They take as many pieces of rhubarb as they have occaſion for, and ſteep them 24 hours in rice wine (that of grapes would be better if they had any) 'till they are very ſoft, and can be cut into thin ſlices. Then they put upon a furnace a kind of kettle, whoſe mouth is two feet in diameter, and which diminiſhes gradually to the bottom in form of a cap. They fill this kettle with water, and cover it with an inverted ſieve, made of ſmall ſlips of bark. Upon the bottom of the ſieve they lay the pieces of rhubarb, covering the whole with a piece of wood, over which they throw a felt, that the ſteam of the water may not come out; then they heat the furnace, and make the water boil, ſo that the ſteam raiſed through the ſieve penetrates the ſlices of rhubarb, and deſtroys their acrimony. At laſt this ſteam reſolving, as in an alembic, falls down into the boiling kettle, and renders the water yellow, which the Chineſe keep for cutaneous diſorders. Theſe ſlices muſt remain at leaſt eight hours in this circulation of the ſteam, after which they take them out, and dry them in the ſun. They repeat this operation twice, and then the rhubarb is prepared, and is of a blackiſh colour. It may be pounded and formed into purgative pills. Five or ſix drachms at leaſt make a doſe, which purges gently and without gripes. The urine is that day more copious and red than uſual, which, according to the Chineſe, denotes that an unnatural heat is diſſipated in that way. They who have an averſion to ſo many pills, take the ſame quantity of the dried ſlices, and in an earthen or ſilver veſſel boil them in nine ounces of water to three, which they drink warm, but ſometimes they mix ſimples with it.

This manner of preparing rhubarb produces the moſt ſalutary effects. An obſtinate conſtipation had reduced a mandarin to the greateſt extremity, and no remedies could procure him a ſtool; he vomited them up as ſoon as they were ſwallowed, as he alſo did rhubarb, whether taken in pills or decoction: a Chineſe phyſician made him take a decoction of a double doſe of this prepared rhubarb, with which he had mixed ſome virgin honey, by which means the patient had no naufeas, and was freed from this diſorder without any pains or gripes.

Some European phyſicians ſay, that a drachm of that part of the rhubarb where they ſtring it, given in the morning faſting, in a glaſs of roſe or plantain-water, is an infallible remedy for fluxes. The Chineſe phyſicians think quite otherwiſe, and ſay, that the rhubarb always begins to corrupt at that hole; that the powder found there is of no uſe; that it ought to be thrown away; and that only the internal part of the root, which is weighty and well marbled, ought to be uſed. It may happen, that in China they undervalue this part of the rhubarb, becauſe it is there worth no more than four-pence a pound, or becauſe, being much dearer in Europe, the natives are unwilling to loſe any of it.

RICE, according to Pomet, is the product of a plant which grows very common in many places of Europe: it commonly grows in the water, and, as ſome obſerve, though the water increaſes during the time of its growth, it ſtill keeps its ear above the ſurface of it. That which is commonly ſold in Paris, is brought from Spain and Piedmont. This is a ſeed of ſo great uſe and profit, that it may be called the manna of the poor, and throughout ſeveral entire countries, they have ſcarce any thing elſe to ſubſiſt on.

Chuſe the neweſt rice, well cleanſed, large, that is to ſay, plump or well fed, white, not duſty, nor ſmelling rancid: thoſe who take notice of the rice of Piedmont, eſteem it much more than that of Spain, which is commonly reddiſh, and of a ſaltiſh taſte. The uſe of rice, chiefly at Paris, is for the Lent ſeaſon, when they boil it in water, then in milk, and ſometimes reduce it to powder, that is to ſay flour, which they uſe inſtead of wheat flour to thicken their milk with.

To reduce rice into powder, pour boiling water upon it, and then waſh it with cold water, ſo often 'till the water remains clear; after this put it into a mortar to pound, and when it is powdered ſet it to dry, and then to ſearce it fine; for it will often appear very fine when it is wet, and yet as it dries ſhews that it is coarſe and requires ſifting.

It is reſtorative, nouriſhing, and ſweetening; it congluti-nates the humours, and is uſeful in fluxes of the belly; it purifies the maſs of blood, and ſtops hæmorrhages. It is uſed either in ptiſans or food.

Beſides this, pearl or French barley is uſed, which ought to be choſen new, dry, plump, and well fed, white, but not blanched: it is prepared at Charenton, near Paris; but the beſt is that of Vitry. We likewiſe have rice that is brought from ſeveral parts of the country, but chiefly to make a ſort of coffee of, which it taſtes very like when burnt. The poor buy what we call in England groats, which is made from oats, and when ground at the mill is called oatmeal.

There is a millet alſo ſhelled and picked, which they prepare in the foreſt of Orleans: beſides other pulſe, as the green and yellow peaſe, which come from Normandy, and the beans of Picardy and other places; there are other things alſo ſold in the ſhops, which are made of wheat flour, as vermichelli, both the white and yellow ſort, and ſtarch.

The vermichelli, which the Italians invented, and call vermicelli, is a paſte made out of the fineſt part of the wheat flour and water, which is afterwards drove through ſmall pipes like ſyringes, to what length or thickneſs they pleaſe; ſo that from the reſemblance of its figure to ſmall worms, it is called vermicelli. Some of this kind of paſte they make in the ſhape of ribbands, of two fingers breadth, and this they call kagne; other parcels of it are formed like a quill, and thoſe they call macaron; and ſome in ſmall grains like muſtard-ſeeds, which they call ſemoule, the name by which they call the finer flour they compoſe it of: and finally, ſome in the ſhape of beads, which they call patrer. They colour this paſte as they fancy, with ſaffron or other things, and ſometimes make it up with the yolk of an egg, ſugar, and cheeſe. Of late years this is made at Paris, and uſed in ſoups and broth, as in Italy, Provence, and Languedoc. The white vermicelli ought to be new made and as white as poſſible, and the yellow of a fine golden colour, the drieſt and the neweſt made which can be got.

Starch is made of the fæcula of wheat flour, which the ſtarch-makers form into cakes and dry in an oven, or by the heat of the ſun. This uſed to be brought into France from Flanders and other countries, but at preſent that (if we can believe the French) which is made at Paris ſurpaſſes that of all other places, and they tranſport from thence great quantities into other parts of France, and ſeveral neighbouring countries.

We ought to chuſe ſtarch for being white, ſoft, and moſt ſubject to crumble, likewiſe ſuch as has been dried in the ſun, and not in an oven, which makes it of a greyiſh white: its uſe is ſo generally known that it needs no deſcription.

Monſ. Lemery ſays, this plant bears its ſtalk about three or four feet high, much thicker and ſtronger than that of wheat or other corn: the leaves are long, like the reed, and fleſhy; the flowers blow on the top like barley, but the ſeed which follows is diſpoſed in cluſters, each of which is encloſed in a yellow huſk, ending in a ſpiral thread. This ſeed is oblong, or rather oval, and white: the plant is cultivated in moiſt or low grounds in Italy, and the ſeed brought dry from Piedmont, Spain, and ſeveral other places: its chief uſe is for food, but is ſometimes made uſe of in phyſic: it nouriſhes well and ſtops fluxes, therefore is good in armies, camps, and ſieges, becauſe it is of light carriage and excellent ſuſtenance, and eaſily prepared; it increaſes blood, and reſtores in conſumptions: it is made into frumenty by boiling in milk, or, for want thereof, in water; or into cakes with water or milk, and ſo baked dry; and is excellent good in broth, with any kind of fleſh.

Beſide the other uſes of rice, there is an excellent ſpirituous liquor made from it, which the people of Peru call acua, and we, from a wrong pronunciation of the word, arrac.

REMARKS.

'The firſt origin, ſays a late French writer, of rice plantations in Carolina, was purely fortuitous; a ſhip on its return from the Eaſt-Indies happened to be caſt away on the coaſt of this colony, ſome bags of rice being taken out of the ſhip, a trial was made of ſowing them, which ſucceeded beyond expectation; and this cultivation has been ſo improved, that for ſome time paſt, one year with another, fifty thouſand barrels of rice are ſent from thence to Europe, each weighing about four

four hundred pounds, and at leaſt worth from 50 to 60 s. per barrel, and often more; conſequently, at only 50 s. the barrel, here is a ſum of 125,000 l. ſterling, and the greateſt part of this rice is re-exported to foreigners, which is an additional advantage to the Engliſh; beſides that, like tobacco, it employs a great number of ſhips.

For the firſt encouragement of this commerce, the government of England laid a heavy duty on foreign rice, exempting that of its own colonies; but the cultivation of rice coming to be thoroughly eſtabliſhed, it was made ſubject to a duty. See the BUSINESS of the CUSTOMS, at the end, of P. [PLANTATIONS.] And this duty includes only the rice for home conſumption, the tranſportation of it from the colonies all over the Mediterranean, and Spain and Portugal, being permitted, on condition that the ſhips ſhall directly return to England.

Thus the Engliſh traders are enabled to ſell their rice cheaper than that brought from the Levant, formerly a great market for it; but now, by the wiſdom of the Engliſh, this trade is at a very low ebb.

If theſe laws ſtood in need of any addition, it is a diſpenſing clauſe in the return of ſhips to England, when the owners intended to ſell them, the ſale of ſhips in England being ſuch a conſiderable branch of commerce, that it is highly the intereſt of that nation to facilitate the means of ſelling them, for the greater encouragement of building more.

From north to ſouth the Engliſh are in poſſeſſion of a chain of colonies, reaching to Spaniſh Florida, and very advantageouſly ſituated for trade and navigation. Our poſſeſſions, indeed, are of larger extent, ſtretching themſelves without bounds *, up the country, where they incloſe all the Engliſh ſettlements, and the Spaniſh in Florida; our colonies may be ſaid to form a kind of a bow, of which thoſe of the other two nations are the ſtring.

* Obſerve the Frenchman! Their colonies in North America are boundleſs, ſo many of their map-makers ſay; and if their miniſters ſhould be of the ſame opinion, what will it avail England to treat about limits, if none ſhall be acknowleged? See the article MAP, and our article BRITISH AMERICA. See alſo the articles CANADA, COLONIES, LOUISIANA, MISSISSIPPI, NORTH CAROLINA, and PLANTATIONS.

The Engliſh colonies, continues this writer, in theſe parts, are Nova Scotia, New England, New York, Penſylvania, the two Jerſeys, Maryland, Virginia, Carolina, and Georgia: theſe different colonies have their reſpective government both civil and military; they are independent and ſeparated one from the other, but the ſubjection of the military government, in regard of the civil, will be an eternal bar to any COALITION of their forces for acting harmoniouſly under one chief *.

* Under the ſeveral heads before referred to, we have endeavoured to ſhew the abſolute neceſſity of a coalition of forces, and a union of power among our Britiſh colonies in North America, before the laſt war, as an effectual barrier againſt the ſhameful incroachments which the French had been many years making in that part of the world; ALL WHICH CAME TO PASS: and I had the unſpeakable ſatisfaction to obſerve, that ſuch union of forces and power which I had done myſelf the honour to point out and zealouſly recommend, was adopted by his late Majeſty's councils.

Every country being governed by its own inhabitants there, mind only themſelves, with little or no concern about their neighbours; it is not the authority of the governors, or even of the king himſelf, which, without the conſent of the aſſembly of a colony, can march its troops and militia to the aſſiſtance of any other which may be attacked; particularly the New England people have carried matters ſo far, as to make their governor dependent on them for his revenue; and on ſome differences between them and the king's council concerning their governor, they had the confidence to ſay, it was little conſidered that this colony afforded an hundred thouſand men capable of carrying arms *.

* Certainly this French ſcribbler could have ſuch intelligence only from ſome of his Popiſh emiſſaries, who are reſtleſs in ſowing the ſeeds of confuſion, as well in Britiſh America as in the mother country.

The military power of a country, where there is ſuch a ſlender ſubordination, is little to be feared; yet is it the only one which might be formidable from the great number of the inhabitants, did not their inclination tend rather to be pirates * than ſoldiers; beſides, in every point of the military government, it is certain, that we are vaſtly SUPERIOR TO THE ENGLISH †.'

* What an impudent and groundleſs reflection does this Frenchman make upon our North Americans!

† If this be true, as we have now reaſon to believe, we doubt not, but from the wiſdom of his Majeſty's councils at preſent, that the ſcene will ſoon be changed, and that our brave NORTH AMERICANS will be as ſucceſsful againſt the French on the main, as they were at Cape Breton, and that the conſequences of their ſucceſs may prove more ſatisfactory to them in the preſent, than in the former caſe.

The reader is deſired to obſerve here as well as elſewhere, that the author wrote this before the laſt war, and the laſt TREATY OF PEACE, and judges it more ſatisfactory to remain as it does; it giving an inſight into the hiſtory of the times, and ſhews better the nature of the laſt peace.

In an act of parliament paſſed anno regni Geo. II. triceſimo tertio, intituled, An act for granting liberty to carry RICE from his Majeſty's province of Carolina in America, directly to any part of Europe ſouthward of Cape Finiſterre, in ſhips built in, and belonging to, Great Britain, and navigated according to law; which was to be in force for five years from the 29th day of September 1730, and from thence to the end of the then next ſeſſion of parliament; and alſo an act made in the eighth year of the ſaid reign, to continue the ſaid act from the expiration thereof, till the 29th of September 1742, and from thence to the end of the then next ſeſſion, and ſo extend that liberty to the province of Georgia in America; which ſaid acts, by ſeveral ſubſequent acts made in the 15th and 16th, the 20th and 27th years of the ſaid reign, were further continued from the expiration thereof, till the 29th of September 1760, and from thence to the end of the then next ſeſſion, ſhall be and the ſame is hereby further continued from the expiration thereof to the ſaid 29th of September 1767, and from thence to the end of the then ſeſſion of parliament.

RIVERS. Navigable rivers are of ſuch important uſe in a trading nation, that it is quite needleſs to ſay any thing in general upon that head: we ſhall, however, take notice of ſomething particular in regard to this matter, that ſeems to merit the public attention.

The ingenious Dr Congreve, late of Wolverhampton in the county of Stafford, after many years obſervation on the country between the Severn and the Trent, formed a deſign of uniting thoſe rivers, and was at the labour and expence of meaſuring and calculating every part of the levels in that diſtance; and hath publiſhed this proof of his ingenuity, without fearing the reproachful name of projector, uſually beſtowed by the ignorant, on all thoſe who attempt any thing new for the ſervice of mankind. He hath ſhewn, by comparing it with other works of the ſame kind effected in other countries, that this deſign may be executed without any very great difficulty or expence; and the mill and forges on the canal and the navigable rivers and ſluices will be mutually uſeful to each other, according to the modern way of conducting improvements of this nature.

The expence will appear leſs conſiderable than may be generally ſuppoſed, by comparing it with works of this kind already executed; and might be leſs ſo, by employing the army on this undertaking, giving them a reaſonable addition of pay.

By the account kept of the expence of cutting the new canal at Cheſter, in the year 1735, it appears that a canal dug 100 feet wide at top, 6 feet deep, and 60 wide at bottom, coſt 28 s. every ten feet, which amounts to 739 l. 4 s. per mile; that the expence of that canal 20 miles, did not exceed 17,000 l. But here a canal of half theſe dimenſions will anſwer all purpoſes, and will not be half the expence.

A barge 120 feet long, 15 feet broad, containing 1800 ſuperficial feet, and drawing 2 feet water, is equal in weight to 3600 cubic feet; each foot cubic weighing 70 pounds, amounts to 252,000 pound weight; this barge, if drawn with ſix horſes, will carry 126 tons, with two feet water, or very little more. If this ſcheme be completed, it will make a paſſage by water from York to Briſtol, acroſs the middle of the kingdom, where moſt of the heavy goods are made or produced. Timber, coals, lead, iron, milliſtones, lime, alabaſter, marble, Birmingham, and all other wares made in the kingdom, would be carried to all parts at a cheap rate. What advantage this will be to the land-owners, as well as to trade, I need not mention. But ſo beneficial a ſcheme, ſo clearly ſtated, merits the regard of the public.

The diſtance and fall of the water from Alderſley to Burton upon Trent, is as follows:

	Miles.	Fur.	Perch.		Feet.	Inch.
From Alderſley to Newmill is	2	1	25	Fall	20	0
Thence to Penkridge -	8	3	36		68	9
From Penkridge to Burton -	33	2	0		100	9
Total	43	7	21		189	6

In which ſpace are 17 mills and forges.

	Miles.	Fur.	Perch.		Feet.	Inch.
From Alderſley to Newbridge	0	4	0	Fall	6	0
Thence to Preſtwood -	12	5	0		175	0
From Preſtwood to Severn -	13	0	8		104	6
Total	26	1	8		285	6

In which ſpace are 25 mills and forges.
Length of the whole, 70 miles, 29 perches; fall both ways, 475 feet.
There are upon the whole length of the ſaid water 42 mills and forges, which, by late improvements, will be a great help to make the rivers navigable, without any damage to the mills.
The fall of the water in the canal betwixt Peterſburgh and the Wolga, in Ruſſia, both ways (that is, eaſt and weſt) is 555 feet, which is more than the fall of the water of this canal by 80 feet. Vid. Capt. Perry's Account of Ruſſia.
In 475 feet (the fall of the Penk and Smethſtall) are 158 yards, 1 foot, which will require 32 locks, wears, and turnpikes, each lock, &c. being 5 yards high; which is not equal in number to the locks upon the river betwixt Letchlade and London, which, in 138 miles, hath 36 locks, wears, and turnpikes.

A canal from Severn to Trent, may be made, viz.

Sixteen thouſand acres are in a ſquare whoſe ſide is five meaſured miles: ſuch a ſquare ſeems to be betwixt Eſington windmill, the head of Chillington mill-pool, and the tops of Wrotteſlye-park, Tettenhall-wood, Wolverhampton, and Biſhbury-hills.
Seven brooks ariſe from the ſprings and rain-waters that fall on theſe 16,000 acres, and may all be drawn into a magazine in the moors betwixt Tunſtall and Penford.
Five or ſix hundred acres will be in this magazine, if a dam of 24 feet high be made betwixt the new mills at Penford and the hill, in which the ſtone-quarry, and another at the new bridge of Tettenhall, 10 feet high.
Twelve miles or leſs will be the length of the canal from Tettenhall to Preſtwood, where the Smethſtall meets the water from Stourbridge, and ſo goes to Severn.
Eight miles or leſs will be the length of the canal from Penford to Penkridge, from whence the river will eaſily be made navigable to Burton: the land-floods of theſe 16,000 acres, that now are hurtful to mills and forges, by this magazine will be made ſerviceable.
Seventy-one market-towns and cities may trade by this canal. More may be added.
Two brooks run into the pool at Goſebrook-mill, from whence the water will run both into Severn and Trent, whenever the miller pleaſes.
Five brooks only feed the magazine of St. Feriol in Languedoc, which hath 595 acres in it, and ſupplies a canal 64 French leagues long. See Philoſ. Tranſact. No. 56.
Two millions and fifty thouſand acres in the three counties of Stafford, Derby, and Leiceſter.
Twenty-four miles inland navigation only to theſe three counties.
One market-town only out of forty hath navigation in the three counties.
Two hundred and fifty thouſand pounds per ann. got by water-carriage in the ſame quantity of land in the ſeven Dutch provinces.
Two thouſand ſix hundred and twenty-five miles is the length of the fifteen Roman roads in England and Wales, many parts of which are ſpoiled for want of inland navigation.
One thouſand pounds per week loſt out of the iron trade within ſix miles of Dudley-caſtle.
One thouſand tons of coals might, perhaps, be ſold every week more than now are in the three counties, and as many of lead, lime, iron, ſtone, timber, marble, fullers-earth, wool, &c. if a canal were made betwixt Severn and Trent by Penk and Stour; then clothiers might trade from Burton to Kinfare, and ſo to Bridgwater, &c.
One tenth of the waſte land of the three counties incloſed, will be worth 10,000 l. per ann. at 4 s. per acre, which will make a canal, and keep poor vicars; this canal will make an eaſy and cheap carriage betwixt the weſtern and northern clothiers, and bring fiſh living, in well-boats, to ſupply theſe three inland counties.
300,000 l. per ann. is, ſays Sir William Petty, the charge of the land-carriage in England, one third of which might probably be ſaved, if this canal were made betwixt Severn and Trent, and another betwixt Severn and Thames by the Bath river, and market-towns have corn, cheeſe, &c. carried cheaper than by horſes, and 2000 l. per week might be added to the wages of the labourers in huſbandry and manufactory, the money ſaved by water-carriage.
Nine parts in ten of the product of all tilled lands are owing to the labour of men and horſes, ſays Mr. Locke, ſo that to take off many men and horſes from huſbandry, to land-carriage, muſt be a vaſt damage to huſbandry, and no ſmall damage to the roads.
Two miles and a half or more is the length of the magazine in the moors betwixt Newbridge and Penford on the weſt ſide of it, three miles the length of it on the eaſt ſide: it may contain 456 acres.
Fifty acres more might be added to it, by placing one ſluice on the Dam-mill brook out of the boggy lands betwixt Barnhurſt and Cronkwall, and one other ſluice on the Moſely brook, out of the boggy lands betwixt Penford wood and Manſell-Newhouſe, upon the road betwixt Wolverhampton and Stafford.
More magazines may be made on the brooks that come out of the foreſt of Cannock, &c. which would fall into the canal, though not into this magazine.
Seven mills upon the brooks that would come into theſe moors, to join the Barnhurſt brook, viz. Chillington mill, Dam-mill, New-mill, Seawall-mill, Goſebrook-mill, Tunſtall-mill, and Fordhouſe-mill, all which depend upon ſprings, and have but ſmall pools, except one.
If the rains on theſe 16,000 acres that come into theſe moors betwixt Newbridge and Penford are 36 inches, which is leſs by ſix inches than the rains of Lancaſhire and Cheſhire, which join to part of Staffordſhire, they are more than the rains of Liſle by one third, for the rains are but 24 inches, which help their canal and that of Mardyke; and almoſt double to the rains of Paris, which are 19 inches, and perhaps to thoſe of Briare, which help to fill the canal betwixt the two rivers of Paris and Orleans.
The rains on theſe 16,000 acres will probably fill this magazine 12 times per ann. 2 yards deep.
The depth of rain-water, if it were to ſtagnate on the earth, would amount, one year with another, at Townley in Lancaſhire, to 42 inches and a half, at Upminſter in Eſſex 19 inches and a quarter, at Zurich in Switzerland 32 inches and a half, at Piſa in Italy 43 inches and a quarter, at Paris in France 19 inches, and at Liſle in Flanders 24 inches.
Forty acres allowed to each canal and its locks, ſo that the magazine of 500 acres will fill both the canals, and their locks, being 80 acres, five or ſix times before it is empty once.
N. B. That the rains on the weſt ſide of England are double to thoſe on the eaſt ſide, and that this magazine will not be 40 miles from Weſt-Cheſter.
If this canal were made, and two or three more, it is very probable that the ſame number of working horſes and their drivers now employed in England, working the ſame number of hours every day, may improve the product of the lands of England to be worth 1,000,000 l. of money per ann. more than they are now. For the horſes that might be ſpared from carriage on the roads, as alſo thoſe that carry corn, &c. to markets, might carry marle, lime, &c. which now lie uſeleſs in the earth, for improvement of land, to make them produce much more corn and graſs, than they now do.

Observations concerning the Rivers betwixt Oxford and Bath.

Sir James Long's objections were made new in 1683-4, which are ſaid to be anſwered in 1664 by Mr. Aylyffe, Mr. Smith, &c. who were for an inland navigation betwixt Avon and Iſis, by a cut to be made from Malmſbury to Summerford upon Iſis near Cricklade.
Sixty thouſand pounds computed by Matthews and Baſkerville to be the charge of the canal from Briſtol to Oxford, though there may be rocks to be cut through.
Three pounds per ton the price of carriage by land, and twenty ſhillings per ton by water, from Oxford to London.
Mr. Hill and Mr. Rowland Vaughan were ſaid to deſign this in queen Elizabeth's time.
Judge Vaughan propoſes projectors to be hanged that did not finiſh any navigation undertaken by ſubſcription, if they miſapplied the money.
From Cricklade to Purtonſtalke one mile and a half, thence to the foot of Purtonhill one mile and an half, thence to Brinkworth betwixt Summerford and Malmſbury to fall into the Avon ſeven miles. Here may a canal be cut.
A boat might paſs from London to Briſtol in ten days.
The bill ſaid to paſs the commons, but ſtopt when twice read, with the lords.
Cromwell ſaid to offer 20,000 l. at the Navy-Office to join the city of London in this deſigned cut.
Matthews dedicates a book about it to king Charles II. ann. 1670.
Vid. Mr. Fridour's book, 1672, of the Languedoc canal; and Philoſ. Tranſ. No. 56. where is a map of it.
Mr. Collins ſays, that from canals to water grounds ſprinkled with ſalt is vaſt profit.
Capt. Matthews had a private ſeal for the cut granted to him, as he ſays, by king Charles II.
Thirty-ſix locks, wears, and turnpikes, are upon the river Thames betwixt London and Letchlade, by which navigation London receives the proviſions of ſeven counties, and ſend its merchants goods to them.
It is humbly ſuppoſed, that the ſame number of locks, or fewer, may make good this navigation betwixt Severn and Trent, and carry the proviſions and manufactures of ſeven counties, or more, to above 70 market-towns and cities.
Ninety-three miles Engliſh is the length of the canal begun betwixt the Don and the Wolga, to make a communication betwixt the Caſpian and the Euxine Seas.
The Ladoga canal deſigned for the uſe of Peterſburgh 460 Engliſh miles long, the fall of the rivers that fall into the Wolga 110 feet, of thoſe that fall into the Neva (upon which another dock is to be made) 445 feet fall. Total 555.

Vid.

Vid. Capt. Perry's Account of Ruſſia.
Four hundred ſeventy-one thouſand one hundred and fifty-four men were employed to cut a canal to draw down the lake of Mexico. Vid. Collection of Travels, Vol. IV. page 531.

REMARKS.

Under our article FRANCE, we have ſhewn what advantages the trade of that nation derives from the great plenty of river-navigation that runs through moſt parts of their provinces. The convenience of communication, the facility of carriage for the natural productions and manufactures to the ſea, are two objects of great importance for a kingdom of ſo vaſt an extent as that of France. Its principal rivers, the Seine, the Loire, the Garrone, the Rhone, with the others, that run into them, are an advantage it owes to nature. Its induſtry has added to it NAVIGABLE CANALS, admirable for the immenſity of the work, and for the profits the commerce draws from them. Such is the canal of Languedoc, by means of which Riquet eſtabliſhed a commodious communication between Bourdeaux and Marſcilles, that is to ſay, between the ocean and the Mediterranean: ſuch the canals of Orleans and Briare, between the countries watered by the Seine and Loire; not to mention other canals, and projects for rendering rivers navigable, the carrying of which into execution will have reſpectively their uſe and advantage.

The Dutch too have an infinite number of rivers and canals, running through the whole ſeventeen provinces [ſee the article UNITED PROVINCES], ſome in every part; and as all theſe rivers and canals are navigable, ſo this river-navigation is ſo conſiderable, particularly in thoſe provinces, that it is ſaid, above 50,000 men are conſtantly employed upon them in the dominions of the States-General; who being all uſed to the water, make good ſeamen on occaſion. By mean of this river-navigation, the Dutch carry on a great and beneficial commerce with Germany and France, and even as high as Switzerland.

In this they may be ſaid to have no rival: the trade up the Maeſe and the Rhine is, as it were, their own, and through them they trade into all the navigable rivers, which flow into them; by the means of which, the Dutch enjoy a full commerce on both thoſe great ſtreams, and poſſeſs the trade of all the countries through which they flow; and by the Danube, which begins to be navigable near the Neckar, they have likewiſe a trade down that river into Bavaria, and even to Vienna itſelf.

The Spaniards are endeavouring to improve their river navigation.—The great importance of making the river Ebro navigable, has been recommended to the court of Madrid by an able miniſter. It is intended, it ſeems, to make that river more navigable from Navarre, or even higher up, down to the very alfaques of Tortoſa, where it runs into the Mediterranean. By this means, the ſuperfluous commodities and fruits of the ſeveral countries which this river traverſes, may be conveyed at an eaſier charge, and their traffic on that account facilitated; and many other benefits procured, without any real expence, as the principal difficulties are at preſent ſurmounted, inſomuch that flat-bottomed veſſels frequently paſs from the neighbourhood of Tudela to Tortoſa, and even to the ſea, laden with gunpowder, bombs, granades, artillery, and other military ſtores, manufactured in Navarre, as alſo any other commodities, that want carriage thither; though the navigation has its difficulties, eſpecially at the water-fall of Flix, where they are at the charge and trouble of landing the goods, and putting them aboard again. But this, and the other inconveniencies, they ſay, may be eaſily removed, as we have ſeen, in Flanders, France, and Holland, much greater ſurmounted by means of flood-gates, ſluices, and other contrivances. If the navigation of this river ſhould be made more eaſy, the Spaniards may go up and down the river with common veſſels, which will not only promote the mutual commerce of the ſeveral provinces of Spain, and that which might be carried on abroad, but alſo ſerve for the tranſport of all the materials neceſſary for the navy; and the above ſtores of war, together with wheat, barley, and other ſupplies for the army, and his Majeſty's garriſons, to the ſaving of millions of dollars, which have been expended in that kingdom, by carrying them, as they have done on ſeveral occaſions, either upon horſes or in waggons. And,

By erecting of new ſhip-yards in the alfaques, they propoſe to themſelves other advantages. For as they will be ſituated at the mouth of the river Ebro, they happen to lie in the very paſſage of the maſts, planking, and other timber, which being cut down in ſeveral parts of the Pyrenees, and conveyed by different roads, and ſmall rivers into the Ebro, they may be brought down to the ports of the Mediterranean and the ocean. And if ſuch quantities of naval ſtores in general be detained in the alfaques, as ſhall be worked up in the propoſed new ſhip-yards, there will be ſaved the expence and riſk of tranſporting them to Calabria, and the four towns, as has been done, making a coaſting voyage of above 500 leagues; ſo that the way will be ſo much ſhorter than when they carry them to theſe parts, ſubject to the expence and hazard above-

mentioned. By this meaſure the Spaniards propoſe to procure many able hands from the neighbouring provinces for their new ſhip-yards, and thereby have ſuch kinds of works eſtabliſhed in ſeveral places: they will, by this means, alſo be enabled to improve and ſecure the building and fitting out of men of war and merchant-men, while at the ſame time it will be eaſier to man the ſhips upon theſe coaſts, that as ſoon as they are finiſhed, they might ſail to the ports of Andaluſia, or other parts, that ſhould be thought proper; ſince, even for the few that have been lately built in the yards of Calabria and the four towns, it is well known, that after great delays and expence, the Spaniards could procure but a ſcanty number of hands in thoſe provinces to man them for ſo ſhort a trip as to Cadiz.—This is a ſpecimen of what the Spaniards are about, in regard to the increaſe of their river-navigation.—And we might mention more inſtances of ſeveral powers in Europe, who, for the benefit of their trade, are purſuing the like meaſures. No one need be informed of the unſpeakable benefit ariſing to trade from the river-navigation on the continent of America. The Louiſiana, as the French have chriſtened Florida, a vaſt country watered by the river Miſſiſſipi, and by a multitude of other rivers, yield the French at preſent more than bare promiſes, as we are likely ſoon to experience to our coſt, unleſs they ſhall be effectually checked in their career: nor is the ſame of leſs utility and importance in Aſia. It cannot be ſuppoſed, but that in a country of ſuch an exceeding extent as China, and ſo very populous, there muſt be a communication of the product of one province with another, and that this muſt occaſion a very great trade among them; and, indeed, it is ſo to a wonderful degree, as well by land-carriage as by river-navigation; and eſpecially by their canals, of which the royal canal in China from Canton to Pekin is the wonder of the world.

Their river-navigation is exceeding great; the two rivers of Kiang and Hoang are known to be navigable, the firſt above 1200 miles, the latter 700 miles. The great lake Phujang is ſaid to be 300 miles in circumference, and has great ſhips ſailing in it. Some exaggerating authors raiſe theſe things up to impoſſibilities, and tell us they have 300,000 ſhips and barks, and that it is ordinary to ſee 30,000 veſſels on the river at Nanquin at once, beſides ſuch as are continually going and coming upon buſineſs.

Certain it is, there is a vaſt inland commerce among them, the product of the reſpective provinces requiring it: for as the ſeveral productions are extremely different, ſo the diſtant provinces call for thoſe things in trade which they have not of their own, and which are the product of the provinces moſt remote. Thus the carrying and recarrying thoſe productions, whether for ſubſiſtence or for merchandize, neceſſarily requires all poſſible aſſiſtance of boats, horſes, and men; and this occaſions the extraordinary circulation of their trade. For example.

The beſt and fineſt ſilk is found in the province of Chekiam, or Chekaing, lying ſouth of Nanquin, the country being ſpread over with foreſts of mulberry-trees. The chief city of this province is Hamcheu, a place full of the people employed in drawing or ſpinning the ſilk from the worms, and doubling it again, ſo as to make it fit for the throwſter's mill: alſo they tell us there are 10,000 throwſters, or twiſters of ſilk, here.

To this city there is a navigation by 17 canals or rivers, ſome reaching to one river, ſome to another: ſo that the ſilk is, or may be, tranſported by water-carriage to all the great cities and ſea-ports in China; ſome of which otherwiſe would not be able to carry on the manufacture of ſilk, without fetching the materials, at great charge, a long way by land.

It is from this city the raw ſilk is brought above 100 miles, to the ſea port of Limpo, from whence the Engliſh factory receive it, and bring away great quantities of it to Europe.

From this city it is likewiſe carried north to Pekin, and ſouth to Canton, places diſtant and remote, one above 700 miles one way, the other 600 miles another way; in both which cities, as well as in Nanquin (the greateſt of them all) the manufactures work it up into the moſt curious broad ſilks, and other manufactures, of which this country is ſo full.

Kiamſi is an inland province, full 300 miles from the ſea, at the neareſt diſtance, and almoſt 500 at the remoteſt, yet it has the royal canal running through the center of it, in its paſſage from Canton to Pekin: ſo that, by this canal, there is a navigation quite through the province, and a communication of inland trade from ſea to ſea, as it may be called: that is, from Lamton Bay, or Langchang, as the Chineſe call it, to the bay of Nanquin, and the ſea of Cang below Pekin, which is above 1000 miles.

In the north part of this province alſo is the great inland ſea, or lake, of Phangu, or Fujang, which has 1000 very large ſhips, or jonks, employed on it, and all the rivers in the province fall into it: they ſay it is 300 miles in circumference, and empties all its waters into the great river Kouang, or the Blue River.

In this province, lies the great manufacture of china-ware; that is to ſay, the fineſt and beſt is made here.

From hence, after great multitudes of people are employed in the labouring part, the goods are conveyed by water to all parts of the empire, and to all the ſeveral ports of Tonquin,

Canton,

Canton, Amoy, Nanquin, Pekin, Chuſan, Limpo, and from thoſe ports to all the reſt of the world.

This trade muſt of neceſſity employ not only a great many hands, but a great many veſſels, boats, and barks, upon thoſe canals, lakes, rivers, and ſeas: and it will not be wondered, were we to go over all the provinces in this manner, and view the inland commerce, by which 59 millions of people are ſaid to be fed, cloathed, and employed (for ſo many they tell us the country contains): it will not, I ſay, be wondered at, that the numbers of ſhips, barks, and boats, are ſo many, which are ſeen upon thoſe rivers and canals.

The next province weſt of this, and yet farther from the ſea, is Huquam. The great river Koiang runs through the heart of this province; and the channel being very broad, and withal exceeding deep, the ſtream is mild and gentle, and is therefore not only navigable for great ſhips, but the navigation is very ſafe and eaſy.

Here is alſo another lake, or inland ſea, larger than the former, being, as ſome write, 400 miles in circuit, and in ſome places 50 to 100 fathoms deep, on which there are very large ſhips employed. All this is taken notice of, to ſhew that the inland trade of this country is exceeding great, by the means of river-navigation: for as this river is made uſe of to ſupply the two populous cities of Chiccheu and Nanquin, in which are ſo many millions of people, as well with proviſions as with manufactures and merchandizes of ſeveral kinds, ſo the trade muſt be very great, and the number of veſſels employed alſo very great; and it is certainly ſo, for they tell us there are above a million of people taken up in the navigation of this one river only, and in the canals made from it to the neighbouring provinces, for the convenience of trade, including the two great lakes.

The product of this province is chiefly corn and rice, cotton and fiſh; the latter is found in the great lake mentioned above in moſt incredible quantities, which are carried down the great river to Chiccheu and Nanquin in boats, with wells to keep them alive.

The great quantity of corn and rice carried down to Nanquin, &c. is enough to keep a very great number of veſſels conſtantly employed, and no queſtion it does employ ſome thouſands.

But the navigation does not end here, the Koiang being navigable ſtill further weſt: for this river, which takes its riſe in the mountains of Thibet, in the Great Mogul's country, runs above 500 miles, and is a very large river before it enters the dominions of China: ſo that it is navigable to the fartheſt weſtern bounds of the Chineſe empire.

It is alſo very remarkable, how the navigation of this river reaching thus far, is particularly uſeful, and indeed neceſſary to trade, becauſe in theſe weſtern provinces of China, the heavy and bulky goods are chiefly produced, which could not be carried ſo far as to the ſea-ſide or ſea-ports, but by water. For example,

The province of Suchuen, or Suchen, lies weſt, extended to the eaſtern boundary of the kingdom of Thibet; and this great river runs through the heart of the province, and is diſtant there from the ſea near 700 miles.

In this province are found mines of ſeveral metals and minerals, which being heavy goods require water-carriage, or elſe could not be removed, except at an immenſe charge, to ſo great a diſtance as Canton or Nanquin, or any of the ſea-port towns which lie ſo far due eaſt from them.

We have run over theſe provinces to ſhew the inland navigation of the country, and the prodigious courſe of trade carried on by that navigation, which is the great occaſion their produce and manufactures come ſo cheap to the European markets. Which ought to be a prevailing argument with Great-Britain, to cultivate river-navigation to what extent they are able, in order to anſwer the ſame wiſe and ſalutary purpoſes. See the article ROADS.

ROADS. The repairs, amendment, and preſervation of the roads of this kingdom, is certainly a public good work, well worth the conſtant attention of the legiſlature; and, by virtue of acts of parliament, the public hath found great advantage from the improvements of the roads, and by the application of tolls collected at the turnpikes.

The firſt is, that travelling might be rendered ſafer, eaſier, and pleaſanter to gentlemen and others, upon their ordinary occaſions; that this end is greatly anſwered, every one's experience will tell him, who can remember the condition of the roads about 30 or 40 years ago.

The ſecond is, the benefit accruing to our trade and commerce, by rendering the carriage leſs expenſive upon all ſorts of goods and merchandize: whether they are proviſions of any kind, the immediate growth and produce of our lands, or whether any other ſorts of wares, which muſt have conveyance by land.

That this good end hath alſo been greatly anſwered, will clearly appear, by comparing the former rates of carriage with what is now paid. Of this we ſhall produce ſome few inſtances to the city of London only, that being the great mart, not only for proviſions, but alſo for the various manufactures carried on in the ſeveral parts of the kingdom. Hither they are chiefly brought, and from hence the ſame carrier loads back with ſuch goods, as the ſeveral counties have a demand for, whether they be foreign or otherwiſe. Thoſe who have made it their buſineſs to be rightly informed of this matter, have, upon enquiry, found that carriage in general is now 30 per cent. cheaper than before the roads were amended by turnpikes: of which it may be proper to produce ſome proofs.

1ſt, From Birmingham to London it is ſaid there are not leſs than 25 or 30 waggons ſent weekly; 7 s. per hundred was formerly paid, the price now paid is from 3 to 4 s. per hundred.

2dly, From Portſmouth to London the common price was 7 s. per hundred, the government paid ſo in queen Anne's war; and now only 4 to 5 s. per hundred is paid: and, in the late war, arms and warlike ſtores for his Majeſty's ſervice were carried at the rate of 4 or 5 s. per hundred.

3dly, From Exeter to London, and from other towns in the weſt of like diſtance, the carriage of wool and other goods is very great, eſpecially in times of war.—12 s. per hundred was formerly paid, now only 8 s. per hundred: the ſame may be affirmed with reſpect to Briſtol, Glouceſter, and the adjacent counties; the land-carriage particularly, in time of war, is very large, and the price of it is proportionably reduced.

4thly, Let us proceed now to another part of the kingdom, of leſs diſtance from the metropolis, and ſee what is the difference between the preſent rates of carriage, and thoſe which were uſed to be given: from the woollen manufacturing towns in Eſſex to London, 2 s. 6 d. was formerly paid for a double bay, but now only 1 s. 6 d.; a ſingle bay paid formerly 1 s. 6 d. is now reduced to 6 d. and 8 d. a pack of wool, weight 200, paid formerly 6 s. now only 4 s.

5thly, Butter from Cambridge to London, the produce of the iſle of Ely and county of Norfolk, from whence about 90,000 firkins are brought yearly, was formerly from 18 d. to 2 s. per firkin, and is now but 14 d. More inſtances might be produced, but theſe may be ſufficient; and from theſe it may be inferred, that the reduction in the price of carriage is general from all places. To ſet this matter in a ſtill more ſtriking light, it may not be improper to deſcend to an exacter ſcrutiny into this matter. Wherefore to begin in the order wherein we firſt ſet out.

From Birmingham to London, viz.

15 Tons of goods formerly ſold at 7 s. per hundred coſt	l. 105
15 Tons now at 4 s. per hundred coſt only -	60
Saved 3 l. per ton - - -	45

From Exeter to London.

8 Tons of goods at 12 s. per hundred coſt -	l. 96
8 Tons now at 8 s. per hundred coſt - -	64
Saved in the carriage of 8 tons - - -	32

From Eſſex formerly.

800 Double bays at 2 s. 6 d. per bay, coſt -	l. 100
800 Ditto, now at 1 s. 6 d. per hundred, coſt only	60
Saved 40 per cent. - - -	40
300 Packs of wool, formerly at 6 s. each, coſt -	l. 90
300 Ditto now at 4 s. coſt - - -	60
Saved - - - -	30

And now let us enquire from whence the ſaving in land-carriage, ſo great a benefit to trade, ariſeth; no other cauſe, we conceive, can be reaſonably aſſigned, than that, ſince the amendment of the roads by turnpikes, our carriers are enabled to draw greater weights, with the ſame number of horſes in one carriage, than they formerly could do. To demonſtrate this, we ſhall bring an example or two: the roads in general were formerly ſo deep and bad, ſo full of holes and ſloughs, that a team of ſix horſes could ſcarce draw from any place of 60 miles diſtance, or upwards, above 30 hundred weight of goods; whereas the ſame team can now draw with more eaſe 50 or 60 hundred.

Suppoſe from Birmingham, or any other place of equal diſtance,

Formerly 30 hundred at 7 s. per hundred coſt -	l.	10 10
Now 50 hundred at 4 s. per hundred coſts only -		10 0

Or, to ſhew the ſavings, you may be pleaſed to compute thus:

50 Hundred formerly at 7 s. per hundred coſt	l.	17 10
50 Hundred now at 4 s. per hundred coſt -		10 0
Saved - - -		7 10

Again, ſuppoſe from Exeter, &c.

That formerly ſix horſes could draw 40 hundred of woollen goods, at 12 s. per hundred, is	l. 24
Now 6 horſes can draw 60 hundred at 8 s. per hundred	24

From

From theſe inſtances it is extremely evident, that a team with ſix horſes can now draw 20 hundred more than they could do formerly; that the price of carriage is, for this reaſon, proportionably reduced, and the public, or trade and commerce, have the immediate benefit of it.—In proviſions, as wheat, meal, malt, butter, and cheeſe, &c. the farmer and landed intereſt generally have the benefit of theſe ſavings. In all our manufactured goods, the public have the benefit of them, whether they are uſed at home or exported. The cheaper the maker can get his wares to market, the cheaper he muſt and doth ſell them: of this every merchant and trader is fully ſenſible.—It is a known maxim in commerce, that the leſs it is burthened, or the eaſier the conveyance both at home and abroad, the more extenſive and beneficial it will certainly prove. I have ſhewn above, the general benefit that the nation reapeth from the improvement of our roads by turnpikes. I ſhall not proceed to point out whence it is, that the farmers and traders apprehend ſo great a burthen upon trade, from the late act of limitation; whereby no waggon, &c. ſhall be drawn with more than five horſes, unleſs up ſteep hills, after the 1ſt of July 1752: and the truſtees or commiſſioners of the turnpike roads, in their reſpective diſtricts, are required, on or before the 25th of March 1752, to erect weighing engines at the toll-gates, or elſewhere, upon their reſpective roads; and that no waggon, &c. be ſuffered to paſs through with above 60 hundred, the weight of the waggon, &c. included.

We ſhall not enter into the merits of this act; there has been ſcarce time to ſhew with what conſequences it may be attended, and therefore we muſt leave it to experience. If the article of carriage receives as great additional benefit by the laſt principal acts, as it has done by the eſtabliſhment of tolls and turnpike roads in general, the public will have no reaſon to complain.

However, be this as it may, the public will be no way relieved from the great expence attending the conſtant amendment on the highways; and what traders may ſave, in reſpect to the point of carriage, the public pays very amply for, I am afraid, for the repairs of the highways: and that expence falling upon the public in general, inſtead of traders in particular, is only a ſeeming alleviation of the burthen; it remains ſtill a prodigious expence to the nation, from which, in as great a meaſure as is poſſible, they ought to be diſincumbered, and that ſaving, if it can be effected, will anſwer other public exigencies. All contentions about expedients to ſave and preſerve the roads by changing the manner of carriage, and laying peculiar reſtraints thereon, do not appear to be ſtriking at the root of the evil; for ſuppoſing that the roads by ſuch expedients do wear out or decay one twelfth leſs than they did before ſuch expedients are carried into execution, yet, if the price of carriage is raiſed one twelfth more from inconveniencies that the carriers may experience, we do not ſee any great gain that will thereby accrue to the public in general.

The eſſential point, we humbly apprehend, to be conſidered, is, whether there is any probability ſo to repair and amend the highways in general, that the weight of any carriages that have heretofore contributed to, or may hereafter contribute to, leſſen the price of land-carriage in general, will do little injury to the roads in general, and conſequently, after ſuch work is gradually completed, will put the nation to very little expence in their conſtant reparation, in compariſon to what now is expended by the public for that purpoſe. This, we conceive, is the principal matter that deſerves to be weighed and conſidered: and although we do not preſume to offer any thing to the public conſideration, that will effectually anſwer theſe deſirable purpoſes; yet we ſhall give a ſummary of what has occurred to us upon this occaſion, with a view to ſpirit up and excite others more capable, to put a matter of this general concern in ſuch a light, as may appear more rational, eligible, and practicable than any thing that we can preſume to ſuggeſt.

Whether any thing of the nature of that which we ſhall take the liberty to offer, may ever be practicable, might be tried by a fair experiment of five miles, or even of one ſingle mile only, at the public expence; and if it ſhould be found to anſwer in one mile, then it might be ſeriouſly thought of to be made general, or laid aſide. Nay, one hundred yards only, experienced in one of the moſt public roads, through which the heavieſt carriages paſs, would, perhaps, be ſufficient to give this matter a fair trial. But this is not an experiment that has never been tried, it was long experienced by the ancient Romans; and as we ſeldom err in the imitation of their wiſe example, in many important particulars, the imitating them, perhaps, in regard to the management of their highways, ſo far as it may be experienced to be practicable in this nation, may not be attended with leſs emolument and glory than in many other things, wherein we are fond, and even value ourſelves upon following their great and glorious example.

Nor do I pretend to have any merit in the propoſal; it was, I underſtand, many years ſince drawn up by a public-ſpirited gentleman. I ſhall endeavour only to put the matter in ſomething of a different light, as being more accommodated to the preſent times, by adding what may ſeem requiſite, and curtailing what may be ſuperfluous.

The Romans, while they governed this iſland, made it one of their principal cares to make and repair the highways of the kingdom, and the chief roads we now uſe, are of their marking out; the conſequence of maintaining them was ſuch, or at leaſt ſo eſteemed, that they thought it not below them to employ their legionary troops * in this work; and it was ſometimes the buſineſs of whole armies, either when in winter-quarters, or in the intervals of truce or peace with the natives.

* We know by experience in Scotland, what the ſoldiery can do in this reſpect.

If we lay aſide the barbarity and cuſtom of the Romans as heathens, and take them as a civil government, we muſt allow they were the pattern of the whole world for improvement and increaſe of arts and learning, civilizing and methodizing nations and countries conquered by their valour; and if this was one of their great cares, that conſideration ought to move ſomething with us. But to the great example of that generous people, we will add three arguments.

(1) It is uſeful. And that as it is convenient for carriages, which in a trading country is a great help to negoce, and promotes univerſal correſpondence, without which our inland trade could not be managed.

(2) It is eaſy. We queſtion not to make it appear it is eaſy, to put all the high roads, eſpecially in England, in a noble figure, large, dry, and clean, well drained and free from floods, unpaſſable ſloughs, deep cart-ruts, high ridges, and all the inconveniencies to which they are liable, if not conſtantly kept in repair in the common way, at a prodigious expence to the public; and when this is once done, much eaſier ſtill to be maintained ſo, at a very moderate and trifling public expence, in compariſon to the preſent annual one, raiſed by toll, and other rates.

(3.) It may be cheaper; and the whole aſſeſſment for the repairs of highways for ever be dropped, or applied to other uſes for the public benefit.

The propoſal is as follows:

Firſt, That an act of parliament be made, with liberty for the undertakers, where it is wanted, to dig and trench, to cut down hedges and trees, or whatever is needful for ditching, draining, and carrying off water, cleaning, enlarging, and levelling the roads, with power to lay open or incloſe lands; to incroach into lands, dig, raiſe, and level fences, plant and pull up hedges or trees, for the enlarging, widening, and draining the highways, with power to turn either the roads or water-courſes, rivers and brooks, as by the directors of the works ſhall be found needful, always allowing ſatisfaction to be firſt made to the owners of ſuch lands, either by aſſigning to them equivalent lands, or payments in money, the value to be adjuſted by judicious and indifferent perſons, to be named by the lord chancellor, or lord keeper, &c. for the time being; and no water-courſe to be turned from any water-mill, without ſatisfaction firſt made both to the landlord and tenant.

But before we proceed, it may be neceſſary to ſay a word or two upon this article.

The chief, and almoſt the only cauſe of the deepneſs and foulneſs of the roads, is occaſioned by the ſtanding water, which for want of due care to draw it off by ſcouring and opening ditches and drains, and other water-courſes, and clearing of paſſages, ſoaks into the earth, and ſoftens it to ſuch a degree, that it cannot bear the weight of horſes and carriages; to prevent which, the power to dig, trench, and cut down, &c. mentioned above, will be of abſolute neceſſity: but becauſe the liberty ſeems very large, and ſome may think it is too great a power to be granted to any body of men over their neighbours, it is anſwered,

(1.) It is abſolutely neceſſary, or the work cannot be effectually done, and the doing of the work is of much greater benefit than the damage can amount to. But,

(2.) Satisfaction is propoſed to be made to the owner, and that firſt too, before the damage be done, as an unqueſtionable equivalent; and both together, I think, are a full anſwer to any objection in that caſe.

Beſides this act of parliament, a commiſſion muſt be granted to fifteen, at leaſt, in the name of the undertakers, to whom every county ſhall have power to join ten, who are to ſit with the ſaid fifteen, ſo often and ſo long as the ſaid fifteen do ſit for affairs relating to that county; which fifteen, or any ſeven of them, ſhall be directors of the works, to be adviſed by the ſaid ten, or any five of them, in matters of right and claim; and the ſaid ten to adjuſt differences in the counties, and to have right by proceſs to appeal in the name either of lords of manors, or privileges of towns or corporations, who ſhall be either damaged or encroached upon by the ſaid work: all appeals to be heard and determined immediately by the ſaid lord chancellor, or commiſſion from him, that the work may receive no interruption.

This commiſſion ſhall give power to the ſaid fifteen to preſs waggons, carts, and horſes, oxen, and men, and detain them to work a certain limited time, and within a certain

limited ſpace of miles from their own habitations, and at a certain rate of payment: no men, horſes, or carts, to be preſſed againſt their conſent, during the times of hay-time, or harveſt; or upon market-days, if the perſon aggrieved will make affidavit he is obliged to be with his horſes or carts at the ſaid markets.

It is well known to all who have any knowledge of the condition the highways in England in general would be in, without the conſtant great expence we are at to repair them, that in moſt places there is a convenient DISTANCE OF LAND * left open for travelling, either for driving of cattle, or marching of troops of horſe, with perhaps as few lanes or defiles, as in any counties: the croſs roads, which are generally narrow, are yet broad enough in moſt places for two carriages to paſs; but, on the other hand, we have on moſt of the high roads a great deal of waſte land thrown in as it were for an overplus to the highway; which, though it be uſed of courſe by cattle and travellers on occaſion, is indeed no benefit at all either to the traveller as a road, or to the poor as a common, or to the lord of the manor as a waſte; upon it grows neither timber nor graſs, in any quantity anſwerable to the land; but, though to no purpoſe, is trodden down, poached, and over-run by drifts of cattle in the winter, or ſpoiled with the duſt eternally flying from the roads in the ſummer. And this may be obſerved in many parts of England to be as good land as any of the neighouring incloſures, as capable of improvement, and to as good purpoſe.

* A great quantity of this land has been unwarrantably incroached on, and incloſed within theſe 30 or 40 years; and if enquiry was made into the titles, I doubt not but they will be found very deficient.

Theſe lands only being incloſed and manured, leaving the roads to dimenſions with meaſure ſufficient, are the fund upon which the propoſer would build the ſtock of money that muſt carry this deſign into execution, without any expence to the public whatever.

Theſe lands, which we ſhall afterwards make an eſſay to value, being incloſed, will be either ſaleable to raiſe money, or fit to exchange with thoſe gentlemen, who muſt part with ſome land where the ways are narrow: always reſerving a quantity of the lands to be let out to tenants, the rent to be paid into the public ſtock or bank of the undertakers, and to be reſerved for keeping the ways in the ſame repair; and the ſaid bank to forfeit the lands, if they are not ſo maintained.

Another branch of the ſtock muſt be hands, for a ſtock of men is a ſtock of money; to which purpoſe every county, city, town, and pariſh, ſhall be rated at a ſet price, equivalent to eight years payment for the repair of highways; which each county, &c. ſhall raiſe, not by aſſeſſment in money, but by preſſing of men, horſes, and carriages, for the work; the men, horſes, &c. to be employed by the directors: in which caſe all corporal puniſhments inflicted for miſdemeanors, as of whippings, ſtocks, pillories, houſes of corrections, &c. might be eaſily tranſmitted to a certain number of days work on the highways; and in conſideration of this proviſion of men, the county ſhould for EVER AFTER be acquitted of any contribution, either in money or work, for repair of the highways, building of bridges excepted.

There will, perhaps, lie ſome popular objection againſt this undertaking; the firſt is, the great controverted point in England of the INCLOSURE OF THE COMMON †, which tends to depopulation, and injures the poor. 2. Who ſhall be judges or ſurveyors of the work, to oblige the undertakers to perform to a certain limited degree.

† If as much of common land had been incloſed, and the profits thereof applied to the repairs of the highways, as has been unjuſtifiably ſtolen therefrom, the amount would have greatly, if not effectually, contributed to this good work.

For the firſt, the incloſure of the common: a clauſe that runs as far as to an incroachment upon Magna Charta, and a moſt conſiderable branch of the property of the poor: I anſwer it thus:

(1.) The lands propoſed to be incloſed, are not ſuch as from which the poor do indeed reap any benefit, or at leaſt any that is conſiderable.

(2.) The bank and public ſtock, which are to manage this great undertaking, will have ſo many little labours to perform, and offices to beſtow, that are fit only for labouring poor perſons to do, as will put them in a condition to provide for the poor who are ſo injured, that can work; and to thoſe who cannot, may allow penſions for overſeeing, ſuperviſing, and the like, which will be more than equivalent.

(3.) For depopulations, the contrary ſhould be ſecured, by obliging the undertakers, at ſuch and ſuch certain diſtances, to erect cottages, two at leaſt in a place, which would be uſeful to the work and ſafety of the traveller, to which ſhould be an allotment of land, always ſufficient to invite the poor inhabitant, in which the poor ſhould be tenant for life gratis, doing duty upon the highway as ſhould be appointed; by which, and many other methods, the poor ſhould be great gainers by the propoſal, inſtead of being injured.

(4.) By this erecting of cottages at proper diſtances, a man might travel all over England as through a ſtreet, which might contribute, in ſome meaſure, to prevent robberies, and prove directors to travellers in their way.

(5.) This undertaking once duly ſettled, might in a few years be ſo ordered, that there ſhould be no poor for the common; and if ſo, what need of a common for the poor? Of which in its proper place.

As to the ſecond objection, Who ſhould oblige the undertakers to the performance?

(1.) It is anſwered, Their commiſſion and charter ſhould become void, and all their ſtock forfeited, and the lands incloſed and unfold, remain as a pledge; which would be ſecurity ſufficient.

(2.) The ten perſons choſen out of every county, ſhould have power to inſpect and complain, and the lord chancellor upon ſuch complaint to make a ſurvey; and to determine by a jury, in which caſe, on default, they ſhall be obliged to proceed.

(3.) The lands ſettled on the bank ſhall be liable to be extended for the uſes mentioned, if the ſame at any time be not maintained in the condition at firſt provided, and the bank to be amerced upon complaint of the county.

Theſe and other conditions, which on a legal ſettlement to be made by the wiſdom of the legiſlature, might be thought on, that I do believe would form a conſtitution ſo firm, ſo fair, and ſo equally advantageous to the country, to the poor, and to the public, as has not been put in practice in theſe latter ages of the world.

By means of a grant of waſte, and almoſt uſeleſs lands lying open to the highway, we may preſume to ſay, thoſe lands to be improved, as they might eaſily be, together with the eight years aſſeſſment to be provided in workmen, a noble magnificent CAUSEWAY might be erected, with ditches on either ſide deep enough to receive the water, and drains ſufficient to carry it off; which CAUSEWAY ſhould be four feet high at leaſt; and from thirty to forty feet broad, paved in the middle, to keep it well cemented and cooped in, and ſo ſupplied with gravel, and other proper binding materials, as ſhould ſecure it from decay, with ſmall occaſional reparation.

We hope no man would be ſo weak now, as to imagine that by lands lying open to the road, to be aſſigned to the undertakers, we ſhould mean that all Finchley-common, &c. ſhould be incloſed and ſold for this work: but leſt ſomebody ſhould ſtart ſuch prepoſterous objections, we think it is not improper to mention, That wherever a highway is to be carried over a large common, foreſt, or waſte, without a hedge on either hand for certain diſtance, there the ſeveral pariſhes ſhall allot the directors a certain quantity of the common to lie parallel with the road, at a proportioned number of feet to the length and breadth of the ſaid road; conſideration alſo to be had to the nature of the ground, or elſe giving them only room for the road directly, ſhall ſuffer them to incloſe in any one ſpot ſo much of the ſaid common, as ſhall be equivalent to the like quantity of land contiguous to the road: thus, where the land is good, and the materials for erecting a cauſeway near, the leſs land may ſerve, and on the contrary the more; but in general, allowing them the quantity of land proportioned to the length of the cauſeway, and forty rod in breadth; though where the land is poor, as on downs and plains, the proportion muſt be conſidered to be adjuſted by the country.

Another point, in relation to the dimenſions of roads, ſhould be adjuſted, and the breadth of them, I think, cannot be leſs than thus:

From London every way 10 miles, the high poſt-road, to be built full 40 feet in breadth, and four feet high, the ditches eight feet broad, and ſix feet deep, and from thence onward 30 feet, and ſo in proportion.

Croſs-roads to be 20 feet broad, and ditches proportioned; no lanes and paſſes leſs than nine feet without ditches.

The middle of the HIGH CAUSEWAYS to be paved with ſtone, chalk, or gravel, and the beſt-cemented matter that can be procured the neareſt thereunto, and kept always two feet higher than the ſides, that the water might have a free courſe into the ditches, and perſons kept in conſtant employ to fill up holes, let out water, open drains, and the like, as there ſhould be occaſion. A proper work for highwaymen, and ſuch malefactors as might, on thoſe ſervices, be exempted from the gallows.

It may here be objected, That eight years aſſeſſment to be demanded down, is too much in reaſon to expect any of the poorer ſort can pay; as for inſtance, if a farmer who keeps a team of horſes be, at the common aſſeſſment, to work a week, it muſt not be put ſo hard upon any man as to work eight weeks together. It is eaſy to anſwer this objection. So many as are wanted muſt be had; if a farmer's team cannot be ſpared, without prejudice to him, ſo long together, he may ſpare it at ſundry times, or agree to be aſſeſſed, and pay the aſſeſſment at ſundry payments; and the bank may make it as eaſy to them as they pleaſe.

Another method, however, might be found to fix this work at once. Suppoſe a bank be ſettled for the highways of the county of Middleſex, which as they are, without doubt, the moſt uſed of any in the kingdom, ſo alſo they require the more charge, and, in ſome parts, lie in the worſt condition

of any in the kingdom, 'till the preſent great expence for their repair took place.

If the parliament fix the charge of the ſurvey of the highways upon a bank to be appointed for that purpoſe, for a certain term of years, the bank undertaking to do the work, or to forfeit the ſaid ſettlement. As thus:

Suppoſe the tax on land and tenements for the whole county of Middleſex does, or ſhould be ſo ordered, as it might amount to 20,000 l. per annum, more or leſs, which it now does, and much more, including the work of the farmers teams, which muſt be accounted as money, and is equivalent to it, with ſome allowance to be rated for the city of London, &c. who do enjoy the benefit, and make the moſt uſe of the ſaid roads, both for carrying of goods and bringing proviſions to the city, and therefore in reaſon ought to contribute towards the highways; for it is a moſt unequal thing, if a deſign of this kind ſhould ever take place, that the road from Highgate to Smithfield-market, by which the whole city, is, in a manner, ſupplied with live cattle, and the road by thoſe cattle horribly ſpoiled, ſhould lie all upon that one pariſh of Iſlington to repair: wherefore we will ſuppoſe a rate for the highways to be gathered through the city of London, of 10,000 l. per annum more, which may be appointed to be paid by carriers, drovers, and all ſuch as keep teams, horſes, or coaches, and the like, or many ways, as is moſt equal and reaſonable; the waſte lands in the ſaid county, which, by the conſent of the pariſhes, lords of the manors, and proprietors, ſhall be allowed to the undertakers, when encloſed and let out, may (the land in Middleſex generally letting high) amount to 5000 l. per annum more. If then an act of parliament be procured to ſettle the tax of 30,000 l. per annum, for eight years, moſt of which will be levied in workmen, and not in money, and the waſte lands for ever: we may preſume to affirm, that the highways for the whole county of Middleſex ſhould be put into the following form, and the 5000 l. per annum land be bound to remain as a ſecurity to maintain them ſo, and the county be never after burthened with any further tax for the repair of the highways.

And that we may not propoſe a matter in random generals, like begging the queſtion, without demonſtration, we ſhall enter into the particulars how it may be executed, and that under theſe following heads of articles:

(1.) What is propoſed to be done to the highways.
(2.) What the charge will be.
(3.) How to be raiſed.
(4.) What ſecurity for the performance.
(5.) What profit to the undertakers.

(1.) In regard to what is propoſed to be done to the highways. We anſwer firſt, to repair them, and yet, ſecondly, not alter them, that is, not alter the courſe they at preſent run.

But perfectly build them as a fabric; and, to deſcend to the particulars, it is firſt neceſſary to note which are the roads we mean, and their dimenſions.

Firſt, The high poſt-roads; and they are, for the county of Middleſex, as follows:

		Miles.
From London to	Stains, which is	15
	Colnbrook is from Hounſlow	5
	Uxbridge	15
	Buſhy, the Old-Street way	10
	Barnet, or near it	9
	Waltham-Croſs, in Ware road	10
	Bow	2
		66

Beſides theſe, there are croſs-roads, by-roads, and lanes, which muſt alſo be looked after; and that ſome of them may be put into condition, others may be wholly ſlighted and ſhut up, or made driſt-ways, bridle-ways, or foot-ways, as may be judged convenient by the countries.

The croſs-roads of moſt repute are as follow:

			Miles.
From	London	to Hackney, Old Ford, and Bow	5
	Hackney	Dalſton and Iſlington	2
	Ditto	Hornſey, Mouſewell-Hill, to Whetſtone	8
	Tottenham	The Chace, Southgate, &c. called Green lanes	6
	Enfield-Waſh	Enfield town, Whetſtone, Totteridge to Edgware	10
	London	Hampſtead, Hendon, and Edgware	8
	Edgware	Stanmore, to Pinner, to Uxbridge	8
	London	Harrow and Pinner-Green	11
	Ditto	Chelſea, Fulham	4
	Brentford	Iſleworth, Twickenham, and Kingſton	6
	Kingſton	Staines, Colnbrook, and Uxbridge	17
	Dittto	Chertſey Bridge	5
			90
		Overplus miles	50
			140

And becauſe there may be many parts of the croſs-roads which cannot be accounted in the number above mentioned, or may eſcape our knowledge or remembrance, we allow an overplus of 50 miles, to be added to the 90 miles above, which together make the croſs-roads of Middleſex to be 140 miles.

For the by-lanes, ſuch as may be ſlighted need nothing but to be ditched up; ſuch as are for private uſe of lands for carrying corn and driving cattle, are to be looked after by private hands.

But of the laſt ſort, not to be accounted by particulars, in the ſmall county of Middleſex, we cannot allow leſs in croſs by-lanes, from village to village, and from dwelling-houſes which ſtand out of the way to the roads, than 1000 miles.

So in the whole county we reckon up,

	Miles.
Of the high poſt-roads	67
Of croſs-roads leſs public	140
Of by-lanes and paſſes	1000
	1207

Theſe are the roads we mean, and thus divided under their ſeveral denominations.

To the queſtion, What we would do to them? it is anſwered, (1.) For the 67 miles of high poſt road, it is propoſed to throw up a FIRM STRONG CAUSEWAY, well bottomed, well cemented, and well built, ſix feet high in the middle, and four feet on the ſides, faced with brick or ſtone, and crowned with gravel, chalk, or ſtone, as the ſeveral countries they are made through will afford, being 44 feet in breadth, with ditches on either ſide eight feet broad, and four feet deep; ſo that the whole breadth will be 60 feet, if the ground will permit.

At the end of every two miles, or ſuch like convenient diſtances, ſhall be a cottage erected, with half an acre of ground allowed, which ſhall be given gratis, with 1s. per week wages to ſuch poor man of the pariſh as ſhall be approved, who ſhall once, at leaſt, every day, view his walk, to open paſſages for the water to run into the ditches, to fill up holes or ſoft places. Two riders ſhall be allowed to be always moving the rounds, to view every thing out of repair, and make report to the directors, and to ſee that the ſaid cottagers do their duty.

(2.) For the 140 miles of croſs-road, a like CAUSEWAY to be made, but of different dimenſions, the breadth 20 feet, the ditches four feet broad, three feet deep, the height in the middle three feet, and on the ſides one foot or two, where it may be needful, to be alſo crowned with gravel, and well cemented and built, as before; and 1 s. per week to be allowed to the poor of every pariſh; the conſtables to be bound to find a man to walk on the highway in every diviſion, for the ſame purpoſe as the cottagers do on the greater roads.

Poſts to be ſet up at every turning, to note whither it goes, for the direction of ſtrangers, and how many miles diſtant.

(3.) For 1000 miles by-lanes, only good and ſufficient care to keep them in repair as they are, and to carry the water off, by clearing and cutting the ditches, and laying materials where it is wanted.

This is what is propoſed to be done to the roads; and what, if once performed, we ſuppoſe all people would own to be an undertaking both uſeful and honourable to the kingdom.

(2.) The ſecond queſtion propoſed to be anſwered is, What the charge of all this will be?

Which is reckoned thus:

The work of the GREAT CAUSEWAY is propoſed not to coſt leſs than 10s. per foot, ſuppoſing materials to be bought, carriage and mens labour to be all hired; which, for 67 miles in length, is no leſs than the ſum of 176,880 l. as thus:

Every mile, accounted at 1,760 yards, and three feet to the yard, is 5,280 feet, which, at 10s. per foot, is 2640 l. per mile, and that again multiplied by 67, makes the ſum of 176,880 l. wherein is included the charge of water-courſes, mills to throw off water where needful, drains, &c.

To this charge muſt be added ditching to incloſe land for 30 cottages, and building 30 cottages, at 40 l. each, which is 1,200 l.

The work of the ſmaller cauſeway is propoſed to be finiſhed at the rate of 12 d. per foot, which being for 140 miles in length, at 5,280 feet per mile, amounts to 36,960 l.

Ditching, draining, and repairing 1000 miles, ſuppoſed at 3 s. per rod, for 320,000 rods, is 48,000 l. which added to the two former accounts, ſtand thus:

	l.
The high poſt roads, or great cauſeway	178,080
The ſmall cauſeway	36,960
By-lanes, &c.	48,000
	l. 263,040

If I were to propoſe ſome meaſures, continues the propoſer, for the eaſing this charge, I could, perhaps, lay down a ſcheme how it may be performed for leſs than one half of this charge.

As firſt, By a grant of the court at the Old Baily, whereby all ſuch criminals as are condemned to die for ſmaller crimes, may, inſtead of tranſportation, be ordered a year's work on the highways; others, inſtead of whipping, a proportioned

time, and the like; which would, by a moderate computation, provide us generally a ſupply of 200 workmen, and thoſe coming in as faſt as they go off; and the overſeers ſhould make them work.

Secondly, By an agreement with the African company, to furniſh 200 negroes, who are generally perſons that do a great deal of work; and all theſe are ſubſiſted very reaſonably out of a public ſtorehouſe.

Thirdly, Large carts and horſes to be bought, not hired, with a few able carters; and to the other a few workmen that have judgment to direct the reſt: and thus, perhaps, the great cauſeway might be done for 4s. or 5 s. per foot charge; but of this by the by.

Fourthly, A liberty to aſk charities and benevolence for the execution of this work.

(3.) To the queſtion, How this money ſhall be raiſed? I think if the parliament ſettle the tax on the county for eight years, at 30,000 l. per annum, no man need aſk how it ſhall be raiſed; it will be eaſy enough to raiſe the money; and no pariſh can grudge to pay a little larger rate for ſuch a term, on condition never to be taxed for the highways any more.

Eight years aſſeſſment, at 30,000 l. per annum, is enough to afford to borrow the money by way of anticipation, if need be, the fund being ſecured by parliament, and appropriated to that uſe and no other.

As to what ſecurity for performances.

The lands which are incloſed may be appropriated, by the ſame act of parliament, to the bank and undertakers, upon condition of performance, and to be forfeited to the uſe of the ſeveral pariſhes to which they belong, in caſe, upon preſentation by the grand juries, and reaſonable time given, any part of the roads in ſuch and ſuch pariſhes be not kept and maintained in that poſture they are propoſed to be. Now the lands thus ſettled are an eternal ſecurity to the country, for the keeping the roads in repair, becauſe they will always be of ſo much value over the needful charge, as will make it worth while to the undertakers to preſerve their title to them; and the tenure of them being ſo precarious as to be liable to forfeiture on default, they will always be careful to uphold the cauſeways.

Laſtly, What profit to the undertakers? for we muſt allow them to gain, and that conſiderably, or none would undertake ſuch a work.

To this it is propoſed, firſt,

During the execution of this work, let them be allowed out of the ſtock 3900 l. per annum, for management.

Alſo, after the work is finiſhed, ſo much of the 5000 l. per annum as can be ſaved, and the roads kept in good repair, let be their own; and if the lands ſecured be not of the value of 5000 l. a year, let ſo much of the eight years tax be ſet apart as may purchaſe land to make them up; if they came to more, let the benefit be to the adventurers.

It may be objected here, That a tax of 30,000 l. for eight years will come in as faſt as it well can be laid out, and ſo no anticipations will be requiſite; for the whole work propoſed cannot probably be finiſhed in leſs time; and if ſo,

	l.
The charge of the county amounts to -	240,000
The lands ſaved eight years revenue - -	40,000
	l. 280,000

Which is 13,000 l. more than the charge; and if the work be done ſo much cheaper, as is mentioned, the profit to the undertakers will be unreaſonable.

To this I ſay, I would have the undertakers bound to accept the ſalary of 3000 l. per annum for management; and, if a whole year's tax can be ſpared, either leave it unraiſed upon the county, or put it in bank, to be improved againſt any occaſion of building, perhaps, a bridge; or ſome very wet ſeaſon, or froſt, may ſo damnify the works, as to make them require more than ordinary repair. But the undertakers ſhould make no private advantage of ſuch an overplus; there might be ways enough found for it.

Another objection lies againſt the poſſibility of encloſing the lands upon the waſte, which generally belongs to ſome manor, whoſe different tenures may be ſo croſs, and ſo otherwiſe encumbered, that even the lords of thoſe manors, though they were willing, could not convey them.

This may be anſwered, in general, That an act of parliament is omnipotent with reſpect to titles and tenures of land, and can empower lords and tenants to conſent to what elſe they could not. As to particulars, they cannot be anſwered, 'till they are propoſed; but there is no doubt but an act of parliament may adjuſt it all in one head.

What a kingdom would England be, if this deſign were effectually executed in all the counties of it! And yet I believe it is poſſible, even in the worſt. I have narrowly obſerved, ſays the propoſer, all the conſiderable ways in that impaſſable county of Suſſex, which, eſpecially in ſome parts of the Wild, as they very properly call it, of the county, hardly admits the country people to travel to markets in winter, and makes corn dear at market, becauſe it cannot be brought, and cheap at the farmer's houſe, becauſe he cannot ſometimes carry it to market; yet even in that county would I undertake, ſays he, to carry on this deſign, and that to great advantage, if backed with the authority of an act of parliament.

I have ſeen, in that horrible country, the road 60 to 100 yards broad, lie from ſide to ſide all poached with cattle, the land of no manner of benefit, and yet no going with a horſe, but at every ſtep up to the ſhoulders, full of ſloughs and holes, and covered with ſtanding water. It coſts them incredible ſums of money to repair them, and the very places that are mended would fright a young traveller to go over them. The Romans maſtered this work, and, by a firm cauſeway, made a highway quite through this deep country, through Dorking in Surrey, to Stanſted, and thence to Okeley, and ſo on to Arundel; its name tells us what it was made of, for it was called Stone-Street, and many viſible parts of it remain to this day.

Now ſhould any lord of a manor refuſe to allow 40 yards in breadth out of that road I mentioned, to have the other 20 made into a fair, firm, and pleaſant cauſeway over that wilderneſs of a country?

Or would not any man acknowlege, that putting this country into a condition for carriages and travellers to paſs would be a great work? The gentlemen would find the benefit of it in the rent of their land, and price of their timber; the country people would find the difference in the ſale of their goods, which now they cannot carry beyond the firſt market town, and hardly thither, and the whole county would reap an advantage an hundred to one greater than the charge of it. And ſince the want we feel of any convenience is generally the firſt motive to contrivance for a remedy, I wonder no man ever thought of ſome expedient for ſo conſiderable a defect.—Thus far Mr Projector.

REMARKS.

Ancient Rome * was the center of a great number of magnificent highways, which run through all Italy: ſeveral of them croſſed the Alps, the country of the Gauls, the Pyrenees, and the whole kingdom of Spain. One of them reached from Rome to Lyons, from Lyons to Rheims, and from Rheims to the Channel; it was carried on again in Great-Britain, and continued as far as Scotland. That which extended as far as Byzantium [Conſtantinople] was continued on the other ſide of the Helleſpont, from Chalcedonia through Aſia Minor, Syria, and Paleſtine, then winding through the Iſthmus of Seuez, which joins Aſia and Africa, paſſed through Egypt, as far as Syene, and thence into Ethiopia. There were others that ran along the coaſts of Africa, from one end of it to the other; and hence poſſibly the Romans borrowed the model of their paved ways.

* See the Hiſtory of the Highways of the Roman Empire, by Nicholas Bergier, counſellor at the court of Rheims; a very curious and learned work, and too little read.

If we compare the remains of the Roman roads with the beſt of our modern ones at preſent, we ſhall find many of the former that have ſtood firm and intire for above 1500 years, without any repairs, while ours want reparation two or three times, and oftener, a year.

If the Roman highways, through any neglect to mend them in time, are decayed and broken down in ſome places, at this time of day, yet there are ſeveral countries where they ſtill remain whole and intire. The Appian Way, which was firſt carried from Rome to Capua, and afterwards continued from Capua to Brunduſium, is ſtill in good condition, though it has been a high road above 1900 years; and we have ſome ways in ſeveral parts of France, which have ſubſiſted upwards of 15 or 1600 years. Now it is to their particular ſtructure that we are to aſcribe their long duration; which ſtructure was as follows:

They firſt of all laid open with a plough two parallel furrows; then the ſoldiers (for they were generally employed in the works of this kind in time of peace) carried away the light looſe earth that they found betwixt the furrows, and dug 'till they came to a hard firm bottom: they then filled up the foſſe, or bed which they had hollowed, with a more denſe and weighty matter; as for inſtance, with a ſort of hard ſand, or gravel, taken out of the rivers, or dug out of the quarries: this done, they rammed the whole hard down, and ſmoothed it with heavy rollers; nor did they always end their work here, but oftentimes (to facilitate the draining off the water, and to prevent any mud or dirt from ſoaking in, which would infallibly undermine and looſen the whole) raiſed a terras, or cauſeway, ſeveral feet above the level of the plain, conſiſting of four layers, or ſtories, of ſtrong maſonry.

On the foundation of earth, which, as ſaid before, was firmly compacted and levelled, they ſpread a covering of cement, made of lime and ſand, or haſſock, about an inch thick. The firſt layer, which they placed upon the cement, was of large flat ſtones, laid one upon another, ten inches high, and cemented together with well-tempered mortar: the largeſt ſtones of all were ranged along the ſides of the cauſeway: this layer was called ſtatumen.

The ſecond layer conſiſted of ſtones of a cubical, round, or oval figure, and of many rough irregular ſtones, ſometimes mixed

mixed with potſherds and pieces of broken tiles and bricks; all theſe were ſpread with a ſhovel over the firſt coat of ſtones, and rammed down into the morter, which cemented them together: this ſecond layer was about eight inches thick: this layer was called rudas.

The third layer conſiſted of a foot of morter, not made of beaten tile, for that would have been too expenſive, but of chalk, ſand, or haſſock, mixed with lime, as any of theſe materials were near at hand. This layer, which was ſometimes called the pudding, or pap, though more commonly the nucleus, or kernel, filled up all the cavities or interſtices in the inferior layers, and ſettled into a hard level coat. The great difficulty we find in breaking it now, ſufficiently proves how firm a ſupport this was to the upper covering, eſpecially when we conſider the extreme hardneſs of the inferior ſtrata, with which it is ſo firmly incorporated, as to form one compact impenetrable body, capable of ſuſtaining the greateſt weight imaginable: this layer was called nucleus.

The fourth and laſt layer, which they called the cruſt, ſometimes conſiſted of great hard ſtones, cemented together, as we find in the Appian Way; ſometimes of gravel, or ſmall flints mixed with gravel, as we find in moſt of the Roman military ways *.

* Miſſon's Travels into Italy.

The hardeſt ſtones of all the free-ſtone, and the largeſt ſort of flints, they reſerved for their towns. This layer was called ſumma cruſta.

The ſmall ſtones, flints, and gravel, were often brought hither from other parts, the country people ‖ being ordered to gather them in their vineyards, their heaths, and plowed lands, on the banks of rivers, and the ſea-ſhores, and to bring and lay them by the highway-ſide, where the ſoldiers † had occaſion to uſe them in their work. Of theſe materials the Romans made a covering ſix inches thick, upon the third layer, and ſecured it on the ſides with two borders of earth, which they conſolidated with heavy ſtones, which they laid ſloping, for the water to run off the cauſeway on the plain beneath, to prevent its ſoaking into, and thereby looſening the gravel. By means of this precaution, the traveller and carrier, in all ſeaſons, enjoyed the benefit of a dry hard road. It ſometimes happened that the flint pavement was looſened, by the falling down of the banks and borders which ſhould ſupport the road on the ſides; but the internal layers being ſo cloſely bound and cemented, they did not ſuffer much by it, and the damage was eaſily repaired.

‖ There would be no great hardſhip upon the country people who come for ten miles round to the London markets, and to all other markets throughout the kingdom, and go home with their carts empty, if they were obliged, by act of parliament, to carry a load of proper road materials gratis, to contribute to put the roads into this deſirable condition.

† Our own ſoldiers, in times of peace, might alſo greatly contribute towards forwarding this good work, provided, during the time of their working at the roads, they had an addition of ſix-pence or eight-pence a day made to their pay, out of the ſtock appropriated to carry this deſign into execution. We have experienced the benefit of their labour in this ſhape, in the Highlands of Scotland; beſides, by labour of this kind, they will be preſerved more healthy, ſtout, and vigorous, kept from the vices and debaucheries which the idle profeſſion of a ſoldier, in times of peace, is too apt to lead them into, and be better fitted to act in their military capacity, when public affairs required them; they will alſo be leſs odious, and eſteemed leſs burthenſome to the people in times of peace, when they experience they receive ſo great a benefit from their labour at ſo ſmall an expence. And what barges are obliged to return empty from London, or any other conſiderable market-towns to which, by water-carriage, they may bring any commodity, ſhould alſo be compelled, by the ſaid act of parliament, to carry back gratis a load, or ſuch a quantity as ſhall make up their load, of the beſt road materials that are to be met with the neareſt to their river navigation; but they ſhall not be obliged to land them any where beyond, or out of the courſe of their neceſſary navigation; nor ſhall they land them but at the moſt convenient place neareſt to the river-ſide where the road corporation ſhall order them: but neither the bargemen nor the land-market people ſhall be obliged to load or unload the ſaid road materials, without ſome reaſonable gratuity made them by the corporation. Likewiſe all coaſting veſſels, which now return empty into the country, ſhall be obliged to take a certain quantity of ſuch road materials, when and where it may prove of benefit to the corporation, and no injury whatever to the employment of ſuch veſſels: nor ſhall the veſſels be ever at any trouble in the lading or unlading ſuch materials, without a reaſonable gratuity from the ſaid corporation. But leſt any thing of this kind, though only of a temporary nature, ſhould look too much with the aſpect of arbitrary power, and be taken for a hardſhip, the road corporation might allow them the half price of their ordinary freight; and ſomething of the like kind might be done in regard to the land carriage; which they may chuſe to accept, rather than go empty.

Every one will readily apprehend the laſting ſtrength and ſupport that the roads muſt receive from the ſide walls and abutments, raiſed to a due height, with proper drains to carry off the water, towards the ſloping extremity of ſuch ſide walls and abutments; for if they are made competently ſtrong, they will ſo cement the road materials, as to render them as hard as a rock, and quite impenetrable; at leaſt ſo durable and permanent, that, after the roads are effectually completed, they will require very little conſtant annual expence to keep them in repairs; and which expence, after the firſt, muſt be borne intirely by the road corporation, and the public, if I underſtand the projector rightly, to be for ever after free from all future tax or incumbrance whatſoever, all turnpikes be laid aſide, and no toll or highway tax be ever more heard of in this kingdom.

ROMAGNA, or ROMANIA, a province in Italy, in the Pope's dominions, bounded on the eaſt by the Marcha d'Ancona, along the river Foglia; on the ſouth by the Apennine Hills, which part it from Tuſcany; on the weſt by Lombardy, along the Panero; and on the north by the fens of Verona and the Po, and by part of the Venetian gulph.

This whole country is naturally very rich and delightful, and the plains and vallies productive of corn, wine, oil, fruits, and paſtures for cattle. There are ſome large woods, which abound with all kind of game; and thoſe parts which are contiguous to the Adriatic Sea furniſh the country with a ſufficiency of ſalt, both for itſelf and all the neighbouring inland territories. The ſea, as well as their many rivers, ſupply it with plenty and variety of fiſh; and ſome of theſe being navigable, help to carry on an advantageous commerce. The people here are ſtrong and laborious, and equally fit for arms, traffic, or learning; and the mountains yield mines of ſeveral metals, and the country hath various hot mineral ſprings, of excellent virtue for the preſervation of health.

RAVENNA city hath the Adriatic on the eaſt; the air is very healthy, and the vines in its neighbourhood furniſh it with plenty of delicious wines; but as they have no freſh water but that of rain, the town often labours under a great ſcarcity of it.

CERVIA, ſituate in an unhealthy air, near the coaſt of the Adriatic gulph, 12 miles ſouth-eaſt from Ravenna, and 15 from Rimini. The air is ſo bad, and the place ſo thinly inhabited, that it doth not contain above 400 inhabitants: it has ſome ſalt-works, which bring in a conſiderable profit.

RIMINI is pleaſantly ſituated, on a ſpacious plain on the coaſt of the Adriatic gulph, at the mouth of the river Mareckhia; it being ſeated between a fertile plain on one ſide, and hilly grounds on the other, covered with gardens, vines, olives, and fruit-trees.

FORLI, a city, ſituate 15 miles ſouth-weſt of Ravenna; its territory is extremely rich and fertile, and produces not only plenty of corn, wine, oil, fruits, beans, and other pulſe, but likewiſe great quantities of cummin, anniſe, and cardamum ſeeds; of fenugreek and ſaffron, both wild and cultivated; beſides ſalt and mineral waters, marble, mill-ſtones, ſulphur, &c. It is 46 miles round, and has four conſiderable dependencies on it. Here is an academy of wits, which has produced many learned men and works, in various arts and ſciences.

FAENZA, an ancient city, famed, in regard to its trade, for a fine earthen ware, called by its name, and not inferior to the Dutch Delft, and for its fine linen manufacture.

ROMANIA, RUMELIA, or RUMELI, in Turkey, formerly a part of Thrace, a province of European Turkey, is bounded by Mount Argentum, or Rhodope, anciently called Hæmus, which ſeparates it from Bulgaria, on the north; by the Euxine Sea and Boſphorus, or ſtraight of Conſtantinople, on the eaſt; by the Propontis, or ſea of Marmora, and the Archipelago, on the ſouth; and by another branch of Mount Rhodope, which ſeparates it from Macedon, on the weſt; being near 300 miles long, and 130 broad. It is a fruitful country, abounding in good arable and paſture ground, but produces ſcarce any wine; and the mountains which divide it from Bulgaria and Macedon are exceeding cold and barren; but then they are of ſuch difficult acceſs, that no country is better defended naturally than this, being encompaſſed by the ſea on the ſouth-eaſt, as it is by theſe mountains on the north-weſt: ſo that ſhould the Turks be driven out of Servia and Bulgaria by the Chriſtians, it would be difficult to penetrate further into the Turkiſh-empire.

In the mountains beforementioned are mines of ſilver, lead, and allum; but, through the lazineſs of the Turks, the riches that might be gathered from thence are loſt. Its chief river is the Mariza, which riſes at the foot of Mount Rhodope, and falls into the Archipelago at Eno, againſt the iſle of Samandrachi. In this river it is ſaid that gold ſand is ſometimes found, ſuppoſed to be waſhed down from the mountains.

The chief cities and towns are theſe, viz.

CONSTANTINOPLE, the capital of the whole Turkiſh empire, is ſeated at the moſt eaſtern point of Romania, on a neck of land, which projects towards Natolia, from which it is ſeparated by a canal, or ſtraight, about a mile broad; the ſea of Marmora waſhes its walls on the ſouth ſide, and a gulph of the canal of Conſtantinople waters it on the north.

This city with its ſuburbs, according to Tournefort, is the largeſt in Europe. Its ſituation, by general conſent, is the

moſt agreeable, and the moſt advantageous of any in the whole world. It ſeems as if the canal of the Dardanelles, and that of the Black Sea, were deſigned on purpoſe to bring it the riches of the four quarters of the world: thoſe of the Mogul, the Indies, the remoteſt north, China, and Japan, come by the way of the Black Sea; and by the canal of the White Sea, or ſea of Marmora, come the merchandizes of Arabia, Egypt, Ethiopia, the coaſt of Africa, the Weſt-Indies, and whatever Europe produces. Theſe two canals are as the door of Conſtantinople; the north and ſouth, which are the ordinary winds there, are, as it were, the two folds of the door: when the north wind blows, the door is ſhut, that is, nothing can come in from the ſouthern coaſt; this door opens when the ſouth wind prevails.

The port of Conſtantinople is commodious and magnificent; it is a baſon ſeven or eight miles in circuit towards the city, and as much on the ſuburbs ſide. Its entrance, which is about 600 paces broad, begins at the point of the Seraglio, or Cape of St Demetrius ſituated in the ſouth; this point opens to the eaſt, and faces Scutari; Galata and Gaſſum-Pacha are to the north; laſtly, it terminates to the north-north-weſt, where the river Lycus empties itſelf. This river is made up of two ſtreams; the biggeſt, on which there is a paper-mill, comes from the weſt, and the other flows from the north-weſt. The Lycus is not every where navigable, and, therefore, there are ſtakes to point out the ſureſt places. The ſtream that comes from the north-weſt is not practicable for boats farther than the village of Hali-bei-cui; the other is deep enough for about four miles. Theſe ſtreams are of wonderful uſe to cleanſe the haven; for, deſcending from the north-weſt, they waſh all the coaſt of Paſſim-Pacha and Galata, while part of the waters of the canal of the Black Sea, which deſcend from the north like a torrent, daſh violently againſt the Cape of Boſphorus, and recoil to the right towards the weſt: by which motion they ſweep away the mud that might gather about Conſtantinople, and, by a piece of natural mechaniſm, drive it on by degrees as far as the freſh waters. Theſe freſh waters help to preſerve the ſhipping; for experience ſhews, that they are leſs ſubject to be worm-eaten in ſuch ports where there is freſh water, than where there is ſalt: ſome fiſh too take greater delight in ſuch water, and are better taſted.

The port of Conſtantinople abounds with tunny-fiſh; dolphins alſo ſometimes appear in this port, in ſuch numbers that it ſwarms with them: their teeth are made like a ſaw. Procopius, in commendation of the port of Conſtantinople, ſays it is a thorough port, that is, you may anchor in any part of it; and it is juſtly obſerved by him, that the ſhips there have their prow on land, while the poop is in the water. In ſhallower places you go over a plank into the biggeſt ſhips; ſo that there is no occaſion for a boat to load or unload them. If the Turks would bend their thoughts to navigation, they might make themſelves formidable that way, for they have the beſt harbours of any in the Mediterranean; they would be maſters of all the trade to the Eaſt, by favour of their ports in the Red Sea, which would open them a door in the Eaſt-Indies, China, Japan, places which the Chriſtians cannot reach without doubling the Cape of Good Hope; but the Turks hug themſelves at home, pleaſed to ſee all the nations in the world come to them. Nothing but the eaſt wind can diſturb the port of Conſtantinople, it being intirely expoſed to it; whenever it blows hard from that quarter, eſpecially if it be in the night, it occaſions a frightful hurley-burley, for the ſeamen make ſuch a bawling, and dogs ſuch a barking, that one would think the town was going to be ſwallowed up, if one were not apprized of the cauſe of it.

The bazars, or bezeſtins, are places like our changes, for ſelling fine wares of all ſorts. The old and new bazars ſtand pretty near each other; there are large ſquare buildings, covered with domes, ſupported by arches and pilaſters. In the old one there is but little fine merchandize! it was built in 1461. Here they ſell all ſorts of weapons, eſpecially ſabres, and likewiſe horſe-harneſſes, ſome of which are inriched with gold, ſilver, and precious ſtones. The new bazar is repleniſhed with all manner of merchandizes; and though there be none but goldſmiths-ſhops, yet they ſell furrs, veſts, carpets, ſtuffs of gold and ſilver, ſilk, goats-hair, &c. nor is it without jewels and China wares. They were repairing it when Mr Tournefort was at Conſtantinople, in the year 1700; and he tells us that it would be much more lightſome than it was before, and there would be apartments for officers to have the guard of it, and go their rounds night and day. The goods are well ſecured in theſe places, the gates being ſhut betimes. The Turks retire to their own homes in the city, but the Chriſtian and Jewiſh merchants croſs the water, and return the next morning. See the article BAZAR.

The market for ſlaves of both ſexes is not far off. Here the poor wretches ſit in a melancholy poſture: before the buyers cheapen them, they turn them about from this ſide to that, ſurvey them from top to bottom, put them to exerciſe whatever they have learned, and this ſeveral times a day, before ever they come to an agreement. Such of them, both men and women, to whom nature has been niggardly of her charms, are ſet apart for the vileſt ſervices; but ſuch girls as have youth and beauty paſs their time well enough, only they are often forced to turn Mahometans. The retalers of this human ware are the Jews, who take great care of the ſlaves education, that they may ſell the better. Their choiceſt they keep at home, and thither you muſt go if you would have better than ordinary; for it is here as it is with markets for horſes, the handſomeſt do not always appear, but are kept within doors. Theſe Jews teach their beautiful ſhe-ſlaves to dance, ſing, play on inſtruments, and every thing elſe that may inſpire love. Sometimes they marry very advantageouſly, and feel nothing of ſlavery; they have the ſame liberty in their houſes as the Turkiſh women themſelves. One ſees inceſſantly coming from Hungary, Greece, Candia, Ruſſia, Mengrilia, and Georgia, ſwarms of young wenches, deſigned for the ſervice of the Turks. The ſultans, the baſſa's, and the greateſt lords, often chuſe their wives among them. The women whom fortune allots to the ſeraglio, are not always the beſt diſpoſed of: it is true, a poor ſhepherd's daughter may come to be a ſultaneſs; but then, what numbers of them are neglected by the ſultan! After the Grand Signior's death, they are ſhut up for the reſt of their days in the Old Seraglio, where they pine themſelves away, unleſs ſome baſſa courts them. This Old Seraglio was built by Mahomet II. Here are confined theſe poor wretches, to bewail at leiſure the death of a prince, or that of their children, whom the new ſultan often cauſes to be ſtrangled. It would be a crime to ſhed a tear in the ſeraglio where the emperor reſides: on the contrary, every body ſtrives to expreſs their joy for his acceſſion to the throne. This Old Seraglio, called by the Turks Eſqui Serai, is incloſed with a wall 24 ſpans high, for two miles in compaſs, within which are lodgings and gardens for thoſe ladies diverſion. There is no going into it, the gate being guarded by janizaries and capigi's.

Inſtead of inns at Conſtantinople, and indeed all over Turkey, they have public buildings, called caravanſeras, or kans, erected in convenient parts of the city, for the markets, and traffic of different commodities. Theſe are for all men, of what quality, condition, country, or religion ſoever they be. See the article CARAVANSERA.

ADRIANOPLE is about 110 miles from Conſtantinople, towards the north-weſt; 85 from the confines of Bulgaria, to the ſouth; and 175 from the ſtraights of the Dardanelles, to the north. It is inhabited by Greeks, Jews, Armenians, Turks, and Walachians, and other nations. There is in this city a beautiful exchange, half a mile long, called Ali-Baſſa, taking its name from its founder. It is a vaſt arched building, with ſix gates, and contains 365 noble ſhops, including thoſe that are under the arch of the great gate; they are furniſhed with all ſorts of rich goods, and kept by Turks, Greeks, Armenians, and Jews, who pay five piaſtres, or crowns, a month for each of them, to the founder's heirs, or to ſuch as have purchaſed them, and half a piaſtre to the moſque of Vecerfeli, granted by the Grand Signior, to whom it belonged. Near this exchange is a ſtreet called Seraci, full of good ſhops, with all ſorts of commodities, which affords a delightful ſight for a mile in length.

NICOPOLI, ſituate on the left bank of the river Neſſo, near the confines of Macedonia, is a place of pretty good trade.

GALLIPOLI, in Turkiſh JEBBOLE, is a place of great trade, by reaſon of its convenient ſituation, being in the way to Conſtantinople and Adrianople; inſomuch that the baſſa who governs it makes about 1000 crowns a year of it, beſides the profits of the cadi, aga, and other officers.

The famous canal which ſeparates the two faireſt quarters of the earth, Europe and Aſia, is called the Helleſpont, the Streight of Gallipoli, the canal of the Dardanelles, the Arm of St George, or the Mouth of Conſtantinople. This canal is in a fine country, bounded on each ſide with fruitful hills, on which you ſee ſometimes vineyards, ſometimes olive-plantations, and a deal of arable land. As you go in, you have Thrace and Cape Greek on the left-hand; Phrygia and Cape Janizary on the right; the Propontis, or ſea of Marmora, preſents itſelf on the north, and the Archipelago remains behind on the ſouth. The mouth of the canal is four miles and a half over, and is defended by the new caſtles built in 1659, to ſecure the Turkiſh fleets againſt the inſults of the Venetians, who uſed to attack them in the ſight of the old caſtles. The waters that paſs through this canal, out of the Propontis, are as rapid as if they flowed beneath a bridge, and, when the north wind blows, no ſhip can enter; but, when it is ſouth, you hardly perceive any current at all; you muſt only beware of the caſtles, and yet the paſſage might be forced without much danger, the caſtles being above four miles aſunder: the Turkiſh artillery, however monſtrous it appears, would not much annoy the ſhips, if they had a good wind, and went in a file. Such merchants ſhips as come from Conſtantinople, ſtop three days at the caſtle on the Aſiatic ſhore, to ſearch whether they have any of the Turks ſlaves on board: and yet there paſſes not a day but ſome or other of theſe poor creatures make a ſhift to eſcape. No ſhip of war, of whatever nation, is exempted from being thus viſited, without an expreſs order from the Porte: it is true, it is rather a ceremony than a ſearch. See LEVANT TRADE, ORIENTAL TRADE, and TURKEY TRADE.

ROYAL EXCHANGE, a commodious and elegant building in the city of London, for the convenient public meeting, at ſtated hours, of the merchants, eminent tradeſmen, brokers, agents, and all who have commercial buſineſs to tranſact, by either buying or ſelling commodities, making contracts, or drawing or remitting monies, either within the three kingdoms, or on or to foreign countries, by the means of bills of exchange.

An idea of the ROYAL EXCHANGE of LONDON, as given by Mr Addiſon, afterwards ſecretary of ſtate to his Majeſty George I.

'There is no place in the town, ſays he, which I ſo much love to frequent as the Royal Exchange. It gives me a ſecret ſatisfaction, and in ſome meaſure gratifies my vanity, as I am an Engliſhman, to ſee ſo rich an aſſembly of my countrymen and foreigners conſulting together, upon the private buſineſs of mankind, and making this metropolis a kind of emporium for the whole earth. I muſt confeſs, I look upon high change to be a great council, in which all conſiderable nations have their repreſentative. Factors in the trading world are what ambaſſadors are in the politic world: they negociate affairs, conclude treaties, and maintain a good correſpondence between thoſe wealthy ſocieties of men that are divided from one another by ſeas and oceans, or live on the different extremities of a continent. I have often been pleaſed to hear diſputes adjuſted between an inhabitant of Japan and an alderman of London, or to ſee a ſubject of the Great Mogul entering into a league with one of the Czar of Muſcovy. I am infinitely delighted in mixing with theſe ſeveral miniſters of commerce, as they are diſtinguiſhed by their different walks and different leagues. Sometimes I am joſtled among a body of Armenians; ſometimes I am loſt in a crowd of Jews; and ſometimes make one in a group of Dutchmen: I am a Dane, Swede, or Frenchman, at different times; or rather fancy myſelf like the old philoſopher, who, upon being aſked what countryman he was, replied, That he was a citizen of the world.

Though I very frequently viſit this buſy multitude of people, I am known to nobody there but my friend Sir Andrew, who often ſmiles upon me as he ſees me buſtling in the crowd, but, at the ſame time, connives at my preſence, without taking any further notice of me. There is, indeed, a merchant of Egypt who juſt knows me by ſight, having formerly remitted me ſome money to grand Cairo; but as I am not verſed in the modern Coptic, our conferences go no further than a bow and a grimace.

This grand ſcene of buſineſs gives me an infinite variety of ſolid and ſubſtantial entertainment. As I am a great lover of mankind, my heart naturally overflows with pleaſure, at the ſight of a proſperous and happy multitude; inſomuch that, at many public ſolemnities, I cannot forbear expreſſing my joy with tears, that have ſtolen down my cheeks. For this reaſon, I am wonderfully delighted to ſee ſuch a body of men thriving in their own private fortunes, and, at the ſame time, promoting the public ſtock; or, in other words, raiſing eſtates for their own families, by bringing into their country whatever is wanting, and carrying out of it whatever is ſuperfluous.

Nature ſeems to have taken a particular care to diſſeminate her bleſſings among the different regions of the world, with an eye to this mutual intercourſe and traffic among mankind, that the natives of the ſeveral parts of the globe might have a kind of dependance upon one another, and be united together by their common intereſt. Almoſt every degree produces ſomething peculiar to it. The food often grows in one country and the ſauce in another. The fruits of Portugal are corrected by the product of Barbadoes; the infuſion of a China plant ſweetened with the pith of an Indian cane; the Philippic Iſlands give a flavour to our European bowls. The ſingle dreſs of a woman of quality is often the product of an hundred climates: the muff and the fan come together from the different ends of the earth; the ſcarf is ſent from the torrid zone, and the tippet from beneath the pole; the brocade petticoat riſes out of the mines of Peru, and the diamond necklace out of the bowels of Indoſtan.

If we conſider our own country in its natural proſpect, without any of the benefits and advantages of commerce, what a barren uncomfortable ſpot of earth falls to our ſhare? Natural hiſtorians tell us, that no fruit grows originally among us beſides hips and haws, acorns and pignuts, with other delicacies of the like nature; that our climate of itſelf, and without the aſſiſtance of art, can make no farther advances towards a plum than to a ſloe, and carries an apple to no greater perfection than a crab; that our melons, our peaches, our figs, our apricots and cherries, are ſtrangers among us, imported in different ages, and naturalized in our Engliſh gardens; and that they would all degenerate and fall away into the traſh of our own country, if they were wholly neglected by the planter, and left to the mercy of the ſun and ſoil. Nor has traffic more enriched our vegetable world, than it has improved the whole face of nature among us. Our ſhips are laden with the harveſt of every climate; our tables are ſtored with ſpices, and oils and wines; our rooms are filled with pyramids of China, and adorned with the workmanſhip of Japan: our morning's draught comes to us from the remoteſt corners of the earth; we repair our bodies by the drugs of America, and repoſe ourſelves under Indian canopies. My friend Sir Andrew calls the vineyards of France our gardens, the Spice Iſlands our hot-beds, the Perſians our ſilk-weavers, and the Chineſe our potters. Nature, indeed, furniſhes us with the bare neceſſaries of life, but traffic gives us a great variety of what is uſeful, and, at the ſame time, ſupplies us with every thing that is convenient and ornamental. Nor is it the leaſt part of this our happineſs, that, whilſt we enjoy the remoteſt products of the north and ſouth, we are free from thoſe extremities of weather which give them birth; that our eyes are refreſhed with the green fields of Britain, at the ſame time that our palates are feaſted with fruits that riſe between the tropics.

For theſe reaſons, there are not more uſeful members in the commonwealth than merchants. They knit mankind together in a mutual intercourſe of good offices, diſtribute the gifts of nature, find work for the poor, add wealth to the rich, and magnificence to the great. Our Engliſh merchant converts the tin of his own country into gold, and exchanges his wool for rubies. The Mahometans are cloathed in our Britiſh manufacture, and the inhabitants of the frozen zone warmed with the fleeces of our ſheep.

When I have been upon the change, I have often fancied one of our old kings ſtanding in perſon, where he is repreſented in effigy, and looking down upon the wealthy concourſe of people with which that place is every day filled. In this caſe, how would he be ſurprized, to hear all the languages of Europe ſpoken on this little ſpot of his former dominions, and to ſee ſo many private men, who in his time would have been the vaſſals of ſome powerful baron, negociating, like princes, for greater ſums of money than were formerly to be met with in the royal treaſury? Trade, without enlarging the Britiſh territories, has given us a kind of additional empire. It has multiplied the number of the rich, made our landed eſtates infinitely more valuable than they were formerly, and added to them an acceſſion of other eſtates, as valuable as the lands themſelves.'

REMARKS

ON THE ROYAL EXCHANGE, with regard to private Traders.

From this juſt, beautiful, and elegant deſcription of this aſſembly of traders, an idea may be formed, not only of their uſefulneſs to the ſtate, but what their general conduct ought to be upon this public ſtage of action; for here the eyes of traders are like thoſe of Argus upon each other, and the leaſt faux pas in the management and negociation of their private concerns, may bring inſtantaneous ruin upon individuals, although they may really be men of large fortunes, and even of an extenſive and a boundleſs credit.

As a memento, therefore, to the younger and leſs experienced claſs, we ſhall preſume, from a deſire of being as uſeful as we can to the riſing generation, to point out ſome of thoſe ſhoals and rocks, on which numbers have ſplit in their adventures, from their miſconduct on the Royal Exchange; to the end that this commercial chart of ours, wherewith we preſent them, may guard them againſt thoſe evils.

To which purpoſe, we ſhall conſider the principal relations wherein traders are under a neceſſity of acting upon the exchange towards each other, and towards thoſe, who may act in any capacity ſubſervient to their intereſts.

And (1.) With regard to brokers, who are concerned as middle agents between trader and trader, in relation to drawing and remitting monies by bills of exchange.

We ſhall firſt conſider the drawer, who has occaſion to diſpoſe of his credit in paper. And herein there is no little delicacy requiſite on his ſide; for as theſe exchange agents [the brokers in bills of exchange] are preſumed to know, in the courſe of their altercations, the quantity of exchange-bills that are to be diſpoſed of on a poſt-day, as well as the quantity wanted to any peculiar foreign part, they can often, in an hour's time, diſcover how this matter ſtands, and thereby become maſters of the plenty or ſcarcity of bills to be ſold, as well as the quantity required to be purchaſed.

When this is known (bills of exchange being conſidered like another commodity to be bought and ſold) the broker, by his private conſultation between the buyer and ſeller, or the drawer and remitter, has it in his power to diſcern, and in a great meaſure to fix the price of exchange for ſuch bills. But as it is his intereſt to execute as much buſineſs in a poſt-day as he can for the ſake of his commiſſion, he will not be remiſs in bringing thoſe contracts to as ſpeedy a concluſion as he can, for the ſake of gaining brokerage for his agency.

The ſeller and buyer alſo are heedful to their intereſt, the one to get as advantageous terms for his bills as he can, the other to get them as cheap as the plenty or ſcarcity will admit of. It is, however, the intereſt of the broker to oblige both parties, and as there are a certain number of theſe brokers, who are upon the wing to rival each other, it is the intereſt of every individual to catch at all the buſineſs he can,

leſt, during change time, he ſhould be ſupplanted by any of his brethren, and thereby loſe his commiſſion. Thus ſeveral of theſe brokers applying both to drawers and remitters, they feel out the market price by theſe altercations; and the remitters may judge from the brokers intercourſe, who ſeem eager to fall their bills below the market price, and a drawer may alſo judge from the price bid, who ſeem to be under the neceſſity to remit.

In the courſe of theſe money-negociations between the principal parties concerned, there ariſes a criſis of great delicacy, in relation to the perſonal credit of both, and the broker will eaſily diſcern it. For if the ſeller offers his bills at under rate, or the buyer bids more than men of the beſt credit upon the exchange, here naturally ariſes a ſuſpicion both on the ſide of the drawer and remitter; the latter may from hence diſtruſt the goodneſs of the bill, and the former may doubt whether his money may be punctually paid, when he has parted with his bill, although the time of payment is ſhort.

In theſe tranſactions, therefore, both parties will be upon their guard, leſt in the conduct of theſe concerns, their perſonal credit ſhould ſuffer upon the change; for the principals ſhould not only conſider, that their credits are in the power of each other on ſuch occaſions, but likewiſe in the power of the brokers, whom they employ, and who may poſſibly afterwards give out ſuch ſecret innuendoes, that may in one poſt ruin a trader's reputation, though he may be a man of ſubſtance.

Nor is any thing attended with more unhappy conſequences to a trader, than the appearance of drawing and redrawing upon the exchange; for this is conſtrued as an indication of a man's over-trading, or of his declenſion in credit and fortune. Neceſſities of this kind generally proceed from over-trading, and it is to be feared that there are more traders undone by undertaking too much, than for want of trade. Over-trading is like over-lifting among ſtrong men; vain of their ſtrength, and pride prompting them to put it to the utmoſt ſtretch, they at laſt attempt ſomething too heavy, and become cripples ever after.

Though the diſcounting of bills of exchange by the bank of England and bankers, is a common practice among traders, even of no indifferent repute, yet when too frequently practiſed, is a ſign of want of competent capital wherewith to carry on the circle of their commerce; for who would allow 4 per cent. diſcount out of the profits of his trade, if he could do without it? This is another ſign of over-trading, and is conſtrued ſo by the exchange, notwithſtanding many are weak enough to think that no one remarks it.

Too many frequently deſiring the favour to over draw on their banker with whom they may keep caſh, is conſtrued upon change as another token of declenſion, or over-trading; and although traders may flatter themſelves that theſe things remain ſecrets and unknown, yet if often practiſed, even by pledges in bankers hands, I could tell them how they are generally blown; but this is not my buſineſs. If ſome ſhould not be generous enough in their own breaſt to thank me for the hint, that ſhall not prevent my good offices to others, whoſe gratitude I have experienced.

Traders that uſe the exchange giving out promiſſory notes, is no ſymptom in favour of a trader, though it may not always be imprudent. A few years ſince, practice of this kind gave an alarm in the city of London, when it was diſcovered, that ſeveral traders had entered into a combination to ſupport each others credit, which proved to be rotten at bottom, by the mutual loan of promiſſory notes. If a man really poſſeſſes a tolerable fortune, and he plunges in trade ſo far out of his depth, as to need the practice of ſuch artifices, it will in the end ruin the little credit and fortune he may have: but ſuch I am afraid, as well as others, are too apt to flatter them, as great ſinners do, that their mal-practices are concealed from all but themſelves; when, from the nature of ſuch things being carried on in the heart of the metropolis, and, as it were, within the ſcent of the Royal Exchange, they will ſoon be ſmelt out from the general intercourſe of tranſactions among men of buſineſs.

There are two principal cauſes that may be properly called over-trading in a young beginner, and by both which traders are overthrown. (1.) Trading beyond their ſtock. (2.) Giving too large credit.

A trader ought to meaſure well the extent of his own ſtrength; his ſtock of money and credit is properly his beginning, for credit is a ſtock as well as money: he that takes too much credit, is not in leſs danger than he that gives too much: and the danger lies particularly in this, if the tradeſman over-buys himſelf, that is, buys faſter than he can ſell; by his buying on credit, payments, perhaps, become due too ſoon for his compliance therewith: though the goods are not ſold, he muſt anſwer the bills, upon the ſtrength of his proper ſtock, that is, he muſt pay for them out of his own caſh: if that ſhould not hold out, he is obliged to put off his bills after they are due, or ſuffer the impertinence of being dunned by the creditor, and perhaps by ſervants or apprentices, and that with the uſual indecencies of ſuch kind of people.

This greatly impairs a trader's credit, and if he has any further dealings with his former creditors, he is treated like an indifferent paymaſter: if he bargains for ſix months, they know he will take eight or nine in the payment, and this they conſider in the price, and uſe him accordingly, and this impairs his gain: ſo that loſs of credit is indeed loſs of money, and this weakens him both ways.

The trader that buys warily, generally pays ſurely, and every young beginner ought to buy cautiouſly. Some tradeſmen pride themſelves on ſeeing their ſhops well ſtocked, and their warehouſes full of goods; this is a ſnare to them, and induces to the purchaſe of more goods than they can vend ſuitably to the credit they take, or the capital they poſſeſs; it is a fooliſh as well as a fatal error, whether it lies in their judgment or their vanity; except in ſome retale trades, where a great choice of goods is abſolutely neceſſary, or a trader will want trade on that account; otherwiſe an experienced trader had rather ſee his warehouſe rather ſparingly filled, than overſtocked: if it be too empty, he can ſupply its deficiency when he pleaſes, if his credit be good, and his caſh ſtrong; but a thronged warehouſe is a ſign of the want of cuſtomers, and of a bad market; whereas an empty warehouſe is a ſign of a quick demand. This conduct will ſupport a man's credit on change and elſewhere, in foreign countries as well as in his own.

He then that keeps his credit unſhaken has a double ſtock; we mean, it is an addition to his real ſtock, and often far ſuperior to it. I have known ſeveral traders in the city of London, who have traded to a conſiderable degree very ſucceſsfully, and yet have had a very trifling capital, and ſome not a ſhilling of their own; but by the ſtrength of their reputation, being prudent and aſſiduous, and having preſerved the character of honeſt men, and the credit of their buſineſs by cautious dealing and punctual payments, they have gone on 'till the gain of their trade has effectually eſtabliſhed them, and they have raiſed good eſtates out of nothing.

He that takes credit in trade may give credit, but he muſt be exceeding vigilant, for it is the moſt dangerous ſtate of life that a trader can live in. If the people he truſts fail, or fail but in punctual compliance with him, he can never ſupport his own credit, unleſs he inviolably obſerves the preſervative maxim not to give ſo much credit as he takes: that is, he muſt either ſell for ſhorter time than he takes himſelf, or in leſs quantity; the latter is the ſafeſt, that he ſhould not truſt ſo much as he is truſted with. If indeed he has a large real capital; beſides the credit he takes, that alters the caſe; a man that can pay his own debts, whether other people pay him or no, that man is out of the queſtion: but if ſuch a perſon truſts beyond the extent of his ſtock and credit, even HE may be overthrown too.

Could the trader buy all upon credit, and ſell all for ready money, he might turn uſurer, and put his own ſtock out to intereſt, or purchaſe land with it; but as that is not the caſe, he ſhould ſo reſtrain his liberty of buying and ſelling, as never to give ſo much credit as he takes, by one third part at leaſt.

By giving credit, we mean that even all the goods which a trader buys at home or imports from abroad upon credit, may not be ſold upon credit: perhaps there are goods which are uſually ſold ſo, and no otherwiſe: but the alternative lies before him thus, either he muſt not give ſo much credit in quantity of goods, or not ſo long credit in relation to time: to explain ourſelves.

Suppoſe a trader buys 10,000 l. value of goods on credit, and this 10,000 l. are ſold for 11,000 l. likewiſe on credit, if the time given be the ſame, the man is in a ſtate of apparent deſtruction. Perhaps he owes the 10,000 l. to twenty creditors, perhaps the 11,000 l. is owing to him by 200 debtors: it is ſcarce poſſible that theſe 200 petty cuſtomers (if that be his way of dealing) ſhould all ſo punctually comply with their payments as to enable him to comply with his; and if 2 or 3000 l. fall ſhort, the tradeſman muſt be inevitably undone, unleſs he has a fund to ſupply the deficiency. But,

If a trader had bought 10,000 l. in goods at 6 or 8 months credit, and had ſold them all again to his 200 cuſtomers, at three or four months credit, then it might be ſuppoſed that all, or the greateſt part of them, would have paid time enough to enable him to make the payments on his ſide good; if not, all would be loſt ſtill.

On the other hand, ſuppoſe he had ſold but 3000 l. worth of the 10,000 l. for ready money, and the remainder at ſix months credit, it might be ſuppoſed that the 3000 l. in caſh, and what elſe the 200 debtors might pay in time, would ſatisfy ſuch trader's creditors, 'till the difference might be made good: ſo eaſy a thing is it for a man to loſe his credit in trade, and ſo hard is it upon ſuch a blow to retrieve it again: ſhould not therefore the trader moſt effectually guard as well againſt running too far into debt himſelf, as to ſuffer others to run too deeply in his debt? For if his debtors do not pay him, he cannot pay his creditors, and the next thing is a commiſſion of bankruptcy: thus a trader may be undone, although he has 11,000 l. wherewith to diſcharge 10,000 l. Though it is not poſſible to carry on the extent of trade we do in this kingdom, without a reciprocal credit both taken and given; yet this is ſo nice and tender a point, that perhaps, as many traders fail by giving, as by taking too much credit.

There

There are divers other ways of over-trading, beſides this of taking and giving too much credit; one of theſe is the running into projects and large undertakings, either out of the trader's ordinary road, wherein he is already engaged, or graſping at too many undertakings at once: in both which caſes the trader is often wounded, and ſometimes too deeply to recover. For ſuch adventurers generally ſtock-ſtarve the trader's ordinary buſineſs, which is his principal conſtant ſupport; and as ſchemes out of the way of a trader rarely add to his credit, ſo if they leſſen his ſtock, they weaken him in both his grand ſupports, and it is no wonder that he at length ſinks.

The prudent and ſafe trader is he, that avoiding all ſuch remote excurſions, keeps cloſe and ſteady within the verge of his own concerns, and exerts his whole attention and abilities in his ſhop, his warehouſe, or his counting-houſe, to what he well underſtands, and confining himſelf to what belongs to him there, goes on in the road of his buſineſs without launching into unknown oceans; and content with the gain of his own trade, is neither, by too much ambition or avarice, tempted to be greater or richer by ſuch uncertain and hazardous attempts. See the article PROJECTOR. See alſo the article CREDIT [PRIVATE CREDIT], wherein I have endeavoured to ſhew, both in a perſonal and a national light, the neceſſity of all traders carrying on their affairs in general leſs by credit, and more by ready money.

Credit on a public exchange, and among the commercial world, within the compaſs of a man's concerns, is ſo much a trader's bleſſing, that it is the choiceſt ware in which he deals; he cannot be too tender of ſo eſtimable a jewel, or purchaſe it too dear when he ſtands in need of it: it is a ſtock to his warehouſe, it is current caſh in his cheſt, it accepts all his bills, for it is on the fund of his credit that he has any to accept: demands otherwiſe would all be made upon the ſpot, and he muſt pay for his goods before he had them: in a word, it is the life and ſoul of his trade, and it requires the utmoſt attention and vigilance to maintain and preſerve it.

If then a trader's own credit ſhould be of ſo much value to him, and he ſhould be ſo delicate in his concern about it, ought he not, in ſome degree, to have the ſame care of his neighbours? As a good name is to a man better than life, as the wiſe man ſays, ſo is credit to a trader; it is the life of his traffic; and he that wounds ſuch a man's credit without cauſe, is as much a murderer in trade, as he that kills a man in the dark is a murderer in matters of blood. There is a peculiar nicety in regard to the credit of a trader, which does not reach in other caſes: any other perſon who is ſtigmatized in his character or reputation, it is injurious to him: if it comes in the way of marriage, or a preferment in any ſhape, it may greatly diſappoint and prejudice him only for a time: but if this happens to a trader, he is inſtantly and inevitably blaſted and undone. A trader's credit and a maid's virtue, ought to be ſacred againſt the tongues of defamation; and yet how many traders have been thus undone, and how many more have been put to the full trial of their ſtrength in trade, and have ſtood their ground by the mere force of their good circumſtances! Whereas had they been unfurniſhed with caſh to have anſwered their whole debts, they muſt have fallen with the reſt. There have been inſtances, not only on the London exchange, but that of other places of the like kind, where groundleſs rumour, invidious calumny, and even mean and artful innuendoes, have greatly hurt, and ſometimes ruined, the characters of worthy and ſubſtantial traders. Have we not lately had a moſt notorious inſtance, as appeared in our courts of law, of a vile and infamous attempt to ruin the credit of two very worthy and honourable merchants of the city of London? When I mention the names of a F—t—d and C—k—t, every one acquainted with the true characters of theſe gentlemen, and of the circumſtances of this late affair, I am perſuaded, will think that I have herein done nothing more than juſtice to the characters of theſe eminent traders.

A trader's reputation is of no leſs nicety than a blight upon a fine flower; if it is but touched, the beauty, or flavour of it, or the ſeed of it is loſt; though the noxious breath which touched it, might not reach to blaſt the leaf, or hurt the root; the credit of a trader, eſpecially in his beginning, is too much at the mercy of every enemy he has, 'till it has taken root, and is eſtabliſhed on a ſolid foundation of good conduct and proſperity. Every idle tongue can blaſt the character of a young trader: though we would not diſcourage, yet we would alarm young beginners, and apprize them of the ſtorm and ſcandal which they may expect upon the leaſt ſlip they make. If they but ſtumble, fame will throw them down; if they recover, ſhe will, indeed, as faſt ſet them up; but calumny generally runs before, and bears all down with it; and there are ten, perhaps, who fall under its weight, to one that is raiſed again by the hurry of report.

Nor have only young traders been often the ſacrifice of obloquy; I could point out many inſtances like thoſe of the honourable, though imprudent Woodwards, late bankers in Exchange-alley. There was a time too, when Lombard-ſtreet was the only bank, and the goldſmiths there were all called bankers; the credit of their buſineſs was ſuch, that the like in private hands has not ſince been ſeen in England. Some of thoſe bankers had above a million and an half of paper-credit upon them at a time.

On a ſudden, like a clap of thunder, king Charles the IId ſhut up the Exchequer, which was then the common center of the overplus caſh, which theſe bankers had in their hands: and what was the conſequence? Not only the bankers who had the bulk of their caſh there, but all Lombard-ſtreet ſtood ſtill with aſtoniſhment; the very report of having money in the Exchequer, brought a run upon the bankers that had no money there, as well as upon thoſe that had; and not only Sir Robert Viner, Alderman Backwell, Farringdon, Forth, and others, broke and failed, but ſeveral were ruined, who had not one penny of money in the Exchequer, and only ſunk by the rumour of it, which gave a check to the whole credit of Lombard-ſtreet.

But theſe are ſuch days, that we have never ſeen ſince the happy Revolution; no princes that ever reigned in this kingdom, have been ſo tender of the public credit, as thoſe of the royal houſe of Hanover; and would our Britiſh traders in general, be as ſollicitous to preſerve their own perſonal credit, and that of their fellow traders, unſullied, as our preſent moſt gracious ſovereign is to maintain them in their legal rights and liberties, the traders of Great-Britain would be a match in point of ſkill and addreſs, in their commercial affairs, for thoſe of any, or indeed for thoſe of all nations in the world. And while every individual is vigilantly upon his guard, honourably and judiciouſly to uphold and maintain his own credit, and do no injury to that of other traders, the whole body will become, as it were, a united corps, and may, by dint of their ingenuity and their large capitals, (which in the general are ſuperior to thoſe of moſt nations) rival the traders of every other ſtate or empire.

As the preſervation of the perſonal credit of our Britiſh traders in general, is not only of the greateſt importance to themſelves and families, but likewiſe of unſpeakable benefit to the ſtate, I hope I ſhall be excuſed if I urge a word more upon a topic ſo intereſting and national, more eſpecially to the riſing generation of our traders.

Among the various ſteps of miſconduct that have a tendency to injure and ruin the trader, that of borrowing money (imprudently) upon intereſt is not the leaſt. He that borrows upon intereſt, ſhould inviolably apply the loan to ſtop the breach, which made it firſt neceſſary to him to borrow; otherwiſe, ſuch loan will ſink him deeper into the calamity than it found him; he ought to conſider, whether he may not be as hard diſtreſſed to pay back the loan, as the debts which it was intended to diſcharge, and whether he may not want money as much then as before.

There is a vulgar error in trade, concerning the borrowing money upon intereſt: ſome think that no man ſhould borrow on intereſt, but he whoſe neceſſity obliges him to do it, for the immediate ſupport of his credit, and prevention of his ruin, and that as ſoon as he is able he ſhould refund it, to free himſelf from the payment of intereſt: this is carrying the matter to a more rigid extreme than it ought, and there may be ſome exceptions to this, as there are to moſt general rules.

Some ready-money dealers are yet obliged to keep ſuch vaſt ſtocks of goods by them unſold, that they are ſometimes undone by that means; but he that buys for credit, and ſells for ready money, or leſs credit than he bought for, is always ſafe, and he may ſafely borrow money upon intereſt, for any conſiderable ſum: the reaſon is obvious; his trade muſt increaſe in proportion to the loan which he takes up; if not, he has no uſe for the money he borrows, and will return it of courſe. But if he ſees that he can employ more money than he has, and that he can certainly gain more than the intereſt he pays will balance, and that he can make his returns in due time, he then knows, how much money ſoever he borrows, that he gains ſo much by it above the intereſt, beſides the difference of the credit given and taken for exchange.

A. finds he has bought the value of 3000 l. in ſaltpetre, or pepper, at an India ſale; but if he could buy 6000 l. value at the ſame rate, he has a cuſtomer for it, a very good paymaſter, who will give him after the rate of 8 per cent. profit; whereas if he does not buy that quantity, ſuch a man will. Upon this A. borrows 3000 l. at 5 per cent. intereſt of a ſcrivener, and he buys the goods, ſells them again for 3 per cent. profit more than the intereſt he pays comes to, and has his money in caſh again, time enough to repay the ſcrivener. At this way of calculating, A. is ſure to gain 3 per cent. whereby he gains good profit, without any hazard, as it were: and if he has a return ſooner, as may be the caſe, then he gains ſo much more, as the difference of the money comes to, at 5 per cent. per ann. for the difference of time.

On the other hand, he that gives longer credit than he takes, though he gains 10 per cent. and pays but 5 per cent. may gain nothing. Example: Suppoſe he is truſted but 6 months, and he truſts his cuſtomers 12 months; if he pays 5 per cent. intereſt for the money, and yet ſhould ſell the goods for 10 per cent. profit, it is plain he gains nothing, and acts with diſadvantage into the account; becauſe he runs the riſk of the perſon he truſts, and makes no profit, either for his trouble or hazard.

By the truſting of cuſtomers twelve months, we would not ſuggeſt that any trader in his wits ſhould ſell his merchandize by contract for a year's credit, and for that time to tie up his hands, that he cannot demand his money before. What we mean is, according to the ordinary uſage of trade: Example: A wholeſale man deals with another, a ſhopkeeper, and trades with him upon the general credit of his dealing; the ſhopkeeper goes on buying and paying; he does not examine when the payment for every particular parcel of goods is due, but he buys as his occaſions require goods, and he pays as he can ſpare money; and as he is a current man, and purchaſes large quantities, he is eſteemed a good cuſtomer; yet if we look into his accounts, his parcels and his payments anſwer one another, perhaps, after the rate of 9 to 10 and 12 months credit, nor does he think himſelf a bad paymaſter; and yet, if the wholeſale dealer with whom he trades, paid intereſt of 5 per cent. for his money, unleſs he got more than 10 per cent. by this cuſtomer, he would loſe money by all the goods which he ſold him.—This is a reflection that every tradeſman ought to make, and well to conſider, who may incline to take up money at 5 per cent. intereſt.

Beſides, if all the while any part of the money-borrower's goods remain in the warehouſes unſold, and all that while he pays intereſt for the money that bought them, this article of intereſt-money, if exactly deducted from the profits, eats through the whole bargain; and if ſuch trader would keep an accurate account of profit and loſs, he would experience that ſuch conduct would deſtroy the whole profits of his trade. In a word, intereſt of money is a canker-worm in trade, eats through and through the trader, and inſenſibly conſumes him; and few traders, we fear, ſtate to themſelves this matter in a true light; for whatever loſs the trader meets with, the money-lender muſt be duly paid his intereſt: and with whomſoever the trader compounds, the money-lender makes no compoſition, unleſs he is forced, by the ruin of the trader, to compound for principal as well as intereſt, when, perhaps, by the mere intereſt, he has received doubly his principal.

If it be thus fatal to the trader to pay but the legal intereſt of 5 per cent. for his money, how deplorable muſt his caſe be, when he is oppreſſed either by the lender, the procurer, the ſcrivener, or banker, under the ſly and ruinous article called procuration, continuation, premio, and the like? And this extortion is made when the debtor is apparently in need of the loan, or that it appears he is not in a condition to refund the money: and although, perhaps, the creditor has good ſecurity for his money, yet thoſe people never want pretences and artifices, ſomehow to hook in new and frequent conſiderations, by way of addition to the ordinary intereſt-money.

There is another unhappy practice among the more neceſſitous traders, and which in the end is infallibly deſtructive and ruinous, at leaſt as far as it is followed: this is paſſing and repaſſing promiſſory notes, or bills indorſed by one another reciprocally, and drawn upon themſelves; for ſo it may properly enough be termed, for the preſent ſupply of caſh, in which they are, in the long-run, even extortioners upon themſelves.

This miſchievous practice began principally among merchants trading in foreign parts, when at an extraordinary pinch for money: ſuppoſe it be, that the merchant has a ſhip come into the river, laden with wines, and he wants a ſum of money immediately wherewith to pay the cuſtom-houſe duties; which being done, will preſently come to market, and reimburſe his money.

The importer wanting caſh for the purpoſe, and being in full credit on the exchange, and having a friend at Amſterdam, that he knows will honour his bills, he draws upon him for 2000 l. ſterling, payable at two uſances: upon this draught he immediately receives the money upon the exchange, for the exchange is the merchant's bank on ſuch occaſions as theſe: having thus taken up the money on the credit of his bills, he lands his wines, or whatever other goods they are; ſells a large quantity of them on the keys, and getting in a competent ſum to anſwer it, he immediately takes care of his credit, and of his friend at Amſterdam: and having ſtaid but one month, and his bills being payable at two months in Amſterdam, he punctually remits 2000 l. to his friend there in good bills, to anſwer his firſt draught upon him, and remits the like ſum at uſance; ſo that his friend, experiencing in this caſe, how careful he is of his honour, is ready to accept any bills for him another time: thus far this tranſaction is carried on with reputation; and though a merchant drawing, may have ſome ſmall loſs, by remitting at a ſhorter time than his draught was made for, yet that is not conſiderable, the ſervice done him upon ſuch an exigence requiring it, and merchants of the beſt figure are ſometimes obliged to ſerve themſelves with ready money in ſuch a manner.

But ſuppoſing the merchant finds, that though his wines are landed, and perhaps ſold, yet he has other preſſing occaſions which call for his money, and he cannot remit to Amſterdam to anſwer his draught: hereupon he contrives another ſhift to keep the money two months longer; which is by ordering his friend at Amſterdam to redraw upon him at London at two uſances; which he at Amſterdam does accordingly, and his bills being accepted here, the merchant at Amſterdam is fully ſatisfied, and the drawer's credit remains good at London. But, in this caſe, the merchant at London becomes an extortioner upon himſelf; for, beſides the loſs by the exchange, which is generally againſt him, becauſe he cannot, like a man that draws or remits for the advantage of the exchange, wait, and take it this way or that way, as the courſe of exchange may be moſt to his benefit; ſo his neceſſity at firſt, and his credit at laſt, preſſing him to draw when he had occaſion, and be drawn upon juſt as bills become due, his neceſſities alſo oblige him to run the riſk, and take his chance for the courſe of the exchange; and this is frequently to his diſadvantage. Beſides this, his friend at Amſterdam muſt have his commiſſion, both for the payment of his bills, and again for drawing, with the charge of brokerage both upon the exchange of London and Amſterdam, with poſtage of letters, and other incidents: nor does the matter end here.

When the two uſances are towards expiring, and that, on ſuch an approaching day, his bills from Amſterdam will become due, and muſt be paid or his credit ruined, and perhaps his friend at Amſterdam too; and being not yet in caſh to anſwer thoſe bills, he has recourſe to another expedient, and having ſtill unſpotted credit abroad, he draws for 10,000 crowns upon two merchants, the one at Genoa, the other at Leghorn, his correſpondents, at 30 days after ſight, having effects ſufficient in their hands to anſwer the payment. In order to back this credit, he buys 2000l. worth of goods of the warehouſemen in London, in druggets, or duroys, &c. for which he can currently have ſix months credit, and takes care to have thoſe goods ſhipped, and the bills of lading ſent to his correſpondents, before his advice of drawing the bills. To ſupport his credit with them alſo, he writes, at the ſame time, that, if his effects in their hands ſhould not ſupply in time to anſwer his bills, they ſhould draw upon ſuch another merchant at Paris on his account, to whom he had given directions to accept his bills; all which being politically managed, the bills at Leghorn and Genoa are accepted and paid, without the drawing upon Paris: and now the merchant of London has tranſerred his debt from his friends abroad, to two or three warehouſemen, or Blackwell-Hall factors at home, and has now got ſix months time for the payment of this 2000 l. more than the four months at firſt; ſo that in all he has enjoyed this credit ten months.—When theſe ſix months are expired, it would be greatly to his intereſt that he might be able, out of his ordinary caſh, to pay the tradeſmen off; but his other demands do not admit of it, and, that he may not be dunned and diſhonoured, he becomes under the neceſſity to take the ſame courſe again, and his friends at Leghorn and Genoa having accepted his bills, on the credit of the effects already in their hands, and ſhipped to them as above; he now tries his good friend Monſ. ———, banker at Paris, and draws 2000l. ſterling upon him; and taking up this money upon change, as before, he pays off his warehouſemen and factors, and perhaps buys again, in order to lay in ſtill a good bank at Leghorn and Genoa.

All this while the London merchant keep up his credit, his bills are all honourably accepted and paid; but ſtill the drawing falls all upon himſelf at laſt, till by thus frequently running the ſame round, if he will make an exact calculation, he ſhall find that he has paid at laſt from ten to fifteen per cent. for the uſe of this money; and, which is ſtill worſe, is indebted the principal ſums, one where or other; and this gradually eats him up, and devours his fortune, 'till at length ſome conſiderable diſaſter happening abroad, in the courſe of his affairs, he receives a blaſt upon his reputation, ſo that his bills will not be taken as formerly upon the exchange, and then he is undone.

This drawing and remitting, as it is a fatal thing to a merchant, ſo, unleſs it be very warily managed, it ſoon comes to be ſmelt into by the ſtaunch-credited remitters of money upon the exchange, and they are always jealous where they find a man thus concerned; ſo that it rarely can be carried on for any long time without obſervation, unleſs it be done with a vaſt variety of changing hands, and ſometimes names, and a very punctual anſwering every demand to a tittle; and yet at length it proves fatal to moſt that embark in it.

Another thing that often proves ruinous to a trader, more eſpecially to the merchant, is the want of requiſite accompliſhments to acquit himſelf with credit and honour in his profeſſion; but as I have ſpoken very amply to this matter under the article MERCANTILE COLLEGE [BRITISH MERCANTILE COLLEGE] I refer the reader to that head.

REMARKS in a national light.

Though the conſtant intereſt of our trade and commerce does, in a great meaſure, depend upon the induſtry, prudence, ſkill, and ingenuity of our merchants and traders in general, yet theſe things alone will not anſwer that great end; if the government of Great-Britain does not ſteadily, wiſely, and zealouſly co-operate with our traders to promote and advance the ſame cauſe, all that our traders can do will be ineffectual. But as too many catch at every occaſion to miſrepreſent the conduct of the royal houſe of Hanover, in relation to the

care

care that has been taken of the trade of this kingdom ſince the happy acceſſion of that auguſt family to the throne; I think it my duty to refreſh the memories of ſome, with a ſhort ſtate of what has been done by his late and preſent Majeſty, with regard to this important point. And as an impartial man, I think this more incumbent upon me, becauſe I have taken the liberty, where I have thought truth and the public intereſts have required it, to give my free and undiſguiſed ſentiments on ſome points wherein it appears to me that our miniſters have not ſo warmly eſpouſed this cauſe as could be wiſhed.—We ſhall briefly trace this matter from the beginning of his late Majeſty's reign.—To which end we ſhall take notice of the treaty, concluded at Madrid, on the 14th of December, 1715, and, by comparing it with that concluded at Utrecht on the 19th of December, 1713, ſhew ſeveral particulars in which the treaty made with his late Majeſty is more advantageous to Great-Britain than that which was made in Queen Anne's reign: and indeed it muſt be equally ſurprizing how ſo bad a treaty came to be made at the end of a glorious and ſucceſsful war, and how ſo good a one was obtained by king George I, in the beginning of a reign diſturbed by ſuch inteſtine commotions. But we may learn from hence, that the wiſdom of a ſovereign, and the integrity of his miniſters, are more neceſſary for bringing about works of ſuch conſequence for the public good, than any juncture of time, or any other the moſt favourable circumſtance.

We muſt here premiſe, that by the treaty concluded at Madrid in 1667, the duties of importation payable upon the manufactures and products of Great-Britain, amounted, upon the eſtabliſhed valuation in the Spaniſh book of rates (after the deduction of the gratias) in Andaluſia to $11\frac{1}{3}$ per cent. in Valencia to 5 per cent. and in Catalonia to about 7 per cent. or leſs, and conſequently, upon the whole aforeſaid trade, thoſe duties could not exceed 10 per cent. on a medium.

After this ſhort account of our trade with Spain before the treaty of Utrecht, made by the late queen, we muſt obſerve, that, by the explanatory articles of this laſt-mentioned treaty, the duties of importation upon the products and manufactures of Great-Britain were augmented in Andaluſia to $27\frac{1}{5}$ per cent. at a medium.

But by the treaty made by king George I. at Madrid, the ſaid duties were again reduced, according to the aforeſaid treaty of 1667, and the deduction of the gratias * is eſtabliſhed as an inviolable law; whereas before, the gratias of the farmers of the royal revenue of Spain, were particularly altogether precarious, and depended intirely upon courteſy.

* For the nature of thoſe gratias in Spain, ſee our article GRATIAS, where this matter is fully explained.

That the common reader, however, may here underſtand ſomething of the nature of theſe gratias, he muſt know, that when the king of Spain had laid higher duties upon our Engliſh goods than what the Britiſh merchants were able or willing to comply with, he uſed to abate a certain part: which indulgence or abatement went under the name of gratia, or matter of favour, and not matter of right by treaty. But when he had farmed out theſe his cuſtoms to ſeveral of his ſubjects, the farmers, in order to draw more merchandize to their reſpective ports, and thereby to increaſe their own particular profits, uſed to make new abatements, or gratias, to the Britiſh merchants, endeavouring ſometimes to outvie one another in ſuch indulgences, and by that means to get a greater proportion of cuſtom into their own hands.

But to proceed. The duties on exportation may be computed to be raiſed by the Utrecht treaty, near as much as the foreſaid duties of importation: whereas, by the treaty made by his late Majeſty, they are reduced to their ancient ſtandard. Complaint having been made that the Spaniards, after the ſuſpenſion of arms in queen Anne's reign, had taken ſeveral New England, and other Britiſh ſhips, gathering ſalt at the iſland of Tortuga, a very full and juſt report concerning that affair was laid before her late Majeſty, of which we ſhall give the reader the following extract.

'Your Majeſty's ſubjects have, from the firſt ſettlement of 'the continent of America, had free acceſs to this iſland, 'and have without interruptions, unleſs in time of war, uſed 'to take what ſalt they pleaſed there; and we have proof 'of that uſage for above 50 years, as appears by certificates 'of perſons who have been employed in that trade.

'It doth not appear, upon the ſtricteſt enquiry, that the 'Spaniards ever inhabited or ſettled on the ſaid iſland; nor 'is it probable they ever did, it being all either barren rock, 'or dry ſand, and having no freſh water or proviſions in it.

'We take leave to lay before your Majeſty, the conſequence 'of your Majeſty's ſubjects being prohibited to fetch ſalt at 'Tortuga; which will in part appear from the number of 'ſhips uſing that trade, being, as we are informed, one year 'with another, about 100 ſail.

'The ſalt carried from thence to New England is uſed chiefly 'for curing of fiſh, which is either cod, ſcate-fiſh, or mack-'rel; the former of which is the principal branch of the re-'turns made from the continent to Great-Britain, by way 'of Spain, Portugal, and the Streights, for the woollen and 'other goods ſent from this kingdom thither. Beſides which, 'the ſcate fiſh and mackrel are of ſuch conſequence, that the 'ſugar iſlands cannot ſubſiſt without them, their negroes be-'ing chiefly ſupported by this fiſh: ſo that, if they were not 'ſupplied therewith from New England (which they cannot 'be if your Majeſty's ſubjects are prohibited from getting 'ſalt at Tortuga) they would not be able to carry on their 'ſugar works. This hath been confirmed to us by ſeveral 'conſiderable planters concerned in thoſe parts.

'Upon the whole, your Majeſty's ſubjects having enjoyed an 'uninterrupted uſage of gathering ſalt at Tortuga, ever ſince 'the firſt ſettlement of the continent as aforeſaid, we humbly 'ſubmit to your Majeſty the conſequence of preſerving that 'uſage and right, upon which the trade of your Majeſty's 'plantations ſo much depends.'

Notwithſtanding it appears, from what is above-written, that our SUGAR ISLANDS were like to ſuffer conſiderably, for want of FISH from NEW ENGLAND, no care was taken to have this matter remedied by the explanatory articles to the Utrecht treaty, which were poſterior to the above mentioned report.

However, in the third article of the treaty made by king George I, this buſineſs is fully ſettled to our advantage.

The Britiſh merchants having had ſeveral hardſhips put upon them at Bilboa in Spain, which occaſioned the decay of our trade at that place, the ſaid merchants did make and execute, in the year 1700, A TREATY OF PRIVILEGES with the magiſtrates and inhabitants of St. Ander, very much to the advantage of this kingdom, in order to their removing and ſettling there: the effect of which was prevented by the death of king Charles II. of Spain, and the war which ſoon after enſued. This matter, it ſeems, was ſlighted or neglected by the managers of the Utrecht treaty: for by the XIVth article of that treaty, there is only A LIBERTY GIVEN TO THE BRITISH SUBJECTS TO SETTLE AND DWELL AT ST ANDER, UPON THE TERMS OF THE IXth AND XXXth ARTICLES OF THE TREATY OF 1667, which are general: but no regard was had to the forementioned treaty of privileges in 1700; whereas by the ſecond article of the forementioned treaty made by king George I, the forementioned TREATY OF PRIVILEGES with St Ander, is confirmed and ratified.

Another conſiderable advantage obtained is, that the French, by the treaty made with his late Majeſty, are to pay the ſame DUTIES at the DRY-PORTS, through which they paſs by land-carriage, as we pay upon importation or exportation by ſea, which was not provided for by the Utrecht treaty.

By the ſchedules annexed to the treaty of 1667, the valuable privileges of having JUDGE-CONSERVATORS in Spain (appointed to make a more ſpeedy and leſs expenſive determination of all controverſies ariſing in trade between the Britiſh merchants and the Spaniards) was fully eſtabliſhed. But by the XVth article of the Utrecht treaty, that privilege was in effect given up: for it is therein only ſtipulated, THAT IN CASE ANY OTHER NATION HAVE THAT PRIVILEGE, WE SHALL IN LIKE MANNER ENJOY IT. But by the Vth article of the treaty made by his late Majeſty king George, it is ſtipulated, that WE SHALL ENJOY ALL THE RIGHTS, PRIVILEGES, FRANCHISES, EXEMPTIONS, AND IMMUNITIES WHATSOEVER, WHICH WE ENJOYED BY VIRTUE OF THE ROYAL SCHEDULES, OR ORDINANCES, BY THE TREATY OF 1667: ſo that hereby the great privilege of JUDGE-CONSERVATORS is again confirmed to us.

Theſe are ſome of the advantages which the royal houſe of Hanover hath obtained for us in our SPANISH TRADE.

We ſhall now give a ſhort account of thoſe procured for us from the AUSTRIAN LOW COUNTRIES, by virtue of the XXVIth article of the BARRIER TREATY.

This branch of our trade was regulated by a tariff, or declaration of the DUTIES of IMPORT and EXPORT, in the year 1670, which was ſuperſeded by another made in 1680, and continued 'till the laſt tariff, ſettled in 1715 with king George I. As for the two former, thoſe who will be at the pains of peruſing them, will find the tariff of 1670 laid HIGHER DUTIES on ſeveral conſiderable branches of our trade than that of 1680, but in many particulars was more favourable to us than the latter. Now by the tariff made by king George in 1715, theſe DUTIES were fixed and regulated for the future by thoſe which were moſt favourable in either of the former tariffs, and all our Britiſh products and manufactures (one only excepted, which ſhall be named preſently) ſettled upon an eaſier foot than ever.

Our woollen cloths, being the moſt profitable branch of our trade into theſe countries, by this means gained a very conſiderable advantage: for the tariff of 1680 having laid HIGHER DUTIES upon the finer ſorts, and LOWER DUTIES on ordinary cloth, than what were ſettled in the tariff of 1670, his late Majeſty, by the forementioned BARRIER TREATY, reduced the DUTIES on the finer ſorts to the tariff of 1670, and confirmed the DUTIES on ordinary cloth according to the tariff of 1680. Inſomuch that the tariff of 1715, conſidered with relation to this valuable part of our trade, reduced the DUTIES at leaſt one ſixth part, ſuppoſing the exportation of all ſorts to be equal; but, as there is always a much greater exportation of the ordinary cloth than of the

finer

finer ſorts, the reduction of theſe duties became ſtill much more conſiderable.

We muſt further obſerve, that there had been ſeveral innovations made to the detriment of the Engliſh merchant, ſince the tariff of 1680; all which innovations were intirely ſet aſide by the ſaid treaty of 1715, upon every ſpecies of goods except butter, which is mentioned becauſe we cannot be too minute and circumſtantial in accounts of this nature: this article, however, is moderated, and is rated in proportion to what has been paid by the Dutch.

As our commerce with the Netherlands [ſee the article NETHERLANDS] was thus ſettled to the advantage of our Britiſh merchants, ſo it was much to their ſatisfaction.

I cannot conclude this topic without obſerving, that as nothing but the great reputation of his late Majeſty king George in foreign countries, and of his fixed purpoſes to purſue the real good and happineſs of his kingdoms, could bring about treaties ſo beneficial to our commerce, in ſo few years as he did; ſo it is impoſſible to reflect with patience on the folly and ingratitude of thoſe men, who wickedly laboured to diſturb him in the midſt of theſe his royal cares, and to miſrepreſent, as they did at that time, his glorious endeavours for the good of his people. And if this great prince did ſo much for us, even within the firſt two or three years of his reign, and ſtill greater things during every year of his reign afterwards, as I ſhall ſhew in its proper place: if this wiſe monarch did ſo much for theſe kingdoms, altho' his whole reign was diſturbed with the ſtorms of rebellion and invaſion, and domeſtic ferments of another kind too, what would he not have done for commerce, if his reign had been a ſcene of deſirable quiet and tranquillity? Inſtead of undervaluing the important things he did in this reſpect, we ought rather to admire that he was able to do ſo much, when we could not reaſonably expect he ſhould have been able to have done any thing.

And it may be further ſaid with great truth, that, as well during the reign of his preſent Majeſty, as of that of his royal predeceſſor, they have never made the leaſt attempt to invade the rights of trade or poſſeſſions of any ſtate or empire whatſoever; they never diſcovered any glimmerings of low artifice, chicanery, or perfidy, in their treaties and negociations with foreign powers, not the ſhadow of an intention to injure any in relation to their territorial or commercial intereſt. On the contrary, the royal houſe of Hanover have ſupported the intereſt and glory of this nation by meaſures the moſt juſt, the moſt equitable, and the moſt honourable towards all countries; and I wiſh I could ſay the like of ſome neighbouring nations; but their preſent, as well as their paſt conduct, would give the lye to it; for at this time, without the leaſt cauſe or provocation on the ſide of his Britannic Majeſty, his dominions are moſt ignominiouſly attacked in the face of the whole world: and what adds to the aggravation of the baſeneſs and treachery is, that theſe very deſigns have been chiefly, and moſt effectually meditating, ever ſince the laſt treaty of peace and friendſhip, and under the diſguiſe of the ſincereſt amity, and moſt honourable intentions to preſerve the tranquillity of Europe. See our article PLANTATIONS, and divers others, to which we from thence refer.

Ought not ſuch conduct as this to rouſe all true friends to the trade and intereſt of Great-Britain, to unite their zealous endeavours, to make the remainder of his Majeſty's reign as great and as glorious as it has hitherto been, and not ſuffer it to be ſullied with the loſs of any part of his dominions, eſpecially thoſe which are ſo ineſtimable to the kingdom, and which are, therefore, ſo ſhamefully invaded at preſent? If the wiſe and good have any thing of moment to offer at this critical time, either within doors or without, for the true intereſt and honour of the nation, let it be offered with moderation and ſtrength of argument, not with rancour, heat, and animoſity, for this deſtroys the power and ſplendor of truth and right reaſon. Let gentlemen communicate their ſentiments like gentlemen: let Britons not widen our breaches, when it is their duty to heal them: let us not debate, but act, when the enemy is at the door: let us demonſtrate to the whole world that we are an united people, that we have all imaginable reaſon to love and revere our moſt gracious monarch, and to be warmly attached to the ſupport of his royal houſe, and to the trade and glory of the kingdom; that we are determined to be unanimous to enable his Majeſty effectually to reſent the indignity which is now offered to the nation, and to chaſtiſe and humble thoſe who are the common diſturbers of the peace and tranquillity of the whole world. And as the chief expence, during the reign of his late as well as his preſent Majeſty, has been (as I hope to make appear at a proper time) laid out upon the royal navy of this kingdom, and our magazines are at preſent plentifully filled with naval and military ſtores: as the naval power of this nation is much greater now than it ever was before in any period of time, even compared with that of any other, or many nations: and as we are in a capacity, as I could eaſily prove, to increaſe our naval power to ſuch a degree as will ſoon make our enemies tremble: as this is the real ſituation of our public affairs; we need not be intimidated by the bullies of the world. Every true friend to the Proteſtant cauſe, will chearfully lend his helping hand to ſcourge thoſe whoſe inſolence and treachery deſerve it; and certain I am that thoſe who ſhall do otherwiſe, and endeavour to diſtract his Majeſty's councils at this criſis, or to perplex the great repreſentative of the nation, or the public in general, with ill-timed diſputes and controverſies, can be as little friends to the Proteſtant intereſt, as to the trade and the liberties of theſe kingdoms: and ſuch who ſhall attempt, in any ſhape, to embroil our public affairs, at ſo important a conjuncture, deſerve ever to be ſtigmatized, as unworthy to live under ſo mild, ſo gracious, and ſo free a government; they ought to be branded on the forehead with an hot iron, that they may be for ever after-ſhunned and avoided, as peſtilential to ſociety, and fitter to live under a Popiſh tyranny than under a government like this, of all deſirable liberty and freedom. No man has a greater contempt for men in power, who abuſe the great truſt repoſed in them, than myſelf, nor would any one ſooner lend a hand to pull them down; and few have ſpoke their mind with more freedom upon very intereſting occaſions than I have done: but as I have done it with that decency and moderation that becomes every man that means good and not miſchief, I do not find that I have given any offence. But whoever impartially conſiders the hiſtory of his late and preſent Majeſty's reigns in theſe kingdoms, will find that their hands have been tied from doing the nation that good they have ever aimed at; their reigns have been diſturbed with rebellions at home, and attempts of invaſion from abroad; and our domeſtic ſquabbles, under the pretence of popular patriotiſm, have not, perhaps, done the nation leſs injury than the attempts of our foreign foes. It is true, great ſums of money have been raiſed; but what with domeſtic ſtrife, unnatural rebellions, and the perfidy of foreign courts upon thoſe accounts; theſe ſums, I am perſuaded, have not had the effect that half the money would have had, if thoſe, who have pretended to have been friends to their country, had approved themſelves really ſuch. See the articles REVENUE and TRADE; ſee alſo our article PARLIAMENT [MEMBER of PARLIAMENT].

The Royal Exchange of London is the firſt place in the kingdom that will feel the effects of the injury meditated to be done at this juncture by foreign rivals and enemies to our trade and navigation; and I am well perſuaded that great and honourable body will be the firſt who will ſupply his Majeſty with the ſinews of war, to defeat thoſe wicked intentions. However our enemies may flatter themſelves with the weight of our debts and taxes, and that we cannot act with that ſpirit and vigour requiſite to fruſtrate their unwarrantable deſigns, they will find themſelves as ſhamefully miſtaken as they have heretofore been. It is true, our debts are large, but their incumbrance, let them remember, is, by the reduction of intereſt, rendered much lighter than otherwiſe it would have been: and there are eaſy ways and means to render our debts much lighter ſtill than they are; nor will his Majeſty want either ample reſources or wiſe meaſures, to reduce a certain nation to as low an ebb as ever the great Marlborough did, if they once more rouſe the Britiſh lion againſt them.

ROYAL SOCIETY.

Of the firſt conſtitution of the ROYAL SOCIETY of London, eſtabliſhed in the reign of king Charles II.

Charles the IId, by the grace of God, of England, Scotland, France, and Ireland, king, defender of the faith, &c. To all unto whom theſe preſents ſhall come, greeting. Having long reſolved within ourſelf to promote the welfare of arts and ſciences, as well as that of our territories and dominions, out of our princely affection to all kind of learning, and more particular favour to philoſophical ſtudies; eſpecially thoſe which endeavour, by ſolid experiments, either to reform or improve philoſophy. To the intent therefore that theſe kinds of ſtudy, which are no where yet ſufficiently cultivated, may flouriſh in our dominions; and that the learned world may acknowledge us to be, not only the defender of the faith, but the patron and encourager of all ſorts of uſeful knowledge, KNOW YE, that we, out of our ſpecial grace, certain knowlege, and mere motion, having given and granted, and do by theſe preſents give and grant, for us, our heirs, and ſucceſſors, that there ſhall be for ever a ſociety, conſiſting of a preſident, council, and fellows, which ſhall be called by the name of the preſident, council, and fellows of the Royal Society of London, for cultivating and improving of natural knowlege, of which ſociety we do by theſe preſents declare ourſelves to be founder and patron. And we do hereby make and conſtitute the ſaid ſociety by the name, &c. to be a body corporate, to be continued under the ſame name in a perpetual ſucceſſion; and that they and their ſucceſſors (whoſe ſtudies are to be employed for the promoting of the knowledge of natural things, and uſeful arts by experiments, to the glory of God and the good of mankind) ſhall, by the aforeſaid name of preſident, council, &c. be enabled and made capable in law, to levy, hold, poſſeſs, and enjoy, lands, tenements, &c. liberties, franchiſes, juriſdictions, for perpetuity, or terms of lives, or years, or any other way; as alſo goods, chattels, and all other things of what nature or kind ſoever. And alſo by the name aforeſaid to give, grant, demiſe, or aſſign the ſaid lands, goods, &c.

and to do all things neceſſary thereabout. And the ſaid perſons by the name aforeſaid, are enabled to implead, be impleaded, ſue, defend, &c. in any courts, and before any judges, officers, &c. whatſoever, of the king, his heirs and ſucceſſors, in all and ſingular actions, real and perſonal: pleas, cauſes, &c. of what kind ſoever, as any of his ſubjects within his kingdom of England, or corporations, are by law capable and enabled to do.

And the ſaid preſident, council, and fellows, are impowered to have a common ſeal for their uſe in their affairs; and from time to time to break, change, and make anew the ſame, as ſhall ſeem expedient unto them.

And his Majeſty, in teſtimony of his royal favour towards the ſaid preſident, council, and fellows, and of his eſpecial eſteem of them, doth grant a coat of arms to them and their ſucceſſors, viz. on a field argent a canton of the three lions of England: for a creſt, an eagle proper on a ducal coronet, ſupporting a ſhield charged with the lions aforeſaid; and for ſupporters, two talbots with coronets on their necks. The ſaid arms to be borne, &c. by the ſaid ſociety upon all occaſions.

And that his Majeſty's royal intention may take the better effect for the good government of the ſaid ſociety from time to time, it is eſtabliſhed, that the council aforeſaid ſhall conſiſt of 21 perſons (whereof the preſident for the time being always to be one). And that all perſons, which, within two months next enſuing the date of the ſaid charter, ſhall be choſen by the ſaid preſident and council; and in all times after the ſaid two months, by the preſident, council, and fellows [and noted in a regiſter to be kept for that purpoſe] ſhall be fellows of the ſaid ſociety, and ſo accounted and called during life, except by the ſtatutes of the ſaid ſociety to be made, any of them ſhall happen to be amerced; and by how much any perſons are more excelling in all kinds of learning, by how much the more ardently they deſire to promote the honour, buſineſs, and emolument of the ſaid ſociety, by how much the more eminent they are for integrity, honeſty, piety, loyalty, and good affection toward his Majeſty, his crown and dignity, by ſo much the more fit and worthy ſuch perſons are to be judged for reception into the ſociety.

And for the better execution of his royal grant, his Majeſty hath nominated, &c. his truſty and well-beloved, William, viſcount Brouncker, chancellor to his deareſt conſort queen Catherine, to be the firſt and modern preſident, to continue in the ſaid office from the date of the patent to the feaſt of St Andrew next enſuing, and untill another perſon of the ſaid council be duly choſen into the ſaid office. The ſaid lord Brouncker being ſworn in all things belonging thereto, well and faithfully to execute the ſaid office, before his right well-beloved and right truſty couſin and counſellor, Edward Earl of Clarendon, lord high chancellor of England, in the words following:

I William viſcount Brouncker, do promiſe to deal faithfully and honeſtly in all things belonging to that truſt committed to me, as preſident of the Royal Society of London, for improving natural knowledge. So help me God.

And his majeſty hath nominated, &c. the perſons following, his truſty and well-beloved Sir Robert Murray, Knt. one of his privy council in his kingdom of Scotland, Robert Boyle, Eſq; William Brereton, Eſq; eldeſt ſon to the lord Brereton, Sir Kenelme Digby, Knt. chancellor to his deareſt mother queen Mary, Sir Gilbert Talbot, Knt. maſter of his jewel-houſe, Sir Paul Neile, Knt. one of the uſhers of his privy chamber, Henry Slingſby, Eſq; one of the gentlemen of his ſaid privy chamber, Sir William Petty, Knt. Timothy Clark, doctor of phyſic, and one of his phyſicians, John Wilkins, doctor of divinity, George Ent, doctor of phyſic, William Erſkyne, Eſq; one of his cupbearers, Jonathan Goddard, doctor of phyſic, William Ball, Eſq; Matthew Wren, Eſq; John Evelyn, Eſq; Thomas Henſhaw, Eſq; Dudley Palmer, of Gray's Inn, Eſq; Abraham Hill, of London, Eſq; and Henry Oldenburg, Eſq; together with the preſident aforeſaid, to be the firſt and modern 21 of the council and fellows of the Royal Society aforeſaid, to be continued in the offices of the council aforeſaid, from the date of the patent to the feaſt of St Andrew next following, and from thence 'till other fit perſons be choſen into the ſaid offices. The ſaid perſons to be ſworn before the preſident of the ſociety for the time being, well and truly to execute the ſaid offices, according to the form and effect of the aforeſaid oath to be adminiſtered to the preſident, by the lord chancellor as aforeſaid. For the adminiſte ing which oath to the ſaid perſons, and all others hereafter from time to time to be choſen into the ſaid council, full power and authority is granted to the preſident for the time being: and the ſaid perſons duly ſworn, and all other from time to time duly choſen into the ſaid council and ſworn, are to aid, adviſe, and aſſiſt in all affairs, buſineſſes, and things, concerning the better regulation, government, and direction of the Royal Society, and every member thereof.

Furthermore, liberty is granted to the ſaid ſociety, lawfully to make and hold meetings of themſelves, for the ſearching out and diſcovery of natural things, and tranſaction of other buſineſſes relating to the ſaid ſociety, when and as often as ſhall be requiſite, in any college, hall, or other convenient place in London, or within ten miles thereof.

And power is granted to the ſaid ſociety, from time to time to nominate and chuſe yearly, on St Andrew's day, one of the council aforeſaid, for the time being, to be preſident of the ſociety, until St Andrew's day next enſuing (if he ſhall ſo long live, or not be removed for ſome juſt and reaſonable cauſe) and from thence until another be choſen and put into the ſaid office, the ſaid preſident ſo elected, before admiſſion to that office, to be ſworn before the council, according to the form before expreſſed, who are impowered to adminiſter the ſaid oath from time to time, as often as there ſhall be cauſe to chuſe a preſident.

And in caſe that the ſaid preſident, during his office, ſhall die, recede, or be removed, then, and ſo often, it ſhall be lawful for the council of the Royal Society to meet together to chuſe one of their number for preſident of the ſaid ſociety: and the perſon ſo choſen and duly ſworn, ſhall have and exerciſe the office of preſident for the remainder of the year, and until another be duly choſen into the ſaid office.

And in caſe that any one or more of the council aforeſaid ſhall die, recede, or be removed, (which perſons or any of them, for miſdemeanor, or other reaſonable cauſe, are declared to be amerceable by the preſident and the reſt of the council) then and ſo often it ſhall be lawful for the preſident, council, and fellows, to chuſe one or more of the fellows of the Royal Society in the room of him or them ſo deceaſing, receding, or removed, to complete the aforeſaid number of 21 of the council; which perſon, or perſons ſo choſen, are to continue in office until St Andrew's day then next enſuing, and until others be duly choſen, the ſaid perſons being ſworn faithfully to execute their office, according to the true intention of the patent.

And his Majeſty doth will and grant unto the ſaid preſident, council, and fellows, full power and authority on St Andrew's day yearly, to elect, nominate, and change, ten of the fellows of the Royal Society, to ſupply the places and offices of ten of the aforeſaid number of 21 of the council, declaring it to be his royal will and pleaſure, that ten and no more of the council aforeſaid, be annually changed and removed by the preſident, council, and fellows aforeſaid.

And it is granted on the behalf of the ſaid ſociety, that if it ſhall happen that the preſident be ſick, infirm, detained in his Majeſty's ſervice, or otherwiſe occupied, ſo as he cannot attend the neceſſary affairs of the ſociety, then and ſo often it ſhall be lawful for him to appoint one of the council for his deputy, who ſhall ſupply his place from time to time, as often as he ſhall happen to be abſent, during the whole time of the ſaid preſident's continuance in his office, unleſs he ſhall in the mean time conſtitute ſome other of the council for his deputy: and the deputy ſo conſtituted, is impowered to do all and ſingular things which belong to the office of the preſident of the Royal Society, and in as ample manner and form as the ſaid preſident may do by virtue of his Majeſty's letters patent, he the ſaid deputy being duly ſworn before the council in form before ſpecified, who are impowered to adminiſter the oath as often as the caſe ſhall require.

It is farther granted to the ſociety, to have one treaſurer, two ſecretaries, two or more curators of experiments, one or more clerk, or clerks, and alſo two ſerjeants at mace, who may from time to time attend on the preſident; all the ſaid officers to be choſen by the preſident, council, and fellows, and to be ſworn in form and effect before ſpecified, well and faithfully to execute their offices, which oath the council are impowered to adminiſter: and his Majeſty nominates and appoints his well-beloved ſubjects, the aforeſaid Will. Ball, Eſq; to be the firſt and modern treaſurer; and the aforeſaid John Wilkins and Henry Oldenburg, to be the firſt and modern ſecretaries of the Royal Society, to be continued in the ſaid offices to the feaſt of St Andrew next following the date of the patent. And that from time to time and ever hereafter on the ſaid feaſt of St Andrew (if it be not Lord's day, and if it be Lord's day on the next day after) the preſident, council, and fellows aforeſaid, are impowered to nominate and chuſe honeſt and diſcreet men for treaſurer and ſecretaries, which are to be of the number of the council of the Royal Society; which perſons elected and ſworn, in form before ſpecified, are to exerciſe and enjoy the ſaid offices until the feaſt of St Andrew next then following.

And if it ſhall happen, that the aforeſaid election of the preſident, council, treaſurer, and ſecretaries, or any of them, cannot be made or perfected on the feaſt of St Andrew aforeſaid; it is granted to the aforeſaid preſident, council, and fellows, that they may lawfully nominate and aſſign another day, as near to the ſaid feaſt of St Andrew as conveniently may be, for making or perfecting the ſaid elections, and ſo from day to day 'till the ſaid elections be perfected.

And in caſe that any of the aforeſaid officers of the Royal Society ſhall die, recede, or be removed, from their reſpective offices, then and ſo often ſhall it be lawful for the ſaid preſident, council, and fellows, to chuſe one or more into the office or offices, vacant, to hold the ſame during the reſidue of that year, and untill others be duly choſen and ſworn in their places.

Moreover, on the behalf of the ſociety, it is granted unto the preſident and council, that they may aſſemble and meet together in any college, hall, or other convenient place in

London, or within ten miles thereof (due and lawful ſummons of all the members of the council to extrordinary meetings being always premiſed) and that they being ſo met together, have full power and authority, from time to time, to make, conſtitute, and eſtabliſh ſuch laws, ſtatutes, orders, and conſtitutions, which ſhall appear to them to be good, uſeful, honeſt, and neceſſary, according to their judgments and diſcretions, for the government, regulation, and direction of the Royal Society, and every member thereof; and to do all things concerning the government, eſtate, goods, lands, revenues, as alſo the buſineſſes and affairs of the ſaid ſociety: all which laws, ſtatutes, orders, &c. ſo made, his Majeſty will's and commands, that they be from time to time inviolably obſerved, according to the tenor and effect of them: provided that they be reaſonable, and not repugnant or contrary to the laws, cuſtoms, &c. of his kingdom of England.

And furthermore, full power and authority is given and granted unto the ſaid ſociety, from time to time, to chuſe one or more printers and gravers; and by writing, ſealed with the common ſeal of the ſociety, and ſigned by the preſident for the time being, to grant them power to print ſuch things, matters, and buſineſſes concerning the ſaid ſociety, as ſhall be committed to them by the council from time to time, the ſaid printers and gravers being ſworn before the preſident and council, in form before ſpecified: which preſident and council are empowered to give the ſaid oath.

And for the greater advantage and ſucceſs of the ſociety in their philoſophical ſtudies and endeavours, full power and authority is granted unto them to require, take, and receive, from time to time, dead bodies of perſons executed, and the ſame to anatomize, to all intents and purpoſes, and in as ample manner and form, as the College of Phyſicians and Company of Surgeons of London (by what names ſoever they ſaid two corporations are or may be called) have had and made uſe of, or may have and uſe the ſaid bodies.

And for the improvement of ſuch experiments, arts, and ſciences, as the ſociety may be employed in, full power and authority is granted unto them, from time to time, by letters under the hand of the preſident, in the preſence of the council, to hold correſpondence and intelligence with any ſtrangers, whether private perſons or collegiate ſocieties, or corporations, without any interruption or moleſtation whatſoever: provided, that this indulgence or grant be extended to no farther uſe than the particular benefit and intereſt of the ſociety, in matters philoſophical, mathematical, and mechanical.

Full power and authority is alſo granted, on the behalf of the ſociety, to the council, to erect and build one or more colleges within London, or ten miles thereof, of what form or quality ſoever for habitation, aſſembling, or meeting of the preſident, council, and fellows, about any affairs and buſineſſes of the ſociety.

And if any abuſes or differences ſhall ever hereafter ariſe and happen, about the government or affairs of the ſociety, whence the conſtitution, progreſs, and improvement, or buſineſſes thereof may ſuffer, or be hindered: in ſuch caſes, his Majeſty aſſigns and authoriſes his right truſty and right well-beloved couſin and counſellor, Edward earl of Clarendon, lord high chancellor of England, by himſelf during his life, and after his deceaſe, the lord archbiſhop of Canterbury, the lord chancellor, or lord-keeper of the great ſeal of England, the lord high treaſurer of England, the lord-keeper of the privy ſeal, the lord biſhop of London, and the two principal ſecretaries of ſtate for the time being, or any four or more of them, to compoſe and redreſs any ſuch differences or abuſes.

And laſtly, his Majeſty ſtrictly charges and commands all juſtices, mayors, aldermen, ſheriffs, bailiffs, conſtables, and all other officers, miniſters and ſubjects whatſoever, from time to time to be aiding and aſſiſting unto the ſaid preſident, council and fellows of the Royal Society, in and about all things according to the true intention of his letters patent.'

This is the legal ratification, which the Royal Society received at its firſt eſtabliſhment. According to the intention of theſe letters patent, their council, I believe, has ever ſince been annually renewed; their preſident, their treaſurer, their ſecretaries choſen: the chief employments have been to preſerve their privileges, to diſperſe correſpondents, and to form the body of their ſtatutes, which I will here inſert.

An abſtract of the ſtatutes of the ROYAL SOCIETY.

Whatever ſtatute ſhall be made or repealed, the making or repealing of it ſhall be voted twice, and at two ſeveral meetings of the council.

This obligation ſhall be ſubſcribed by every fellow, or his election ſhall be void.

We, who have hereto ſubſcribed, do promiſe each for himſelf, that we will endeavour to promote the good of the Royal Society of London, for the improvement of natural knowlege, and to purſue the ends, for which the ſame was founded; that we will be preſent at the meetings of the ſociety, as often as conveniently we can; eſpecially at the anniverſary elections, and upon extraordinary occaſions; and that we will obſerve the ſtatutes and orders of the ſaid ſociety: provided that whenever any of us ſhall ſignify to the preſident under his hand, that he deſires to withdraw from the ſociety, he ſhall be free from this obligation for the future. Every fellow ſhall pay his admiſſion-money, and afterwards contribution towards the defraying of the charges of obſervations and experiments, &c.

The ordinary meetings of the Royal Society ſhall be held once a week, where none ſhall be preſent, beſides the fellows, without the leave of the ſociety, under the degree of a baron in one of his Majeſty's three kingdoms, or of his Majeſty's privy council; or unleſs he be an eminent foreigner, and theſe only without the leave of the preſident.

The buſineſs of their weekly meetings ſhall be, to order, take account, conſider, and diſcourſe of philoſophical experiments and obſervations; to read, hear, and diſcourſe, upon letters, reports, and other papers, containing philoſophical matters; as alſo to view, and diſcourſe upon the productions and rarities of nature and art; and to conſider what to reduce from them, or how they may be improved for uſe or diſcovery.

The experiments ſhall be made at the charge of the ſociety; two curators at leaſt ſhall be appointed for the inſpection of thoſe which cannot be performed before the ſociety; by them the bare report of matter of fact ſhall be ſtated and returned.

The election of fellows ſhall be made by way of ballot, and their admiſſion by a ſolemn declaration made by the preſident of their election.

The election of the council and officers ſhall be made once a year: eleven of the preſent council ſhall be continued by lot, for the next year, and ten new ones choſen in like manner. Out of this new council ſhall be elected a preſident, a treaſurer, and two ſecretaries in the ſame way.

The preſident ſhall preſide in all meetings, regulate all debates of the ſociety and council, ſtate and put queſtions, call for reports and accounts from committees, curators, and others; ſummon all extraordinary meetings upon urgent occaſions, and ſee to the execution of the ſtatutes. The vice-preſident ſhall have the ſame power in the abſence of the preſident.

The treaſurer, or his deputy, ſhall receive and keep accounts of all money due to the ſociety, and diſcharge all money payable by the ſociety. He ſhall pay ſmall ſums by order of the preſident under his hand, but thoſe that exceed five pounds by order of the council. All bills of charges for experiments ſhall firſt be ſigned by the curators. The accounts of the treaſurer ſhall be audited four times a year, by a committee of the council, and once a year, by a committee of the ſociety.

The ſecretaries are to take notes of the orders, and material paſſages of the meetings; to take care of the books, papers, and writings of the ſociety; to order and direct the clerks in making entries of all matters in the regiſters and journal-books of the ſociety or council; to draw up ſuch letters as ſhall be written in their name, which ſhall be approved at one of their meetings; to give notice of the candidates propounded, in order to election.

The curators by office ſhall have a ſufficient allowance for their encouragement, which ſhall increaſe proportionably with the revenue of the ſociety, provided that it exceed not 200 l. a year. They ſhall be well ſkilled in philoſophical and mathematical learning, well verſed in obſervations, enquiries, and experiments of nature and art. They ſhall take care of the managing of all experiments and obſervations appointed by the ſociety or council, and report the ſame, and perform ſuch other taſks, as the ſociety or council ſhall appoint; ſuch as the examining of ſciences, arts, and inventions, now in uſe, and the bringing in hiſtories of natural and artificial things, &c. They ſhall be propounded at leaſt a month before they are choſen: they ſhall be examined by the council before the election: to their election every member of the ſociety ſhall be ſummoned: they ſhall at firſt be only elected for a year of probation, except they be of known merits: at the end of the year, they ſhall be either elected for perpetuity, or for a longer time of probation, or wholly rejected. The cauſes of ejecting a curator ſhall be the ſame with ejecting a fellow, or for fraudulent dealing or negligence in the affairs of the ſociety, provided that he ſhall firſt receive three reſpective admonitions. If any curator ſhall be diſabled by age, infirmity, or any caſualty, in the ſervice of the ſociety, ſome proviſion ſhall be made for him during life, if his condition requires, according as the council ſhall think fit.

The clerk ſhall conſtantly attend at all meetings; he ſhall follow the directions of the ſecretaries, in regiſtering and entering all matters that ſhall be appointed: he ſhall not communicate any thing contained in their books, to any that is not a fellow. He ſhall have a certain rate for what he copies, and a yearly ſtipend for his attendance.

The printer ſhall take care for the printing of ſuch books, as ſhall be committed to him by order of the ſociety or council; and therein he ſhall obſerve their directions, as to the correction of the edition, the number of copies, the form, or volume, &c.

The operators of the ſociety, when they have any of their work under their hands, ſhall not undertake the work of any other

other perſons, which may hinder the buſineſs of the ſociety. They ſhall have ſalaries for their attendance.

The common ſeal of the ſociety ſhall be kept in a cheſt with three locks and three different keys, by the preſident, treaſurer, and one of the ſecretaries. The deeds of the ſociety ſhall be paſſed in council, and ſealed by them and the preſident.

The books that concern the affairs of the ſociety, ſhall be the charter-book, ſtatute-book, journal-book, letter-books, and regiſter-books, for the entering of philoſophical obſervations, hiſtories, diſcourſes, experiments, inventions.

The names of beneſactors ſhall be honourably mentioned, in a book provided for that purpoſe.

In caſe of death, or receſs of any fellow, the ſecretaries are to note it in the margin of the regiſter, over-againſt their names.

The cauſes of ejection ſhall be contemptuous diſobedience to the ſtatutes and orders of the ſociety, defaming or malicious damnifying the ſame. This ſhall be declared by the preſident at one of the meetings, and the ejection recorded.

REMARKS on the important general utility of the ROYAL SOCIETY, and the conſequences of the decay thereof.

Having obſerved an affectation in ſome to treat the Royal Society and its members with very unbecoming contempt and indignity, by inſinuating even that any blockhead, if he is but acquainted with a leading member, may be matriculated into this body, and have his name dignified with F. R. S.; I have pitied the underſtanding of ſuch cenſurers; for though fools will dare to mingle with the wiſe, who but a fool will defame a whole body of men, becauſe he may not be acquainted with any of the wiſe with whom it abounds? But,

Praiſing is harder much than finding fault. Rosc.

As I have always looked upon this ſociety as one of the moſt uſeful, moſt important, and moſt honourable in the three kingdoms, and more eſpecially ſo in relation to its trade and commerce, I judge it no way incompatible with this work, to give ſome faint idea of this inſtitution, in order to diſabuſe thoſe who may have been deceived by ſuch who have detracted from its merits. For that certainly can be aſcribed only to the want of due information, with reſpect to the nature and utility of this eſtabliſhment.

That our uninformed readers may make a right judgment of this great and noble deſign, we ſhall attempt, in few words, a diſplay of its high importance to the nation. Now the great purpoſe of this ſociety is, to make faithful records of all the works of nature and art, which can come within their reach; that the preſent age and poſterity may diſtinguiſh error ſtrengthened by preſcription, reſtore truths neglected, apply thoſe known to more various uſes, and make the way more eaſy to what remains unrevealed in all uſeful, and more particularly in all commercial ſcience; which is the life and ſoul of theſe kingdoms. This is the compaſs of their deſign; and theſe great ends they have ſo far anſwered, as to have proved of unſpeakable emolument to mankind in general, as well as Great-Britain in particular: and thoſe nations of Europe that have followed their laudable example, have likewiſe been of great ſervice to ſociety, as well as to their native ſtates and empires.

As for what belongs to the members themſelves that conſtitute this ſociety, they are of different religions, countries, and profeſſions. For they did not propoſe to lay the foundation of an Engliſh, Scotch, Iriſh, Popiſh, or Proteſtant philoſophy, but a philoſophy of mankind. A moſt glorious and moſt benevolent attempt, and attended with the moſt glorious and benevolent conſequences!

By their naturalizing, as it were, men of all countries they have ſettled a conſtant intelligence throughout all civilized nations, and made the Royal Society of England the general bank and free-port of the whole world, for ſound knowlege and philoſophy grounded on EXPERIMENTS, not on viſionary hypotheſis and conjecture, as it was before their happy inſtitution. And by the admiſſion of men of all profeſſions, theſe two benefits have aroſe. (1.) Every art, and every way of life has been ſecured from receiving detriment by their joint councils. (2.) By the equal balance of all profeſſions, no one in particular has by this ſociety overweighed the other, or made the oracle ſpeak their private ſenſe only. All ranks of men have ſome one darling, upon which their care is fixed. If mechanics alone were to make a philoſophy, they would bring it all into their ſhops, and force it to conſiſt wholly of ſprings, wheels, and weights; if phyſicians, ſcarce any thing would be conſidered, beſides the cure of diſeaſes. So much is to be found in men of all conditions, of that which is called pedantry in ſcholars; which is an obſtinate addiction to the forms of ſome private life, and too regardleſs of general things. But,

Though the ſociety entertains men of particular profeſſions, yet the far greater number are gentlemen, free and unconfined. This has prevented, in a great meaſure, two corruptions of learning complained of: the one, that knowlege ſtill degenerates to conſult preſent profit too ſoon; the other, that philoſophers have been always maſters and ſcholars; ſome impoſing, and all the other ſubmitting, and not as equal obſervers without dependance. The firſt of theſe were, before the eſtabliſhment of this corporation, the cauſe of much inconvenience. It weakened the ſtrength of uſeful arts; it made an unhappy diſproportion in their increaſe; while not the beſt, but the moſt gainful of them flouriſhed. But above all, it diminiſhed that very profit for which men ſtrive: and ſo they were ſerved like ſome fooliſh guards, who, while earneſt in picking up ſmall money dropt out of the priſoner's pocket, let the priſoner eſcape, for whom they might have got a great ranſom. A ſecond error that has been avoided by this ſociety, is, that the ſeats of knowlege have ſince their time been LABORATORIES, as they ought to be; not only SCHOOLS, where ſome have taught, and all the reſt SUBSCRIBED.

We ſhall next conſider what courſe of enquiry they have taken, to make their labours unite for the ſervice of mankind.

1. In regard to their expence. Of the ſtock, upon which their expence has been defrayed, that has aroſe only from among themſelves, by ſmall admiſſion-money and contributions. Such a revenue as this can make no great fund, nor amount to any vaſt ſum; they have been no incumbrance to the public, though the public have enjoyed all the benefit of their ſtudies and their labours.

2. The perfection to which all manual arts have, by their means, been brought, deſerves our attention. Men now generally underſtand, to employ thoſe very tools which the Ancients left us, to infinite more works than formerly; they have likewiſe deviſed a great multitude of all ſorts, which were before unknown. The ordinary ſhops of mechanics are now as full of rarities, as the cabinets of the former nobleſt mathematicians.

'Till the ſixteenth century, the art of mechanics was contained in a very narrow compaſs, there being nothing more known about it, than the ſix ordinary powers. At this time ſeveral of the moſt eminent mathematicians began to conſider mechanics, and by the ſtudy and induſtry of the learned members of our Royal Society therein, and by their great example inciting other nations, mankind have received ſuch extraordinary advantages, that none can be ſenſible of, but thoſe who have diligently attended to their labours and tranſactions. To the art of mechanics is owing all ſorts of inſtruments to work with, all engines of war, ſhips, bridges, mills, curious roofs and arches, columns, pendent galleries, and all other grand works in building of every kind. Alſo all clocks, watches, jacks, chariots, carts and carriages; all elegant and uſeful machines of every ſort, are owing to the manual application of theſe principles: in a word, architecture, navigation, huſbandry, and military affairs, owe their invention and uſe to this art; and, indeed, whatever hath artificial motion by air, water, wind, or cords; as all manner of muſical inſtruments, water-works, &c. This is a ſcience of ſuch importance, that, without it, we could hardly eat bread, or lie dry in our beds.—Without mechanics, a general cannot go to war, nor beſiege a town, or fortify a place; or could even invent a ſtocking-frame, the weaving-loom, and any thing elſe for the improvement of the manufactural arts.

The Royal Society have been happily inſtrumental to the advancement of all theſe arts, and to lay open the ſecrets of all trades, and the ſeveral machines uſed therein; whereby one trade has derived great aid and aſſiſtance from others, to the mutual benefit and advantage of all. See our articles ARTIFICERS, MECHANICS, MANUFACTURERS, and PHILOSOPHY EXPERIMENTAL.

The method which they have taken to pry deeply into natural knowlege, has been the moſt judicious, and this may be reduced to theſe following heads: the queries and directions they have given abroad; the propoſals and recommendations they have made; the relations they have received; the experiments they have tried; the obſervations they have taken; the inſtruments they have invented; the theories that have been propoſed; the diſcourſes they have written or publiſhed: the repoſitory and library; and the hiſtories of nature and arts, and the works they have collected.

The manner of their gathering queries, and diſperſing queſtions, is this. Firſt, they have required ſome of their particular fellows to examine all treatiſes and deſcriptions, the natural and artificial productions of thoſe countries, in which they would be informed; at the ſame time they have employed others to diſcourſe with ſeamen, travellers, tradeſmen, and merchants, who are likely to give them the beſt light. Out of this united intelligence from men and books, they have compoſed a body of queſtions, concerning the obſervable things of theſe places. Theſe papers being produced in their aſſemblies, have been augmented or contracted, as they have in their joint judgment ſeen occaſion. And then the fellows themſelves are wont to undertake their diſtribution into all quarters, according as they have had the convenience or correſpondence.

They have compoſed queries and directions, what things are neceſſary to be obſerved, in order to their making of a natural hiſtory in general; what are to be taken notice of towards a perfect hiſtory of the air, and atmoſphere, and weather; what is to be obſerved in the production, growth, advancing,

vancing, or transforming of vegetables; what particulars are requiſite, for collecting a complete hiſtory of the agriculture which is uſed in ſeveral parts of this nation, and others.—Whereby they have been the inſtruments of improving huſbandry in general, and tranſplanting exotics into their own country for the benefit of its commerce.

They have preſcribed exact enquiries, and given punctual directions, for the trials of experiments of rarefaction and condenſation; concerning the cauſe and manner of the petrefaction of wood; of the load-ſtone; of the parts of anatomy; of currents; of the ebbing and flowing of the ſea; of the wonders and curioſities obſervable in mines: in all which they have made improvements, that have tended greatly to the advantage of theſe kingdoms, as I could eaſily ſhew in a ſurprizing variety of particulars, would the limits to which I am circumſcribed admit of it.

To their queries, in general, they have received good returns and ſatisfaction. Beſides theſe there have been ſeveral great and profitable attempts, relating to the good of mankind, and that of the Britiſh nation, propounded to them by many public bodies and private perſons, which they have again recommended to be examined apart by divers of their own number, and by other men of ability and integrity, who have accepted of their recommendations of this kind. In conſequence of this conduct, they propounded the compoſing a catalogue of all trades, works, and manufactures, wherein men are employed, in order to the collecting each of their hiſtories; by taking notice of all the phyſical receipts or ſecrets, the inſtruments, tools, and engines, the manual operations or ſlights, the cheats and ill practices, the goodneſs, badneſs, and different value of materials, and whatever elſe belongs to the operations of all trades.

The effects of theſe meaſures are too manifeſt throughout all their labours to need proof.

Their improvements in aſtronomy and navigation are not leſs than in thoſe of other cardinal points of general uſe. They ſuggeſted the making a perfect ſurvey and map of all the fixed ſtars in the zodiac, both viſible to the naked eye, and diſcoverable by teleſcopes; towards the obſerving the apparent places of the planets with teleſcopes, both by ſea and land: and, in order to perfect this great work, ſeveral of their fellows had their portions of the heavens allotted to them, wherein they have made an extraordinary proficiency, and their members, or thoſe who have built upon their diſcoveries, have made very conſiderable improvements in aſtronomy and navigation.

They firſt recommended the advancing of the manufacture of tapeſtry; the improving of ſilk-making; the propagating of ſaffron; the melting of lead ore with pit-coal; the making iron with ſea-coal; the uſing the duſt of black-lead, inſtead of oil, in clocks; the making trials on the qualities of Engliſh earths of various kinds, in order, if they could not diſcover ſo fine a ſubſtance as china, for the perfecting of the potters art: in moſt of which the deſired improvements have been made, by the generous communication of their ſucceſsful experiments, and the ſpirit which they firſt raiſed for thoſe things in the nation.

They firſt ſtarted the propagation of potatoes; the planting of verjuice grapes in England; the chemical examination of French and Engliſh wines; the gradual obſervation of the growth of plants, from the firſt ſpot of life; the increaſing of timber, and the planting of fruit-trees; which they have done, by ſpreading the plants into many parts of the nation, and by publiſhing free and unreſerved accounts of the beſt ways of their cultivation.—The great effects that we have experienced in relation to theſe particulars, were firſt owing to this noble and generous body.

Nor is there any branch of the mathematical literature but what has received more extraordinary helps and advancement from this learned corporation, than from any other whatever; and how far that hath contributed to the promotion of our commercial arts and trade, ſee our article MATHEMATICS.

But it would be endleſs to recount all the uſeful and important diſcoveries and improvements that this learned body have made for the benefit of the trade of theſe kingdoms: nothing leſs can do juſtice to them than an ample hiſtory of all their tranſactions; wherein we ſhall find that there is ſcarce any branch of trade, or any art or ſcience practiſed in Great-Britain, but hath received ſome advantage from this inſtitution.

This was a part of the aſſiſtance and information which they at firſt gave to others, to provoke them to enquire, and to order and regulate their inquiſitions. To theſe may be added the relations of thoſe effects of nature and art which have been communicated to them. Theſe have been infinite in number: all which have furniſhed judicious readers and artiſts, from time to time, with admirable hints to direct their obſervations. Among the vaſt heap of relations which abound in their entry-books, it is no wonder that ſome ſhould prove miſrepreſentations, and ſometimes deceptions of the relators. But this has never long occaſioned the propagation of miſtakes: nay, ſometimes the very erroneous accounts of others have been attended with ſome benefit; for as the minds of men are liable to miſtake falſhoods for truths, though they are ever ſo circumſpect, ſo they are often drawn by uncertain, and ſometimes erroneous reports, to ſtumble on truths and realities.

But if this way of general receiving all credible accounts of natural and artificial productions, ſhall ſeem to have been expoſed to over-much hazard and uncertainty, that danger has been removed, by the Royal Society's reducing ſuch matters of information into real and impartial trials, performed by their own hands. To which end it has been their uſual courſe, when they themſelves have appointed the trial, to propoſe one week ſome particular experiments, to be proſecuted the next, and to debate beforehand concerning all things that might conduce to the better carrying them on. In regard to which, it has been the cuſtom for any of the ſociety to urge freely what came into their thoughts or memories, either from the obſervations of others, or from books, or from their own experience. This is a moſt neceſſary preparation to any that reſolve to make a deep ſearch into nature, or any advancement in the uſeful arts.

It is impoſſible but they, who will only tranſcribe their own thoughts, and diſdain to meaſure or ſtrengthen them by the aſſiſtance of others, ſhould be, in moſt of their apprehenſions, too narrow and obſcure, by ſetting down things for general, which are only peculiar to themſelves: it cannot be avoided but they will commit many groſs miſtakes, and beſtow much uſeleſs pains, by making themſelves wilfully ignorant of what is already known, and what is concealed.

It was tried among the Ancients, to find out the pure and primitive language of the world, by breeding up a child ſo, that he might never hear any man ſpeak. But what was the event of that trial? Inſtead of obtaining that end, the child was made abſolutely dumb thereby. And the like ſucceſs will that philoſopher find, who ſhall expect that, by the keeping his mind free from the tincture of all others opinions, it will give him the original and uninfected truths of things. All knowlege is to be got the ſame way that a language is, by induſtry, uſe, and obſervation; it muſt be received, before it can be drawn forth. It is true, the mind of man is a glaſs, which is able to repreſent to itſelf all the works of nature; but it can only ſhew thoſe figures which have been brought before it. I know it may be here ſuggeſted, that they who buſy themſelves much abroad about learning the judgments of others, cannot be unprejudiced in what they think; but it is not the knowing, but the peremptory addiction to others tenets, that ſours and perverts the underſtanding: nay, to go farther, that man who is thoroughly acquainted with all ſorts of opinions, is much more unlikely to adhere obſtinately to any one particular, than he whoſe head is only filled with thoughts that are all of one colour.

Nor can diſcoveries of this nature be better conducted than by the joint labours of the whole ſociety. It were an intolerable burthen, if it were wholly caſt on the experimenters themſelves: for it is not only true, that thoſe who have the beſt faculty of experimenting are commonly moſt averſe to the reading books, and ſo it is fit that this defect ſhould be ſupplied by others pains: but alſo it would too much tire and waſte, or at leaſt divert their ſpirits, before they came to the main work; whereas the taſk being ſhared amongſt ſo great a number, becomes not much more than a buſineſs of delight. Well then, by this firſt comment and diſcourſe upon the experiment, he that is to try it being preſent, and having ſo good an opportunity of comparing ſo many other men's conceptions with his own, and with the thing itſelf, muſt needs have his thoughts more enlarged, his judgment confirmed, his eyes opened to diſcern what moſt compendious helps may be provided, what part of it is more or leſs uſeful, and upon what ſide it may be beſt attempted: the truths which he learns this way will be his pattern, the errors will be his ſea-marks, to teach him to avoid the ſame dangers; the very falſhoods themſelves will ſerve to enlarge, though they do not inform his underſtanding.

Thoſe to whom the conduct of the experiment is committed, being diſmiſſed with theſe advantages, do, as it were, carry the eyes and imaginations of the whole company into the laboratory with them; and, after they have performed the trial, they bring all the hiſtory of its proceſs back again to the teſt. Then comes in the ſecond great work of the aſſembly, which is to judge and reſolve upon the matter of fact.

In this part of their employment, they uſed to take an exact view of the repetition of the whole courſe of the experiment; here they obſerved all the chances, and the regularities of the proceeding; what nature does willingly, what conſtrained; what with its own power, what by the ſuccours of art; what in a conſtant road, and what with ſome kind of ſport and extravagance; induſtriouſly marking all the various ſhapes into which it turns itſelf when it is purſued, and by how many ſecret paſſages it at laſt obtains its end; never giving it over 'till the whole company has been fully ſatisfied of the certainty or impoſſibility of the effect.

This critical and reiterated ſcrutiny of thoſe things which are the plain objects of their eyes, muſt needs put out of all reaſonable diſpute the reality of thoſe operations which the ſociety ſhall poſitively determine to have ſucceeded. If any ſhall ſtill think it a juſt philoſophical liberty to be jealous of reſting on their credit, they are in the right, and their diſſentings are

always

always moſt thankfully received, if they be eſtabliſhed on ſolid works, and not only on prejudices or ſuſpicions. To the Royal Society it is as acceptable to be confuted as to diſcover, ſeeing, by this means, they will accompliſh their main deſign: others are inflamed, many more labour, and ſo the truth is obtained between them; which may be as much promoted by the contentions of hands and eyes, as it is commonly injured by thoſe of tongues.

The hiſtory of the experiments performed being thus ſecured by the ſociety, the next matter is their conjecturing upon CAUSES, which is a matter of no leſs delicacy than of general importance in experimental reſearches; and herein ſuch exquiſite diſcernment is required, that they have been cautious to ſhun the overweaning dogmatizing on cauſes on the one hand, and not to fall into a ſpeculative ſcepticiſm on the other; and whatever cauſes they have, with ſuch deliberation, found to hold good, they have ſtill made them increaſe, to the advance of ſcience, by further experimenting upon them: wherein though they have been, in many reſpects, very ſucceſsful, yet this has been owing to their great caution; becauſe they have not been over-haſty and precipitate in concluding upon the cauſes, before the effects have been ſufficiently ſearched into: for although the experiment has been the taſk of few, yet the conjecturing and debating on its conſequences has been the employment of their full and ſolemn aſſemblies. Experience in all ages has evinced that there never can be found, in the breaſt of any particular philoſopher, as much wearineſs and coldneſs of thinking, and rigorous examination, as is needful to a ſolid aſſent, and to a laſting concluſion in regard to matters of experimental ſcience: the wiſeſt men are apt to deceive themſelves into a certain confidence of the certainty of their knowlege.

On the other ſide, this doubtfulneſs of thoughts, this doubtfulneſs of concluding, which is ſo uſeful in this caſe, is ſo natural to a multitude of counſellors, that it is frequently urged againſt them as their inſeparable imperfection. It is not in theſe caſes that the moſt ſpeedy determinations will anſwer the end aimed at: here many delays are required; here he that can make a ſolid objection, or aſk a ſeaſonable queſtion, will do more ſervice than he who ſhall raſhly fix on an hundred ill-grounded reſolutions.

Nor has the ſociety been only fore-armed againſt this great inconvenience, they foreſaw it, and, therefore, have not regarded the credit of names, but things, preſerving to itſelf the liberty of refuſing or liking, and ſo advancing its ſtock, by a ſure and double increaſe, by adding new diſcoveries, and retaining ancient truths.

Another miſchief, againſt which this body have guarded in the great matter of CAUSES, is an eternal inſtability and averſion from aſſigning of any. Though at their firſt eſtabliſhment they were not daring in ſettling general concluſions, yet they laid no injunctions upon their ſucceſſors not to do ſo, when they had obtained a ſufficient ſtore of well-grounded experiments, whereon they might ſafely depend. Nothing ſound is to be expected from thoſe who will fix blindly on whatever they can lay hold on; and nothing great from them who will always wander, who will never leave diſputing; the one can produce nothing but unwholeſome and rotten fruits, and the other, for fear of that, will endeavour to have no harveſt nor autumn at all. It has been the conduct of the ſociety, that the way to arrive at advancement in true ſcience, a ſolid ſpeculation ſhould every day be more and more purſued; which is to be done by a long forbearing of ſpeculation at firſt, 'till all materials be ripe for it. They have never affirmed any thing of the cauſe, 'till the trial was paſt; whereas to do it before, ever proved a venemous thing in the advancement of ſciences; for whoever has fixed on his cauſe before he has experimented, can hardly avoid fitting his experiments and his obſervations to his prepoſſeſſed cauſe, rather than the cauſe to the truth of the experiment itſelf. But this ſociety have made little other benefit of the cauſes to which they have conſented, than that thereby they might have a firm footing, whereon new operations might proceed; and for a continuation and variation of the enquiry, the tracing of a falſe cauſe hath often conduced to the knowlege of the true. Thus it frequently happens to philoſophers as it it did to Columbus, who firſt believed the clouds that hovered about the continent to be the firm land; but this miſtake was happy, for, by ſailing towards them, he was led to his great diſcovery: ſo, by ſometimes proſecuting miſtaken cauſes, with reſolution of not giving over the purſuit, this learned ſociety have been guided to the truth itſelf.

There is nothing of all the works of nature ſo inconſiderable, or ſo fully known, but, by being made to reflect on other things, it will contribute to enlighten them, and ſhew itſelf the more conſpicuouſly. Such is the dependance amongſt all the orders of creatures, the inanimate, the ſenſitive, the rational, the natural, the artificial, that the right apprehenſion of one of them is a good ſtep towards the underſtanding of the reſt: and this is the higheſt pitch of human reaſon, to follow all the links of this chain, 'till all their ſecrets are open to our minds, and their works advanced or imitated by our hands!

Thus has this learned corporation judged, conjectured upon, and improved experiments, for the benefit of the uſeful arts.

But in thoſe that have come under their care, there is one thing more about which the ſociety has been ſollicitous; which is, the manner of diſcourſe and communication among the fellows, of which, had they not been watchful, the whole ſpirit and vigour of their deſign had been deſtroyed, by impertinent verboſity. The effects of a ſuperfluity of prating overwhelms moſt arts and profeſſions; this ſociety, therefore, have been rigorous in putting in execution the only remedy for this extravagance: they reject all amplifications, digreſſions, and ſwellings of ſtile, to return to the primitive purity, when men delivered ſo many things in an almoſt equal number of words.

By theſe wiſe meaſures the ſociety avoided the talkative jargon, and thereby have arrived at a wonderful ſcene of uſeful knowlege. They have likewiſe reduced its principal obſervations into one common ſtock, and laid them up in public regiſters to be nakedly communicated to poſterity, or ſuppreſſed, as by repeated ſcrutiny and trial they ſhall deſerve. By this, they have ever made a firm confederacy between their own labours, and the induſtry and ingenuity of future ages. If their predeceſſors, like theſe worthies, had continued to add, by little and little, to the ſtore of experimental knowlege; if they had endeavoured to have been benefactors to, and not tyrants over our reaſons; if our learned diſputants and wranglers had communicated more of their WORKS, and leſs of their WIT and PEDANTRY, they would have advanced, rather than eclipſed, the human knowlege, and ſolid ſcience would have been, ages before, propagated among mankind, to the proportionate increaſe of their felicity.

And as their purpoſe has always been to accumulate a mixed maſs of experiments, without digeſting them into any perfect model, ſo, to this end, they have confined them to no peculiar order of ſubjects; whatever they have recorded, they have not done it as complete ſchemes of ſcience or opinion, but as ſubſtantial materials, wherewith the great ſtructure of ſolid arts and true knowlege might be gradually, and not precipitately erected: for it is certain, that a too ſudden ſtriving, as their predeceſſors did, to reduce the ſciences, in their beginnings, into method, beauty, and ſyſtem, very much retarded their increaſe: for it happens to the invention of arts as to children in their younger years, in whoſe bodies the ſame applications that ſerve to make them ſtraight and comely, are often found very miſchievous to their eaſe, their ſtrength, and their growth.

By their fair and equal way of regiſtering the knowlege that has come before them, they have left room for their ſucceſſors to augment, to approve, to contradict them at their diſcretion. How unſpeakably beneficial to true ſcience this conduct hath proved, may be judged, by comparing the ſtate of ſcience before their time with its preſent. What wonders would not ſuch ſocieties have by this time produced, if they had been begun in the times of the Greeks and Romans, or even of the ſchoolmen? If our anceſtors, a thouſand or two thouſand years ago, had begun, in this manner, to have added gradually to the ſtorehouſe of true knowlege, what depth of nature could by this time have been hid from our view?

If in the firſt learned times of the Ancients, and all thoſe that followed after them, down to this day, their philoſophers had chiefly beſtowed their pains in making plain hiſtories of nature, and not in building up ſciences, without ſubſtantial materials for the purpoſe, how unſpeakably their ſucceſſors would have been indebted to them, is much eaſier conceived than can poſſibly be deſcribed. Perhaps, indeed, the names of ſome particular men who compiled thoſe ſyſtems and epitomes which they gave us, and which ever cramped true and general ſcience, would have been leſs glorious than they were; though that may be doubted, for we have reaſon to believe that theſe ages would have honoured a Plato, Ariſtotle, Zeno, and Epicurus, as much, if not more, than now they do, if they had only ſet things in a way of propagating EXPERIENCES down to us as the only TRUTHS.

But this matter of reputation was only the private concernment of five or ſix: as for the intereſt of thoſe times in general, we may venture to ſay, that, in all effects of true knowlege, they might have been as happy without thoſe bodies of arts as they were with them, logic and the mathematics excepted. To inſtance in their phyſics; they were utterly uſeleſs in reſpect of the good of mankind; they almoſt confeſſed as much, by reſerving their natural philoſophy for the retirements of their wiſe men. What help did it ever bring to the bulk of the people? What viſible benefit to any city or community in the world? Their mechanics and artificers, and huſbandmen (for whom the true natural philoſophy ſhould be principally intended) were ſo far from being aſſiſted by thoſe abſtruſe doctrines, that ſcarce any one of thoſe profeſſions has underſtood Ariſtotle's principles of bodies, from his own time down to ours. If, therefore, thoſe ages, inſtead of raiſing ſo many mere ſpeculative, and, in many reſpects, very idle and whimſical opinions, had only minded the laying of a SOLID GROUND-WORK, as our Royal Society has done, for a vaſt pile of experiments, to have been continually augmenting

through all ages, we ſhould have infinite more reaſon to revere and bleſs their memories than we have at preſent.

If ſuch a courſe had been at firſt ſet on foot, philoſophy would have been kept cloſer to MATERIAL THINGS, and would not have undergone ſo many eclipſes as it did. If we reckon from its firſt ſetting forth in the Eaſt, we ſhall find, that, in ſo long a track of time, there have not been above 400 or 500 years, at intervals, wherein it has been in any requeſt in the world. And if we look back on all the alterations of ſtates for theſe 3000 years, we may ſtill behold that the SCIENCES OF MEN'S BRAINS have been always ſubject to be far more injured by ſuch viciſſitudes, than the ARTS OF THEIR HANDS. What cauſe can be aſſigned for this? Why was learning the firſt thing that was conſtantly ſwept away, in all deſtructions of empires and foreign inundations? Why could not that have weathered out the ſtorm, as well as moſt ſorts of PRACTICAL ARTS AND MANUFACTURES, which, though they began as ſoon, or before the other, yet they have remained, through all ſuch changes, unaltered, except for the better? The reaſon of this is evident: it is becauſe philoſophy was made too ſubtile for the conceptions of men of buſineſs, who are the great ſupport of all communities. The philoſophers themſelves did, as it were, baniſh it out of the world, by confining it only within the ſhades of their walks. By this means, it was firſt looked upon as moſt USELESS, and ſo fit ſooneſt to be NEGLECTED: wherefore if philoſophy at firſt had been made more to converſe with the ſenſes, and to aſſiſt familiarly in all the occaſions of human life, it would, no doubt, have been thought needful to have been preſerved in turbulent, as well as ignorant times: it would have eſcaped the fury of the moſt barbarous people, as well as the arts of ploughing, gardening, cookery, making iron and ſteel, fiſhing, ſailing, and many more ſuch handicrafts have done.

But it is too late to lament this error of the Ancients, ſeeing it is not now to be repaired: it is enough that we gather from hence, that, by bringing philoſophy down to men's ſight and practice, and applying it to the numberleſs commercial arts of life, the Royal Society has put it into a condition of holding out againſt the invaſions of TIME, or even BARBARISM itſelf; that by eſtabliſhing it on a firmer foundation than the AIRY AND ENTHUSIASTICAL NOTIONS of men alone, upon all the WORKS OF NATURE, by turning it into one of the great and univerſal ARTS OF LIFE, of which men ſee there is daily need; this ſociety have provided, that it cannot hereafter be extinguiſhed, at the loſs of a library, at the overthrowing of a language, or at the death of ſome few philoſophers: but that men muſt loſe their EYES and HANDS, and muſt leave off deſiring to make their LIVES convenient or pleaſant, before they can be willing to deſtroy ſuch philoſophy, or ceaſe to revere and honour thoſe who are the zealous promoters of it.

After this learned body had received the royal confirmation of their inſtitution, the whole civil world entertained the higheſt eſteem and veneration towards their enterprize. In imitation of this SEARCHING SPIRIT, this affection to SENSIBLE KNOWLEGE, in England, other nations fell into the like kind of applications; and the moſt conſiderable effects of their endeavours throughout Europe have been generally recommended to the Royal Society of London by their authors, to be examined, approved, or corrected. This has brought great glory to our nation.

As France lies the neareſt to England in its ſituation, ſo that country has alſo been the neareſt to it in its zeal for the promotion of EXPERIMENTS. In that kingdom, the Royal Society has maintained a perpetual intercourſe with the moſt eminent men of art of all conditions, and they have mutually and generouſly communicated their knowlege, for the benefit of each other; and if the politicians of the two empires could have always as happily accorded, and have acted with as much unanimity for the real happineſs and welfare of both nations, as this kind of philoſophers have really done, the world would never have been as it has, and is likely always to be, diſtracted with eternal wars and bloodſhed. If the ſtateſmen of both kingdoms were actuated as much by the principles of benevolence towards mankind, as their reſpective experimental philoſophers have been: if theſe two nations had ſet the world as glorious an example of the love of peace, and the felicity of human nature, it is very likely that Chriſtendom in general might have enjoyed an uninterrupted ceſſation of halcyon days; for had theſe two ſtates acted in concert, upon ſuch noble and generous principles towards each other, they would have ſo awed the reſt of Europe, as ever to have prevented thoſe eternal broils that are daily ſpringing up among the various potentates. Such conduct among the men in power in both nations, would have proved a far more effectual preſervative for ſecuring the everlaſting peace of Europe, than even the project recommended for that intent by a learned French abbot, in the year 1712 *.

* See a tract, intitled, A Project for ſettling an Everlaſting Peace in Europe; firſt propoſed by HENRY IV. of France, and approved of by QUEEN ELIZABETH, and moſt of the then PRINCES of EUROPE, and now diſcuſſed at large, and made practicable.—By the ABBOT ST PIERRE, of the French Academy. This is a very curious and elaborate performance; and it would be very happy for mankind, if ſo great and glorious a deſign could ever be accompliſhed.

From the phyſicians, chirurgeons, and anatomiſts of France, our ſociety has received many faithful relations of extraordinary caſes; from their moſt judicious travellers, the fruits of their voyages; from their famous mathematicians, many advances in that branch of learning; from their chemiſts, the effects of their operations; and from others of their beſt obſervers, many rarities, and diſcourſes of their fruits, ſilk, wine, bread, plants, ſalt, and ſuch natural productions of their ſoil. And to inſtance once for all, our ſociety was affectionately invited by the French academy of Paris to a mutual correſpondence: in which invitation, there is one expreſſion, that ought not to be paſſed over in ſilence, That they have acknowleged the ENGLISH NATION to have many advantages for the propagating of REAL PHILOSOPHY, which are wanting to all others. This confeſſion is true: yet theſe advantages, unleſs they had been improved by the Royal Society, had been only as thoſe that we have had for FISHING, objections and arguments of our ſloth and ſupineneſs, 'till lately.—In return for theſe communications of the French, our Britiſh philoſophers have been no ways behind them, they have made ample retaliation; and the French and all the world, are not only highly indebted to great numbers of this learned body, as might eaſily be ſhown; but they have gratitude enough to acknowlege, that they owe more to one preſident of this ſociety, than to all the philoſophers that ever lived taken together: I mean the immortal Sir Iſaac Newton, the glory of the Engliſh nation, the eternal honour of the Royal Society of London.

From ITALY alſo, the Royal Society were at firſt earneſtly invited to a mutual intelligence, by many of their moſt noble wits, but chiefly by the prince Leopoldo, brother to the then Great Duke of Tuſcany, who was the patron, at that time, of all the inquiſitive philoſophers of Florence.

In GERMANY, and its neighbouring kingdoms, the Royal Society met with great veneration, and have had with them a conſtant intercourſe of philoſophical communication. For which kind of enterprizes, the temper of the German nation is admirably fitted, both in reſpect of their peculiar dexterity in all ſorts of manual arts, their profound knowledge in mineralogy and metallurgy, as well as in chemiſtry in general; and alſo in regard of the plain and unaffected ſincerity of their manners, wherein they ſo much reſemble the Engliſh, that we ſeem to have derived from them the compoſitions of our minds, as well as to have deſcended from their race.

In the LOW-COUNTRIES, their intereſt and reputation have alſo been eſtabliſhed, by the laſting friendſhip of their chief learned men, and at firſt principally of Huygens. This gentleman beſtowed his pains on many parts of the ſpeculative and practical mathematics, with wonderful aſſiduity, and particularly his applying the motion of pendulum clocks and watches, was an excellent invention. In the proſecution of ſuch diſcoveries, he often required the aid of our Royal Society; and he received the lights of their TRIALS, and freely admitted their alterations or amendments. And this learned correſpondence with him, and many others in theſe countries, has been continued down to this day. Even during the breach between Charles II. and the States-General, the traffic of ſciences was uninterrupted, when all other commerce was ſtagnated.

In ſhort, moſt civilized nations, and eſpecially thoſe that enjoy any tolerable ſhare of trade, have now philoſophical ſocieties of this kind eſtabliſhed in their reſpective countries, for the advancement of theſe arts in particular, which have any connexion with their commercial intereſts and uſeful ſciences: and all thoſe learned bodies at Berlin, Muſcovy, Denmark, and Sweden, &c. preſerve a conſtant correſpondence with our Royal Society at London, pay the higheſt regard to their judgments in all philoſophical and mathematical diſquiſitions, and always expreſs great veneration for thoſe peculiar members of that body, who have eminently diſtinguiſhed themſelves in knowlege of this nature.

But not to wander farther in particulars; it may with great truth be ſaid, that no ſociety ever received greater honours than our Royal Society from all foreigners, who have had a taſte for any branch of ſolid ſcience.—All foreigners, men of letters, the nobility, ambaſſadors, and foreign princes that have travelled here, have all viſited the Royal Society, as one of the moſt illuſtrious inſtitutions belonging to the whole kingdom. From hence they have returned home, with a free engagement of their aſſiſtance; the men of learning aſſuring it of a contribution of their labours, and the ſtateſmen and princes of their authority and endeavours, in ſatisfying all philoſophical queries, with which they have been plentifully furniſhed.

It would be an uſeleſs pomp to reckon up a catalogue of their names, eſpecially ſeeing they are recorded in the regiſters of the ſociety. It will not be amiſs, however, to mention the viſit of one prince to them, becauſe it may afford us a profitable obſervation. When the duke of Brunſwick and Lunenburgh was introduced into their weekly aſſembly, and had

hd ſubſcribed his name to their ſtatutes, there was, according to cuſtom, one of the fellows appointed to interpret to hin, what experiments were produced and examined at that meting. But his highneſs told them, that it was not necéary they ſhould put themſelves to that trouble, for he well unerſtood our language, having been induced to the ſtudy of it, out of a deſire of reading our philoſophical books. Frm whence, ſays biſhop Spratt, there may this concluſion bemade, that if ever our NATIVE TONGUE ſhall get any grund in Europe, it muſt be by augmenting its EXPERIMENTAL TREASURE. Nor is it impoſſible, but as the FIMININE ARTS of PLEASURE and GALLANTRY have ſpread ſome of our neighbouring languages to ſuch a vaſt extert, ſo the ENGLISH TONGUE may alſo in time be more enlarged, by being the inſtrument of conveying to the world the MASCULINE ARTS of KNOWLEGE.

We ſhall now relate what encouragement this inſtitution has received at home in its native ſoil. As the original of this ſocety met with a general approbation within ourſelves, the moſt judicious of all profeſſions and intereſts, their reverence to the firſt trials and intention; ſo our moſt wealthy merchants and citizens in particular, have aſſiſted it with their preſence; and thereby have added the induſtrious and active genius of men of traffic, to the reſerved and ſedentary temper of men of learning. They have contributed their labours, helped their correſpondence, employed their factors abroad to obtain anſwers to their enquiries in foreign parts; they have laid out in all countries for obſervations, they have beſtowed heretofore many gifts on their treaſury and repoſitory. There is one bounty chiefly that deſerves applauſe and imitation. It is the eſtabliſhment made by Sir John Cutler, for the reading on mechanics, in the place where the Royal Society ſhall meet. This was the firſt lecture that was founded of this kind, amidſt the vaſt munificence of ſo many benefactors to learning in our country; and yet in a trading country, this was the moſt neceſſary of all others. For this chiefly cauſed the ſlow progreſs of manual arts; that the TRADES themſelves have never ſerved apprenticeſhips, as well as the TRADESMEN; that they have never had any MASTERS ſet over them, to direct and guide their works, or to vary and enlarge their operations.

Of our phyſicians, many of the moſt judicious have contributed their purſes, their hands, their judgments, their writings. This they have moſt generouſly done, though they have alſo in London a college peculiar to their profeſſion; which ever ſince its foundation, for the ſpace of about 250 years, has given the world a ſucceſſion of the moſt eminent phyſicians of Europe. In that they confine themſelves to the advancement of medicine; in this they have alſo with great zeal and ability promoted an univerſal inſpection into all NATURAL KNOWLEGE.

Of our nobility and gentry, the moſt noble and illuſtrious have condeſcended to labour with their hands, to impart their diſcoveries, to propoſe their doubts, to aſſiſt and defray the charge of their trials. This they have done with ſuch an univerſal agreement, that it is almoſt the only one thing, wherein the nobility of the three kingdoms have been united. This laid a good foundation for removing their prejudices towards each other.

Of our miniſters of ſtate at home, and our ambaſſadors abroad, moſt of them have been fellows of the Royal Society, and theſe latter eſpecially have been wont to beſtow pains in foreign courts, to collect relations and ſecrets of nature as well as of ſtate.

Our great captains and commanders have inrolled their names amongſt this illuſtrious number, and regarded theſe ſtudies, which are not, as other parts of learning, to be called the ſtudies of the gown; they as well becoming the ſoldier, as any other way of life. Nor have our moſt renowned GENERALS neglected the opportunities of philoſophical enquiries, even in the midſt of their greateſt enterprizes, on which the fate of kingdoms has depended. They have been furniſhed with inſtruments and directions by the Royal Society, and amidſt the tumults of war and government of fleets, they have found leiſure to make ſome trials of experiments: which WORKS as much excel that of DECLAIMING, which ſome of the ROMAN GENERALS uſed in their camps, as it is better to DO than to TALK well.

Of our churchmen the moſt diſtinguiſhed, by the conſtant patronage and aſſiſtance they have afforded the Royal Society, have confuted the falſe opinions of thoſe men, who believe that philoſophers muſt needs be irreligious: on the contrary, the wiſeſt and moſt learned among that reverend body have declared their opinions, that the greatneſs of the Divine Majeſty is beſt to be worſhipped, by the honouring and obſerving of nature, which is the univerſal miniſter of his almighty power. The ſearching into the works of nature, while it delights and enlarges the human underſtanding, and ſtrikes us with the ſtrongeſt aſſurance of the wiſdom and power of the divine architect, in framing for us ſo beautiful and well-regulated a world, does at the ſame time convince us of his conſtant benevolence and goodneſs towards us.

Before the art of philoſophical experimenting took place, ſcarce any thing prevailed but vain imaginations, whimſical conjectures, preſumptuous hypotheſes, and wretched reveries of every ſort; and theſe were uſhered into the world, and gilded over with the reſpectable name of philoſophy. Not ſuch is the philoſophy of the Royal Society, but as different therefrom as light from darkneſs, as reaſon from abſurdity, or truth from error.

From the more obvious powers of nature, we are led by this philoſophy, aided by the mathematical diſquiſitions, to penetrate into the powers of nature, and ſo to apply her divine principles to the acquiſition of every branch of uſeful knowlege. By the principles of attraction and repulſion, we view the ſmalleſt particles of matter, endowed with a mighty power of action; whence enſues that variety of properties and phænomena, depending on the figure, ſize, motion, and action, of the conſtituent parts of bodies. Thus we diſcern, that by the particles of matter attracting each other, they cohere with various degrees of firmneſs, according to their tangibility, by a greater or leſſer quantity of ſurface; which all variety of bodies does, with different degrees of conſiſtence, from the hardeſt to the ſofteſt, from the moſt fixed to the moſt fluid bodies.—By theſe principles alſo we are ſhewn, that on the ſeparation of the particles of matter beyond the ſphere of attraction, there commences a repulſive power, by which they mutually repel each other, and acquire their elaſticity. Hence the force of elaſtic fluids is accounted for on the principle of a centrifugal force, actuating the ſeparated parts of matter.—On this part of philoſophy, depends the ſolution of the phænomena attending the various proceſſes of chemiſtry; why ſolid bodies diſſolve in fluid menſtruums, and fluid ones become hard; why heavy bodies are ſuſpended in lighter fluids, and the opake, by ſolution, rendered tranſparent. Hereby are pointed out the methods of analyſing natural bodies, and diſcovering their component parts. Whence infinite diſcoveries in art and nature, are brought to light for the uſe of arts and trade.

This philoſophy alſo leads to the interior receſſes of the earth; ſuggeſts to us the manner how minerals and metallic ores are generated [ſee the articles MINERALS and METALS]; how ſulphureous, ſaline, and mercurial principles, produce the variety of mineral waters; why ſome are hot or others cold. [See the articles PYRMONT and SPA WATERS] Why the phænomena of earthquakes, and the eruptions of vulcanoes.

By the nature and laws of fluids, we ſee what is neceſſary to conſtitute matter a fluid ſubſtance, and how ſuch act upon ſolids, and what relates to their ſpecific gravities, the quantity and force of preſſure, why things ſink or ſwim, the nature and uſe of the hydrometer, the hydroſtatic ballance, and the whole ſcience of hydroſtatics.

Before this philoſophy became to be ſtudied, with what uncertainty did we grope after the origin of ſprings and fountains? We knew nothing of the theory of aqueducts, or the reaſon why water roſe in a pump; the ſuſpenſion of mercury in the barometer was a myſtery; nor could we account for the action of that ſimple inſtrument the ſyphon, or common crane: much leſs could we eſtimate the force of ſpouting fluids, or ſay what the action of the air muſt be to move the ſails of a mill. And as to the theory of the tides, that was indeed vulgarly adjudged to be the effect of the moon, but, according to what ſteady laws it is effected, was a matter too incomprehenſible for any to inveſtigate, but a preſident of our Royal Society, a NEWTON, the ELDEST SON of wiſdom, as the ingenious Mr Martin elegantly ſtiles him.

Then as to the doctrine of winds, this philoſophy accounts for their phænomena upon the plaineſt principles; and ſhews why ſome are conſtant, why others are periodical and alternate; and why in great latitudes, the winds are uncertain, both as to their immediate cauſe, as well as to the point of the compaſs from whence they blow.

The nature and theory of ſounds, and in conſequence the ſcience of harmony, was a myſtery 'till true philoſophy brought it to light; and this was not 'till our Newton's days. From him we learn the true cauſe of ſounds, and trace them from the tremulous body, through all the elaſtic aërial undulations, to the curious mechaniſm of the ear. From him we are taught why ſome are loud, others low; ſome obtuſe, others acute; and ſome more agreeable than others. Hence all the grounds of melody and muſic are derived, the rationale of muſical proportion, the harmonical diviſion of lines, the ſtructure of organs, harpſicords, and other muſical inſtruments, are all the reſult of this philoſophy.

If we look into the vegetable world, what amazing ſcenes does philoſophy preſent to our view! The generation of plants was quite myſterious and incomprehenſible, 'till philoſophy ſhewed us each in its embryo pre-exiſtent ſtate, and convinced us that plants of every kind were completely included in the ſeed of each proceeding plant; and ſo the whole tribe were all contained and included in infinite miniature, in one original ſeed: this is a moſt wonderful diſcovery, and incredible to vulgar minds.

Philoſophy next apprizes us of the curious and exquiſite apparatus of parts, for the production of embryo-plants. The ſcene here lies in the flower, whoſe delicate attire is deſtined not only for beauty and fragrance, but principally for the purpoſes of generation. To this end ſerve the ſtamina, with

their apices and included farina, the ſtylus and matrix, with its included ſeed; which latter part makes all that agreeable variety of fruit, ſo deſirable and delightful to the taſte.

By our philoſophical reſearches, we have been enabled to make great improvements in the knowlege of the make and ſtructure of the bodies of plants and trees: we ſee the wondrous ſyſtem of the attracting capillary veſſels, which imbibe and draw up the ſap, or nutritious juices of the earth, by means of the roots, and which is conſtantly perſpired off by the leaves. Beſides theſe, we find other veſſels deſtined to ſupply the plant with air; and aſtoniſhing it is to conſider, how each annual ſyſtem of air and ſap-veſſels (which makes the annulus or ringlet of wood, by which the tree does each year increaſe its bulk) unravel and expand itſelf from the bark, in which all the bulk or lignous part of the tree, is originally contained. Theſe and many other curious and engaging ſpeculations in botany, we owe entirely to the invention of optical glaſſes, and conſequently to our favourite ſcience philoſophy.

But in nothing is the excellence of philoſophy ſo conſpicuous, as in its ſublime diſcoveries relating to the nature and ſtructure of animal bodies, and the uſe of the ſeveral parts. By this ſcience we are taught the divine laws of animal mechaniſm; not in the low nonſenſical notion of the Carteſians, who conſider animals as mere machines, devoid of life or ſenſation: on the contrary, true philoſophy repreſents an animal fabric as one of the nobleſt works of God, in which dead matter is made to live, inert matter is rendered capable of action and motion; matter abſolutely devoid of any ſenſitive faculty, endowed with various powers of ſenſibility, in different modes, and almoſt infinite degrees. But above all, to conſider how this inanimate, inert, inſentient ſubſtance, ſhould be conſtructed with faculties rendering it capable of mind and thought, is the moſt myſterious and amazing ſpeculation! This fixes the bounds to philoſophical enquiries; hitherto can we go, but no further. Bold preſuming man may as well pretend to make an animal, as to account for its powers and functions. Theſe are all the works of infinite wiſdom, whoſe judgments are unſearchable, and ways paſt finding out.

But however inſcrutable the origin of an animal may be, the laws by which the ſeveral animal functions are governed, and the vital actions performed, are the proper ſubjects of philoſophy; and though the cauſe, the manner, and intimate texture of moſt parts of animal bodies, are latent and incomprehenſible, yet it is great ſatisfaction to think we are admitted to the knowlege of the offices, uſes, and ends of the ſeveral parts, and the general œconomy of animal nature, which is one of the moſt agreeable and ſublimer leſſons of philoſophy.

Thus we are ſhown the nature, make, and diſpoſition of the bones, and how they give firmneſs and ſtability to the body. We are next taught the ſtructure and uſe of the muſcles, for giving motion and ſtrength to the parts; though the modus agendi (or muſcular motion) be among the number of nature's arcana. We have lately been inſtructed in the true uſe and deſign of that noble organ the heart, the primum mobile of animal nature; from hence we learn the origin and uſe of that wonderful ſyſtem or compages of veſſels we call arteries and veins for circulating the blood and animal fluids through every part of the body, for the grand and final purpoſe of nutrition.

Beſides theſe, we find another wonderful apparatus of veſſels or parts we call nerves, which have their origin from the brain and marrow, and are appointed by nature the inſtrumental cauſe of ſenſation to animals. Thus the optic branch is deſtined for viſion, the auditory nerves for hearing, the olfactory pan for ſmelling, the nerves ſpread over the tongue and palate for taſting, and all the other nerves, minutely ramified through all the body, for the general ſenſe of feeling. But the immediate cauſe of this nervous ſenſation, whether by means of a fine ſubtle fluid, called animal ſpirits, paſſing through the hollow fibrillæ of the nerves, or whether by means of a ſubtile æthereal ſpirit acting upon the ſolid capillamenta, or whether this great work of nature be any otherways effected, is as yet a matter concealed from human intelligence.

But whatever be the cauſe thereof, it is, without all doubt, derived from the noble viſcus the brain: for the brain is manifeſtly of the glandulous kind, and the uſe of the glands is to ſecrete the various juices deſtined to ſerve the various purpoſes of animal life. Thus the liver ſecretes the bile, the pancreas, the pancreatic juice, the kidnies ſtrain off the urine, the breaſts collect the milk, the teſtes ſecern and prepare the ſemen, and other glands the lymphatic liquor. By ſuch wondrous contrivances are the operations of life carried on, and the animal functions perfected through the determined period of duration for each reſpective ſpecies.

In ASTRONOMY we owe every great improvement to philoſophy; we hereby know the nature of circular and elliptic motion, and the laws which govern bodies moving in theſe or any other orbits; we hence learn all the anomalies of motion in a ſyſtem of bodies, and can ſettle the theories for calculation. Hence the places, poſition, aſpects, tranſits, occultations, eclipſes, and other affections of the heavenly bodies, become known for any given time, paſt, preſent or to come.

In CHRONOLOGY, we are guided by the unerring hand of philoſophy. We thence get a true idea of time, and the only juſt methods of meaſuring it, and dividing it in a natural and proper manner. By this means our periods and cycles, our years and days, become conſtant and certain; which would otherwiſe be vague and unſettled, and induce a general confuſion in our accounts, and thereby embaraſs the occurrences of life.

In NAVIGATION and GEOGRAPHY [ſee thoſe articles NAVIGATION and GEOGRAPHY], great and manifold are the uſes of philoſophy. From thence we learn the ſize, dimenſions, and figure of the earth; and by the diſcovered properties of the wonderful ſtone, are enabled to navigate the ſpacious ſeas, with much certainty and ſafety. Hence a communication and commerce with other nations and people, is opened unto us; we are hereby made, as it were, proprietors as well as inhabitants of the earth: and moſt of the wealth and commodities of life, are owing to this philoſophical improvement of the natural properties of wind and water.

Yea, GEOMETRY itſelf is but the philoſophy of the magnitude and dimenſions of natural bodies, and their various proportions and relations to each other on that account: and no one who underſtands any thing of the modern Newtonian matheſis, can deny, that its very firſt principle (viz. the doctrine of fluxions) conſiſts in the doctrine of motions, and velocity of the generating powers of bodies: and therefore, every mathematical ſcience is, in its general nature, purely philoſophical: and it would be very eaſy to ſhew, that ſome of the moſt perplexed propoſitions of geometry are demonſtrated with the greateſt eaſe by philoſophy; and that ſome problems, impracticable by the geometrician, are ſolvable with the greateſt facility and exactneſs by the philoſopher.

In OPTICS, what variety of the moſt curious inventions and ſtructures of inſtruments has of late flowed in upon us! Scarce a year or month can paſs, not pregnant with optic diſcoveries and contrivances; and yet none of theſe inventions, none of theſe machines, owe their origin to any other ſource than philoſophy. It is this ſcience alone that diſcovers, not only why a microſcope can aſſiſt the eye to diſcern ſmall objects, or a teleſcope diſtant ones, but it enables the artiſt to give the beſt form to his glaſſes, and to diſpoſe them in the beſt manner, in the ſtructure of theſe and other inſtruments, to anſwer the ends propoſed. And who can ſay to what limits this growing ſcience may yet extend, under the conduct and direction of our philoſophical ſociety?

We need not ſay, that PERSPECTIVE, DIALLING, or the art of ſhadows in general is purely philoſophical. Theſe arts conſiſt only in the various repreſentations and optical views of nature: and to repreſent things under the ſame appearance and reſpective relation which they have to each other, requires no ſmall art or ſkill in philoſophy. How little do we eſteem a mere mechanic dialiſt, who knows nothing of the reaſon or philoſophy of his art; who ſets the ſtyle of a dial pointing to the pole, for no other reaſon, but becauſe he cannot make it ſhew the hour in any other poſition?

PAINTING, as it conſiſts in an exact imitation of nature, by a judicious mixture of colours, and a proper diſpoſition of various tints, lights, ſhades, &c. muſt be pronounced a philoſophic art, whoſe theory depends on the moſt refined principles of this ſcience. A perſon by a thorough ſkill in this doctrine of light and colours, might almoſt make a picture a priori: how natural, genuine, and excellent muſt that portrait be, which is executed by a hand, whoſe every motion is directed by the dictates of preſiding ſcience!

GUNNERY, or the doctrine of projectiles, is, perhaps, the only art whoſe principles are purely philoſophical throughout; and that yet has not received all the advantage it is capable of from this all-perfecting ſcience. 'Till Sir Iſaac Newton's time, all that was wrote on this ſubject was errant jargon: ſince him, we have had many pieces on the parabolic hypotheſis, whoſe theories are founded in vacuo, and vacuous theories they are indeed: their authors not underſtanding true philoſophy, could not inſtruct mankind in the principles of gunnery; and this is but too well known an inſtance of the fatal conſequences that attend either the ignorance or neglect of philoſophy, in the momentous affairs of life. However, ſomething conſiderable has already been done, and more may be expected, to give the engineer all the advantages he can poſſibly have from the preſent matheſis and philoſophy. See the article MATHEMATICS.

In PHYSIC and SURGERY, the whole field of philoſophy, in its utmoſt extent, is concerned [ſee the article QUACK]: for, on the one hand, if we conſider the human body as a ſyſtem of ſolids and fluids in motion, this will require, at once a thorough knowlege in all the laws of motion, of action and re-action, of attraction and repulſion, of every mechanical principle and power, the hydroſtatic and hydraulic laws of fluids, and every other principle of nature's agency in one, who has the care of ſuch a noble machine to keep it in order, and to rectify it when out.

And what ſhall we more ſay? For the time would fail us to ſpeak of anatomy, and of botany, and of agriculture, and of

gardening, and of every mechanical and manual art and trade alſo, even down to brewing and baking [ſee the articles BREWING and BAKING], whoſe profeſſors and artiſts by the various improvements and precepts of philoſophy, have been enabled to explain to us the animal œconomy, the nature of vegetation, the culture of plants, the improvement of land [ſee the article MANURE], the manufacture of goods [ſee the article MANUFACTURER], and meliorating the methods of procuring and preſerving our bread and our meat, our beer and our wine [ſee the article WINE]. And it may be ſhewn, that a man in every vocation, in every employment of life, has occaſion enough for the aſſiſtance of this ſcience; and that in every occupation no artiſt can execute and ſucceed ſo well as he that keeps cloſe to nature, and beſt underſtands her operations, which is all we have to underſtand by philoſophy.

If then all that has been ſaid be true, (and who will ſay it is not?) if philoſophy be of that importance to mankind, as has been ſhewn it is, we need not wonder to ſee the wiſe and knowing part of our ſpecies, in every age, have ſo great an opinion of ſuch a ſcience, and ſo deſirous of being initiated into its myſteries. How ardent were the purſuits of Plato, Pythagoras, Socrates, Ariſtotle, Seneca, and other ſages of antiquity, after philoſophy, even in its infant ſtate? But to ſee and enjoy it in its preſent glory and perfection, to which it has aroſe ſince the time of the ROYAL SOCIETY, what ſtudies would have been too arduous, what voyages too dangerous, what climates too diſtant, for thoſe champions of wiſdom not to have undertaken, with the greateſt alacrity and pleaſure?

It is very remarkable, that whereas other arts and ſciences give only a poliſh to mankind, and make them expert and ingenious, this of philoſophy, in a peculiar manner, confers not only the higheſt delight, and the moſt tranſporting pleaſure to the mind, but even happineſs itſelf. The attribute of philoſophy is felicity by general conſent: thus the inſpired penman—Happy is the man that findeth wiſdom.—Thus Virgil too,

Fœlix qui potuit rerum cognoſcere cauſas.

An idea of ſuch ſocieties, peculiarly adapted to the general improvements of all the COMMERCIAL ARTS.

It would be endleſs to urge all that might be ſaid upon a topic of ſuch infinite extent, and of ſuch infinite utility to mankind in general. If we have ſaid enough to give Britons ſome idea, though a very glimmering and imperfect one, how highly they are obliged and indebted to all gentlemen, who have made any advancement in theſe the moſt excellent and the moſt uſeful of all ſciences, and more particularly to that moſt learned and honourable ſociety, that has produced a ſucceſſion of the ableſt philoſophers that ever lived: if, from what has been ſaid, we have removed the prejudice of ſome towards this noble inſtitution, and ſtrengthened the good opinion of others, this will be no ſmall ſatisfaction; but that is not all that I would humbly intend: the principal motive with me, is not only to give a faint diſplay of the merit of all who have ſucceſsfully applied themſelves to theſe ſtudies, but to convince the public, that not only the conſtant preſervation, but the conſtant increaſe and advancement of THE WHOLE COMMERCE OF THE THREE KINGDOMS, DEPEND UPON DULY ENCOURAGING AND HONOURING THOSE WHO EXCEL IN ANY BRANCH OF THESE SCIENCES THAT TENDS TO THE BENEFIT OF TRADE AND NAVIGATION, AND TO THE GLORY OF THE BRITISH EMPIRE: for if once theſe ſtudies become neglected and unfaſhionable among us; if the ſtudents therein are diſregarded, and meet with no honour or emolument ſuitable to the important nature of their applications, theſe ineſtimable ſciences will be left only to the men of figure and fortune; and how few the number of theſe have been, when compared with thoſe of another condition, is well enough known; and how few of theſe have met with any recompence ſuitable to their merit is equally notorious.

Indeed in the time of Sir Iſaac Newton, and a few years after, the mathematical and philoſophical ſtudies were in high eſteem; and, becauſe it was the mode of the times to have ſome knowlege therein, they were pretty generally purſued: but the gentleman and man of buſineſs, in the general, have not ſo ardent a taſte, or indeed leiſure ſufficient, ſo to apply themſelves as to make any great proficiency in what has been well known for above this century paſt; and therefore ſuch, in the general, cannot be expected to have greatly contributed to the advancement of philoſophy; to do which, certainly requires uncommon talents, and greater ſeverity of application than one gentleman among thouſands will beſtow; and although among the learned profeſſions, more eſpecially among the moſt learned clergy and phyſicians, there have aroſe many excellent mathematicians and philoſophers, who have contributed to the improvement of ſound philoſophy; yet, even among theſe, there have been but very few that have excelled in compariſon to the number who conſtitute theſe learned bodies; and thoſe who have made any extraordinary proficiency, lived in the times when theſe ſtudies were more in vogue, and in higher veneration than they ſeem to be at preſent. In ſhort, had it not been for the Royal Society of London, (among whom there has always been, and I hope there always will be, a moſt laudable emulation to advance philoſophy) it is greatly to be feared we ſhould have few philoſophers capable of making conſiderable improvements therein, except in our univerſities; and in thoſe noble ſeminaries too, philoſophy is not ſo generally and ſo zealouſly purſued as it was 50 years ago. And here few derive any great advantage from theſe ſtudies, except the capital profeſſors, and the ordinary tutors to young people of diſtinction, who ſometimes, by virtue of their office, and friendſhips contracted with their pupils, obtain handſome preferment in the church; but philoſophy now-a-days ſeems to be as little the road to extraordinary preferment in the church, as in the ſtate, though it is the great ſupport of both.

It is well enough known, and I hope it has been well remembered by thoſe whoſe duty it is not to forget it, that, in the late war, we had no extraordinary choice of able engineers, while our enemies had numberleſs: we had very few then; and a gentleman that would have approved himſelf, perhaps, one of the ableſt in all Europe, was long neglected; and although he was deſervedly recommended to his late royal highneſs the prince of Orange, in order to ſave Bergen-op-Zoom, yet he came too late, and was, on his return, ſtill diſregarded, 'till the Eaſt-India company had occaſion for his ſervice: but his heart being almoſt broke before he was provided for ſuitably to his diſtinguiſhed merit, it is no wonder that he did not long ſurvive the generous preferment he at length met with. It would be no difficulty to give many more inſtances of gentlemen of real merit in philoſophical ſtudies, who have reaſon to complain of the difficulties and diſcouragements which they have met with: many a cobler, I am afraid, lives more comfortably than ſome able mathematicians and philoſophers, who, if duly contenanced by the great, might be made happily inſtrumental to improve and advance the commercial arts of this kingdom.

For my own part, I frequently lament the low condition of many of thoſe gentlemen; nor can I but think there may be ways and means eaſily found out to provide for them, in a manner ſuitable to their talents, and that in ſuch a manner, as to enable them to promote our commercial arts in particular, by the courſe of their ſtudies being duly planned out and regulated by a committee of the ROYAL SOCIETY, appointed for that purpoſe: for I would humbly propoſe to make this illuſtrious corporation ſtill more and more ſerviceable, if poſſible, to the ſtate, than it has been; and this, we conceive, may be done with no leſs glory to themſelves, than honour and emolument to the kingdom.

Nor would I only preſume to ſuggeſt the manner how, under the direction, management, and controul of the Royal Society, ſuch ſtudents in particular may become more uſeful to the nation than they are at preſent, but how this celebrated body may, in other reſpects alſo, become inſtrumental to a ſtill further advancement of all arts that are ſubſervient to the intereſt of our trade and navigation. And this is ſubmitted to be done, by enabling the Royal Society to confer ſuitable rewards and honours on all working mechanics, artiſans, and manufacturers, who ſhall make any capital improvements in their ſeveral branches, and the like on thoſe who ſhall make any important advancement in the arts of agriculture, or any thing connected therewith, as farming, grazing, nurſerying, mineralogy, metallurgy, &c.

That ſomething of this nature is really wanting in England at preſent, and that to be under the conduct of ſo learned and ſo experienced a body, ſeems to be obvious from hence; that in Ireland we find they have long ſince inſtituted what they call the Dublin Society, which conſiſts of a number of private gentlemen, and traders of eminence and fortune, who have by themſelves, and their influence among their friends and perſons of diſtinction, raiſed a fund by voluntary ſubſcription, for the promotion of induſtry and labour among the poor, and for the advancement of manual arts, whereon commerce depends; and the remarkable ſucceſs with which the endeavours of theſe gentlemen have been crowned, ſhould have ſome weight, methinks, with us in England, to think of the eſtabliſhment of a well conſtituted ſociety for this, as well as the other laudable purpoſes of philoſophical improvements, for the benefit alſo of the trading part of the kingdom; for whatever uſeful improvements are made in the latter, the former will be certain to reap all the benefit and advantage by them: every artificer and mechanic, every manufacturer and farmer, every tradeſman and merchant, as well as every landed gentleman and nobleman, will thereby become gainers, and the nation in general the more and more proſperous and powerful: and the more eſpecially ſo, if all proper meaſures be taken by the governing ſociety, to propagate among the people all thoſe diſcoveries that ſhall be made, either by new inventions, or by the improvement of the old, in the plaineſt and moſt intelligible manner, that theſe diſcoveries may not remain only in the hands of a few, but be diſſeminated through the nation, for the common benefit of all.

That England ſhould ſeem to be ripe for the reception of, and the people well diſpoſed to promote and encourage, a proper inſtitution of this nature, may be reaſonably enough inferred,

ferred, from the ſpontaneous conduct of ſeveral bodies of people among us at this time: I mean that laudable and numerous ſociety who have diſtinguiſhed themſelves by the title of ANTIGALLICANS, and who have voluntarily and liberally raiſed a fund among themſelves, in order to diſtribute as premiums, to thoſe who ſhall excel in any of the mechanical or manufactural arts, for the benefit of our commerce.

In imitation of this public-ſpirited body of gentlemen and tradeſmen, we find likewiſe, by repeated advertiſements in our public news-papers, addreſſed 'To THE PUBLIC, That 'ſome of the nobility, clergy, gentlemen, and merchants, 'having at heart the good of their country, as their adver-'tiſement expreſſes, have lately met together, in order to 'form a ſociety for the encouragement of arts, manufactures, 'and commerce in Great-Britain, by beſtowing rewards, 'from time to time, for ſuch productions, inventions, or 'improvements, as ſhall tend to the employing of the poor, 'to the increaſe of trade, and to the riches and honour of 'this kingdom, by promoting induſtry and emulation, &c.'

The advertiſement further informs, that 'Though at preſent 'their plan is not completed, it has nevertheleſs been re-'ſolved to make a beginning, in manner following: that is 'to ſay, cobalt having been already diſcovered in ſome parts 'of this kingdom—for producing ſpecimens, not leſs than 'ten pounds in weight, for the beſt in quality, to be produced 'on or before the 15th day of January next, with ſatisfactory 'certificates of the place where found, and reaſonable aſſu-'rances that it may be obtained in quantity, 30l. — To be 'determined that day fortnight.

'For raiſing and curing the moſt and beſt madder for dying, 'in this kingdom, not leſs than twenty pounds in weight, of 'which ſamples to be ſhewn, with ſatisfactory certificates, 'on or before the 15th day of January, in the year 1756, '30l.—To be determined that day fortnight.

'For the beſt drawings by boys and girls, under the age of 'fourteen years, and proof of their abilities, on or before the '15th day of January, 1755, 15l.

'Likewiſe for the beſt drawings by boys and girls, between 'the age of fourteen and ſeventeen, with like proof of their 'abilities, on or before the ſame day, 15l.

By order of the ſubſcribers,

WILLIAM SHIPLEY.

'☞ Cobalt is a mineral found in mines of copper, lead, ſil-'ver, tin, and iron, in Sweden, Germany, and other coun-'tries: it has likewiſe been found in Cornwall, and may pro-'bably be diſcovered in other places in this kingdom. It is a 'heavy ſubſtance, ſometimes of a blackiſh, but more com-'monly of a bluiſh-grey, ſome of its parts inclining to a ſil-'ver colour, and that with much variety, according to its 'mixture with metals, ſtoney, or other matters: it has alſo 'ſometimes on its ſurface a red efflorescence, which is called 'the flowers of cobalt.

'The teſt of cobalt is, the ſtaining glaſs blue in fuſion, and 'producing arſenic and zaffer, from which ſmalt is made.

'Thoſe who may find what anſwers the above deſcription, 'and are ignorant of making an aſſay, are adviſed to apply 'to ſome ſkilful perſon, as uncautious trials with this mineral 'are dangerous.'

Further REMARKS on the greater utility of the ROYAL SOCIETY, to arts, manufactures, and trade, than it ever has been.

It ſeems to be the temper of the public, at preſent, to cheriſh and encourage ſuch a deſign, which makes it needful, at this juncture, to think of it in earneſt. The above advertiſement acquaints us, that the plan of thoſe patriots is not yet completed; and that of the Antigallicans is but in its infancy; and therefore the public ſhould not be wanting to avail itſelf of theſe happy diſpoſitions in the people; and inſtead of dividing themſelves into various independent and disjointed bodies, it would be more eligible, perhaps, to unite their ſubſcriptions and donations, and put the ſame under the government of one body, duly qualified and experienced to point out what is neceſſary to be done for the conſtant advancement of the commercial arts of every kind, to diſtribute the premiums according to merit, and receive all intelligence and information from practical artiſts and traders, of the difficulties their reſpective arts and trades may labour under; to the end that this grand body may deliberate and determine, with their united knowlege and judgment, what meaſures ſhall be needful for them to take, from time to time, in order to aid and aſſiſt all artiſts to bring ſtill to greater and greater perfection their reſpective arts and trades.

Now, while the Royal Society of London ſubſiſts in its preſent ſplendor and dignity, with its preſent conſtitution, and under the royal ſanction and authority; ſuch an illuſtrious corporation, abounding with perſons of the firſt-rate knowlege and experience in all philoſophical reſearches, ſhould ſeem to be the only fit body to undertake the chief controul and management of all thoſe ſmaller bodies that appear diſpoſed to advance the commercial arts, by the aid of their voluntary ſubſcriptions and donations: for, without any diſparagement to other worthy and judicious bodies, this ſociety may be preſumed to have all the knowlege requiſite to point out the beſt methods of improving the mechanical and manufactural, and all other arts whereon trade depends; and, therefore, they ſhould ſeem the propereſt to be inveſted with the diſtribution of rewards for the encouragement of perſons to excel therein.

If any private ſocieties ſhould unite, in order to raiſe ſums of money among themſelves, for the promotion of the like good ends, thoſe ſocieties may depute ſome of their more intelligent members to confer with the Royal Society, from time to time; by which means theſe benefactors will, in effect, have the diſtribution of their own donations as much in their own power as they would otherwiſe, with this difference, indeed, they would have the advantage of the advice of that learned body to aid and aſſiſt them in carrying their good intentions the more effectually into execution. Nor is it improbable, if the public were to requeſt the Royal Society to take this trouble upon them, but the members thereof might not a little contribute with their purſes, as well as with their ſtudies and their experiments, to forward ſo laudable a ſpirit.

Another advantage that would attend this matter being inveſted in the Royal Society is, that the public could have no reaſon to be under any apprehenſion that any pſeudo-artiſt, any pick-pocket pretenders to knowlege, ſhould impoſe upon them; becauſe nothing could come before them but ſome of their members would be thorough judges of, and they being wiſe experimenters themſelves, and habituated to judge of theſe things with due circumſpection and accuracy, it would be very difficult, if not next to impoſſible, to deceive them: a man may as well have the confidence to paſs upon them lead for gold, or French coin for pure ſterling money, as a falſe experiment for a true one; whereas among other private bodies of gentlemen, however public-ſpirited their intentions may be, yet, if they have not been converſant and familiar with philoſophy, both in the theoretical as well as experimental part, they can neither give proper directions for trials to be made, in order to anſwer any capital purpoſe, nor can they be proper judges of many when laid before them.

Was it not needleſs to ſay more, I might further urge, that this renowned ſociety conſiſts of a numerous body of perſons of the firſt diſtinction in the kingdom; many of whom, though it ſhould be ſuggeſted, they may not themſelves be competent judges of ſome things that may come before them, yet they will always be good judges how the public money is beſtowed, and prevent its embezzlement or miſapplication. Nor can there be the leaſt fear of any thing of this kind, while a noble lord preſides over this ſociety, who is not leſs conſpicuous for his profound knowlege in philoſophical diſquiſitions, than for his diſtinguiſhed honour in every relationſhip.

I have dwelt the longer upon this article, thinking the advancement of the commercial arts a matter of the laſt conſequence to a commercial ſtate. And although ſome might imagine, that a ſum to be annually raiſed by voluntary ſubſcription for this purpoſe, would amount to but a trifle, and not worthy the attention of the Royal Society; yet I am inclined to believe that a mighty eaſy way might be ſuggeſted, and no way diſagreeable to the public, to raiſe, for a certainty, 20 or 30,000l. a year for ſo good a deſign, beſides what might ariſe by voluntary ſubſcriptions.—But if ever any thing of this nature ſhould be thought of in earneſt, the many wiſe in this kingdom will ſtand in no need of any intimation from me how to obtain a proper fund for ſo popular an occaſion. The great Colbert of France, who was prime miniſter under Lewis XIV, uſed to declare, That he thought he ſpent his time well in reading over a hundred propoſals for the advancing the wealth and commerce of France, though but one of them deſerved to be encouraged. And while other nations are ſtudiouſly cultivating the arts of commerce, we ſhall hardly think them undeſerving our regard, while our whole dependence is upon them.

A BRIEF ACCOUNT OF THE PROGRESS OF THE ABOVE SOCIETY for the encouragement of ARTS, MANUFACTURES and COMMERCE, inſtituted at London, anno MDCCLIV.

In the ANCIENT and USEFUL ARTS of AGRICULTURE and HUSBANDRY.

The Society have conſtantly offered honorary premiums of gold and ſilver medals, for planting of acorns, cheſnuts, elms, firs, and Weymouth pines, in different quantities, and for fencing and preſerving the ſame effectually, in order to raiſe timber, ſo eſſential for the ſervice of the navy, and wood for domeſtic uſes in building, &c.

The great utility of the cultivation of theſe trees is ſo obvious, and indeed has been ſo well conceived by our nobility and gentry, that it will be ſufficient to remark, that the premiums have been claimed, from time to time, by perſons of the higheſt diſtinction.

The cultivation of madder, which is a root of great uſe in dying, has been encouraged by the Society's premiums from the firſt year of their inſtitution: it was formerly planted in England in great quantities, but of late years had been wholly diſcontinued, the Dutch having conſtantly ſupplied us with this valuable article; and it is computed that the imports of madder from Holland have amounted for

ſome

ſome time paſt to 200,000 pounds *per annum*; but under the ſanction of the Society the growth of this plant is revived, and very large quantities are now cultivated by ſundry perſons in different parts of this kingdom; one perſon in particular has planted 29 acres, and the premiums offered by the Society are regularly claimed; ſo that in a very ſhort time we ſhall have no occaſion to ſend to Holland for a vegetable, which will thrive as well in our own country.

The other articles in huſbandry which have been encouraged by the Society are, the raiſing apiaries; for which both honorary and pecuniary premiums are offered: the quantity required for the firſt premium, being eighty pounds, is no leſs than four hundred ſtocks in hives or boxes, and before the Society threw out theſe premiums, no perſons ever thought of poſſeſſing ſuch a ſtock of bees—Several ſorts of fodder, particularly lucerne, have been cultivated with great ſucceſs; and laſtly, hemp, the growth and preparation of which in this kingdom, for the making of ſail-cloth and cordage, is of very conſiderable importance, has been greatly encouraged, and the premiums claimed in ſeveral counties.

POLITE ARTS.

The Society ſet out with giving premiums for drawings by boys and girls: theſe have ſince been extended to various ages, and to different kinds of drawing, too numerous to ſpecify in this place; and honorary premiums of gold and ſilver medals have been eſtabliſhed, and claimed, for drawings by young ladies, the daughters of peers and peereſſes.

Through the encouragement given by the Society to this art, drawing is become a branch of education; and as a great many of our manufactures, which depend on correctneſs and elegance of deſign, are annually exported to foreign countries, the improvement of theſe, which will be the reſult of encouraging our youth to learn this art, muſt in time prove a national advantage.

In the year 1757, premiums were offered for modelling, which are ſtill continued; and this art has been greatly improved amongſt us, ſeveral excellent ſpecimens in clay, and in wax, having been preſented to the Society, in conſequence of their premiums. The great benefits ariſing from the improvement of this art, to the ſtatuaries, ſculptors, &c. is too well known to require a detail.

Etching and engraving, and caſting in bronze, all of which have their various well-known uſes, have been conſiderably improved under the ſanction of this Society; and premiums for theſe articles are ſtill offered.

In 1758, premiums were publiſhed for the encouragement of the medallic art, and the ſubjects propoſed and executed have been, ſome of the moſt glorious events of the late war: as theſe medals are ſtruck from ſteel dies, an extenſive benefit is derived from improvements in this branch, which is not known in general; a variety of articles in hard ware, as etwees, ſeals, &c. of which vaſt quantities are exported, are likewiſe ſtruck from ſteel dies, and therefore all improvements of them muſt prove beneficial to theſe manufactures by increaſing the variety of deſigns or patterns.

Hiſtory and landſcape painting have likewiſe been encouraged, and alſo ſtatues and baſſo relievos in marble; by which many young artiſts and ſome maſters have been induced to produce ſuch performances in each branch, as have done honour to the Society under whoſe ſanction they have been produced.

Engraving on gems has been encouraged with ſucceſs; and ſeveral other articles of inferior note, but which are all uſeful in their kind.

CHEMISTRY, MINERALOGY and DYING.

Premiums have been offered for ſundry preparations and improvements in theſe very uſeful arts, and are ſtill continued: thoſe which have been particularly improved or eſtabliſhed, and for which premiums have been paid, are, verdigris uſed by the dyers, the making of which from Britiſh materials has been ſo far eſtabliſhed to the ſatisfaction of the Society, that the premium is diſcontinued. White enamel, in imitation of the Venetian, has been produced, and a manufactory eſtabliſhed in England, in conſequence of the premiums thrown out for this article.

Premiums have likewiſe been claimed for improvements in dying cloth and ſilk in grain, and for dying cotton ſcarlet, or crimſon in grain, and to anſwer the purpoſes of the Turky or India red. Specimens of improvements of varniſh, to anſwer the ends of Martin's at Paris, have been brought in for the premium offered for this article, and are now under examination; and alſo a compoſition to prevent ſteel from taking ruſt: the making ſalt petre of pig and bar iron, ſal ammoniac, a ſubſtitute for borax, &c. are ſubjects for which premiums are offered under this head; and it is not to be doubted but that conſiderable improvements will be made in every branch of theſe commercial arts.

MECHANICS.

The firſt articles in this claſs which the Society encouraged by premiums were improvements in wind and water mills, models of which have been produced to the Society, and are kept in their repoſitory.

Premiums were likewiſe offered for improvements in ſpinning-wheels, and this year a complete ſpinning-wheel has been produced, with which one perſon may ſpin ſix threads at a time, and it will prove very ſerviceable to ſeveral of our manufactures by ſaving a number of hands; but an article of much greater conſequence lately brought to perfection is, the erecting of a ſaw-mill for ſawing of planks, the model of which has lately been purchaſed by the Society for one hundred pounds, and is now lodged in their repoſitory: this machine is worked by water, and carries ſixteen ſaws: from this model various mills may be conſtructed for the ſame purpoſe.

Bounties have alſo been granted for ſeveral uſeful inventions and improvements in mechanics, which have from time to time been laid before the Society, particularly improvements in reels for winding ſilk, a new invention of a machine for planing caſt iron, eſteemed very curious and uſeful; and ſeveral other things of leſs conſequence. To this curſory review of the Society's ſucceſs in the purſuit of the firſt part of their plan, the encouragement of arts, I have only to add, that they have a repoſitory conſiſting of a variety of models, machines, &c. ſome of which have been preſented to the Society; others have been depoſited in conſequence of their premiums and bounties; and ſeveral have been purchaſed of the inventors or improvers for the benefit of the public; and as this repoſitory is continually increaſing, either by donations from gentlemen, or in conſequence of premiums and bounties, they may in time form a collection equally uſeful and extenſive.

The ſecond branch propoſed to be encouraged by this Society is,

MANUFACTURES.

Several valuable manufactures have been improved, and ſome actually eſtabliſhed, through the patronage of this Society.

In the year 1755, premiums were offered for making buff leather for the uſe of the army; in conſequence of which, bullocks hides were dreſſed in oil, and were found to be as good as the hides of buffaloes imported from abroad: lord Romney introduced the uſe of this leather among the Kentiſh militia, and it has ſince been approved by ſeveral regiments.

In 1756, the Society offered a premium for making carpets in England in imitation of thoſe made in Turkey and Perſia, which have been brought to very great perfection by Mr. Moore, in Chiſwel-ſtreet, Moor-fields, who produced to the Society a carpet in many reſpects equal, and in ſome ſuperior, to thoſe imported from Perſia and Turkey.

A manufactory of crucibles made of Engliſh materials, has been eſtabliſhed by Mr. Leiberick in Weſtminſter, in conſequence of a premium publiſhed by the Society for that purpoſe.

Marble paper, which has hitherto been imported from Holland, chiefly for the uſe of bookſellers and ſtationers, has been brought to ſuch perfection this preſent year, as in every reſpect to equal the Dutch; and the firſt premium offered for this article has been claimed by, and granted to, the manufacturer, who reſides at Exeter.

Paper for rolling-preſs printing has likewiſe been conſiderably improved by means of the encouragement given by this Society: the French excel in this article, and their impreſſions from copper plates are more perfect than ours; but we have lately manufactured a quantity of this paper nearly equal in quality to the French.

Quilting in the loom, in imitation of Marſeilles or India quilting, has been eſtabliſhed in this country, and brought to great perfection, under the patronage of the Society, and the premium has been claimed and adjudged.

The making of flowers of point lace, after the manner of Bruſſels lace, having been encouraged, great improvements have been made therein, and the premiums have been claimed and granted.

Premiums have been publiſhed for making chip hats, which have thereby been conſiderably improved, and the premiums have been granted accordingly.

Alſo great encouragement has been given to the manufacturers of druggets, ſpecimens of which were produced, ſo excellent in their kind, that the premium is diſcontinued.

Theſe are the principal manufactures that have flouriſhed under the ſanction of the Society, and have rendered this part of their plan of equal utility with the encouragement of arts.

The encouraging of improvements in arts and manufactures, has ſo direct a tendency to the ſupport of commerce, that little remains to be ſaid on this head, which completes the plan of our laudable Society: however, ſeveral articles in

COMMERCE

Have been greatly improved by means of their premiums, eſpecially in our colonies.

The planting of white mulberry trees, whoſe leaves are the proper food for ſilk worms, has been promoted by premiums;

ums; and great quantities of cocoons, being little balls or bags on which the incloſed ſilk worms have ſpun the ſilk, have been produced to the Society's correſpondents in the colonies, who have paid the premiums that have been claimed for this article.

The importation of raw ſilk from the colonies has likewiſe been promoted by premiums, which are ſtill continued.

A premium is alſo offered for producing wines in our American colonies, and ſome ſamples have been ſent over of both red and white, which were greatly approved of in the Society; but as the time for granting this premium does not expire till 1765, we may expect further improvements, and that ſuch wines will be produced as ſhall deſerve the reward of one hundred pounds.

The cultivation of hemp, of the olive and cinnamon trees, of aloes, ſafflower, &c. in the colonies, is encouraged by ſuitable premiums, and various other articles to be imported from thence; amongſt which the importation of pearl-aſh has been effected this preſent year, though not in ſuch large quantities as to merit the premium; but the proprietor has been honoured with the Society's gold medal, in conſideration of what he has already done towards promoting their intentions with reſpect to this commodity.

And ſo large a field is opened in the colonies, for carrying on the laudable deſigns of this Society, that it is impoſſible to ſet bounds to the advantages that may one day ariſe, from affording this encouragement to our fellow ſubjects in America, eſpecially if it be conſidered that our poſſeſſions in North America are ſo extenſive, that they include almoſt all the different climates of the world; and there is the greateſt reaſon to imagine that moſt of the ſpice trees, plants, and other valuable articles, which at preſent are peculiar to the eaſt, may be cultivated in the weſt.

Having now given an account of the principal public advantages ariſing from the premiums and bounties granted by the Society for the encouragement of ARTS, MANUFACTURES and COMMERCE,

I have only to add, that this reſpectable body at preſent conſiſts of between two and three thouſand members, and that their proceedings are carried on with the utmoſt candour, propriety, and decorum, by means of a well-digeſted ſet of rules and orders, which are printed for the uſe of the members, the ſubſtance of which I ſhall endeavour to comprize in as few words as poſſible.

THE OFFICERS of this Society are, the preſident, the vice-preſidents, of whom there are ten, the ſecretary, aſſiſtant ſecretary, regiſter and collector: theſe are choſen annually by ballot. The election of a new member is likewiſe by ballot: he may be propoſed by a member, at any meeting of the Society, and be balloted for at the next meeting, when, if two thirds of the members then preſent ballot in his favour, he is deemed a perpetual member on payment of twenty guineas, or a ſubſcribing member on payment of any ſum not leſs than two guineas, ſo long as ſuch payment is annually continued.

Their meetings are held in their great room oppoſite Beaufort buildings in the Strand; and they meet every Wedneſday at ſix in the evening preciſely, from the ſecond Wedneſday in November to the laſt Wedneſday in May; and in the intermediate time, on the firſt and third Wedneſday in every month: theſe are called ordinary meetings, beſides which, there are eight general meetings every year, and ſome occaſional extraordinary meetings.

When the Society is ſitting, the preſident or preſiding member conducts the buſineſs of the evening agreeable to the book of rules and orders which lies on the table before him: the buſineſs begins with reading the minutes of the preceding meeting, which being once read, are on a ſecond reading to be diſcuſſed if neceſſary, article by article, before any other ſubject is conſidered: all the minutes which are not objected to on the ſecond reading, ſtand confirmed: after this the reports from committees are read, and agreed to or diſapproved; unleſs a motion is made and ſeconded to poſtpone the reports, in order to introduce any new propoſition, which cannot be received after ten o'clock: if ſuch motion ſo ſeconded is carried by a majority of hands held up in ſupport of it, then the new propoſition is immediately conſidered, being firſt delivered at the chair in writing; and in this, and all other caſes, the greateſt freedom of debate is allowed, and carried on with the utmoſt decency and candor, every member being patiently and attentively heard without interruption, unleſs he departs from any order of the Society, or ſpeaks more than once to the ſame queſtion, which is not permitted, unleſs a gentleman has been miſunderſtood, and deſires to explain himſelf: when any member ſpeaks, he ſtands up and addreſſes himſelf to the gentleman in the chair, and the reſt remain ſilent: no limitation of time is preſcribed to the ſpeaker, but few exceed ten minutes, except on very extraordinary occaſions; and moſt gentlemen, for the ſatisfaction of ſo large an auditory, ſpeak as audibly as poſſible.

There are nine ſtanding committees, and two chairmen to each committee, beſides which there are occaſional committees for miſcellaneous ſubjects: to theſe committees are referred the ſeveral ſubjects properly falling under their conſideration, as letters, to the committee of correſpondence, polite arts, to the committee of polite arts, &c. and every member is of every committee, though particular gentlemen are nominated to each committee.

Theſe are the principal regulations that have not been already noticed in the courſe of this narrative, which I cannot more aptly conclude than with a ſincere and fervent prayer, "that "this moſt free and independent Society, inſtituted FOR "THE PUBLIC GOOD, may long continue to do honour "to its patrons, and that its preſent moſt excellent plan "with all poſſible improvements may be handed down to "poſterity, and by them be ſacredly revered, and firmly "upheld with the reſt of thoſe ineſtimable privileges, which "have rendered us ſuperior to all the nations of the "earth."

RUM, a ſpirituous liquor, often uſed in punch: it is made in the Weſt-Indies, of ſugar-canes, and is, in the general, of a ſtronger body than brandy, i. e. it contains a larger quantity of oil, and leſs phlegm and ſalt: its oil is leſs attenuated and ſubtilized, whereby its volatile ſalts are more embarraſſed and ſheathed up. Neither is its oil reduced to ſuch minute and ſubtile particles, either becauſe the canes were leſs fermented with the water, or becauſe the oil and ſalt of this cane are more viſcid and groſs, than thoſe of the moloſſes drawn from the ſugar, which has undergone the ſundry neceſſary operations, and has been thoroughly fermented afterwards. For although all thoroughly fermented liquors afford much more ſpirit, in proportion to their body and kind, than the leſs fermented; yet it is certain, that the ſundry operations ſugar undergoes in the making, may, and does break, attenuate, ſeparate, and divide the principles in the moloſſes (though the groſſeſt of the ſugar) more than theſe ſame principles exiſting in the crude cane, where the firm union of the groſs oil and ſalt makes the unprepared ſugar of almoſt a loathſome luſcious taſte. And alſo all liquors, thoroughly fermented, have, during the fermentation, a free acceſs and communication with the external air; whereby the inteſtine motion is promoted, and the ſmalleſt and moſt ſeparable parts are too much attenuated and reduced to a ſubtile aura, which exhales to the depauperating of the liquor of much of its fineſt parts; hence it yields leſs (though a ſubtile) ſpirit.

That rum which is of a browniſh, tranſparent colour, of a ſmooth, oily, grateful taſte, of a ſtrong body and conſiſtence, of a good age, and well kept, is the beſt. That of a clear, limpid colour, and hot pungent taſte, is either too new, or daſhed with ſpirits.

To ſuch palates and ſtomachs as can bear it, rum is certainly preferable to brandy, either for a dram or punch, in many caſes. Brandy (e. gr.) is diuretic, becauſe it ſtimulates the veſſels, and rarefies the blood, whereby only its finer and more ſerous parts are ſtrained off by the kidnies; but rum not only ſtimulates by its ſalts, but lubricates by its more and groſſer oil, and thereby expands and dilates the renal lateral veſſels; whereby not only the thinner, but alſo the groſſer and more excrementitious parts of the blood, are allowed a ready paſſage through the renal ſtrainers, and get off by the ureters.

Again, when the veſſels are ſluggiſh, and the blood ſizy, brandy promotes perſpiration in a gouty habit, and forces off part of the ſalts by urine, as it at the ſame time carries much eſſential vegetable ſalt into the blood; but rum ſoftens and dilates the veſſels more; hence a freer perſpiration both of ſalts and ſeroſities, as well as a diſcharge by urine; and at the ſame time it conveys leſs ſalt into the blood, and its more and groſſy oil ſheaths the remaining acrimony of the blood; which anſwers two valuable intentions. 1. It thereby dilates the corrugated capillary veſſels, wherein the gouty matter was ſtopped and lodged, and the relaxation of the veſſels gives nature an opportunity to pour in thinner fluids upon theſe gritty lodgments and ſharp matter, whereby they are diluted, diſſolved, thruſt forward, and expelled by the excretory ducts of the ſkin. 2. It blunts the edges of the pointed pricking ſalts, and obtunds the reigning acrimony, makes it leſs uneaſy to the patient, 'till the elaſtic veſſels can attenuate, ſeparate, and diſſolve it, ſo as to be either perſpired or thrown back into the blood, 'till it arrive at and be ſtrained off by the kidnies.

In nephritic pains and gravelly caſes, where the veſſels are always much contracted, and ſometimes inflamed, the uſe of rum is preferable to that of brandy, becauſe it relaxes the contraction more, increaſes the ſtream of urine, and makes way for the obſtructed matter to paſs off, or be forced and waſhed out of the channels. Bilious conſtitutions can bear the uſe of rum, diluted with water, better than brandy, becauſe their ſolids being elaſtic and contracted, and their veſſels narrow, and fluids acrimonious; for whatever blunts the acrimony of their juices, and ſoftens and dilates their fibres and veſſels more, muſt be beneficial. On the contrary, whatever adds to the ſtimulation and contraction of their ſolids, and the ſharpneſs and ſaltneſs of their fluids, muſt unavoidably be hurtful. All ſuch as have elaſtic fibres, contracted veſſels, ſharp and thin juices, lean and ſlender bodies, if they will be meddling with drams (which, if they prefer health and long

life to taſte and luxury, they ſhould uſe but as medicines, i. e. from neceſſity, not choice or pleaſure) ſhould prefer rum. Hard drinkers, who have broken their conſtitutions by frequent debauches, will have a moderate dram, that will not only raiſe, but preſerve the tone of the ſtomach, maintain and ſtrengthen good digeſtion, and keep them from being too much damped: here rum ſhould take place of brandy; not only becauſe it fills and invigorates the nervous tubes with leſs volatile and more durable ſpirits, but, at the ſame time, its oil blunts the points of the ſalts, which other liquors have left too plentiful in the blood.

In chronical aſthmas, coughs, and ſtuffing of the lungs, if any moderate dram may be allowed, rum is the beſt, becauſe its ſpirits are leſs volatile, its oil more and groſſer, to ſmooth the ſtiff and contracted veſſels, expand their ſides, make way for ſpitting, and, by its ſolid particles, clearing the tubes of ſome parts of their load.

In choleric diſorders, from acrimony, pricking, paining and tearing the nervous threads, rum offers fairer for relief than brandy, becauſe it is more oily, ſmooth, and ſoftening. It is alſo more ſuitable to old age, becauſe, at the ſame time it ſtimulates, it alſo lubricates and dilates the veſſels, whereby they keep longer open and paſſable, the ſtraitening, ſhutting up, and coaleſcence of which, is the only cauſe of old age and natural death.

In recent great colds, without a fever, rum is more ſerviceable than brandy, provokes both perſpiration and urine more powerfully, as it ſheathes the ſalts, makes their ſtimulus leſs ſenſible, and contracts the veſſels leſs, nay, its ſulphur ſmooths and dilates them more.

When the perſon is very hot and thirſty, a dram of rum is much better to drink than brandy, before water, ſmall beer, or milk; for this keeps the veſſels more pliable, dilated, and lax, maintains a freer courſe for the fluids to paſs without lett or ſtoppage: for the miſchief done by water, or ſuch ſmall liquors, in this caſe, is, being drank cold, they ſuddenly contract the veſſels, ſo as the liquids cannot paſs; their fineſt and thinneſt parts are diſcharged through the interſtices, or forced along the tubes, whilſt the more groſs are obſtructed, fixed, and wedged in; hence obſtructions, ſtagnations, inflammations, ulcerations, or mortifications, or ſchirrhus's, and carcinomatous tumours of ſome viſcera of the lower belly.

But for theſe reaſons, phlegmatic and corpulent people muſt ſtill allow brandy the preference, becauſe it ſtimulates more, and raiſes a greater contraction; for it abounds more with ſalts, and its oil is more ſubtile, exiſts in ſmaller particles in the liquor; and their veſſels and fibres are ſo ſoaked in inſipid humidities, and relaxed with oil, that they want no lubrication, nor the ſalts in their blood any abſorbent. Cachectic, hydropic, lethargic, and paralytic perſons, muſt alſo chuſe brandy on the ſame account; and ſo muſt thoſe who have furred-up veſſels and foul glands (which raiſe ſcrophulous knots, œdematous ſwellings, whether fixed or ſhifting) for the ſpirits of brandy being more fine and ſubtile, they rarefy the blood, and ſtimulate the veſſels more. In exceſſive hot weather, when the fibres are much relaxed, and perſpiration, or ſweat, profuſe, brandy muſt have the precedency, becauſe it ſtimulates and contracts more, and rarefies the thick and ſizy matter better, raiſes a briſker motion in all the juices; though it muſt be owned, that theſe its good effects are but of ſhort ſtanding.

In a moiſt, foggy, or marſhy air, where the moiſture hangs upon the ſkin, and ſtraitens or ſtops the mouths of its excretory ducts, and diminiſhes perſpiration, or where the ſpring of the air is weakened or broke, ſo that it neither expands itſelf ſufficiently in our lungs, food, nor blood, but renders the juices both ways ſizy, a dram of brandy is better than rum.

But in an infected air rum is before brandy, becauſe it leaves more oil in the mouth and throat, which entangles and imbibes the infectious effluvia, or miaſmata, floating about and hanging in the atmoſphere, and ſucked in together with the air; and in this caſe, the greateſt preſervative is to ſpit out all our ſpittle whilſt we are in that infected air.

Rum being a ſpirit procured from the fermented ſcummings, waſte, and refuſe matters of a primary ſugar-houſe, that immediately works the ſugar from the cane, differs from a ſugar ſpirit, as containing more of the natural flavour, or eſſential oil of the ſugar-cane, a deal of the raw juice, and parts of the cane itſelf, being often fermented in the liquor, or ſolution, whereof the rum is prepared.

The unctuous flavour of rum is often ſuppoſed to proceed from the large quantity of fat uſed in boiling the ſugar; which fat indeed, if coarſe, will commonly give a diſagreeable, nidorous, or oily flavour to a ſpirit, as I have found by experience; but rum has its ſpecific and natural flavour from the cane.

When a ſufficient ſtock of theſe refuſe materials is procured, they are fermented in the common method, though always ſlowly at the beginning of the ſeaſon of making rum in the iſlands, for want of yeaſt, or other fermenting matter, to ſet the liquor at work; but, by degrees, they procure a ſufficient quantity of the ferment, which ſpontaneouſly riſes as a head in the operation: and thus they come, in a little time, to ferment and produce their rum with great expedition.

When the waſh is fully fermented, or to a due degree of acidity, the diſtillation is carried on in the common way, and the ſpirit made up proof, though ſometimes advanced nearer to alcohol, or the ſtate of double proof; in which caſe they call it double-diſtilled rum.

It may be otherwiſe rectified to advantage, as it is commonly firſt drawn with a full doſe of high-flavoured oil in it, which requires to lie, or digeſt for a long time in the ſpirit, before the whole becomes ſoft and fit for uſe; whereas, were it to be well rectified, it would grow mellow much ſooner, and have a much leſs potent flavour, which ſometimes renders it diſagreeable.

The beſt ſtate to keep it in, both for exportation and otherwiſe, is, doubtleſs, that of alcohol, unleſs when the groſs oil is required in it, for the ſake of mixing and covering; and, by duly throwing out its oil, it may be brought nearly to the flavour of a fine ſugar-ſpirit, or arrac, as a very ſmall proportion of it, uſed in its natural ſtate, to a fine taſteleſs ſpirit, will give it a flavour bordering very near upon that admired in arrac.

This ſpirit is uſually very much adulterated in England, with one or other of the cheaper ſorts; even a rectified malt-ſpirit, if uſed in moderation, much leſs a moloſſes, or ſugar-ſpirit, being not eaſily diſtinguiſhable therein.

The ways of trying its goodneſs are the ſame with thoſe mentioned under brandy [ſee BRANDY and DISTILLATION.] In this, and moſt other reſpects, it ought to be conſidered as a brandy of a particular ſpecies; ſo that what is delivered in regard to brandy will be alſo applicable to rums: for though the ſugar-cane differs from the vine, yet the ſweet ſaccharine ſubſtance whereto both the juice of grapes and the juice of the ſugar-cane are, by the ſame art, reducible, fits them to afford wines and brandies that ſhall not be readily found to differ; which is a pregnant hint, that may prove of unſpeakable advantage to the Britiſh ſugar colonies. See the articles SUGAR, SUGAR COLONIES. See alſo the BUSINESS of the CUSTOM-HOUSE at the end of this letter R.

RUSSIA, or MUSCOVY, is bounded on the north by the Northern Ocean; on the eaſt by Great and Chineſe Tartary, and part of the Japonic Sea; on the ſouth by the Calmuc and Cuban Tartary, Perſia, Georgia, and the Caſpian and Euxine Sea; and on the weſt by Poland and Sweden. Its extent from eaſt to weſt, that is, from the confines of Sweden to thoſe of China, is computed, by ſome geographers, to be 1500 leagues; and from north to ſouth, that is, from the Frozen Sea to the Euxine, 600; though others differ in their accounts: the whole country, however, lies between the 46th and 70th degree of north latitude, and in ſome parts eaſtward reaches even beyond it, and between the 30th and 160th of eaſt longitude.

Ruſſia may be divided into Weſtern and Eaſtern, Tartarian and Laponic, and the late conqueſts in Aſia.

I. In the WESTERN MUSCOVY are the following provinces: 1. PLESKOW, or PSKOW. 2. GREAT NOVOGOROD. 3. TWERA. 4. RZEVA, or RESCHOW. 5. BIELA, or BIELSKI. 6. SOMOLENSKO. 7. SEVERIA. 8. CZERNICHOW. 9. VORSTIN. 10. REZAN.. 11. BIELGOROD. 12. MORDOA, &c. 13. NISINOVOGOROD, or LOWER or LESSER NOVOGOROD. 14. VOLODIMER. 15. SULDAL. 16. Moscow. 17. ROSTOW. 18. YEROSLAWLA. 19. BILIJESORA, or BELOZERO. 20. VOLOGDA. 21. CARGAPOL, OWEGA, &c. 22. DWINA.

II. In the EASTERN are the provinces of, 1. MEZON. 2. JUGORA, or INGORSKI. 3. CANDORA and TEESCA. 4. PETZORO, or BORANDAI. 5. The country of the VOGULISI. 6. PERMIA. 7. OUSTIONG. 8. ZIRANIA; and, 9. VIATKA, or VIADSKAI.

III. In the MUSCOVIAN TARTARY are thoſe of, 1. CASAN, or CAZAN. 2. BULGARA. 3. BASKIRIA. 4. ASTRACAN. 5. SIBERIA; and, 6. SAMOIEDA.

IV. In the RUSSIAN LAPLAND. 1. MURESMANROI, or MARITIME LEPORIA. 2. TERSKOI LEPORIA. 3. MORESKI LEPORIA; and, 4. NOVA ZEMBLA.

We ſhall not, in ſo large a territory, enter into a minute deſcription of theſe diſtinct provinces, many of which afford little trade, but give the beſt general ſtate of this trade that we can.

As the Czarina is now miſtreſs of a vaſt extended dominion, there muſt neceſſarily be a great variety in the trade of ſo many countries; and yet, as they are all under the management of one ſovereign, ſo they are, by an extraordinary conduct, brought at laſt to run, as it were, in one general channel; which was the effect of the exquiſite conduct of the late Czar Peter, emperor of Ruſſia.

The Muſcovite dominions are ſomething wonderful in their ſituation, and which qualifies them for commerce with almoſt all the world, in a manner which no empire but this can boaſt of.

They have a communication with four parts of the world, by ſeas ſo remote from one another, that nothing can be ſhewn like it in the whole globe; and, in the obſerving this, we ſhall be able with the greater eaſe to deſcribe the prodigious commerce they now carry on.

1. They have the port of Archangel, in the White Sea, as it is called by ſome, the Frozen Sea by others; and by this they have a navigation to the nothern ocean, can fit out ſhips to Spitſbergen (Groenland) and, by the north cape, into the German and Caledonian Oceans, and may ſend ſhips to any part of America, paſſing by the north of Scotland and Ireland, with as great eaſe as the Dutch, who go north about, do to the ſame countries. It is true, the Muſcovites have not yet meddled with thoſe remote branches of trade, but it may not be long ere they do.

2. They have the port of Peterſburgh, in the gulph of Finland; by which they have opened a door into the Baltic Sea, and, by that ſea, into the Britiſh Channel, and ſo with all the reſt of the world. They have alſo the intire poſſeſſion of Wiborg, Narva, Revel, and Riga, four of the beſt ports for trade in that part of the Baltic Sea.

3. They have the port of Aſtracan, in the Caſpian Sea, by which they have a navigation to the coaſt of Georgia and Perſia, and where they are likely one day to open effectually the moſt important trade in that part of the world, notwithſtanding they met with ſome obſtruction, in relation to the Perſian raw-ſilk trade from Geylan, on the ſide of Georgia: and to that purpoſe the late Czar fortified Terki, on the utmoſt weſtern bound of Circaſſia; and the late Czarina built a fort and royal city there, which they boaſt will, in time, be equal to that of Peterſburgh in the gulph of Finland.

4. They have three ſmall forts on the ſide of the Black Sea, which, when they took Aſoph from the Turks, they ſlighted, as having reſolved to make Aſoph the ſeat of a naval power, equal to that of the Turks, and ſo have obliged the Grand Seignior to allow them a free paſſage out of the Palus Meotis, and the Black Sea, by Conſtantinople, into the Mediterranean, which would have been a door of trade worth a kingdom itſelf; but that great deſign miſcarried afterwards, by the loſs of Aſoph*, which they were obliged to reſtore to the Grand Seignior, by that fatal treaty made on the banks of the river Pruth, in Moldavia; and, ſince that, they are glad to make uſe of theſe ſmaller ports in the Black Sea; but they have not yet appeared to be of much ſervice, either in matters of trade or war, having no harbours to ſeaward capable of receiving any ſhips of burthen, nor any navigable river by which to carry on their commerce by land, the country next adjoining being moſtly deſert, and incapable of trade: yet it is ſaid the late Czar, had he lived, would have ſettled a communication that way by caravans, and ſo have had a trade to Terki on the Caſpian Sea.

* This town ſtanding on the frontiers of Ruſſia, againſt Turkey, has been ſeveral times taken and retaken of late years; but on the laſt peace, concluded in the year 1739, between thoſe powers, it was agreed that the fortifications ſhould be demoliſhed, and the town remain ſubject to Ruſſia.

Theſe are the four ſeas into which the great extent of their dominions gives them an entrance; which yet are ſo exceedingly diſtant and remote in their ſituation, as to have no practicable communication by ſea with one another: but the ſituation of Muſcovy is ſuch, that, by the great river Wolga, which runs from north to ſouth through the heart of their dominions, they may one day form a communication for trade between all theſe parts, being able, with the help of two ſmall canals, which his Czariſh Majeſty had begun before his death, to join the waters of the lake Onega with the ſtream of the Wolga, and ſo in effect cauſe the waters of the Caſpian, the Baltic, and the White Sea, to meet one with another. In the like manner, by a canal at Varonitza, he had brought the navigation of the rivers Wolga and the Don, or Tanais, together, and ſo joined the waters of the Caſpian with thoſe of the Euxine Sea; though by the diſmantling of Aſoph, as above, that communication is not rendered near ſo uſeleſs to this country as it otherwiſe might have been.

Having theſe advantages for extending their commerce by ſuch a ſtrange kind of river-navigation, we will proceed to enquire into the ſunds of trade which are to be found in this vaſt dominion. And here we may obſerve, that though the induſtry of the people of Muſcovy is really ſcandalous (at leaſt it was ſo before their prince fired their minds with expectations of getting great things from trade) and that their manufactures were very few, yet now no ſingle country (take it complexly) has ſo many, and ſuch valuable things for exportation, as the Muſcovite dominions, and thoſe both of land produce and manufacture, and which, conſequently, bring a prodigious return to the country in money; but 'till the late Czar ſettled his court at Peterſburgh, opening a trade to the Baltic Sea, and bringing his ſubjects to cloath and dreſs after the German and French manner, they had no great conſumption of Britiſh or French manufactures among them, and, conſequently, no great commerce this way; but now their exports and imports are exceedingly increaſed, and are daily increaſing; and certain it is, that the ballance of trade is greatly to the advantage of the Ruſſians, with moſt countries with which they have dealings.

The produce of the European part of this country is as follows.

From Ruſſia and north parts of Muſcovy,
- Tar in a prodigious quantity.
- Honey and bees-wax.
- Ruſſia-leather, deer, bear, and elk-ſkins.
- Pot-aſhes, timber and plank, iron, and ſome copper, the laſt from Kexholm, or South Finland.
- Hemp and flax.
- Linen and linen-yarn.
- Furrs, ſuch as ſable, black fox, ermin, rain-deer, martens.
- Raw ſilk, by the Wolga.
- Perſian, Indian, and China goods, the laſt by land-carriage.

From Ruſſia by the port of Wiborg, conquered from Sweden,
- Tar,
- Deals,
- Fir-timber,
- Maſts,
- Iron, and alſo copper.

From Livonia, Eaſthonia, and Narva, new conqueſts, and from Lower Ruſſia,
- Hemp, flax, linſeed the beſt in Europe.
- Corn, ſturgeon, and cavear.
- Pitch and tar.
- Linen-yarn.
- Linen cloth of ſeveral ſorts.
- Ruſſia linen, properly ſo called.
- Diaper, a late manufacture.
- Sail-cloth, the like, } both improving.
- Canvas and duck, }
- Pot-aſhes.

From Siberia,
- Rich furrs, as ſables, ermins, black fox, white bear.
- Beaver, &c. as above.

From Circaſſia, — Tobacco, which is very much increaſed.

All theſe are extraordinary exportations, and the more, becauſe exported in an extraordinary quantity: but their manufactures are but ſmall in proportion to theſe, except their linen, linen-yarn, and Ruſſia leather; and theſe, it muſt be acknowleged, are articles of very great extent, and have been much increaſing for many years paſt. Of theſe merchandizes, the tar is, as before obſerved, a prodigious article. The late Czar was, as the Czarina now is, the ſole merchant, and it is principally exported at Archangel and Wiborg.

The Czarina is likewiſe ſaid to be the only merchant in the tobacco of Circaſſia. Tobacco, it ſeems, was once prohibited to the Muſcovites, that is to ſay, to ſmoke; the reaſon was, that it affected their heads, and made them drunk: and they ſay of a Ruſſian, that if he is drunk, he becomes mad, is a mere ruffian; and the quarrels and murders which frequently happened among them were ſuch, occaſioned chiefly by this tobacco, that it obliged the late Czar to prohibit the uſe of it: but, as the people were gradually brought under a new diſcipline, they became more civilized, and under government; and upon this the Czar allowed them the uſe of tobacco again; which, as it grows in exceeding plenty, and very good, in their own dominions, they are ſupplied from thence wholly, and the government makes a very great revenue from it. The country of Circaſſia they ſay yields above 60 or 70,000 hogſheads of tobacco yearly, and they vend no inconſiderable quantity of it in the Baltic, and in Sweden and Poland, to the great detriment of the Engliſh and Dutch merchants, who had all that trade before.

Between the port of ASTRACAN and the coaſt of PERSIA, there is a very large commerce carried on.

From SIBERIA, the Czarina's ſhare only of the ſables and rich furrs taken there, is ſaid to amount to above 150,000 l. ſterling a year, and the duty paid upon the reſt to as much more; by which ſome gueſs may be made of the value of theſe fine furrs, the whole trade of that kind being in her dominions.

The trade in their new conqueſts was very great before, and is not leſſened ſince their falling into the hands of the Ruſſians. The hemp, flax, and other naval ſtores ſhipped off every year at Riga, Revel, Narva, Wiborg, and Peterſburgh, are ſo exceeding great, that the Dutch only are ſaid to load 300 ſhips a year at Peterſburgh, and near as many at Wiborg.

The tar being a monopoly in the Czarina's own hands, brings in about 250,000 l. ſterling profit to her exchequer, occaſioned chiefly for the following reaſons:

1. Becauſe of the exceſſive tyranny of the nobility and boyars, the labour of the people is of no great value; and their maſters being obliged to yield the Czarina ſo many barrels of tar, according to the lands and eſtates they hold, they again oblige their vaſſals to produce it to them; ſo that it really coſts next to nothing either to the Czarina or to the nobility, but the expence and conſumption of an infinite quantity of timber in the country; which, on the other hand alſo is of no value, the woods being of ſuch a boundleſs extent, that, if we give credit to ſome travellers, there is one wood, or foreſt, equal to the whole iſle of Great-Britain.

2. Becauſe of the great quantity produced; for though it is extremely cheap, yet the quantity ſupplied is ſo great, that it makes the revenue from it amount prodigiouſly: and ſome think it riſes to as much more as we have mentioned.

The

The late Czar erected two or three foreign trades out of the way of all Europe beſides, and in which none could diſturb him, nor does any one yet pretend to it: the one is, a trade by caravans from China. This trade he long ſtrove to accompliſh; and becauſe the diſtance is prodigious great, and the way moſt of it deſolate and dangerous, he erected ſtages, at proper diſtances, on the way, ſo that travellers might ſubſiſt at a reaſonable expence, and likewiſe be ſecure from the inſults of the Tartars, who are naturally thieves, and who rove about, and ſurround paſſengers, and ſometimes plunder them of all they have, and murder them alſo. Nay, in ſome places he built cities, as Janiſea, on the river Janiſea; Albaſſin, or Albaza, on the Yamour; Schelinga, on the river Schelinga; Argun, on the river Argun; and the like.

If due notice is here given of dangers to travellers on theſe roads, the governors of the ſeveral ſtages, or cities, are always ready to ſend convoys to eſcort the merchants from one ſtage to another; and when they hear of any caravans of merchants coming, and having notice of any hoords of Tartars on the road to attack them, they ſend detachments of their ſoldiers to meet their caravans, and conduct them ſafe: and this they are obliged to do, without taking or demanding any gratuities or rewards, much leſs obliging the merchants to pay any tolls or duties on their goods.

Theſe caravans, or companies of merchants, ſometimes conſiſt of ſeveral hundred horſes and camels, and bring a very large quantity of rich goods; and would the Chineſe emperor have done his part towards opening a trade with Europe that way, as the Czar would have done, it might have been made eaſier to them both, and infinitely more conſiderable. For example:

There are ſeveral rivers capable of being made navigable, whoſe courſe running from weſt to eaſt, have their beginnings in the Muſcovite dominions; and, were due methods taken to clear theſe rivers of the obſtructions which prevent their navigation, and which are rather accidental than natural, half the journey might be turned into a voyage, and be performed by water.

There are likewiſe other rivers, more ſouthward, which riſe on the frontiers of China; ſome take their courſe directly into China, and paſſing by or through ſome of the greateſt trading cities and provinces in that country, empty themſelves into the Chineſe ocean.

Other rivers riſing on the ſame frontiers, and not very remote from the firſt, take a quite contrary courſe, and empty themſelves into the Caſpian ſea. So that were theſe mighty monarchs agreed to promote reciprocally the good of each other's ſubjects, a ſmall expence to ſettle caravans, or land-carriages, between the ſaid rivers, for the diſtance, perhaps, of 12 or 20 days journey, would facilitate the commerce of thoſe nations that way, and goods might come even from Pekin in China to Peterſburgh itſelf, almoſt all the way by water.

We ſhall but juſt mention with what eaſe theſe two powerful monarchs, if they concurred in their endeavours, might bring the world to a certainty about the continuity of the northermoſt land of Aſia with that of America, and the poſſibility or impoſſibility of a paſſage by the north-eaſt ſeas to China and Japan; whether Nova Zembla be an iſland or a continent; whether there be any ſuch thing as paſſing from the mouth of the river Oby, and the river Janiſea, into the ocean, or whether thoſe rivers empty themſelves into the ſtraights called Waygat's, and whether that ſtraight is a bay or a vare, and opens eaſtward into the ocean; whether the river Tartarus opens into the ſaid Indian Ocean, or whether its ſtream is continually diving under a ſurface of ice; whether the north eaſt part of Grand Tartary, and the mountains of which our geographers ſay they know not how far they extend, run out beyond the pole, or whether they are broken off by the ocean, and leave room to ſhips to ſteer to the ſouth-eaſt, and to the land of Jeſſo and Japan.

We do but juſt mention theſe things, however inſtructing they might be, becauſe the emperor of China, not addicted to improve his people by commerce or correſpondence with Europe in this ſhape, is no way inclined to make diſcoveries, or, perhaps, apprized of the advantages it might be to his country if he did.

But we muſt not omit, that the late Czar of Muſcovy, a very enterprizing and politic prince, had encouraged ſeveral of his own people to travel by land, and trace the northern coaſt, in order to diſcover what they could of theſe things; but either for want of conſtancy to endure the extremity of the weather, or for want of judgment, they have, 'till very lately, done nothing worthy of the deſign, nor afforded any accounts that have been ſatisfactory: not that the thing was impracticable, for as they never came to any country but what was inhabited, it is hard to conceive that it ſhould be impoſſible for ſome people to travel through a country where others could dwell; or, which is ſtill more, that they could not paſs through a country in the ſummer, where others could ſubſiſt the whole winter. We make no doubt, but if the late Czar had lived, and accompliſhed his other great enterprizes for the advancement of the commerce of his people, he would have found ſome methods to make a commerce with China more practicable by ſea or by land, by caravan, or by river-navigation, than it is at preſent.

Whether the journey to China may be ſhortened by the convenience of water-carriage, it may be conſidered, that the way which travellers from Moſcow to China now take, is this: they go north to Jeraſlow upon the Wolga, 200 miles; then to Wolagda, on the Ruſſian Dwina, 188 miles farther, the ſame river, which runs to Archangel; then north to the latitude of the arctic circle (to avoid a great defert of 800 miles, which lies in the way) then ſouth-eaſt to Tabolſki, on the river Irtiſch, which ſome make in 54, but Sanſon places it in 66, degrees of north latitude; and this is 3000 miles from Moſcow, if we may believe the journal of the Holſtein ambaſſador, Iſbrand of Gluckſtadt, who travelled as miniſter of the Czar of Muſcovy, from Moſcow to Pekin.

From hence they croſs the river Oby, and travel eaſt to the river Janiſea, which by the account of Iſbrand held them 67 days.

All this might be traverſed another way, thus: from Moſcow to Caſan, all the way down the Occa and Wolga, about 300 miles; at Caſan they enter the river Kama, by the ſtream of which, large enough for veſſels of 80 tons, they can go up to Perma Mielki, within three days journey of Irtiſch: ſo that by travelling only three days by land, all the journey of 2200 miles to Jobolſki may be performed by water.

Let it be ſuppoſed, that from Jobolſki they go by water 'till they enter the Oby, which has been done, and is practicable every day: from the banks of the Oby to the Janiſea, and from the Janiſea to the great lake of Baikala, is the 12 or 20 days journey we ſpeak of. Out of this lake iſſues the great river Angara, or Argun, by ſome called Yamour, according to Sanſon, or Jamor, or Amour, according to others; which running with a vaſt channel, empties itſelf, after a courſe of 2720 miles, into the great Tartarian ocean, or ſea of China.

This is the river which the Chineſe ought to take care of, and which, perhaps, may be as eaſily opened for navigation as the Wolga, whoſe courſe is as long, and channel as large: and, as it lies in a latitude not to be incumbered with ice, it may probably be an eaſy paſſage into the Chineſe ſea, and anſwer as well, perhaps, to the Ruſſians, as a north-eaſt paſſage by ſea would to the reſt of the world.

Some of the modern map-makers, though their authority is much to be queſtioned, bring the head of the river Irtiſch farther ſouth, and make its courſe much longer than the Ancients; they lay the ſtream parallel with the Oby, and that with Janiſea, and their ſpring-heads not far aſunder; ſo that according to thoſe maps, from Caſan on the Wolga, it cannot be above ſix days journey to the Irtiſch, without going north up the Cama at all, and then they may paſs down the ſtream of Irtiſch, which lies north-eaſt by eaſt, 'till they come into the Oby, and then to the land by the river or the lake Janiſea; and from thence in 20 days journey, as above, they reach the lake Baikala, whence they go by the Angara. But thoſe differences can only be adjuſted by the Ruſſian geographers, and theſe routes ſettled to China, ſo as to make it eaſy for the carriage of merchandizes. But, as the Chineſe have not concurred herein, there lie difficulties, which, perhaps, may never be removed except by force.

But the late Czar, who had this trade to China much at heart, had his eye another way; and though even this, according to one method, wanted the concurrence of the Chineſe government, yet if that failed, there was another method which would not want it at all, which was thus:

The navigation from Moſcow to the Caſpian Sea is known, and is all within themſelves; the Wolga enters the Caſpian Sea about the latitude of 46 degrees on the north ſide of the ſaid ſea. On the eaſt, almoſt in the ſame latitude, is a great river called Khun or Sihun; others call it Oxis or Oxus, which enters itſelf into the ſame ſea, and is navigable many hundred miles, or may be ſo: it riſes out of the ſame mountains, and not far from the head of the great river Ganges. From the head of this river, or ſo far as it may be ſuppoſed to be made navigable, they travel now in 26 days to the frontiers of China, where they meet with the river Coccei, or the Yellow river, by which the Chineſe do already correſpond with ſome of the Tartars of Karakathay, and of the kingdom of Tibet, which ſome call the Independent Tartary.

This river Coccei is, therefore, navigable already, even on this ſide of the Chineſe dominions; and when it enters China, it paſſes through the heart of the country, between Pekin and Nanquin, and receives into it the river that runs through Pekin, or the Royal Canal, which the emperor began to make for that navigation, and then falls into the ſea of China in the latitude of 33.

There is yet another way to be propoſed for this paſſage to China, and that is paſſing out of the Caſpian Sea up the ſaid river Gyhun, to Bokara. This is a city of great trade already, and to which great quantities of ſpices are brought from Surat up to Lahor upon the river Indus, of which we ſhall ſpeak ſeparately.

From Bokara they keep ſtill the ſtream of the river Gyhun, about 300 miles; then overland to Cachemire, within three days

days of the great river Indus, which they croſs over; and keeping under the mountains, and in the Great Mogul's country, they come to Syrmagar on the river Ganges, all which is a journey of about 18 days. Here they embark, and ſail down the ſtream to Minapour, where they go up another river for about ten days more; then landing, they travel by land to Barantola, the capital city of Laſſebontan. Here, or within a very little of this place, they meet with the great river Kiam or Kaim, which runs directly into China, and upon which they paſs above 460 miles to Nanquin in the heart of China.

So that in all this paſſage there is not above 28 days journey by land, all the reſt being upon very conſiderable rivers, well known to thoſe who have been in theſe countries.

By any of theſe methods it is evident, that a much eaſier way of trading to China might be ſettled, than is now carried on by caravans, which are four or five months upon the roads; and if they perform it, it is with great fatigue as well as great hazard: whereas the methods of carriage being ſettled as above deſcribed, the trade ſhould ſeem eaſy to to be carried on, by giving commiſſion to captains for buying and conſigning to other factors for ſale, as is the practice of other countries nearer home.

But there is yet an eaſier way for this commerce with China, than what has been mentioned, and which we are told the late Czar had in his eye, and reſolved to attempt or not, as his expedition to Georgia might ſucceed: and, indeed, if there was a friendly diſpoſition in the Perſians, or in the Great Mogul, it would appear moſt eaſy to eſtabliſh a commerce with India that way almoſt all by ſea; and then the commerce from India to China by ſea likewiſe will be a thing ſo eaſy, that it would by no means be worth while to make any attempt by land. For example:

From the mouth of the Wolga in the Caſpian Sea, to the mouth of the Sihun, or to the mouth of the Oxus, is an eaſy voyage; the former of theſe rivers is navigable up to Bokara, a city already full of merchants, and which has a great trade for all the kinds of goods which we now bring from the coaſt of Malabar, from Bombay or Surat.

Theſe goods are brought up the river Indus to Cachemire; alſo the trade of the bay of Bengal, is brought up the river Ganges to the lake of Tibber; and both being in the Great Mogul's country, they are brought within eight days journey the laſt, and within five days the firſt, to the city of Termed on the Gyhun, from whence they come by water to Bokara, and after into the Caſpian Sea.

So that to bring it to a ſhort concluſion, the whole trade of the Indies from the mouth of the gulph of Perſia, which is very near to Surat, and the mouth of the river Indus to Achim on the iſland of Sumatra, may be brought by water (eight days caravan only excepted) to Bokara on the Sihun, thence over the Caſpian Sea to Aſtracan on the Wolga, and thence to Peterſburgh, the late Czar's new canal to Peterſburgh being ſuppoſed to be completely finiſhed, as he originally intended.

From China then to Bengal, every one knows is no long voyage; and the goods of China are every year brought by the Chineſe junks through the ſtraights of Sincapore to Achin in the iſland of Sumatra, and thence to Hugeli on the Ganges, and that with much leſs charge and time, than they can come one twentieth part of the way over the deſerts from Pekin to Moſcow. So that the Ruſſians ſeem to have no more to do, than to induce the Great Mogul, by a proper treaty of commerce, to open the trade of the Ganges and the Indus, and ſettle a ſafe correſpondence between his ſubjects and the Muſcovites, and the trade to China would be effectually ſecured.

This proſpect was ſo glorious, and the advantage of ſuch a commerce would have been ſo conſiderable, that it accounts for all the great enterprizes and motions of the late Czar that way: his embarking an army, and building a fleet to make himſelf maſter of the Caſpian Sea *: all which, at one time, the world ſeemed to look upon as chimerical, and of no weight, not ſubſtantial enough to anſwer the expence; but we are likely one day to ſee a trade ſo effectually opened, either through Perſia into the Mogul's country, or by the river Oxus and the Sihun to the ſaid country, as may render the Ruſſian dominions immenſely rich and potent, by making them the mart of all Europe for the Eaſt-India and Chineſe commodities, eſpecially the fineſt, and ſuch as are not too bulky for carriage.

* Although the trade of the Caſpian Sea hath not hitherto proved ſo ſucceſsful, either to the Ruſſian or Britiſh empire, as was expected, yet the matter is ſaid, at preſent, to be upon the tapis; ſome propoſals having been lately made to the Ruſſian court about it, by means of an annual fleet, to be built at the expence of the crown; the ſhips to be commanded by Ruſſian officers, or at leaſt officers in the Ruſſian ſervice; but merchants and their goods to be tranſported at a reaſonable rate, with a ſufficient force to eſcorte and protect them. In caſe this deſign can be brought to bear, it is intended to make Aſtracan the mart where all Perſian commodities are to be vended. But 'till the troubles of Perſia are ſome way or other at an end, it is not eaſy to conceive how a ſcheme of this ſort can be carried into execution with ſucceſs.

As for the advantages of the north-eaſt paſſage to China and India, which ſo many adventures have been made for, and ſo many lives loſt, it is in the power of the Muſcovites to ſearch that to the bottom, and to bring the world to a certainty about it: but we muſt add alſo, that if it was found practicable, it would not be any great advantage to the trade of the people of Muſcovy in particular, more than to the reſt of the world: nay, it might, perhaps, prove the contrary, and, therefore, it may not be amiſs to obſerve, That

In former times both the Engliſh and the Dutch made ſeveral attempts to diſcover the northermoſt coaſts of Europe, and to find out a paſſage that way to China and the Eaſt-Indies. The Engliſh in queen Elizabeth's time, under Sir Hugh Willoughby, made a fatal attempt; that unhappy gentleman, with his ſhip, beat it long at ſea in vain, and being driven into a creek on the ſhore of the Ruſſian Lapland, endeavoured to winter there; but they were all frozen to death, by the violence and extremity of the weather, not having diſcovered ſo much as the White Sea.

The Dutch, in the year 1596, under the famous Heemſkirk and Barents, diſcovered the ſtraights of the Waygats, as they are now called, and went, as it was thought, into a ſtraight or paſſage between Nova Zembla and the main, but were not able to proceed far enough for the ice; no, not ſo much as to know, whether there was a paſſage through, or only a deep bay, and ſo were obliged to return again. After which Heemſkirk ſailed round the north part of the land or iſland of Nova Zembla, paſſing into the latitude of 80 degrees, and then coming back into the latitude of 76, and being driven on ſhore by the ice, he loſt his ſhip, and he and his whole crew were obliged to ſtay all the winter in great extremity of cold: and the next year building themſelves two ſhallops of the wreck of their ſhip, with great difficulty, they got to the ſhore near the mouth of the river Cola in Laponia Ruſſienne, but came home no wiſer than they went out, as to knowing whether there was any paſſage or no.

We mention theſe things only, to intimate how induſtrious both the Engliſh and Dutch have been, even ſo long as about 160 years ſince, to find out a paſſage to the Indies that way: and no doubt it would be very advantageous to both theſe nations in their trade, (1.) As the voyage to China in particular, would be at leaſt 8000 miles ſhorter than it is now, by the Cape of Good Hope, and the ſtraights of Sunda or Sincapore. (2.) That the danger as to health would not be ſo much this way, being beyond all compariſon healthier, becauſe it is not needful to paſs the line at all, or go into any violent hot climates; whereas our navigators paſs the Line four times in every voyage to China, as they now go; and extreme cold is found to be much healthier than extreme heat, and eaſier to be borne.

But to bring this to a point; ſuppoſe this paſſage could be found out, the queſtion, in regard to the trade of Ruſſia is, What advantage would ſuch a trade be to the Muſcovites? The anſwer is, nothing, in compariſon, perhaps, to what it may otherwiſe prove: for if the Muſcovites can, upon any tolerable terms, bring the manufactures and growth of China and the Indies home to their own country, they would thereby make themſelves the merchants, and their country the general mart of this part of the world for thoſe goods, and raiſe an immenſe profit from the trade; ſeeing all the northern parts of Europe muſt neceſſarily come to their markets to purchaſe theſe commodities.

But if the Engliſh and Dutch could go about by the north-eaſt to China, and bring all thoſe goods by ſea, Ruſſia could have no benefit thereby, except what might happen on any ſhip's putting in by ſtreſs of weather into their ports; which would prove of little conſideration to what we have put in competition therewith. Beſides, they would have the mortification of ſeeing the trade all carried away by their doors, without paying them any toll or profit whatſoever.

It is true, that could a paſſage be found beyond the land of Nova Zembla, from the mouth of any of the rivers in the Muſcovite dominions, as from the river Oby, or the Janiſea, which is ſtill farther, and ſo the trade ſhould firſt come into the Czarina's dominions, it would do very well on their ſide, and her country would be the great emporium for all the riches of the eaſt: for our navigators have hitherto been no more able to find a paſſage through the Waygats, than they have been able to paſs quite round by the north of Nova-Zembla.

But the grand difficulty does not ſeem to lie about paſſing the ſtraights of Waygats, or ſailing round Nova Zembla; it ſhould ſeem that there is an ocean beyond it, becauſe the great rivers Oby, Janiſea, and others, whoſe names our geographers do not agree about, and which riſing in the ſouthern parts of Grand Tartary, and taking their courſe due north, muſt empty themſelves ſomewhere into the ocean, on the north ſide of the country.

It is pleaſant to obſerve, that although none have ever yet been able to paſs through the Waygats, or to diſcover to general ſatisfaction whether Nova Zembla be an iſland or a continent, or whether the northermoſt parts of Aſia be contiguous with America; yet our map-makers ſhew us at the

north-eaſt part of Aſia a great promontory of land, and a long ridge of mountains, and ſay it is not yet diſcovered where they end; at the ſame time putting theſe words over the ſea-coaſt, between thoſe two undiſcovered lands,—[Here they may fiſh for whales, but the navigation is very difficult.] Upon the whole, though ſuch paſſages have not hitherto been diſcovered, yet we cannot anſwer for what futurity may bring to light; but if ſuch paſſages ſhould be found, if they are not practicable in the ordinary way of commerce and navigation, the diſcovery will as little avail Ruſſia as any other ſtate or empire.

For though there ſhould be ſuch a paſſage diſcovered, yet if it be found ſo hazardous that ſhips ſhould often be obliged to return back without being able to beat through, and others ſtranded and run on ſhore, and then incloſed among the ice and loſt, this would, as to trade, be no paſſage at all, ſeeing in trade that may be ſaid not to be practicable, which is not ſo to the advantage of the merchant.

What diſcovers itſelf to us in the late attempts of the Muſcovites to find out a paſſage to China by ſea is, that they do not intend it from the White Sea at Archangel, and ſo through the Waygats, by which all Europe would ſoon be as able to go as themſelves, and ſo the diſcoverers be nothing the better for it; but their deſign ſeems to be to diſcover, whether a paſſage being found out by the north-eaſt point of Tartary, it may not be navigated from ſome other part of the Muſcovite coaſt, either by the river Oby or the Janiſea, or ſome other rivers, by which means, though they would have the chief benefit of it to themſelves, yet even this way, ſuch a diſcovery might be of ſome advantage to the reſt of this northern world too.

Now, if the Muſcovites can firſt make out the main diſcovery, viz. That there is a paſſage, and that they may ſail about by the north-eaſt point of Aſia, and then could ſtill keep the ſtraights of the Waygats undiſcovered, and as it were ſhut up, they would by ſuch a diſcovery have the whole trade of China and the Indies to themſelves, being able to bring their ſhips into ſome particular port or place, not ſo liable to be frozen up as the Waygats, and then bring the goods, by the rivers Oby or Irtiſch, into the very heart of their country.

But we have not yet done with the trade of Ruſſia, in which we are to take notice, that on the eaſtern ſide of this great empire, and on or near the bank of the great Kama, they have great quantites of rock-ſalt, which they dig out of the earth, then diſſolve it in its own brine, as it may be called, that is, in ſalt-water which riſes out of the mines of ſalt, and then boil it up again to be very fine white and ſtrong ſalt.

They drive a conſiderable trade in this ſalt, inſomuch that it is ordinary to ſee 20,000 people employed in making it, all at a time.

They bring this ſalt down the river Kama, thence carry it up by the Wolga and the Occa to Moſcow, and down the Wolga to other cities, even as far as the city of Aſtracan.

They cure alſo vaſt quantities of fiſh in the great lakes at the head of the Oby, the Janiſea, and other lakes in the frontiers of Kathay; which fiſh is brought down thoſe rivers to Caſan, and ſo into the Wolga, and up to Moſcow.

As we have mentioned the produce of the Ruſſian dominions for their trade on this ſide, and by the exportation of which ſo much wealth daily flows into their country, it ſeems neceſſary to add ſomething of the increaſe of their trade this way, and of the city of Peterſburg, as it reſpects the trade of the Baltic Sea.

PETERSBURGH is a great city, and the Czar, beſides the houſes of the inhabitants, founded many magnificent ſtructures there; among the reſt, the fortifications are ſaid to be invincibly ſtrong, taking in its advantageous ſituation by water. Alſo the works which he made at Cronſlot are very conſiderable; and the ſhore is ſo lined with artillery in all places, that no power in that part of the world will, perhaps, ever make any attempt on that ſide. But notwithſtanding that, it may not be abſolutely impracticable by other nations: nor are the fortifications at Cronſlot, or on any other part of the entrance of the Neva, ſo formidable as to ſecure the city from all apprehenſion of an attempt, when it ſhould come to be made by any nation able and experienced in ſuch undertakings; and this appeared by the panic, which ſeized them in the year 1726, when a ſquadron of Britiſh men of war appeared before the harbour of Revel, threatening, as they thought, an attack upon this place.

The Czar alſo built a cathedral, ſeveral churches, and a palace for himſelf, with a great many fine apartments, and ſo many lines drawn for increaſing them, that had he lived, it was believed he would have equalled, if not exceeded, the palace at Verſailles, a model of which he had cauſed to be taken. Here are very fine docks and yards for building large ſhips of war, from 70 to 90 guns; and, as it is ſaid, the emperor reſolved to keep in conſtant pay a full complement of ſeamen to man them fit for ſervice. Nor is it impoſſible, perhaps, that this empire ſhould one day obtain a competency of conſtant navigation, as a nurſery for the maintenance of a much larger royal navy than they have at preſent.

'Till within theſe twenty years, a Muſcovite fleet was a thing that was never heard of; it ſeemed at firſt to appear in the Baltic, like a comet in the waſte or ſtarry ſpaces; or like the new ſtar in Caſſiopeia's chair, for all the world to wonder at. Yet ſo it is, that the Ruſſians are able now to figure it in the Baltic, with a naval power no way contemptible. But what is it, that is not abſolutely impoſſible to accompliſh, which a prince of the late Czar's great natural abilities and indefatigable application, was not able to do?

Though Peterſburgh is the capital city of Ruſſia, yet it ſtands very low, and is expoſed to inundations: and therefore ſome have thought that the Czar was ill adviſed, and took a very injudicious ſtep, when he pitched upon the ſpot of ground on which he built this new city; for that the great quantity of waters, which ſometimes come down from the Ladoga, and from the innumerable lakes of Finland and Carelia, are ſuch, that the Neva cannot give vent to them faſt enough, to prevent the city of Peterſburgh being ſubject to inundation: nor can any human art, ſome ſay, be able to prevent this, there being no way poſſible to be contrived on that ſide, whereby to carry the water off, except a canal, exceeding deep and broad, were opened from that great branch of waters, which paſſes near Kexhold to Wiborg. This, it is imagined, might turn the water another way, and the Czar, it is alſo ſaid, had ordered ſuch a canal to be opened.—But, however, Peterſburgh is ſo ſituated, as to be the center of a vaſtly-extended commerce; and may one day, perhaps, ſhow the world, that to trade to that city, will be to trade to Turkey, to Perſia, to India, and even to China itſelf all at once.

We have already ſpoken of the grandeur and magnificence of this metropolis, the eſtabliſhing the navy there, and the building ſhips, as well men of war as merchantmen; of all which it muſt be obſerved, that this cannot fail to bring a vaſt concourſe of buſineſs and of people; and trade muſt follow the court, as naturally as the court follows the faſhions.

We are told there are in Peterſburgh above three quarters of a million of people; and that their numbers daily increaſe, by the prodigious increaſe of the court ſince the time of Czar Peter; as alſo in a particular manner by the increaſe of the naval power of Ruſſia, of which this port is the center, in ſo prodigious a manner, within a few years, as to have at once from 60 to 80 ſail of capital men of war, beſides leſſer men of war, prohms, frigates, ſloops, and gallies, amounting to above 300 more. All the ſeamen, workmen, artificers, tradeſmen, &c. depending on ſuch a navy, muſt neceſſarily increaſe the inhabitants of this imperial city; and this number of inhabitants muſt conſequently bring a new face of trade into this part of the empire, of which it is proper to take ſome notice.

The ſupply of proviſions to ſo great a body of people, has occaſioned numerous trades to be ſet up, which greatly tend to the increaſe both of ſhipping and of people, and particularly of that uſeful ſort of people called ſeamen, who are a ſet of men more imminently wanted now in this part of the Ruſſian empire.

The bringing corn to ſerve this city, employs now a prodigious number of veſſels and boats, great and ſmall, upon the river Neva, and upon the great lakes of Ladoga and Onega, to and from all the towns on every ſide of theſe lakes: all which part of the country is now exceedingly enriched and aggrandized, to what it was before this capital was built; the lands are improved almoſt beyond all imagination, by the great quantity of corn raiſed in the country, adjoining to theſe rivers and lakes; to which before the inhabitants never applied, not having a convenient port for its exportation, much leſs a capital city for its conſumption.

Nor is the country on the ſhores of all thoſe rivers and lakes, ſufficient for ſupplying the ſaid capital city with corn, but a great number of ſhips are employed, more than ever before, in fetching corn from the coaſt of Livonia and Eſthonia, and even from Dantzic itſelf, for the ſupply of the markets at Peterſburgh.

As the corn-trade thus employs a number of veſſels, ſo does the fiſhing as well in the Baltic, viz. in the gulph of Finland, as alſo on the great lakes of Ladoga and Onega, which are covered with fiſhing-boats, always employed in catching fiſh at the proper ſeaſon, and carrying them to Peterſburgh, as well freſh fiſh for the daily markets, as cured and dried for keeping, and ſtoring ſhips and houſes for winter conſumption, when the ſaid lakes are frozen up.

Abundance of ſmall craft are alſo employed on the Wolga, and men and carriages between the Wolga and Peterſburgh, for conveying goods and merchandizes to Peterſburgh, ſuch as tobacco, honey, wax, leather, and all ſorts of goods, the growth and produce of the ſouthern parts of Muſcovy; and for the return of the merchandizes imported at Peterſburgh, ſuch as grocery, wine, oil, fruits, woollen manufactures, ſilk, and all other goods, occaſioned principally by the building ſo great a city in that place.

And though all the importations to this city from the exterior provinces cannot be minutely enumerated, yet it may be concluded, that the trade from Peterſburgh to Moſcow itſelf, the great and moſt ancient capital of the whole empire, is exceedingly great, that city having all its ſupply of manufactures, and of other goods beſides, through the ſaid river

Wolga, or by land-carriage, by ſleds from the city of Peterſburgh.

This increaſe of commerce is manifeſt by the great number of ſhopkeepers, manufacturers, artificers, and other tradeſmen, with whom the metropolis at preſent ſwarms.

It is not probable (we might ſay hardly poſſible) but that the erecting a new capital and imperial city, in a place where there was no town of note before, and bringing together ſuch a body of people where there were very few inhabitants before, muſt, as is obſerved of the trade by water, conſequently improve the lands, employ the country, and draw together people for buſineſs of all kinds, from the inland provinces, as well to the adjacent towns, as to the banks of the rivers, the ſea-coaſts, lakes, &c.

Of this the famous city of Novogorod was a remarkable example: this was a city once prodigiouſly great, populous, and rich, ſo that it was called the Golden City; by which the whole correſpondence between the Ruſſian empire and the reſt of Europe was carried on, and it was the mart of the whole trade.

While this city flouriſhed, all the country round it did ſo too: the wealth and numbers of people collected there, inriched and employed all the adjacent provinces, the lands were cultivated to furniſh proviſions for their ſubſiſtence, all the richeſt grounds were employed to feed cattle for them, and to raiſe fruits and plants to ſupply the markets.

Thus it is now at Peterſburgh, which, if we may believe fame, is much greater, much richer, and far more populous, than Novogorod ever was, and conſequently muſt in proportion increaſe and inrich all the adjacent country, and fill their towns with people and money, becauſe it will fill them with buſineſs and trade.

But with this exception, the city of Peterſburgh is inriched by the fleets, the marine part of trade, and by the court, and by the magnificence of the equipages of their nobility, great officers, &c. and has an infinite advantage by all meeting together as in a common center.

It is true, the Czar found he had another weighty clog upon his new empire as to trade: nature had ſeemed to exclude the Muſcovite dominions from a communication of trade with the reſt of the world, 'till by a wonderful chain of victories, unexpected even to himſelf, that emperor opened a door for his ſubjects into the Baltic, by his conqueſt of Ingria and the mouth of the Neva, which he could no way come at before. Many of his anceſtors had in vain attempted this communication by the way of Narva; but, though they had ſeveral times conquered that city, they could never keep it: but the Czar not only ſecured the Neva, and ſince that conquered Narva, and all the coaſt of Livonia, but alſo reduced Wiborg, on the other ſide; ſo that the whole gulph of Findland was intirely his own: and, which is ſtill more, he alſo ſecured the poſſeſſion of theſe conqueſts by a peace, as well with Sweden as with all his other neighbours.

But his Czariſh majeſty, beſides this, had another great obſtruction to his mighty enterprizes, which was, that the king of Denmark kept the paſſage of the Sound, the great key through the navigation of the Baltic, and no ſhips could paſs in or out without paying ſuch an unlimited toll as he ſhould think fit.

This rendered the Muſcovite commerce into Europe tributary to the Danes; and this was now the only impediment to the Czar for the trade of his people; which, but for that occaſion, he would have ſoon extended to France and Spain, Italy and Venice; for which too, he had laid a good foundation by treaties.

This difficulty, under which his dominions laboured, gave firſt birth to the deſign of cutting a canal from Huſum to Sleſwic, or ſome other port in Holſtein (for there are ſeveral places where there was no great difficulty in the execution) and thereby to have joined the two ſeas, and opened a back-door into and out of the Baltic, and which the king of Denmark would have had no power or right to interrupt; nor would the reſt of the trading world have been diſpleaſed therewith.

Theſe are ſome of the obſtacles that this great prince met with in his glorious undertakings, which if he could have ſurmounted, he would have bid fair to have been as powerful at ſea as moſt of his neighbours; and this would have rendered the alliance of Ruſſia by ſea not leſs conſiderable than it now appears by land.

But he had his diſappointments, as well as other princes, and particularly one of no little mortification to ſo enterpriſing a monarch. He had been compelled to reſtore Aſoph, at the mouth of the river Don, of which once he not only had the poſſeſſion, but had, at an immenſe expence, made it one of the moſt impregnable fortreſſes in the world; nor could the whole Turkiſh empire have recovered it, unleſs the Czar had been firſt beaten from it by land; and, had he kept it, he would have built ſuch a fleet of ſhips of war, from 70 to 100 guns, at Voronitz upon the Don, or Tanais, which would ſoon have enabled him to have brought the Grand Seignior to have granted his ſhips a free paſſage and commerce through the Thracian Boſphorus and the Helleſpont, into the Levant Seas, or have driven the Turks out of the Euxine Sea, and have ſtarved Conſtantinople itſelf.

But, in this reſpect alſo, this illuſtrious prince was diſappointed, being, by ſurprize, brought into ſuch a labyrinth in Moldavia by the Turks, that he and his whole army had been ſwallowed up, if he had not purchaſed his peace and deliverance, among other things, with the yielding back Aſoph to the Turks.

The late Czar reſolving to reform and civilize his people, who, before his time, were little better in the general than ſavages, he determined to make a general change in apparel, and brought the Ruſſians, eſpecially thoſe about his court, to cloath themſelves after the German faſhion: this change put his ſubjects inceſſantly upon a new expence, viz. buying cloaths in an unuſual manner, for which purpoſe the manufactures of England and Scotland, &c. were introduced, as well at Peterſburgh as at Moſcow, in prodigious and unuſual quantities.

But the Czar, after the example of the Swedes, the Pruſſians, and the Saxons, attempted to act herein greatly for the proſperity of his ſubjects in this particular of new cloathing them, reſolving to introduce the making and manufacturing all thoſe cloths and ſtuffs which his ſubjects were then beginning to wear, and to have them all made in his dominions, that his poor might be uſefully employed.

Nor was it ſo unlikely an undertaking as at firſt it ſeems to be, in that he had an eaſy ſupply of wool out of Poland and Saxony, eſpecially of the firſt, ſufficient for thoſe works.

His Czariſh majeſty had alſo reſolved to bring manufacturers from France, to ſettle in Peterſburgh, to manage and carry on the ſilk trade, furniſhing them with ſilk from Perſia, by the navigation of the Caſpian; by which means the ſilk itſelf is ſo cheap, and the labour of the people more particularly ſo, he reſolved to have all ſorts of the richeſt brocade ſilks, as alſo ribbons, &c. wrought in his own country, as well for their own uſe as for the exportation to foreign parts; but this is one of the great improvements that is not likely ſoon to be brought to perfection.

The Ruſſians have had alſo, ſome years, a royal foundery: for having a ſufficient quantity of iron ore in the country about Kexholm, which they bring to Peterſburgh by water, the late Czar reſolved to ſupply foreign countries with cannon, bombs, ſhells, ſhot, and all ſorts of military ſtores which are furniſhed from the iron; as alſo ſmall arms, muſkets, piſtols, ſwords, halberts, &c. This foundery is kept continually at work, and the Czarina, his ſucceſſor, gave directions for enlarging and encouraging the works, having got ſome very ſkilful workmen out of the king of Pruſſia's dominions. This foundery, as well as their iron manufactures in general, have proved a very great advantage to this empire, and are daily advancing.

In ſhort, there ſeems to be nothing wanting to make the city of Peterſburgh a center of commerce to the whole Baltic, but the raiſing ſome ſettled employment for the poor in general, by which they may gain a comfortable ſubſiſtence to themſelves and families: and this ſubſiſtence after the Ruſſian manner being ſo exceeding cheap, and labour, by conſequence, moderately low, it is manifeſt, if they have but two things provided for them, viz. proper materials to work upon, and ſkilful workmen to inſtruct them how to manage thoſe materials, they would work as cheap as the Indians and Chineſe, and in a few years, perhaps, fill Europe with their manufactures, in ſuch a manner as none in theſe parts would wiſh to ſee. And the eſtabliſhing manufactures ſeems to be an eſſential part of the ſyſtem that they have at preſent adopted, which we muſt more and more ſenſibly feel and experience as they advance therein, unleſs we ſhall take leſs of their productions and commodities, in proportion as they ſhall import leſs of ours.

Of the MONIES, WEIGHTS, and MEASURES of RUSSIA.

In Peterſburgh and Archangel moſt merchants keep their accounts in rubbles and copecks; and ſome keep them in copecks, grieveners, and rubbles.

The Ruſſian coins go under divers denominations, viz. copecks, altines, grieveners, polpoltins, poltins, and rubbles.

They have likewiſe a ſmall gold coin, called a Ruſſian ducat, worth between eight and nine ſhillings ſterling.

The ſaid monies are reckoned as follows: 3 copecks is an altin, 10 copecks one grievener, 25 copecks is a polpoltin, 50 copecks is a poltin, 100 copecks is a rubble, and 2 rubbles is a ducat.

They count their ſmall money in altines, adding one copeck to make the rubble.

The rubble is worth between four and five ſhillings ſterling.

An Engliſh crown-piece goes among them according to weight, at between 120 and 130 copecks.

Their weights are zollotnicks, pounds, poods, and barquits; 96 zollotnicks make their pound, which is counted equal to 13 oz. 3dwts. 6 grs. Troy weight; 40 pounds is one pood; 10 pound is a barquit: a pood of 40 lb. Ruſſian weight will render in England 35 ½ or 36 lb. avoirdupoiſe weight.

Their long-meaſure for linen and woollen is the arſheen, which is divided into 16 veſhcoves, and is 28 inches London meaſure; and 7 Engliſh yards make 9 of their arſheens, or 100 arſheens make 56 Engliſh ells.

Their meaſures for corn are the chetwert and the chetwericks;

8 chet-

8 chetwericks is one chetwert, which holds about 5 $\frac{3}{10}$ buſhels Wincheſter meaſure.

They pay the cuſtoms in no other money than foreign rix-dollars, Engliſh crowns, ducats, and ſuch-like good whole pieces, which they alſo take by weight.

They give to Hamburgh in exchange an uncertain number of copecks for the rixdollar of Hamburgh.

To Amſterdam, the rubble, for an uncertain number of ſtivers current money of Amſterdam. The exchange generally riſes in November and December.

REMARKS.

In negociating money by bills of exchange between England and Ruſſia, it is commonly done by the way of Amſterdam. The computation of which is thus: (1.) The Ruſſian rubbles are converted into florins current money of Amſterdam; this current money is reduced into bank money, according to the agio, which is generally from 3 to 5 per cent. i. e. 103 to 105 florins, or gilders, current money, are equal to 100 florins, or gilders, bank money of Amſterdam; and this bank money of Amſterdam is reduced into ſterling money, according as the courſe of the exchange ſhall be between England and Amſterdam. See the article HOLLAND.

☞ All merchandizing coming from Ruſſia pay a duty to the king of Denmark in paſſing through the Sound. See the article DENMARK.

The DUTIES which the following Ruſſia goods pay in paſſing through the Sound.

		rixd.	ſtiv.
Linen	Fine, 1000 arſheens, pay	1	12
	Middling, ditto	0	40
	Coarſe, ditto	0	30
1 Shipon of fine flax		0	12
1 Ditto of coarſe		0	8
1 Ditto of hemp		0	8
1 Piece of canvas		0	$3\frac{3}{4}$
6 Shipon, or 1 laſt of iron		0	24

Note, 10 pood is 1 ſhipon, and 6 ſhipon is 1 laſt.

N. B. 48 ſtivers make 1 rixdollar.

☞ When the captains of ſhips run the goods through the Sound without paying the duty to the king of Denmark, the merchant allows the captain $\frac{1}{3}$ of the duties ſaved, for his trouble.

RUSSIA COMPANY. The Ruſſia company was firſt projected towards the end of the reign of king Edward VI, executed in the firſt and ſecond years of Philip and Mary, but had not its perfection 'till its charter was confirmed by act of parliament under queen Elizabeth, in 1566. It had its firſt riſe from certain adventurers, who were ſent in three veſſels on the diſcovery of new countries, and to find out a north-eaſt paſſage to China: theſe falling into the White-Sea, and making up to the port of Archangel, were exceedingly well received by the Muſcovites, and at their return, ſollicited letters patent to ſecure to themſelves the commerce of Ruſſia, for which they had formed an aſſociation.

The charter was promiſed them by Edward VI. but he dying, was firſt diſpatched by queen Mary, in 1555. By this charter, the aſſociation was declared by a body politic, under the name of the Company of Merchant-Adventurers of England, for the Diſcovery of Lands, Territories, Iſlands, &c. unknown, or unfrequented. Their privileges were, to have a governor, four conſuls, and twenty-four aſſiſtants for their commerce; for their policy, to make laws, inflict penalties, ſend out ſhips to make diſcoveries, take poſſeſſion of them in the king's name, ſet up the banner royal of England, plant them, and, laſtly, to enjoy the excluſive privilege of trading to Archangel, and other ports of Muſcovy, not yet frequented by the Engliſh.

This charter, not being ſufficiently guarded, was confirmed by parliament, in the eighth year of queen Elizabeth; wherein it was enacted, That, in regard the former name was too long, they ſhould now be called the Company of Engliſh Merchants for diſcovering New Trades; under which name they ſhould be capable of acquiring and holding all kinds of lands, manors, rents, &c. not exceeding 100 marks per ann. and not held of her Majeſty. That no part of the continent, iſland, harbour, &c. not known or frequented before the firſt enterprize of the merchants of their company, ſituate to the north or north-eaſt of London; nor any part of the continent, iſlands, &c. under the obedience of the emperor of Ruſſia, or in the countries of Armenia, Media, Hircania, Perſia, or the Caſpian Sea, ſhall be viſited by any ſubjects of England, to exerciſe any commerce, without the conſent of the ſaid company, on pain of confiſcation.—The ſaid company ſhall uſe no ſhips in her new commerce but thoſe of the nation, nor tranſport any cloths, ſerges, or other woollen ſtuffs, 'till they have been dyed and preſſed.—That in caſe the company diſcontinue of itſelf to unload commodities in the road of the Abbey of St Nicholas in Ruſſia, or ſome other port in the north coaſts of Ruſſia, for the ſpace of three years, the other ſubjects of England ſhall be allowed to traffic to Narva, while the ſaid company diſcontinues its commerce into Ruſſia, only uſing Engliſh veſſels.

This company ſubſiſted with reputation almoſt a whole century, 'till the time of the civil wars. It is ſaid, the Czar then reigning, hearing of the murder of king Charles I, ordered all the Engliſh in his ſtates to be expelled; which the Dutch taking the advantage of, ſettled in their room.—After the Reſtoration, the remains of the company re-eſtabliſhed part of their commerce at Archangel, but never with the ſame ſucceſs as before, the Ruſſians being now well accuſtomed to the Dutch merchants and merchandize.

This company ſubſiſts ſtill, nearly on the foot of that of Hamburgh, and the Northern and Turkey companies, i. e. each member thereof traffics for himſelf, and on his own bottom, only paying an acknowlegement for admiſſion-money, beſides ſome other dues impoſed from time to time, for the occaſions of the company, and the commerce in general.

Of the BRITISH CASPIAN TRADE, as it was attempted to be carried on through RUSSIA to PERSIA.

'Till the ſixteenth century we had no Caſpian commerce, and then only ſmall trials. His preſent Majeſty king George II, renewed a treaty of commerce with Ruſſia in 1734. by which a liberty of this trade is granted. In 1741 the parliament of Great-Britain paſſed an act, granting a liberty to ſuch perſons as are free of the Ruſſia company, to import the RAW SILK of Perſia into Great-Britain, in return for Britiſh manufactures ſold in Perſia; in conſequence whereof, were ſent 170,000 l. value into Perſia.—In 1743, John Elton, one of the factors in Perſia, engaged himſelf as a ſhip-builder in the ſervice of NADIR SHAH, which offended the Ruſſians, and at length occaſioned a decree of the Ruſſian court, publiſhed in 1746, prohibiting this trade.—The cruelties of NADIR SHAH involved his people in ſuch miſery, that no ſales of goods could be made by the BRITISH factors in the north of Perſia, from 1744 to 1747.—In June 1747 NADIR ſuffered a violent death.—His nephew Ali ſucceeded to the throne, and trade revived.—In January following, AMUR ASLAN KHAN, a couſin of NADIR, revolting from ALI, ſent a body of forces, who pillaged the BRITISH factors in RESHD, to the amount of 80,000 l.—Yet the Britiſh CASPIAN traders did not give over all hopes of the recovery of their loſs.—The rebel AMUR ASLAN KHAN, the author of the plunder of the Britiſh factory, was ſoon ſeized by IBRAHIM, and put to death.—After that, SHAHROKH was choſen king, and ſupported by a powerful party.—This carried IBRAHIM back, but his fortune was reverſed, by the deſertion of his army, and his total defeat.—The Britiſh CASPIAN traders applied to SHAHROKH for redreſs, about the month of Jan. 1750.—Afterwards the ENGLISH factors in St Peterſburgh united in ſending a perſon of reputation to act in concert with Mr Wilder in Perſia, intending to reconcile certain difficulties which had ariſen among the adventurers, and apprehending that a coalition of intereſt would be the beſt means of preſerving that unanimity, without which, a ſollicitation for the recovery of their loſs would prove fruitleſs.—With regard to their reſpective loſſes, they had now but one common intereſt: but here we experienced the great want of proper regulation, and what perplexities commercial affairs in ASIA are ſubject to, if left free and open, or with the appearance of a BODY CORPORATE, without the ſubſtance of it *. See our articles LEVANT TRADE, ORIENTAL TRADE, and TURKEY TRADE.

* In EUROPE every man has a right of claiming according to the laws of the country he is in, regard being had, at the ſame time, to private agreements, or the authority of the conſul of his own nation, as has been found productive of the general good of the whole factory or community: but in ASIA there muſt be ſome regulations independent of the national government, or animoſity and confuſion inevitably enſue; ſo at leaſt we found it in the CASPIAN trade. Hanway's Travels.

The ſucceſs the merchants had at ASTRABAD, the remembrance of the promiſes of ADIL SHAH, the aſſurance that Perſia abounded in money, likewiſe that SHAHROKH was eſtabliſhed in the government, inclined the factors and merchants to attempt a recovery, at the riſk of ſome expence; the ancient laws of Perſia alſo favoured this deſign: however Mr CHAMBERLAIN, who was charged with the king's letter, found it unneceſſary to proceed any farther than RUSSIA, PERSIA being ſtill torn with inteſtine commotions; but nothing has been yet done, and it may be preſumed that a great part of the Indian treaſure is diſſipated ſo as to leave no hope of accompliſhing any recovery.

Theſe diſtractions having continued for ſix years, the cultivation of raw ſilk in PERSIA has alſo been much neglected *. Many other reaſons concurred to raiſe the price of ſilk to this nation. Under theſe circumſtances, the BRITISH parliament was induced to try if our own plantations could produce this valuable commodity, and accordingly an act was paſſed, entitled, An act for encouraging the culture of raw ſilk in his Majeſty's colonies or plantations in America. See the articles SILK, and BRITISH AMERICA, particularly GEORGIA.

* The ARMENIANS and RUSSIANS, have for ſome years paſt imported hardly $\frac{1}{10}$ part of the uſual quantity.

Notwith-

Notwithſtanding the encouragement given by the legiſlature to the culture of raw ſilk in our American colonies, an ample ſupply of this commodity, we fear, can be brought only from Aſia, unleſs we ſhall be able to make ſome very extraordinary improvements. Europe, during the laſt war, did not produce the uſual quantity, nor has the price of ſome particular kinds declined ſince that time: for the conſumption of this article rather increaſes than diminiſhes. The EAST-INDIA company, therefore, we may preſume, applied to parliament for an alteration of the duty of CHINA ſilk, the obtaining of which affords an encouragement to the importation of it *, and no doubt we ſhall have a ſufficient quantity. The act in favour hereof is entitled, An act for repealing the DUTIES payable upon CHINA raw ſilk, and for granting other DUTIES in lieu thereof. See SILK.

* In 1752, we find accordingly a large ſupply of CHINA raw ſilk arrived.

The Ruſſia company finding themſelves thus excluded a branch of trade, from which they had expected many private as well as national benefits, applied their thoughts how beſt to repair this injury: the moſt natural expedient was to obtain a liberty to purchaſe the ſame commodity in RUSSIA, which they could no longer provide in the north of PERSIA, at leaſt not to tranſport it through RUSSIA: they might, indeed, purchaſe ſilk in RUSSIA to tranſport to other countries, but an act of parliament was neceſſary for the importation of it into England. Accordingly the following petition was preſented to the parliament.

The petition of the merchants of London trading through Ruſſia into Perſia,

Sheweth,

'That your petitioners did, in the year 1741, obtain an act of parliament to enable them to import Perſian raw ſilk by the way of Ruſſia from Perſia, if purchaſed there with the produce of Britiſh woollens, and other manufactures. Your petitioners having, in conſequence of the ſaid act, ſent into Perſia about 200,000 l. value in Britiſh manufactures, and received part of their returns in Perſian raw ſilk, are now prevented by the many revolutions and fatalities which have happened in Perſia ſince the commencement of this trade. Other accidents alſo have intervened to obſtruct the deſign as at firſt propoſed, his Majeſty not having any miniſter at the court of Perſia, to protect our factors, his Majeſty's ſubjects, and our effects in that country, which gives the Ruſſians and Armenians very great advantage over us, your petitioners.

And as the Ruſſians and Armenians do bring large quantities of Perſia raw ſilk yearly into Ruſſia, which cannot be purchaſed by your petitioners to be ſent into Great-Britain, the preſent act reſtraining all imports of Perſian commodities, but ſuch as are in return of goods actually ſold in Perſia; the raw ſilk in queſtion is therefore carried to Holland by the Armenians, and woollen goods taken of the United Provinces in return.

Your petitioners therefore humbly pray, that in order not to loſe ſo valuable a branch of trade, as that of importing raw ſilk, a commodity at this time ſo much wanted, that a clauſe may be annexed to the bill now depending, relating to the importation of China raw ſilk, to permit your petitioners to import Perſian raw ſilk, from Ruſſia, ſubject to the ſame reſtrictions as they have done from Perſia by the way of Ruſſia.

And your petitioners, &c.'

In conſequence of this application, the following ſeparate act * was obtained, from which ſome happy effects may be felt, as ſoon as the Perſians are in any capacity to ſend a ſupply of ſilk into Ruſſia: and this will probably be the caſe, whenever Perſia ſhall be reſtored to a ſtate of tranquillity.

* In 1750, 23d year of his Majeſty's reign.

An act for permitting raw ſilk of the growth of Perſia, purchaſed in Ruſſia, to be imported into this kingdom from any port or place belonging to Ruſſia.

'Whereas by an act made in the fourteenth year of his preſent Majeſty's reign (entitled, An act for opening a trade to and from Perſia through Ruſſia) it is (amongſt other things) enacted, that from and after the 24th day of June 1741, it ſhall and may be lawful to and for any perſon or perſons, free, or to be free, of the fellowſhip of Engliſh merchants for diſcovery of new trades, commonly called the Ruſſia company, excluſive of all others, to bring and import into this kingdom, in Britiſh-built ſhipping, navigated according to law, from any port or place of or belonging to the Czar or Emperor of Ruſſia, raw ſilk; or any other goods or commodities of the growth, produce, or manufacture of Perſia (provided ſuch manufacture be made of the growth or produce of Perſia) being purchaſed by barter with woollen, or other manufactures, goods, or commodities, exported from Great-Britain to Ruſſia, and from thence carried into Perſia (gold and ſilver in coin or bullion excepted) or with the produce ariſing from the ſales of ſuch manufactures, goods or commodities, ſo exported to Ruſſia, and carried into Perſia as aforeſaid, and not otherwiſe: and it is by the ſaid act alſo further enacted, that no ſilk, or other produce, commodities, or manufactures of Perſia, ſhall be imported into Great-Britain through Ruſſia, by virtue of the ſaid act, unleſs the importer or importers thereof do take an oath, or (being of the people called Quakers) a ſolemn affirmation, before the collector, cuſtomer, or comptroller of his Majeſty's cuſtoms (who are by the ſaid act impowered to adminiſter the ſame) at the port or place of importation, that, to the beſt of his or their knowlege and belief, the ſilk, and other the produce, commodities, or manufactures of Perſia, contained in his or their entry or entires, was or were really and truly purchaſed by barter with woollen, or other manufactures, goods, or commodities, exported from Great-Britain to Ruſſia, and from thence carried into Perſia (not being gold or ſilver in coin or bullion) or with the produce ariſing from the ſales of ſuch woollen, or other manufactures, goods, or commodities, ſo exported as aforeſaid, and not otherwiſe; and that in default of taking ſuch oath or affirmation, all ſuch ſilk, or other the produce, commodities, or manufactures of Perſia, ſo imported from Ruſſia, ſhall be liable to be ſeized and forfeited, in like manner, as if the ſame had been imported contrary to the act made in the twelfth year of the reign of king Charles II. entitled, An act for encouraging and increaſing of ſhipping and navigation: and whereas, ſoon after the commencement of the ſaid act made in the fourteenth year of his preſent Majeſty's reign, a very beneficial trade between Great-Britain and Perſia, through Ruſſia, was opened, by means whereof great quantities of raw ſilk, and other the goods and commodities, of the growth, produce, or manufacture of Perſia, were imported into this kingdom, in return for the woollen and other manufactures, goods, and commodities of Great-Britain, upon much eaſier and more advantageous terms, than ſuch ſilk, and other goods and commodities of the growth, produce, or manufacture of Perſia could have been otherwiſe procured: but whereas the ſaid trade between Great-Britain and Perſia, through Ruſſia, hath been for ſome time paſt interrupted, the ſubjects of Great-Britain not having been of late permitted to tranſport Britiſh manufactures, goods, and commodities into Perſia, through the dominions or territories of or belonging to the empire of Ruſſia, in conſequence whereof the importation of raw ſilk, and other commodities of the growth, produce, or manufacture of Perſia from Ruſſia, hath been diſcontinued: and whereas it would be of great advantage to the trade of this kingdom in general, as well as contribute to the increaſe and improvement of the ſilk manufactures in particular, if raw ſilk of the growth or produce of Perſia, purchaſed in Ruſſia, were permitted to be imported from any of the countries, dominions, or territories of the empire of Ruſſia, in return for woollen and other manufactures exported from Great-Britain to Ruſſia, although the ſame be not carried from thence into Perſia; may it therefore pleaſe your Majeſty that it may be enacted, and be it enacted by the king's moſt excellent Majeſty, by and with the advice and conſent of the lords ſpiritual and temporal, and by the commons, in this preſent parliament aſſembled, and by the authority of the ſame, that from and after the 24th day of December 1750, it ſhall and may be lawful to and for any perſon or perſons, free or to be made free, of the ſaid fellowſhip of Engliſh merchants for diſcovery of new trades, commonly called the Ruſſia company, excluſive of all others, to bring and import into this kingdom, in Britiſh-built ſhipping, navigated according to law, from any port or place within the countries, territories or dominions, of or belonging to the empire of Ruſſia, raw ſilk of the growth or produce of Perſia which ſhall be purchaſed by barter with woollen or other manufactures, goods, or commodities, exported from Great-Britain to Ruſſia, although the ſame be not carried from thence into Perſia (gold and ſilver in coin or bullion excepted) or with the produce ariſing from the ſale of ſuch manufactures, goods, or commodities, exported from Great-Britain to Ruſſia as aforeſaid, and not otherwiſe, upon paying, or ſecuring to be paid, the cuſtoms and other duties now payable for the ſame, by any law now in force, according to ſuch rules, methods, and directions, and in the ſame manner and form, and with ſuch allowances, abatements, diſcounts, and drawbacks, and under ſuch penalties, forfeitures, and diſabilities, as are by law preſcribed and practiſed, on the importation of raw ſilk of the growth or produce of Perſia, imported into this kingdom from any port or place in the Levant Seas, by any perſon or perſons free of the Levant or Turkey company; any thing in the ſaid act made in the fourteenth year of his preſent Majeſty's reign, or in the ſaid act made in the twelfth year of the reign of king Charles II, entitled, an Act for encouraging and increaſing of ſhipping and navigation, to the contrary notwithſtanding.

Provided always, and be it further enacted, that no ſilk of the growth or produce of Perſia, ſhall be imported into Great-Britain,

Britain, from any of the countries, dominions, or territories, of or belonging to the empire of Ruſſia, by virtue of this act, unleſs the importer or importers thereof do make oath, before the collector, cuſtomer, or comptroller of his Majeſty's cuſtoms (who are hereby impowered and required to adminiſter ſuch oath) at the port or place of importation, that, to the beſt of his or their knowlege and belief, the ſilk, contained in his or their entry or entries, was really and truly purchaſed by barter with woollen or other manufactures, goods, or commodities, exported from Great-Britain to Ruſſia (not being gold or ſilver in coin or bullion) or with the produce ariſing from the ſale of ſuch woollen, or other manufactures, goods, or commodities, ſo exported as aforeſaid, and not otherwiſe; and in default of making ſuch oath, all ſuch ſilk ſo imported from any of the countries, dominions, or territories, of or belonging to the empire of Ruſſia, ſhall be liable to be ſeized and forfeited, in like manner as if the ſame had been imported contrary to the ſaid act, made in the twelfth year of the reign of king Charles II, entitled, An act for encouraging and increaſing of ſhipping and navigation. Provided alſo, that nothing herein contained ſhall extend, or be conſtrued to extend, to deprive the corporation of the united company of the merchants of England trading to the Eaſt-Indies, of any of the powers, privileges, franchiſes, and benefits, which do or ſhall belong to them, or which they could or might have had and enjoyed in any manner whatſoever, if this act had not been made, any thing herein contained to the contrary notwithſtanding.

And be it further enacted, That this act ſhall be deemed a public act, and ſhall be judicially taken notice of as ſuch, by all judges, juſtices, and other perſons whatſoever, without ſpecially pleading the ſame.'

'I preſume, ſays the judicious Mr Hanway, in his Travels, it is meant by this act to reſtrain all purchaſes of ſilk in Ruſſia to the produce of Perſia only, for the words of the act allow no more: but ſilk of the growth of Greece is ſometimes brought through Walachia into the Ukrain, and from thence tranſported to St Peterſburgh, but the quality does not anſwer. It may be neceſſary to obſerve, that this act has been explained to mean ſilk purchaſed with the produce of Britiſh manufactures at large; for in barter, or with the identical money received for ſuch goods, it is hardly poſſible. This act will very much favour the Armenians, for beſides the encouragement they had to bring ſilk from Perſia into Ruſſia, either to tranſport into Holland for their own account, or to ſell it in Ruſſia, they may now diſpoſe of it alſo in England, and by being naturalized may alſo import ſuch ſilk into this kingdom, for their own account, as one of them has already done. The advantages this bill is calculated to produce are many, for whoever receives the profit of the firſt ſale, the more there is brought to market, the cheaper it muſt be to us.

The benefits of the ſilk manufactory muſt ever appear conſiderable, even upon the moſt ſuperficial view, when it is conſidered, that a pound of 16 ounces of the plaineſt manufactured ſilk is commonly worth 35 or 40s. and that rich ſilks increaſe in proportion to the greater labour which is beſtowed on them. The great pound of 24 ounces, coſting 21s. the ſmall pound is 14s.: let us now ſee what profit ariſes from it, and how much it increaſes in value, as it paſſes through the hands of the ſeveral workmen; and here the charge only of throwing the ſmall pound is 5s. dyeing, grain colours included, on a medium, is 2s. and winding, weaving, &c. is 10s. ſo that allowing 1s. for the dyeing materials, the nation gains 16s. at leaſt on every pound of ſilk manufactured here and exported abroad, and in ſome articles much more. To inſtance only in one particular, a pair of ſilk gauſe ſtockings weighs about 2 ½ ounces of ſilk, which computed as above is 2s. 2d. and 20 per cent. brokerage, and other contingencies on the ſilk, is leſs than 3s. and yet the ſtockings ſell for 9, 10, or 12s. Thus this beneficial branch of commerce gives a ſubſiſtence to the induſtrious artificer, and enriches the nation.'

An abſtract of Mr Hanway's view of the Britiſh trade and factory at St Peterſburgh.

The productions of the earth, ſays this gentleman, and foreign trade, are the great ſources from whence the riches of every nation proceed: Ruſſia has made great ſtrides in the improvement of her commerce for ſeveral years paſt, enjoying ſome advantages beyond any other nation: the number and greatneſs of her rivers open a communication almoſt to every part of the globe, but particularly within her own extended dominions. As to timber, hemp, iron, which are the inſtrumental cauſes of trade, no country in the world produces a greater quantity, which is a natural conſequence of the cheapneſs of land and labour: the former of theſe GREAT-BRITAIN enjoys in her AMERICAN dominions, though not the latter; but if we have occaſion for the commodities of Ruſſia, that empire has the greateſt ſource of her revenues in the trade which this iſland carries on with her ſubjects.

Hemp, which twenty years ſince was hardly worth 5 rubbles the berquevitz *, of late years has been about twice that value; the increaſe of ſilver makes money every year leſs valuable: as they can afford this article in St Peterſburgh at 6 or 7 rubbles, they will certainly bring enough of it to market ſo long as they can obtain 8 or 9.

* Or 6l. per ton firſt coſt in St Peterſburgh.

Iron is alſo a very improveable article: they have both wood, hands, and ore in Siberia, ſufficient to make a quantity, which would depreciate the value of the Swediſh iron, raiſe their rivalſhip and competition with the Swedes † in this important article of the revenues of that nation, and at the ſame time greatly augment thoſe of the Ruſſian empire. But by a certain fatality which prevails in every country in ſome inſtance or other, the Ruſſian government, for a courſe of years, has preferred a profit of about 15,000l. or 5000 tons, to near twice that advantage which they might have had to all appearance, though the price ſhould have been reduced, had the quantity been more than doubly augmented. The great difficulty was, in whoſe hands to lodge an increaſe of power in that diſtant country Siberia. It is not 40 years ſince the Ruſſians began to open iron mines, and yet in the year 1750, they exported 20,000 tons: the ordinary annual export may now be called 12 or 15,000 tons, which is ſo much more in favour of the Ruſſians, as the SWEDISH forges, for theſe few years paſt, have not produced ſo much by one third as formerly.

† The queſtion is, Whether, with regard to the ballance of power in the North, the SWEDES are not poor enough in all conſcience?

The ordinary computation of the Ruſſian general export from St Peterſburgh is three millions ‡, of which the Britiſh ſubjects in Ruſſia take off two, conſiſting chiefly in hemp, flax, iron, hogs-briſtles, hare-ſkins, hempen and flaxen manufactures, Ruſſia leather, and other articles.

‡ In 1750, the exports were four millions of rubbles, or 880,000l. value.

The ordinary imports of the Ruſſians were two millions, conſiſting in indigo, cochineal, lead, pewter, tin, wrought ſilks, gold and ſilver lace, toys, cotton and linen manufactures, woollens and wines. The Ruſſians receive the ballance in their favour in ſilver and gold, of which part is a ſum of about 500,000 ſilver rixdollars, of the coin of the United Provinces; theſe do not, however, paſs current in Ruſſia, but the duties on goods muſt be paid in them at a certain rate, according to weight. The conſumption of the Ruſſians is ſo far increaſed with their acquiſitions by commerce, that they import now more than uſual, but the Engliſh have ſtill above a million ballance againſt them.

It ſeems to be a maxim eſtabliſhed in all countries where commerce has made any progreſs, that the value of exports muſt exceed that of the imports, for otherwiſe the ballance muſt neceſſarily be paid in money: againſt this the Ruſſians have taken the precaution of making it death to export their coin, nor is any plate or bullion exportable without expreſs permiſſion. I have already obſerved, that in countries poſſeſſed of ſilver and gold mines, money may be conſidered as a commodity; but even in theſe countries we do not find ſuch great wealth, as where the only reſource is in the induſtry of numbers of WORKING PEOPLE, and in thoſe productions of the earth, which being eſſential to the ſupport of mankind, are really intrinſically worth more than ſilver, gold, or precious ſtones.

When a people are deſirous of foreign productions, and eſpecially articles of luxury, if they do not exert themſelves to pay for ſuch commodities by their labour, and the produce of their own lands, they muſt be impoveriſhed, and in danger of ruin. The augmentation of the revenues of Ruſſia ought to be imputed, in a great meaſure, to the increaſe of her trade for ſome years paſt, and the increaſe of her national wealth, to the great annual ballance in her favour, of one million of rubbles §.

§ 220,000l.

The interior trade of Ruſſia is certainly very much augmented, and the commerce they carry on with the Tartars and other frontier nations, is a conſiderable object, as Ruſſia ſometimes receives a large quantity of foreign ſilver and gold from thoſe nations, in exchange either for her own or foreign productions. I will not undertake, from an impulſe of my good wiſhes, to determine what articles Ruſſia ſhould be cautious of importing; but thoſe of the produce of Great-Britain are either eſſentially neceſſary to her, or ſuch as ſhe can never ſuffer by: I ſpeak not of the major part of them, for I think not one article, even our ale, but tends to the good of the Ruſſians; not to mention the great advantages to Ruſſia of the Riga and Narva trade with Great-Britain and Ireland. As our Ruſſian trade is well conducted, I ſhall

paſs it over, obſerving only, that in whatever light it is conſidered, it ought to be a means of eſtabliſhing a PERPETUAL FRIENDSHIP between this nation and the Ruſſian empire.

OBSERVATIONS on the RUSSIAN COIN.

It is remarkable, that when the Ruſſian trade began to flouriſh, and for ſome time after, their rubble, which was intrinſically worth no more than 39 current ſtivers of Holland, was eſtimated an exchange at 70 current ſtivers, and this price of their commodities regulated accordingly in the merchants calculation of them; at length it was reduced to 50, and from 45 to 50 it has ſtood for many years. The Ruſſian rubble has too conſiderable an alloy to encourage the exportation, but it is not ſo baſe as to induce any piratical traders to bring falſe coin into the country: I ſpeak of the ſilver money. But by an error in politics in a late reign, the want of money induced the government to make a copper coin of 5 copecks value, which was not intrinſically worth 2; the conſequence of which was, that ſome millions of this coin were run in upon them, particularly by the Jews of Poland; ſo that at length, in the years 1744, 45, and 46, the government wiſely reduced the value each year a copeck, and it now ſtands at 2 copecks. They keep accounts, as before obſerved, in rubbles and copecks, 100 copecks to a rubble; and their old way of reckoning, yet in the greateſt uſe, as it is in ſome parts of Germany, is with beads on wires, which they work without pen and ink.

Before I take my leave, ſays Mr Hanway, of Ruſſia, I ought, perhaps, to mention a circumſtance of ſome moment to my friends in that country, if not to this nation. The Engliſh factory in Ruſſia, as I have already had occaſion to mention, was firſt eſtabliſhed in Archangel, in virtue of a charter granted by king Philip and queen Mary, at the ſame time that the Czar Ivan Waſſilowitz ſwayed the Ruſſian ſcepter.

This charter is of too extenſive a nature, either in regard to the crown, the Ruſſia company, or the Britiſh ſubjects at large, to be fully complied with, and is conſequently become in certain reſpects obſolete: it reſerves, however, in full force, ſuch neceſſary authority as excludes all foreigners, except Ruſſians, from a participation of the Ruſſia trade to Great-Britain; and in virtue of the bye-laws to which the traders acquieſce, the good government of the company is ſupported; a ſmall tax is levied for extraordinary occaſions, and for the charitable purpoſe of relieving poor ſeamen and the widows of deceaſed mariners.

The factors employed abroad in the name of the Ruſſia company, removed from Archangel to St Peterſburgh, ſoon after Peter the Great founded that city, which he made the ſeat of the Ruſſian commerce. Among other particulars it is remarkable, that this factory has been for ſome time blended with foreigners, who, in conſequence of their naturalization, have enjoyed a participation of the privileges and immunities of the company. The Britiſh factors ſaw this with impatience, and at length ſent their remonſtrances to their principals in London, in conſequence of which an oppoſition was made to a bill * then depending before the parliament in behalf of a foreigner. This is a circumſtance in every reſpect intereſting, and about which there are a great variety of opinions: ſome particulars relating to the caſe of the merchants of Great-Britain reſiding at home, or in the Britiſh factories in foreign countries, with reſpect to perſons obtaining acts of naturalization, without any purpoſe of continuing in theſe kingdoms, were printed, and of which I have preſerved ſuch extracts, as ſerve as an introduction to the ſubject, viz.

* 1752.

'The granting to ſtrangers all the privileges and immunities which the conſtitution derives to thoſe born under its protection, and who have a mutual tie of duty and affection, has been ever regarded, in all civilized nations, as a point of the higheſt importance to the public; as it plainly is in Great-Britain, where ſuch a participation, in the birthright of its ſubject, cannot be beſtowed but by the legiſlature; that is, in effect, by the conſent of the whole kingdom.

Whenever, therefore, this high and great favour is conferred, it muſt be preſumed to flow from juſt and weighty reaſons; ſuch as eminent ſervices actually performed by thoſe who ſeek it, or which may be rationally expected from them; and in this light, acts of naturalization are highly reaſonable, as they are apparently calculated for the public benefit; and arguments of this kind may be uſually ſuggeſted, when favours of this ſort have been rendered more general, with a view to invite into this country foreign proteſtants of eaſy fortunes, ſkilful in commerce, capable of introducing or improving manufactures, or, in a word, fit to become uſeful members of the community; into which they are received in the moſt ſolemn manner, and become entitled to all that is dear and valuable to Engliſhmen.

Theſe motives, ariſing from reciprocal advantages, have been eſteemed ſo wiſe and equitable, that acts of naturalization, ſo founded, have been ever conſidered as tending highly to the advantage of this nation, and more eſpecially to the mercantile intereſt, which certainly reaped very ſignal and indiſputable advantages from them; as is particularly manifeſt from numbers of opulent families now ſubſiſting in theſe kingdoms, that were originally invited, fixed, or eſtabliſhed here, in virtue of ſuch wiſe and ſalutary laws.

But this being the caſe, it is not eaſy to ſee how the ſame benefits, or any other adequate to them, can ariſe from particular or general acts of naturalization, where the privileges granted to ſtrangers are not in ſome meaſure reſtrained to their reſidence within the BRITISH DOMINIONS; and this, from the laſt bill for ſuch a general naturalization, ſeemed to have been the ſenſe of the legiſlature, from a clauſe evidently founded upon this reaſoning.

The naturalizing foreigners, and thereby giving them a title to all the privileges of Britiſh ſubjects, without requiring from them the plain and natural equivalent of RESIDING HERE, puts it in their power to ſettle in foreign countries, with all the advantages due to the ſubjects of Great-Britain; and thereby affords them an opportunity of ſerving their own countrymen, and, indeed, foreigners of all nations, at the expence of Great-Britain, without any the leaſt advantage accruing to this nation.

With reſpect to foreigners thus naturalized, and eſtabliſhed as factors abroad, we are not led, either from reaſon or experience, to conceive, that they can have any particular attachment to the intereſts, or any real zeal or rooted affection for the welfare of Great-Britain; but muſt be chiefly governed by that principle of ſelf-intereſt, which originally led them to ſeek ſuch privileges, of which they might avail themſelves, in conſequence of thoſe treaties and alliances concluded with the kingdom of Great-Britain, and by which many valuable immunities and indulgencies are ſecured to her ſubjects, equivalents for which are, and will be always expected from the Britiſh nation. Theſe may frequently occaſion a public expence, and that expence muſt be raiſed by taxes on the natives of this iſland; but theſe naturalized foreigners reſiding abroad, do not in the leaſt contribute to them. Foreigners, under theſe circumſtances, are then more favoured than the natives.

The arguments in favour of unreſtrained acts of naturalization to factors abroad, ought to be extremely clear and convincing; for in Ruſſia, and, perhaps, in other countries, it is difficult, if not impracticable, to make the natives underſtand, how the people of any other country can become Engliſhmen, or Britiſh ſubjects, and by that means entitled to the privileges that by TREATIES are ſtipulated to us. Thus ſuch treaties may be rendered very precarious, the dignity of the nation weakened, and the conduct of ſuch foreigners ſubject us to diſputes and inconveniences, which otherwiſe might never have ariſen.

The act of navigation, that wiſe and ſalutary law, which has been the bulwark of the Britiſh commerce, breathes a ſpirit that would incline us to think the ſame regard ought to be had to Britiſh ſubjects, as to Britiſh bottoms; and that all imaginable precaution ſhould be taken to ſecure the advantages ariſing by a commiſſion on the ſale of the commodities and manufactures of this iſland, to their natural proprietors and native ſubjects; more eſpecially at a juncture, when there is nothing more evident, than that all the nations in Europe have opened their eyes to the advantages of commerce.

The queſtion then is, If upon this principle we ought to be very circumſpect in beſtowing the privileges of ſubjects on thoſe who were yeſterday our rivals, without any ſecurity that they will not become the ſame to-morrow? To this we may alſo add, that as there was a time when the whole of our traffic was engroſſed by Lombards, merchants of the Steel-yard, members of the Hanſe-Towns, and other foreigners, if we ought in common prudence to avoid every thing that may bring us into the like ſtate again?'

The connexion which the nation hath with foreigners, and the advantages confeſſedly derived from them, has made a deep impreſſion on the minds of ſome of the greateſt men in this kingdom; but general views of things do not always give the mind that light and ſatisfaction as a particular object, which it can more eaſily graſp, and from thence, with the greateſt facility, enlarge itſelf, and take in others of a ſimilar nature. Let us then examine the particular caſe which gave occaſion to theſe remarks. 'The amount of the reaſons againſt any reſtrictive clauſe in the acts of naturalization of foreigners, as factors in Ruſſia *, was this, that the treaty of commerce between the crowns of Great-Britain and Ruſſia is really a matter of no great moment, and that the figure which the Engliſh make in Ruſſia is owing to their aſſociation with foreigners in that country.' A further argument was, 'That foreigners ſituated in Ruſſia are under peculiar diſadvantages to all other foreigners, or even what they themſelves would be if ſituated in any other country; not by any particular law of the legiſlature, but from a partial regulation of the Ruſſia company, by which each

* A paper publiſhed in 1752.

member

member is reſtrained, by virtue of the oath taken upon his 'admiſſion to his freedom, from giving any commiſſions to 'any perſon not free of that company; and that freedom is 'never granted but to Britiſh-born and naturalized ſubjects:' from whence it is deduced, that the trade is a monopoly.

Thus becauſe the Ruſſia company do not give up to foreigners the benefits of the Ruſſian trade with Great-Britain, therefore their charter is hurtful to Great-Britain. Now it is evident, that there cannot be a greater trade where a greater liberty is open to the natives of a country than this in queſtion. The Ruſſian markets are always well ſupplied, each trader purſuing his own inclination to import, and his own opinion concerning the riſe and fall of markets, and the opportunities of ſale. I have known Britiſh houſes in St Peterſburgh, that, for ſeveral ſucceſſive years, have had from 40 to 100 bales of cloth remaining over the annual demand. The credit given the Ruſſians is never leſs than twelve months, unleſs in ſmall articles, and it is often extended to fifteen and eighteen months; and the prices of goods are as low as poſſible, for the merchant to receive a living profit.

There are no monopolies or excluſive privileges aſſumed by the Ruſſia company, nor any rule of conduct eſtabliſhed, which has the leaſt appearance of being injurious to this nation; for any natural-born Proteſtant ſubject may, for 5 l. take his freedom of the company, go into Ruſſia, and eſtabliſh a houſe of buſineſs, under the protection of the Britiſh crown. The Engliſh merchant may alſo conſign goods to any perſon who is a native of Ruſſia, or a ſubject of Great-Britain, remembering that the advantage in favour of the Britiſh ſubjects in Ruſſia, according to the 27th article of the treaty of commerce, is about one-third part in the cuſtoms of ſoldiers cloths *, Yorkſhires †, and flannels. Nor is there any reſtraint with regard to the markets of theſe kingdoms, for any Ruſſian, as well as freeman of the company, may ſend Ruſſian goods into England; he is only to pay the aliens duty, as eſtabliſhed by law ‡. The law of nations, the right of reciprocal protection, and the laſt articles of the treaty do, I apprehend, make the Ruſſians intirely free to trade to this country. Some Ruſſian merchants have actually been here, but finding they could not diſpoſe of their goods in a ſatisfactory manner, nor live near ſo cheap as at home, they returned to their own country.

* Coarſe cloths ſo called.

† A thick coarſe cloth.

‡ This duty amounts to 3 s. 4 d. on a ton of hemp, or about $\frac{3}{4}$ per cent. on the preſent value of hemp, at 23 l. per ton, which, in general terms, is provided for in the treaty of commerce.

Beſides this favour in the cuſtoms, the Britiſh factors in St Peterſburgh eſteem it a valuable privilege, that, in all caſes where they are defendants, particularly bankruptcy, their affairs are cognizable by the college of trade, and their books ſacred to the inſpection of reputable merchants, appointed by that college. In many caſes, alſo, where they are plaintiffs, they apply to the college of trade; but their common ſuits and demands for money of the Ruſſian merchants, have been for ſome years transferred to the magiſtracy *.

* This was a moſt ignorant and corrupt tribunal, and a ſhame to the Ruſſian nation in my time; but if it ſhould continue the ſame, it is in the power of factors to repreſent this grievance.

With regard to the quartering of ſoldiers in Ruſſia, the Britiſh ſubjects are indulged in a peculiar manner, and no doubt it ought to be deemed a favour, under a military government, to be exempt from it. This privilege, however, was more ſacred and more conſiderable formerly than of late years: I have myſelf oppoſed attempts made by the officers of the police to oblige me, as a tenant, to find quarters. I do not know that theſe attempts have yet ſucceeded againſt tenant or landlord; but if the landlord is compelled to find quarters, and the rent is raiſed on this account, the tenant ought to complain: for we conſider it not only as the ſpirit of the treaty, that Britiſh ſubjects ſhall enjoy an intire exemption from quarters, that is, the landlord not being chargeable with it, the tenant ſhall have his rent ſo much the cheaper. This muſt be the ſenſe of the 16th article, or it means nothing; for who can imagine it ſhould be deemed a favour to a Britiſh government, that common ſoldiers may not ſit in the compting-houſe of a Britiſh merchant in Ruſſia?

How cautious the Ruſſians are of being laviſh of any eſſential part of the treaty, appears by this, that, in order to aſcertain the legality of property, when a Britiſh ſubject firſt appears in the cuſtom-houſe of St Peterſburgh, the officers demand a certificate of his Majeſty's conſul, that the perſon is really what he pretends to be, and without it they will not clear his goods.

In what manner this treaty of commerce is conſidered by the Ruſſians, may be deduced from the embaſſy of Monſieur de Dieu at the Ruſſian court, in 1745. It is generally reported, and I believe it is true, that his chief buſineſs was to negociate a treaty of commerce on the behalf of his maſters, the States of the United Provinces, on the plan of that of Great-Britain; but certain it is, that he did not accompliſh any ſuch treaty: and if ſo able and ſo favoured a miniſter could not procure this privilege for his countrymen, the Ruſſians certainly meant not that the advantages they grant to BRITISH SUBJECTS ſhould become general; ſo that naturalizations granted to foreigners in Ruſſia tend to enervate the treaty of commerce, and may at length render it contemptible.

The Ruſſians know very well, that the Engliſh were the firſt that diſcovered Archangel; that they had an excluſive privilege of trade to Ruſſia in the reign of queen Elizabeth; that Peter the Great, whoſe maxims of government are juſtly near to them, always ſhewed a diſtinguiſhed regard to the Engliſh merchants, and even at the time that the politics of the two nations did not intirely coincide *, he gave them his royal word, that, at all events, they might conſider themſelves as under his peculiar care and protection: this I have been aſſured by one who was familiar with his imperial Majeſty. The Ruſſians are alſo ſenſible of the political, as well as of the commercial intereſt of the two nations, and conſider this country, and I hope will always conſider it, as their hereditary friend †. As our extenſive commerce has reached every corner of the earth, the greater our ſupport is at home, the greater muſt our reputation be abroad. Reputation is certainly no imaginary thing, but muſt be in ſome degree productive of good to our commercial intereſt, with relation to the ſpirit of commerce in our factories abroad.

* Some difference with his late Majeſty as elector of Hanover.

† I remember the compliment made to this nation by the governor of Aſtracan, a very ingenious man, whom I have mentioned in the courſe of theſe papers, ſpeaking to his friends in my preſence: 'You are to conſider, ſays he, the 'Engliſh merchants in a different light from thoſe of any 'other nation trading to this country; they are ſkilful, 'generous, humane, upright; they extend their commerce 'over the whole earth, and every country where they come 'is enriched by them. The commodities they deal in are 'neceſſary, ſubſtantial, of the greateſt uſe to the commu-'nity, and they take off more of the Ruſſian commodities 'than all the other nations united.'

The Britiſh houſes in St Peterſburgh have not only a trade to Great-Britain and Ireland, but to Holland, Pruſſia, Sweden, Holſtein, and ſeveral parts of Germany; alſo to Portugal, Spain, and Italy; this has ariſen from the connections of their extenſive commerce, intirely independent of naturalized ſubjects in Ruſſia. On the other hand, this is not the caſe with naturalized ſubjects *. There long has been, and I hope ever will be, an honourable diſtinction abroad between us and other foreigners, both as BRITONS and as MERCHANTS, not in the eſteem of the Ruſſians only, but of all other nations. Whether it is worthy of national obſervation or not, can be determined only from the nature of the ſubject; but it is apparent, that the naturalization of foreigners to reſide in Ruſſia creates ill blood in the breaſts of his Majeſty's natural-born ſubjects who are in that country: it would have created much more, but that there are but few of the naturalized factors who have not failed; had they conducted their trade with moderation and prudence, it is probable the Britiſh commerce might have been intirely in their hands, and this nation nothing the better for the commiſſion on the ſale of Britiſh commodities, or on the purchaſe of thoſe of Ruſſia. Beſides, is it not highly reaſonable to think that ſuch naturalized ſubjects would be leſs tender than the Britiſh factors, in regard to the prices this nation might pay for NAVAL STORES?

* I have heard the Ruſſian merchants occaſionally treat us with ridicule, by uſing a droll expreſſion, which ſignifies, 'Are you a white-waſhed Engliſhman?' And a naturalized factor being in ſome diſtreſs, pleaded his being an Engliſh ſubject, to Valenoſky, a miniſter of the empreſs Anne: 'You an Engliſh ſubject! ſays the miniſter, why you was 'born in Caſan, in the dominion of the empreſs.'

I paſſed ſome years of my life at Liſbon, where I obſerved that the French Proteſtants in that place live in mutual harmony with the native ſubjects of this iſland; and from the experience we have that their riches always center here, they are conſidered upon the ſame footing with other Britiſh ſubjects.

The trading world is often ſuſpected of acting upon narrow principles; yet our factors abroad are not only for the moſt part loyal, but, upon the compariſon of the ſeveral governments under which they live with the excellent conſtitution of theſe kingdoms, they contract a patriot and diſintereſted ſpirit: but when, from the ſtrongeſt evidence, they apprehend the intention of the legiſlature is defeated, and their own intereſt hurt at the ſame time, they are alarmed, and think it their duty to appeal to their country. The Britiſh factors in Portugal are jealous of thoſe foreigners, who having obtained of the Britiſh crown a participation of the Britiſh birthrights, carry all their wealth to any country except this iſland, where, indeed, their paternal connections do not center *. Many of the Portugal traders ſigned the petition already mentioned, the meaning of which is intelligible beyond diſpute,

* Mr Raihleigh, a great Portugal trader, who has given eſtates to many Hamburghers in Liſbon, can tell if any of them ever brought a ſhilling of it into this country.

and

and ſeems to ſpeak the general ſenſe of the merchants of this metropolis, though ſome may be inclined, upon DIFFERENT PRINCIPLES, TO DIFFERENT SENTIMENTS.

The BRITISH FACTORS in HAMBURGH have not one naturalized ſubject among them. The convention of the Britiſh Hamburgh company with the regency of that city, will not admit any naturalized ſubject to a participation of the valuable immunities of that company, and which, for a ſeries of years, they have enjoyed with a moſt unblemiſhed reputation: and what could this nation gain by an admiſſion of naturalized ſubjects into that factory?

It would be eaſy to prove, that whatever we play into their hands is a loſing game to this country; for I do not comprehend what they could give us in exchange. My reaſon for thinking it is a loſing game is this; with regard to the Ruſſia factors, I know at this time eight or ten Britiſh ſubjects, I ſuppoſe there are more, who laid the foundation of their fortunes as factors in that country, and ſome of them are yet intereſted in houſes there; there is not one of thoſe perſons but has brought riches, more or leſs, and ſome of them, I believe, to a conſiderable amount, to the national ſtock of this country, and are, I have great reaſon to think, good members of the community.

On the other hand, I have ſeen a liſt of 24 foreigners, many of whom I know perſonally, who, within theſe 25 years, have been naturalized, and of all this number, in all this time, only one ever came into this kingdom, and he had particular connections with a Britiſh ſubject. It muſt be obſerved, that it was only 25 years ſince any naturalization reached Ruſſia; the trade then was not ſo conſiderable as it is now, nor had our people eſtabliſhed themſelves there under the ſanction of ſuch a treaty as the preſent.

We are jealous of weakening ourſelves by the want of foreign aids; but to think ourſelves dependent in caſes where our intereſt in one light is apparently wounded, is it not to weaken ourſelves, for fear of being weakened? Not to confound things of a different nature under one name, it muſt be obſerved, that the circumſtances of naturalized ſubjects at home, under this government, and intitled to enjoy all the good, and ſubject to ſhare in all the evils, which befal the ſtate, are very different from thoſe perſons who participate of the advantages which this nation enjoys abroad.

The intention of naturalization, no doubt, is the benefit of this iſland; and if there are caſes in which naturalizations are not attended with any benefit, but, on the contrary, proſtitute the honour of the nation, enervate its influence, and counteract its native ſubjects, it is to be preſumed that ſuch caſes have not been ſet in a proper light.

The French Proteſtants have, indeed, ſtrong connections with this iſland; their parentage, their intereſt, or the protection they receive, induce them to conſider this as their proper home, and, conſequently, they are intitled to all the regard which we can ſhew them.

If experience is the beſt guide of life, it is that which muſt teach us whom to receive into our breaſts as friends, and who to reject, in the commercial light we now conſider the ſubject, as no friends to this country. By what rule can we judge better, than by obſerving thoſe people who return our kindneſs with gratitude, and thoſe who forget the benefits they receive?

If our firſt concern ought to be for our own children, it ought then to be conſidered how many ſons of tradeſmen, merchants, gentlemen, and even noblemen, are loſt to their parents, their country, and their God, for want of employment? Merchants are no where more honourably eſteemed than in this country; but they often lay the foundation of that knowlege for which they are eſteemed in diſtant climes: and ſhall we encourage foreigners to take their place?

There cannot be more trade carried on than a country will bear; it will uſually employ ſo much money, ſo many hands, and no more. Do we want money in this nation to carry on our trade? By no means. It is true, the national intereſt is already very low, perhaps it will be lower ſtill; and what will be the conſequence, but we muſt throw more money into trade, and extend our ſettlements and commercial intereſt over the earth as much as poſſible? Why ſhould we encourage FOREIGNERS to do any thing for us ABROAD, which we can do better OURSELVES? What circumſtances ſhould we be in, if all our FACTORS ABROAD were foreigners? What tie, or what ſecurity ſhould we have of their integrity, in the SALE of OUR COMMODITIES, much leſs in the promotion of our NATIONAL MANUFACTURES, in oppoſition to thoſe of other countries, or zeal in the purchaſe of the commodities of the countries where they reſide, if they left us no pledge of their fidelity, nor ſpent any part of their lives in this iſland?

On the other hand, what riches do not OUR FACTORS bring home! How many conſiderable men have not we in this metropolis from LISBON! Who can be ignorant of the wealth that has been brought here by EAST-INDIA FACTORS? Are not theſe great national objects? Italy, Spain, and other countries, are ever ſending us new recruits to our commercial ſtrength, ariſing from FACTORAGE. But there is yet a further reaſon which occurs: let the warmeſt advocates for general naturalizations, without any diſtinctions of perſons, profeſſions, or reſidence, conſider how deſtructive ſuch naturalizations are to our GENERAL SYSTEM OF NATURALIZATION AND NATIONAL PROFIT. If we give to foreign Proteſtants abroad that which ſhould invite them hither, we may even prevent their coming to us. By being laviſh of our beneficence, we ſeem to be ſufficiently paid by their acceptance of it, without any regard to the return which they are to make us. For what foreigner, ſeeing us ſo prodigal of our bounty in a caſe of this nature, which he knows to be injurious to the natural-born ſubjects of this iſland, can, in proportion as it is beneficial to himſelf, entertain any other opinion than that we do not purſue our own intereſt?

The original intention of naturalization being confeſſedly the benefit of this nation, where there is the leaſt ground of ſuſpicion that the party going abroad means not to add any thing to the national advantage, ought he not, in ſuch a caſe, to declare on what principles he pretends to the favour in queſtion; and if it ſhould appear that he deceived the legiſlature, would not ſuch a reſentment be due as at leaſt to refuſe a compliance?

If a reciprocal regard to the intereſt of this nation is the ſole motive of the invitation given to foreigners who reſide here, and if by their reſidence they do in fact give us the earneſt of a grateful return, is there no ſecurity to be aſked of thoſe who do not ſo much as pretend to live amongſt us, nor give us any kind of equivalent? The very expectation of advantage from them is diſtant, remote, confuſed, and, perhaps, utterly unintelligible.

The injury is obvious to demonſtration, and is actually complained of by thoſe who feel it, whoſe intereſt is common with that of the whole nation.

The reader to whom the ſubject is new, muſt now be informed, that the merchants and Ruſſia factors at length obtained the thing they aſked, by fixing the time of abſence to the naturalized foreigners already mentioned, to three years, and then to reſide three years alternately in this country, or to become an alien: but this was a temporizing accommodation of the matter, and does not ſeem to anſwer the full intent of the legiſlature. Upon the principle that this reſtrictive clauſe will produce the end propoſed, it might become a rule of conduct to the nation in ſimilar caſes of naturalized factors. As a trading nation, we might be yet more indulging to thoſe whoſe connections are nearly equal with the common ties of the natural-born ſubjects. But let us conſider diſpaſſionately, how dangerous it is in politics to enter very deep into refinements of this ſort, either immediately to advance the intereſt of a nation, or to prevent an injury which may be more remote.

The object moſt dear to an honeſt man is the real happineſs of his country. This principle being laid down, let us conſider what means are moſt effectual to obtain this end in a direct view. We ſee one of the wiſeſt princes in Europe uſing his utmoſt endeavours to bring people into his country, as we deſire to engage foreigners who can bring riches, arts, or induſtry, to come to this iſland. He gives them lands and great immunities; he has brought 20,000 into his capital in a few years; but he is far from extending thoſe privileges to perſons out of his dominions. With regard to ourſelves, the ſame reaſons that induce us to give encouragement to people to come to this iſland, may be a ſufficient motive not to give it out of theſe dominions, and under foreign juriſdiction. If we carry our views ſo far as to give foreigners abroad a power of taking ſhare in what our own people poſſeſs, without any ſecurity of the leaſt return from ſuch foreigners, nay, where all appearances make againſt any return, do we not counteract our own principle?

If it is urged, That a nation cannot be ſaid to confer a favour which by reſtrictions is rendered leſs valuable; I do not apprehend, without being Quixotes in politics, what it is we mean by theſe words: for ſuppoſe intereſt is the object in purſuit: as to weakening the influence of naturalization, by which commerce is intended to be promoted, this alſo ſeems to prove nothing more, than that we ſhould run all hazards, rather than loſe any poſſibility of getting a ſubject who is a foreigner, though at the expence of a ſubject who is a native. It is ſaid that naturalization without limitation has, after an indefinite abſence, brought foreigners into this country, who might not otherwiſe have come. It would be well worth examining if this is true, and who ſuch perſons are, and what were their inducements to ſettle here, before this argument can be anſwered; for, when they do in fact come, we receive them with open arms; and we ought to countenance and encourage thoſe who may ſettle here, if we do not pay too much for it. But I do not comprehend that here are any ſettlements of ſuch weight as to eſtabliſh a rule of conduct in oppoſition to our commercial intereſt, as it appears in a direct view. The caſe before us is foreign to the countenancing of ſtrangers, who ſet out upon a principle of deſigning to ſettle in this iſland. I ſay FOREIGN TO SUCH PRINCIPLE; for though many French Proteſtants have come here, after being as long abroad under the protection of the crown of Great-Britain as they pleaſed, yet ſtill the matter will reſt

on this iſſue: are we ſo fond of naturalization, as to give a power to foreigners, without diſtinction, to ſupplant our own people, when experience teaches us we have no juſt grounds to expect any ſuitable returns?

It cannot be too often repeated, that we ought to be cautious of curbing in any degree the inclinations of the natural-born ſubjects in regard to commerce, or of damping that ſpirit and application to trade, on which is founded the opulence of this nation, and its ſtrength and influence as a maritime power. And whilſt intereſt is the great incentive to human actions, and particularly actions of this kind, I think it is apparent, that the more we interpoſe to countenance foreigners in commercial deſigns, in caſes not demonſtrably beneficial to this country, the more we depreſs the ſpirits of our own merchants, who confeſſedly do advance the intereſt of the nation: and this diſcouragement may extend not only in regard to their being deprived of thoſe profits which immediately accrue from the ſhare ſuch naturalized foreigners have in their trade, but alſo to a jealouſy of being intirely ſupplanted, in the courſe of time.

May it not be queſtioned what prejudices would this nation receive, if no naturalized ſubject, 'till he has reſided here ſeven years, nor the children born abroad of perſons already naturalized, their parents not having lived in his Majeſty's dominions for the ſame number of years, were received abroad as factors or merchants, in common with native-born ſubjects? If it can be demonſtrated that ſuch prejudice will be greater than any that can be proved on the other ſide the queſtion, there is no room for a debate; but if it can be made appear that it is only equal, the ſcale, we may expect, will turn in favour of the native ſubject, much more if the prejudice is againſt the latter, for this plain reaſon, that the national and mercantile intereſt are but two words for the ſame thing. The impartial reader will conſider the argument, not the writer, if I am ſuſpected of intereſt, where I have no other view than national benefit; yet the real truth can receive no diminution: I hope that will be done which is moſt for the intereſt of my country, be it what it will.'

RUSSIA conſidered with relation to other principal ſtates and empires.

The northern parts of the empire of Ruſſia, from the frontiers of the Swediſh dominions to thoſe of China and Japan, are guarded in ſuch a manner, as to be ſecure not only from danger, but from apprehenſions, having on that ſide a ſea hitherto impenetrable, and through which, if any paſſage could be found, it muſt turn to the benefit, but can never prove of any diſadvantage, to the ſubjects of Ruſſia; which is a point of great conſequence, and a bleſſing ſcarce known to any other country than this. The frontiers of the empire towards China are alſo inacceſſible, as conſiſting of deſerts impenetrable by armies, but which yield a tolerable paſſage for caravans; ſo that the Ruſſians may always reckon on the friendſhip of the Chineſe, and, whenever they apply themſelves ſeriouſly thereto, may make this friendſhip turn to their advantage.

The Tartars inhabiting the countries between Ruſſia and Perſia, are no longer formidable to the firſt-mentioned empire; on the contrary, they all reſpect it, and many of them have willingly ſubmitted, and become vaſſals to it.

The Caſpian Sea, and the dominions which the Ruſſians have on that ſide, give them a fair opening into Perſia, which they have already improved ſo, as to gain to themſelves a very advantageous trade; and this by degrees may be extended, perhaps, as far as the Eaſt-Indies.

It will always be the intereſt of Ruſſia to cultivate a good underſtanding with the Shah; but, in caſe of a rupture, ſhe would not have much to fear, ſince the frontiers of Perſia being open, ſhe might ſoon make an end of the war, by letting looſe upon them the Tartars who are her tributaries. The Turks, and their aſſociates the Crim Tartars, are more dangerous enemies; but, at preſent, the circumſtances of the Porte are ſuch as ſcarce will allow her to break with the Ruſſians, if ſhe had concluded a peace with Perſia; and we ſhall hereafter ſee, that Ruſſia can never want the power of defending herſelf on this ſide, or even of making the Turks ſenſible of the folly of breaking with her without juſt provocation. The two great Chriſtian principalities depending upon that empire, will always have a biaſs in favour of the Ruſſians, and, therefore, the Turks run a greater hazard by making war with this, than with any other nation.

The intereſts of Ruſſia in Europe are not hard to aſſign. As to Sweden, it is of great conſequence to live upon good terms with that crown; and, on the other hand, the ſuperiority of Ruſſia, when forced into a war, has of late been rendered ſo apparent, that there are good grounds to expect the Swedes will continue quiet on that ſide for a long time to come, even ſuppoſing that no ſtreſs ſhould be laid on the natural connections between the two branches of the houſe of Holſtein, when they come to govern theſe nations. As it is requiſite for the court of Peterſburgh to be well with the Swedes on one ſide, ſo it imports them no leſs to be upon good terms with the Poles on the other; for which reaſon, we ſee the late Czarina omitted nothing to ſet the preſent king Auguſtus upon the throne of Poland, well knowing that his intereſts were of ſuch a nature as muſt, without treaties, bind him effectually to her's.

There ſeems to be no great cauſe of intercourſe between Ruſſia and Denmark, farther than what reſults from attention to the ballance of power in the North, which will always incline a wiſe adminiſtration in this empire to keep the ſcales as even as may be, between this crown and that of Sweden and Denmark.

The intereſts of Ruſſia, with reſpect to the houſe of Auſtria, are its moſt material concern; for while theſe houſes are united, not only by general alliances, but by a due and hearty regard for each other's proſperity, neither has much to fear from the Turks; but if they are divided, and the Ottomans ſhould recover their ancient power, they may be formidable to both.

As to Pruſſia, of late years great regard has been due, and, in ſucceeding times, it is like to claim a greater; but certainly, if theſe two powers purſue their true intereſts, and are not miſled by ambitious views, they are not like to fall out. The maritime powers are the natural allies, and hitherto have been, and are like to be faſt friends to Ruſſia.

As to the other potentates of Europe, their dominions lie at too great a diſtance for Ruſſia to have very great intercourſe with them of any ſort; and with reſpect to the houſe of Bourbon, as the court of Peterſburgh has never had any cauſe to like, ſo, in ſpite of all its power, there is no probability of its ever ſeeing much reaſon to fear it.

And now the imperial prince has iſſue, there does not appear any ſign, at preſent, that this empire will ſoon be diſturbed by any inteſtine commotions in regard to the ſucceſſion; nor could any thing diſtreſs the Ruſſians on this occaſion, unleſs we ſuppoſe that Sweden, Denmark, Poland, and Pruſſia, ſhould unite, and continue united in this league, to promote a revolution, which ſeems now far from probable.

It is very certain, that the great power of the Ruſſian empire and her cloſe connexion with the houſe of Auſtria, has excited a ſpirit of ſuſpicion and jealouſy in the North, to which alſo the particular views of ſeveral powers have not a little contributed; but notwithſtanding this, what has been ſaid remains not at all the leſs certain.

But if, on any future occaſion, a war ſhould actually break out between the houſes of Auſtria and Bourbon, &c. the turn of that war muſt remain very uncertain, ſince the force of the Ruſſian empire is really much greater than is commonly imagined, and would be found ſo in ſuch a caſe.

We may from hence form a judgment of the abilities of thoſe miniſters who direct at preſent the councils of this empire, and who by ſhewing an unſhaken ſteadineſs in purſuing that ſyſtem which they have adopted, have at leaſt raiſed the credit of their government to a very high degree, and, for ſome time, made this empire not only the arbiter of all differences in the north, but have likewiſe extended its influence to the moſt diſtant parts of Europe, ſince it is univerſally confeſſed, that the march of the Ruſſian auxiliaries, during the late war, was the meaſure that contributed moſt to the concluſion of the definitive treaty at Aix la Chapelle.

It deſerves the reader's notice, likewiſe, that, in the preſent ſtate of things, the true intereſts of this empire will certainly be the rules of the reigning Czarina's government; for remaining ſingle, and having no particular deſires or deſigns to gratify, the peace and proſperity of her government can depend on nothing elſe.

In conſequence of this, a conſtant and firm adherence to that ſyſtem, beſt calculated to promote the good of her ſubjects, and the glory of the empire, will be the ſtanding maxims in the Czarina's councils. As ſuch a conduct cannot fail of having a ſtrong tendency to promote peace and ſatisfaction at home, and to ſecure the attachment of the allies of Ruſſia, by maintaining the credit of the adminiſtration abroad, there are no grounds to apprehend, at leaſt in our times, any great inconveniences of extraordinary alterations ſhould enſue.

We may likewiſe add, that things remaining, as they are like to remain, in their preſent poſture for a few years, the advantages of theſe meaſures will become more and more perceptible, and a proper ſenſe of loyalty and gratitude diffuſe itſelf through the inhabitants, even of the remoteſt provinces of that extended empire, which is certainly in a very thriving condition, and will by degrees, in conſequence of the improvements that are daily making, come to extend its power and influence much farther than thoſe who are unacquainted with, or unattentive to, political principles, can eaſily conceive.

REMARKS on our article Ruſſia, ſince the laſt war, and treaty of peace of 1763.

As the laſt treaty of peace has annexed ſuch extenſive territories to the crown of Great-Britain in North-America, it is now hoped, that we ſhall no longer ſtand in need of NAVAL STORES of any kind from Ruſſia, or elſewhere; we being able to produce them there, in what quantities we pleaſe, provided rational and vigorous means ſhall be taken by the government of England for that purpoſe. See our articles NAVAL STORES, NAVAL AFFAIRS, WAR.

That the court of England ſeems to be in earneſt about this important matter, it is ſaid that an ADDITIONAL DUTY will ſoon be laid on the foreign importation of HEMP, HEMPSEED and FLAX, particularly from RUSSIA and the Baltick; great quantities, the growth of our own American colonies, being expected over in the ſpring.

RUTLANDSHIRE, the ſmalleſt county in England, almoſt of a circular form, encompaſſed on the eaſt and ſouth with Lincolnſhire and Northamptonſhire, with Leiceſterſhire on the ſouth and weſt, and with part of Leiceſterſhire and Lincolnſhire on the north. It is about 15 miles in length, 10 in breadth, and is computed at 136 ſquare miles.

The air is ſweet and healthful, it being quite free from fogs and miſts. The Guaſher-Waſh is the chief river which runs through the ſhire, which is from eaſt to weſt, in the middle of the county. There are ſeveral brooks that run into this river, by which the inhabitants are ſupplied with water, and with plenty of fiſh; almoſt all the ſouth and eaſt parts, in particular, have good ſupplies from the river Welland, which ſeparates it from Northamptonſhire and Lincolnſhire.

The ſoil is very fruitful in corn and paſture, which breeds great numbers of cattle, eſpecially ſheep, whoſe wool is obſerved to be more red than in other countries, from a red quality peculiar to the ſoil. The vale of Catmos in particular, where Oakham ſtands, is not inferior in fertility to the vales of White Horſe and Belvoir. It alſo produces abundance of wood for fuel.

OKEHAM is the capital of the county, and ſhire-town for the aſſizes, and for tranſacting all other public affairs.

UPPINGHAM, a modern town, the ſecond in the county, and the only one that has a market. It is a neat, compact, well-built town, with a well-frequented market for cattle, corn, &c.

This, though a ſmall county, is remarkable for many fine ſeats, and ſome of the firſt rank, particularly the earl of Gainſborough's at Enton, and the earl of Winchelſea's, at Burley on the Hill, both near Okeham.

Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE, continued from the end of letter Q.

With regard to RUM.

RUM imported in caſks not containing 20 gallons at the leaſt, (except for the ſeamen's uſe) forfeited, or the value; but, if it appears, to the ſatisfaction of the principal officer of the cuſtoms, to be imported without fraud or concealment, may be admitted to entry. 5 Geo. I. c. 11. §. 2. and 27 Geo. II. c. 18. §. 4.

—— or ſpirits, of the Britiſh ſugar-plantations, imported directly into Great-Britain, may, on entry, and before payment of the duty of excife, be landed and put into warehouſes, provided by the proprietor or importer, and approved of by the commiſſioners of exciſe, under the joint locks of the proprietor and warehouſe-keeper; ſecurity being firſt given to pay the ſaid duty, (according to the gauge at landing) as ſoon as ſuch rum or ſpirits ſhall be ſold, or at the end of ſix months, if they ſhall not be then ſold. 15 and 16 Geo. II. c. 25. §. 1, 7. and 23 Geo. II. c. 26. §. 2.

—— If the duty is not paid at the expiration of the ſaid ſix months, the commiſſioners may cauſe ſuch rum or ſpirits to be ſold by auction, and out of the produce diſcharge the duty and all expences, and pay the ſurplus, if any, to the proprietor. 15 and 16 Geo. II. c. 25. §. 9. and 23 Geo. II. c. 26. §. 2.

—— Landed without being entered at the cuſtom-houſe, and without the collector of exciſe, or without a warrant from the proper officers, or without the preſence of an exciſe-officer, forfeited; one moiety to his majeſty, the other to ſuch perſon as ſhall ſeize, inform, or ſue for the ſame. 15 and 16 Geo. II. c. 25. §. 3. and 23 Geo. II. c. 26. §. 2.

—— May from time to time be delivered out of ſuch warehouſes, (but not in leſs quantities than one caſk, containing at leaſt 20 gallons, unleſs it was for the uſe of the ſeamen in the voyage) on paying the duty, and producing to the warehouſe-keeper, and officer appointed to attend, a warrant or certificate from the collector, certifying ſuch payment. 15 and 16 Geo. II. c. 25. §. 5, 6. and 23 Geo. II. c. 26. §. 2.

—— Warehouſe-keepers, and officers appointed to attend warehouſes, are to enter, in proper books, accounts of all rum, &c. which ſhall be brought into and carried out of their reſpective warehouſes; and at the end of every ſix months tranſmit an account thereof, upon oath, to the commiſſioners of exciſe, together with what is remaining; and if it ſhall appear to the ſaid commiſſioners, that any of the ſaid rum, &c. has been delivered out before payment of the duty, then ſuch warehouſe-keepers and officers reſpectively offending, ſhall be diſabled to hold any publick office, and alſo forfeit 100l. 15 and 16 Geo. II. c. 25. §. 4. and 23 Geo. II. c. 26. §. 2.

—— No rum nor ſpirits of America, (except of the growth or manufacture of his majeſty's ſugar-colonies there) may be imported into Ireland, unleſs ſhipped in Great-Britain in ſhips legally navigated, upon forfeiture thereof, or the value, together with the ſhip and her furniture. 6 Geo. II. c. 13. §. 4.

And ſince, there has been an act of parliament, made in the 33d year of his late majeſty, for encouraging the exportation of RUM and SPIRITS of the growth, produce and manufacture, of the Britiſh ſugar-plantations, from this kingdom, and of Britiſh ſpirits made from moloſſes.

The duties of cuſtom payable upon the importation of rum and ſpirits from the Britiſh ſugar-plantations, to be repaid upon the exportation thereof—And the duties of exciſe to be remitted upon all ſuch as ſhall be exported before payment is made of the ſaid duties—The exporter to give bond for the due exportation thereof—Upon producing a certificate of ſuch bond having been given, the rum, or ſpirits mentioned therein, are to be delivered out of the warehouſes—And a certificate of the quantity, and ſize and marks of the caſks, &c. to be given therewith—And produced to the officer attending the ſhipping—Due entry to be made of ſuch delivery—Bonds to be given for the duties are to be delivered up, upon oath made of the intended exportation—And certificates produced, &c. of the quantity ſhipped, and that the ſame are proof ſpirits; and alſo of the delivery thereof from the warehouſes, &c.—If part only of the rum or ſpirits, mentioned in the bond, are certified to be delivered and ſhipped, the quantity is to be indorſed on the bond—And the bond is to be delivered up, when the remaining part ſhall be certified to be delivered and ſhipped; provided the ſame be before the time ſtipulated for payment of the duties.—All rum and ſpirits intitled to the ſaid drawback, &c. are to be exported in caſks containing not leſs than 100 gallons, and in veſſels not leſs than 100 tons burthen—The quantity delivered out is to be computed according to the gauge taken upon the importation thereof—If after delivery they ſhall be concealed, or not ſhipped within 12 hours, or the caſks opened, or the ſame be reduced or altered in quantity or quality; ſuch rum or ſpirits are FORFEITED, and the bond is to be put in ſuit; unleſs the commiſſioners ſee cauſe to forbear the ſame—Bonds given for exportation are not to be diſcharged 'till certificates be produced of the due exportation and landing, and proof made thereof on oath, in manner required by the act, for preventing the exceſſive uſe of ſpirituous liquors, &c.—The condition of all bonds taken ſhall be to produce ſuch certificates, within ſuch times reſpectively as are limited by the act, for producing the certificates therein required to be delivered—In caſe no ſuch certificates ſhall be produced within the time limited, the bonds may be put in ſuit—If ſuch rum or ſpirits ſhall not be exported, or ſhall be fraudulently relanded, the ſame, together with the veſſels, cattle and carriages employed therein, are FORFEITED; and the perſons concerned forfeit double the amount of the duties—And the maſter or commander of the veſſel, if he aſſiſts or connives thereat, is to ſuffer alſo ſix months impriſonment; or if the package be altered before arrival at the place of diſcharge, he forfeits 100l.—The rum or ſpirits to be exported, are to be PROOF; and the exporter is to give five days previous notice of the ſhipping thereof, and allow the officers to mark the caſks, and take ſamples, paying for the ſame, if demanded, upon PENALTY of forfeiting 100l.—If any rum or ſpirits ſhall be altered or reduced, in quantity or quality, after being ſhipped, the ſame is FORFEITED, and the perſons concerned therein forfeit 100l.—And no drawback is to be allowed for the ſame—PENALTY for granting a falſe certificate, or of counterfeiting, altering, &c. any oath or certificate, 500l.; one moiety to the crown, and the other to the proſecutor.—An additional DRAWBACK of 3l. 3s. per tun, allowed on all Britiſh-made ſpirits drawn from moloſſes, exported; oath being made of the truth thereof, and the duties being duly paid; and certificate produced of the quantity ſhipped, and that the ſame were PROOF SPIRITS, &c.

The powers, regulations, forfeitures, and clauſes, &c. in the recited act, relating to the DRAWBACKS hereby granted on the exportation of ſpirits, and to the preventing or puniſhing FRAUDS, &c. are extended to this act—And all FINES, PENALTIES,

PENALTIES, and FORFEITURES, impoſed by this act, ſhall be ſued for, levied, recovered, or mitigated, by ſuch ways, means, and methods, as may be recovered or mitigated by any law or laws of exciſe (not otherwiſe directed by this act) or by action of DEBT, BILL, PLAINT, or INFORMATION, in any of his Majeſty's courts of record at Weſtminſter, or in the court of Exchequer of SCOTLAND; and that one moiety of every ſuch FINE, &c. ſhall be to his Majeſty, &c. and the other to him or them, who ſhall diſcover, inform, or ſue for the ſame. — That any perſon ſued, &c. in purſuance of this act, may plead the general iſſue, and give this act, &c. in evidence in their defence, &c. and if a verdict ſhall paſs for defendant, ſuch defendant ſhall have TREBLE COSTS.

With regard to the RUSSIA COMPANY.

RUSSIA COMPANY. —— Any Britiſh ſubject may be free of it, upon payment of 5 l. for admiſſion. 10 and 11 Will. III. cap. 6. §. 1, 2. — Any perſon free of this company may import, in Britiſh-built ſhips legally navigated from Ruſſia, any goods of the growth, produce, or manufacture of Perſia (provided ſuch manufactures are made of the growth or produce of Perſia) purchaſed by barter with, or the produce of, woollen or other goods exported from Great-Britain to Ruſſia (except gold or ſilver in coin or bullion) and from thence carried into Perſia, to the truth whereof the importer is to make oath; paying the ſame cuſtoms as ſuch goods are liable to if imported from the Levant ſeas by any perſon belonging to the Turkey company. 14 Geo. II. cap. 36. §. 1, 2. — But by 23 Geo. II. cap. 34. raw ſilk of the growth or produce of Perſia may be imported under the ſame regulations, although the goods with which they are purchaſed are not carried from Ruſſia into Perſia.

—— If any doubt ſhall ariſe, whether any of the goods ſo imported be of the growth, &c. of Perſia, or not, or were imported contrary to this act, and for that reaſon ſhall be ſeized as forfeited, the proof thereof ſhall be incumbent on the importer or claimer. 14 Geo. II. cap. 36. §. 4.

—— Wrought ſilks, and other manufactures of Perſia, mentioned in act 11 and 12 Will. III. cap. 10. are not to be worn in this kingdom, but are to be under the regulations in the ſaid act. 14 Geo. II. cap. 36. §. 3.

—— Nothing in this act is to deprive the Eaſt-India company from enjoying their full powers, privileges, &c. — 14 Geo. II. cap. 36. §. 6.

S.

SABLE. Several authors have, here and there, given deſcriptions of theſe ſpecies of precious animals. I ſhall therefore only add thus much, viz. (1.) That it is the nature of theſe creatures, at a certain time of the winter, to ſleep for a while; but firſt they hide themſelves ſo ſecurely, that it is a very hard matter to find any of them. And if at any time they are diſcovered, they lie wrapped up, as it were, like a ball, and you may roll and throw them about, without waking them. (2.) That they live upon mice, cedar-kernels, red-berries, fiſh, &c. (3.) That thoſe years, when cedar-kernels and red-berries are moſt plenty, theſe animals are the moſt difficult to be found, and their furr is the worſe; becauſe feeding plentifully, they reſt moſt; on the contrary, if there be a ſcarcity of cedar-kernels and berries, they are eaſier caught; for they then run more about, and exerciſe makes the furr much more beautiful. (4.) That the moſt beautiful ſable ſkins have generally the worſt tails, and the worſt ſkins, on the contrary, the fineſt tails. (5.) That there are ſables as white as ſnow, but they are met with very rarely. (6.) Upon the iſlands in the north-eaſtern ſea, beyond Khamtſchatki in Ruſſia, the ſables are very indifferent, but then they have tails a quarter of a Ruſſian ell long, ſtreaked red and black. Near Craſnoyahr, Abakan, Kuanetſko, and ſome other places, you may buy a hundred of the beſt ſable tails for about ſix or eight rubbles; whereas they are worth from 25 to 30 rubbles at Tobolſky, and will ſell for 100 rubbles at Moſcow. The ſkins bear the ſame proportion of price. A timber of ſables conſiſts of 40 ſkins, or 20 couple.

Note, a rubble is about 4s. 6d. ſterling. See the article RUSSIA.

SADLER. Under this title is carried on a very conſiderable trade, but in very different degrees.

Their buſineſs is not only ſaddle-making, which is a curious as well as very ancient employ, but to complete ſome, and ſell all other neceſſaries for the ſaddle-nag and horſeman.

Some only work privately, making up goods for town and country trade.

Some keep but ſmall ſhops, and for the moſt part ſell and repair the middling ſorts of ſadlery-wares, but ſeldom make up.

Others have large ſhops, and make up and ſell all ſorts of the fineſt horſe-furniture.

Others again keep large ſtocks of goods for exportation, and merchandize a great deal on their own accounts.

They were a company before the year 1190, but not incorporated 'till 1272. In the reign of king Edward I. Livery-fine 10 l. whereof his royal highneſs the late prince of Wales was a member.

Their hall is near Foſter-lane in Cheapſide, and their court-day on the firſt Tueſday in the month.

Before their hall-gate they have a ſtand, in which they ſit to attend the lord mayor on the day of his inſtallation.

SAFE-CONDUCTS, PROTECTIONS, PASSPORTS.

A ſafe-conduct is a ſecurity given by the king, under the great-ſeal, to a ſtranger, for his ſafe coming into and paſſing out of the realm, touching which are ſeveral ſtatutes. A paſſport is a licence granted by any in authority, for the ſafe paſſage of man or ſhip, &c. from one place or country to another.

Protections are of two ſorts; public, where a prince takes on him the defence of another prince or ſtate; or private, of perſons or ſhips, in effect only a paſſport.

By the law of protection, the protected perſon owes all reſpect to his protector, who, on his part, ſhould defend and ſuccour the protected; or he may withdraw himſelf from the protection, and ſeek another. The Genoeſe revolting from the protection of the French king, he changed their conditions into privileges, that he might deprive them of them when he ſhould think fit. Molloy 84.

In protections of ſhips and perſons, generally great faith is kept by the granters; for at this day, if a ſhip hath a Barbary protection, the pirates of that nation will reſtore any ſuch ſhip they have taken; and if no protection, yet if taken within ſight of their caſtles, the prize is not abſolute, unleſs reſiſtance be made.

The ſtatute of Magna Charta, 9 Hen. III. cap. 30. ordains, That all merchant-ſtrangers ſhall have ſafe conduct into, out of, and whilſt in, England, to buy, ſell, &c. if not openly prohibited; except in time of war, and in an enemy's country. And by 27 Edw. III. cap. 2. Safe-conduct is granted to merchant-ſtrangers, to dwell and traffic in this kingdom, and return at pleaſure.

By 15 Hen. VI. cap. 3. it is recited, That whereas the king had granted ſafe-conduct to certain perſons coming in and out of England, France, and Ireland, with certain laden ſhips; and faith ſhould be given both to the copy called Vidimus, and the original of thoſe letters: and that one John de Guntier granted ſuch copy to as many as he pleaſed, ſealed with the ſeal of him that called himſelf king of France; by which a great navy of enemies was aſſembled, and took many ſhips, &c. to the great damage of England.

The king, at the grievous complaint of the commons in parliament, ordains, that the clauſe Vidimus ſhall not be put in any future ſafe-conduct granted, without great cauſe. And alſo that in all ſafe-conducts, the name of the ſhips, maſters, number of mariners, and ſhip's burthen, ſhall be expreſſed.

By 18 Hen. VI. cap. 8. Merchants aliens may charge veſſels of Spain, and other parts, enemies of the king, if the maſters, owners, &c. have ſafe-conduct. And if any ſuch ſhips be taken by the king's ſubjects, not having authentic ſafe-conducts, the poſſeſſors may enjoy the ſame. And proclamation is to be made of this ſtatute on the ſea-coaſts, that merchants aliens may have knowlege of it.

By 20 Hen. VI. cap. 1. All letters of ſafe-conduct granted to the king's enemies, or others, ſhall be enrolled in chancery before delivery, or elſe be void: and if at any time hereafter, goods are taken by Engliſh ſubjects on the ſea in enemy's ſhips, not having legal ſafe-conduct, they ſhall enjoy them without reſtitution.

And the king's ſubjects, taking ſuch ſhips, and forcibly bringing them into any port of the realm, ſhall not receive damage, if ready to make reſtitution within reaſonable time after they ſhall have knowlege of letters of ſafe-conduct, enrolled in chancery before taking them.

By 31 Hen. VI. cap. 4. Any ſubject offending upon the ſea, or in any port of the kingdom, to the injury of any ſtrangers in amity with us, or having ſafe-conduct, the chancellor of England may iſſue proceſs to bring the offenders to anſwer to the parties grieved, and make ſuch reſtitution as ſhall ſeem to the chancellor expedient.

And on this proceſs, the chancellor ſhall further proceed, to make full delivery and reſtitution, of perſons, ſhips, &c. with all coſts and loſſes, diſburſed and ſuffered by them.

A late act 4 Geo. II. cap. 18. recites, That treaties are ſubſiſting between the king and ſubjects of Barbary, by which it is ſtipulated, that all ſhips belonging to his Majeſty or his ſubjects, may paſs the ſeas, and enter the harbours of the ſaid governments, without ſeizure or moleſtation, on producing paſſes under ſeal of the admiralty-office, called Mediterranean paſſes. It is therefore enacted, That if any ſhall forge or counterfeit any ſuch paſs, or make any alteration or erazement, &c. ſuch perſons, on conviction in any of his Majeſty's dominions, ſhall be guilty of felony.

And the ſaid offences, whereſoever committed, may be tried and adjudged in any county of England, or before any juſticiary in Scotland.

By the laws of France, no veſſel ſhall put to ſea from any port, without paſſport from the admiral, recorded at the admiralty-office of the place whence the maſter ſails; who, in 24 hours after his arrival in any port, ſhall preſent his paſſport, and declare all the conſiderable circumſtances of his voyage, &c.

And by a treaty marine, made by king Charles II. with the king of France in the year 1677, a form of paſſport is appointed to be given by the lord admiral of England, or by the mayor or other chief magiſtrate, or the principal officers of the cuſtoms, in the ſeveral ports and places of the king's

dominions, to ſhips and veſſels. See MARQUE [LETTERS of MARQUE], REPRISALS, MARINE TREATIES.

SAFFRON.

Of its growth and cultivation in England.

As ſaffron grows at preſent moſt plentifully in Cambridgeſhire, and has grown formerly in ſeveral other counties of England, the method of culture does not, I believe, vary much in any of them, and therefore I have judged it ſufficient to take notice of the obſervations which ſeveral capable perſons have made, in different ſeaſons, in the years 1723, 24, 25, and 28, up and down all that large track of ground that lies between Saffron Walden and Cambridge, in a circle of about ten miles diameter. In that country, ſaffron has been longeſt cultivated, and therefore it may reaſonably be expected, that the inhabitants thereof are more thoroughly acquainted with it than they are any where elſe.

I ſhall begin with the choice and preparation of the ground.

The greateſt part of the track already mentioned, is an open level country with few incloſures; and the cuſtom there is, as in moſt other places, to crop two years, and let the land lie fallow the third. Saffron is always planted upon fallow ground, and all other things being alike, they prefer that which has borne barley the year before.

The ſaffron-grounds are ſeldom above three acres, or leſs than one, and in chuſing them, the principal thing they have regard to is, that they be well expoſed, the ſoil not poor, nor a very ſtiff clay, but a temperate dry mould, ſuch as commonly lies upon chalk, and is of a hazel colour; though if every thing elſe anſwers, the colour of the mould is pretty much neglected.

The ground being made choice of, about Lady-day, or the beginning of April, it muſt be carefully plowed, the furrows being drawn much cloſer together and deeper, if the ſoil will allow it, than is done for any kind of corn, and accordingly the charge is greater.

About five weeks after, or during any time in the month of May, they lay between twenty and thirty loads of dung upon each acre, and having ſpread it with great care, they plow it in as before. The ſhorteſt rotten dung is the beſt, and the farmers who have the conveniencies of making it, ſpare no pains to make it good, being ſure of a proportionable price for it. About Midſummer they plow a third time, and between every ſixteen feet and an half, or pole in breadth, they leave a broad furrow or trench, which ſerves both for a boundary to the ſeveral parcels (when there are ſeveral proprietors to one encloſure) and to throw the weeds in at the proper ſeaſon.

To this head likewiſe belongs the fencing of the grounds, becauſe moſt commonly, though not always, that is done before they plant. The fences conſiſt of what they call dead hedges, or hurdles to keep out not only cattle of all ſorts, but eſpecially hares, which would otherwiſe feed on the ſaffron-leaves during the winter.

About the weather we need only obſerve, that the hotteſt ſummers are certainly the beſt, and if therewith there be gentle ſhowers from time to time, they can hardly miſs of a plentiful rich crop, if the extreme cold, ſnow, or rain of the foregoing winter, have not prejudiced the heads.

The next general part of the culture of ſaffron, is planting or ſetting the roots; the only inſtrument uſed for which, is a narrow ſpade, commonly termed a ſpit-ſhovel.

The time of planting is commonly in the month of July, a little ſooner or later, according as the weather anſwers. The method is this: one man with his ſpit-ſhovel raiſes between three and four inches of earth, and throws it before him about ſix, or more inches; two perſons, generally women, following him with ſaffron heads, place them in the fartheſt edge of the trench he makes at three inches diſtance from one another, or thereabouts. As ſoon as the digger or ſpitter has gone once the breadth of the ridge, he begins again at the other ſide, and digging as before, covers the roots laſt ſet, and makes the ſame room for the ſetters to place a new row, at the ſame diſtance from the firſt, that they are from one another. Thus they go on 'till a whole ridge, containing commonly one rod, is planted, and the only nicety in digging is to leave ſome part of the firſt ſtratum of earth untouched to lie under the roots; and in ſetting, to place the roots directly upon their bottoms. What ſort of roots are to be preferred, ſhall be ſhewn under the fourth head; but it muſt be obſerved in this place, that formerly when roots were very dear, they did not plant them ſo thick as they now do; and that they have always ſome regard to the ſize of the roots, placing the largeſt at a greater diſtance than the ſmall ones.

The quantity of roots planted in an acre is generally about ſixteen quarters, or 128 buſhels, which according to the diſtances left between them, as before aſſigned, and ſuppoſing them all to be an inch in diameter one with another, ought to amount to 392,040 in number.

From the time that the roots are planted, 'till about the beginning of September, or ſometimes later, there is no more labour about them; but as they begin to ſpire, and are ready to ſhew themſelves above ground, which is known by digging a few out of the earth, the ground muſt be carefully pared with a ſharp hough, and the weeds, &c. raked into the furrows, becauſe otherwiſe they would hinder the growth of the plants.

In ſome time after appear the ſaffron-flowers, and this leads us to the third branch of our preſent method. The flowers are gathered as well before, as after they are full blown, and the moſt proper time for this is early in the morning. The owners of the ſaffron get together a ſufficient number of hands, who place themſelves in different parts of the field, pull off the whole flowers, and throw them handful by handful into a baſket; and ſo continue 'till all the flowers are gathered, which happens commonly about ten or eleven o'clock. Having then carried home all they have got, they immediately ſpread them upon a large table, and placing themſelves round it, they fall to picking out the filamenta, ſtyli, or chives, and together with them, a pretty long portion of the ſtylus itſelf, or ſtring to which they are joined. The reſt of the flower they throw away as uſeleſs. The next morning they return into the field again, whether it be wet or dry weather, and ſo on daily, even on Sundays, 'till the whole crop be gathered.

The chives being all picked out of the flowers, the next labour about them is to dry them on the kiln. The kiln is built upon a thick plank (that it may be moveable from place to place) ſupported by four ſhort legs. The outſide conſiſts of eight pieces of wood, about three inches thick, joined in form of a quadrangular frame, about twelve inches ſquare at bottom on the inſide, and twenty-two inches at the top, which is likewiſe equal to the perpendicular height of it. On the foreſide is left a hole about eight inches ſquare, and four inches above the plank, through which the fire is put in. Over all the reſt, laths are laid pretty cloſe to one another, and nailed to the frame already mentioned, and then are plaſtered over on both ſides, as is alſo the plank at bottom very thick, to ſerve for a hearth. Over the mouth, or wideſt part, goes a hair-cloth fixed to two ſides of the kiln, and likewiſe to two rollers, or moveable pieces of wood, which are turned by wedges or ſcrews, in order to ſtretch the cloth. Inſtead of the hair-cloth many people now uſe a net-work of iron wire, with which it is obſerved, that the ſaffron dries ſooner, and with a leſs quantity of fuel; but the difficulty of preſerving the ſaffron from burning, makes the hair-cloth be preferred by the niceſt judges in drying.

The kiln is placed in a light part of the houſe, and they begin by laying five or ſix ſheets of white paper on the hair-cloth, upon which they ſpread wet ſaffron, between two and three inches thick. This they cover with other ſheets of paper, and over theſe lay a coarſe blanket five or ſix times doubled, or, inſtead thereof, a canvas pillow filled with ſtraw; and after the fire has been lighted for ſome time, the whole is covered with a board, having a large weight upon it.

At firſt they give it pretty ſtrong heat, to make the chives ſweat, as their expreſſion is; and in this, if they do not uſe a great deal of care, they are in danger of ſcorching, and ſo of ſpoiling all that is on the kiln.

When it has been thus dried for about an hour, they take off the board, blanket, and upper papers, and take the ſaffron off from that which lies next it, raiſing at the ſame time the edges of the cake with a knife. Then laying on the papers again, they ſlide in another board between the hair-cloth and under papers, and turn both papers and ſaffron upſide down, afterwards covering them as above.

The ſame heat is continued for an hour longer; then they look to the cake again, free it from the papers and turn it; then they cover it, and lay on the weight as before. If nothing happens amiſs, during theſe firſt two hours, they reckon the danger to be over; for they have nothing more to do, but to keep a gentle fire, and turn their cake every half hour, 'till it be thoroughly dry; for doing which as it ought, there are required full twenty-four hours.

In drying the large plump chives they uſe nothing; but towards the latter end of the crop, when theſe come to be ſmaller, they ſprinkle the cake with a little ſmall beer to make it ſweat as it ought; and they begin now to think, that uſing two linen cloths next the cake, inſtead of the two innermoſt papers, may be of ſome advantage in drying; but this practice is followed, as yet, but by few.

Their fire may be made of any kind of fuel; but that which ſmoaks the leaſt is beſt, and charcoal, for that reaſon, is preferred to any other.

What quantity of ſaffron a firſt crop will produce is very uncertain. Sometimes five or ſix pounds of wet chives are got from one rod; ſometimes not above one or two, and ſometimes not enough to make it worth while to gather and dry it. But this is always to be obſerved, that about five pounds of wet ſaffron go to make one pound of dry, for the firſt three weeks of the crop, and ſix pounds during the laſt week; and now the heads are planted very thick, two pounds of dryed ſaffron may, at a medium, be allowed to an acre for a firſt crop, and four and twenty pounds for the two remaining, the third being conſiderably larger than the ſecond.

In order to obtain theſe, there is only a repetition to be made every year of the labour of houghing, gathering, picking, and drying, in the ſame manner as before ſet down, without the addition of any thing new; except that they let cattle into the fields, after the leaves are decayed, to feed upon the weeds, or perhaps mow them for the ſame uſe.

About the Midſummer after the third crop is gathered, the roots muſt all be taken up and tranſplanted: the management requiſite for which is the fourth thing to be treated of. To take up the ſaffron-heads, or break up the ground, as their term is, they ſometimes plow it, ſometimes uſe a forked kind of hough called a pattock, and then the ground is harrowed once or twice over; during all which time of plowing, or digging and harrowing, fifteen or more people will find work enough to follow and gather the heads, as they are turned up. They are next to be carried to the houſe in ſacks, and there to be cleanſed or raiſed. This labour conſiſts in clearing the roots thoroughly from earth, and from the remains of old roots, old involucra, and excreſcences; and thus they become fit to be planted in new ground immediately, or to be kept for ſome time without danger of ſpoiling.

The quantity of roots taken up, in proportion to thoſe that were planted, is uncertain; but at a medium it may be ſaid, that allowing for all the accidents that happen to them in the ground, and in breaking up, from each acre may be had 24 quarters of clean roots, all fit to be replanted. The owners are ſure to chuſe for their own uſe the largeſt, plumpeſt, and fatteſt roots, but above all, they reject the longiſh-pointed ones, which they call ſpickets or ſpickards, for very ſmall round or flat roots are ſometimes obſerved to flower.

This is the whole culture of ſaffron in the country above mentioned; and we have only now to conſider the charges and profits which may be ſuppoſed, one year with another, to attend this branch of agriculture; and of theſe we have drawn up the following computation for one acre of ground, according to the price of labour in this county.

	l.	s.	d.
Rent for three years	3	00	0
Plowing three times	0	18	0
Punging	3	12	0
Hedging	1	16	0
Spitting and ſetting the heads	1	12	0
Weeding or paring the ground	1	4	0
Gathering and picking the flowers	6	10	0
Drying the flowers	1	6	0
Inſtruments of labour for three years with the kiln, about	0	10	0
Plowing the ground once, and harrowing twice	0	12	0
Gathering the ſaffron-heads	1	00	0
Raiſing the heads	1	12	0
Total charge	23	12	0

This calculation is made upon the ſuppoſition, that an acre of ground yields 26 pounds of neat ſaffron in three years, which is ſtated only as a mean quantity between the greateſt and the leaſt; and therefore the price of ſaffron muſt be adjuſted accordingly, which I think cannot be done better than by fixing it at 30 s. per pound; ſince in very plentiful years it is ſold for 20 s. and is ſometimes worth between 3 and 4 l. At this rate, 26 pounds of ſaffron are worth 39 l. and the neat profits of an acre of ground producing ſaffron, will in three years amount to 15 l. 13 s. or to about 5 l. 4 s. yearly. This, I ſay, may be reckoned the neat profit of an acre of ſaffron, ſuppoſing that all the labour were to be hired for ready money; but as the planter and his family do a conſiderable part of the work themſelves, ſome of this expence is ſaved: that is, by planting ſaffron, he not only may reaſonably expect to clear about 5 l. yearly per acre, but alſo to maintain himſelf and family for ſome part of each year; and it is upon this ſuppoſition only, that the reſult of other computations which have been made of the profits of ſaffron, can be ſaid to have any tolerable degree of exactneſs; but the calculations themſelves are undoubtedly very inaccurate.

We have ſaid nothing here concerning the charge in buying, or profits in ſelling the ſaffron heads, becauſe in any large track of ground, theſe muſt at length always ballance one another, while the quantity of ground planted yearly continues the ſame.

An eſſential extract of ſaffron.

Take two ounces of the choiceſt freſh Engliſh ſaffron dried, and either cut ſmall or remaining whole; put it into a clean bolt-head with a long and ſlender neck; pour upon it ſo much of the pureſt alcohol, containing no foreign thing, as may float four or ſix inches about it: then ſtop the glaſs ſlightly with a wreath of paper, put it into a wooden little furnace ſupplied with a live coal buried under ſifted aſhes, that the heat may be only a hundred degrees. Leave it thus in digeſtion for three days, the veſſel being often ſhook; let it afterwards reſt for 24 hours, in a cold quiet place; then carefully ſtrain off all the tinged liquor through a piece of clean linen, placed in a funnel ſet in a clean glaſs, and keep it cloſely ſtopped. It will be of a bright red colour. The ſaffron remaining at the bottom of the glaſs, will be found paler than before. To this pour the like quantity of freſh alcohol, and proceed as before, and mix the tincture thus acquired with the former; the ſaffron will now remain paler. If more alcohol be added to it, and the proceſs be repeated, a ſtill poorer tincture will be obtained, which ought to be kept ſeparate: the ſaffron will now become pale, but otherwiſe will have the ſame appearance and bulk, as before. To this if water be added, digeſted therewith, and poured off, it will be of a yellow colour; put on freſh, and continue thus, 'till no more tincture can be extracted; and now the chives will appear quite white, and if gently dried, will retain their former figure, though they appeared much ſhrunk, perfectly inodorous, and inſipid, ſo as ſcarce to be diſtinguiſhed from bits of clean thread; whence it is wonderful, where the ſeat of that ſurprizing matter extracted from it ſhould be, which is found to give ſo rich a tincture to ſo large a proportion of alcohol. Let the tincture procured by the two firſt digeſtions, be diſtilled in a glaſs body, fitted with its head, and perfectly well cloſed, with a fire of a hundred degrees, 'till about an ounce remains behind, which, when cold, is to be poured into a glaſs veſſel, to be kept carefully ſtopped. It will prove of an exceeding red colour, a highly fragrant odour, and a bitter, aromatic, penetrating taſte, and have the conſiſtence of thin oil. Let it be kept under the title of the eſſential extract of ſaffron. The ſpirit that comes over in the diſtillation will be limpid and colourleſs, but retain the grateful and aromatic ſmell and taſte of ſaffron. This is to be reſerved for the ſame uſe, and thus every time becomes the richer.

The USE.

This ſurprizing experiment ſhews us a new ſpecies of matter, which we can neither call oil, ſpirit, gum, roſin, reſinous gum, wax, or balſam; but it is ſomething perfectly ſingular, and of a ſpirituous oily nature. This extract mixes with water, ſpirit, and oil, and has ſuch exhilarating virtues, that being uſed too freely, it occaſions an almoſt perpetual and indecent laughing; but uſed moderately, it becomes proper: it tinges the urine red, and is particularly ſaid to deſtroy the petrefying power thereof in the kidnies, and therefore to be an extraordinary remedy againſt the ſtone.

REMARKS.

Thus we find that nature has prepared, in particular parts of certain vegetables, a determined kind of body, ſo different from all others as ſcarce to be referred to any other known kind; and has, at the ſame time, endowed it with virtues, otherwiſe inimitable. We have ſeen an example of this in the chives of ſaffron, which the principal chemiſts have ſo highly eſteemed, as to call it the philoſophers ſpice. It is incredible how rich this ſaffron is in colour, taſte, odour, and virtue; how ſmall the bulk is that poſſeſſes all theſe rich faculties, and how tender and eaſily corruptible the thing itſelf is, and therefore requires the above peculiar method of operation.

Saffron is in many places in great eſteem in ſauces, and on many occaſions in foods, but its great uſe is in medicine. It is a high cordial, a powerful aperient, detergent and reſolvent. It gives great relief in faintings and palpitations of the heart; it alſo ſtrengthens the ſtomach, and aſſiſts digeſtion. It is certainly a noble medicine, under the direction of a ſkilful phyſician, but given by a quack may prove as hurtful as otherwiſe it might be ſalubrious.

The Engliſh ſaffron is allowed by all, except the French writers on theſe ſubjects, to be greatly ſuperior to any other. It is to be choſen freſh, tough, and flexile, difficultly broken, of a ſtrong ſmell and very bitter taſte, and ſuch as ſtains the hands in touching it. Our druggiſts are apt to keep it in damp places, to increaſe its weight, whereby it becomes mouldy, and ſuch is to be rejected.

SAIL-CLOTH.

The chief LAWS relating to this manufacture.

Makers of ſail-cloth ſhall fix ſtamps, with their names, &c. to every piece, under the penalty of 5 l. Perſons cutting off ſtamps, or uſing any falſe names, incur certain penalties. A bounty is allowed on exportation of Britiſh-made ſail-cloth.

All foreign ſail-cloth imported, for which duties are granted, ſhall be ſtamped with a ſtamp expreſſing from whence imported, &c. on forfeiture of 10 l. upon conviction before one or more juſtices. New ſhips on firſt ſetting out to ſea, ſhall have a complete ſet of ſails, bonâ fide, belonging to her, manufactured here, on pain of 50 l. Flax yarn uſed in Britiſh ſail-cloth, ſhall not be whitened with lime, on forfeiture of 6 d. per yard.

Every maſter of a ſhip, belonging to a ſubject (Eaſt India ſhips excepted) having any foreign ſails on board, ſhall, at the time of making entry of his ſhip, alſo make entry, on oath, of all foreign ſails uſed on board, for which the ſame duties ſhall be paid as by ſtat. 12 Ann. cap. 16. Foreign ſail-cloth, unſtamped, ſhall not be made into ſails, under penalty of

of 50l. and forfeiture of the ſails. Sails made of foreign ſail-cloth unſtamped, ſhall not be mended, under penalty of 20l. Every ſail-maker ſhall impreſs on every new ſail, a mark of eight inches diameter, containing his name and place of abode, and under the penalty of 10l. See the articles CANVAS, and HEMP; and ſee the BUSINESS of the CUSTOMS at the end of LETTER S. for the LAWS relative to SAIL-MAKING.

SAIL-MAKER. The ſail-maker cuts out and ſews the pieces together, which form the ſails of a ſhip. It is a profitable trade.

SAILOR, ſee the article SEAMEN.

SALT. This being a commodity of general utility in commerce, as well with regard to our fiſheries as our royal navies, and ſhips concerned in the merchants ſervice, and there being ſeveral delicacies in the operation to produce a ſalt ſuitable to all the occaſions of life, we ſhall give an abſtract of the learned Dr Brownrigg's late improvements upon the making of ſalt, to a greater perfection than has been heretofore practiſed in this kingdom.

Mines of ſalt, ſays the doctor, have been long diſcovered and wrought in England, Spain, Italy, Germany, Hungary, Poland, and other countries in Europe. Moreover, the ſea affords ſuch vaſt plenty thereof, that all mankind might thence be ſupplied with quantities ſufficient for their occaſions. There are alſo innumerable ſprings, ponds, lakes, and rivers, impregnated with common ſalt, from which the inhabitants of many countries are plentifully ſupplied herewith.

In ſome countries which are remote from the ſea, and have little commerce, and which are not bleſſed with mines of ſalt, or ſalt waters, the neceſſities of the inhabitants have forced them to invent a method of extracting their common ſalt from the aſhes of vegetables.

In ſhort, this ſalt is diſperſed all over nature; it is treaſured up in the bowels of the earth; it impregnates the ocean; it deſcends in * rain; it fertilizes the ſoil; it ariſes in vegetables; and from them is conveyed into animals; ſo that it may well be eſteemed the univerſal condiment of nature.

* See Boyle on the ſaltneſs of the ſea.

Naturaliſts, obſerving the great variety of forms under which this ſalt appears, have thought fit to rank the ſeveral kinds of it under certain general claſſes, diſtinguiſhing it moſt uſually into rock or foſſil-ſalt, ſea-ſalt, and brine or fountain-ſalt: to which may be added others of thoſe muriatic ſalts, which are found in vegetable or animal ſubſtances. Theſe ſeveral kinds of common ſalt often differ from each other in their outward form and appearance, or in ſuch accidental properties as they derive from the heterogeneous ſubſtances with which they are mixed; but, when perfectly pure, they have all the ſame qualities; ſo that chemiſts, by the exacteſt inquiries, have not been able to diſcover any eſſential difference between them.

By rock-ſalt †, or native ſalt, is underſtood all ſalt dug out of the earth, which hath not undergone any artificial preparation.

† By rock-ſalt, ſal rupium, the ancient chemiſts mean ſalt adhering to the rocks above the high-water mark, being there lodged by the ſpray of the ſea, evaporated by the heat of the ſun; which is the pureſt ſalt of all for chemical uſes, and is to be had off the rocks of Sicily, and ſeveral iſlands in the Weſt-Indies.

Under the title of bay-ſalt may be ranked all kinds of common ſalt extracted from the water, wherein it is diſſolved by means of the ſun's heat and the operation of the air; whether the water from which it is extracted be ſea-water, or natural brine drawn from wells and ſprings, or ſalt water ſtagnating in ponds and lakes.

Under the title of white ſalt, or boiled ſalt, may be included all kinds of common ſalt extracted by coction from the water wherein it was diſſolved; whether this water be ſea-water, or the ſalt water of wells, fountains, lakes, or rivers; or water of any ſort impregnated with rock-ſalt, or other kind of common ſalt.

The firſt of theſe kinds is in ſeveral countries found ſo pure, that it ſerves for moſt domeſtic uſes, without any previous preparation, triture excepted. But the Engliſh foſſil-ſalt is unfit for the uſes of the kitchen, until by ſolution and coction it is freed from ſeveral impurities, and reduced to white ſalt.

The Britiſh white-ſalt alſo is not ſo proper as ſeveral kinds of bay-ſalt for curing fiſh, and ſuch fleſh-meats as are intended for ſea-proviſions, or for exportation into hot countries. So that for theſe purpoſes, we are obliged, either wholly or in part, to uſe bay-ſalt, which we purchaſe in France, Spain, and other foreign countries. To remedy theſe inconveniencies, what follows may be uſeful, in order to ſhew how the ſubjects of Great-Britain may be ſupplied with ſalt of their own manufacture, fit and ſufficient for all their occaſions.

In order that the methods here propoſed might be better underſtood, and that the reaſonableneſs of them might more fully appear, it is neceſſary to premiſe a brief account of ſeveral ways of preparing bay-ſalt, as well as white-ſalt. From this hiſtory may be formed a judgment, how far the methods now in uſe are proper, in what deficient, where erroneous, and how they may be improved for the benefit of our trade.

BAY-SALT in general may be divided into two kinds. Firſt, bay-ſalt, drawn from ſea-water, as is practiſed in France, Spain, Portugal, and many other countries. Secondly, bay-ſalt extracted from ſalt ſprings, ponds, and lakes; as at Cape de Verde iſlands, Tortuga, and other places. Of theſe the firſt is imported in large quantities into Great-Britain and Ireland: our American colonies, in times of peace, are chiefly ſupplied with the latter; but in time of war they have large quantities of bay-ſalt from Liſbon, and other parts of Portugal.

Bay-ſalt is prepared in a manner the moſt ſimple and eaſy, when the water of ponds and lakes impregnated with ſalt, is totally exhaled by the force of the ſun and air, and the ſalt is left concreted into a hard cruſt at the bottom of the lake or pond. Of ſalt thus prepared we have inſtances in many parts of the world, as in the Podolian deſert near the river Boryſthenes, on the Ruſſian frontiers towards Crim Tartary, in the kingdom of Algiers, and in other parts of the world.

Bay-ſalt is alſo drawn from the brine of ponds and lakes, and it is prepared in this manner in the Cape de Verde iſlands. This account was collected chiefly from the relations of ſeveral perſons of credit, who themſelves aſſiſted in making ſalt in theſe iſlands. Every kind of bay-ſalt is prepared without artificial heat, and by only expoſing the brine under a large ſurface to the action of the ſun and air, by which, in proportion to the ſtrength of the brine, and to the different temperature of climate and ſeaſon, the ſalt cryſtallizes into what we call bay-ſalt, and comes under different appearances to us from different places, which ariſe principally from the cleanlineſs and care of the artiſt.

WHITE-SALT, although in general, is made in warm climates, with the greateſt eaſe, and at leaſt expence, by the heat of the ſun, after the methods already deſcribed; yet in ſeveral countries, where bay-ſalt might be conveniently made, they prepare all their ſalt by culinary fires. Thus in Auſtria, Bavaria, and many other parts of Germany, and alſo in Hungary, and even in ſome parts of Italy, they conſtantly boil the water of their ſalt-ſprings into white-ſalt. But in other parts of Europe, as in Britain, and in the northern parts of France and Germany, an erroneous opinion long prevailed, that the heat of the ſun was not there ſufficiently intenſe, even in the ſummer ſeaſon, to reduce ſea-water or brine into bay-ſalt. And all arguments would probably have been inſufficient to remove this miſtake in the Engliſh, had not the contrary been fully proved by experiments, which were firſt accidentally made in Hampſhire. However, the method of making ſalt by coction, will probably ſtill continue to be practiſed in Britain, as the ſalt ſo prepared is for ſeveral uſes preferable to bay-ſalt; and when prepared after a particular manner, is preferable to common bay-ſalt, even for curing proviſions, as the practice of the Hollanders ſufficiently teſtifies: ſo that the due and right preparation of white-ſalt ſeems very deſerving of the notice and regard of the publie.

White-ſalt, as it is prepared from various ſaline liquors, may therefore be diſtinguiſhed into the following kinds:

1. MARINE BOILED SALT, which is extracted from ſea-water by coction. 2. Brine or fountain-ſalt, prepared by coction from natural brine, whether of ponds or fountains. 3. That prepared from ſea-water, or any other kind of ſalt-water, firſt heightened into a ſtrong brine by the heat of the ſun, and the operation of the air. 4. That prepared from a ſtrong brine or lixivium drawn from earths, ſands, or ſtones impregnated with common ſalt. 5. Refined rock-ſalt, which is boiled from a ſolution of foſſil-ſalt in ſea-water, or any other kind of ſalt-water, or pure water. 6. Laſtly, Salt upon ſalt, which is bay-ſalt diſſolved in ſea-water, or any other ſalt-water, and with it boiled into white ſalt; and under theſe heads may be ranked the ſeveral kinds of boiled ſalt now in uſe. The learned author before mentioned has given us an exact hiſtory of the manner of preparing theſe different kinds of ſalt, as practiſed in different places, with miſcellaneous obſervations and cautions relating to their reſpective proceſſes, for which in general we muſt refer to the work itſelf: but the making ſalt upon ſalt deſerves more particular attention, as the author, being under no tie of ſecrecy, has revealed to us the method of making in Holland and Zealand that ſtrong and pure kind of ſalt, with which they cure herrings, and all other proviſions for long-keeping, which gives the Dutch a great advantage over all other nations in the herring-fiſhery; ſince fiſh preſerved with this ſalt look much cleaner and fairer than thoſe that are cured with bay-ſalt, and keep much better than thoſe preſerved with any other kind of white-ſalt.

From the proceſs whereby white-ſalt is made from ſea-water by coction, it appears that ſea-water, beſides common ſalt, contains ſeveral other ingredients, ſome of which are ſeparated before the common ſalt falls, and others remain in the bittern, after all the ſalt is extracted. Our author has given a full and circumſtantial account of theſe in an expreſs chapter under the appellation of Memoirs for an Analyſis of Sea-water.

The ſalt-boilers, and particularly thoſe who prepare brine-ſalt, have long been accuſtomed to make uſe of various ſubſtances, which they call additions, or ſeaſonings, and mix them with the brine while it is boiling, either when they firſt obſerve the ſalt begin to form, or elſe afterwards, during the time of granulation. Theſe additions they uſe for various purpoſes. Firſt, to make the ſalt grain better, or more quickly form into cryſtals; ſecondly, to make it of a ſmall fine grain; thirdly, to make it of a large, firm, and hard grain, and leſs apt to imbibe the moiſture of the air; fourthly, to render it more pure; and, laſtly, to make it ſtronger, and fitter for preſerving proviſions.

Theſe additions moſt commonly uſed to anſwer the above-mentioned purpoſes, are wheat-flour, reſin, butter, tallow, new ale, ſtale beer, bottoms or lees of ale or beer, wine-lees, and allum. Wheat-flour and reſin are uſed for the property they poſſeſs of making the ſalt a ſmall grain; butter, tallow, and other unctuous bodies, are commonly applied, as they are ſaid to make the brine cryſtallize more readily; for which end, ſome ſalt boilers more particularly prefer the fat of dogs; but others have little to plead for their uſing theſe ſubſtances, but immemorial cuſtom. How far they have the effects aſcribed to them, can only be determined by experiments, as ſeveral boilers, who formerly uſed them, now find they can make as good ſalt without them. Wine-lees, new ale, ſtale ale; the lees of the ale and beer, are now generally rejected by the marine ſalt-boilers, except in the weſt of England, where the briners, who uſe them, affirm that they raiſe a large grain, and make their ſalt more hard and firm, and ſome ſay that they make it cryſtallize more readily. Hoffman prefers the ſtrongeſt ale; and Plott aſſures us, that it makes the ſalt of a larger or ſmaller grain, according to the degree of its ſtaleneſs. The only good effects that fermented liquors can have as an addition, are probably owing to their acid ſpirit, which may correct the alkaline ſalts of the brine, and ſo render the common ſalt more dry and hard, and leſs apt to diſſolve in moiſt air: if, therefore, it ſhould be thought neceſſary to uſe any of theſe additions, in order to correct the alkaline quality of the brine, ſtale ale, or Rheniſh wine *, ought to be choſen, as new ale contains but little acid.

* Why not malt vinegar?

Allum is an addition long known and uſed in Cheſhire, together with butter, to make the ſalt precipitate from ſome ſorts of brine, as we are aſſured by Dr Leigh, in his Natural Hiſtory of Lancaſhire, Cheſhire, &c. who firſt taught the Cheſhire ſalt-boilers the art of refining rock-ſalt. As the bad properties of their ſalt proceeded from hard boiling, they found every method ineffectual, until they had recourſe to a more mild and gentle heat. And as allum hath been long diſuſed amongſt them, it is not likely that they found any extraordinary benefit from it, otherwiſe they would ſcarce have neglected it, and continued the uſe of butter. However, the late Mr Lowndes hath lately endeavoured to revive its uſe, aſſerting, that brine-ſalt hath evermore two main defects, flakineſs and ſoftneſs; and, to remedy theſe imperfections, he tried allum, which fully anſwered every thing he propoſed, for it reſtored the ſalt to its natural cubical ſhoot, and gave it a proper hardneſs, nor had it any bad effect whatever. But our author is of opinion, that whoever conſiders the nature of allum, will ſcarce expect ſuch extraordinary effects from it. Neither does it here ſeem wanted; for the grains of common ſalt will always be ſufficiently hard, and of their natural figure, large ſize, and no ways diſpoſed to run by the moiſture of the air, if formed by a gentle heat, and perfectly free from heterogeneous mixtures: ſo that the goodneſs of Mr Lowndes's ſalt does not ſeem owing to the allum with which it is mixed, but chiefly to the gentle heat uſed in its preparation.

The Dutch, who have long ſhewn the greateſt ſkill and dexterity in the art of boiling ſalt, make uſe of another addition, which they eſteem the greateſt ſecret of their art: this is whey, kept ſo long 'till it is extremely acid, now firſt revealed by our author to the Britiſh ſalt-boilers, but long held in great eſteem by the Dutch, for the good effects it hath upon their ſalt, which it renders ſtronger, more durable, and fitter to preſerve herrings, and other proviſions.

Bay-ſalt, as well as white ſalt, is of different kinds, and poſſeſſed of different qualities: with the different kinds of theſe, proviſions muſt be cured, according to the uſes for which they are deſigned. The Dutch, indeed, uſe no ſalt for curing proviſions, beſides their own refined ſalt: with it they can preſerve fleſh and fiſh of all kinds, as well as with the ſtrongeſt bay-ſalt, and chuſe to be at the expence of refining bay-ſalt, rather than to defile their proviſions with the dirt and other impurities with which it commonly abounds.

Salt eſteemed the beſt for curing proviſions, and for preſerving them the longeſt time, is that which is the ſtrongeſt and the pureſt. This may be known by the following characteriſtics, viz. it is uſually concreted into large grains or cryſtals, which are firm and hard, and, in reſpect to thoſe of other kinds of common ſalt, the moſt ſolid and ponderous; it is not diſpoſed to grow moiſt in moderately dry air, to which it has been expoſed a conſiderable time; its colour is white and ſomewhat diaphanous; it hath no ſmell; its taſte is truly muriatic, and more ſharp and pungent than that of other kinds of common ſalt: it has, beſides theſe, ſeveral other diſtinguiſhed properties, mentioned by our author. The ſalts which approach neareſt to this degree of perfection, are the beſt kinds of bay-ſalt, and the ſtrong Dutch refined ſalt; but moſt of the ſalt now made for ſale is very far from anſwering to theſe characteriſtics.

Having related the various methods of preparing that are now in uſe, as far as they are come to our author's knowlege, it appears, that this art is not brought to ſuch perfection in the Britiſh dominions as in ſeveral other countries, the ſalt here prepared being unfit for preſerving many kinds of proviſions. It remains now to ſhew, that this want of a ſtrong ſalt of Britiſh manufacture, proceeds not from any defect in nature, but of art, and that, if proper ſkill and induſtry be uſed in the Britiſh dominions, and due encouragement there given by the legiſlature, ſuch improvements may be made in this art, that not only Great-Britain, but Ireland alſo, and the Britiſh colonies in America, may be ſupplied with ſalt of their own manufacture, proper for curing all kinds of proviſions, in quantity ſufficient for all their occaſions, in quality equal, if not ſuperior, to any foreign ſalt now made at a moderate price.

Theſe are truths, which appear evident from the facts and reaſonings contained under the following poſitions:

Lemma I. The quantity of water which annually falls in rain, ſnow, and hail, is very different in different parts of Great-Britain, there commonly falling almoſt double the quantity on the weſtern coaſts, that falls on the eaſtern coaſts of that iſland.

Lemma II. The quantity of rain which falls in Lancaſhire, during the four hotteſt months of the year, viz. May, June, July, and Auguſt, doth not, at a medium, amount to more than a third part of the quantity of water which falls in rain, ſnows, and hail, during the whole year.

Lemma III. The water which aſcends in vapours from the ſea, very greatly exceeds that which deſcends thereon in rain and other aqueous meteors; but the quantity of water which uſually exhales from a given part of the ocean, in a given time, cannot with any exactneſs be determined.

Lemma IV. The quantity of water which commonly exhales in Great-Britain from ſhallow ponds, during the four hotteſt months of the year, greatly exceeds the quantity of rain which commonly falls on the ſurface of thoſe ponds during the ſaid months.

From theſe lemmata, which the author has ſupported by the obſervations not only of himſelf, but of other learned men, are deduced the following propoſitions:

Propoſition I. In ſeveral parts of England large quantities of bay-ſalt may be extracted from ſea-water, during the hotteſt months of the year, by receiving the ſalt water into ponds, and ſuffering its aqueous parts thence to exhale by the heat of the ſun, and the operation of the air and winds.

Propoſition II. In ſeveral parts of England large quantities of bay-ſalt may very commodiouſly be extracted from ſea-water, after the ſame manner that is practiſed in France, and in other parts of Europe.

Propoſition III. Bay-ſalt may be extracted in England from ſea-water, in larger quantities, and with more certainty, than by the foregoing method, if care be taken to preſerve the brine contained in the ſalt-pits from being diluted with rains, and to promote the evaporation of the water by ſeveral artificial means, which may eaſily be put in practice.

Propoſition IV. In ſeveral parts of England large quantities of excellent bay-ſalt may, with great eaſe, be made from the natural brine of ſalt ſprings, and alſo from the rock-ſalt diſſolved in weak brine, or ſea-water.

Propoſition V. Bay-ſalt may be prepared in England by the foregoing methods, at a very moderate expence, equal in goodneſs to the beſt foreign bay-ſalt, and in quantity ſufficient for the conſumption of all the Britiſh dominions.

Propoſition VI. In ſeveral of the Britiſh colonies in America, bay-ſalt might, with little expence and trouble, be prepared from ſea-water, in quantities ſufficient to ſupply the American fiſheries, and all other occaſions of thoſe colonies, ſo as to become a conſiderable branch of their trade.

The author has ſupported all theſe propoſitions with great ingenuity; but we cannot paſs over in ſilence the artificial means to promote the evaporation of ſea-water mentioned in Propoſition III, as well as to preſerve the brine contained in ſalt-pits from being diluted with rains; we therefore ſhall lay before the reader a ſhort account of theſe.

It will be proper, ſays our author, to make all the ſalt-pits of the marſh in one long row, extended from eaſt to weſt, and for each pit to make covers of thin boards, or rather of coarſe canvas, or ſail-cloth, ſtretched on frames of wood, and painted white. Theſe covers muſt all be fixed with hinges, to ſtrong poſts and beams, on the north ſide of the pits, ſo that they may be let down and drawn up with cords and pullies, or by ſome other contrivance, ſomewhat like draw-bridges. Theſe covers, thus fixed, may be let down

over

over the pits like a ſhed, or penthouſe, in rainy weather, and in dry weather may be erected almoſt to a perpendicular, but inclining a little towards the ſouth, ſo as to form a wall with a ſouth aſpect. Thus theſe may ſerve a double purpoſe, as coverings for the pits in wet weather, and as reflectors of the ſun's heat upon them in dry weather, and thus greatly promote the evaporation of aqueous parts of the brine. The hinges on which the reflectors turn may be fixed about eight or ten inches from the ground, by which means, when the reflectors ſtand upright, there will be an opening left beneath them, through which the air will continually flow in a briſk current, and greatly increaſe the evaporation of the water.

After having gone through that part of Dr Brownrigg's work which relates to bay-ſalt, we proceed to the methods that gentleman propoſes for preparing and improving white ſalt, which, if brought into uſe, may probably be of advantage, not only to private undertakers, but alſo to the public: for it appears, that two very different kinds of white ſalt are required, the one for the uſe of the table, and the other as a condiment for proviſions. Its whiteneſs, dryneſs, and the ſmallneſs of its grain, are the properties which chiefly recommend the firſt kind; and its great ſtrength and purity, the latter. It is this ſtrong and pure kind of white ſalt which is wanted in the Britiſh dominions; and it is, therefore, our author's principal deſign here to conſider how this defect may be ſupplied, although, at the ſame time, inſtructions are given how to prepare table-ſalt, not only better in quality, but alſo at leſs expence, than it is now prepared by the common methods.

Lemma I. In the common proceſſes for making white ſalt, the ſalt is deprived of a conſiderable part of its acid ſpirit, by the violent boiling uſed in its preparation.

Lemma II. Moſt kinds of white ſalt are rendered impure by the mixture of various heterogeneous ſubſtances.

Lemma III. White ſalt, by the violent coction commonly uſed in its preparation, is rendered leſs fit for preſerving fiſh, fleſh, and other proviſions, than it would be if prepared with a more gentle heat.

Lemma IV. The heterogeneous ſubſtances which are commonly mixed with white ſalt, render it leſs proper for preſerving proviſions than it would be if ſeparated from them.

After having fully conſidered the foregoing lemmata, our author gives a method of preparing a kind of white ſalt proper for curing fiſh, fleſh, and other proviſions; likewiſe a method of refining ſalt; but for theſe we muſt refer you to the work itſelf, as well as for the tables, wherein the ſeveral expences attending theſe operations are minutely conſidered.

Moſt of the facts referred to in theſe diſquiſitions are ſuch, as the conſtant practice of thoſe who make ſalt ſufficiently warrants us to rely upon for true and certain; or elſe they are the obſervations of judicious ſalt-officers, daily converſant in theſe matters, or of curious and inquiſitive navigators, merchants, travellers, and naturaliſts; or, laſtly, the experiments of many learned phyſicians, chemiſts, and philoſophers: the truth of which ſeveral facts, though many of them have been ſome time publiſhed, hath never been called in queſtion. So that theſe obſervations and experiments may probably be more relied on by the public, than if they had only been made by our author, ſince they have the teſtimony of many ſkilful and unprejudiced perſons, who could have no notion of the uſes to which they have been here applied. If, therefore, the arguments founded upon thoſe facts ſhould be eſteemed any ways reaſonable and ſatisfactory, the author preſumes to remark, that it might not be unworthy the wiſdom of the Britiſh legiſlature to direct a more full enquiry to be made into a matter of this importance, and to order proper works to be erected for making bay-ſalt, and for making and refining white ſalt, and to put thoſe works under the management of able and judicious perſons, to make exact and accurate trials, in order to diſcover the beſt and cheapeſt methods of doing them; and the methods which ſhould be moſt approved of might, for the general good, be made public, and eſtabliſhed, by law, a common ſtandard, to which all thoſe who make ſalt in the Britiſh dominions ſhould be obliged to conform.

The making and refining ſalt muſt certainly be conſidered as one of thoſe mechanic arts, the hiſtory of which, as we are taught by the noble * lord Verulam, is a neceſſary part of that knowlege, that true ſcience of nature, which is not taken up in vain and fruitleſs ſpeculations, but effectually labours to relieve the neceſſities of human life. See THE BUSINESS OF THE CUSTOMS AT THE END OF LETTER S, FOR THE LAWS RELATIVE TO SALT.

* Verulam de Aug. Scient. lib. ii. cap. 2.

SALTERS, or, as they are often termed, DRY-SALTERS, who deal in divers foreign goods of a dryiſh kind, as log-wood, cochineal, pot-aſhes, &c. and much like merchants, moſtly in a wholeſale way.

They were incorporated into a company by queen Elizabeth, and are one of the twelve of the city of London.

SALT-PETRE. It is a ſalt, though extracted out of the earth, yet abundantly impregnated with the ſpirit of the air; it alſo cleaves to ſtone walls, rocks, clefts, and caverns under ground. That which is extracted out of fat earth, is made in moſt countries in Europe; but our greateſt quantities come from the Eaſt-Indies. It is compoſed of near an equal quantity of fixed and volatile nitrous aërial ſalts, bitteriſh in taſte: it is the product of the elements, depoſited in the boſom of the earth, for the generation and nouriſhment of vegetables, and may not be improperly called the univerſal and unſpecific mercury.

Purification of ſalt-petre.

Take what quantity you pleaſe of nitre, diſſolve it in * warm water, filtre, evaporate, and cryſtalliże, as you do other ſalts. Some eſteem the cryſtalline nitre beſt, others the lump; but I could never obſerve any difference in them, the one being the top, and the lump the bottom of the pan in which the nitrous liquor was put to ſhoot.

* Somewhat more than ſix times its weight of boiling water is ſufficient.

Of the gathering of ſalt-petre in quantities.

Although it be certain that the air and the water are all impregnated with a kind of nitre, which is frequently to be ſeen coagulated into fine white ſalt, like flour of wheat (but by the very taſte may be eaſily known to be petre) ſticking to the ſides of plaſtered walls, and, in brick walls, to the mortar between the bricks (in dry weather, or where the wall is defended from the rain) for lime doth ſtrongly attract it; and although dew and rain do convey much of it to the earth, and the clouds ſeem to be ſpread out before the face of the ſun, either to imbibe ſome part of his influence, or to have a ſalt generated in them, for to advance the fertility of the earth, and certainly they return not without a bleſſing; for ſalt-petre may be eaſily extracted out of rain and dew, but from the latter more plentifully, accompanied, indeed, with a greaſy purple oil, in great plenty: though likewiſe moſt ſtanding waters, and even deep wells, have ſome ſmall quantity of ſalt-petre in them: though the face of the earth, if it were not impregnated with this ſalt, could not produce vegetables, for ſalt (as the lord Bacon ſays) is the firſt rudiment of life, and nitre is, as it were, the life of vegetables; yet, to be more ſure of it, experiment ſhews likewiſe, that ſome is to be found in fallows, and the earth which moles caſt up in the ſpring: though the air and water want it not, yet it is not there to be had in any proportion anſwerable to the charge in getting it: and though the earth muſt neceſſarily have great quantities thereof generated or infuſed into it, yet, in theſe temperate countries of Europe, it is no ſooner dilated by rain, or other waters, but it is immediately applied to the production or nutriment of ſome plant, inſect, ſtone, or mineral; ſo that the artiſt will find as little of it here to ſerve his turn, as in the other two elements.

The chief places, therefore, where ſalt-petre is to be found in any quantities in theſe northern countries, are in ſtables, pigeon-houſes, cellars, barns, warehouſes, or, indeed, any place which is covered from the rain, which would diſſolve it, and make it vegetate, as alſo from the ſun, which doth rarify it, and cauſe it to be exhaled into the air. (For the ſame reaſon, huſbandmen alſo might make double or treble the profit they uſually do of their muck, if they will lay it up under a hovel, or ſome covered place, until they carry it out upon their land.) And I have been told by an experienced workman, that no manure yields petre ſo plentifully as the earth in churches, were it not an impiety to diſturb the aſhes of our anceſtors, in that ſacred depoſitary. See the article MANURE.

For this purpoſe the earth ſhould be of good mould; and the better the mould is, the more petre is produced, for in clay or ſandy earth, little or none is to be found: the freer ingreſs the air hath into a place, it is ſtill of more advantage, ſo that the ſun be excluded; and let the earth be never ſo good, if it be laid on a brick or boarded floor, it will not be ſo rich in petre as if it had free communication with the exhalations of the lower parts of the earth.

In any place thus qualified, you cannot miſs of good quantities of petre, if it have not been drawn out in ſome years before, which a workman will quickly find, after he hath digged the firſt ſpadeful of earth, by laying a little of it on the end of his tongue; and if it taſtes bitter, he is ſure of good ſtore of ſalt-petre; if the ground be good, it continues rich to ſix or eight feet deep, and ſometimes, but not often, to ten.

After the ſalt-petre is extracted, if the earth be laid wet in the ſame place again, it will be twenty years ere any conſiderable quantity grows there of it; but if the earth be well dried, it will come in twelve or fourteen: and if they mingle with the dried earth ſtore of pigeons-dung and mellow horſe-dung, and then temper it with urine (as was uſual before we were ſupplied with petre from India) it will be fit to dig again in five or ſix years. He that ſhall caſt water upon a ground fit to dig for petre, will only ſink the mineral deeper into the earth; but he that throws ſoap-ſuds on it, will quite deſtroy the petre (as the workmen have a tradition) and it very well deſerves a further enquiry.

That ſalt-petre, and the way of drawing it out of the earth

now in uſe, was a modern invention, is generally concluded by all authors; but whether we owe it to chance, or the ſagacity of ſome great wit, is as unknown as the time when it was firſt diſcovered.

It ſeems to have many years preceded the invention of gun-powder, which by the Germans is aſcribed to Conſtantine Autlitzer, or Berthwold Scwertz, a monk of Friburgh, and was in all probability not long diſcovered when the inventor (Polydore Virgil tells us) taught the uſe of guns to the Venetians, at the battle of Foſſa Claudia, where they obtained that notable victory over the Genoeſe, anno 1380: for there is mention made both of ſalt-petre and aqua fortis, in the writings of Geber, a Spaniſh Moor, and an alchemiſt; but at what time he lived is not ſatisfactorily known, though it be certain ſome hundreds of years before Raymund Lully, who, about the year 1333, publiſhed ſome of his books, wherein he treats of ſalt-petre and aqua fortis. It is no ill conjecture of Maierus, that the aforeſaid monk being a ſkilful alchemiſt, had a deſign to draw a higher ſpirit from petre than the common aqua fortis, and, that he might the better open the body of petre, he ground it with ſulphur and charcoal, by which compoſure he ſoon became the inventor of gun-powder. See GUN-POWDER.

The manner of collecting ſalt-petre in quantities.

In the firſt place you muſt be provided with eight or ten tubs, ſo large that they may be able to contain about ten barrows full of earth each of them: theſe tubs muſt be all open at the top, but in the bottom of every one of them you muſt make a hole, near to that ſide you intend to place outermoſt, which hole you muſt fit very well with a tap and a ſpiggot, on the outſide downward.

On the inſide of the tub, near the tap-hole, you muſt carefully place a large wad of ſtraw, and upon that a ſhort piece of board, which is all to keep the earth from ſtopping up the tap-hole. When you have placed your tubs on their ſtands, at ſuch a diſtance one from the other that you may come with eaſe between them, then fill them up with ſuch petre earth as you have choſen for your work, leaving only void about a ſpan's breadth between the earth and the edge of the tub; then lay on the top of the earth in each tub, as near as you can to the middle, a rundle of wicker, like the bottom of a baſket, and about a foot in diameter, and by it ſtick into the earth a good ſtrong cudgel, which muſt be thruſt pretty near the bottom; the wicker is to keep the water, when it is poured on, from hollowing and diſordering the earth, and the cudgel is to be ſtirred about, to give the water ingreſs to the earth upon occaſion: then pour on your earth common cold water, 'till it ſtands a hand's breadth over the earth; when it hath ſtood eight or ten hours, looſen the ſpiggots, and let the water rather dribble, than run, into half-tubs, which muſt be ſet under the taps. This lixivium the workmen call their raw liquor; and note, that if it come not clear at the firſt drawing, you muſt pour it on again, and, after ſome little time draw it off, 'till it come clear, and of the colour of urine.

If you are curious to know how rich your liquor is before boiling, you may take a glaſs phial, containing a quart, fill it with the common water you uſe, then weigh it exactly; next fill the ſame glaſs with your liquor, and find the difference of weight, which, compared with the quantity of all your liquors, will give you a very near gueſs how much ſalt-petre you are like to make by that boiling.

Then pour again, on the ſame earth, more common water, that it may bring away what is remaining in the earth of the former liquor. This ſecond liquor is of no other uſe but to be poured on new earth, inſtead of common water, becauſe it contains ſome quantity of ſalt-petre in it.

When this is done, turn the uſeleſs inſipid earth out of the tubs, which you muſt fill with new earth, and continue this operation, 'till you have in the ſame manner lixiviated all the earth: then fill your copper with your liquor, which copper, for one of the profeſſion, muſt be about two hundred weight, and ſet ſtrongly in a furnace of brick-work; beſides, on one ſide of your furnace you are to place a tub full of your liquor, which, at a tap below, may dribble as faſt into the copper as the force of the fire doth waſte your liquor; which invention is only to ſave charges in fuel.

When you have boiled it up to that height, that a little of it, ſlirted off the finger on a live charcoal, will flaſh like gun-powder (which for the moſt part falls out to be about two days and a night's boiling) at that time, upon trial, a hundred weight of the liquor contains about 35 lb. weight of petre; but the workmen ſeldom make uſe of any further indication, than by finding the liquor hang like oil on the ſides of the brazen ſcummer, when it is dipped into it, which is a ſign it is fit to be paſſed through the aſhes, which is done in this manner.

You muſt prepare two tubs, fitted after the manner of the firſt, wherein you put your earth, ſaving that at the bottom of theſe tubs you muſt lay reeds or ſtraw, a foot high; over them place looſe boards, pretty near one another, over them again a little more ſtraw (which is to keep the aſhes from the top, and give the liquor room to drain the better from them:) then fill up your tubs with any ſort of wood-aſhes, to half a foot of the top; pour on the foreſaid liquor, as it comes ſcalding hot out of the copper, on the aſhes contained in the firſt tub; after a while draw it off at the top: and ſo continue putting on and drawing off, firſt at one tub of aſhes, then at the other, 'till your liquor grows clear, and loſes the thick turbid colour it had when it went on.

When all the liquor hath in this manner paſſed through the aſhes of both tubs, that by this means all its greaſy oil is left behind in the aſhes, you muſt keep it for the ſecond boiling in a veſſel by itſelf: in the mean time, pour upon your aſhes a ſufficient quantity of common water, very hot, once or twice, to bring away what is remaining of the liquor in the aſhes.

When you begin the ſecond boiling, put firſt into the copper the water that went laſt through your aſhes, and as that waſteth, let your ſtrong liquor drop into the copper, out of the tub above deſcribed, ſtanding on the ſide of the furnace, 'till the liquor in the copper be ready to ſhoot or cryſtallize.

Note, That toward the end of your boiling, there will ariſe great ſtore of ſcum and froth, which muſt be carefully taken off with a great braſs ſcummer, made like a ladle, full of little holes; and uſually about that time it lets fall ſome common ſalt to the bottom, which you muſt take up with the ſaid ſcummer, and lay it aſide for another uſe.

To know when the liquor is ready to ſhoot into petre, you need but drop a little of it on a knife, or any other cold thing that hath a ſmooth ſuperficies, and if it coagulate, like a drop of tallow, and do not fall off the knife when it is turned downwards, which alſo may be judged by its hanging like oil to the ſides of the ſcummer; when the liquor is brought to this paſs, every hundred weight of it contains about three ſcore and ten pounds weight of petre.

When you find your liquor thus ready to ſhoot, you muſt with great iron ladles take it out of the copper, into a high narrow tub for that purpoſe, which the workmen call their ſettling tub; and when the liquor is grown ſo cold, that you can endure your finger in it, you ſhall find the common, or cubic ſalt, begin to granulate, and ſtick to the ſides of the tub; then at the tap, placed about half a foot from the bottom, draw off your liquor into deep wooden trays, or braſs pans, and the cooler the place is where you let them ſtand to ſhoot in, the better and more plentifully will the ſalt-petre be produced; but it will be of no good colour 'till it be refined, but will be part white, part yellow, and ſome part of it blackiſh.

The ſalt which ſticketh to the ſides and bottom of the ſettling-tub is of the nature of common ſalt, and there is ſcarce any petre to be found but is accompanied with it, though no doubt ſome of this is drawn out of the aſhes by the ſecond liquors: if it be foul, they refine it by itſelf, and about London ſell it at good rates, to thoſe that ſalt neats-tongues, bacon, and collar-beef; for, beſides a ſavory taſte, it gives a pleaſing red colour to moſt fleſh that is ſalted with it.

When the liquor hath ſtood two days and two nights in the pans, that part of the liquor which is not coagulated, but ſwims upon the petre, muſt be carefully poured off, and being mingled with new liquors, muſt again paſs the aſhes, before it be boiled, elſe it will grow ſo greaſy that it will never generate any ſalt. To refine ſalt-petre, ſee above.

Before we take our leave of this article, it may not be amiſs to obſerve, firſt, that though petre will diſſipate in gun-powder, yet if you fulminate it in a crucible, and burn off the volatile part with a powder of coal, brimſtone, antimony, or meal, there will remain a ſalt, and yet ſo fixed (very unlike common ſalt) that it will endure the force of almoſt the ſtrongeſt fire you can give it; which being diſſolved into water, and ſpirit of nitre dropped into it, 'till it give over hiſſing (which is the ſame with the volatile part that was ſeparated from it in the fulmination) it will be again reduced to cryſtals of petre, as it was at firſt; which noble experiment the world hath already been taught, by an honourable member of the Royal Society of London, with a train of ſuch important obſervations as never were before raiſed from one experiment.

That which I aim at then is, that, if the ſpirit of volatile ſalt of ſoot, or of the urine, blood, horns, hoofs, hair, excrements, or, indeed, any part of animals (for all abound with ſuch a volatile ſalt fixed, and oil, as petre doth) could by the ſame way, or any like it, be reduced to petre, or ſome nitrous ſalt not much differing from it; it would excellently make out a theory that I am much delighted with, 'till I am convinced in it, which is, that the ſalt which is found on vegetables and animals, is but the nitre which is ſo univerſally diffuſed through all the elements (and muſt, therefore, make a chief ingredient in their nutriment, and, by conſequence, of their generation) a little altered from its firſt complexion: and that the reaſon why animals that feed on vegetables are obliged by nature to longer meals than thoſe that feed on other animals, is, becauſe animals are fuller of that ſalt than vegetables: and, indeed, ſuch animals are but

caterers of it for man, and others whom nature's bounty gratifies with a more ſtrong and delicious diet.

SALVAGE, an allowance made for the preſerving goods from ſhipwreck.

The principal laws relating thereto.

By the naval laws of Oleron, if a ſhip departing with her lading to any place abroad, happens, in the courſe of her voyage, to be rendered unfit to proceed therein, and the ſeamen ſave as much of the lading as poſſibly they can; if the merchants require the goods of their maſter, he may deliver them if he pleaſes, they paying the freight in proportion to the part of the voyage that is performed, and the coſts of the ſalvage: but if the maſter can readily refit his veſſel, he may do it; and although he has promiſed the people who helped him to ſave the ſhip, the third or the half part of the goods ſaved, for the danger they ran therein; yet, if ſuch a cauſe come before any judicature, it ſhall be conſidered the pains and trouble they have been at, and the reward be accordingly, without any regard to the promiſes made them by the parties concerned, in the time of their diſtreſs. See OLERON'S LAWS.

If a ſhip puts to ſea with merchants goods, and there ſhe is diſabled or periſhes, by the fault of the maſter or his men, the goods that are ſaved ſhall be ſecured in a certain place, free from danger: but if it be proved by witneſſes that the misfortune was occaſioned by tempeſt, what remains of the ſhip and goods ſhall be brought to a contribution, and the maſter ſhall retain half the value of the freight, by the laws of Rhodes. And the ſame laws have ordained, that if a ſhip be ſurprized at ſea with whirlwinds, or wrecked at ſea, any perſon ſaving any part of the wreck, ſhall have one fifth of what he ſaves. See RHODIAN LAWS.

And for the charges of ſalvage, very great allowances have been made; as to the divers and ſalvers, the half, the third, or the tenth of the things ſaved, according to the depth of the water out of which they were fiſhed, whether fifteen, eight, or one fathom: alſo a tenth part for ſalvage on the coaſt, and the fifth to him that, ſaving himſelf, carries ſomething with him. If the ſhip only periſh, and the goods be ſaved, then the goods ſhall pay the tenth or the fifth, as the difficulty of the ſaving thereof ſhall require: and gold, ſilver, ſilk, and the like, being of eaſy tranſportation, ſhall pay leſs than goods of greater weight, and more burthenſome for carriage, which are in greater danger. Lex Mercat. Malines, 119.

Where things are caſt up by ſhipwreck, or leſt through caſting in ſtorms, the laws of Rhodes allow to the finder a fifth part for the ſaving; and in France they allow one third part for ſalvage; but by the common cuſtom of countries, every perſon of quality, or lord of a manor, &c. claims all as his own, if it cometh upon his land; contrary to ſome ſea laws, which give it to the finder: though, by the opinion of lawyers, the finders thereof ſhould do therewith as with other goods found upon land; they ought to proclaim the things to be forth-coming to the true owner or loſer, and, if no man claim the ſame, then the finder to keep them to himſelf. Lex Mercat. Malines, 119.

By ſtatute 12 Ann. cap. 18. All perſons required by conſtables, &c. who ſhall act in the ſaving and preſerving any ſhip in diſtreſs on our ſea-coaſts, or the cargoes thereof, ſhall within 30 days after be paid a reaſonable reward for the ſame, by the maſter of the ſhip or merchant; in default whereof, the ſhip or goods ſo ſaved ſhall remain in the cuſtody of the officers of the cuſtoms, 'till payment be made: and if any difference ariſe about the ſalvage, three juſtices of peace ſhall adjuſt the quantum to be paid to the perſons acting therein, which ſhall be binding to all parties, and recoverable in an action at law.

And if goods thus ſaved are not claimed in twelve months, they ſhall be ſold, the juſtices taking an account thereof in writing, ſigned by the officer of the cuſtoms, into whoſe hands they are ſafely to be put; and, if they be periſhable goods, they are to be forthwith ſold, and, after charges deducted, the money ariſing by ſuch ſale ſhall be tranſmitted into the Exchequer, with a fair account of the whole, for the benefit of the owner, who giving proof of his property before one of the barons of the Exchequer, ſhall, upon his order, receive the ſame.

If any perſons ſhall moleſt any one in ſaving the ſhip or goods, or, when ſaved, ſhall deface the marks of any goods, before the ſame be entered in a book for that purpoſe, ſuch perſons ſhall, in 20 days, make double ſatisfaction to the party grieved, at the diſcretion of the two next juſtices, or, in default thereof, ſhall be ſent to the houſe of correction for 12 months. See the remainder of this ſtatute under the article WRECKS.

SAMOGITIA lies on the north of Pruſſia, between Courland and Semigallia, on the north; Lithuania on the eaſt, and ſouth-eaſt; and Ducal Pruſſia on the ſouth-weſt, with a ſmall part of it extending weſt, quite down to the Baltic. It is a marſhy ſoil, and has abundance of rivers and lakes, that at ſome ſeaſons overflow the land, which yields corn and paſture. The country has inacceſſible mountains, and is over-run with woods, wherein the inhabitants find great quantities of honey, every tree, almoſt, having a ſwarm of bees; and their wax is purer and whiter than that either of Lithuania or Livonia. Here is a breed of horſes which are ſmall, but ſprightly, ſwift, and hardy.

The Samogitians, as well as Poles, plow, ſow, and harrow, all at the ſame time; and the ground having been but once improved by burning, will bear crops ſeven or eight years together, without dunging. When they burn the woods on the lands, if they meet with high trees, they do not cut them down, but only prune off their ſide branches, to let in the rays of the ſun upon the ground; which they perform with ſuch dexterity, that one peaſant will prune above a thouſand trees together, without once coming down: for which end, he provides himſelf with a ſeat of rope, much like a ſtirrup, which he faſtens to a long cord, and having caſt it over an arm of a tree, a boy, who is on the ground, draws him up and down; and, when this is done, by the help of another tree he eaſily ſhifts himſelf, with his hook, to the next. They have alſo as odd a way of ſowing; which is, by mixing two parts of barley with one of wheat, and putting them into the ground together, in the ſpring; whereby it happens, that the barley may be mowed in one harveſt, and the wheat reaped the next. This wheat being trod down by thoſe that mow the barley, the next harveſt commonly comes up very thick and high. In time of war they bury their corn under ground, in a place made up with poſts and bark of trees, for that purpoſe; and they dry their corn with ſmoak, before they lay it up in their granaries, by which means it keeps good for ſeveral years together.

SARDINIA, an iſland in the Mediterranean, ſituate between 8 and 10 degrees of eaſt longitude, and between 39 and 41 degrees of north latitude; bounded by the ſtraight which divides it from Corſica on the north; by the Tuſcan Sea, which flows between this iſland and Italy, on the eaſt; and by other parts of the Mediterranean Sea on the ſouth and weſt; and is about 140 miles long, and 60 broad; a warm country, but not eſteemed very healthful.

This iſland, which is the moſt conſiderable in the Mediterranean, next to Sicily, for bigneſs and fertility, is ſaid to be about 700 miles in circuit, comprehending the turnings and windings of the coaſt, namely, the capes and the gulphs; which way of calculating is no leſs uncertain than laborious; hence ſome have it only 500 miles in compaſs. The ſoil is fruitful in all ſorts of corn, and no leſs productive of various fruits, in great quantity and perfection. It alſo breeds vaſt herds of large and ſmall cattle, ſo that it furniſhes Italy with wool, hides, and a fine ſort of cheeſe, beſides its home conſumption. The traffic it drives moreover from the fiſhery of coral, linen, ſilk, &c. is no leſs conſiderable. The moſt rocky and mountainous parts of the iſland are no leſs rich within than barren without, they yielding great quantities of metals and minerals, as gold, ſilver, lead, iron, ſulphur, allum, &c.

REMARKS.

This iſland was under the dominion of Spain 'till the year 1708, when Sir John Leak, the Engliſh admiral, reduced it to the obedience of the late emperor Charles VI. It was afterwards allotted to the duke of Savoy, anno 1719, with the title of king of Sardinia, under whoſe dominion it ſtill remains: but the duke was obliged to make a ceſſion to the houſe of Auſtria of the iſland Sicily [See SICILY] to which throne he had been advanced by the parties to the Utrecht treaty, anno 1713.

The commerce of the dominions of his Sardinian Majeſty was heretofore ſo very inconſiderable, as to be ſcarce worthy of notice; but by degrees, and under the two laſt reigns, more eſpecially, things have been much changed. The ſtaple commodity of Piedmont is a kind of ſilk indiſpenſably neceſſary in many manufactures, and his Sardinian Majeſty has put this under ſuch regulations as to make it riſe to the higheſt amount poſſible; the navigation of the Po enables the inhabitants of Turin, and the adjacent country, to carry on a conſiderable trade to Venice.

There is a little (and but a little) traffic ſtirring at Alexandria and Villafranca. Beſides all theſe, his Sardinian Majeſty has gradually and ſilently poſſeſſed himſelf of all the paſſages, by which the inland trade is carried on between France and Italy, and having it by this means in his power to lay what duties he thinks proper, derives from thence an additional revenue, which is not only of great conſequence in itſelf, but the more ſo by keeping the neighbouring ſtates in a kind of dependance, through fear of the injuries he might otherwiſe do the commerce of their ſubjects.

This ſufficiently demonſtrates the power of his Sardinian Majeſty, and that it is both natural and expedient the ballance of Italy ſhould be held by him. This his intereſts ſeem to direct, the ſituation of his country demands, and even without the leaſt ſuſpicion of flattery, we may add, the conduct of the preſent king deſerves it. Whatever addition of territory he receives from any quarter, is not more an acquiſition to him, than to the common cauſe; and we have

reaſon

reaſon to wiſh his power may increaſe, becauſe we ſee the whole of his power has been exerted for the nobleſt purpoſes, in preſerving the freedom and independency of Italy; which, without queſtion, will be always at his heart, and in his eye.

The doubts and ſuſpicions which weak and narrow minds have been, at certain ſeaſons, too apt to ſuggeſt, with reference to this great prince's conduct, are in reality as idle and improbable, as they are falſe and groundleſs; becauſe it is impoſſible, that the houſe of Bourbon ſhould ever give him any ſecurity for the performance of the promiſes they may be induced to make him. A little conſideration will ſet this in the ſtrongeſt point of light. The offers they made him have been almoſt without limits, which, at the ſame time that it ſhews his importance, muſt convince him, that unleſs they had mighty views for their own advantage, they would never make them. But what are theſe views? The eſtabliſhing a ſuperior power in the houſe of Bourbon in Italy. If we put this into other words, it means neither more nor leſs, than propoſing to give him a maſter; which is ſuch a propoſition, as no offers whatever can tempt a wiſe and brave prince to liſten to with the leaſt attention.

It was to avoid this, that in the earlieſt part of his reign he entered into an alliance with thoſe very powers, which gave him an opportunity of knowing their maxims ſo well, while they profeſſed themſelves his friends, that it is the greateſt abſurdity to ſuppoſe he can ever be brought to truſt them, after having had them ſo long, and to ſuch a degree, his enemies. It was to prevent his having a maſter, that he engaged in the late war, and run ſo many riſks in the courſe of it. This was manifeſtly the baſis of the treaty of Worms, the whole ſcope of which was to render him independent, and to give him the power of ſupporting that independency.

To depart, therefore, from this plan, for the ſake of any thing that could be offered by the Spaniards and French, would be ſuch a manifeſt ſacrifice of the ſubſtance to the ſhadow, that, conſidering the knowlege we have of his Sardinian Majeſty's character, ought never to be ſuſpected. The ſmalleſt diſtrict granted him by the queen of Hungary, under the guarantee of his other allies, is of more real conſequence to him, than half the duchy of Milan given him by the houſe of Bourbon, admitting they ſhould have it in their power to give it; becauſe they can never have this power, without having at the ſame time the power of taking it again; which would not only render the poſſeſſion of that, but of all his other dominions, precarious.

It is very apparent, that even as things ſtand now, the territories of this monarch are very far from being extenſive; but it muſt be allowed that they are very populous, and the people of Savoy, and of the vallies, are naturally martial; ſo that under theſe two laſt reigns, a very conſiderable army of regular troops has been conſtantly kept up, and the king can never be at a loſs to bring 40 or 50,000 men into the field, when occaſion requires it.

This force is, indeed, nothing in compariſon to that of France and Spain; but it will appear very conſiderable, when compared with the ſtrength of other Italian princes. Beſides this, the fortreſſes of Piedmont are in ſo good order, that his Sardinian Majeſty can always make a ſtand, 'till he is ſupported by the Auſtrians, which he muſt be ſo long as they deſire to preſerve their dominions in Italy.

Upon theſe principles, therefore, we may ſafely lay it down, that though his revenue is not ſo large as that of the Great Duke, yet he is one of the greateſt powers in Italy, and is juſtly eſteemed ſo by his neighbours, his allies, and his enemies. His claim upon the city of Geneva, and the attempts made by ſome of his predeceſſors to become maſters of it, will be hardly ever forgot by that republic; which, however, is ſufficiently covered from either his ambition, or his reſentment, by its ſtrict league with the Swiſs Cantons, as well as by the protection it may always expect from the French crown.

The pretenſions he inherits from his anceſtors to ſeveral places poſſeſſed by the republic of Genoa, will probably hinder him, at leaſt for ſome years, from living in any ſtrict degree of harmony with that commonwealth, which is naturally jealous of him, and will probably continue ſo; though, if they knew their own intereſt, they would certainly compromiſe their differences with this prince, which would be a thing of great conſequence to both.

His taking the title of king of Cyprus, and ſome circumſtances, has created a coldneſs between this monarch and the republic of Venice, though it is certainly for their mutual good to forget old injuries, and to aſſiſt each other.

There have been formerly high diſputes between his Majeſty's predeceſſors and the Pope, which have been renewed in the laſt, and even in the preſent reign; but they ſeem now buried in oblivion, as they ought to be, conſidering that the pontiff muſt be long ago convinced by experience, that the thunder of the Vatican has loſt its efficacy; and excommunications will do very little, either with this prince or his ſubjects; and as to the temporal power of the Pope, it is not to be compared with that of the Sardinian monarch.

The territories of the king of the Two Sicilies, if we conſider him only in the light of an Italian potentate, lie at too great a diſtance to create any difference between them; but conſidered as a prince of the houſe of Bourbon, the king of Sardinia cannot but be jealous of any augmentation of his power. But to ſay the truth, the great point which this monarch muſt always keep in view, is the ballancing the power of that houſe and the houſe of Auſtria; to the latter of which, notwithſtanding his near relation in blood to the former, it is more natural for him to adhere.

As things ſtand at preſent, it is far from being probable that the court of Vienna will incline to meaſures that may juſtly provoke a prince, to whom ſhe has ſo many obligations, for whoſe aſſiſtance ſhe muſt have ſo often occaſion, and who, in that caſe, would eaſily find reſources ſufficient to defend himſelf againſt all attempts.

On the other hand, while, from a due regard to their reſpective intereſts, a good correſpondence is kept up between them, the light of experience plainly ſhews, that their enemies will find it very hard to make any impreſſion upon either; and in proceſs of time it is highly probable that ſuch alterations may happen in Spain, as will render their capacity of defending themſelves ſtill greater than they are at preſent.

But with reſpect to the houſe of Bourbon, though it will be always decent and proper for his Sardinian Majeſty to preſerve for it a juſt meaſure of reſpect and complaiſance; yet as his ſafety muſt perpetually depend upon the greatneſs of his own ſtrength, and the limitation of their power, ſo it can never become either requiſite or agreeable to him, to enter into any cloſe alliance with that family, the aggrandizing of which muſt be always, if not at his expence, at the riſque of his ſecurity. There are alſo good reaſons to believe, that France will not eaſily be drawn to quarrel with a prince, who keeps, as it were, the gates of her dominions, and who may be juſtly ſtiled a terror to her, while ſhe is ſo to all the reſt of her neighbours; for, without doubt, if the king of Sardinia were thoroughly provoked, and the houſe of Auſtria at full liberty to ſupport him, he might carry his arms either into Dauphiny or Provence, or, perhaps, into both at the ſame time, more efficaciouſly than in the laſt, or the preceding war; in both which, however, irruptions on this ſide have brought the French monarchy into circumſtances of very great diſtreſs. As for the maritime powers, they are, though at a diſtance, the natural and conſtant allies of the monarch of whom we are ſpeaking, becauſe their intereſts and his are the ſame: and if a good port could be made in the county of Nice, capable of admitting men of war, he would be quickly able not only to maintain his own freedom, but alſo to protect the liberty and independency of Italy againſt all invaders; though he would not be even then in a capacity of giving law to others.

If once the affairs of this part of the world were put into ſuch a ſituation, the benefits reſulting to the people there, as well as to all the reſt of Europe, would be ſo great and ſo evident, that his Sardinian Majeſty would have no room to apprehend any new confederacy formed againſt him, ſince his neighbours would be then as willing to defend that ſyſtem, as, for want of conſidering it properly, they formerly ſeemed averſe to receive it.

We have dwelt the longer upon this article, becauſe, with reſpect to the Britiſh nation, there is no power in Italy, with the ſtrength and ſtate of which it imports us ſo much to be well acquainted, as the crown of Sardinia.

But there is one thing very requiſite to be obſerved before we conclude, which is this, that nothing can be of greater importance to the trade of this nation, than the preſerving the ballance in Italy; which, if loſt, muſt neceſſarily throw all that valuable branch of commerce, in which we have at preſent ſo large a ſhare, and from which we derive annually a conſiderable profit, into other hands, and, which is worſt of all, into the hands of the French; a thing againſt which we have as much reaſon to guard, as a trading nation, as the king of Sardinia himſelf has cauſe to oppoſe, as far as poſſible, the growth of the French power, out of regard to his own ſafety. This ſufficiently ſhews, that our intereſts are really mutual, and that there is nothing of political art in what we have been told, of the expediency of ſupporting this monarch againſt all his enemies, though at a large expence to ourſelves. See the article MEDITERRANEAN, eſpecially our reaſons for the conſtant care and poſſeſſion of GIBRALTAR, the key of all our ITALIAN and LEVANT COMMERCE, and the grand preſervative of the ballance of power in ITALY.

SAVOY duchy is ſituated between France and Italy, on the weſt ſide of the Alps, bounded by the lake and territories of Geneva on the north, by Switzerland and Piedmont on the eaſt, by another part of Piedmont and Dauphiné on the ſouth, and by Franche Compte and Dauphiné on the weſt. It is a barren country, generally being encumbered with the high cold mountains of the Alps; however, there are ſome pleaſant fruitful vallies, producing corn, wine and fruit; and they have large herds of cattle, and abundance of game, veniſon, and wild fowl, in their mountains, and plenty of fiſh

fiſh in their lakes and rivers. Their greateſt misfortune is, that they lie open to the incurſions of the French; and whenever their prince is at war with that kingdom, Savoy is firſt made ſenſible of the ravages of the French troops, and uſed as a conquered country, though upon every treaty of peace it has hitherto been reſtored to the duke of Savoy, at preſent king of Sardinia. See the articles SARDINIA and PIEDMONT.

SAXON GREEN COLOUR.

Method of dyeing white cloth green, called Saxon green.

The ordinary greens, ſtained blue in a woad-vat, and afterwards yellow, in a bath of dyers woad, are ſeldom uniform, almoſt always dull, and require ſeveral days labour to finiſh them entirely. The green, dyed according to the new proceſs, of which the Saxons are believed to be the inventors, is, without compariſon, more freſh and lively; and, in four and twenty hours, one may dye ſeveral pieces of cloth, firſt blue, and then green, in the ſame copper.

Although this green is not ſo ſolid, when tried inſtantaneouſly, as the common green, nevertheleſs it reſiſts, as much as theſe, both the action of the air, and the rays of the ſun; and its luſtre hath obtained it the preference over them in England, Germany, and the northern countries.

The firſt Saxon greens imported into the kingdom of France were purchaſed immediately, and the public, aſtoniſhed at their livelineſs, was deſirous that they ſhould be imitated in France. Their deſire was complied with, as ſoon as it was poſſible to learn the baſis of the proceſs; and thoſe who were charged with the execution, have ſucceeded ſo much to their wiſh, that the laſt cloths which they dyed are, at leaſt, as pretty as the fineſt greens brought from Saxony.

The foundation of this green is a blue, extracted from indigo by the acid of vitriol: it is covered with a yellow, extracted from real yellow woad, from dyers weed, or from any other ingredient, which gives a yellow of a good tint: but the ſucceſs of the proceſs depends upon the choice of the acid, known in trade by the appellation of oil of vitriol; and alſo upon the equal diſtribution of the ſame acid, when it is incorporated with the blue of indigo in the copper, where the cloth is to be dyed firſt a lively ſhining blue, and afterwards a yellow, which is to be changed into a green.

If the oil of vitriol is weakened by a too great quantity of aqueous particles, it doth not attack the beſt indigo, or, at leaſt, extracts from it an ugly grey. If the indigo blue, extracted by a concentrated, or very acid oil of vitriol, is not equally diſtributed in the bath of the copper, as this liquor is much heavier than water, it is precipitated to the bottom by its own gravity: in this caſe, the cloth dipped in the bath imbibes the blue very unequally, and appears variouſly ſhaded. It takes, indeed, the green colour in the bath of yellow; but that green is alſo differently ſhaded.

In publiſhing the proceſs of a Saxon green, we thought proper to begin with informing dyers with the method of preventing theſe defects. The common oil of vitriol which is bought of druggiſts, or brought from Hamburgh or Holland, muſt be concentrated by diſtillation. But this operation is difficult for a dyer, who may not be always ſuppoſed capable of conducting diſtillation by a retort. Now it is required to have the oil of vitriol with the feweſt aqueous particles poſſible; theſe may be expelled by a ſand-fire, ſtrong enough to make them evaporate into ſmoke or vapour. When the oil of vitriol ceaſes to ſmoke with the ſame degree of heat, it is a ſure ſign that it is concentrated, or acid enough to extract the blue colour from indigo, and conſequently to make what is called, in the proceſs, the compoſition. This evaporation is performed in a glaſs pot without a funnel, better than in any other veſſel: where that is wanting, a well-burnt ſtone pot may be uſed, provided it is not porous; or finally, an earthen pot well varniſhed, which, however, is not ſo proper for that operation, as either thoſe of ſtone or glaſs.

This veſſel, of glaſs, of ſtone, or of varniſhed earth, is to be placed upon an iron pan, half, or two-thirds, full of fine ſand, which ought to be well dried before. This iron pan muſt be put upon a ſtove, with a grate, and an aſh-pan under it, and the bed of ſand muſt be gradually heated with a charcoal fire, that the glaſs, ſtone, or earthen pot, may likewiſe be heated by degrees, and not be in danger of cracking, which would certainly be the caſe, if it was warmed too precipitately.

As ſoon as the oil of vitriol emits no more aqueous vapours, the acid begins to evaporate: it is eaſily judged if the vapour is acid, by holding a piece of blue paper ſtretched over it: if the paper becomes red almoſt inſtantaneouſly, the liquor is ſufficiently evaporated: allow it then to cool 'till it be lukewarm, by taking the pot off the hot ſand, and placing it upon ſtraw at a ſmall diſtance from the ſtone, that the contiguous air may be dry: for, was it placed in a moiſt air, the oil of vitriol would re-imbibe the aqueous humidity, which is loſt by evaporation. This liquor, being thus cooled, ſo as to be hardly lukewarm, muſt be poured upon the quantity of indigo which ſhall be afterward preſcribed. The indigo, however, muſt be beforehand reduced to a powder, and put into a glaſs or ſtone veſſel, which ſhould be well ſtopped with a cork; with wax round it, leſt the oil of vitriol, after diſſolving the indigo, which is then called the compoſition of blue, ſhould re-attract the moiſture of the air.

In fine, if you would be abſolutely certain that the oil of vitriol is concentrated enough not to fail in forming this compoſition, you have only to pour two ounces of it upon forty or fifty grains of pulveriſed indigo, put into a phial, and to mix them well by ſhaking the phial; in an hour's time, the liquor which floats above the ſediment, ſhould be of a fine dark blue: if it is only grey, the oil of vitriol is not enough concentrated.

Proceſs for dyeing a piece of cloth twenty ells long, into a Saxon green.

Diſſolve in a ſufficient quantity of river water, which breaks ſoap perfectly well, three pounds and a half of Roman alum, and two pounds of the powder of white tartar; boil the cloth in it half an hour, or five and thirty minutes at moſt; take it out and expoſe it to the air to cool, but do not waſh it.

Refreſh the bath of this boiler with twenty or five and twenty buckets full of water, and throw in, at two different times, the compoſition of blue deſigned for the cloth. If the oil of vitriol has concentrated, or has ſtood the proof as deſcribed above, it is ſufficient to take a pound and a half, and pour it lukewarm upon two ounces and an half of fine powder of indigo. You muſt wait till the diſſolution is made, and the liquor becomes a fine dark blue; but if this compoſition of blue has been made ſome days before, ſo much the better; for then you may take one pound ten ounces, or a little more, and pour the half of it into a large ſtone pot, or into a bucket, proper for the uſe, into which there muſt be put before, ten or twelve pints of the refreſhed bath from the boiler. The whole muſt be well jumbled, in order to diffuſe the compoſition of blue. You muſt likewiſe have a ſtraining-bag of cloth, ſteep it well in the bath of the boiler, open it, and pour into it that half of the compoſition which is already mixed. By this means you will preſerve the ſtraining-bag, which, without this precaution, would have been burnt by the oil of vitriol, if it had been poured in as much concentrated as at firſt.

Put the ſtraining-bag over the whole extent of the bath, that it may imbibe the blue equally: palliate likewiſe the bath, that the diſtribution of the colouring particles may be more equal; when the cloth is cooled, let it down into the cauldron, and keep it there five or ſix minutes without boiling, turning it rapidly, and agitating the bath with a pole of white woad. Then take out the cloth, raiſing it only upon the turn. Put the ſtraining-bag again into the ſame bath, and throw in the other half of the compoſition of blue, after it has been diſſolved, as the former half, in ten or twelve pints of water taken from the boiler. Paſs the ſtraining-bag over the bath, as formerly, palliate it ſtrongly, let down the cloth, and turn it three or four times very quickly, in continuing to agitate the bath with the ſtick: in fine, in order to make the colour even, boil the bath of blue very gently, and turn the cloth in it ſlowly for ſeven or eight minutes. Take it out ſtained blue, and let it cool.

Empty this boiler of three-fourths of its contents, and as many buckets full as you take out of the blue bath, pour in the like number of the yellow bath, deſcribed below.

In order to make the yellow bath, you muſt heat gradually another boiler, into which muſt be put a ſufficient quantity of pure river water, with a bag of new coarſe cloth, containing from ten to twelve pounds of real yellow woad (not fuſtic) cut into chips.—When this bath has been heated by degrees 'till it boil, you muſt let it boil two full hours. Yellow woad, cut into chips, ſucceeds better than when it is ground; in this caſe, eight pounds are ſufficient for a piece of cloth of twenty ells; but there is a great riſque of uſing it adulterated.

After you have poured into the firſt boiler when the blue was made, the quantity of the yellow bath, preſcribed above, or even a greater number of buckets full, according to the ſhade of green required; the blue cloth, which ought to be ſufficiently cooled, muſt be let down into this new bath, when very hot, and ſtirred about 'till you have the ſhade of green you want: then take out the cloth, cool it by expoſing it to the air, waſh it, lay the nap, dry it on the tenter-hooks, bruſh it, as ſcarlet is bruſhed, and afterwards preſs it, but in this operation let it be as cool as poſſible. If you have ſeveral pieces of blue cloth to be dyed green ſucceſſively, you muſt take from the bath, which dyed the preceding piece blue, as many buckets full as are to be added from the yellow bath to dye the blue cloth into a green; which will amount to twenty buckets full, or thereabouts, to be taken out, and twenty to be ſupplied; by theſe means, the ſhades of green are rendered more equal and uniform.

The Saxon green of that cloth, which hath been firſt dyed blue in a bath compoſed of allum and white tartar, is much more ſolid than that which is ſtained blue in a new bath of plain water, without theſe ſalts, but it has not ſo good a luſtre.

luſtre. However, as it reſiſts the rays of the ſun for twelve days, it may be reputed a very good tint. Being made by means of an acid, it muſt not be proved by ſoap, which is preſcribed for the ordinary greens made in the blue vats. In order to prove it, you ſhould boil it for five minutes in a quart of water, with two drachms of Roman allum, as ſcarlet is tried, which is alſo dyed with an acid: if it preſerves its colour, it may be reckoned a very good tint, although, by this operation, it loſes much more than in the rays of the ſun.

SAXONY, the electorate and dominions of Saxony in Germany.

Theſe dominions, as they are included in the circle of Upper Saxony, are bounded by the duchies of Magdeburgh and Brunſwic on the north, Sileſia and port of Bohemia on the eaſt, Bohemia and Franconia on the ſouth, and the Landgraviate of Heſſe on the weſt.

The particular diviſions, as they lie from ſouth-eaſt to north-weſt, where the Upper leads to Lower Saxony, are as follow, viz.

The firſt, which lies betwixt the Elb and Oder, is the marquiſate of LUSATIA.

It is for the moſt part ſandy and boggy, that they have little corn; but here is ſuch plenty of wood, veniſon, and fiſh, as might enrich them if they had any trade.

GORLITZ is the largeſt town in the marquiſate, and by ſome called its capital. Their chief trade is in beer, and in dreſſing and dyeing woollen and linen cloth.

LAUBAN upon the river Queiſs is a little town, but has a great linen manufacture.

ZITTAW is a fine city, has a good trade in beer, and a great manufacture of cloth.

CAMITZ is a populous little city, and has a manufacture both of woollen and linen cloth.

GUBEN is a large and populous town, and has a woollen manufacture.

SOMMERFIELD has alſo a woollen manufacture, and CALOW has a great market for wool.

The marquiſate of MISNIA is the ſecond diviſion of the electorate of Saxony. It has Luſatia on the eaſt, Thuringia on the weſt, Merſburgh, Bohemia, and Franconia on the ſouth, and the duchy of Saxony, with Anhalt on the north. Their plains abound with all ſorts of corn, and their hills with rich minerals.

DRESDEN is a large city ſituate on the Elbe, the capital of the electorate of Saxony, 65 miles north-weſt of Prague, and 85 ſouth of Berlin.

The trade of this place is very inconſiderable. The moſt important commodity here is ſilver, of which the mines near Fridburg produce every fifteen days about the value of 20,000 dollars *, which is brought into the city in ingots in a regular carriage appointed for that purpoſe, and immediately coined and delivered to the proprietors. The mines are under the care of directors, whoſe buſineſs it is to ſupport the value of the ſtock; but they uſually go in a beaten track, without making any efforts to increaſe the quantity; on the contrary, it often comes ſhort of the ordinary computation. This ſilver is immediately coined into florins of 16 groſch, which, with reſpect to the current money of bats, driers, &c. is worth 7 per cent. advance, and is conſequently ſo ſpeedily conveyed into the neighbouring territories to be again melted down, that it is next to impoſſible to obtain in change, in this true ſilver, money for one ſingle louis d'or in the ordinary commerce of the people: in which inſtance the Saxons ſeem very regardleſs of their own intereſt; for though this ſilver may be conſidered as a commodity, the currency of ſuch a coin as their bats and drivers, muſt be detrimental in proportion as they are worſe than their genuine coin.

* 3500l.

The exchange here is regulated as in Leipſic. The par is reckoned 125 Saxon dollars for 100 rixdollars current in Amſterdam, but the exchance is generally 135 for their ſmall monies: there is an agio of 3 per cent. when payment is made for bills in louis d'ors, and for ducats 4 per cent. is allowed.

MEISSEN has a manufacture of porcelain, which is more beautifully painted and enamelled than that of Japan, and much dearer; and the vent of it brings no inconſiderable ſum annually into this country. See our article PORCELAIN.

COLDITZ is a little town of good trade, at the conflux of the Muldaw and Multa.

FREYBERG is a large, well-built, and populous town, but owes both its increaſe and riſe to the neighbouring mines of all ſorts of metal, but eſpecially ſilver, copper, pewter, and lead, beſides brimſtone, vitriol, &c.

THURINGIA is bounded on the north by the duchy of Brunſwic and the principality of Anhalt, on the eaſt with Miſnia, on the ſouth by Franconia, and on the weſt by Heſſe.

GOTHA, the capital of the duchy of SAXE GOTHA, is a large walled city on the river Leina. Its chief trade is in dyers woad.

EYSENACH is a pretty little city on the river Neſa. It has a conſiderable trade in iron, of which here are mines not far from it.

ERFURT is reckoned the capital city of Thuringia: it lies in a pleaſant fruitful plain on the river Gere, in a country abounding with all ſorts of corn and good wines, by their trade in which, and in woad, the inhabitants get much money at their two great fairs.

WEYMAR is a neat, well-built city, on the river Ilma. It has a good trade in wine, yet the adjacent country abounds with corn-fields and hop-grounds, inſtead of vines.

MULHAUSEN on the river Unſtrut lies in a fruitful ſoil, and reaps ſo much benefit by its river, in point of commerce, that it was admitted amongſt the Hanſe-Towns, and is called a large populous city.

WIPREN, on a river of the ſame name, is a town of good trade.

One of the chief places of trade in the circle of Upper Saxony, is

LEIPSIC, in the principality of Miſnea or Meiſſen ſituate on the river Pleiſs, 42 miles north-weſt of Dreſden.

Leipſic, by its advantageous ſituation in the centre of Germany, is become one of the moſt commercial cities of Europe; none in Germany are equal to it, being but little inferior to Hamburgh itſelf; though ſmall, it is very populous, and as well built.

In order to a juſt idea of the trade of this city, it muſt be conſidered in two points of view, during the time of the fairs and out of the fairs. [See the article FAIRS.] Leipſic abounds in merchants, with a few or no manufactures; yet conſiderable fortunes are raiſed there. Three years ago only a retale dealer left an only ſon three millions of livres, and M. Stoman, who ſet out with little or nothing, even outſtripped the former. Eſtates of 2 or 300 thouſand rixdollars are no extraordinary matter; ſeveral of four or five may be produced.

The merchants of Leipſic may be divided into three claſſes, the wholeſale dealers making 150, the retalers to the number of 250, and the woollen drapers, who make no ſmall number. To theſe may be added the bookſellers, a conſiderable body, Leipſic having the greateſt book-trade of any city in Germany, but differently managed from any part of Europe. The German and northern bookſellers furniſh themſelves at Leipſic; and this is done either by barter, or ready money, but the far greateſt part by barter.

One of the moſt lucrative branches of the commerce of this city conſiſts in exchange of monies, which is ſo conſiderable, as to be computed at four millions of livres each of the principal fairs.

The ſecond branch of trade lies in home and foreign goods; by the home are meant the products of the ſoil and manufactures of the inhabitants of the country. As to the foreign, Leipſic is a ſtaple for all French, Engliſh, and Dutch commodities, for which there is a demand in the North, and of ſuch northern goods as turn to good account among the more ſouthern nations. The former are Lyons ſtuffs, Niſmes and Paris ſtockings, French jewellers work, and hard-ware, Dutch and Engliſh cloths, ſilk and woollen ſtuffs, and hard-ware.

This trade is carried on perſonally or by commiſſion; many limit themſelves to the latter and find the ſweets of it. In and out of fair-time, commiſſions pour in upon them from merchants of all quarters to buy or ſell goods, draw bills of exchange, receive or pay money, and to forward goods.

The fairs are unqueſtionably the main ſprings of its opulence, few, if any in Europe, equalling them in the amount of the ſales and bargains tranſacted there; and they may be ſaid chiefly to owe the incredible reſort thither to the conveniency of their appointed times, and the privileges of the city. The moſt conſiderable fair is that of Eaſter, beginning on Jubilate-day, three weeks after Eaſter; this is ſucceeded by that of Michaelmas, opening on the 1ſt of October; the laſt is New Year's fair, beginning the 2d of January, and ſcarce worth the name of a fair in compariſon of the others.

The city privileges are alſo very favourable to commerce; its citizens are its garriſon; no ſoldier of the king of Poland is ſo much as to lie a night in the place. During the fair, it is in the fulleſt ſenſe a free port for the home goods, and the foreign pay only one duty, which is a very ſmall exciſe; the Steel-yard fee is alſo very moderate. The magiſtracy omit nothing for the ſafety and eaſe of ſtrangers. As to the total of the buſineſs done at the fairs, it cannot be well aſcertained, by reaſon of the difference of them; that of the Jubilate is eſtimated at ten millions of livres, and the produce of the Steel-yard at four hundred thouſand.

In Leipſic are about thirty French refugee merchants and ſome Italians; but the natives only are allowed to deal by retale or purchaſe land; however the trade for French cloths and laces is chiefly in the hands of the ſaid refugees, ſeveral of whom go themſelves every year to Lyons to buy up their ſortments.

The quantities of home goods at Leipſic aſtoniſh a ſtranger. Among the various manufactures of Saxony, that of linen at Luſatz is not the leaſt conſiderable. The prodigious quantities of Chemnitz dimities and handkerchiefs, are carried off by the Engliſh and Dutch, to ſend to both the Indies. The Saxon woollen ſtuffs, anniſeed, tin-work, the celebrated porcelain, juſtly preferred to China, ſmalt, called the Pruſ-

ſian

ſian blue, are all articles which deſerve to come into account. Likewiſe gold and ſilver lace, velvet, camblets, damaſks, and other ſilk ſtuffs, are made at Leipſic; but they are not the beſt in the world: what goes off much better is, thin waxen linen bedaubed with flowers and antic figures; theſe being ſold extremely cheap, are all taken off their hands by the northern traders, who diſpoſe of them for tapeſtry.

The Leipſic fairs were confirmed by the emperor Maximilian I. with a prohibition of the like within 15 German (75 Engliſh) miles. By its jus ſtapula, or ſtaple privilege, the refuſal of all goods coming on the king's roads from within 15 miles, is to be offered to the merchants of Leipſic.

SAY, or ASSAY, a term uſed in the art of refining. See the article ASSAY.

SAY, or SAYE, in commerce, a kind of ſerge, or light croſſed ſtuff, made of wool; greatly uſed abroad for linings of cloaths, and by the religious in Popiſh countries for ſhirts. Thoſe made in England are chiefly exported to Portugal and Spain, and ſome to Leghorn.

SCILLY, weſt longitude 7, latitude 50, a cluſter of iſlands and rocks, ſituated in the Atlantic Ocean, 30 miles weſt of Cornwall, the moſt weſterly county of England, dangerous to be approached by ſtrangers on account of the hidden rocks, and have been very fatal to many ſhips of our own nation on their return home; particularly admiral Shovel, with three other men of war, were caſt away here on the 22d of October 1707, in the night-time, in their return from the Mediterranean and the ſiege of Toulon, there being near 1000 people on board the admiral, ſeveral of them gentlemen of quality, both of Spain and England. There is, however, a ſafe paſſage to theſe iſlands, where ſhips are furniſhed with pilots from the place, and there are ſome ſecure harbours in them, large enough to receive the royal navy.

In the towns of St. Mary's, the people trade in ſeveral ſorts of commodities, uſually ſold in ſhops, many of which they are furniſhed with from England; and ſhips coming in, or paſſing by the iſland, ſupply the reſt of their occaſions. With theſe ſtrangers they ſometimes exchange dried fiſh, cattle, or proviſion of the iſland, for ſuch commodities as they want.

A fleet of coaſters, forced in by an eaſterly wind, is of advantage to the iſlanders, as well in their pilotage of them in to the harbours, as in the traffic and expences of the people aſhore. Commanders and paſſengers of ſhips from the Weſt-Indies, or other foreign parts, putting in, never fail of ſhewing their liberality, and of leaving ſome of their commodities and riches behind them. By this means the iſlanders are ſupplied with a ſtock of rum, brandy, wine, and other foreign liquors; ſome for conſumption upon the iſlands, and ſome (by leave of the cuſtom-houſe) for conſumption elſewhere. For the ſake of this trade, which is their principal dependance at preſent, the people of Scilly run very great hazards in going off with their ſmall boats to ſupply themſelves from ſhipping paſſing by, ſhewing undaunted courage and reſolution, in venturing when the ſeas run mountains high.

There being no owners of houſes and lands in Scilly, the peoples hindrances in the improvements of land and trade, are the ſhort leaſes, and ſcarcity of houſes to be met with; it requiring an intereſt to procure a houſe, and another for a leaſe of one. On which account, it was uſual here to engage houſes at the deceaſe of the preſent dwellers. If any houſes are built by leave, at the expence of an iſlander, they become the property of the proprietor after a ſhort term: ſo that no iſlander poſſeſſes houſe or land, but upon pleaſure or leaſe.

The agent is the proper perſon to apply to for a houſe, or land, or a leaſe of either, or both; who has the direction and management of all the houſes, buildings, repairs, rents, &c. upon the iſlands; who alſo has it in his power to diſtribute favour, or ſhew vengeance, in unequal meaſure. But the preſent agent is a gentleman, eſteemed for his generoſity, good ſenſe, and humanity.

The inhabitants are very civilized, and are improved in trade and commerce. The lands are naturally very fruitful, and could eaſily be improved; but as theſe iſlands are held of the crown by proprietors, the perſons in truſt for the proprietors have uſually made their advantage of them, injurious to the iſlanders, and the good intent of the repoſers of that truſt. But if, inſtead of the cuſtom of letting ſhort leaſes (of about twenty-one years) long leaſes were lett, as in Cornwall, and other parts, it would much encourage the improvement of lands in Scilly, and foreigners to ſettle there. And no doubt but thoſe iſlands are as well ſtored with tin, as many parts of Cornwall.

SCLAVONIA, including Ratzia, is bounded by the rivers Drave and Danube, which ſeparate it from Hungary, on the north-eaſt, by the river Save, which divides it from the Turkiſh provinces of Servia and Boſnia on the ſouth-weſt, and by Croatia and the country of Cilley on the weſt, being 200 miles long and 60 broad, a fine level fruitful country where it is cultivated; but having been for many years a frontier province againſt Turkey, and ſubject to the ravages of the Chriſtian as well as Turkiſh armies, it has produced but little corn or wine: the chief town is Poſega, which, with the whole country, is ſubject to the houſe of Auſtria: the people are a mixture of Greek and Latin Chriſtians. The Ratzians inhabit the eaſtern diviſion of this country.

SCOTLAND. All that part of the continent, which is joined with England and Wales, and lies beyond the counties of Cumberland and Northumberland, belongs to Scotland, together with great numbers of iſlands on all the other ſides, which are bounded by the ocean. It is in length about 250 miles, and 150 in breadth; in the moſt ſoutherly part it is 54 degrees 54 minutes in latitude, and 15 degrees 40 minutes in longitude; but the moſt northerly it is 58 degrees, 32 or 30 minutes in latitude, and 17 degrees 50 minutes in longitude.

The ſoil in general is not near ſo fruitful as that of England, being much more fit for paſture than corn: yet in ſome of the inland counties they have great ſtore of grain, wherewith they trade to Spain, Holland, and Norway. The ſkirts of the country abound with timber, which is of a vaſt bigneſs, eſpecially their fir-trees.

We having already, in the alphabetical order, given a pretty minute ſtate of the trade and fiſheries carried on in the ſeveral principal ſhires and ſtewarties in Scotland, we ſhall here only give a ſummary view of the trade in general of this part of the united kingdom, and what elſe may contribute to give a juſt idea of its circumſtances for traffic.

MEMOIR concerning the BANKS eſtabliſhed by authority in SCOTLAND.

The bank of Scotland, commonly called the Old Bank, was erected by act of the Scots parliament, of date the 7th of July, 1695.

By which act the incorporation is allowed to have a capital of 1,200,000 l. Scots, or 100,000 l. ſterling, and each ſhare thereof to be 1000 l. Scots, or 83 l. 6 s. 8 d. ſterling; and each ſubſcriber to the ſaid capital paid one tenth of a ſhare in ſpecie, being 100 l. Scots, or 8 l. 6 s. 8 d. ſterling, making 120,000 l. Scots, or 10,000 l. ſterling; on which ſum then paid, this incorporation commenced their banking.

After this, they made a call of another tenth, and continued to deal on theſe two tenths 'till the year 1720, when, upon an emergency, they called for a third tenth.

They made for many years large dividends, proportionable to theſe calls, which at length they thought fit to reduce to 5 per cent. annually, payable in the month of April, and choſe to retain the ſurplus profits to increaſe their dealings.

Some years ago they were willing and capable, out of their ſurplus profits, to make an extraordinary dividend to their proprietors of one tenth of their reſpective ſhares: but, in place thereof, the proprietors were willing they ſhould retain the money, and hold it as or in place of a fourth call, or tenth, and take annually 5 per cent. for it.

At two other different times they were ready alſo to make extraordinary dividends, each of one tenth, and the proprietors in like manner choſe to have them retained, and deemed to be other two calls, to be attended with 5 per cent. yearly dividend: whereby there are now ſix tenths of their capital paid, being 50,000 l. ſterling, upon which they iſſue a dividend yearly of 5 per cent. and beyond which they probably have ſurplus profits, to be the ſubject of future extraordinary dividends.

Though thus the calls made on the ſtock are ſix tenths, being 600 l. Scots, or 50 l. ſterling per ſhare, upon which the ordinary annual dividend is only 30 l. Scots, or 2 l. 10 s. ſterling, yet the current price of one ſhare is 70 l. ſterling, whereby the putchaſer has only $3\frac{1}{2}$ per cent.—The ſtock is very ſeldom in the market.

The Royal Bank was erected by charter, of date the 13th of May 1727, a copy of which I have obtained, and ſhall give an abridgment of at the end of this Memoir, which muſt be conſidered with the act of parliament and charter of the Equivalent company therein recited.

In conſequence of the charter of the Royal Bank, the proprietors of the equivalent ſubſcribed only to the amount of 111,347 l. 19 s. 10 d. $\frac{5}{112}$, which is now the capital ſtock of this bank.

The bank, immediately after their erection, made a call of 10 per cent. on the ſubſcribing proprietors of the ſaid capital; and ſoon after made a ſecond call, of another 10 per cent. which two calls being about 22,000 l. ſterling, was their firſt fund of banking, together with 4 per cent. which they receive yearly for their capital out of the Equivalent Fund.

About three years after their commencement, they were obliged to accept of a loan of 40,000 l. ſterling, from the Society of Truſtees for improvement of manufactures and Fiſheries in Scotland, at 5 per cent. intereſt; which loan they continue to hold, whereby their fund is 62,000 l. ſterling, beſide their ſaid annual dividend from the Equivalent.

This bank obtained another charter, confirming all their powers and privileges by the former, and impowering them to inlarge their ſaid capital, and add 40,000 l. to it by ſubſcription, on ſuch conditions as they think equitable: but this power they have not exerciſed.

This bank, a few years after their commencement, raiſed the yearly dividend to their proprietors to 6 per cent. of their capital,

capital, payable one half at Chriſtmas, and the other half at Midſummer; which dividend is nearly 5 per cent. of both capital and calls paid; and this dividend they continue uniformly to make, retaining any ſurplus profits for extraordinary dividends.

About twelve years ago, they made an extraordinary dividend of 5 per cent. on the capital, being one fourth of the calls, and are about to make another dividend of 15 per cent. which will repay to the proprietors the whole calls; or they may retain the money for a fund of banking, giving each proprietor credit for his ſhare of it in their books, and to add one half per cent. to the dividend annually, making in all 6 ½ per cent.

The Equivalent company have, by the aforeſaid act of parliament, 600 l. ſterling yearly for expence of adminiſtration, of which they have annual ſavings, which ſometimes they divide among their partners. Some few years ago the Equivalent company divided their ſavings, whereof the bank's ſhare afforded 2 per cent. of the capital to each of their proprietors, which was iſſued to them.

The current price of the ſtock of this bank is 160 l. for every 100 l. capital; and yet the purchaſer at that price will have nearly 4 l. per cent. when the aforeſaid ½ per cent. is added to the annual dividend.

Both the banks lend money upon ſecurity in lands, upon perſonal bonds and bills.

They do not chuſe to lend upon lands; and, when they do lend upon that ſecurity, they have frequently indulged the debtors to repay 10 per cent. yearly of the capital, beſides the intereſt.

When they lend on bills, they take them payable at 60 days date, and add the legal intereſt for that time to the ſum lent.

Neither of theſe banks diſcount bills, or lend upon depoſits or pledges of any ſort.

The exchange between London and Edinburgh was very variable, and ſometimes the private dealers in Edinburgh would have taken 2 per cent. for bills on London, which was hurtful to trade.—The Royal bank, to remedy this grievance, have, for ſeveral years, dealt in that branch of exchange, and correſpond only with the Bank of England, and never take more than one per cent. for draughts on the Bank of England payable at ſight, which keeps the private dealers from extortion.

Both banks allow caſh accounts with them to merchants, capital manufacturers, manufacturing companies, and other men of buſineſs, and give them credit to draw on them beyond their monies lodged, to various extents, from 100 l. to 5000 l. ſterling, ſuitable to their reſpective circumſtances, trade, or buſineſs; the benefit of which is, that thoſe who have ſuch caſh accounts chuſe always to be ſomewhat indebted to the bank, and may pay in at any time not leſs than 10 l. and upwards, which reduces the debt, and by which means the merchants never have any ſum above 10 l. lying dead, the bank charging intereſt only for what ballance is due to them upon every payment. This is not the caſe with the bank and bankers in London.—In ſuch accounts, the two banks give credit for above 300,000 l. ſterling, which create conſtant operations in paying in and taking out by theſe compt-holders, and is a very great encouragement to traders and great manufacturers.

For ſome time after the Royal Bank was erected, there was a jealouſy, emulation, and bickering, between them and the Old Bank, through the peeviſhneſs of ſome in their directions: but, of late years, theſe are removed, and there is ſufficient buſineſs for them both, and they at preſent harmonize; each of them receive the notes of the other bank in payments, which once in the week they exchange, and take ſurplus notes of the other.

About ſix years ago, four merchants in Aberdeen commenced a banking company, ſtruck notes, and endeavoured to have all the ſame operations as the two eſtabliſhed banks in Edinburgh.

Some time after, two different ſocieties of merchants and gentlemen in and about Glaſgow, commenced each of them in like manner a banking company in Glaſgow.

The company in Aberdeen gave up their trade in December laſt, called in their notes, and publickly advertiſed that their partnerſhip was diſſolved. Thoſe in Glaſgow yet continue; but it is probable they may be judged illegal.

The ſubſtance of the WARRANT of the CHARTER erecting the ROYAL BANK of SCOTLAND.

Our ſovereign lord conſidering, That, by an act of parliament made and paſſed in the 5th year of his Majeſty's reign, intitled, An act for ſettling certain early funds, payable out of the revenues of Scotland, to ſatisfy public debts in Scotland, and other uſes mentioned in the Treaty of Union; and to diſcharge the Equivalent claimed on behalf of Scotland, in the terms of the ſame treaty; and for obviating all future diſputes, charges, and expences, concerning theſe equivalents: it is enacted, amongſt other things, That every year, from the feaſt of the Nativity of St John the Baptiſt, one thouſand ſeven hundred and nineteen, the ſum of 10,000 l. of lawful money of Great-Britain, ſhall be a yearly fund for the particular purpoſes in that act expreſſed, concerning the ſame, and ſhall continue and be payable for ever, ſubject nevertheleſs to redemption by parliament, according to a proviſo in the ſaid act contained in that behalf; and that the ſaid annuity of 10,000 l. during the continuance thereof, ſhall be chargeable upon, and be payable out of, the monies ariſing from time to time from the cuſtoms, duties, exciſes, or revenues, that are or ſhall be under the management of the commiſſioners of the cuſtoms, and commiſſioners of exciſe, in Scotland, or of any commiſſioners, farmers, or managers of thoſe revenues, or either of them, for the time being, with ſuch preference as in the ſaid act is mentioned; which ſaid annuity is thereby enacted to be payable quarterly in manner in the ſaid act mentioned, and to be free from all taxes and impoſitions whatever.—His Majeſty is authoriſed, by ſuch names as he ſhall think fit, to incorporate the proprietors of the debts, ſtated to amount to l. 248,550: 0: 9 ½, due to the creditors of the public in Scotland.—And the ſaid l. 248,550: 0: 9 ½, ſhould be the capital, or joint-ſtock of the corporation, and be deemed perſonal or moveable eſtates, not liable to arreſtments or attachment.—600 l. per annum to be paid to the corporation for charges of management.—His Majeſty, by his letters patent, did give, grant, and ordain, that all perſons, natives and foreigners, bodies politic and corporate, who then were proprietors of the debts and ſums of money ſo ſtated to amount to l. 248,550: 0: 9 ½, or who by any lawful title, derived to the ſaid proprietors at any time thereafter, ſhould be intitled to any part, ſhare, or intereſt therein, ſhould be called one body politic and corporate of themſelves, in deed and name, by the name of the Equivalent Company: and that ſuch corporation, and their ſucceſſors, ſhould have perpetual ſucceſſion, ſubject to ſuch redemption as is therein mentioned, and uſe a common ſeal, and ſhould by that name be capable to ſue and be ſued; and that the ſum of l. 248,550: 0: 9 ½, be the capital, or joint-ſtock of the EQUIVALENT COMPANY.—And the annuity of 10,000 l. payable to the company, or their caſhier, to be divided among the proprietors, according to their ſhares in the ſtock.—The ſtock of the company to be transferable.—The 600 l. is payable to the EQUIVALENT COMPANY, or any perſon to be appointed by them, under their ſeal to receive the ſame.—Diſtinct books of ſubſcription to be left at London and Edinburgh, wherein the proprietors are to declare at which of theſe places they are to have credit for their ſtock.—Diſtinct books of transfer to be kept at theſe places likewiſe.—Two of the directors to be for ever choſen, reſiding at Edinburgh, to have the cuſtody of theſe books.—Stock in the books at London may be diſcharged therefrom, and new credit got in the books at Edinburgh, and reciprocally for ſtock at Edinburgh.—His Majeſty covenants to give the EQUIVALENT COMPANY further powers and privileges, upon their humble ſuit and requeſt.—And the company requeſted, that his Majeſty would be pleaſed, by letters patent under the great ſeal of Scotland, to enable ſuch of the proprietors of the ſaid corporation as ſhould ſubſcribe their ſtock for that purpoſe, to have the power of BANKING in SCOTLAND only, with liberty to borrow and lend upon ſecurity there; and that the corporation may, for that purpoſe, be impowered to take ſubſcriptions at Edinburgh, for ſuch ſhare of the ſtock as they ſhall incline to ſubject to ſuch TRADE or BANKING, under ſuch regulations as they by by-laws ſhall appoint, and that ſuch ſubſcribed ſtock only ſhall be affected by the tranſactions relating to BANKING, and ſhall (after ſo ſubſcribed) become transferable from the other ſtock of the company, and that at Edinburgh only, and thereafter to be transferable from the other ſtock of the EQUIVALENT COMPANY, at EDINBURGH only.—Accordingly a charter was ordained to paſs the ſeals of Scotland, authorizing the directors of the EQUIVALENT COMPANY, or any three of them, in ſuch way as the majority of them ſhall direct, to receive at EDINBURGH all ſuch voluntary ſubſcriptions as ſhould be made on or before the 29th of September, 1727, by the proprietors of the ſaid company, who ſhall, at ſubſcribing, have credit for ſtock in the company's books at EDINBURGH; which ſubſcriptions are to be entered in books to be kept for that purpoſe.—The ſtock ſo ſubſcribed to be under the management of the company hereby eſtabliſhed.—The ſubſcribers to be called by the name of the ROYAL BANK of SCOTLAND, and by that name to have perpetual ſucceſſion, and a common ſeal, &c. be capable in law to ſue, and be ſued, &c. in any of the courts within Scotland.—To purchaſe lands, &c. in Scotland, and to ſell the ſame.—The Royal Bank to have a power of banking within Scotland.—To lend any ſums at any intereſt not exceeding lawful intereſt, upon perſonal and real ſecurity, and pledges of any kind.—The Royal Bank may keep the caſh of other perſons, and borrow, owe and take up money on their bills or notes, payable on demand.—A prohibition to trade with the money or ſtock of the company, in buying or ſelling wares of any ſort.—Allowance nevertheleſs to deal in bills of exchange, in buying bullion, &c. and ſelling wares bonâ fide pledged, and lands, &c. purchaſed, and the produce thereof. — That there ſhall be, from time to time, a governor, deputy-governor, nine ordinary, and nine extraordinary directors, for managing the affairs of the corporation; the governor and nine ordinary directors, or any five of them, to

be called a court of directors.—The members of the corporation may, from time to time, meet at Edinburgh, for chuſing their governor, deputy-governor, and directors, and for making by-laws, &c.—Public notice thereof to be given 30 days, at leaſt, before the time appointed for ſuch meeting.—The members ſo aſſembled to be called a general court of the corporation.—That there be four general courts in the year.—The governor, deputy-governor, and directors, after the 24th of December, 1728, to be choſen annually, on the firſt Tueſday of March.—Their qualifications of ſtocks, viz. the governor 2000l. deputy-governor 1500l. an ordinary director 1000l. an extraordinary director 500l. — One vote allowed for 300l. two votes for 600l. three votes for 1200l. and four votes for 2000l.—No perſon intitled to more than four votes.—Proxies qualified with ſtock, allowed to vote in elections.—Form of the oath that may be put to perſons claiming to vote, as follows, viz. I, A. B. do ſwear, that the ſum of of the capital ſtock of the body politic, called the Royal Bank of Scotland, doth at this time belong to me in my own right, and not in truſt for any perſon or perſons whatſoever. — The oath to be adminiſtered by the governor or deputy-governor, or, in their abſence, by any two directors. — No perſon refuſing to take ſuch oath, ſhall be capable to vote. — The ſame oath to be taken by ſuch as appoint proxies, before a juſtice of peace, or chief magiſtrate of a burgh. — The proxy to produce his powers for voting, with ſuch affidavit, to the general court. — Each ſucceeding governor, deputy-governor, and directors ſo choſen, to continue for one year, and 'till others are choſen and ſworn into their places.—In caſe of the death, &c. of any of them, thoſe remaining in their offices may call a general court, to chuſe others in their room. — None to be choſen into theſe offices but ſuch as are ſubjects of Great-Britain, or naturalized, and qualified with ſtock as aforeſaid. — And not to continue in thoſe offices longer than the continuance of ſtock in their own names and rights.—Nor ſhall they be capable to act 'till they have taken the oath of office, as before repreſented. — To be adminiſtered by any of the barons of the court of Exchequer, or any two directors, who ſhall have taken the ſaid oaths before any of the barons of that court.—An oath de fideli to be adminiſtered to the caſhier, and other officers. — No governor, deputy-governor, or director, nor any officer or ſervant under them, ſhall be capable to act, until ſuch have produced certificates from the proper officers of their having taken the oaths to the government.—Any neglecting to take the ſaid oaths, or to take upon them their office for 40 days, if in Scotland, or 40 days after their coming into Scotland, their places ſhall become vacant, and others may be choſe in their places, by a general court.—The court of directors, or major part of them, may call a general court, upon 30 days notice, and ſhall upon demand of any nine or more of the members, having each 1000l. ſtock, call a general court.—And in their default of calling ſuch court, the ſaid nine or more members, having each 1000l. ſtock, may ſummon and hold a general court, upon notice as aforeſaid.—Which general court, for any miſdemeanor or abuſe, may remove or diſplace the governor, deputy-governor, or any of the directors, and elect and chuſe others in their room.—The governor, deputy-governor, and directors, or any five of them, may meet at any place in Edinburgh, for the management of the affairs of the corporation, and hold courts, and ſummon general courts, as they ſee cauſe, and act according to the by-laws to be made and given unto them by the general court; and, where ſuch by-laws are wanting, they, or the major part of them, may direct and manage all the affairs of the corporation, and may appoint a caſhier and ſecretary and all other officers, and may allow them ſalaries, and diſplace them, as they ſee cauſe.—No governor, deputy-governor, nor director, capable to be named, or choſen, into the office of caſhier, or any other the officers of the corporation.—Five extraordinary, and four ordinary directors at leaſt, to meet to ſtate and audit the account, and ſign and approve the ſame, as often as directed by the by-laws.—The extraordinary directors to have no powers but ſuch as ſhall be given to them, and allowed of by the general courts.—The general courts to make and conſtitute by-laws, &c.—And to impoſe mulcts and amerciaments upon offenders, which, if not duly paid, may be retained out of their dividends. — The general court may make calls upon the proprietors, which are not in the whole to exceed 50l. upon the 100l. capital, and no call to be above 10l. per cent. at a time.—Any perſon neglecting or refuſing to pay ſuch calls, ſhall not be allowed to tranſfer, or part with any part of their ſtock.—Such calls chargeable with intereſt, from the time they ought to be paid, and their dividends may be detained, and applied for payment thereof.—Books for transfers to be kept for Edinburgh.—Form of transfers, when made by the party himſelf: I A. B. this day of in the year of our Lord do aſſign and transfer being all my intereſt, or ſhare, or (as the caſe may be) part of my intereſt, or ſhare, in the capital ſtock, or fund, of the Royal Bank of Scotland, and all benefit ariſing thereby, unto C. D. his executors, adminiſtrators, and aſſigns. Witneſs my hand, A. B. Or, in caſe the party aſſigning be not perſonally preſent, then, by an entry in the book or books, ſigned by ſome perſon thereunto lawfully authoriſed by letter of attorney or factory, under hand and ſeal, atteſted by two or more witneſſes, in the words, or to the effect following, viz. I A. B. this day of in the year of our Lord by virtue of a letter of attorney, or authority, under the hand and ſeal of dated the day of in the ſaid year do, in the name and on the behalf of the ſaid aſſign and transfer being all the intereſt, or ſhare, or (as the caſe may be) part of the intereſt, or ſhare, of the ſaid in the capital ſtock, or fund, of the Royal Bank of Scotland, and all benefits ariſing thereby, unto his executors, adminiſtrators, or aſſigns. Witneſs my hand. — Former acceptance is as follows.—And no other method of transfer ſhall be valid.—Letters of attorney to contain the names and deſignations of the writer and witneſſes, and to be atteſted by a notary, juſtice of peace, or miniſter of the pariſh where the granter reſides.—Any ſhare of the ſtock may be diſpoſed of by laſt will and teſtament.—An extract of the teſtament is to be delivered to the company, and a memorandum thereof entered in a book to be kept for that purpoſe.—All the ſhares or intereſts in the ſtock to be deemed perſonal eſtates, and not to be liable to any arreſtment of attachment.—A court of directors to conſiſt of the governor, deputy-governor, and ordinary directors, or any five of them at leaſt, wherein the governor is to preſide, and, in his abſence, the deputy-governor; in the abſence of both, any director preſent may be choſen to preſide in that court of directors, or in any general court of the corporation; and, in default thereof, the general court may chuſe a preſident; the preſident to have no vote, but in caſes of equality.—The court of directors may name committees to manage their affairs.—The caſhier of the corporation, or any other perſon authorized by them, to receive their proportion of the 10,000l. annuity. — Which is to be paid without any fee or reward whatſoever. — The general court twice every year is to declare a dividend, at ſuch two of the quarterly courts as they think fit.—No dividend to be made, but out of their ſhare of the 10,000l. annuity, and the profits of banking. — Calls upon the ſtock may be repaid.—A general court may aſſume ſuch of the proprietors of the equivalent ſtock, as ſhall not have ſubſcribed before the 29th of September 1727, within two years from the date of the charter.—Upon ſuch terms and conditions, and at ſuch times as the majority of the firſt ſubſcribers ſhall appoint in a general court.—Such further ſubſcriptions to be under the management of this corporation, from the time of ſubſcribing.—And to enjoy the ſame privileges, &c. with the firſt ſubſcribers. — The charter to be conſtrued in the moſt favourable ſenſe for the advantage of the corporation. — His Majeſty covenants to give ſuch further privileges as he may lawfully grant. — Which ſhall be deviſed by their own council, and approved of by the lord advocate, or ſollicitor-general for Scotland for the time.

Under our article ABERDEENSHIRE, we have taken notice of the board of truſtees eſtabliſhed by charter for the improvement of the manufactories and fiſheries of Scotland, in conſequence of an act of parliament anno 1727, granting ſome encouragements to them from funds ariſing in Scotland. Theſe, though ſmall, yet by œconomy have had a ſurprizing good effect; which will beſt appear from the following genuine abſtract, which has been tranſmitted to me from Scotland.

ACCOUNT of LINEN CLOTH for ſale, ſtamped in SCOTLAND from November 1, 1727, to November 1, 1753, diſtinguiſhing the quantities and value annually.

Years.	Yards of Linen.	Value in money. l.	s.	d.
1728	2,183,978	103,312	9	3
1729	3,225,155	114,383	19	8
1730	3,755,622	131,262	15	11
1731	3,891,573	145,656	14	3
1732	4,384,832	168,322	14	10
1733	4,720,105	182,766	2	1
1734	4,893,499	185,224	3	11
1735	4,880,633	177,466	3	9
1736	4,538,478	168,177	13	—
1737	4,721,420	183,620	13	9
1738	4,666,011	185,026	11	9
1739	4,801,537	196,068	16	11

1753	9,422,593	445,321	18	1

REMARKS.

This is a very extraordinary increaſe in the linen manufacture of Scotland, in the ſpace of 26 years, it being above quadruple the number of yards and value to what it was at the beginning, and amounts now to almoſt half a million of money per annum. But beſides the quantity of linen before ſhewn, there has been likewiſe no inconſiderable quantity manufactured by private people, for bedding and table linen, for ſhirting alſo, and for home uſe of every ſort, and great quantities of tape and incle, and thread exported, which are not taken any account of by the officers of the truſtees: the country too, in the general, is remarkably well ſtocked with linen cloth; even the lower ſort of people are now plentifully provided with body, bed, and table-linen.

Upon the north ſide of the city of Edinburgh, in the road to Leith, is built a neat row of houſes, with a large and commodious garden, called PICARDY, for the reception of ſome French families brought from France, for the improvement of the cambric manufacture; which has been of great uſe, and is daily growing more and more profitable.

Anno 1733, the ſaid board of truſtees, amongſt other premiums, appropriated 1500l. ſterling per annum, after the rate of 15s. per acre, for 2000 acres of ground to be ſowed with LINT-SEED and HEMP-SEED, according to the rules laid down in a peculiar plan for that purpoſe. This had a very agreeable and extraordinary good effect, the growth of lint increaſing greatly every year. Premiums alſo were given for erecting lint-mills, and bleach-fields; but of late years the ſaid premiums for ſowing of lint and hemp-ſeed are withdrawn, on account of the funds for theſe good purpoſes not anſwering to the extent of what they were formerly; whereby we have the mortification to ſee the growth of lint much decreaſed; but it is greatly to be deſired that ways and means will be found to ſupply this deficiency.

In regard to the propagation of lint, it may be worth obſerving, what method has been found by experience to be the beſt for cultivating of moſſes at a ſmall charge in Scotland, of which there are a great many, to be fit either for tillage or paſturage, which is creating ſo much more valuable ground in the country. This has proceeded from ſeveral years ſtudy and experiments of an ingenious gentleman, Mr Græme, of Argomercy in Stirlingſhire, the truth of which is atteſted by ſeveral gentlemen in the commiſſion of the peace, and by them recommended to the ſaid board of truſtees. — They ſay in every piece of moſs he intends to labour, he makes only a few ſmall ditches, three feet deep, for drains; he pares his field, covers it with earth, which he brings by an eaſy carriage from the adjacent lands; or, if theſe lands are too diſtant, he gets earth enough by digging in the moſs itſelf: he then mixes this earth with aſhes, which he obtains eaſily, by burning the moſs, that being a ſoft rotten earth: then he uſes a breaſt-plough, which a ſingle man puſhes eaſily before him: his harrows, his rollers, and all his inſtruments, are ſuited to the nature of his ſoil and labour, and are purchaſable at a very eaſy rate. He performs all his work with men, without horſes or oxen; nor is he at any expence either for dung or lime; his manure coſts nothing but a very cheap and eaſy labour, and he makes his ſoil as rich as he pleaſes. Conſtant tillage impoveriſhes other, but greatly meliorates a moſſy ſoil. The higheſt eſtimation of all this charge is 40s. per acre, viz. 20s. for digging and laying on the earth, 10s. for paring, 5s. for burning, and 5s. for extra-charges. — The whole may be reduced to 25s. per acre. Neither does moſs cultivated in this manner immediately run out, but being refreſhed with earth and aſhes every third year, it will improve every year by the tillage.

From this judicious gentleman's experience, and that unqueſtionably atteſted by perſons of honour and credit, moſs prepared in this manner anſwers admirably well for the growing of lint, either coarſe or fine. If he wants ſtrong rank lint, he plows the ground very deep, lays a greater quantity of earth upon it, and a great quantity of aſhes; harrows them well, then plows his fields half as deep as before: after which he ſows Riga lint-ſeed thin. If he wants ſhorter, ſmall ſtalked, or fine lint, he does not plow ſo deep, gives leſs aſhes, and ſows Dutch lint-ſeed thick. He has raiſed of both kinds, eſpecially the coarſe, which is moſt wanted, and is, perhaps, moſt profitable for this country. The gentleman has likewiſe had good crops of potatoes, rape, peaſe, beans, wheat, barley, and oats, clover, and natural graſs; and after two or three years culture, they bear good turneps. — A man with his paring plough can eaſily pare an acre in ten or twelve days, which he then burns, and ſpreads the aſhes and earth, plows it with his new breaſt-plow, without cattle; and where cattle can go, two little Highland horſes may do it. An acre thus dreſſed and ſown with lint, is a living for a family the whole year; and, when the flax is manufactured, at a moderate computation may be reckoned worth 100l. ſterling.

Some years ago, his preſent grace the duke of Argyle, ever ready to promote the public good, and other lords and gentlemen, finding ſome difficulties to attend the ſpinners of flax into yarn, as well as the weavers of the ſaid yarn into different ſorts of linen, by reaſon of the want of a ready ſale for their goods; and they being unable to keep them on hand for a market, were often obliged to ſell them at an under value, to the great prejudice of the manufacture: on theſe conſiderations they were incorporated by a charter from his preſent Majeſty, under the name of the Britiſh Linen Company, with a capital of 100,000l. ſterling, for trading in all branches of this manufacture. They import flax from abroad, the beſt lint-ſeed, pot and weed-aſhes for bleaching, and ſell them on credit to proper hands, then buy the yarn and linen, all at reaſonable prices; which linen, particularly the ſort correſponding to Oſnaburghs, &c. fit for America and the Weſt-Indies, they keep in large ware-houſes, both here and at London, where they are ſold for exportation: by which means this manufacture has been greatly improved and increaſed; but I am heartily ſorry to tell you, ſays my correſpondent, and you with very good reaſon will grieve, that it has now received ſuch a blow (as cannot eaſily be recovered) by taking off the BOUNTY upon EXPORTATION, whereby above 8000 weavers in this country are turned out of their bread. I am informed that, upon the act's taking place, and merchants ceaſing to buy their goods, theſe weavers went about deſiring to inliſt, not only in the Britiſh, but alſo in the Dutch ſervice; from whence they frequently deſert to France, and thereby become a double loſs to the kingdom, by aſſiſting our rivals, &c. In the county of Angus, where many of theſe weavers live, alſo my lord Panmure, a moſt amiable gentleman, who being in the army and having occaſion to recruit there, found moſt of them to be weavers.

Anno 1749, being then in London, I gave my beſt aſſiſtance in forwarding the act for a bounty on the whale-fiſhery; and, on my return hither, did aſſociate with others to eſtabliſh that trade from this place [Scotland] which has ſucceeded ſo well, though unfortunate the two firſt years, that laſt year we ſent ſix large ſhips out to Greenland, and the example was followed by ſeveral other places in this country; our fleet laſt year were in all 17 large ſhips from Scotland: but again I am much concerned to tell you, that we meet with a great diſcouragement; and ſome companies at Glaſgow have already given up this moſt national and valuable branch of trade, by reaſon that the BOUNTIES ARE NOT REGULARLY PAID IN THIS COUNTRY; for though the act of parliament enacts, that the ſaid bounties ſhould be paid out of the CUSTOMS IN GENERAL, yet, by opinion of the late attorney-general ſent to our commiſſioners of the cuſtoms here, he reſtrains thoſe CUSTOMS to five articles, viz. OLD SUBSIDY, PETTY CUSTOMS, ADDITIONAL DUTY, ONE PER CENT. INWARDS, and COMPOSITIONS ON PETTY SEIZURES; out of which cuſtoms, it ſeems, that the commiſſioners ſalaries and all other charges, are firſt paid, and there does not remain a ſufficiency for the payment of BOUNTIES.

The enſuing winter I again repaired to London, having had the honour to be appointed commiſſioner from our CONVENTION OF ROYAL BOROUGHS, to ſollicit the act for encouraging the BRITISH-HERRING-FISHERY; by virtue of which act, on my return here, we conſtituted a FISHING CHAMBER for HERRINGS, with a capital of above 13,000l. ſterling; upon which we began our operations with buſſes; and ſome other towns followed our example, by eſtabliſhing fiſhing chambers, with ſtocks of 10,000l. ſterling each, beſides ſome private traders upon the general bounty of 30s. per ton.

Though we did not ſucceed very well at firſt, as all things are attended with caſualties and extra-charges at their commencement, yet we continued 'till this year, when we broke up, and ſold our buſſes, &c. by reaſon of the premium, or bounty, not being regularly paid, as above mentioned.

As you, Sir, have been already ſo full upon this ſubject of FISHERIES, I need ſay the leſs; you having, upon this occaſion, mentioned the old proclamations and treaties in former times, that no foreigners ſhould come and fiſh within ſight or within 14 miles of our ſhores: if theſe ſhould be revived, it would do our buſineſs at once, and ſave the charges of all BOUNTIES. I am, and ever was, ſo much inclined to forward fiſheries of every kind in this kingdom, that I have been at Dronten, and laſt year at Bergen, in Norway, on this occaſion, where I got ſuch information as, I humbly conceive, may tend to the improvement of our herring-fiſhing, which ſhall be communicated in the ſequel, when I come to mention ſome things farther about the Highlands and their adjacent iſlands. See our article FISHERIES.

Upon both ſides of the Firth of Forth is plenty of great and ſmall coal, which are exported abroad, and coaſt-ways: the great coal is eſteemed the beſt firing for houſe uſe: many ſhips are loaded at Alloa, where the price is from 5s. to 6s. 8d. per 24 hundred the ton. The coal is brought to Leith by water, and to this city by carts, weighing about 12 hundred, and ſells for 5s. per cart; and at the ſame rate we have them from other collieries round the town. The refuſe of the great coal is uſed for boiling of ſea-water to make ſalt, of which we have great quantities in this firth, and ſells for

7½d.

7½d. per buſhel, or 25s. per ton: the Engliſh Iceland fiſhers are generally ſerved in that article here, and a large quantity is exported to Bremen, Embden, and to the Baltic. — We have ſome foreign trade to moſt parts in Europe, alſo to America and the Weſt-Indies; but theſe two laſt are chiefly carried on from GLASGOW and DUMFRIES, which trade is of the utmoſt conſequence to our manufactures: we have, in return for them, ſugar, rum, and tobacco, &c. large quantities of the latter are re-exported, which bring in a ballance of money, or anſwer for other commodities that we have occaſion to import.

This brings me to GLASGOW, which is a large, handſome, regular, and well-built city, upon the river Clyde. They have a good univerſity, a town-houſe, fine churches, the houſes moſtly built of free-ſtone; many of their opulent merchants have villas on both ſides of the river: the tide and ſmall ſhips come up to the town.

Upon the Union of the two kingdoms, this town commenced their trade to America, which became very conſiderable, and has imported from 20 to 23,000 hogſheads of tobacco in a year, beſides ſugars, and other Weſt-India commodities, together with their large concern in the herring-fiſhing in the Firth of Clyde and Highlands, which are exported to the Baltic. They alſo ſend ſome ſhips to Greenland and Davis's Streights, for the whale-fiſhing; all which has increaſed their ſhipping very much, and encouraged every kind of manufactures, particularly linens, fine and coarſe, cheques, tapes, incle, thread ſtockings, handkerchiefs, and plaids, or tartans. They have ſeveral ſugar-houſes, an iron ſlitting-mill, all ſorts of iron manufacture, a glaſs-houſe, rope-walks, and ſoaperies, a Delft-work, alſo a very conſiderable tannery, having their raw hides from Ireland, &c.

Six miles from Glaſgow is the town of Paiſly, remarkable for the induſtry of its inhabitants, and the effects thereof, by increaſe of people, buildings, churches, and an hoſpital. About 60 years ago, they had not above 60 weavers, including journeymen and apprentices; now there are about 1400 weavers, and 93 thread-mills. They make cambrics, lawns, minionets, linens, handkerchiefs, thread and tapes, &c.

About 14 miles down the Clyde from Glaſgow, is NEW PORT and GREENOC; the former has a good harbour, fine ware-houſes, and is the port of Glaſgow; the latter is a town of good trade.

IRVINE and AIR are alſo towns of pretty good trade; the former has above 60 ſail of ſhips in the coal-trade to Dublin, and other places; the latter has five or ſix ſhips in the tobacco-trade from America.

CAMPBELTON, a royal burgh in CANTIRE, is a pleaſant-ſituated town, has a fine baſon and good harbour. The inhabitants of this place and country are very induſtrious in agriculture, linen manufactures, and fiſheries. They had a Greenland company for the whale-fiſhing, but ſome differences ariſing amongſt thoſe concerned, it broke up; however, they carry on a conſiderable trade with herrings, alſo cod and ling-fiſhing, with wherries at BARRA, LEWIS, and at ZETLAND, as well as in their own neighbourhood, which they carry for moſt part to Ireland.

DUMFRIES is a neat well-built town, much increaſed of late years, has imported about 3000 hogſheads of tobacco from America in a year; but in the neighbourhood of it, upon that coaſt, they have too much trade with the ISLE of MAN, from whence they bring great quantities of French brandy, and other liquors, to the great injury of Britain, and her revenues. See MAN, [ISLE of MAN,] and SMUGGLING.

ANNANDALE, NITHISDALE, and CLYDESDALE, are great ſheep countries; ſome ſtore-maſters have above 30,000 ſheep, and rent 1000l. a year; but being ſcarce of firing, they are thinly inhabited, and manufacture but little of their own wool, which is ſent to other places.

At DUNCE in BERWICKSHIRE, JEDBURGH and HAWIC in ROXBURGHSHIRE, they manufacture plaids, carpets, and ſerges, &c. TIVIOTDALE, and ſhire of MARS, are good corn countries; wheat, barley, and oats, are exported from BERWICK and EYMOUTH.

The ſhires of the three LOTHIANS are remarkable for fertility in fine corns, particularly wheat, barley, and oats. FIFE, PERTH, and ANGUS SHIRES, have the greateſt ſhare of the linen manufacture, yarn and thread, particularly in and about the towns of COUPER, PERTH, DUNDEE, ARBROATH, and MONTROSE. Ships are loaded from the four laſt-mentioned places to London, with quantities of goods of great value; and they have otherwiſe a very good trade.

ABERDEEN town and ſhire: the town is populous, large, and well built, has a town-houſe, traders and merchants hoſpitals, and one for old women; alſo Gordon's hoſpital, endowed with 10,000l. the intereſt whereof is at 5 per cent. per annum, for education of boys; they have ſix churches, and a very good univerſity. The harbour is ſafe and capacious, and might be made to hold a great number of ſhips; the entry is guarded by a fort, and though there is a bar, it may be removed, and made deep water, by carrying the pier a little farther out. From this port is ſometimes exported 3 or 4000 tons of oat-meal in one ſeaſon. The manufactures here are chiefly fine and coarſe ſtockings, plaidings, and ſerges, to a great amount; I have heard of ſhips loadings of theſe goods to Holland, from 10 to 15,000l. in one cargo; but theſe trades are now ſomewhat fallen off, as the country people have of late run more into the linen manufactures. They have a very extraordinary ſalmon fiſhing, both on the rivers DEE and DON; they have likewiſe a company for the Greenland whale-fiſhing, and within theſe ten years have had a tobacco-trade from America, with 10 to 12 ſail of ſhips.

The exports from Aberdeen, before the Union, were ſalt, ſalmon to France, dried cod and ling, both to France and up the Mediterranean; narrow and broad ſingrims and ſerges, to Holland, and ſome ſtockings to Hamburg and Holland. Our imports from thence were wine and brandy from France, bay-ſalt, ſoap, ſtarch, and barrel-ſtaves, from Dantzic, and ſome flax from the laſt place and Holland.

Soon after the Union, a company here opened a trade to Virginia; but unfortunately two ſhips being loſt at that time, put an end to the attempt.

The moſt material branch, and of longeſt ſtanding here, is the manufactory of knit ſtockings, which was only begun for the Holland market, about the Revolution; they have here riſen to ſuch an extent, that, for ſome years within theſe twelve preceding, there have been ſhipped for Holland and London from 60 to 80,000l. ſterling value.

The wool, little of which is the product of this country, is brought raw from Newcaſtle and London; this was for many years retaled by the importers to the country people, who bought it in ſmall parcels, as they could afford to buy: it was combed, ſpun, and knit into ſtockings by the women and children, and, when waſhed out, ſold either in town, or in the country markets, to merchants exporters: then inſufficiency, and cheating of every degree, was frequent, and they were truly not worth the money they gave here to the laſt wearer: this, as in the like caſes, brought a damp on their ſale at every market, and they have not as yet recovered credit at London, where the ſtockings of the like kind, from Guernſey and Jerſy, outdo ours.

Some merchants about ten or twelve years ago, ſucceſſively undertook a reform of that abuſe; ſince which they have introduced the trade of wool-combing, ſo that now, I believe, we have more wool-combers than in all the reſt of Scotland: the merchant imports the wool, combs it in his own ware-houſe, and gives it out to the people, who ſpin the yarn and knit the ſtockings, into any form or ſize they are directed. I have known ſundry times ſtockings ſhipped for Campveer in one bottom, to the value of 2000l. ſterling.

About ten or twelve years ago ſome merchants here introduced a trade to Virginia, and they have kept ſtores both there and in Maryland; we have four companies trading in the importation of tobacco from different parts in North America, which trade was pretty briſk until the late act of parliament has brought even the fair trader under ſundry diſcouragements; and at preſent the imports are conſiderably leſſened, though I ſtill hope the trade will not be wholly loſt here.

Since the peace of Aix la Chapelle, our merchants have much turned their thoughts on the linen manufacture; this was occaſioned by the conſumption they had for both coarſe and better ſorts of linen in North America. We had ſome years ago ſet up a manufacture of coarſe unbleached linen, known by the name of Oſnaburghs, which cloth was greatly encouraged by the bounty given on exportation; and we were aſſured from all parts, that ours were the beſt made in Scotland. When the parliament laſt year took off the bounty, that manufacture was converted into one of ſail-cloth, which remains entitled to the bounty, but they continue ſtill to make ſome Oſnaburgh cloths. Beſides the above, there are three other manufactures of bleached linen, each of which has from thirty to forty looms, conſtantly employed in the manufacture of cloth, of the value of 1s. 6d. to 7s. per yard; and about two years ago, an iſland upon the river Don, about half a mile above the bridge, was made into a bleach-field of about five acres. The iſland is pleaſantly ſituated, well watered and ſheltered, and for the two laſt ſummers has produced as fine and as beautifully bleached cloth as any in Europe. But our undertakers in the linen way ſay the market is dead at preſent, and large ſtocks on hand unſold. One of thoſe linen companies have got about eight or ten ſtocking-frames, for the weaving of cotton and linen ſtockings, caps, &c. and have alſo lately erected an incle-frame, which at once yields 40 pice.

There is beſides another company, who have erected about twelve or twenty frames for weaving cotton ſtockings, caps, &c. beſides, all our linen companies make checques, napkins of cotton and linen, and tartans. Laſt year two merchants only here have introduced, and very ſucceſsfully carried on, the manufacture of white and coloured threads for ſewing, to ſome conſiderable value.

The two rivers of Dee and Don, which abound in ſalmon, may afford annually at an average one hundred laſts of ſalt-fiſh, which are thoſe caught after the 15th of May, and are

moſtly ſold for the French, and ſome for the Flanders market, where they have the reputation to be the beſt fiſh, and beſt cured of any in the world. From the beginning of the fiſhery-ſeaſon, which is the middle or end of January, to the 15th of May, the ſalmon caught are either ſent raw or pickled for the London market, and this may be yearly to the value of about 3000 l. ſterling.

We have here pork which is ſalted and cured both for London and ſometimes for Holland; it is eſteemed for the fat and the lean being better mixed and ſweeter than the pork of England; and there is exported and ſhipped coaſt-ways about fifteen or twenty laſts yearly.

The chief product of this part of Scotland is oats and oatmeal, the ſtaple articles that bring here the freeſt return of money, in the time of good crops. The two counties of Aberdeen and Bamff have, beſides a competent proviſion for home ſervice, often afforded from 50 to 70,000 bolls of oatmeal, which are ſold in the Firth of Forth, and Tay on the eaſt-coaſt of the Firth of Clyde, and in the Highlands on the weſt, and very often in Ireland, to which laſt place we have about five or ſix weeks ago begun to export.

For ſome years paſt there has been a demand from London, which I am told is afterwards carried down and uſed at Mancheſter, for linen yarn; it is a very coarſe kind, bought here at from 18 d. to 2 s. per ſpindle; but as it is made of flax bought by the country people, they often cheat both in the tale and in the length of reel, and it has for twelve months paſt been on the decline. I am told, that few years ago from 12 to 20,000 l. ſterling value has been ſent to London; but unleſs ſome method be taken like that lately with the ſtockings, this branch will be loſt. It would be to the benefit of the country, if it could be got wove here, and a reaſonable profit on the linen.

There are 35 ſhips belonging to this port, including our two whale-ſhips; and they conſiſt of about 4500 tons, and are chiefly employed in the North American trade, and in that to London, Holland, and two annual ſhips to Dantzic, as many to Riga, ſome to Norway, and one annual ſhip to Antigua, and to France with ſalmon.

The greateſt part of our fewel is coals imported from Newcaſtle to the Firth of Forth. They are chiefly brought us by ſmall ſhips of about 200 tons, belonging to the ſea-ports in Fife; we take alſo about 30 or 40 cargoes of lime, and above 20 cargoes of Scots-made ſalt; ſo that about 30 or 40 Firth barks have their whole bread in thoſe employs, which ſerve to take off our ready money, though in ſmall parcels.

The country people live chiefly on oatmeal, greens, and milk. The knitters of ſtockings and ſpinners of linen yarn, are only the women and children: they are not able to gain above 2 d. $\frac{1}{2}$ per diem at the firſt, nor exceed 3 d. $\frac{1}{2}$ ſterling per diem at laſt, when linen yarn bears any tolerable price at London.

They have here, perhaps, the moſt plentiful and beſt-ſerved fiſh-market in the world; there are above 60 fiſhing-boats within 16 miles of this town on both ſides. The whole of the fiſh caught by 30 boats come duly to our market; at leaſt, the half of the fiſh caught by the other 30 are ſold here, ſo that after a ſtorm, when fiſh are ſcarce, our other proviſions become ſenſibly dearer.

Bamff, Murray, Ross, and Caithness Shires, are very good corn countries, and generally export barley, bigg, oats and oatmeal; all ſorts of vivers in theſe northern counties are extraordinary cheap, and wages very low.

Although the woollen manufacture is not the ſtaple of this country, yet it is far from being inconſiderable. There is an opulent company eſtabliſhed at Haddington, where they make all ſorts of ſuperfine and coarſe broad and narrow cloths, alſo bays, ſhalloons, long ells, carpets, and worſted pluſhes. Before the union of the two kingdoms, there was a very conſiderable undertaking of this ſort at New Mills near Haddington, which had large privileges by act of parliament, but upon the Union that company diſſolved; yet the working people, who had been employed therein, continued to make cloths and other woollen manufactures. At this place is a weekly market, where large quantities of raw cloths are purchaſed from the country people, which are milled, dyed, and preſſed by the cloth-dreſſers here.

At Dalkeith in Mid Lothian, is a conſiderable manufacture of bed-coverlids, which ſupplies moſt of the country with that commodity. At Musselburgh are alſo made ſome broad cloths, but the principal manufacture here is a ſort of narrow ſtuffs of various colours, which are allowed to be the cheapeſt manufacture in Europe, being ſold by the weaver at 2 $\frac{1}{2}$ d. per yard. Of theſe, large quantities are exported to Holland; they alſo make a ſort of white ſtuffs yard wide, that is much uſed in the country for bed-curtains, &c.

At Edinburgh, ſhalloons and tartans, or plaids, are reckoned the beſt in Britain; but the largeſt quantities are made at and in the countries about Stirling, where many hundred looms are employed in the manufacture of ſerges, ſhalloons, and tartans; the two former are exported to Holland, and the latter to England, America, and the Weſt-Indies.

At Alloa, four miles from Stirling, down the Firth, are made camblets, blankets, and long ells. At Kilmarnock, and in the adjacent country, they make cloth ſerges, which are exported to Holland and Hamburgh; from thence they are ſent into Germany, and there milled and dyed for ſoldiers clothing: alſo in this place are made carpets, coarſe floor cloths, and cloths made in imitation of thoſe at Kendal.

This country abounds greatly in mines and minerals, though hitherto but little regarded. Some old and late works are thoſe of Leadhills, alias Hopetoun, belonging to the right honourable the earl of Hopetoun, lying in the ſhire of Clydesdale; theſe are moſt remarkable for all kinds of lead ore; the green, yellow, grey, and black, are found here, as well as the blue and white; the two latter are got in great quantities, and in all their variety; the ſoft broad grained ore is got moſt frequently, and in greater quantities than the hard ſhort ground ſteel ore. Of this broad ground blue ore, pieces are got from the mine like a mirror, as if poliſhed by art. Of late, the white ore has been got in great plenty. There are ſome pieces almoſt tranſparent, ſhot out in the form of cryſtals of all figures, from every part of the cavity, adhering to the ſides of it, as branches to a root; of which ſome are ſhort and ſolid, joined by pairs to one ſurface, croſſing one another like two perpendicular plains, and at right angles; others are long, ſometimes joining both ſides of the cavity, cloſely united one to another, and hollow like tubes. The fine ſoft blue ore is often cruſted with theſe cryſtals, as if deſigned by nature to beautify the maſs, which in its native ſtate is very brilliant in the mine, attracting with admiration the eyes of the curious.

There has been and is ſtill found, gold in theſe parts, of which formerly, broad pieces, Jacobuſes and Caroluſes, have been coined. It is ſometimes found upon the ſurface amongſt a particular kind of earth like red and yellow paint, by the gatherers called oker and brimſtone; which earth does not extend to a great breadth, but it has its courſe in length, regular as the lead veins. They gather it generally in the hollow places near the ſides of the rivulets, to which places it is waſhed down by the rains from its proper bed. Within theſe few years a piece was found on the ſide of Glengonner water about nine drop weight, which was brought to the earl of Hopetoun.

It was ſearching for gold, when they firſt diſcovered the lead mines, which were in the high grounds there about 380 years ago; but in the lower grounds only about the year 1534. Sir James Hopetoun, the preſent earl's great grandfather, got poſſeſſion of theſe grounds by his lady Anne Foules, of the family of Collingtoun, in the year 1641. Since which time they have produced great quantities of lead; ſome years 1500 tons of lead, and 600 tons of potters ore*.

* This is a bright flakey ore, in large lumps, uſed for glazing earthen ware. Great quantities are ſent to Delft in Holland.

At Wanlockhead, belonging to the duke of Queenſberry, about a mile from lord Hopetoun's works are very good workings in lead-mines, which were diſcovered at the time of thoſe at Lead-hills, but their ore is generally of the blue hard ſteely kind, and contains about 14 ounces of ſilver in a ton of lead, which is refined and extracted out of it; they have alſo of the ſoft flakey blue ore, and the works have been ſo rich this laſt year, as to produce about 30,000 bars of lead, each bar containing 1 $\frac{1}{4}$ Ct. which makes 1875 tons.

Anno 1600, at Tartriven, 12 miles weſt of this city, was a fine ſilver-mine wrought, the bottoms of which were cleared out anno 1730. The York-Buildings company expected the work to continue, but were diſappointed.

Anno 1715, Sir John Erſkine, of Alva near Stirling, found a neſt of ſilver at Alva, which he wrought out that ſame year to the amount of 15,000 l. ſince which no more has been diſcovered; but in the ſame range of hills, called the Echals, there have been ſeveral old and late workings in copper-mines, which contain a quantity of ſilver, particularly at Aithry, Blair, Logy, and Tillycoultrie; the appearances are very good and encouraging in ſeveral places.

At Strontian, in Argyleſhire, are very conſiderable lead-mines, diſcovered by Sir Alexander Murry, anno 1727, wrought for account of the duke of Norfolk, and ſundry other partners; theſe were afterwards lett to the York-Buildings company, and ſince to others; I have known 1500 hands employed in theſe works at one time.

At Tyndrum, upon the earl of Broadalbin's eſtate, anno 1740, lead-mines were diſcovered and wrought by Sir Robert Clifton, now leaſed to the Mine Adventurers company, and produce large quantities of ore. There are ſeveral other lead-works in different parts of the country, and appearances with-

out number; but in this country, few are willing or able to venture upon ſuch precarious buſineſs; and indeed, it is moſt proper for ſocieties.

There is lately a mine of wadd or black-lead diſcovered upon M'Donald of Glengary's eſtate in Inverneſsſhire, leaſed and wrought by Capt. Thyne; alſo in the ſame ſhire, about 20 years ago, a fine copper-mine was diſcovered and wrought by Mr Champion of Briſtol, upon the eſtate of M'Donald of Applecroſs, oppoſite to the iſland of Sky, but being troubled with water, it was neceſſary to bring up a level, which was too expenſive for him to undertake.

There are ſeveral other good copper-mines in that neighbourhood and in the iſlands, which ought to be tried.

This country is happily interſected with many firths and lochs, or long inlets of the ſea, which is a great conveniency to trade; the Firth of Forth from St Abb's-head to Stirling about 60 miles, and from the Forth of Glaſgow on the Weſt Sea, is only 18 miles over land; from thence to Fairland-point in Wigtounſhire, being the Firth of Clyde, is 90 miles; the Murry Firth from Kinnaird's-head to Inverneſs, is about 70 miles. This town has a good trade with the Highlands, and a chamber for the herring-fiſhery from Inverneſs to FORT WILLIAM, which from Eaſt to Weſt Sea, is 48 miles, all a valley, fine-made roads, great lochs or lakes in the middle, and bounded with mountains on each ſide; from Inverneſs to the eaſt-end of Lochneſs, is four miles. The loch is 20 miles long, at the upper end is FORT AUGUSTUS. They have a veſſel to carry ſtores and proviſions; the river of Neſs is well ſtored with ſalmon; from FORT-AUGUSTUS to LOCH OICH is 2 miles and a half, the loch 5 miles, one mile to LOCH LOCHY, which is ten miles long, from thence to Fort William five miles and a half; from Fort William is an inlet of the ſea to Caſtle Deuart in the Iſland of Mull, 36 miles.

Upon the MURRAY FIRTH, oppoſite to the town of Fortroſe, about ſix miles from Inverneſs, is a large new fort now building at AIRDERSIER, well fortified; the barracks will be ſufficient to hold 1500 men, and there is free acceſs to the ſea. This comes in place of FORT GEORGE at INVERNESS, now demoliſhed, as is alſo an old fort on the other ſide of the town, built by Oliver Cromwell. FORT AUGUSTUS and FORT WILLIAM, make a chain from the Eaſt to the Weſt Sea as above mentioned, and divide the Highlands, which might not only prevent a junction upon any inſurrection or invaſion, but may alſo be a means to aſſiſt the civilizing and introducing manufactures and induſtry amongſt the Highlanders, which will certainly prove the beſt and moſt effectual way of maintaining peace and improving the country. To all theſe forts there are fine ſpacious roads made, fit for any wheel-carriages from the ſouth and low countries.

The wiſdom of the legiſlature cannot be ſufficiently admired for annexing the Highland forfeited eſtates to the crown, particularly lord Cromarty's in Roſsſhire, lord Lovat's in Inverneſsſhire, Cameron of Lochiel's in Argyleſhire, and the duke of Perth's in Perthſhire, and in appropriating the revenues thereof, for the improvement of the country in the manufactures, &c. and farther for the ſame purpoſe, by an act of the laſt parliament, 3000 l. per ann. payable out of the cuſtoms, is granted and put under the management of the commiſſioners and truſtees for improving fiſheries and manufactures in Scotland; and they have already made a beginning, and publiſhed a plan for diſtributing the ſaid ſum for the firſt year, viz. for introducing the linen manufactures at four different ſtations and ſettlements, in certain parts of the Highlands, in the ſhires of INVERNESS and ROSS (where it hath not hitherto been introduced) and applied a ſum not exceeding 630 l. each ſtation, conformably to the plan; which is for building proper houſes, purchaſing lint-ſeed, giving premiums to the raiſers and dreſſers of flax, and for wheels, reels, heckles, and all ſorts of utenſils, for maſters and miſtreſſes to breed up others, 2520 l.—For ſupporting and encouraging the manufacture in thoſe places where it hath been already introduced, but hath not yet arrived to any conſiderable degree of perfection, 300 l.—For ſalaries to one or more inſpectors, not to exceed 100 l. and for defraying incidental expences attending the execution of this plan, 80 l.—It is hoped that theſe wiſe and uſeful meaſures will have the deſired effect.

The moſt conſiderable fir-woods in this country are in STRATH or the valley SPEE, chiefly belonging to Sir Lodovick Grant, Mr Grant of Rothiemurchas, and the duke of Gordon. Sir James Grant, Sir Lodovick's father, ſold ſixty thouſand well-grown trees to the York-Buildings company, the boughs and tops of which they burnt into charcoal, having erected a furnace and forges for making of iron, and having bog and rock-ore in the country. Alſo they got pig-iron from Mr Rawlinſon's furnaces at M'Donald's of Glengary, lying between Fort William and Fort Auguſtus; to which place fine ores were brought from Lancaſhire, mixed with Scotch ores, and there ſmelted.

The trees were partly cut into deals, and partly carried whole down the river Spey to London, for maſts, yards, and bow-ſprits for ſhips. But the company's affairs at London going wrong, made them give up theſe undertakings, however promiſing they were. Formerly there were alſo iron-furnaces and forges at Achnacarry on Loch-Lochy, ten miles from Fort William, and in other places of the Highlands.

At preſent there are new iron works erecting at Bonawe in Argyleſhire, to which place great quantities of timber are brought down from Glenorchy to Loch Awe, and then by the water or river Awe, in which are plenty of ſalmon. Alſo from Logh Etive to Bonawe.

Upon Lochiel's eſtate are fine woods, which may eaſily be brought to FORT WILLIAM—Alſo upon Loch Neſs, particularly on lord Lovat's eſtate, which might be brought to Inverneſs. Upon Chiſholm's eſtate are likewiſe very fine woods on the river Beauly, but ſo difficult to be brought to the river, which has ſeveral falls, that it makes the wood of little value. In like manner lord Braees has very fine woods about the head of the river Dee, forty miles from Aberdeen; but ſomewhat the ſame difficulties attend them as do the laſt mentioned. It is much to be regretted, that ſuch fine timber, fit for ſhips maſts, ſhould be cut down into boards, or left rotting on the ground; I can't think, but by ſome contrivance they might be brought to water-carriage.

All round about the weſtern iſlands, and oppoſite upon the main, are plenty enough of herrings, cod, ling, and ſalmon, &c. to enrich a nation. We have ſometimes a hundred ſail of ſhips there in a ſeaſon, and all of them get their loadings; and many more ſhips might be loaded, if the fiſhery was upon a right eſtabliſhment; but at preſent it is attended with ſo much charge, and is ſo precarious, that many adventurers ſuffer greatly by it, and it is in a great meaſure given up; for the chief herring-ſeaſon is in the winter time. Ships come thither from the eaſt and weſt country loaded with ſalt and barrels, and proviſions for three or four months voyage, beſides ſtores of tobacco, ſpirits, oatmeal, and bread for the Highland fiſhermen; for they carry no nets of their own, but engage the Highland boats to fiſh for them, giving theſe Highlanders proviſions fiſh or no fiſh, and then giving ſo much more for the barrel of freſh herrings, according to their ſucceſs and demands.

The proprietor of the eſtates where ſuch fiſhings are, exacts one night's fiſhing, the beſt in the week, for himſelf; alſo a tax for the liberty of packing them upon the ſhore. If a veſſel gets a cargo, when many of them are together, it will come pretty dear, by the quantity of proviſions given to the fiſhermen, and the high price for the freſh herring, every one ſtriving to have his cargo firſt, by reaſon of the bad weather at that time of year. It ſhould not be forgot alſo, that it is ſomewhat precarious, for though the herrings come annually pretty regular, yet it is uncertain into what loch they will come, and how long they will remain.

Suppoſe a number of ſhips goes to Loch Boque on the weſt ſide of the Lewis, and after ſtaying ſome time, they hear that herrings are plenty in Loch Broom upon the main; if the wind is weſterly, which is often the caſe, they may not get about the iſland for a long time, and when they arrive at Loch Broom, the herrings may have ſhifted to Loch Seafort or Stornway, on the eaſt ſide of the Lewis, and thereby the fiſhers be altogether diſappointed. Then it comes to be a heavy loſs upon the adventurers; the dead freight of the ſhip which from this Firth is generally 40 s. per laſt, being ſunk, ſtores exhauſted, ſalt waſted, barrels ſpoiled, &c.

Wherefore, in my humble judgment, ſtorehouſes ſhould be erected in ſundry places, ſalt, barrels, and other neceſſaries lodged there, and ſhips not to come till their loadings are ready.

I ſhall communicate ſome farther thoughts about improving of this article, amongſt other remarks ſubjoined to this letter, and beg reference thereto.—But I muſt here previouſly obſerve, that the conſequence of ſuch ſettlements would be the making of ſo many towns, cultivating more ground, growing of corn, and planting of potatoes, &c. Alſo the fiſhermen would always be at hand, and prompted to follow after the ſucceeding fiſheries of cod and ling. In many of theſe weſtern iſlands, they have great quantities of fern, which is found to contain the beſt and moſt ſalts of any vegetable; they burn the fern to aſhes, and either uſe them in place of ſoap, or make a pot-aſh and ſoap of them. Theſe ſhores likewiſe abound with ſea-weeds, which are burnt into kelp, fit for bottle glaſs-houſes, and great quantities thereof are brought to Newcaſtle.

Some of theſe iſlands are very fruitful in corn, barley, or bigg, and oats, particularly the iſland of Tyric, which is level; it belongs to the duke of Argyle, and the ſouth end of the ſouth-weſt belonging to M'Donald of Clandronald, abounds moſtly with limeſtone and marle; alſo they here uſe the ſea-weed for manure.

They often delve their ground with garden-ſpades, and ſow their corn by drilling, by which means it produces ſixty fold. Theſe iſlands and the Highlands in general, abound with black cattle, which are drove down to fairs and markets in the low countries, particularly to Crief and Falkirk; at the former of which places, I have ſeen twenty thouſand head of cattle, and ſold from 30 to 40 s. per head; moſt of them are drove from thence to England, where they are fattened and brought to London, which is alſo a great trade from the ſhire of GALLOWAY.

ORKNEY

ORKNEY and SHETLAND iſlands are the moſt northerly parts of his Majeſty's dominions in Scotland; the former of theſe helps to feed the latter, Orkney being plentiful in corn and all ſorts of vivers; they are very populous, moſt of the inhabitants are fiſhermen, or at leaſt they underſtand to handle the oar; oatmeal is from 7 to 8 s. per boll, or 1 s. 4 d. Engliſh; bigg 5 to 6 s. per boll, or ſix Wincheſter buſhels; beef and mutton ¾ to 1 d. per pound; geeſe 4 d. to 6 d. fowls 2 d. to 3 d. eggs 1 d. per dozen, or 14; eating butter 2d. ½ per pound, greaſe butter 30 to 40 s. per barrel. Wages for women ſervants, 5 s. 6 s. 8 d. to 8 s. 4 d. per ann. men ſervants, 12 to 15 s. per ann. wages for head ſervants about 4 d. per diem, and maintenance. Their fiſhing here is not conſiderable, on account of the rapidity of the tides; in Pentland Firth, the tide running nine miles an hour, yet they have plenty of fiſh for their own conſumption, and ſome for exportation; however, they are ſo expert at the buſineſs, that they go generally to the iſland of Bara, the ſouthernmoſt of the long weſtern iſlands, to the cod and ling-fiſhing, and are annually employed by all the Britiſh cod-fiſhers to Iceland.

The Hudſon's-Bay ſhips call there every year, and carry ſome of them to remain at their ſettlements in Hudſon's-Bay for ſeveral years, and afterwards bring them home and exchange them for others. This year about 300 of them are employed on board the herring-buſſes belonging to the London ſociety; I think they may alſo be made very ſubſervient and uſeful to our Greenland whale-fiſhing.—They have ſome linen and woollen manufactures, particularly thoſe of coarſe ſtockings.—Capt. M'Kenſie has made a very exact ſurvey of the Orkney and Lewis iſlands, with deſcriptions of them, alſo of the ſoundings and tides, publiſhed in folio; he is now employed by the lords of the admiralty to go on with the ſurvey of all the weſtern iſlands and coaſts, which, when publiſhed, will be of very great uſe.

ZETLAND, or SHETLAND, grows but little corn; yet the country is populous, and is ſupplied with oatmeal from the Orkneys and other parts; they are much employed in fiſhing for herrings, cod, ling, and tuſque. This laſt-mentioned is a thick, fat, and delicious fiſh, ſomewhat like a ſmall cod, not found any where elſe in Britain; they have a conſiderable trade to Hamburgh with their fiſh and coarſe ſtockings, from whence they bring many neceſſaries as well as ſuperfluities of life.

BRASSA SOUND, famous for the rendezvous of the Dutch herring-buſſes; formerly eighteen hundred ſail have been here from Holland in one ſeaſon. The Dutch buy of them coarſe ſtockings and mittens.—Whales come frequently aſhore on ſome of theſe iſlands, which proves a good perquiſite to the admiral. Alſo there are too often ſhipwrecks of Dutch, Daniſh, and Swediſh Indiamen, and large Norwegian ſhips bound for the Iriſh channel.—They have fine beef and mutton in this country, and live very comfortably, but their fiſheries might be much improved.

REMARKS.

The laſt parliament, continues my correſpondent, were inferior to few in regard to the wiſe meaſures taken by them for the encouragement of trade and manufactures, as well as for ſeveral uſeful laws, tending particularly to the improvement of this part of the united kingdom. Many of the ſame perſons being ſtill in the adminiſtration, and the new parliament having an addition of many true patriots, gives us the pleaſing hope and proſpect of a continuation of ſuch a ſyſtem of policy, as will effectually preſerve and promote the commerce, and the public credit of theſe kingdoms.

Amongſt theſe, the fiſheries are not the leaſt. We have ſeen the happy effects of the bounty for the whale-fiſhing; though it was granted only for ſeven years, yet the trade has increaſed ſo much, that we have had this year eighty-nine large ſtout Britiſh ſhips in Greenland, which have been, in the general, pretty ſucceſsful; the nett produce of which fiſhery is near all gain to the nation, beſides the multiplying our fiſhers and ſailors. But as extraordinary charges attend every new trade at its commencement, and in this caſe in particular, from the neceſſity of erecting of boiling-houſes and warehouſes, and bringing from the iſland of Foern on the coaſt of Jutland, commanders, ſpectioneers, and harponeers, &c. both to execute our buſineſs and inſtruct our people: theſe things are very expenſive to the firſt undertakers. We are obliged to give thoſe chief officers high wages and premiums, and are at the charge alſo of ſending them home again annually.

On theſe conſiderations, it is judged abſolutely neceſſary to have a prolongation of the BOUNTY for ſeven years farther, which was laſt winter approved of by a late able miniſter, but put off 'till this winter on account of a new parliament. As this and all bounties are given amongſt ourſelves, they can be of no loſs to the nation; and therefore it is to be hoped, a meaſure ſo expedient will meet with no obſtruction. Beſides, in this caſe, the revenue is firſt increaſed by all the duties on the articles uſed by this trade, viz. on iron, hemp, flax, oak plank, pitch and tar, &c. for building of ſhips; alſo the duties and exciſes on ſpirits, liquors, and ſalt, &c. conſumed in theſe voyages, make us fit out and navigate, at a greater charge than our neighbours and rivals. Wherefore the bounty is but returning only a part of thoſe duties, and putting us on a footing with our neighbours. And after the ceſſation of this bounty, it is reaſonable enough to believe, that this trade may be able to ſtand upon its own legs, and conſequently will greatly tend to increaſe the revenue, as well as greatly benefit the whole kingdom. It is to be hoped likewiſe, that by the time of expiration, we ſhall have no occaſion for theſe Jutlanders, who make good advantage in ſerving us at preſent, as well as the Hollanders, Hamburghers, Bremeners, with the chief officers in the whale-fiſhery. But as every ſaving is neceſſary to be made upon an infant trade, wherein we are rivalled too, it is humbly propoſed, That As the iſlands of Orcades lying in the latitude 58 and 59, and directly in the way to Iceland and Greenland, are a very plentiful country for all ſorts of proviſions, and well peopled, more eſpecially with fiſhermen; ſo the fleet of 25 to 30 ſail of veſſels from BROAD STAIRS, RAMSGATE, or MARGATE, for the annual Iceland cod-fiſhing, ſhould proceed from thoſe parts to the Orkneys, with no more hands than are neceſſary to navigate the veſſels thither; where they ſhould take on board all the additional hands wanted for the fiſhing, and ſet them down again in about a month or ſix weeks upon their return from the fiſhing; by which means there will be a conſiderable ſaving in the articles of wages and proviſions.—In like manner our Greenland-ſhips might ſail from all the different ports in Britain, at firſt with their officers and as many hands only as are neceſſary to navigate the ſhips to the Orkneys, and there take in the additional hands for boat-ſteerers, &c. wanted for that fiſhery; theſe hands may be made boat-ſteerers the firſt year, and learn in a few voyages to become dexterous harponeers and ſpectioneers, &c.: theſe additional hands likewiſe may be ſet down again upon their return from the fiſhing. This would not only prove a great ſaving in wages and proviſions in thoſe fiſheries, but alſo be a certain reſource for theſe officers and hands, that are ſo neceſſary for the buſineſs; whereas, at preſent, we are at an extraordinary charge for our dependance upon the Jutlanders before mentioned; and though many of our people are taught to be chief officers, as harponeers, &c. yet it frequently happens, that the neceſſary Jutlanders are otherwiſe engaged in voyages abroad, or out of the way when wanted; ſo that the Orkneys may, in this reſpect, ſupply the place of Jutland: for which purpoſe, ſome new regulations in the law for obtaining licences, in order to give title to the bounty, would be neceſſary.

We before obſerved, that there are in Scotland 16 large ſhips employed in the Greenland trade, which, in proportion to the number of merchants and their ſtock, is more than in England: but as the articles of our cuſtoms, out of which, as we have ſaid, theſe bounties are payable, viz. out of the OLD SUBSIDY, PETTY CUSTOMS, ADDITIONAL DUTY, ONE PER CENT. INWARDS, and COMPOSITION in PETTY SEIZURES, have proved inſufficient to anſwer the intention of parliament; there are already conſiderable arrears due to the Greenland ſhips and herring-buſſes, contrary to the deſign of the legiſlature. Upon this account, the herring-fiſhing chamber of Edinburgh has already given up; and I am afraid, unleſs ſome remedy is found, the other chambers and whale-fiſhing adventurers in Scotland, will be obliged to follow their example; for it is not enough that the government owes them ſo much money, theſe trades cannot be carried on in Scotland without punctual payment of the bounties; and what a pity would it be, that ſuch a national and beneficial trade ſhould be ſo ſhort lived! But we have all reaſon to hope, that the parliament, when applied to, will give ſpeedy and effectual relief; and that they will not ſtarve, but nurſe and cheriſh, theſe infant undertakings.

Having mentioned the herring buſs-fiſhing, which in Holland is called the great fiſhery, it requires and deſerves ſome conſideration. I am glad that ſo many gentlemen of worth and conſideration are concerned in the fiſhing ſociety at London, who may overcome any difficulties that may occur in ſuch a delicate branch of trade, wherein we have many rivals.

In order to anſwer this great end the more ſpeedily and ſubſtantially, we are humbly of opinion, that the act of parliament needs ſeveral amendments. The chief intention of the legiſlature, was certainly to make this branch of trade general, and to ſpread itſelf throughout the kingdom: but the 3 per cent. bounty upon the amount of money employed that way, being reſtrained to the ſociety at London, and the chambers at the out-ports, prevents this trade becoming general, becauſe no private adventurers in buſſes are entitled to it.

Moreover, the out-port chambers complain of trouble and expences in being obliged firſt to remit their money to London, which is deſigned to be employed in this trade, paying it into the bank and drawing it out again, without any manner of uſe. Another great inconveniency is, that they are obliged to ſend all their vouchers to the ſociety at London, in order to receive the ſaid 3 per cent. through their hands.

Now it is humbly ſubmitted, that if the parliament ſhould think fit, in lieu of the ſaid 3 per cent. which correſponds to about 10 s. per ton, and in lieu of 30 s. per ton already ſtipulated to be paid, to grant 40 s. per ton for the whole bounty to every buſs, that ſhall be fitted out with nets, and

all

all neceſſaries for the herring-fiſhing, the buſſes being ſurveyed and certified by the officers of the cuſtoms, in the ſame manner as the whale-ſhips are ſurveyed, &c. it would anſwer much better; and, indeed, when the great charge of nets is conſidered, the herring deſerves rather a larger bounty than the whale-fiſhing.

It may be worth obſerving, that it has been found by experience the herrings are often ſeen about the Lewis and weſtern iſlands, in the months of May and June, as well as in the autumn and winter months: wherefore, it might be permitted for buſſes to fiſh in theſe places in all ſeaſons; they will always go where they expect the beſt ſucceſs: it may be ſufficient for them to be properly fitted out, and to be employed in the fiſhing, at leaſt four months in the year, to entitle them to the bounty. This article of early herring and buſs-fiſhing comes to be very dear, on account of the great charge of nets, and the fiſh are chiefly conſumed in the Netherlands and Germany: the Dutch themſelves for that reaſon are much fallen off from this early fiſhery. The Baltic conſumption is chiefly ſupplied from Norway, where they have large quantities of herrings cured and packed, at about 6 or 7 s. per barrel: they are afforded ſo cheap, by reaſon of their being caught within lands and inlets of the ſea, by a number of ſmall boats and nets at an eaſy charge, and the people being always at home. They have of late years a contrivance, which may deſerve the attention of our people, by which they catch great quantities in a ſhort time. The method is this: when the herrings come into ſome of their deep bays, they draw a parcel of large nets joined together like a fleet of buſs-nets, acroſs the mouth of the ſaid bays, which is called an incloſing net, by which means the herrings are incloſed and hemmed in; then the ſmall boats with their nets fall to work, and do great execution.

We have before obſerved, what advantages may be derived to Scotland from the many lochs or inlets of the ſea, in the weſtern iſlands and the Highlands, which run up from 10 to 30 miles within land, and often not above one mile broad; particularly the Firth of Cromarty, Lochs Rogue, Seafort, and Stornaway in the Lewis, and Lochs Aſſynt, Broom, and Torndon, oppoſite on the main, and ſundry others; into ſeveral of which lochs, herrings do annually come in great plenty. Since this is the caſe, we might encloſe and hem them in, by a fleet of buſs-nets drawn acroſs the loch, as is done in the Baltic; and notice being given to all the boats round about, they would come with their ſmall nets, and fiſh what quantities they pleaſed.

If this ſhould be found practicable, it would be requiſite to have proper places, the moſt centrical for this fiſhing, ſtorehouſes with ſalt and barrels, and all ſorts of neceſſaries, where coopers, twine-ſpinners, and net-breaders, &c. may have employment the whole year; and when the herring ſeaſons are over, the fiſhers may be employed in the cod and ling-fiſhery, of which there are great plenty and very good in theſe parts; there are likewiſe many rivers ſtored with fine ſalmon much neglected; theſe fiſheries, when improved to the extent they are capable of, would greatly contribute to increaſe the wealth of the united kingdom, and prove an additional nurſery for ſeamen: but theſe things are more proper for ſome ſociety, public or private, the adventure and trouble being too much for private people.

When herrings are caught in theſe parts and properly cured for exportation, either to the Weſt-Indies or other places, the beſt opportunities of ſhipping are from London, Briſtol, Liverpool, &c. yet there are difficulties in bringing them coaſtwiſe, by reaſon of the debenture upon exportation: this ought to be regulated, as a further inducement for private perſons or ſocieties to engage herein. See the article DEBENTURE.

They are much embarraſſed alſo in Scotland in relation to the article of foreign ſalt, imported for the cure of fiſh [ſee our article SALT], which requires ſome amendment in the law. Though a quantity of ſalt ſhould, at preſent, lie a number of years, in which time it will waſte conſiderably, yet no allowance is made to the trader for ſuch waſte. For when weighed out again, the cuſtom houſe claims a penalty of 10 s. per buſhel duty for every deficient buſhel. If at importation it is entered for the cure of fiſh, and there is no opportunity for uſing it that way, which has been the caſe in this Firth for ſeveral years, as ſalt is generally brought hither by our retour ſhips from the ſtraights; yet that ſalt is not allowed to be exported, but muſt lie as a dead ſtock, and waſte away, beſides being liable to the above-mentioned penalty; which is a difficulty on this trade, that ſeems neceſſary to be removed.

Alſo when any parcel of ſuch ſalt is carried from Edinburgh to the Highlands and weſtern iſlands for the cure of fiſh, there are ſome hardſhips that attend traders herein; for they give bond at 10 s. per buſhel, and the merchants or purchaſers grant alſo new bonds to the cuſtom-houſe in theſe parts where it is lodged and to be uſed; yet the firſt importer is ſtill held bound to cancel theſe bonds, though it ſhould be many years after, until the ſaid ſalt ſhall be conſumed: ſome remedy would be neceſſary for this article likewiſe.

We come now to the conſideration of the linen manufacture, which certainly is an object no way unworthy the moſt ſerious public regard and attention.

This ſtaple manufacture was firſt cheriſhed and raiſed in Scotland by the means of bounties; but by ſome unhappy miſtake, thinking it could ſtand upon its own legs, the bounty was this year withdrawn, which has given a ſudden check to its growth; nor will it be able to riſe again without ſome powerful aid. For I am informed by good authority, that above eight thouſand weavers are quite turned adrift, many of whom are ſent to our plantations, many become ſoldiers both in the Britiſh and Dutch ſervice, and ſome are gone into other employments of various kinds at home.

If this, upon due inquiſition, ſhould be found to be FACT, is not this undoing all that has been hitherto done? If this capital manufacture ſhould ever be revived again, it muſt be ſome conſiderable time firſt; a number of hands cannot be collected and bred to this manual art of a ſudden. See our articles ARTIFICERS and MANUFACTURERS.

Ireland, though more concerned in the linen manufacture than Scotland, does not ſuffer ſo much, becauſe of their high bounties at home. It is true, the government has granted 3000 l. per ann. in aid to civilize the Highlands, by promoting the growth of lint and eſtabliſhing the manufacture there; which moſt certainly in time will be of great uſe, but cannot be a preſent relief to this valuable and important article, and preſerve it from ruin.

It is ſuggeſted by ſome, as a redreſs for this grievance, to take off the drawback on the exportation of foreign linen; but we are afraid, this meaſure will not effectually anſwer the purpoſe, and may be attended with conſequences no leſs diſadvantageous than thoſe it is intended to prevent; for, if the drawback is taken off, only upon what linen is re-exported to our plantations, it is likely to prove a means of encouraging fraud and ſmuggling, by entering the ſame out for other places, and ſmuggling it into America. If the drawback is wholly taken off, theſe linens from other places may ſtill be ſmuggled to America.

Moreover, a meaſure of this kind may diſcourage our trade to Germany, by not taking ſome of their goods in exchange for ours. And may not our commerce to Spain, &c. be greatly prejudiced, for want of an acceptable aſſortment of cargoes? As other nations may obtain the proper aſſortments from France and Holland, if this ſhould prove the caſe; ſo the remedy leaſt injurious, ſhould ſeem to be the revival of the bounty upon Britiſh linen exported. And although the giving ſuch bounty ſhould be thought a preſent incumbrance, yet as it wholly centers and circulates among ourſelves, the nation cannot be the poorer, but muſt neceſſarily ſo proſper in its linen manufactures and the employment of the poor, as to make ample and permanent compenſation for this temporary national burthen.

Another article of great importance, which ſeems to be in a declining way at preſent, as well in Scotland as in England, is our tobacco trade, which hitherto has occaſioned a great demand and conſumption of our manufactures, and given employment to many ſhips; and the re-export thereof has brought money into the kingdom, and enabled us to pay the ballance due for other articles imported. But we are informed, that the late act of parliament, though well intended, to prevent many abuſes and frauds committed in this trade, is attended with ſo many real difficulties and diſcouragements to traders, that both officers and merchants are often at a loſs what to do: wherefore, ſeveral American merchants in Scotland have given up this trade, and others, it ſeems, are likely to follow their example. This has an evil aſpect. To remedy which, it would be happy if ſome method could be found, that would prevent fraud, without cramping or deſtroying the trade. 'Till ſomething better can be ſuggeſted, we would ſubmit to conſideration the example of lowering the duties on teas. This has had ſo happy a tendency, as to produce a far larger revenue to the crown than it did before, [ſee the article SMUGGLING] and to prevent ſmuggling in the like proportion. Let it be ſuppoſed that the duty on tobacco was, in like manner, reduced even to 2 d. per pound, is it not highly reaſonable to believe, that the ſame deſirable effect would follow therefrom, as hath done in regard to the duty on teas? and that the revenue would be thereby conſiderably increaſed, and ſmuggling proportionably ceaſe, which is now encouraged as well by the high duties at home, as the great drawback on exportation? Nor is encouragement to ſmuggling the only diſadvantageous conſequence of theſe high duties; it alſo gives foreigners the benefit of manufacturing our tobacco cheaper than we can do; and that tobacco which does not coſt them above 2 d. per pound, is ſent us again worth from 2 s. 6 d. to 5 s. per pound, ſuch as Straſburgh rappee, &c. whereas if the manufacturing of tobaccoes in all its ſhapes at home was encouraged, as well as the exportation of the ſame ſo manufactured, and either no drawback at all, or only half of the duty, allowed for the export of unmanufactured tobacco, we ſhould then not only have a great additional benefit from the trade, but the revenue augmented in proportion to the increaſe of the vent and conſumption.

This manufacture of tobacco in France alone, has enabled the farmers to pay for that branch, and ſalt, 40 millions of livres; which, in the time of Lewis the XIVth, was farmed

for no more than 8 or 10 millions; for which reaſon, perhaps, they will not be very ready to promote the growth of it, either in America or at home. I have been told another reaſon for our tobacco being brought ſo low is, that we plant too great a quantity, and that it would be better to burn a part of it, as the Dutch do their ſpices: wherefore, would it not prove more nationally beneficial to raiſe a ſmaller quantity of tobacco, and employ our ſpare ground and hands in raiſing hemp and flax, &c.?

The article of mines in Scotland ſeems to be greatly neglected, though ſeveral works have turned to no inconſiderable account; which may ſerve as a ſpecimen of what may reaſonably be further expected. This part of the united kingdom is mountainous, and has many promiſing appearances of veins of copper, lead, and, in ſome places, tin; and ſome of theſe contain ſuch a proportion of ſilver, as is worth the extraction. Yet hitherto ſtrangers have not ventured much into the Highlands, the reaſon of which, we may preſume, has been, that property was formerly not ſo ſecure there as could be wiſhed. The caſe at preſent is much altered for the better, ſince the plan formed by the laſt parliament for appropriating the forfeited eſtates in the Highlands to the public benefit, appears to be of ſuch national importance; and, ſince his Majeſty, in his late moſt gracious ſpeech, recommended it to the preſent parliament to make ſuch further proviſions as may be expedient for perpetuating the due execution of the laws in that part of the united kingdom *, we may expect that not only improvements in the Highlands will be made in the mineral kingdom, but in many other manufactures, and in the fiſheries. This will certainly give a new face, not only to the Highlands, but to every part of the kingdom of Scotland; it will convert, we hope, the ſpirit of rebellion into that of honeſt induſtry, and uſeful commerce, which will render the people proſperous and happy, inſtead of poor and turbulent, under his Majeſty's benign government.

* See his Majeſty's Speech, November 14, 1754.

As an inducement to cultivate the arts of mineralogy and metallurgy in Scotland in particular, where nature ſeems to have given ſo generous an invitation, we need only conſider what a beggarly country Sweden would be without their mines; nor has Ruſſia, of late years, leſs profited by them.

Upon the whole, Scotland, it is certain, has by nature many advantages for trade; a large territory; of eaſy defence; plenty of people, if employed at home; a wholeſome air; mines; a proper ſituation for the eaſtern and weſtern trades; a ſafe coaſt; rivers of eaſy entry; the ſeas and rivers ſtocked with fiſh. This country is as capable of extended trade as any in all Europe; yet, 'till within theſe few years, it was reduced to a very low ſtate: trade was ruined; the national ſtock waſted; the people forſook the country; the rents of lands were unpaid; houſes in towns, and farms in the country, were thrown upon the owners hands; the creditors could not have the intereſt of their money to live on; and the debtors perſons and eſtates were expoſed to law.—But ſince the Union, the aſpect of things is certainly greatly changed for the better; and, if this country had not unhappily been the dupes and bubbles of a rebellious crew, this nation would have certainly been in a far more proſperous condition. And it is to be hoped, that no wiſe meaſures will be wanting effectually to eradicate this curſed ſpirit of rebellion among the more ignorant Scots, for that is not likely ever to prove of other conſequence to them than to promote the ſpirit of anarchy, and, conſequently, of woe and poverty.

Before I conclude this article of Scotland, I think it proper to acknowledge, that the chief matter of which it is compoſed was communicated to me by Francis Grant, Eſq; brother to Sir Archibald Grant, Bart. and alſo to the right honourable the late lord high advocate of Scotland, and now lord Preſton-Grange, one of the lords of ſeſſion.

Of the WEIGHTS and MEASURES of SCOTLAND.

The weight in Scotland upon which not only their other weights, but likewiſe their liquid and dry meaſures are founded, is the French Troy ounce, being about one and four fifths per cent. lighter than ours; but their pound conſiſts of 16 ounces, whereas that of our's is only of 12.

There is no doubt but this ounce was originally the ſame with our's, and that it is only time and neglect hath made this difference.

The Scottiſh pint, upon which all their wet and dry meaſures are founded, ought to weigh, of the running water of Leith, 55 of thoſe ounces, and to contain about 99 ſquare inches: conſequently, their three pints being as 297 is to 282, is 5 per cent. better than our beer gallon, near 103 of ſuch pints going to our beer-barrel.

Their ordinary peck conſiſts of 21 $\frac{1}{4}$ of ſuch pints; but the peck uſed for oats, barley, and malt, contains near 31 of ſuch pints; and thus their boll conſiſts of four ſuch pecks; their ordinary peck is about one-fifteenth part leſs than our buſhel, but the extraordinary about a fourth part more.

In this kingdom they did uſe to keep their accounts three different ways, viz. in Scotch pounds, ſhillings, and pence; in Scotch marks; and in Engliſh pounds, ſhillings, and pence: counting 20 Scotch ſhillings to a pound, and 12 Scotch pence to a Scotch ſhilling, and 13 Scotch ſhillings and four Scotch pence to a mark; a Scotch ſhilling being then only valued at the price of an Engliſh penny, and their mark was valued at no more than 13 $\frac{2}{3}$ d. Engliſh money.

But ſince the union of the two kingdoms, the ſame ſpecies of gold and ſilver as are coined in the king's mint in the Tower of London, paſs current in this kingdom.

SEA DOMINION in general. The conſtant proſperity of our trade and navigation depending principally on the figure the nation is capable of making at ſea, and preſerving thoſe rights and privileges upon that liquid element, to which we are not only intitled by nature, but by the laws of nations, and by treaties; it becomes neceſſary, in a work of this kind, to take proper notice of a topic of ſuch high concernment.

By the word ſea, according to the genuine ſignification, is underſtood the ocean and main ſea, as well as gulphs and inland ſeas, ſuch as the Mediterranean, Adriatic, Egean, Britiſh, and Baltic Seas, which are more immediately ſubject to dominion: for as to the ſovereignty of the vaſt ocean, no man can pretend to it, unleſs he was lord of the univerſe; and the dominion of every prince and ſtate can extend no farther on the main ſeas than where it is reaſonable that his neighbours ſhould begin, or where the particular dominion is loſt in the boundleſs deep.

By dominion is meant a propriety, or right of uſing, enjoying, diſpoſing of, and freely alienating the thing ſo enjoyed and poſſeſſed. This dominion is of two ſorts; that which is common to all men, as poſſeſſors without diſtinction; and that which is particular to ſome, appointed and ſet apart by peculiar perſons or ſtates, ſo that all other perſons are excluded from a liberty of uſe and enjoyment, without the previous conſent and permiſſion of the proprietor or enjoyer.

That the land is ſubject to ſuch a dominion is not doubted; but ſeveral have objected againſt the dominion of the ſea. They ſay the nature of the element will not admit of any ſuch property, that being fluid, and, conſequently, ſubject to a continual alteration, by the acceſſion of new waves, which continually ſhift from one place to another; whereby the ſtate of it is ſo abſolutely uncertain, that it is hard to ſuppoſe any part of it retainable in a particular poſſeſſion, which naturally conſiſts in the diſtinction of limits, and they cannot conceive this poſſible in the ſea.

To which it is anſwered, That as God has ordained the land ſhould be ruled, protected, and governed by public power, ſo the ſame is appointed for the ſea, which cannot be alleged to be near ſo fluid as rivers, the property of which has been ſeldom, if ever diſputed. If it is ſaid, Rivers being bounded on either ſide by land, can admit of particular dominion more eaſily than the ſea, this makes for our purpoſe, to prove the king of Great-Britain's title to the ſovereignty of the Britiſh Seas, they being in a great part bounded by land.

But to anſwer the above-mentioned objection more generally; no reaſonable man will deny, that tho' the water is frequently ſhifted, the channel, or ſpace of ground over which it flows, continually remains the ſame; and when a man is ſaid to rule over a ſea or river, it is underſtood not of the element, but of the ſite where they are placed. The waters of the Britiſh and Adriatic ſeas continually run out, yet the ſea is the ſame; as the Tyber, Po, Rhine, Thames, or Severn, are the ſame rivers as they were a thouſand years ago; and this is what is ſubject to princes by way of protection and government.

Would it not ſeem ridiculous if any man ſhould allege, that the ſea ought to be left without protection, ſo far that any one might do what he pleaſed there, well or ill, rob or ſpoil? Which alone argues, that the ſea ought to be governed by thoſe to whom it moſt properly appertains by divine diſpoſition.

The air is a much more fluid element than the water, and yet that ſpace which is above any piece of land that any particular perſon poſſeſſes, is ſo abſolutely the property of the owner, that he may lawfully hinder any man from extending a ſconce, or any thing from any contiguous building, that may reach over his ground, even though the foundation of any ſuch building be entirely upon the ground of him who owns it. And if the poſſeſſion of the ground gives the proprietor an unqueſtionable title to the dominion of the air, the poſſeſſion of the channel of the ſea muſt ſufficiently intitle the poſſeſſors to the dominion of the waters. As to their not being capable of limits and bounds, on account of their fluidity, that is a frivolous argument: for, unleſs the ſea is ſuppoſed to be infinite, it muſt neceſſarily be bounded; and it is certain the ſea and land do ſo mutually embrace one another with crooked windings and turnings, this by peninſulas and promontories, and that by creeks and gulphs, that they both promiſcuouſly ſet bounds to one another; and, beſides, it has been bounded.

Others

Others object againſt the particular dominion of the ſea, that freedom of paſſage, commerce, and traffic, is a right ſo inherent to mankind, that it can no where be abrogated or aboliſhed, by any law or cuſtom whatſoever, and that the ſea is like the highway, common to all. To this we reply, It is ſo, as much as other highways by land, or great rivers are, which, though common and free, are not to be uſurped by private perſons to their own intire uſe, but remain to the uſe of every one; not that their freedom is ſuch that they ſhould be without the protection and government of ſome prince or ſtate.

As the ſea is capable of protection and government, ſo is the ſame, no leſs than the land, ſubject to be divided among men, and appropriated to cities and potentates, which long ſince ſeems to have been ordained as a thing moſt natural.

As to the community of the ſea by freedom of paſſage, no body pretends an inoffenſive paſſage ought, or can in reaſon be denied to travellers and ſtrangers at ſea, in as much as it has relation only to the offices of humanity, and where there is no cauſe of fear or jealouſy; which freedom of paſſage does not in the leaſt derogate from the dominion of the place where ſuch perſons are permitted to paſs: becauſe the paſſengers being allowed that liberty, not as having a regal right and title to it, but by permiſſion, and the permitting of another to participate of any thing, does not in the leaſt diveſt the owner of his propriety, or any ways diminiſh his power over his own, eſpecially when he himſelf loſes nothing by it. All paſſages through foreign countries are (as they ever have been) ſubject to ſuch limitations and reſtrictions, as the ſeveral princes and ſovereigns of the countries, through which paſſage is deſired, think fit for the welfare and ſecurity of their own people, as well as of their allies.

The right of the flag, which is in the crown of Great-Britain, demands a mark of reſpect from all ſhips paſſing in the Britiſh Sea, and is the limitation and reſtriction on which ſuch paſſage is permitted. As to that part of the objection which relates to the liberty of trade, it appears, at firſt view, ſo trivial, that it needs no other confutation but a flat denial, as the objectors give no other reaſon but their bare aſſertion: but, to ſilence them, let us ſuppoſe that, in time of peace, France would exchange her wines with England's wool, and the Engliſh, not finding it conſiſtent with the intereſt of the nation to let the wool be exported (as certainly it is not) nor being willing to give the French money for their wines, ſince they can be abundantly ſupplied with that commodity from Spain and Portugal, in exchange for Engliſh manufactures, ſhould refuſe any ſuch commerce with France; the queſtion is, Whether France has any right to compel England to compliance with her demand? Who is there that will not anſwer in the negative? it being certain that every nation in the world may conſent to or refuſe all traffic with any other, as they think fit, except there has preceded ſome treaty or compact to the contrary. Some who oppoſe the dominion of the ſea, inſtead of arguments, pretend to produce authorities againſt it, which we ſhall obſerve, as far as they ſeem to have any weight with them.

They tell us Antoninus Pius, according to Marcianus the lawyer, and Juſtinian in his Inſtitutions, declared, That, by the law of nature, the air, as well as the rivers, the ſea, and its ſhores, ought to be common to all. Accordingly he allowed the fiſhermen of Formia and Capena (and all others in general) to fiſh upon the ſhore, with this proviſion only, that they ſhould not meddle with towns, monuments, and buildings, which were not by any law common to all. They alſo cite Ulpian againſt the dominion of the ſea, as ſaying, That the ſea, being by nature free for all, cannot be ſubjected by any peculiar law or private dominion; and in another place, That the ſea and ſhores are common to all, as the air, and that it is often declared by the emperors, That none ſhould be deprived of the liberty of fiſhing. We are told alſo, that Antoninus Pius ſaid, That he himſelf was lord of the world, but the law of the ſea. If the opinion of ſome particular perſons was of ſufficient authority to build the ſuppoſitions of the abſolute community of the ſea upon, theſe objections might be of ſome force: but, by inquiring diligently into the laws and cuſtoms of moſt ages and nations, we ſhall find the matter to be quite otherwiſe; and to evidence it, in the courſe of our argument, we ſhall inſtance ſeveral nations that were ſucceſſively in poſſeſſion of the ſovereignty of the Eaſtern Seas.

As to the teſtimony of Ulpian, let us make uſe of him himſelf againſt it: for he reckons the revenues of fiſheries (which are generally looked upon to be part of the regalia, or royalties of the prince) among the public cuſtoms, and places fiſhponds among the other poſſeſſions that are deemed liable to pay aſſeſſments. Juſtinian's laws, as excellent as they are, have ſuffered conſiderable infractions and alterations, and particularly in one relating to the marine: for by his laws, ſhips driven by tempeſt upon a ſhore, ſhould either belong to the former owners, or as things relinquiſhed and unpoſſeſſed become theirs who firſt ſhould find them; which good law is confirmed in the German empire, but intirely altered by ſeveral other nations, and, among others, by the Engliſh. In a word, it is not to be ſuppoſed that Juſtinian meant, by any decree or inſtitution of his, to forbid a particular dominion of the ſea, ſince he appropriated the Helleſpont to himſelf, in ſuch a manner that the liberty of that ſea, and the ports there, coſt the merchants and mariners that frequented them very dearly, according to Procopius, who was his contemporary, and wrote his hiſtory. The moſt conſiderable authority the objectors quote, is the anſwer of the emperor Antoninus Pius, That he himſelf was lord of the land, but the law of the ſea. This matter being put in a wrong light, the reader ſhould be informed of the fact, which is this:

Endemon Aſiaticus, a native of Nicomedia, a city in Bithynia, having ſuffered ſhipwreck in the Egean Sea, and his goods having been ſeized by the cuſtomers of the Cyclades Iſlands (in the Archipelago) he repreſented to the emperor Antoninus how unjuſtly and cruelly theſe cuſtom-houſe officers had dealt by him, and petitioned him for relief (according to Voluſius Marcianus, who was one of that emperor's privy-counſellors) in theſe words, Oh emperor Antoninus, our lord, we having been ſhipwrecked, were robbed of all by the receivers of the cuſtoms that inhabit the Cyclades Iſlands! To which the emperor made him the following anſwer, I indeed am ſovereign of the world, but the law of the ſea: let it be determined by the Rhodian laws [ſee RHODIAN LAWS] which are preſcribed for the regulation of ſea affairs, ſo far as they are not oppoſed by any of our laws: for the emperor Auguſtus was alſo of that opinion. The only controverſy that ever was about the reading of this anſwer, is in relation to the pointing of it, and particularly to the full point, or period, which is found after theſe words, But the law of the ſea: there being a full point after the words beforementioned, the objectors allege, that the BUT implies the emperor indeed acknowleged himſelf to be lord of the land, but not of the ſea, and that the law only, and no man, was lord of the latter. Whereas the true ſenſe of this anſwer ſeems to be, That ſea affairs ought properly to be determined by the Rhodian law, which was appointed to be the rule in ſuch caſes: for ſince the emperor aſcribed to himſelf the ſovereignty of the whole world, he undoubtedly intended in that to comprehend the ſea; which, as well as the land, was ſubjected to his authority, though in a different manner, controverſies in relation to land affairs being always determined by the Roman laws only, but thoſe relating to marine affairs were decided according to the ſea laws of the Rhodians; with this reſtriction, indeed, that the Rhodian laws ſhould only take place when they did not oppoſe any Roman law: beſides the diſputes about the reading of this anſwer, Joannes Ignæus, and others, affirm, That the emperor Antoninus, far from declining to aſcribe to himſelf a dominion over the ſea, rather ſeems to intimate, by this anſwer, that he was lord of it; alleging, that, by theſe often-recited words, I indeed am ſovereign of the land, but the law of the ſea, he means to ſay, I indeed am the lord of the world; and I alſo am the law of the ſea. With this agrees the opinion of the learned Samuel Petit, a Frenchman, who ſays, Antoninus does not here deny himſelf to be lord of the ſea, ſo as to decline to give law, and do juſtice to thoſe who frequent it; for, on the contrary, he orders the controverſy between Endemon and the cuſtomers to be determined according to the Rhodian law; by which law, however, he does not think himſelf ſo tied up, as to be deprived of other means of relieving Endemon, even againſt it, in caſe he ſhould ſuſtain any injury by the Rhodian law, which he plainly and poſitively makes ſubject to his own laws. Monſieur Petit adds, he believes the Greek word in the petition (which was both made and anſwered in that language) that ſignifies law, has been by a miſtake inſerted for another, that has ſome affinity to it in the ſound and letters, and ſignifies wind: ſo he makes the emperor ſay, I indeed am lord of the land, but the wind of the ſea. Whether the fault is in the pointing, or in the conſtruction, it is very unlikely that Antoninus ſhould aſſert a thing contrary to the known laws and cuſtoms of all ages, and his own imperial prerogative.

The opinion of the ſovereignty of the ſea has been oppoſed by two very learned men, whom we may ſuppoſe to be ſet to work by their ſeveral maſters, and wrote to ſerve a particular turn: the one is Fernando Vaſquez, counſellor to Philip III. of Spain, the other the famous Hugo Grotius. Vaſquez, in his Diſcourſe of the Law of Nature and Nations, writes to this purpoſe: Their opinion is not much to be eſteemed, who imagine the Genoeſe or Venetians may forbid others a paſſage through their reſpective gulphs, as if they could lay claim to thoſe ſeas by preſcription; which is equally contrary to the imperial laws, and to the primitive law of nature and nations, which cannot be ſubject to any alteration. That it is againſt this law is evident, becauſe by it not only the ſeas, but all other immoveable things whatever, were in common: and though afterwards that law came to be partly aboliſhed, ſo far as it relates to the dominion and propriety of lands, which being firſt enjoyed in common, according to the law of nature, were afterwards divided and ſeparated from common uſe; yet it is otherwiſe as to the dominion of the ſea, which has been from the beginning of the world, and is to this preſent day, common, without the leaſt alienation, as is univerſally known.

And many of the Portugueze are of opinion, their king has acquired, by preſcription, ſuch an ancient right to the vaſt ocean of the Weſt-Indies, that he may lawfully refuſe other nations paſſage through it; and the vulgar ſort of Spaniards ſeem likewiſe to be of opinion, that no people but themſelves have a right to ſail through that vaſt and ſpacious ſea that leads to the Indies, which the kings of Spain have conquered, as if they alſo obtained a right by preſcription to them; yet we look upon theſe mens imaginations as no leſs vain and fooliſh than the opinion of thoſe who have dreamed the ſame things of the Genoeſe and Venetians. The law of preſcription can be of no force in deciding controverſies which happen between princes and people that acknowlege no ſuperior, becauſe the peculiar civil laws of any country are of no more weight, in relation to foreign nations, than if ſuch laws had never had a being: ſo that for deciding controverſies of that nature, recourſe muſt neceſſarily be had to the general law of nations, originally or ſecondarily, which certainly can never admit of ſuch an uſurpation of a title to the dominion of the ſea by preſcription.

The reader, by the weakneſs of theſe arguments, will have a taſte of the reſt, and deſire no more of them. Notwithſtanding Vaſquez has the character of a great man in the learned world, he begins with a plain contradiction; for although he ſays he holds the law of nature to be abſolutely unchangeable, and cannot be ſubject to any alteration, yet he owns afterwards, that law came to be partly aboliſhed, &c. He acknowleges, that, by the law of nature, the land was common at firſt, and being evident that it is not now ſo, what ſhould hinder a private dominion of the ſea, which, according to himſelf, was not more common in the beginning than the land? For if he alleges that ſuch a property over the land is uſurped, as he ſays of that of the ſea, he overthrows all property, and aboliſhes all laws, both divine and human; and if, on the contrary, he acknowleges ſuch a dominion over the land to be juſt (as certainly it is) why then ſhould he deny a propriety of the ſea?

The other parts of his diſcourſe are of the ſame ſtrength; for whereas he ſays the ſea has been from the beginning of the world, and is to this day common, as is univerſally known, it is ſo plain a falſhood, that one would wonder a man who, in other things, is extolled for his wiſdom and ſufficiency, ſhould aſſert a thing ſo contrary to the laws and cuſtoms of moſt ages and nations, as we ſhall ſee preſently: but Don Vaſquez was to pleaſe the court of Spain, who then were on no good terms with the republic of Venice, whoſe greatneſs at ſea hindered the Spaniards from being maſters of the Mediterranean. The ſenate aſſerted their dominion in the Adriatic about the ſame time, as may be ſeen in Julius Pancius's tract of the Dominion of the Sea, where we find enough to confute what Vaſquez ſays of the Venetians: it is in the ſecond book, chap. 6. In the year 1630, Mary, ſiſter to the king of Spain, being married to the emperor's ſon Ferdinand, king of Hungary, and the Spaniards deſigning to convey her from Naples with a ſquadron of their own, the Venetians ſuſpected they intended ſome infringement of their privileges by this ſpecious precedent, which they might, perhaps, afterwards pretend to make uſe of to their prejudice, and thought they took this occaſion, when the republic was involved in a war abroad, and infected with the peſtilence at home, to endeavour to undermine the ſovereignty of the Adriatic Sea; which had been uninterruptedly enjoyed by the ſigniory of Venice by immemorial preſcription.

The Spaniſh ambaſſador having acquainted the ſtate that his maſter's fleet was to tranſport his ſiſter, the queen of Hungary, from Naples to Trieſte, the doge anſwered, That her Majeſty ſhould not paſs but in the gallies of the republic. To which the ambaſſador replying, That they were infected with the plague; the ſenate met to conſult about it, and came to the following reſolution: That his Catholic majeſty's ſiſter ſhould not be tranſported to Trieſte in any other fleet but that of the republic, according to the uſual cuſtom of the gulph, with which her Majeſty ſhould be attended, with all the marks of reſpect and deference that were due to her quality; adding, that if her Majeſty proceeded any other way, the republic would by force aſſert her rights, and attack the Spaniſh gallies in an hoſtile manner, as if they were enemies. Upon which the Spaniſh ambaſſador was obliged to deſire the favour of the ſenate to tranſport that princeſs with their gallies to Trieſte, which was accordingly performed by the Venetian general, Antonio Piſani; and both the emperor and king of Spain returned the Venetians thanks; which is a plain indication that they did not then call in queſtion the Venetians title to the dominion of the Adriatic Sea.

The moſt conſiderable adverſary we have to deal with in this controverſy, is Hugo Grotius, author of the celebrated piece, intitled Mare Liberum, which the learned Selden fully anſwered in his Mare Clauſum. After the treaty between the Spaniards and Hollanders, held at the Hague in the year 1609, concerning the freedom of trade and navigation to the Eaſt-Indies, the above-mentioned author publiſhed his book, with an intention to prove that the Hollanders had liberty to trade to the Eaſt-Indies; which he endeavoured to do by the law of nations, allowing ſuch a liberty of navigation to all mankind, in which none can be moleſted without injury.

He aſſerted further, That the right of navigation through the Atlantic and Southern Sea to the Indies, cannot be the propriety of the Portugueze, or of any other nation in particular; becauſe the law of nature not only permits, but requires, that ſhould be common. The learned author of this tract had certainly good reaſon to aſſert the Hollanders and other nations right to the liberty of the Atlantic Ocean, and to trade in the Eaſtern Seas as well as the Portugueze: for who can ſay in the midſt of the vaſt deep, ſuch a channel or ſuch a ſpace is mine? and who has a right to exclude any one a paſſage through the main? So that the diſpute is brought within a narrower compaſs; and by the dominion of the ſea, is only meant the ſovereignty of ſuch a part of it, as, bounding any country, may be ſaid to belong to it, and to extend as far as certain imaginary lines or viſible marks. And herein Grotius agrees in ſome meaſure with us, when he ſays, that ſuch ſmall parts of the ſea as can in a manner be incloſed, if they may be at all poſſeſſed, ought to fall to them who firſt acquire a title to them by occupation. Now the difference between a greater and leſs part, cannot well take place in the determining of a private dominion, ſince it is not the ſpace nor the extent of the thing poſſeſſed, but the nature and validity of the title, by which the matter ſhould be decided. And the author in another place in expreſs terms excepts a bay or creek; and ſays elſewhere, he does not ſpeak of an inland ſea, which being ſtraitened on either ſide, exceeds not the breadth even of a river, but the ocean; which the Ancients called immenſe and infinite, the parent and original of things confining the air, &c. He adds a little after, The controverſy is not about a ſtreight or creek in the ocean, nor of ſo much as in the view of the ſhore. And in other places, he ſays things much to the ſame purpoſe; ſo that in the diſpute about the ſovereignty of the Britiſh Sea, we ſhould have little to do with him; for he grants enough to warrant the crown of Great-Britain's aſſerting its dominion over it. He advances every thing modeſtly, and the main of his argument tending to ſet free the Atlantic and Southern Seas from the ſovereignty the Portugueze claimed, he is in the main in the right; for it is impoſſible to poſſeſs the whole ocean, or to have a title to the dominion of it, unleſs a prince or people were ſovereigns of the whole world. Alexander's conqueſts gave him but a ſmall ſea-dominion, about half the Mediterranean, and part of the Indian Sea. The Romans, indeed, had a title to the dominion of almoſt all the known part of the Great Ocean, as lords of the ſhore: but there never was, nor ever will be, a power ſo infinite as to ſubject the whole world, and to be ſovereign of both ſea and land, excluſive of all others. The ſea bounding the land under the ſubjection of any prince, will be under his dominion. Grotius, in his excellent treatiſe de Jure Belli & Pacis, ſays*, The land and rivers, and any part of the ſea that may fall under the private dominion of any nation, ought to be open to ſuch as have occaſion to paſs upon juſt and neceſſary grounds; and even a creek, or narrow ſea, may be poſſeſſed by any that poſſeſs the land on both ſides, provided the ſpace of ſea be not ſo great as, being compared with the land, it cannot ſeem to be any part of it. In a word, he acknowleges the right of primary occupation of creeks and ſtreights of the ſea, at leaſt, that it was not by virtue of any natural right that the ſea was not appropriated and entered upon by occupation, attributing the community of it only to cuſtom, and confeſſing that cuſtom being changed, the reaſon of the community ceaſes. That it has been changed, is too well known to need any further proofs of it againſt Vaſquez, and as much of Grotius as is againſt the dominion of the ſea.

* Book ii. chap. 2. § 13.

We might bring many authorities of the ſame weight, but ſhall only take notice of two or three, as Reginerus Sixtinus, in his book de Regalibus, where he ſays, The thing in queſtion concerning the ſea and its ſhore is, whether they ought, as navigable rivers, &c. to be reckoned among the regalia, or royalties, of the prince, every thing that is reputed ſuch being as much the private and peculiar right of the prince, as the ſubjects eſtates are theirs. And ſo Catheranus Deciſ. 155. no. 81. and Ferrarius Montanus de Feud. book v. chap. 7. reckons the ſovereignty and dominion of the ſea among the royalties of the prince, without making any diſtinction between that and a public river. And Mynſingerus, Auſ. 1. no. 162. decad 11. ſays, The property of the ſea is a part of the royalties of the prince. But not to detain the reader longer on this head, we ſhall prove by law and hiſtory, ſacred and profane, ancient and modern, that the ſea is capable of a private dominion and propriety.

Holy writ, in more than one place, juſtifies this; for there we find it ſaid, Repleniſh the earth and ſubdue it, and have dominion over the fiſh of the ſea, &c. And again, The fear of you, and the dread of you (which are terms implying dominion) ſhall be upon every beaſt of the field, and every fowl of the air, upon all that moveth upon the earth, and upon all the fiſhes of the ſea, &c. Which words, though it muſt

be

be acknowleged they are not meant of private dominion (ſince, in the perſons of our firſt parents, and of Noah and his three ſons, this bleſſing was given to them and their poſterity in general;) yet it is by no means to be forgotten, that the ſea and land did ſo paſs together at firſt into the common enjoyment of mankind, that from hence we may very reaſonably conclude, that being both in one globe, there could be no ſuch diverſity in their nature, as might hinder the one more than the other to paſs at the pleaſure of men, in the future diſtribution of things, into private dominion and poſſeſſion. Nor is there, by that donation, any community ordained; mankind are left to their own choice, to uſe and enjoy both ſea and land, as they think fit. To theſe paſſages of Scripture, the objectors oppoſe other, as, The heavens, even the heavens are the Lord's, but the earth hath been given to the children of men. From which they pretend to infer, that there being no mention of the ſea, the Almighty reſerves that peculiarly to himſelf; which explication is formally contradicted in ſeveral places of the Scriptures, and particularly in that above cited. They may as well ſay God is not the creator of the ſea, becauſe in the ſame Pſalm it is ſaid, You are bleſſed of the Lord, that made heaven and earth. Who will deny but that the Pſalmiſt, by the word EARTH, means the world in general, which comprehends both ſea and land? And both are equally poſſeſſed by the children of men. Several other paſſages of Scripture are quoted on both ſides in this controverſy: but the objectors find them as little to their purpoſe as that before recited out of the Pſalms.

We ſhall now give inſtances of the private dominion of the ſea poſſeſſed by ſeveral nations: and firſt by the

TYRIANS.

Tyre was a town great in ſtrength and riches, by her commerce; according to Iſaiah, The harveſt of the river is her revenue; than which nothing can be more expreſſive, nor more elegant. And again, ſpeaking ſtill of Tyre, The ſea has ſpoken, even the ſtrength of the ſea. Nothing can be more apparent, and no authority ſo full and unexceptionable. It is ſaid by the Pſalmiſt, I will ſet his hand alſo in the ſea, and his right-hand in the rivers; by which, according to Eben Ezra, the dominion of the waters is aſſigned to king David, that he might rule over ſuch as failed therein. There is alſo a clear and convincing paſſage in Holy Writ to our purpoſe: And the king Ahaſuerus laid a tribute upon the land, and upon the iſles of the ſea; by which it appears very plainly, that prince was lord of the ſea and iſlands, upon which he impoſed a tribute. There are ſome apocryphal texts, which confirm what we aſſert; as that, O ye men, do not excel in ſtrength, that bear rule over the ſea and land, and things in them: but yet the king is more mighty, for he is lord of all theſe things, and hath dominion over them. And that, The ſea is ſet in a wide place, that it might be deep and great; but in caſe the entrance were narrow, like that of a river, who then could enter the ſea, to look upon it, and have dominion over it, without paſſing through the ſtreight? Whoever will give themſelves the trouble to look over the comments of the Jewiſh rabbins in the xxxivth chapter of Numbers, where the bounds of Canaan are ſet out, will find they are poſitively of opinion that the ſea is included.

The rabbi Jehuda, a celebrated interpreter of the law, from the expreſs words of the holy law concludes, that the whole ſea lying before the weſtern coaſt of the Holy Land, being limited by ſtrait lines drawn on each ſide, from the north-eaſt and ſouth borders, through that great ſea into the weſt, having been, together with the main land, given to that people by God, thoſe precepts ſhould no leſs be obſerved in that immenſe ocean, than in the Holy Land itſelf, according as the author's opinion is delivered to us in the moſt ancient digeſts of the Jewiſh law, de Libellis Divortii & Manumiſſionis, cap. 1. fol. 8. All that lies directly oppoſite to the land of Iſrael, is of the ſame account with that law, according as it is written, As for your weſt border, you ſhall even have the great ſea for a border; this ſhall be your weſt border, the border of the ſea, or of the weſt. Alſo the iſlands ſituated on either ſide, in the ſame direct line, fell under the ſame account with the ſides themſelves; ſo that a line being drawn through the iſles, from Cephalonia to the main ocean, and alſo from the river of Egypt to the ocean, whatever is contained within that line is under the dominion of Iſrael, and what lies without that line is out of its dominion; which this author, rabbi Eben Ezra, and others, made to reach through even the Spaniſh Sea, notwithſtanding its vaſt diſtance from the continent of the land of Iſrael; alleging by that paſſage, where it is ſaid, The great ſea ſhall be thy border, it was meant, the great ſea, which of itſelf was their border, ſhould alſo be their poſſeſſion.

This is, perhaps, to ſtretch the ſovereignty of the Jews too far; and other rabbins, by moderating their explication of the law, come nearer to the true meaning. They would have a ſtraight line drawn from the promontory of Mount Hor, to the entrance of Peluſium, or from the north-eaſt to the ſouth, by which they would bound the weſtern dominion of the Holy Land, reckoning whatever ſpace of ſea or iſland ſhould fall within the compaſs of the ſaid line towards the Eaſt, ſhould belong to the territories of Iſrael. After this manner, the ſaid line would include very conſiderable ſpaces of the ſea, lying before the ſhore inhabited by the tribes of Aſhur, Ephraim, Dan, Zabulon, and Simeon; which ſea was looked upon to be the property of that people, as well as the land, according to the digeſts of the Jewiſh laws.

Of theſe two opinions of the rabbins, this latter (by which only the adjacent parts of the ſea are conceived to be, by God's appointment, aſſigned with the Promiſed Land to the children of Iſrael) is the moſt univerſally received, as is evident, not only by both volumes of the Talmud, but alſo by the teſtimony of the moſt learned rabbins, Moſes Maimonides and Moſes Cotzenſis: and this latter opinion ſerves directly our purpoſe, as well as the firſt; for we aſſert, That the ſea is capable of dominion, and it is not the extent, but the nature of the thing, that is here called in queſtion.

By the law civil and domeſtic, as well as by the common law, whether intervenient or imperative, and by the moſt known practice and cuſtom of the moſt renowned nations and kingdoms that are known to us, ſuch a ſovereignty and dominion of the ſea has been univerſally admitted. It muſt be allowed, either that all theſe mighty nations, who either by virtue of ſome domeſtic law of their own, or of ſome other law common to themſelves and their neighbours, have admitted of ſuch dominion, are, or have been, competent judges of the natural permiſſive law; or elſe it muſt be ſuppoſed, that the moſt famous nations of the world have erred for many years againſt nature, the law of which, according to Juſtinian, is, That which being eſtabliſhed by natural reaſon amongſt all men, is obſerved by all alike, and called the law of nations, becauſe it is ſuppoſed to be a law which all nations uſe; ſee his Inſtitutions de Jure Naturali: with which paſſage that of Caius, in his book de Acquirendo Rerum Dominio, very well agrees, where he ſays, The law of nations is by natural reaſon obſerved in the ſame manner amongſt all men. And that the dominion of the ſea has been the law and practice of nations, we are now to prove from profane hiſtory firſt, and then that it has been continued down to our own times.

The inhabitants of the iſland of Crete, now called Candia, had a very large dominion in the neighbouring ſeas, as appears in the writings of Diodorus Siculus, and others, particularly Thucydides, who tells us, when they acquired this dominion, Minos, the ſon of Lycaſtus, ſon of Jupiter, king of Crete, poſſeſſed all the Cretan, and a great part of the Egean Sea, as ſovereign lord of it. And according to Eutropius, the empire of the Cretans over that part of the ſea, did not expire 'till Cæcilius Metellus made an intire conqueſt of that iſland. We may ſee, by Plato's works, that the ſea laws of the Cretans were attributed to Minos. This dominion of the Cretans is ſuppoſed to be in the time of the Judges, and to have laſted 'till that of the Lydians, which began 175 years afterwards: Theſe

LYDIANS,

According to Euſebius, held this dominion 92 years; but Iſaac Caſaubon was of opinion, that XCII was by a miſtake inſerted in the Greek for CXX. Marianus Scotus, and Florence the monk, both make mention of the dominion of the Lydians, which is generally reckoned to have begun about the time of Æneas. Their ſucceſſors in it were the

PELASGI,

Of whom Euſebius ſays, They in the ſecond place poſſeſſed the dominion of the ſea, which is meant excluſively of the Cretans, who were not in his catalogue; and though this author makes their dominion to laſt 85 years, it is conjectured it did not laſt above 55. The time of it is placed in th days of Solomon. And after them the

THRACIANS

Held the dominion of the ſea, which began in Jeroboam reign; but authors do not agree how long it laſted. W now come to the

RHODIANS,

Who, though they are omitted by Marianus and Florentius, according to Euſebius, held the dominion of the ſea 23 years, beginning about the reign of Jehoſophat. Strabo in his fourth book ſays, That Rhodes was ſovereign miſtreſs of the ſea a conſiderable time. They indeed have rendered their name and ſovereignty immortal, by their ſea laws; which, as Conſtantius Harmenopulus affirms, in his Porchir. Juris, lib. xii. tit. 11. are the moſt ancient now in being, and were in force among the Romans from the time of Tiberius, as you may ſee in Jus Græco-Romanum, tom ii. p. 265. The paſſage before-mentioned, in the emperor Antoninus's anſwer to Endemon's petition, confirms this; and it is certain, the emperor Juſtinian put thoſe laws into the Digeſts. Next to them the

PHRYGIANS

Acquired the dominion of the ſea, as it is ſuppoſed, in the time of Lycurgus. Euſebius writes they maintained it 25 years, others ſay 26; and then the

CYPRIANS

Poſſeſſed it. Some authors ſay they maintained it 23 years, and others 31 years: the time is ſaid to be the reign of Joaz. The

PHOENICIANS

Held this dominion in the days of Uzziah, king of Judah: from them all the bottom of the Mediterranean was called the Phœnician Sea; and Pliny tells us, That people were very ſkilful in the art of navigation, inſomuch that Atergatis, queen of Syria and Phœnicia, publiſhed an edict, importing, That it ſhould not be lawful for any one to eat fiſh without her licence and permiſſion: it afterwards became cuſtomary to conſecrate to Atergatis fiſhes of gold and ſilver, when ſhe was placed among the goddeſſes. After the Phœnicians the

EGYPTIANS,

As we find in Euſebius, Marianus, and Florence the monk, were ſovereigns of the ſea, under their kings Pſamnitis and Bocchoris, who flouriſhed a little before the beginning of the Olympiads. Next to them the

MILESIANS

Held this dominion; and though Euſebius takes no notice of the time they enjoyed it, Marianus and Florence agree their dominion laſted 18 years. Stephanus alſo obſerves, That Naucratis, a city of Egypt, was built by the Mileſians, who then poſſeſſed the ſea: Euſebius adds, their ſovereignty was about the time of Romulus. They alſo built Sinope, on the Euxine Sea, which, according to Strabo, in his xiith book, commanded the ſea flowing within the Cyanean Iſlands. The

CARIANS,

As Euſebius, numb. 1281, and Diodorus Siculus, biblioth. 5. enjoyed a dominion in the ſea, about the time of the good king Hezekiah; as did afterwards the

LESBIANS.

See Euſebius, numb. 1341: their dominion, according to ſome authors, laſted 69 years; but Marianus makes it laſt but 58 years. The

PHOCIANS

Succeeded them in the dominion of the ſea, about the time of the Jews captivity at Babylon; and Euſebius writes, that they maintained it 44 years. The

CORINTHIANS

Were alſo ſovereigns of the ſea, though they are omitted in the catalogues of the hiſtorians; however, Thucydides, lib. i. reports, that being very potent in ſhipping, and mightily ſuppreſſing piracies, they acquired a very great reputation and command by ſea, as well as by land. He takes notice alſo of their diligence and ſucceſs in reſtoring the affairs of navigation to their former perfection: it muſt nevertheleſs be confeſſed, that authors have been too ſilent with reſpect to them and the

IONIANS,

Whoſe dominion of the ſea is taken notice of by the ſame hiſtorian, in words to this effect: the power and ſtrength of navigation were in the hands of the Ionians in the time of Cyrus the firſt king of the Perſians, and his ſon Cambyſes. The

NAXIANS

Enjoyed this maritime ſovereignty after them, during the ſpace of 10 years, in the reign of Cambyſes and Darius; they inhabited the iſland of Naxos, one of the Cyclades, in the Archipelago. After them the

ERETRIANS

Poſſeſſed the dominion of the ſea for about ſeven years. They were ſo called from Eretrias, a rich and famous city in the iſland Eubœa. The next maſters of the ſea were the

ÆGINETÆ:

They were the inhabitants of the iſland Egina; and not long before the Peloponneſian war broke out, were ſo ſtrong at ſea, that they inſulted the Athenians, and it was to curb them that the ſtate of Athens increaſed their naval ſtrength, by which they afterwards acquired the ſovereignty of the Eaſtern Sea. Not only Euſebius, but Strabo and Ælian, take notice of the dominion of this people: ſome make it laſt 10, ſome 20 years, and ſome more. But the Athenians were too great a nation, to ſuffer ſo inconſiderable a people as the Æginetæ were, to enjoy this power long. After them the

ATHENIANS and LACEDÆMONIANS

Enjoyed the ſovereignty, though they are not inſerted in the catalogue of the lords of the ſea. Demoſthenes, in his IId Phil. ſays, The Lacedæmonians had a dominion over the ſea and over the land, and who does not know that Eurybiades the Spartan, commanded the Grecian fleet in the war between the Grecians and Xerxes? It is true, the Lacedæmonians were not ſo ſtrong by their own naval ſtrength, as by that of their allies the Peloponneſians; but their dominion at land was the occaſion of their being preferred to the dominion at ſea; and they always had the chief command, 'till the famous Timotheus an Athenian general, having ſubdued Corcyra, brought the people of Epirus, the Athamanians, Chaonians, and other nations, to enter into an alliance with them. Upon which the Lacedæmonians found themſelves under an indiſpenſible neceſſity to reſign the ſovereignty of the ſea to the Athenians, in a treaty of peace then concluded between the two nations.

The Lacedæmonians were not allowed to put to ſea ſo much as one ſhip of force, but ſhips of burthen only; and the Athenians obliged Artaxerxes Longimanus king of Perſia, to agree, That the king's ſhips ſhould not come within the length of a horſe-race of the Grecian Sea, and that it ſhould not be lawful for him to ſend any ſhips of force within the Cyanean and Chelidonian Iſlands, which formerly had been infeſted by his navies, as may be ſeen in Plutarch's life of Cimon the Athenian. Indeed, the Greek hiſtory is full of inſtances of the power and dominion of the Athenians at ſea. Iſocrates ſpeaking of it tells us, It was not lawful to ſail in long ſhips or gallies beyond Phaſelis, a town ſituated in a direct line with the Chelidonian Iſlands.

This dominion was entirely loſt in the end of the Peloponneſian war, when Lyſander deſtroyed their fleet and took Athens. And they never recovered it ſo far as to be ſaid to be maſters of the ſea afterwards, though they grew powerful again. If any ſhould be curious to know how theſe catalogues of the maritime ſovereigns have been preſerved, we can only inform them, that it is very probable, that Caſtor Rhodius, who lived about the time of Auguſtus Cæſar, and wrote a hiſtory of thoſe that had ruled at Sea, as Suidas witneſſes, furniſhed Julius Africanus and Euſebius with theſe liſts of the nations who held dominion at ſea, though Caſtor's hiſtory is itſelf loſt.

To continue as far as we can trace this dominion of the ſea after the Athenians loſt it, there were not above 70 years between the Peloponneſian war and the reign of Alexander the Great. When the Tyrians, according to Quintus Curtius, had not only a ſovereign dominion over the neighbouring ſea, but was miſtreſs over all the ſeas through which their ſhips did ſail. Before this we find by the Greek hiſtories, that the Lacedæmonians were again maſters at ſea, and the Bœotians aſpired to it, if they did not obtain it after their ſucceſſes at land. But the Tyrians were ſuch abſolute maſters, that Tyria Maria, or Tyrian Sea, became a proverbial expreſſion for all ſeas poſſeſſed, ſo as the paſſage through them could not be obtained without the permiſſion of the lord.

We find a query in Ariſtotle's works, Whether it be for or againſt the intereſt of any well-governed nation, to maintain a ſovereignty of the ſea, ſo as to exclude all others from the benefit of navigation through the part ſo poſſeſſed, either upon account of paſſage, traffic, or fiſhing, &c.? But he had been too well inſtructed of the lawfulneſs of ſuch a dominion, by the continual practice of all the neighbouring nations, to declare againſt it. Though the many inſtances that have been given of the ſovereignty of the ſea from ancient hiſtory, are ſufficient to convince any reaſonable man, that it is capable of dominion; yet we ſhall add ſome further arguments, which ſeem to corroborate what has been urged.

It is very well known by all who are acquainted with the hiſtories of ancient times, that according to the cuſtom of the Eaſt, the ſymbols of dominion and empire, which the kings of Perſia demanded of the Greeks and other nations, were earth and water; by which was undoubtedly meant the empire of the ſea as well as the land. Darius demanded earth and water of the Athenians and Lacedæmonians, who threw his ambaſſadors into a well. He alſo demanded it of Indathyrſus king of Scythia, as we find in Herodotus, and in the Greek copies of the hiſtory of Judith; that Nebuchadnezzar required earth and water of the neighbouring nations, with which he threatened to make war.

Several parts of the ſea belonging to the Eaſtern Empire were reckoned among its provinces and governments. Witneſs Conſtantius Prophyragennetus, lib. 1. Them. 17. where he ſays, That the Helleſpont was very expreſsly aſſigned to

the commander in chief of the Egean Sea. And again, That the Egean Sea was reckoned among the provinces of the empire, and that the Cyclades Iſlands, and the moſt remarkable of the Sporades, Myteline, and Chios, belonged to the government of the Egean Sea. The emperor Leo by a decree declared, that every man ſhould poſſeſs the ſea lying before his lands, by ſuch a peculiar and unqueſtionable right, that he ſhould have power to deprive any other perſon of uſing or enjoying the ſame in any manner, ſo as to reap any gain or benefit, without the ſpecial conſent of the owner.

By which the opinion of the univerſal community of the ſea is utterly deſtroyed, and a private and ſeparate propriety and dominion introduced. This decree took immediate effect about the year of our Lord 900, without any oppoſition, over all the Egean Sea, as well as over the Boſphorus, Helleſpont, and all the other ſeas ſubjected to the Conſtantinopolitan empire.

We have hitherto confined ourſelves to the Levant or eaſtern part of the Mediterranean: let us now ſee how the dominion of the ſea was maintained in the weſtern; where firſt we find the

Spinetans,

So called from the ancient city Spina, ſituated near the mouth of the river Po, in poſſeſſion of the ſovereignty of the Adriatic Sea; where, as we read in Strabo, lib. 5. and Dionyſius Halicarnaſſæus, de Orig. Rom. lib. 1. they raiſed ſuch conſiderable revenues, that they uſed to ſend very liberal tenths to the temple of Apollo at Delphos. The ſame author adds, that the

Tuscans

Were abſolute ſovereigns of that part of the Mediterranean that waſhes the ſouthern coaſt of Italy. And Diodorus Siculus, lib. 20. ſays, The Tyrrheni or Tuſcans were ſo powerful upon the ſea, which they poſſeſſed as lords of it, that at laſt it took their name. But the

Carthaginians

Grew ſo mighty at ſea, that all other naval dominion ceaſed, and none could pretend to diſpute with them the maritime empire, 'till the reign of Agathoclas, king of Sicily, who ſhared for ſome time with them the ſovereignty of the ſea. His ſubjects in Africa revolting from him about the 118th Olympiad, the dominion of the Mediterranean devolved almoſt entirely upon the Carthaginians, who held it near 40 years, and gave laws to all navigators, 'till the beginning of the firſt Punic war, when the Romans refuſed any longer ſubjection to them at ſea. Before this, the people of Rome, notwithſtanding they had extended their conqueſts very far at land, gave up the ſovereignty of the ſea to the Carthaginians, as we may ſee by the firſt league concluded between theſe two mighty ſtates, about the 68th Olympiad. By which Polybius tells us it was ſtipulated, That neither the Romans nor their confederates, ſhould ſail beyond the Fair Promontory, unleſs they ſhould be driven thither by tempeſts or enemies. And Polybius further gives an account, That in the ſecond treaty of peace concluded between the two nations, it was provided, That no Roman ſhould ſo much as touch either upon Africa or Sardinia, except it were either to take in proviſions or repair their ſhips. But after the ſecond Punic war, when Carthage was forced to ſubmit to what laws the Romans, their conquerors, pleaſed to give them; when the Roman fleet was alſo victorious at ſea as well as Scipio by land, the dominion the Carthaginians held at ſea, was of courſe transferred to the people of Rome; and, indeed, they became maſters of the Mediterranean, before they were maſters of Carthage; ſo induſtrious had they been to increaſe their naval ſtrength, without which they ſay, they could never ſubdue their rivals, the Carthaginians: for Hannibal in his ſpeech to Scipio, in the 30th book of Livy, ſeems to acknowlege the Romans to be lords of all the Mediterranean, and its iſlands. And accordingly after the concluſion of the peace at the end of the ſecond Punic war, the Carthaginians themſelves burnt 500 gallies, that they might not be obliged to pay homage to their conquerors, of whom they had formerly exacted the ſame marks of ſubmiſſion. The

Romans

Having thus acquired the dominion of the ſea, were very careful to maintain it, and had always a powerful fleet ready, either to ſuppreſs pirates, or aſſert their ſovereignty.

The fleet that was given to Pompey to ſcour the Mediterranean Seas, is mentioned by all the Roman hiſtorians; and Pliny tells us, that by freeing the ſea from pirates, he reſtored the dominion to the people of Rome. He alſo made them maſters of that part of the ſea, to the ſovereignty of which the Cilicians pretended, as appears by an ancient league between them and Antiochus king of Syria, That the latter ſhould ſurrender his warlike ſhips and their furniture, except ten gallies, none of which ſhould be rowed with above thirty oars; and Polybius ſays, it was not allowable for him to have ſo much as one with that number of oars; and that none of his ſhips ſhould paſs the promontory of Sarpedon, unleſs it were to carry money or hoſtages.

As to the nature of the ſea dominion of the Romans, and the extent of it, Appianus Alexandrinus makes them ſovereigns of all the Mediterranean, and Dionyſius Halicarnaſſæus, lib. 1. de Orig. Rom. writes, their dominion extended over the whole ocean as far as it is navigable. However extravagant this boundleſs empire may appear at firſt, it will not at a ſecond view ſeem improbable, that the Romans were ſovereigns of moſt part of the known ſeas, as they were of the land. For the ſovereignty of the Britiſh Seas was in their poſſeſſion as long as they were maſters of any conſiderable part of Britain; but they looked on the Mediterranean to be entirely their property, as appears by ſeveral paſſages of Florus, Salluſt, and other authors, who being Romans, gave ordinarily to that ſea the general name of our ſea.

Their naval dominion may be proved by ſo many examples, that we ſhould tire the reader to repeat them, and the eaſtern emperors pretended to the ſame maritime ſovereignty as the people or Cæſars of Rome enjoyed. Themiſtius, in his 5th Oration, ſpeaking of the emperor Theodoſius the Elder, aſcribes to him the dominion of almoſt the whole earth and ſea, of which he calls him ruler. Dion Chryſoſtom tells us, the emperor Trajan, long before this, granted the citizens of Tharſus a dominion and juriſdiction over the river Cydnus, and the adjacent ſea.

Thus much is ſufficient to ſhew, that the Antients believed and practiſed the dominion of the ſea. When the Barbarians over-ran the empire, the Roman power was broken as well by ſea as land; and as their territories fell under the dominion of ſeveral princes, ſo their naval force was divided, navigation neglected, barbariſm prevailed, and with that, ignorance; and commerce growing dangerous, fleets grew leſs; and the ſovereignty of the ſea was not talked of again, 'till there aroſe a power able to maintain, as well as aſſert it. The firſt of this kind was that of the

Venetians,

Who claimed the ſovereignty of the Adriatic Sea, formerly ſo called, from the ancient city of Adria. At the bottom of this ſea, bay, or gulph, ſtands the famous city of Venice, governed by a republic, that, from the beginning, have made it one of their chief political maxims to encourage trade, and improve their ſtrength at ſea. This bay is 600 miles long, and the land on both ſides poſſeſſed by ſeveral princes, inſomuch, that a ſixth part of it does not belong to the Venetians; yet by their promoting commerce they grew formidable at ſea, aſſerted their dominion over the gulph, as belonging to their city, the capital of thoſe parts, and for ſome time there was no nation that durſt diſpute the ſovereignty with them.

Flavius Blondus, Decade 2. lib. 8. tells us, That in the year 1265, when Lorenzo Tepolo was doge of Venice, the republic impoſed a tax upon all that traded in the Adriatic Sea, making a law (which to this day remains in force) that all who ſailed between the gulph de Quevera and the Capo di Pola, or promontory of Solo and coaſt of Revenna, ſhould (if thereto required) come into Venice and pay cuſtom, and (if the officers thought fit) unlade their goods and let them be ſurveyed.

Several barks were ordered to cruize day and night about the harbours to enforce the execution of this law. The inhabitants of Ancona complaining to the Pope of this exaction, the caſe came to be conſidered, and Gregory X. confirmed to them the right of levying their cuſtoms in the Adriatic for the maintenance of mariners employed by them againſt the Saracens and pirates. The ceremony of the doge's wedding the Adriatic Sea, is much older, and ſhews their ſovereignty is as old as Alexander III. by whom it was inſtituted according to Anton. Peregrino in his 8th book de Jure Fiſci 185. This ceremony is performed on Aſcenſion-day, when the doge goes in his bucentoro, a magnificent galley of ſtate accompanied by the chief noblemen in a moſt pompous manner, and as a ſign of the perpetuity of the republic's dominion over it, throws a ring into the water in token of wedding it, ſaying theſe words as tranſlated from the Italian, WE ESPOUSE THEE, O SEA, AS A SIGN OF A REAL AND PERPETUAL DOMINION.

But the proofs of the republic's aſſerting this ſovereignty are ſo many, that they would be almoſt endleſs, ſhould we come to inſtances: we therefore refer the curious to a treatiſe written by way of epiſtle from Franciſcus de Ingenius to Siberius Vincentius, in vindication of it againſt Joannis Baptiſta Valenzolo, a Spaniard, and Laurentius Motiorus, a Roman, who being the duke of Oſſuna's creatures, wrote againſt it to pleaſe that duke, then viceroy of Naples, and a great enemy to the republic.

In this epiſtle, the author reckons no leſs than thirty eminent lawyers of his opinion, in favour of the Venetian's dominion in the Adriatic. In the year 1399, when the king of Naples had married his ſiſter to the archduke of Auſtria, he did not

pretend to tranſport her by way of the gulph, without firſt aſking the republic's leave. There are two letters extant from the emperor Frederic III. to Giovanni Mocenigo, then doge of Venice, deſiring liberty of the ſtate to tranſport corn through the Adriatic from Apulia; and others from the kings of Hungary to the ſame purpoſe are produced by Francis de Ingenius above mentioned. All the commanders of their ſhips treat as open enemies thoſe of any prince or ſtate, though in peace with them, that attempt the leaſt infringement of this their dominion; of which a very ſignal inſtance happened in the year 1638, when the Turkiſh fleet having entered the gulph without the ſenate's permiſſion, the Venetian general attacked them in an hoſtile manner, ſunk ſeveral of their ſhips, and drove the reſt into Valona, a port upon the Adriatic Sea, belonging to the Grand Seignior.

The Venetian, not ſatisfied with this, landed his men, and put a great number of mariners to the ſword who had eſcaped him at ſea. The Sultan not long after concluded a treaty with the ſenate, and thereby it was agreed, That it ſhould be lawful for the Venetians in time to come to ſeize by force, if they did not otherwiſe ſubmit, all Turkiſh veſſels, which ſhould enter the gulph without their licence, and that even within the ports and havens under the obedience of the Grand Seignior, ſituated on the Venetian Gulph. We have inſtanced before, their refuſing to let the queen of Hungary paſs, and the emperor and king of Spain's owning their dominion by complying with them. It is true, the emperors had from time to time endeavoured to ſhare this dominion with them, but the republic would never admit of it; and in the year 1535, commiſſioners on both ſides met at Friuli, to decide this important queſtion; where two advocates, Rapicio for the emperor, and Chizzola for the ſtate of Venice, learnedly diſputed this matter. After a full hearing, and ſeveral weighty arguments too long to be inſerted here, the imperial commiſſioners acknowleged, that by the native force and evidence of the learned Chizzola's diſcourſe, they were perſuaded in their conſciences that the commonwealth of Venice was the undoubted miſtreſs and protectreſs of the Adriatic Gulph, and might there impoſe what cuſtom ſhe thought convenient. Than which declaration nothing could be more glorious for the republic of Venice, as being an acknowlegement paid her by the agents of the greateſt power in Europe: nor can any thing be a better proof of the dominion of the ſea in them. Which makes good the argument of his Britannic Majeſty's ſovereignty: for there is not one reaſon urged by Chizzola in behalf of the Venetians ſovereignty of the Adriatic, but will ſerve to vindicate the right of the crown of Great-Britain to the dominion of the Britiſh Seas, of which ſee the article SEA BRITISH.

The Venetians are not the only nation who have pretended to dominion at ſea. The

TUSCANS and GENOESE

Have done the ſame. The Great Duke of Tuſcany is generally acknowleged to be the lawful lord and ſovereign of the Tuſcan Sea. To maintain which ſovereignty, he has built ſeveral forts and caſtles there, to which ſuch foreign ſhips as arrive before them, are obliged to pay thoſe marks of reſpect, that by the laws of the country are eſtabliſhed.

The Genoeſe were formerly very conſiderable at ſea, eſpecially in the time of cruſades, when, though rather by policy than power, they were ſuperior in the Eaſt to the Venetians. And before the Engliſh and Dutch fell into the Perſian and Turkiſh trade, Venice and Genoa were the only marts and ſtaple ports of Chriſtendom, for all the precious commodities of thoſe countries.

The hiſtories of Italy ſhew us how likely the Genoeſe were once to reduce the commonwealth of Venice. Their fleet beſieged the city of Venice, and their admiral Doria triumphed in the Adriatic about the year 1300; but the Venetians afterwards recovered their naval power, and followed the Genoeſe ſo cloſely, that they broke theirs. However, the city of Genoa is ſtill much frequented by foreign merchants; and according to Benedictus Bonius, lib. de Cenſibus, artic. 16. §. 40. Genoa is the lawful ſovereign of the Liguſtic Sea, and this ſtate always keeps a certain number of armed gallies, and other ſhips for the defence of their right and title to that dominion. The

PISANS

Were alſo very conſiderable in the Mediterranean Sea, about 400 years ago, and once a match for the Genoeſe; but they ſoon loſt their reputation, and ſince the city has been annexed to the Great Duke of Tuſcany's dominions, its trade is ſunk, and Leghorn is now the only flouriſhing port in Tuſcany. The

POPE

Pretends alſo to the ſovereignty of the ſea, which bears the name of the Church's Sea, as is proved by the very words of the bull Cœnæ Domini; which, among other delinquents, excommunicates and anathematizes all rovers, pirates, and robbers, haunting and infeſting our ſea, and eſpecially that part of it which lies between the mountain Argentaro and Sarracius. The

SPANIARDS

Have ſometimes thought fit to ſpeak favourably of the community of the ſea; yet when it was for their preſent purpoſe, they have as ſeverely maintained the particular dominion of it as any other nation; and notwithſtanding, that by the common law of Caſtile, the uſe of the ſea is free, yet many of their moſt eſteemed lawyers have declared in expreſs terms, not only that, according to their opinion, the ſea is capable of dominion, but that ſuch a dominion was acquired by their king: and ſo the prince may grant any man a permiſſion to fiſh in any certain part of the ſea, ſays Gregarias Lopez ad Alphonſinas, Partid. 3 tit. 28. l. 11. Nor muſt we forget that ſeveral German authors in the titles of Charles V. emperor and king of Spain (and particularly in the preface to the conſtitution concerning public judicatures in the empire) ſtile him KING OF THE CANARY ISLANDS, AND OF THE ISLANDS AND CONTINENT OF THE INDIES, AND OF THE OCEAN, &c.

By which, though he was not really ſo, it ſufficiently appears they did not queſtion the lawfulneſs of a dominion in the ſea. As to the

PORTUGUEZE,

They are, above all others, obſtinate maintainers of this doctrine of the lawfulneſs of a dominion and propriety in the ſea, as will ſufficiently appear by the uſual title of their kings. And particularly king Emanuel, in his preface to the laws of Portugal, ſtiles himſelf, DOM MANUEL, PER GRACE DE DEOS, REY, &c. SENHOR DE GUINEE, ET DA CONQUISTA, &c. NAVIGACAM ET COMMERCIO D'ETHIOPIA, ARABIA, PERSIA, ET DA INDIE, &c.

Where he pretends to be ſole lord of the navigation and trade of Ethiopia, Perſia, &c. But all this is nothing in compariſon to what is found in the body of the laws of Portugal, concerning the pretenſions of that nation to the ſole dominion, even of the vaſt Atlantic ocean itſelf: for among the ſaid laws, O quinto libro des Ordonaconnes, tit. 112. there is a moſt poſitive and abſolute prohibition to any perſon whatſoever, whether native or ſtranger, in any ſhip or veſſel, to paſs to the countries, lands, and ſeas of Guinea and the Indies, either upon occaſion of war or commerce, or for any other reaſon whatſoever, without the king of Portugal's ſpecial licence and authority, under pain of death and confiſcation of all effects, to be inflicted upon all ſuch perſons as ſhould preſume to go thither in contempt of the prohibition.

Purſuant to this law, ſeveral perſons who fell into the hands of the Portugueze, were put to death; and it extended to foreigners as well as the king's own ſubjects, though the former never acknowleged his pretended title to the dominion of the Atlantic and Southern Sea, which gave occaſion to a very warm diſpute between our queen Elizabeth and Don Sebaſtian king of Portugal. But the matter then in queſtion was not, whether king Sebaſtian was capable of becoming lawful ſovereign of thoſe ſeas, but whether he had acquired ſuch a dominion by right of occupation, or otherwiſe, which it was plain he had not. If we look into the hiſtories of the northern nations, we ſhall alſo find that ſeveral of them have demanded dominion at ſea; as the

DANES, NORWEGIANS, SWEDES, and POLANDERS.

Before Denmark and Norway became united under one monarch, the Norwegians had a ſeparate ſovereignty in the ſea, as well as the Danes. Saxo Grammaticus, in the 7th book of his Hiſtory of Denmark, writes, That in the time of Harald Hildeland, king of Denmark, none durſt preſume to uſurp any privilege or dominion in the Daniſh Seas, becauſe the empire of the land and ſea was the ſame in Denmark. He adds, that Olo, who ſucceeded his father in both dominions, vanquiſhed all ſuch as pretended in any manner to infringe his ſovereignty therein. In the year 1582, Frederic II. king of Denmark and Norway, permitted and lett out the paſſage and uſe of the Norwegian Sea to the Engliſh Muſcovy company, in the ſame manner as if he had rented out a piece of land.

The SWEDES are of the ſame opinion, with regard to the dominion of the ſea, as very plainly appears by the treaty concluded between Chriſtiern IV. king of Denmark, and Guſtavus Adolphus king of Sweden; in which the latter entirely renounced the ſovereignty formerly claimed by him over the ſeas of Norway, Norland, and the juriſdiction of Warbhuyſen.

All merchants concerned in the Baltic trade, know very well what

what great revenues the king of Denmark raiſes out of the royalties of that and the Norwegian Sea.

As to the POLES, we find by Januſzowſkius Syntazma of the ſtatutes of that republic, lib. 3. tit. 10. fol. 109. that when Henry duke of Anjou was king of Poland, the French ambaſſadors agreed that the ſaid moſt illuſtrious prince then choſen, as ſoon as he ſhould aſſume the government of his kingdom, ſhould, at his own charge, maintain a navy ſufficient for the defence of the ports, and of the ſovereignty of the ſea belonging to the kingdom and dominions of Poland.

The FRENCH.

Though the French have ſometimes, in oppoſition to the ENGLISH, declared for the community of the ſea, yet it is very certain they have pretended to the dominion of it, and even of part of the Britiſh Seas. Charondos Caronæus, in Not. ad Cod. Henrici III. lib. 20. tit. 7. Conſtit. 1 and 28. ſays, The king is ſovereign of the ſeas which flow about his kingdom, becauſe the univerſal right of all things common by the laws of nature and nations, is transferred into his dominion. With which aſſertion agree ſeveral paſſages of Stephanus, Paſchaſius, Ludovicus, Servinus, Popellenerius, and others.

They pretend to derive a title to the ſea that flows about the coaſt of Britany, from the poſſeſſion of that continent, which they allege had once a ſovereignty in the ſea; for the proof of which they inſtance one Rotlandius, mentioned by Eginhart in his life of Charlemagne. He is there ſpoken of as governor of that ſhore, where they affirm it was uſual to exact a certain cuſtom of ſhips that navigated there; whereas that cuſtom was only a ſort of pilotage or conduct-money, which was principally paid by the inhabitants, or at moſt by ſuch only as traded upon the coaſt, for pilots to conduct them ſafe from the ſhore of Bretagne, which is very dangerous.

That this was the nature of that exaction is plain, by the account Bertandus Argenterus gives of its origin, in his book ad Conſuet. Brit. art. 46. where he ſays, the ancient kings of Britany, conſidering the frequent ſhipwrecks that happened upon that rocky ſhore, which then was almoſt deſtitute of havens, made a law, that none ſhould go to ſea without taking guides and paſſes, for which they paid a certain ſum, called in Bretagne, to this day, droit de ſalvage.

The French kings have been ſo far from diſowning the ſea is not capable of dominion, that they have uſurped a ſovereignty which does not belong to them, by pretending to that part of the Britiſh Seas: for Henry II. and Henry III. publiſhed two edicts, requiring all foreign ſhips navigating in the neighbouring ſeas, and meeting with any of their ſhips, to ſtrike their top-ſails, in acknowlegement of their pretended ſovereignty; which edicts they endeavoured to get the convention of States to confirm, but never could effect it: on the contrary, the latter of them was declared void, and of no effect in law, in a notable caſe, in which ſome Hamburgh merchants were plaintiffs, againſt Mich. Butardus and other defendants, before an aſſembly of the States of that kingdom, held at Tours by Henry IV.

We ſhall not in this place anſwer the vain arguments brought by the French authors, to prove their king's title to the ſovereignty of the ſea flowing about their coaſts: for by aſſerting and proving that there can be no legal dominion of any part of the Britiſh Sea, but what is veſted in the crown of Great Britain, all the French pretend to the contrary will be at once deſtroyed, and appear to be groundleſs. See our article SEA BRITISH. Having taken notice of the dominion of the ſea claimed by the nations of Chriſtendom, we muſt now obſerve what naval ſovereignty the

TURKS

Pretend to in the Levant. The Grand Signior, ſucceeding by right of conqueſt to the ſea dominion of the emperors of Conſtantinople, changed the name of the Egean and Euxine, into thoſe of the White and Black Seas, of which he in a very ſolemn manner ſtiles himſelf lord. This is particularly remarkable in the league concluded at Paris, the 20th of March, 1604, between Henry IV. of France, and Achmet the Ottoman emperor; by which, Achmet granted the French liberty to fiſh, and ſearch for coral, in certain ſtreights and bays upon the coaſt of Africa, ſubject to the Sultan. Beſides this, Coriolanus Cippicus, in his hiſtory of Pietro Mocenigo, ſays, The Turks had built two very ſtrong caſtles, oppoſite to one another, on both ſides the Helleſpont, at its narroweſt paſſage, which being well provided with ordnance and ammunition, the governors had orders to ſink all ſhips that ſhould attempt to paſs without the permiſſion of the Grand Signior. See the article ROMANIA in Turkey.

As to the opinion of the DUTCH in relation to the ſovereignty of the ſea, they, as well as the Hanſeatic towns, have declared for a community of the ſea; but that is becauſe they once being the greateſt traders in the world, got more by that community than any other people, and have very little to pretend to by a ſea dominion. Whatever their real ſentiments are, they ſeem to be againſt any ſuch ſovereignty. But what is their oppoſition to right, reaſon, and the practice of almoſt all countries and ages?

The HANSEATIC TOWNS, in a diſpute about the Venetians aſſerting the ſovereignty of the Adriatic Sea, urged by their advocates, that Inter res communes, utl ipſe imperator numerat mare, & ideo nemo in mari piſcari aut navigare prohibitur, & adverſus inhibentem competit Actio Injuriarum, l. 10. ſiquis in mare, l. Injuriarum, ſect. ult. de Injuriis. Sin littora quoque communia ſunt, l. 2. re diverſ. Quia acceſſorium ſunt mercis, & acceſſorium ſequitur naturam principalis, l. 2. de Peculio Legat. c. Acceſſorium de Reg Juris 6. Ad littus maris igitur accedere quivis poteſt, non piſcandi tantum gratia, ſed etiam ædificandi & occupandi cauſa. l. quod in Litt. de Acquir. rer. Dom. l. in Lit. ne quid in loc. pub. Jo. Angelius J. C. de Repub. Hanſiat. par. 6. fol. 85. edit. Francof. An. Dom. 1641. But theſe arguments were eaſily anſwered by the Venetian lawyers, Quemadmodum communi littorum reſtringitur ad populum æquo occupata ſunt, lib. 3. ſect. Littora D. de quid in loc. pub. Ita etiam communia maris, adeo ut per mare a nemine occupatum, navigatio ſit omnino libera; per mare autem occupatum ab aliquo principe liberam habeant navigationem, qui ſunt illi principi ſubjecti; alii vero eatenus, quatenus idem princeps permittit. Julius Tacitus de Dom. Maris Adriatici.

The infringements the Hollanders have made on the dominion of the Britiſh Sea, have coſt them dear; but now the two nations are ſo nearly allied by intereſt, it is to be hoped they will rather help us in maintaining that juſt dominion, than ever think of abridging any part of it; ſince it will appear, under our article SEA BRITISH, that the ſovereignty and dominion of the Britiſh Seas are the ſole and undoubted prerogative of the king of Great-Britain.

REMARKS.

Our reaſon for introducing this article, which aſſerts and proves a right to the dominion of the SEA, is, in order not only to vindicate and maintain, in its proper place, this nation's right of ſovereignty in the Britiſh Seas, on which the preſervation of our fiſheries, &c. depends, but to confront a late certain French writer, who has endeavoured to ſubvert thoſe principles, with a view to pave the way ſome time or other, we may preſume, to ſome intended encroachments and uſurpations of his Grand Monarque on the Britiſh rights of navigation. The author to whom I allude is Monſieur Deſlandes, in his Eſſay on Maritime Power, publiſhed during the late war. This gentleman was encouraged to write this eſſay by the count de Maurepas, who had the care of the French marine. The deſign in writing it is pretty evident; that miniſter has been long endeavouring to inſpire the councils of that country with an ardent paſſion of retrieving the naval power of France, and ſetting it again on the foot upon which it ſtood in the reign of Lewis XIV. In order to bring this gradually to bear, the count de Maurepas, from time to time, cauſed ſeveral treatiſes to be written and publiſhed on navigation and commerce, in ſuch a method as was moſt likely to ſtimulate the pride, and excite the jealouſy, of the French nation; and in juſtice to the learned and judicious author, I think it in many reſpects a very ingenious and maſterly performance of its kind, notwithſtanding I am about to cenſure the following paſſage, which is as follows, viz. 'I think it proper 'to obſerve, ſays this excellent writer*, that moſt of the 'ſtates of Europe have been for appropriating to themſelves 'the ſovereignty of ſuch ſeas as waſh their coaſts, and ex-'cluding others the uſe of them. As for France, incapable 'of giving into ſo vain a notion, ſhe has always ſupported 'her right of navigating ſhips in ALL SEAS; and the king 'of Denmark having dared, in 1637, to diſturb ſome veſſels 'that were employed in the whale-fiſhing on the coaſt of 'Greenland, Lewis XIII. cauſed him to be informed, by 'count d'AVAUX, his ambaſſador, that ALL SEAS were 'open to his ſubjects, and that he was able to maintain them 'in the poſſeſſion, of which he would ſuffer no body to 'doubt. And it is, indeed, one of the firſt principles † in 'the

* To confirm what he urges upon this head, he has the following note: 'To be perſuaded, ſays this gentleman, be-'yond all poſſibility of doubt, that there is nothing more 'frivolous, or worſe founded, than theſe ſort of preten-'ſions, one need only read two excellent works compoſed 'upon this ſubject, the one by the learned HUGO GRO-'TIUS, under the title of MARE LIBERUM; the other by 'THEODORE GRASWINCKEL, advocate fiſcal of the do-'maines of the States of Holland, under the title of MA-'RIS LIBERI VINDICIÆ.'

† This learned author diſcovers here no ſmall prejudice in favour of his country; he ought certainly, in juſtice, to have mentioned

mentioned the book written in anſwer to Grotius, by our learned SELDEN, under the title of MARE CLAUSUM, SEU DE DOMINIO MARIS, LIBRI DUO, LONDINI, 1636, 8vo; and his anſwer to the other book cited by our author: in which two works he has fully proved, that a RIGHT may be acquired over the SEA, that ſuch a RIGHT has been acquired over OUR SEAS by our anceſtors, and that it has always been ſubmitted to by our neighbours, nay, that our kings have granted commiſſions to hear complaints, even againſt the FRENCH king for injuries done at SEA. We ſay, our learned SELDEN has proved all this as fully as any thing can be proved by reaſon, authority, or evidence; and to his treatiſes, therefore, we refer the Engliſh reader, for full ſatisfaction on this head.

'the law of nature, as eſtabliſhed by our old lawyers, MARE 'COMMUNE OMNIUM EST, ſay they, & LITORA, SICUT 'AËR, & EST SÆPISSIME RESCRIPTUM, NON POSSE 'QUEM PISCARI PROHIBERI: i. e. The ſea is common 'to all, and ſo are its coaſts; and it is often ſet down as 'law, that no body has a right to prohibit fiſhing in them.
'LEWIS XIV. puſhed his authority ſtill farther, and em-'ployed it not only in favour of his ſubjects, but alſo of his 'allies: for the king of England, Charles the Second, in-'clining to diſturb the Hollanders, and even French, in 'fiſhing in the channel, or along the coaſt of Flanders, 'LEWIS XIV, in 1661, charged the count D'ESTRADES, 'his ambaſſador, to tell him, That he was in the wrong to 'extend his prohibition of fiſhing, to the prejudice of com-'mon right, which gave that liberty to all the world; that 'beſides the intereſt he had in this, in reſpect to his own 'ſubjects, he could not help aſſiſting, in this caſe, the 'Dutch, his allies, or refuſe them his interpoſition, having 'a maritime force, ſufficient to render him not afraid of be-'ing oppoſed in this reſpect by any prince in the world*.'—'Such were the terms, continues Monſieur Deſlandes, in 'which this prince expreſſed himſelf, who having had the 'aſſiſtance of good councils, knew how to render himſelf 'powerful in ſhipping, and formidable at ſea.'—However, as a more ſatisfactory anſwer to what this learned Frenchman has ſuggeſted in regard to this matter, we ſhall refer to the article following.

* This is another very indifferent proof of the French independency at SEA. They engaged in war with us, in conjunction with the DUTCH, with no other view than they afterwards engaged in a war on our ſide, againſt the DUTCH, to make the maritime powers weaken each other, and to gain ſtrength and experience at our coſt. If there was any weight in count D'ESTRADES's declaration, in favour of the DUTCH right to fiſhing on our coaſt without our permiſſion, it was certainly taken away, by the FRENCH king's joining with us in a war againſt HOLLAND; among the cauſes of which, this was one, that they had FISHED in our SEAS without leave: ſo that if the FRENCH king's authority could avail any thing in this caſe, here it is on both ſides.

SEA BRITISH. The ſovereignty of the Britiſh Seas, maintained and aſſerted to have always been, and ſtill continues to be, the undoubted right of the kings and queens of Great-Britain.
We ſhall firſt ſettle the bounds of the Britiſh Sea. The eaſtern and ſouthern coaſts of Britain are waſhed by the German Ocean, and that which Ptolemy calls particularly the Britiſh Sea, and which according to Mela, in his treatiſe de Situ Orbis, lib. ii. cap. 3. reaches as far as the northern coaſt of Spain. And the Arabian geographer, (Clim. 4. part 1.) ſays, Towards the North Andaluſia, by which name the Arabians comprehend all Spain, is waſhed with the Engliſh Sea; adding, there are nine ſtages from Toledo to St James's, which place he ſays (Clim. 5. part. 1.) is ſituated on a promontory of the Engliſh Sea. St James's is a town in the province of Galicia. On the weſt ſide of Britain lies the Vergivian Sea, which, where it waſhes the coaſt of Scotland, takes from thence the name of Deucaledonian Sea: of this Vergivian Sea, the Iriſh, or St George's Channel, is a part. Upon the north of Britain flows the Caledonian Sea, in which are ſituate the Orcades. Thus the Britiſh Sea, or the channel lying between England and France, the Vergivian, the Deucaledonian, and the Caledonian Seas, are properly called the Britiſh Seas, and, as ſuch, are ſubject to the Britiſh empire.
Hugo Grotius, in the ſecond book of his treatiſe of Peace and War, chap. 3. §. 11. ſpeaking of the ſea, has theſe words: 'The bare poſſeſſion of the ſhore is not ſufficient to intitle 'any people to a right to the adjoining ſea: nor is it enough 'for a prince to imagine, or write himſelf lord of the ſea, 'without proclaiming himſelf by ſome OVERT-ACT to be 'ſo.'—By which he certainly means, that it is not from a bare occupation or poſſeſſion of the neighbouring land, but from an actual and peculiar uſe and enjoyment of the ſea itſelf, and exerting all the functions of a ſovereign upon it, ſuch as preſcribing rules of navigation to thoſe that frequent it, puniſhing delinquents, protecting of others, and receiving from all that homage and advantage due to every lawful ſovereign, that ſufficient arguments can be derived for proving a lawful title to the dominion of it. Now, if we make it appear, that the poſſeſſion of the Britiſh Sea was at firſt acquired, and ever ſince aſſerted, in the very manner ſpecified by that author, though he wrote againſt it, we hope there will be no room for objection, by which the argument can be invalidated.
Before we proceed further, it may be proper to obſerve, that the extent of the Britiſh dominions in the Eaſtern and Southern Seas was ſettled by a treaty concluded in the year 1674, between king Charles II. and the States-General; by which it was to reach from the middle point of the land Vanſlaten in Norway to Cape Finiſterre. The dominion of the ſea intitles the lawful poſſeſſors to the ſix following prerogatives.
(1.) The royalty of granting the liberty of fiſhing for pearl, coral, amber, and all other ſuch precious commodities.
(2.) To grant licences to fiſh for whale, ſturgeon, pilchard, ſalmon, herring, and all other ſorts of fiſh whatſoever, as is uſual in Spain, Portugal, and ſeveral other places.
(3.) To impoſe tribute and cuſtom on all merchants ſhips, and fiſhermen fiſhing and trading within the limits of the ſea that is ſubjected to any particular dominion.
(4.) The regular execution of juſtice for protecting the innocent, and puniſhing the guilty for all crimes committed within the extent of ſuch ſea dominion.
(5.) To grant free paſſage through any ſuch ſea to any number of ſhips of war belonging to any other prince or republic, or to deny the ſame, according to circumſtances and occaſion of ſuch paſſage, in the ſame manner as any prince or ſtate may grant or deny free paſſage to the foreign troops through their territories by land, even though the prince or ſtate to whom ſuch ſhips or land forces belong be not only in peace, but in alliance, with the prince or republic of whom paſſage is deſired.
(6.) To demand of all foreign ſhips whatſoever within thoſe ſeas, to ſtrike the flag, and lower the topſail, to any ſhips of war, or others, bearing the colours of the ſovereign of ſuch ſeas.
All which prerogatives do unqueſtionably belong to the kings and queens of Great-Britain. And although the duty of the flag is but an indifferent honorary ceremony, yet it is a ſignificant acknowlegement that the abſolute ſovereignty of the ſeas in which the colours are required to be ſtruck, is veſted in the prince to whom that duty is paid. And ſuch is the high regard that the Britiſh nation puts upon the execution of this ceremonious homage, that a contempt thereof, according to the marine laws, is puniſhable as open rebellion or high treaſon.
That this acknowlegement was always taken for a confeſſion of the abſolute ſovereignty of the Engliſh Seas, appears by a memorable record among the marine laws, about the end of the reign of king John, viz. * 'That if a lieutenant in any 'voyage be ordained by common council of the kingdom, 'do encounter upon the ſea any ſhips or veſſels, laden or un-'laden, that will not STRIKE AND VEIL THEIR BON-'NETS, at the commandment of the lieutenant of the king, 'but will fight againſt them of the fleet, that, if they can 'be taken, they be reputed as enemies, and their veſſels, ſhips 'and goods taken and forfeited as the goods of enemies, 'though the maſters or poſſeſſors of the ſame would come 'afterwards, and allege that they are the ſhips, veſſels, and 'goods of thoſe that are friends to our lord the king; and 'that the common people in the ſame be chaſtized by the 'impriſonment of their bodies for their rebellion, at diſ-'cretion.'

* Inter Leg. Marina, ſub fine anni regni Henrici Secundi le Ordinance called Haſtings.

The claim of this Britiſh ſovereignty at ſea has the ſanction of no leſs than 17 or 18 centuries to countenance and uphold the like uninterrupted practice; and even ſo long ago as Cæſar's time the Britons aſſerted and maintained the like dominion, as may be ſeen in his commentaries, liv. iv. where he ſays*, 'That before his deſcent in Britain, having ſummoned 'the merchants and other ſeafaring Gauls together, and 'made a diligent enquiry concerning the ſituation of the 'Britiſh ſhore and ports, he found that none dared to croſs 'the ſeas to go into Britain, without permiſſion, but mer-'chants, and that they too were ſo ignorant of thoſe ſhores '(as being deprived of a free uſe of the ſea) that he was 'obliged to ſend Voluſenus, in a long ſhip, to ſound the Bri-'tiſh coaſts.' Whence it may be rationally inferred, that ſince the ancient Britons excluded the Gauls and others, at their pleaſure, from the free enjoyment of the ſea, they muſt certainly have been the lords of it. And that this was not a bare prohibition of coming into the iſland of Britain, but even of navigating within the extent of their maritime dominion, is plain from hence: that the merchants themſelves, who were allowed to go thither, ſeem to have only had the liberty of coming to an anchor, and diſpoſing of their goods upon the coaſts, without being admitted into the ports but

* —— quæ omnia ferè Gallis erant incognita. Neque enim temere præter mercatores, illò adit quiſquam; neque iis ipſis quidquam, præter oram maritimam, atque eas regiones quæ ſunt contra Galliam, notum eſt, &c.

very ſeldom; ſince thoſe that Cæſar had ſummoned to conduct his navy into Britain, could not undertake to do it, as being entirely ignorant of the ſituation of their ports. If they were permitted to come to any place, it is conceived to be Gaul's Town, near Yarmouth. They had a naval force to defend this naval dominion, which when Cæſar ſaw, he preferred their ſhips to the Romans: theſe ſhips coming to the aſſiſtance of the Gauls were the occaſion of his expedition to Britain, to revenge himſelf for the ſuccours the inhabitants had ſent their neighbours, his enemies.

Julius Cæſar ſubdued only an inconſiderable part of the coaſt; nor did the dominion of the Britiſh ſea fall into the hands of the Romans 'till the reigns of the emperors Claudius and Domitian, who having conquered the ſouthern parts of the iſland, the empire of the ſea, at leaſt in proportion to that part which was conquered on the ſhore, did neceſſarily devolve upon the poſſeſſor of the land, and was actually reckoned a part of his dominion, as well by his ſubjects as by himſelf.

Though Claudius was the firſt of the Roman Emperors who had ſubjected the Britiſh Sea to his dominion, yet the Romans were not then ſo fully in poſſeſſion of the Britiſh Seas, as they were afterwards in the days of the emperor Domitian; who ſending Agricola to be his lieutenant in the province of Britain, this general extended the Roman conqueſts much farther toward the North, than any had done before him: he alſo ſailed round the land, diſcovered the Orcades or Orkney Iſlands, ſituate on the North of Scotland, and 'till then unknown; and having conquered them, the empire of the Northern Britiſh Seas was poſſeſſed by the Romans, as well as that of the Southern.

Seneca alſo witneſſes, That Agricola deſigning to make war upon the Caledonians, provided a powerful fleet to favour, by a mighty diverſion by ſea, the enterprizes of his army by land. The Romans having acquired the ſovereignty of the Britiſh Seas, committed the management of naval affairs here to a great ſea-officer called Archiguburnus, who had a numerous fleet under his command, with which he was ordered to aſſert and maintain the Roman dominion in the Britiſh Seas; but the Romans abandoning afterwards their conqueſts in the North, retired into the ſouthern parts of Britain; and we may ſuppoſe, as they loſt the dominion of the land in the North, ſo they were obliged to give up the ſovereignty of the ſea there, which naturally returned to the Britons.

We find little mention made of the affairs of the Romans in Britain, eſpecially thoſe relating to the ſea, 'till the reign of Diocleſian, who ſent C. Carauſius to ſcour the Britiſh Seas, which were infeſted with Gauliſh and Saxon pirates. This Carauſius afterwards uſurped here, and maintained the ſovereignty by ſea and land ſeven years. Caius Allectus, who killed him, coined a medal, having on one ſide his name and image (for he alſo uſurped) and on the reverſe a three-oared galley, with this inſcription, Virtus Auguſta; by which repreſentation, he meant to expreſs the force and greatneſs of the empire of the Britiſh Seas. Conſtantius Chlorus, who reduced him, is complimented upon it by ſeveral authors; who, among other things, highly extolled him for the reſtitution of the ſea dominion to the Romans, and of freedom of traffic and commerce to all nations, by ſcouring the ſea from pirates, not only upon the coaſts of Gaul, but even of Spain and Africa.

About the time of Conſtantine the Great, an officer was eſtabliſhed in Britain, by the name of count of the Saxon ſhore; who, beſides his command at land, had under his government the ſeas flowing between France, Holland, Germany, Denmark, and this iſland; and that not as a bound, but as a diſtinct part of the Britiſh empire, as there was a præfect of the Euphrates, a count of the Danube, a count of the Rhine, &c. By the Saxon ſhore it is very plain, that the ſhores of all the above-mentioned countries are meant, becauſe the Saxons, being then the moſt potent people in Germany, enlarged their conqueſts all along the coaſts of Germany, Holland, and France; which appears by the Breviary of the imperial dignities, where ſpeaking of that tract of land extending from the mouth of the Loire to that of the Seine, it is ſaid, under the command of the duke of that province, there was a tribune of the firſt band of ſoldiers of Armorica and Grammona, on the Saxon ſhore. And again, ſpeaking of that ſhore which extends from the Seine to the Maeſe, including Normandy, Picardy, and Flanders, it is ſaid, there were Dalmatian horſemen lodged upon thoſe borders on the Saxon ſhore: and in effect, all the ſhores extending from the weſtern parts of Denmark to the weſtern parts of France, are in the Brevia y moſt expreſsly comprehended under the general term of the Saxon ſhore; the count of which reſided in Britain, as the ſeat of the ſovereignty of all thoſe ſeas.

It is very certain the Saxons never ſeated themſelves in Britain, 'till after the Romans had abandoned the iſland. Some deſcents they might probably have made as pirates, but never poſſeſſed themſelves of any part of the country, 'till after king Vortigern called them in againſt the Picts; whereas they had ſettled on the coaſts of Gaul and Belgia; and the Saxon ſhore cannot, without committing a great abſurdity, be ſuppoſed to mean that of Britain, where the Saxons had not ſeated themſelves, but that of Belgia and Gaul, where they had; which coaſt by the Breviary is plainly proved to be the Saxon ſhore, under the count above named, who reſided, as has been ſaid, in Britain. And for a confirmation that Britain and the Saxon ſhore were two different juriſdictions, we ſhall here inſert a liſt of other governors and officers, that were under the command of the magiſter militum * preſentalis, according to the very words of the Breviary.

* In the edition of Alciatus and Pancirolus, the word militum is by a miſtake inſerted for limitum.

Sub diſpoſitione viri illuſtris magiſtri peditum preſentalis comites limitum infra ſcriptorum.

Italiæ, Africæ, Tingitanæ, tractus Argentoratenſis, Britanniarum, littoris Saxonici per Britannias.

About the year 450, the Romans having entirely abandoned Britain, the Britons reſumed the ſovereignty of the ſea as ſoon as they found themſelves in poſſeſſion of that of the land. But having been weakened by the frequent levies that the Romans made of ſoldiers here, to ſerve them in other parts of their empire, the Scots and Picts, to revenge themſelves for old quarrels, fell upon them, and forced them to call in the Saxons to their aſſiſtance, declaring they were not capable of aſſiſting them. The Saxons by treachery got poſſeſſion of ſeveral parts of the iſland, turned their arms againſt thoſe they came to aſſiſt, and new adventurers coming from Germany to Britain to make their fortunes here, the leaders of each colony founded a kingdom, and from the number of theſe monarchies, the famous name of Heptarchy was given to the ſovereignty of this iſland; to which the dominion of the Britiſh Seas was always a certain appendant, where the Britons, Saxons, or Danes, were maſters of the iſland. It is ſaid, Arthur ſailed with his victorious fleet and army as far as Ireland, forcing thoſe northern people to pay obeiſance to his ſtandard, and acknowlege him for ſupreme lord, even from the Britiſh to the Ruſſian ſhore. Though this, perhaps, is in the fable, yet it is plain it was the received opinion, that the Britons pretended even then to the ſovereignty of the ſea.

Having ſpoken of the maritime ſovereignty of the Britons and Romans, that of the Saxons and Danes comes next to be treated of. The Saxons, even at the time of their firſt arrival in Britain, were very powerful at ſea, and very expert in the art of navigation, as it was practiſed in thoſe days, which is proved by the character given them by Bede and other authors of credit; the Saxons, ſay they, were ſo familiarly and particularly acquainted with maritime affairs, that by an almoſt incredible nicety in their obſervations they counted months and years only by the continual revolution of the tide, or ebbing and flowing of the ſea; calling the former in their language ledones, or lidunas, and the latter malinas; and Ethelberd, an antient writer, ſeems to inſinuate in his firſt book, that the Britons being then informed the Saxons were a people very expert in navigation, and well provided with all things neceſſary for war, they were the more deſirous of their alliance: to whom they ſent ambaſſadors with conſiderable preſents, and offers of a free trade and commerce; that they came, conquered, and were themſelves conquered by the Danes, is related in our Engliſh hiſtories.

All that can be expected from us is, to report as much out of them as proves, that both Saxons and Danes, while they were maſters here, were in poſſeſſion of the dominion of the Britiſh Seas.

Gildas relates, that Octa and Ebiſſa, two leaders of the Saxons, extended their dominions on the northern coaſt of this iſland, and Allor, with his ſons Ciſſa and Cimenus, on the ſouthern; and that they became ſoon maſters of the ſeas to the ſouthward of Scotland. The former with forty armed veſſels ſailing about that kingdom, invading and ſpoiling the Orcades, but minding their ſovereignty at land more than at ſea, their naval ſtrength fell to decay; which the Danes and Normans obſerving, it was a temptation to them to infeſt this iſland, and commit frequent robberies in the Britiſh Seas, in a ſort of long-boats or gallies of their own invention, with which they uſed to be too hard for the Engl ſh Saxons, 'till Alfred cauſed a great number of other ſhips to be built longer, deeper, and nimbler than the Danes; by which means he drove thoſe invaders out of the Engliſh Seas, and recovered the abſolute dominion of them; which was tranſmitted to the ſucceeding kings, of whom EDGAR became powerful at ſea.

Edgar began his reign in 957, according to the Saxon Chronicle; and as to his fleet, it conſiſted of near 1000 ſail; and he did not coaſt round his kingdom once a year in one of the three ſquadrons, as ſome ſay, but each ſquadron carried him to the extent of its cruize, and then he embarked on board the other ſquadron; and in the year 973, he cauſed himſelf to be rowed over the River DEE by eight kings, while himſelf ſteered the helm; and in his titles, he conſtantly uſed this, of LORD OF THE BRITISH SEAS. This is a fact of much greater certainty than can be produced for any naval

power within this period of time; and therefore it deſerves our attention.

We may ſee, by an extract of an old record, how far king Edgar pretended to the ſovereignty of the ſea. Albitonantis Dei largiſlua qui eſt rex regum, ego Edgarus Anglorum Baſileus, omniumque rerum inſularum oceani quæ Britanniam circumjacent, cunctarumque nationum quæ infra eam includuntur, imperator & dominus *: and Randulph of Cheſter, though he does not ſwell the number to above 400 ſhips, makes mention of his ſailing round the iſland, Idem quoque Edgarus 400 naves congregavit, ex quibus omni anno poſt feſtum paſchæ 100 naves, ad quamlibet Angliæ partem ſtatuit; ſic æſtate inſulam circumnavigavit: but the Danes afterwards, as they had been before, were very ſucceſsful in their attempts againſt the Saxons here both by ſea and land.

* Ex. Chart. Fundam. Eccleſ. Wigorn.

Inſomuch, that the Engliſh or Saxon-Britons, were forced to buy them off: and a tax call Danegelt, was levied here, to be paid them that they might not aſſault the inhabitants of this iſland, either by land or ſea. The Saxons, or Engliſh, maintained the Daniſh fleet, which was to be employed for the defence and guard of the Engliſh Seas, as well as of the kingdom. Edward the Confeſſor aboliſhed this tribute, as far at leaſt as it was to be paid to the Danes: ſome authors ſay, that this tax was levied after the Engliſh threw off their ſubjection to the Danes, for the maintenance of the Engliſh navy, which was afterwards ſtrong enough to defend the ſovereignty of the Britiſh Seas, 'till the Norman invaſion.

Hence it appears, that the dominion of the ſea went with that of the land; and that in Edgar's time, the Engliſh Saxons enjoyed it without competitors, as they did alſo under Canutus the Dane; of whom it is written, that deſigning to check the vanity of flatterers, by ſhewing them, that even the greateſt kings were, at their higheſt pitch of grandeur, only men, ſat down on a ſeat on Southampton ſhore, to make a trial before them of the obedience of the ſea, to whom he thus addreſſed himſelf.

> Thou, O ſea! art under my dominion, as the ground upon which I ſit is mine, and none did ever diſobey me and was unpuniſhed. I command thee not to come up upon my land, nor to preſume to wet the feet or garments of thy lord. Matth. of Weſtminſter, anno 1035.

But the tide flowing in the ordinary manner, and wetting not only his Majeſty's feet, but his legs, the king leaping up reſigned his crown of gold to a crucifix, declaring none was worthy of the name of a king, but him alone, who can command both ſea and land, and they obey.

It can hardly be expected, that the ſovereignty of the Britiſh Seas ſhould be maintained without any intervals of invaſion by foreign powers, eſpecially in ſuch confuſed times as the Heptarchy, and the contention between the Engliſh and Danes; but it will be ſeen, that whenever the dominion of this iſland was ſettled, that of the ſea was always an appendant to it: and ſince the Norman invaſion, the kings of England have defended their ſovereignty againſt all foreign powers, and their dominion at ſea has been aſſerted and acknowleged, without any remarkable interruption, from the year 1066, to the preſent times: we ſhall now, therefore, prove, that the civil and natural poſſeſſion of the ſovereignty of the Engliſh Seas has been inveſted in the kings or queens of this nation, from the Norman invaſion to our times.

By a civil poſſeſſion (according to the explication of Hugo Grotius, in his treatiſe de Jure Civili, lib. 5.) we mean, That which is requiſite by law to found a right and title upon, and by a natural poſſeſſion we mean an actual poſſeſſion, which, according to the ſame author, is alſo neceſſary for proving the validity of any prince's title to the ſovereignty of the ſea: both of which we undertake to aſſert and maintain. As,

I. That the kings of England have, by many ſolemn overt-acts and declarations, aſcribed to themſelves the dominion of the adjacent ſeas; and that dominion has been both allowed and confirmed, not only by the laws and cuſtoms of the nation (as appears by the records of parliament, &c.) but alſo by the common and univerſal aſſent of all the neighbouring and other foreign nations concerned.

II. That the kings and queens of England have always exerciſed the dominion of the Engliſh Seas, as well as of the iſlands ſituate in them, as of a province belonging to them, in which they have levied tribute and cuſtoms of foreigners, and have alſo preſcribed laws of navigation to ſuch foreigners, as in time of peace have enjoyed their protection there, and that (in caſe of the violation of ſuch laws) foreign princes and ſtates, by making application to them, have thereby openly acquieſced and acknowleged them to be the ſovereign lords of the ſea.

III. That paſſage through the Engliſh Seas having been humbly deſired, has been ſometimes granted, and ſometimes refuſed, by the kings and queens of England, to the foreigners that petitioned for it; and alſo that all ſhips navigating in their ſeas, on certain occaſions, have been ſtopped and arreſted for the ſervice, and by the command, of the kings of England.

IV. That the liberty of fiſhing in the Britiſh Seas has been frequently obtained by licence of the kings and queens of Britain; and that protection has been given by them to the fiſhers, upon whoſe humble requeſt ſuch licence had been granted, and a tribute exacted for that protection.

To this ſhall be added ſeveral other corroborating evidences; but as for what happened from the Norman invaſion, to the union of the two crowns under James I. we ſhall not be ſo particular, as in what has fallen out ſince that time; becauſe that being of later date, will conſequently be of greater weight.

The order which we propoſe to obſerve, will naturally lead us to treat of the dominion of the Weſtern or Iriſh Sea, in diſcourſing of the eſtate of the maritime affairs of England, at the time that the ſovereignty of that ſea was added to that of the Engliſh, by the acceſſion of Ireland to the crown of England, under king Henry II. and king John, who conquered that iſland.

As to the dominion of the Northern or Caledonian and Deucaledonian Seas, we ſhall endeavour to evince, that it is the ſole and undoubted prerogative of his Britannic Majeſty, as a neceſſary appendant of the ſovereignty of the kingdom of Scotland, both which he has derived by an unqueſtionable right from his royal predeceſſors, the kings and queens of that country.

To begin with William the Norman, it appears by ſeveral paſſages in Doomſday-book, that he maintained the maritime affairs of England in a very flouriſhing ſtate. And other hiſtories ſpeak largely of his powerful navies, which, by the addition of the Norman fleet, muſt have been ſufficient to ſecure the dominion of the ſea; and though the Danes appeared in the northern parts, and committed ſome piracies in the weſtern, yet they dared not engage the royal navy of England; but what they performed was by ſtealth and ſurprize.

The Normans immediate ſucceſſors, William Rufus and Henry I. were as careful in maintaining their empire at ſea, as their father the firſt William had been. Florence of Worceſter and Hoveden relate, That being about to declare war againſt Robert duke of Normandy, who was then preparing for an exportation to England, he commanded his butſecarli, a ſort of ſea-officers then known by that name, to guard the ſeas, and take care that no perſon ſhould paſs over from Normandy towards the Engliſh coaſts. Beſides, this being a ſufficient proof of his ſtrength at ſea, the very office of theſe butſecarli proves, that he looked upon himſelf as lawful ſovereign of it; they being no other than Cuſtodes ipſius maris, or guardians of the Sea, as will be ſhewn more fully hereafter.

The confuſions that happened in Stephen's reign, hindered the growth of the Engliſh ſtrength at ſea; and, indeed, his dominion by land was rendered precarious, by the intereſt of Maud the empreſs, and her Son Henry II. in whoſe time, Ireland being conquered, the Weſtern Sea was added to the maritime empire of the kings of England; and that theſe kings have expreſsly vindicated and aſſerted their title to the dominion of thoſe ſeas, appears among other Iriſh ſtatutes, by an act made in the reign of Edward IV. ſtat. Hibern. cap. 6. forbidding fiſhing there without licences, and laying a tax on all boats and veſſels coming thither to fiſh: ſince which, king James I. did, by a ſolemn proclamation, poſitively forbid all fiſhing upon the Iriſh coaſts to foreigners, without permiſſion.

Many other inſtances might be given to prove, that the kings of England have, from time to time, aſſerted their right to the ſovereignty of the Iriſh, as well as of their other ſeas. Which warrants us, from the reign of king John, when Ireland was annexed to the crown of England, to reckon them a part of the Britiſh Seas; the empire of which we are now endeavouring to maintain, to be part of the ſovereignty of Britain.

King John, in the paſſage before cited, challenged the homage of the flag near 500 years ago, by that memorable ordinance at Haſtings, whereby this duty was required, not barely as a mark of courteſy, but as a matter of undoubted right, cum debita reverentia, and all that refuſed it were to be treated as enemies. This homage of the flag is a conſecutive acknowlegement, that the right and dominion of the ſeas are in him, to whoſe flag they ſtrike and pay that homage; implying, that the prince grants a general licence for ſhips to paſs through his ſeas, that are his friends, paying him that duty: like thoſe ſervices when lords grant out eſtates, reſerving a pepper-corn, or ſome ſuch trifle, the value of which is not regarded, but is only a ſignificant mark of the remembrance and acknowlegement of their benefactor's right and dominion. This ſalutation is to be paid, not only by foreigners, but alſo by natural-born ſubjects; and ſuch as refuſe to do it, may be brought to the flag to anſwer the contempt.

King John aſſerted his title to this homage, by a fleet of no leſs than 500 ſhips, in a voyage royal of his, when he ſailed to Ireland, commanding all veſſels, which he met in his way, to pay that duty and acknowlegement; and our ſucceeding kings

kings have done the ſame, with more or leſs vigour and ſucceſs according to the circumſtances of their affairs.

His ſon Henry III. was too much involved in his wars with the barons, to mind his naval dominion: but then Henry's ſon Edward I. coming to the crown about the year 1272, and entering into a war with Philip the Fair of France, both princes agreed upon a freedom of commerce (then called ſufferance of war) and each appointed commiſſioners to take cognizance of all things relating to this agreement, which they were to decide, according to the laws and cuſtoms of merchants, as far as it was allowed by the aforeſaid treaty of commerce.

When theſe two kings concluded a peace, they mutually obliged themſelves to be enemies to each others enemies, except ſome princes expreſsly mentioned in the treaty of peace and alliance*. But ſeveral complaints ariſing concerning injuries done, and violences offered to merchantmen upon that ſea, not only during the ſufferance, but after the peace; and the two kings foreſeeing the differences between the king of France and the earl of Flanders, might give occaſion to other complaints of that nature, they appointed each four commiſſioners, with full power to decide all controverſies of that kind that had happened, or might happen. Upon which a very remarkable remonſtrance was exhibited to them, not only in the name of the whole body of the people of England, but there alſo joined in it the procurators of all the nations in Europe, that were then in any manner conſiderable for trade and navigation, who all unanimouſly acknowledged the kings of England to have been time out of mind (quatenus kings of England) the LAWFUL SOVEREIGNS OF THE ENGLISH SEAS.

* Selden de Dom. Maris, l. 2. c. 14, 27, 28—Roll's 2 Parl. 174.

This is ſuch an authentic proof, that none can, with any colour of reaſon, object againſt it. The original writing is among the archives, kept in the Tower of London, in the old French or Norman tongue, in which it was then uſual to draw up ſuch ſort of inſtruments. The reader, perhaps, will not be diſpleaſed with a tranſlation of as much of it as relates to the preſent caſe.

'To you our lords, auditors, deputed by the kings of England and France, to redreſs the injuries done to their ſubjects, by ſea and land, in times of truce and peace; we the procurators of the prelates and nobles, and of the admiral of the Engliſh Sea, as well as of the cities and towns, and of the merchants, mariners, meſſengers, and foreign inhabitants, and all others belonging to the realm of England, and other dominions and territories belonging to the king of England; as alſo of divers other inhabitants of Genoa, Catalonia, Spain, Germany, Zealand, Friezland, Denmark, and Norway, and of ſundry other maritime places of the empire, moſt humbly ſhews: That whereas the kings of England, by right of the ſaid kingdom, have always been in peaceable poſſeſſion of the SOVEREIGN LORDSHIP OF THE ENGLISH SEAS, and of the ISLANDS ſituate within the ſame, with power of conſtituting and appointing of laws and ſtatutes, and of prohibiting the uſe of arms and paſſage of ſhips otherwiſe equipped than merchant-ſhips, and of taking ſecurity and granting protection, as occaſion ſhall require, and of appointing all other things neceſſary for the maintaining of peace, juſtice, and equity, among all manner of people, as well foreigners as their own ſubjects navigating in thoſe ſeas, and alſo of determining all cauſes and differences, and adminiſtering juſtice to high and low, according to the aforeſaid laws, ſtatutes, ordinances, conſtitutions, and prohibitions, and generally of doing and acting all other things incumbent and belonging to the exerciſe of their ſovereign juriſdiction within the aforeſaid ſeas; and whereas, &c.*'

* See Coke Inſtit. 142.

Though the Flemmings are not mentioned in this inſtrument, it appears in the records, Rot. Par. 14 Edw. II. part 2. membran. 26. that the ambaſſadors of the earl of Flanders to that king, fully acknowleged the undeniable right of the crown of England to the ſovereignty of the adjacent ſeas. The paſſage is this.

MEMORANDUM.

'That whereas for the reformation of certain injuries in an amicable way, done by the ſubjects of the earl of Flanders to the ſubjects of the kingdom of England, and by the ſubjects of the ſaid kingdom to thoſe of Flanders, ſince the time that our ſaid lord the king undertook the government of his kingdom, &c. And whereas the ſaid ambaſſadors had been admitted by our ſaid lord the king, to treat anew of this kind of injuries, theſe ambaſſadors or other ambaſſadors of the aforeſaid earl, in the aforeſaid treaties, did, among other particulars, that they required before all things, make ſupplication, that the ſaid lord the king, would at his own ſuit, by virtue of his royal authority, cauſe enquiry to be made, and do juſtice, about a certain depredation lately made by the ſubjects of England (as it is ſaid) upon the Engliſh Seas, of wines and divers other merchandizes belonging to certain men of Flanders, towards the parts of Cranden, within the territory and juriſdiction of our ſaid lord the king, alleging, that the aforeſaid wines and merchandizes taken from the ſaid Flemings, were brought within the juriſdiction and realm of the ſaid lord the king, and that it belonged to the king himſelf, ſo to do, for that he is LORD OF THE SAID SEA.

To theſe teſtimonies of the dominion of the crown of England in the neighbouring ſeas, we ſhall now add ſome other remarkable ones in the reign of Edward III. the originals of which are yet to be ſeen in the Tower of London: and the firſt is that king's commiſſion to Geofrey de Say, admiral of his Weſtern and Southern Seas, in which is this paſſage: 'We calling to mind that our progenitors, the kings of England, have in former times been LORDS OF THE ENGLISH SEAS on every ſide, and defended the ſame againſt all invaders; and conſidering, that it would extremely grieve us if (which God forbid) our royal honour ſhould, in any manner, be impaired, or ſhould ſuffer any diminution of this nature in our time, and deſiring,' &c. Nor was the commiſſion given at the ſame time to John de Norwich, admiral of the Northern Seas of England, in any manner different from that to Geofrey de Say.

There is yet another obſervation which may be made upon an action of the ſame Edward III. which is his coining of thoſe ancient pieces of gold called roſe nobles, in which he has been imitated by ſeveral of our kings of later date. Upon this piece is ſeen the repreſentation of a ſhip floating in the ſea, there being ſeated in the ſhip, as on a throne, a king armed with a ſhield, having a royal diadem on his head, and a ſword in his hand; by which, doubtleſs, that great prince intended to denote, that the Sovereignty of the Engliſh Seas belonged to him, nor was it ever ſubject to a maſter that defended it better. For king Edward III. is ſaid to have entertained 1100 ſhips of war, ſuch as were uſual in his time, for preſerving the freedom of the ENGLISH SEAS.

It is objected, indeed, that upon ſome pieces of money anciently coined in France, there were much the ſame figures, and that alſo ſome coins of Zealand bear the repreſentation of a lion riſing out of the ſea, &c. To which it is anſwered, That as to France, there was never any money coined there with theſe inſignia of the ſea, &c. except ſuch as were ſtamped by the kings of England, while they were in poſſeſſion of that country: and with reſpect to Zealand we ſhall allow, if ſhe pleaſes, her animal riſing unnaturally out of the ſea, to denote the ſituation of that iſland, but believe the owners will ſcarce pretend, that piece of money repreſents any dominion in the ſea. But there are innumerable other examples to prove, that the kings of England have always aſſumed, and aſcribed to themſelves, the dominion and ſovereignty of the adjacent ſeas; but the inſtances we have given are ſo full, that there will be no need of adding any more to them. And the taſk would be endleſs, if we ſhould attempt to cite all the paſſages out of our lawyers, that have ſupported this claim of the crown of England to the dominion of the BRITISH SEAS. There is one point univerſally known, and as univerſally acknowleged by all, viz. that in law theſe two phraſes intra regnum, within the kingdom, and intra quatuor maria, within the four ſeas, have one and the ſame ſignification; that is, that all the actions done within the limits of the Engliſh empire, in thoſe, are deemed to be done in England itſelf.

In the antient records concerning the cuſtom of the Admiralty, we read it was uſual in the time of Henry I. and of other kings of England, who reigned about the beginning of the 12th century, when any perſon accuſed of a capital crime committed at ſea, after being five times ſummoned by the public cryer, did not, within a certain limited time, make his appearance before the court of Admiralty, ſuch perſon or perſons were baniſhed out of England, and out of the SEAS belonging to the king of England, for a greater or leſs number of years, according to the pleaſure of the admiral. It was alſo formerly cuſtomary to enter actions in expreſs terms, concerning differences ariſing in thoſe ſeas, in the ordinary courſe of our common law.

However, the ſea province of the Engliſh empire does properly belong, according to the antient and received cuſtom of the kingdom, to the lord high admiral of England, or his deputies, not only with relation to its defence and ſafeguard, but to its government and juriſdiction, which the ſaid officers have always had cognizance of. As for the prerogative of the kings of England in conſtituting and appointing of naval laws, it is very ancient; for beſides what has been ſaid of our Saxon kings, Richard I. ſome years before his death, which happened in the year 1199, publiſhed the SEA LAWS, that to this day are famous by the name of the laws of Oleron [ſee the article OLERON's LAWS], which iſland he was then poſſeſſed of, and it is ſaid by ſome authors, he was then there. And ſince the king of England is univerſally acknowleged to have been the author of theſe laws, which have taken place ever ſince that time, it is to be ſuppoſed his right to give laws was univerſally allowed, or the making of them would have been impertinent, or of no uſe.

Edward I. prescribed a method to be observed for the more regular execution of those laws, as we find in the records of the Tower, de Superioritate Maris, and in the reign of his grandson Edward III. the judges of England were consulted, to the intent, 'That the form of proceeding, formerly instituted by Edward I. and his council, at the request of his subjects, might be resumed and continued for the better retaining and preserving the antient superiority of the seas of England, and the authority of the English Admiralty, in explaining and correcting the laws and statutes made by his progenitors the kings of England, for the maintenance of peace, and the administration of justice, to all nations and people navigating in the ENGLISH SEAS, and the taking cognizance of all attempts made against the liberties thereof, by punishing the guilty, and awarding satisfaction to the injured, according to the laws and ordinances made by the lord Richard, king of England, upon his return from the Holy Land, and declared and published in the aforesaid island of OLERON.' Which record proves sufficiently by whom, and where, the laws bearing the name of that island, were published.

The officers appointed by the kings of England for the management of maritime affairs, were the butsicarli, who were sometimes called guardians of the navy, and sometimes guardians of the sea. In the time of Henry III. authority to guard the Eastern Sea and shore was given to Thouron de Moleton, with the title of captain and guardian of the sea. Rot. Parl. 48 Henry III. numb. 3. & Rot. Claus. 48 Henry III. mem. 3. In the same prince's reign, Hugh de Crequeur is stiled warden of the Cinque Ports, and of the sea in those parts.

After him, in the year 1292, Edward I, dividing his fleet into three squadrons, gave the three officers commanding them the name of admirals; and the like command and character was given to three other such officers, in the time of his son and successor, Edward II; which prince being likewise succeeded by his son, Edward III, in his reign a parliament was called, to provide for the peace and security of the realm, by LAND and SEA. In the time of Richard II, Hugh Calverlee was made admiral of the sea, and so others, as appears by the general list of admirals; by which it is plain, provision was no less punctually made by the kings and parliament of England for the defence of the sea, than for the support of the government by land; and of what nature the commissions granted to those admirals were, may be seen by the form thereof, yet extant, of which we have transcribed as much as is necessary to express the extent of their jurisdiction in those days.

'We give and grant to N—— the office of our great admiral of England, Ireland, and Wales, and of the dominions and islands belonging to the same; also of our town of Calais, and our marches thereof, Normandy, Gascoigne, and Aquitain: and we made, appointed, and ordained, and by these presents we make, appoint, and ordain, him the said N—— our admiral of England, Ireland, and Wales, and our dominions and isles of the same, our town of Calais, and our marches thereof, Normandy, Gascoigne, and Aquitain: as also general governor over all our fleets and seas of our said kingdoms of England and Ireland, our dominions and islands belonging to the same. And KNOW YE further, that of our special grace, and upon certain knowlege, &c. we give and grant unto the said N——, our great admiral of England, and governor-general over our fleets and seas aforefaid, all manner of jurisdictions, authorities, liberties, offices, fees, profits, duties, emoluments, wrecks of the sea, regards, advantages, commodities, prehenninences, and privileges whatsoever, &c.

King Edward VI, in the third year of his reign, granted a commission to John earl of Warwick, his admiral, wherein he calls him 'Our admiral of England, Ireland, Wales, Calais, and Boulogne, and marches of the same, and of Normandy, Gascoigne, and Aquitain, as also governor-general of all our fleets and seas.'

From these forms of the commissions of our English admirals, for several ages past, we shall only infer, that the coasts of the transmarine provinces mentioned in the said commissions, are only inserted to denote the extent and limits of the sea that is thereby committed to their charge and protection; for either the names of the provinces of France inserted in these commissions must signify something or nothing: it is ridiculous to suppose they signify nothing; and if they denote any thing, it must be the bounds of our admiral's jurisdiction, for the following reasons.

I. It cannot be imagined the names of these provinces are there inserted in consequence of our king's pretensions to the crown of France, for then they would have given their admirals the title of admirals of England, France, &c. besides, the English were driven out of France, except Calais, and the English pale in Picardy, before the names of any of these provinces, Aquitain only excepted, were mentioned in the commissions of the admirals of England. By which it appears, II. That the kings of England only added the names of those provinces in their admirals commissions, for the better distinction of their boundaries: for while they possessed the maritime provinces of France, there was no necessity of mentioning them in their commissions, because the dominion of those seas belonged to them as kings of England, and not as dukes of Normandy, Aquitain, &c. but having been dispossessed of these, by adding them afterwards as bounds of the jurisdiction of their admirals, they intended to prevent all differences about the extent of their ancient dominion, as kings of England over the sea.

It appears by the instrument before mentioned, presented to the commissioners appointed by Edward I. and Philip the Fair of France, to determine certain maritime differences, that, by the consent of all the trading nations in Europe, the kings of England had then been in peaceable possession of the dominion of the sea by immemorial prescription; that the sovereignty of the sea belongs to them, not because they were Domini utriusque ripæ, when they had both England and Normandy, and were lords of both shores: for Edward I, at that time, had not Normandy, but that it is inseparably appendant to the kingdom of England. Our kings being superior lords of the said seas, by reason, as the very record mentions, of the said kingdom; and since the sovereignty of the sea did always belong to the king of England, not in any other right than that of the kingdom, no prince or state ought, or can doubt, the title by which our present claim is deduced.

It is objected, That admirals were established many centuries ago in France, as well as in England. But this does not prove that they had the same power as the English admirals had; on the contrary, it is very evident that those officers were at first only occasional commanders of naval forces, on certain expeditions; and so far were they from pretending to any real jurisdiction in the sea itself, as belonging to the crown of France, that they were, in ancient times, for the most part foreigners and mercenaries, hired for some present service, for which we shall give a very unsuspected testimony, viz. that of Joannes Tillius, a clerk of the parliament of Paris, who in his second book de Rebus Gallicis says, 'The kingdom of France having been lessened by intestine divisions, and its kings reduced to narrow dominions by their potent vassals, (such as the kings of England, who possessed Normandy, Aquitain, and other countries, the dukes of Bretagne, the earls of Flanders, Provence, and Languedoc) and having for a long time no command in the sea, had consequently no occasion for admirals, 'till they undertook the expedition for the Holy Land, in which they made use of mercenaries, whom they hired of the Genoese, Spaniards, and other maritime nations expert in the art of navigation, with whom they agreed for the transportation of their forces,' &c. — Which appears to be very true, by the list of French admirals, where Engerenæus Concæus is the first that is said to have enjoyed that dignity, which was conferred upon him, according to Joannes Feronius, by Philip the Bold, king of France, about the year 1280. And Joannes Tillius makes the institution of that office of a later date; for, according to him, 'Amaurius, viscount of Narbonne, was first made admiral of France, about the year 1300: nor do the edicts and decrees of Charles V. and VI, Lewis XII, Francis I, Henry II. and III, and other French kings, concerning marine affairs, and the admiralty, seem to relate to any thing but to the goods and persons of the subjects of the crown of France, and of the enemies taken in time of war by them: for though the admirals of France be therein stiled our lieutenant-general, throughout the sea, and the shores thereof, yet that lieutenant-general, as they call him, never had any command over any part of the sea flowing between Britain and France, as a province, or dominion, belonging to his master the king of France, but only over the ships and naval forces of the said king passing through the British Seas, much in the same manner that any sovereign prince commands and governs the persons belonging to his own retinue, though in a foreign country, but without pretending to have any jurisdiction out of his own family, in that territory.'

As to the French kings having at the beginning, been in possession of Normandy, Picardy, and Flanders; (though it must be observed, that their kingdom was for a long time dispossessed of them), the possession of the shore, as we have already remarked out of Grotius, gives no title to the dominion of the sea flowing before it. And Julius Pacius de Domin. Maris Adriatici, writes, That the right to the sea arises not from the possession of the shores, for the sea and land make distinct territories. It is no more necessary that every sea-town should command 100 miles at sea, than that each city should command 100 miles by land.

By the laws of England, the land is called the REALM, but the sea the DOMINION; and as the loss of one province does not infer that the prince must resign up the rest; so the loss of the land territory does not, by concomitancy, argue the loss of the adjacent seas.

It appears further, that the office of admiral was at first occasional in France; for that, though all the great officers of the crown, as the constable, master of the horse, great master of the household, and others, have each their

particular

particular ſtation in the parliament of Paris; yet it was poſitively denied, in the time of Henry II, to Gaſpar de Coligni, admiral of France; and Henry of Montmerancy ſeemed to be convinced of the French admirals narrow juriſdiction, when, in the year 1612, cauſing a ſtatue to be erected at Chantilly, in honour of his father the duke of Montmerancy, he ſtiles himſelf only, in the inſcription, Navalis militiæ magiſter, or general of the militia by ſea, he being admiral of France. The poſſeſſion of the iſlands of Guernſey, Jerſey, and ſome other iſles on the coaſts of Normandy by the kings of England, is made uſe of as an argument to prove the extent of their dominion over the Channel, and that thoſe iſlands do not belong to them as an appendant or remainder of the duchy of Normandy; but it appears, by ſeveral treaties between the kings of England and other princes, that thoſe iſles are ſpoken of as belonging to the crown of England: and in the grant made of them by Henry V. to his brother John duke of Bedford, that prince was to enjoy the ſovereignty of them, without any recognition to be made to that king, or his heirs, notwithſtanding any prerogative of the crown for any other tenure held of him out of the ſaid iſlands, which may in any manner belong to the ſaid iſlands, caſtle, or dominions. And beſides it is certain, that Henry duke of Warwick was, by Henry VI, made king of thoſe iſlands, and of the Iſle of Wight. Now it is not probable that prince would have erected them into a kingdom, if he had not poſſeſſed them by a title ſuperior to that of an appendant of the duchy of Normandy.

Our kings have frequently forbidden hoſtilities between foreigners at war with one another, within ſuch diſtances from the ports and harbours of thoſe iſlands as to them ſeemed convenient: and we ſhall ſee, by a patent granted by Edward VI. to the inhabitants of Jerſey, that he gave them the privileges contained in it, from no other principle than as he was maſter of the BRITISH SEAS. This patent was confirmed by queen Elizabeth and king James I. By which 'all mer-'chants, natives or ſtrangers, and enemies as well as friends, 'are allowed, in time of war, freely, lawfully, and ſe-'curely, to ſail into and about, and frequent the ſaid iſland 'and the coaſts thereof, with their ſhips and goods, as well 'for ſhelter againſt foul weather, as upon any other lawful 'occaſions, and there to uſe free traffic and commerce, and 'to abide with all ſecurity and ſafety, and to come thence 'and return thither at pleaſure,' &c.

This dominion of the iſles on the coaſt of Normandy, and all the iſlands within the extent of the Britiſh Sea, is no inconſiderable proof of the ſovereignty of the kings of England over them.

That they had always a right of impoſing tributes for the protection given by them to foreigners within their ſeas, might be further evinced, from variety of other remarkable inſtances: we ſhall only inſert the following abſtract of the records of parliament, as it may be ſeen in the original Norman, Rot. Parl. 2 Rich. II. article 38. in ſchedula, of which the following articles are a tranſlation.

The merchants of London having been conſulted by the earl of Northumberland and the mayor of London, about the proper methods for the guard and defence of the NORTHERN ENGLISH SEAS, it was reſolved by the commons in parliament, That that ſea ſhould be guarded by two men of war, two barks, and two bilanders, armed for war, and exact of all ſhips as follows:

(1.) Of all ſhips and barks, of what burthen ſoever (except ſhips bringing goods from Flanders to London, or carrying wool or ſkins from London to Calais, which were alſo to pay for their convoy, if they required any) paſſing through the ſaid ſea, for the voyage going and returning, 6 d. per ton.

(2.) Of all fiſher boats fiſhing in that ſea for herring, 6 d. a week per ton.

(3.) Of all ſhips or boats fiſhing there for other ſorts of fiſh, 6 d. per ton every three weeks.

(4.) Of all Newcaſtle colliers, 6 d. per ton every three months.

(5.) Of all other ſhips and veſſels trading with Pruſſia, Norway, or any other of thoſe parts beyond ſea, for the voyage going and returning, 6 d. per ton.

Nor have the kings of England been contented with exacting tribute, as an acknowlegement of their dominion in the Britiſh Seas; they always obliged all foreigners paſſing through their ſeas to pay them ſuch other homages and tokens of ſubmiſſion, as are ſufficient to prove they acquieſced in the lawfulneſs of their title to that dominion. It was ever accounted even treaſon for any ſhip, of any nation whatſoever, to refuſe to acknowlege the ſovereignty of the kings of England, by ſtriking their colours, lowering their top-ſails, &c. or performing ſuch other ceremonies as have been required by the admirals, or captains, of any of the king's navies, or ſhips meeting with foreigners at ſea; and ſuch as refuſed ſo to do, forfeited ipſo facto, by that refuſal, all the privileges and rights to which they might otherwiſe be intitled as allies, and were puniſhable by the king of England, or his admirals, in the ſame manner as if they had committed a crime within the juriſdiction of his territories by land.

Theſe ceremonies, as we have ſhewn in the preceding pages, have been for many ages exacted by the Engliſh kings, with all imaginable rigour. By an article of the OFFENSIVE and DEFENSIVE LEAGUE, concluded between the French and Dutch, anno 1635, it was agreed, 'That if at any 'time the Dutch fleet (which, according to the league, was 'to ſcour the French coaſt in the Mediterranean from pi-'rates) ſhould meet with the French fleet, the Dutch ad-'miral ſhould, at his firſt approach to the French, ſtrike 'his colours and lower his top-ſail, and afterwards ſalute the 'French admiral with guns; which ſalutation the French ad-'miral was to return with guns only *.'—But even the duty of the flag there claimed by the FRENCH in the Mediterranean, is vaſtly inferior to that due to the ENGLISH in their ſeas, the firſt being only a bare token of reſpect, the refuſal of which could, at moſt, amount to no more than a breach of the league; whereas the homage paid to the ENGLISH being a real and fundamental prerogative of the crown, the contempt of it is, as has been ſaid, deemed to be open rebellion, and the contemners may lawfully be invaded in an hoſtile manner, according to the orders and inſtructions that are given to the admirals and commanders of the ENGLISH NAVIES and SHIPS.

* Leo ab Aitzmet Hiſt. Tract. Pacis Belg. pag. 177. edit. Lugd. Batav. 4. 1054.

Another point, in relation to the ſovereignty of the kings of England to the dominion of their ſeas, is the practice very much uſed of old by them, to extend their embargoes all over the BRITISH SEAS, and ſeize foreign ſhips paſſing there, as well as if they had been within their own harbours, and employing them in their own ſervice, as will appear by the following mandate, iſſued out by king John to this purpoſe.

'The king to all STUREMANNI (ſea captains and officers) 'and MARINELLI (mariners or ſea ſoldiers) and merchants 'of England uſing the ſea, greeting: KNOW YE, that we 'have ſent Alanus Juvo of Sorham, Walter Staltun, Vin-'cent of Haſtings, and Wimund of Winchelſea, with 'others of our barons of the Cinque Ports, &c. four faith-'ful STUREMANNI and MARINELLI of our gallies, to 'arreſt and ſafely bring into England all ſhips that they can 'find, with all that ſhall be found in them: and therefore 'we command you to be aiding to them in this buſineſs, 'ſo that ye be in England with your ſhips and goods at ſuch 'ports as they ſhall appoint: and if any ſhall attempt to 'reſiſt them, contrary to our command, YE our liege 'men are required to aſſiſt them with all your power, as 'you tender yourſelves and your chattels, and your quiet 'and reſidence, and that of all your kindred within our 'dominions.'

Much the ſame order was given by Edward III, to Thomas de Wenlock, vice-admiral of his weſtern fleet, to ſeize and arreſt all ſhips for his immediate ſervice. However, a competent hire was always allowed for ſhips ſo impreſt, according to their burthen, and the number of their hands.

That it was cuſtomary for the kings of England to grant paſſports, or ſafe-conducts, to ſuch foreigners as deſired liberty to paſs through their ſeas, may alſo be ſufficiently proved, out of the records of parliament, where will be found the conditional clauſe of ſuch paſſports, 'That the 'perſons who had obtained them ſhould not convey, or 'cauſe any thing to be conveyed, nor in any manner re-'lieve nor impart any thing to be conveyed, nor in any man-'ner relieve nor impart any thing to the king's enemies in 'France.' And in Edward the Firſt's time it was always a peculiar injunction laid upon his ſea commanders, That they ſhould take ſpecial care to vindicate and maintain the ſovereignty which his predeceſſors, the kings of England, were wont to have in the SEA, concerning the explication and amendment of the laws, which had been by them inſtituted for the government of all nations and people navigating in the Engliſh Seas; than which nothing can more explicitly demonſtrate that they poſſeſſed the dominion of them.

In a paſſport granted by Henry IV. of England, to Farrando Urtis de Sarachione, a Spaniard, that king permits him to ſail freely from the port of London through his kingdoms, dominions, and juriſdictions, to the town of Rochelle. And what can be meant by DOMINIONS and JURISDICTIONS here, but thoſe of the ſeas flowing between London and Rochelle? And the ambaſſadors of Charles VI. of France, and Robert III. of Scotland, in the paſſports they obtained of the ſame king Henry, are therein allowed free paſſage through all the places, territories, and dominions, under his power, by ſea as well as by land: whereas the paſſports granted by ſeveral kings of France to the embaſſadors of the kings of England, only run thus:

'P——, by the grace of God, king of France, to all our 'governors and ſubjects, greeting,' &c.

The reaſon of which muſt certainly be this, that the king of England being himſelf lord of the ſea, there was no neceſſity that the kings of France ſhould ſecure them within the bounds of their own juriſdiction; which John king of Sweden ſeems very well to underſtand, when in his letter to queen Elizabeth, in the year 1587, he deſires leave for

Olaus Wormæus, one of his ſubjects, to paſs through her Majeſty's SEA DOMINIONS, to carry ſome merchandize into Spain.

The * Hamburghers and the Hanſe-Towns petitioned for licence to tranſport corn thither about the ſame time, and were poſitively forbidden, being told plainly, That ſuch as ſhould preſume to go beyond a former licence, 'ſhould 'for that bold preſumption ſuffer the loſs of all their goods 'and effects, in caſe they fell into the hands of any of her 'Majeſty's ſhips of war, or others.'

* June 30, anno 1598.

Wetefeldius and Bernſcovius, ambaſſadors from Chriſtian IV, king of Denmark, deſiring the ſame liberty of tranſporting corn to Spain, by order from their maſter, were anſwered, 'That her Majeſty could by no means conſent 'to the king of Denmark's demands; neither would ſhe 'grant ſuch a liberty to her own ſubjects, or any elſe, 'till 'the war between her and the Spaniards was at an end.'

If queen Elizabeth was not ſovereign of the ENGLISH SEAS, why did ſo many ſtates humbly requeſt her for privileges which ſhe had no right to grant or refuſe? The frequent applications that have been made by foreign potentates for obtaining liberty to fiſh in the ENGLISH SEAS, and the conditions upon which that privilege has been granted, are other proofs of the lawfulneſs of the Engliſh dominion in their ſeas.

Mention has already been made of the tribute impoſed upon fiſhermen in the ENGLISH SEAS, in the time of Richard II, and in the Iriſh Seas in the reign of Edward IV, to which we ſhall now add ſome notable inſtances of the ſame nature.

We find in the Rolls of Parliament, in the reign of king Edward I, a protection was granted by that prince for the men of Holland, &c. to this purpoſe:

'The king to his truſty and well-beloved John de Buteturtu, 'warden of the port of Jernemouth, greeting: being informed 'that men of Holland, Zealand, and Friezland, who are now 'in amity with us, deſign to come and fiſh in our ſea, near 'Jernemouth, we require you to cauſe public proclamation 'to be made once or twice a week, forbidding all manner 'of perſons whatſoever employed in our ſervice, to preſume 'to do, or cauſe to be done, to theſe men, any injury or 'damage, &c.'

The records are full of ſuch protections in the reigns of that king's ſucceſſors, Edward II, Edward III, Richard II, Henry IV, Henry V, and Henry VI; the laſt of whom, as appears by Rot. Franciæ, 38 Henry VI. mem. 9 and 14. frequently gave licences, eſpecially to the French, to fiſh in HIS SEAS, preſcribing a certain time, as well as the ſize of the boats, they or others were to fiſh in. So jealous have our princes always been of this prerogative, that Edward VI. appointed cuſtodes, conductores, and waſtores, guardians, conductors, and waſters, with a ſpecial power to protect the FISHERMEN upon the coaſt of Suffolk; for which protection a tribute was levied on the fiſhers, according to their burthen.

The words of their commiſſion will ſhew us what their office was: they had power to 'raiſe and collect all coſts, charges, 'and expences, to arreſt and apprehend all perſons who ſhould 'pretend to protect, conduct, or waſte the fiſhermen, and to 'commit them to the next gaol, there to be kept ſecurely, 'till the king ſhould be pleaſed to give order for their de-'livery.' And in the patents of that nature granted by Richard III. and Henry VII, theſe officers were impowered to exact this tribute, 'even though any one or more of the 'ſaid fiſhermen may have obtained letters of ſafe-conduct '[ſee the article of SAFE-CONDUCT] from any other king, 'prince, potentate, or governor whatſoever.'

Queen Mary I. being married to Philip II. of Spain, granted, for a fine and a yearly revenue of 1000 l. to be paid into the treaſury of Ireland, a general licence for the NETHERLANDERS TO FISH ON THE NORTHERN PARTS OF THAT KINGDOM. Mr Camden in his Britannia, ſpeaking of the Northern Sea, which waſhes the coaſt of Yorkſhire, ſays, 'The Hollanders and Zealanders firſt obtaining leave ac-'cording to the ancient cuſtom, of the governor of Scarbo-'rough caſtle, made a very plentiful and advantageous HER-'RING-FISHING: the Engliſh reſerving only the honour 'and privilege to themſelves, have, by a very condemnable 'negligence, always reſigned the PROFIT TO STRANGERS.'

This liberty of FISHING in the ENGLISH SEAS has been always requeſted by STRANGERS, and particularly by the FRENCH, though they would gladly uſurp a ſhare of the MARINE SOVEREIGNTY, if they had power to maintain it. HENRY IV. of FRANCE, his admirals uſually aſked of our QUEEN ELIZABETH licences for the FRENCH FISHERMEN TO FISH IN THE NEIGHBOURING SEAS FOR SOLES FOR THAT PRINCE'S OWN TABLE.

The Engliſh do not pretend that their kings were ſovereigns of the Caledonian and Deucaledonian Seas, 'till the kingdom of Scotland was united to that of England, under James I. Though the ancient Scots enjoyed, without any competitors, the ſovereignty of the greateſt part of the ſeas with which their ſhores are waſhed; yet they had, for many ages together, a continual controverſy with their neighbours, the Danes and Norwegians, about the more northerly parts of the Caledonian Sea, to the poſſeſſion of which they all pretended; and, in the main, the government of thoſe ſeas did for the moſt part accompany the ſovereignty of the Orcades, and other iſlands ſituate near them; which, after many revolutions and changes of maſters, did at length devolve upon the kings and queens of Scotland, who peaceably poſſeſſed them a long time: for about the year 1468, Chriſtiern, king of Denmark, ſurrendered the Orcades and Scotland to James III, king of Scotland, who had married his daughter Margaret, and reſigned the right to thoſe iſles to him and his heirs for ever. By which ſurrender and reſignation, the Scots kings became poſſeſſed of the ſovereignty of the Northern Seas, in which they are ſituate, as well as of the iſles. Nor have the Scots neglected, on ſeveral occaſions, to aſſert their dominion of the adjacent ſeas. Mr Welwood, an eminent lawyer of that nation, in a treatiſe he wrote of the dominion of the adjacent ſeas, takes notice of a quarrel that had happened between the DUTCH and the SCOTS, about the propriety of the ſea, which, at laſt, was compoſed on the following conditions, 'That the DUTCH FISHER-BOATS ſhould not 'come within 80 miles of the ſhore, and that, in caſe they 'ſhould be driven in thither by ſtreſs of weather, they ſhould 'pay a certain tribute at the port of ABERDEEN, where a 'caſtle was built and fortified chiefly on that occaſion; and 'the DUTCH, for ſome time, did really and effectually pay 'that tribute,' &c.

In a parliament held in the ſixth year of the reign of Mary queen of Scotland, that dominion was again aſſerted, and all foreigners were expreſsly forbidden to FISH within the extent of the SCOTTISH SEAS, without licence. King James VI. of Scotland, and I. of England, had that act confirmed and enlarged: 'And all fiſhers, or other perſons whatſoever, oc-'cupying the SCOTTISH SEA, and FISHING for herrings 'or white fiſh, were enjoined to bring the ſame to be ſold 'at FREE PORTS within the kingdom of Scotland, that his 'Majeſty and his ſubjects might not be deprived of the ad-'vantages and emoluments which God had appointed for 'them.'

Since the union of the crowns of England and Scotland, the ſovereignty of the SCOTTISH SEA, and the other ſeas with it, which we have taken notice of in ſpeaking of the extent of the BRITISH SEAS, devolved upon the kings and queens of Great-Britain; and we ſhall, in the ſequel, obſerve how they have been careful to aſſert and maintain it.

But we muſt firſt take notice, that the Engliſh had great privileges and immunities in the Northern Seas granted them by the kings of Denmark and Norway, who had at firſt excluded them from all commerce and traffic in ſome parts of them. At laſt it was agreed, by a treaty made in the year 1485, between Henry VII. and John II, kings of England and Norway, that the Engliſh ſhould for ever enjoy the liberty of fiſhing, trading, and ſailing ſafely and ſecurely to IRELAND, called in the treaty the iſland of Tyle, and of buying, ſelling, and merchandizing in thoſe ſeas, upon payment of the ordinary duties of the ports, provided that by petitioning for ſuch liberty once in ſeven years, they acknowledged the ſovereignty of the kings of Norway in thoſe ſeas.

Thus we find the dominion of the ſea is not only capable of being poſſeſſed, but that other princes, beſides the kings of England, have claimed and enjoyed it. 'Frederic II, king of 'Denmark and Norway, in a letter to queen Elizabeth, in 'the year 1585, ſays, That if the Engliſh abſtained from 'doing any injury, they ſhould enjoy their former liber-'ties and privileges, without petitioning any more for li-'cences.'

This privilege depended on the good will of the ſovereign of thoſe ſeas at firſt, but having been long enjoyed, the Engliſh pleaded a right of it by preſcription. It is certain, however, that they have a better title to the dominion of the Northern Sea towards the coaſts of Greenland: for their Muſcovy company firſt acquired a right to that ſea by actual occupation, their MARINERS being the diſcoverers of it, and their FISHERS improved the whale-fiſhing.

An actual and primary poſſeſſion is much more ſufficient than an intentional one, to veſt the diſcoverers with a title to the propriety of the thing ſo diſcovered: of which king James I. ſeemed very ſenſible, when in his letters of credence given to Sir Henry Wotton, his ambaſſador to the States-General of the United Provinces, he ſays, 'That the FISHINGS in the 'Northern Seas, towards the coaſts of GREENLAND, were 'acquired by right for him, and his only.' Notwithſtanding which, it is certain that the Hollanders have been too unfriendly, by incroaching upon the BRITISH FISHERIES, not only on the NORTHERN OCEAN, but even on the coaſts of GREAT-BRITAIN.

We ſhall now obſerve how the kings and queens of Great-Britain have aſſerted the dominion of the Britiſh Seas, ſince the union of the two crowns of England and Scotland.

When king James I. ſucceeded to the kingdom of England, the nations of Europe were almoſt all in profound peace, except the Dutch and Spaniards; and the quiet of the Engliſh Seas was in ſome meaſure diſturbed by the frequent hoſtili-

ties that happened between the Spaniards and Dutch; upon which he publiſhed a proclamation, forbidding (as lord of thoſe ſeas) any ſort of injury or violence to be offered by either party, within certain limits which he appointed, as may be ſeen by the proclamation itſelf.

'Our pleaſure is, that within our ports, havens, roads, creeks, 'or other places of our dominion, or ſo near to any of our 'ſaid ports and havens as may be reaſonably conſtrued to be 'within that title, limit, or precinct, there ſhall be no force, 'violence, or offence, ſuffered to be done, either from men 'of war to men of war, or men of war to merchantmen, or 'merchantmen to merchantmen, of either party, &c.'

And though that proclamation did only prohibit the committing of hoſtilities within or near certain creeks, bays, ports, and harbours, (which were called the king's chambers, ſome of which took in 30 leagues of the ſea) no inference can be brought thence to deſtroy that prince's title to the ſovereignty of the more diſtant parts of the ENGLISH SEA; for he allows the two nations at war between themſelves (but both at peace with him) to invade, attack, and make prize of one another in the open ſea: nor did the SPANIARDS make any ſcruple to claim the king of England's protection againſt their enemies the DUTCH, and all others whatſoever, not only within the ſeas abovementioned, but all over the ENGLISH SEAS, which they looked upon to be as much a part of his dominion as the land, as appears by the diſcourſe of their advocate here, who pleads it in expreſs terms; adding, 'That 'towards the north and weſt the kings of Great-Britain's SEA 'DOMINIONS were of a vaſt extent; for that the northern 'coaſt of Britain having no oppoſite ſhore, their ſea juriſdiction that way had no limits; and the ſouth of Ireland lying oppoſite to Spain, and the weſt to the Indian 'countries belonging to that crown, were conſequently 'bounded by them.' So far did this Spaniſh lawyer make the dominion of our kings extend. Whether he has extended it too far or not, we ſhall not undertake to determine, but make no difficulty to affirm, that the Hollanders have, of all nations, been too free with the Engliſh on this occaſion, and encroached too much on our MARINE SOVEREIGNTY. This is ſaid without any deſign to revive old miſunderſtandings, or to put any Briton out of humour with our ancient and natural allies, who have appeared ſo reſolutely in the cauſe of liberty, and are now, we hope, in a ſtrict alliance with Great-Britain *.

* However incompatible the intereſts of Great-Britain and the United Provinces may appear in the eyes of ſome, in relation to their commercial concerns, we cannot but think it poſſible to promote and cement a union in this great and eſſential point, which, if it could be happily effected, would tend more ſubſtantially to the reciprocal laſting intereſt of both powers, than treaties and alliances founded on any other principles only: for this commercial concert and good underſtanding would enable us, by means of our joint maritime ſtrength, both mercantile and otherwiſe, not only to preſerve that ſhare of trade and naval power we both at preſent poſſeſs, but to increaſe them at the expence of our common enemies, and ſo keep them in ſubjection, that they may never have it in their power to injure either ſtate. Let it be ſuppoſed, for inſtance, that ſuch a ſtrict and intereſting connection ſubſiſted at preſent between theſe two powers, would not that effectually prevent thoſe meaſures that the French ſeem to be now taking to injure our trade in the Eaſt-Indies, and elſewhere? And if the French carry the point at which they aim in Aſia, againſt Great-Britain, and ſettle the French empire there, according to the ſyſtem that it is ſaid Dupleix has formed, may not the Dutch likewiſe ſoon feel the effects of the French power in that part of the world? If the Engliſh ſhould be extirpated from the trade of the Eaſt-Indies, and the French power and commerce is raiſed there, in the like proportion as that of England ſhall decline, what hinders but that France may ſoon totally deſtroy the Dutch power there alſo? For when the power that England and France now have in the Eaſt-Indies, is united in the hands of France alone, it would be ſcarce poſſible for the Dutch to ſupport themſelves in their poſſeſſions and commerce in that part of the world. On the other hand, if the Engliſh and the Dutch ſhould heartily unite in preſerving and increaſing that empire and commerce which they now have in theſe Indies, it would be impoſſible for France there to withſtand their united force; and would not this enable Great Britain and Holland to give law to all other European powers who ſhould attempt any trade in this part of the world? The like conſequence would follow in regard to the commerce of theſe two potentates in Europe, provided their intereſts in commerce and navigation could become one, and happily coincide, for the mutual preſervation and glory of both ſtates. Would ſome of the wiſeſt and ableſt men of both theſe Proteſtant maritime empires, think ſeriouſly of a matter of this high conſequence to them, we ſhould ſoon experience the weight and influence of ſo happy a commercial concert; it would prove, in its conſequences, a far more effectual preſervative of the ballance of power than any other expedient, not only in Chriſtendom, but throughout the whole globe, becauſe Great-Britain and Holland, in concert with other of their Proteſtant allies, would then be able to give law, whenever occaſion ſhould require. And this deſirable union between theſe maritime powers, in regard to their trading intereſt, may not appear impracticable, if ever it ſhould be thought of in earneſt by the joint wiſdom of both nations. See the articles UNITED PROVINCES, HOLLAND, FLANDERS, and NETHERLANDS.

Notwithſtanding king James exerciſed great forbearance towards the Dutch and others, yet there was no point of which he was more jealous than of the ſovereignty of the ſea, which may be ſeen by the following proclamation, which he iſſued in the year 1609.

'Whereas we have been contented, ſince our coming to the 'crown, to tolerate an indifferent and promiſcuous kind of 'liberty to all our friends whatſoever, to fiſh within our 'ſtreams, and upon any of our coaſts of Great-Britain, Ire'land, and other adjacent iſlands, ſo far forth as the per'miſſion or uſe thereof might not redound to the impeach'ment of our prerogative royal, nor to the hurt and damage 'of our loving ſubjects, &c. finding our continuance herein 'hath not only given occaſion of over-great encroachments 'upon our regalities, or rather queſtioning of our right, but 'hath been a means of daily wrongs to our own people that 'exerciſe the trade of fiſhing, &c. which is a matter of great 'conſequence to our eſtate, conſidering how much the 'ſtrength thereof conſiſteth in the power of ſhipping, and 'uſe of navigation; We have thought it now both juſt and 'neceſſary (in reſpect that we are now, by God's favour, 'lineally and lawfully poſſeſſed, as well of the iſles adjacent) 'to bethink ourſelves of good and lawful means to prevent 'thoſe inconveniencies, and many others depending upon 'the ſame: in conſideration whereof, &c. we have reſolved 'firſt to give notice to all the world, that our expreſs plea'ſure is, that, from the beginning of the month of Auguſt 'next coming, no perſon, of what nation or quality ſoever, 'being not our natural-born ſubject, be permitted to fiſh up'on any of our coaſts and ſeas of Great Britain, Ireland, and 'the reſt of the iſles adjacent, &c. until they have orderly 'demanded and obtained licences from us, &c. upon pain of 'ſuch chaſtiſement as ſhall be thought fit to be inflicted upon 'wilful offenders.'

The Dutch got too much by their fiſhings on our coaſt, to be frightened with a proclamation: and this pacific king had no great inclination to any harſher methods than what words would effect. The Hollanders knowing his temper, preſumed upon it ſo far, as to plead immemorial poſſeſſion. Upon which king James commanded his ambaſſador at the Hague to give the States-General to underſtand, that he expected other ſatisfaction with reference to the fiſhings. And indeed the Dutch dealt with him ſo unfairly in that matter, that a prince of more martial temper would have been provoked to a rupture; but negociations were king James's beloved way of concluding affairs, and a long one commenced about this, in which we ſhall ſee what was urged by the Engliſh on this ſubject.

We ſhall begin, therefore, with an abſtract of a letter written by the ſecretary of ſtate in England, to the Engliſh ambaſſador at the Hague, dated December 21, 1618, viz.

'As to their [the Dutch] claiming an immemorial poſſeſſion, 'founded by the law of nations, his Majeſty will have them 'told, That the kings of Spain have ſought leave to fiſh 'there (in the Britiſh Seas) by treaty from this crown, and 'that the king of France (a nearer neighbour to our coaſt 'than they) to this day requeſts leave for a few veſſels to fiſh 'for proviſion for his own houſhold, and that it appears ſo 'much the more ſtrange to his Majeſty, that they, being a 'ſtate of ſo late date, ſhould be the firſt that would preſume to 'queſtion his Majeſty's ancient right, ſo many hundred years 'inviolably poſſeſſed by his progenitors, and acknowleged by 'all other ancient ſtates and princes. That themſelves, in 'their public letters of the laſt of June, ſeemed then to con'firm their immemorial poſſeſſion (as they term it) with di'vers treaties, as by that of the year 1550; and another be'tween his Majeſty's predeceſſor and Charles V, as prince of 'thoſe provinces, and not by the law of nations. To which 'their laſt plea, his Majeſty would have them told, That he 'being an iſlander prince, is not ignorant of the laws and 'rights of his own kingdom, nor doth expect to be taught 'the laws of nations by them nor their Grotius: for his Ma'jeſty taking this for a high point of his ſovereignty, will not 'have it ſlighted in any faſhion whatſoever, &c. Let them 'adviſe to ſeek leave from his Majeſty, and to acknowlege 'him his right, as other princes have done, and do; or it 'may well come to paſs that they that will needs bear all the 'world before them with their Mare Liberum, may ſoon 'come to have neither Terram and Solum, nor Rempubli'cam Liberam.' To which letter the ambaſſador returning an anſwer, among other things ſays, 'I told the prince of 'Orange, That howſoever his Majeſty, both in honour of 'his crown and perſon, and intereſt of his kingdom, neither 'could nor would any longer deſiſt from having his right ac'knowleged by this ſtate, as well as by all other princes and 'commonweals; eſpecially finding the ſame openly oppugned 'both by their States men of war, and the writings of Grotius, 'and the taking of John Brown the laſt year, may teſtify; 'yet this acknowlegement of a right and due was no exclu'ſion of grace and favour, and that the people of this country

'paying

'paying that ſmall tribute upon every one of their buſſes '(which is not ſo much as diſputed by any other nation 'whatſoever) ſuch was his Majeſty's well-wiſhing to this 'ſtate, that I preſumed of his permiſſion to ſuffer them to 'continue their courſe of fiſhing, which they might uſe 'thereby with more freedom, and leſs apprehenſion of mo-'leſtation and lett than before, and thereby ſpare the coſt of 'ſome of their men of war, which they yearly ſend out, to 'maintain that by force which they might have of courteſy. 'The prince anſwered, He would do his beſt endeavour to 'procure his Majeſty contentment, but he doubted the Hol-'landers would apprehend the ſame effect in their payment 'for fiſhing, as they found in the paſſage of the Sound, where 'at firſt an eaſy matter was demanded by the king of Den-'mark, but now more exacted than they can poſſibly bear. 'And touching their men of war he ſaid, They muſt ſtill 'be at the ſame charge with them, becauſe of the pirates. 'He aſked me whether this freedom of fiſhing might not be 'redeemed with a ſum of money. To which I anſwered, 'It was a matter of royalty, more than of utility, though 'princes were not to neglect their profit.' The ſame am-baſſador wrote home afterwards, That the States had acknowleged their commiſſioners in England had gone beyond their inſtructions in uſing of the term of immemorial poſſeſſion. But this diſpute dropped, and nothing came of it in king James's reign, except a verbal acknowlegement of his dominion in the Britiſh Seas, with which this king ſatisfied himſelf; and his eaſineſs encouraged our neighbours to contemn the authority of his ſon Charles I. in the beginning of whoſe reign they committed innumerable abuſes, which provoked his Majeſty to equip a fleet, and publiſh a proclamation, declaring the reaſon of his making that armament, A. D. 1636. Wherein having ſhewn what outrage had been done to his father's and his own prerogative, by ſeveral people fiſhing in their ſeas without licence, he ſays:

'We being very ſenſible of the premiſes, and well knowing 'how far we are obliged in honour to maintain the rights of 'our crown, eſpecially of ſo great conſequence, have thought 'it neceſſary, by the advice of our privy-council, to renew 'the aforeſaid reſtraint of fiſhing upon our aforeſaid coaſts 'and ſeas, without licence firſt obtained from us; and by 'theſe preſents to make public declaration, that our reſolu-'tion is (at times convenient) to keep ſuch a competent 'ſtrength of ſhipping upon our ſeas, as may (by God's bleſ-'ſing) be ſufficient both to hinder ſuch further encroach-'ments upon our regalities, and aſſiſt and protect thoſe our 'good friends and allies who ſhall henceforth, by virtue of 'our licence (to be firſt obtained) endeavour to take the be-'nefit of fiſhing upon our coaſts and ſeas in the places ac-'cuſtomed.'

The Dutch expreſſing their apprehenſions of theſe naval preparations to Sir William Boſwell, then reſident at the Hague, he acquainted the miniſters in England with it, and Sir John Cook, then ſecretary of ſtate, ſent a letter, wherein, after he had ſet forth the ſeveral encroachments made by the Hollanders on the fiſhings in the Britiſh Seas, and other marine offences, he writes thus: 'Conſidering that peace and 'war muſt be maintained by the arm of power, which only 'keeps down war by keeping up dominion, his Majeſty thus 'provoked, finds it neceſſary, even for his own defence and 'ſafety, to reaſſume and keep his ancient and undoubted 'right in the dominion of theſe ſeas, and to ſuffer no other 'prince or ſtate to encroach upon him, thereby aſſuming to 'themſelves, or their admirals, any ſovereign command, 'but to force them to perform due homage to his admirals 'and ſhips, and to pay them acknowlegements as in former 'time they did. He will alſo ſet open and protect the free 'trade of his ſubjects and allies, and give them ſuch ſafe-'conduct and convoy as they ſhall reaſonably require: he 'will ſuffer no other fleet, or men of war, to keep any guard 'upon theſe ſeas, &c.' In the ſame letter the ſecretary ſays, 'We hold it a principle not to be denied, that the king of 'Great-Britain is a monarch at land and ſea, and that it con-'cerns him as much to maintain his ſovereignty in all the 'Britiſh Seas, as within his three kingdoms, becauſe with-'out that theſe cannot be kept ſafe, nor he preſerve his ho-'nour and due reſpect with other nations.'

This fleet, however, did not finiſh the work it was deſigned for; and king Charles being afterwards involved in a war with his parliament, it was not likely he ſhould then much mind his dominion at ſea. But when the Rump had the government, they, out of jealouſy of the neighbouring commonwealth, fitted out a fleet, to maintain the right of ſovereignty of the new pretended ſovereigns to the Britiſh Seas. This fleet was ſcarce arrived in the Downs, when the Dutch, thinking to ſurprize it, fell upon it, and hoped to deſtroy the naval ſtrength of the Engliſh at once; but Blake, who commanded the Engliſh fleet, making his party good with them, though they had two ſhips to his one; and Oliver, after they had been well beaten in ſeveral naval fights, obliging them to beg a peace of him, the duty of the flag was heartily agreed to, and the ſovereignty of the Engliſh Seas very plainly acknowleged by the Dutch, in the 15th and 16th articles of the treaty concluded between the two nations, November 15, 1653. The ſubſtance of which two articles is as follows:

ARTICLE XV.

'That the ſhips and veſſels of the ſaid United Provinces, as 'well men of war as others, be they in ſingle ſhips or in 'fleets, meeting at ſea with any of the ſhips of the ſtate of 'England, or in their ſervice, and wearing the flag, ſhall 'ſtrike the flag, and lower their top-ſail, until they be paſſed 'by, and ſhall likewiſe ſubmit themſelves to be viſited, if 'thereto required, and perform all other reſpects due to the 'commonwealth of England, to whom the dominion and 'ſovereignty of the Britiſh Seas belong.'

Leo ab Aitzma, fol. 847, ſays, The States would have this addition inſerted, after paſſed by, 'In ſuch manner as the 'ſame has been formerly obſerved in any times whatſoever.' This article was from hence tranſcribed into the tenth article at Whitehall *, and afterwards into the 19th article at Breda; from thence into the 6th article made at Weſtminſter after †; and that clauſe of ſearching each other's ſhips made reciprocal; by the 5th article of the marine treaty at London. By the Britiſh Seas in this article are meant the four ſeas, and not the Channel.

* September 14, 1662.
† December 18, 1674.

ARTICLE XVI.

'All Dutch ſhips are allowed to paſs and repaſs in the Britiſh 'Seas, either men of war or others, without any wrong or 'injury, not exceeding ſuch a number as ſhall be agreed up-'on, &c. but, in caſe the ſaid States-General ſhall have oc-'caſion to paſs through the ſaid ſeas with a greater number 'of men of war, they ſhall give three months notice of their 'intention to the commonwealth, and obtain their conſent 'for the paſſing of ſuch a fleet.'

Whatever infringements were made of theſe articles, we queſtion whether king Charles II. would ever have broken the peace on that account. There is nothing more certain, than that the firſt Dutch war in this reign was owing to French councils: however, the effects anſwer our deſign, and prove that the Dutch, who have moſt openly oppugned the title of the Engliſh to the ſovereignty of their ſeas, have moſt ſolemnly acknowleged it, as may be ſeen by the 19th article of the treaty of peace concluded between that king and the States-General, July 29, 1667, to this purpoſe: 'That 'the ſhips and veſſels of the ſaid United Provinces, as well 'men of war as others, meeting any of the ſaid king of 'Great-Britain's men of war in the BRITISH SEAS, ſhall 'ſtrike the flag, and lower the top-ſail, in ſuch manner as 'the ſame hath been formerly obſerved in any times what-'ſoever.'

When the Dutch applied to queen Elizabeth for ſuccours, one argument for her aſſeſſing them, made uſe of by their agent, was, that the ſituation of their provinces would be a great ſecurity for the preſervation of her empire in the ocean; as may be ſeen in Stowe. And how that wiſe ſtate came to forget themſelves ſo far afterwards, as to put the realm of England to the charge of two or three wars to bring them to reaſon, we cannot comprehend: for the homage the Engliſh require at ſea is a trifle, in compariſon of the advantages they reap by their alliance, and the ſecurity of their protection. It is probable the imperious methods uſed by the Engliſh in demanding the flag of the Dutch, might exaſperate that ſtate, and that the court of England were excited by the French, who under Richlieu began firſt to apply themſelves vigorouſly to the increaſing their traffic and ſtrength at ſea: but Richlieu left that undertaking to the famous Colbert, who had the glory to finiſh it, and to ſee the French fleets in a condition to contend with the moſt powerful maritime ſtates. He formed companies for trading to Africa, the Eaſt and Weſt-Indies, and founded a polity for the government of the marine. But knowing all the French naval ſtrength would ſignify little, while the Engliſh and Dutch continued theirs, he may reaſonably be ſuppoſed to adviſe his maſter to ſet them one againſt the other, in order to deſtroy them both; and how far he proceeded in that fatal deſign, the hiſtories of the reign of king Charles II. will make appear.

England then connived at the growing greatneſs of France at ſea, than which nothing could more endanger her maritime ſovereignty. She not only ſuffered, but aſſiſted the French to build a fleet; and had not the parliament, though almoſt too late, put a timely end to the miſunderſtanding which the French did very induſtriouſly foment between Great-Britain and Holland, with a deſign to ruin the naval power of both, Lewis XIV. would not have found it ſo difficult a taſk to acquire the dominion of all the European ſeas, as he did to defend his own coaſts and harbours againſt the victorious fleets of the queen of Great-Britain, and the States-General of the United Provinces.

The great efforts the French court made to encourage and improve navigation, were ſeconded by the labours of ingenious perſons, appointed by the miniſtry * to write tracts, in

* Monſieur Savary's French Dictionary of Commerce was undertaken in France from this motive; and we find that there

there engaged in that work, written many years ſince, not only two brothers of diſtinguiſhed abilities, who ſpent a conſiderable part of their lives therein, but that merchants of the firſt claſs, the public offices of the kingdom, the council of commerce itſelf, perſonages of various ranks, eminent for their knowlege in trade, and even the firſt miniſters of ſtate, unanimouſly concurred to encourage the compoſition and publication of that performance, for the benefit of their country: and doubtleſs they judged wiſely, that nothing could more effectually raiſe an emulous ſpirit both amongſt themſelves, and in oppoſition to foreigners, than the whole nation experiencing the greateſt men in it devoted to the general improvement of trade, and earneſtly labouring, by their example, to render the knowlege and practice thereof univerſal in the kingdom: and the event has verified their penetration and foreſight. — The preſent author of this Engliſh Dictionary of Commerce never was ſo happy as to meet with any aſſiſtance in this, or any other of his labours in the public ſervice; never met with any patronage from any man whatſoever, nor any ſort of public or private encouragement; but on the contrary, he has met with a ſeries of mal-treatment and diſcouragement, for his zealous and public-ſpirited endeavours to ſerve his country.

order to raiſe the ſpirit of commerce in the kingdom, and to excite people of all qualities to be more or leſs concerned in the trading companies that were then forming; wherein the king, and moſt of the princes of the blood, and the lords of the court, had very conſiderable ſhares, that, by their examples, others might be induced to venture in the ſame bottoms. And to one of theſe authors we are obliged for an acknowlegement of the Engliſh dominion in the ſeas lying between us and France, which we ſuppoſe fell from him accidentally. This paſſage is to be found in a treatiſe intitled Le Parfait Negotiant, written by the Sieur Savary, and firſt publiſhed at Paris in the year 1675, with the order and approbation of MONSIEUR COLBERT, prime miniſter for the marine, to whom it was dedicated.

This author, pages 118 and 119, ſpeaking of the diſcovery of the Canary Iſlands, ſays, 'That the duke of Burgundy 'joining with the king of England, an enemy of France, 'made a deſcent into Normandy, with 1000 ſhips, ſo that 'the war being broke out, and the Engliſh poſſeſſing the 'ſea and our ports, the admiral could not get,' &c. Now if the Engliſh poſſeſſed the ſea in ſuch a manner, that the admiral of France himſelf durſt not equip a few tranſport-ſhips, to ſend men and proviſions to the Canaries, to the diſcovery and right of which the French pretend, none can imagine the French at that time preſumed to cope with us at ſea; and if ſuch a poſſeſſion as that attributed by the French themſelves, was not an authentic proof of dominion, we cannot tell what is.

It is true, the French may anſwer to this, When we loſt their ports, we loſt the dominion of the ſea; but it has been ſhewn, that the Britiſh naval ſovereignty was not founded upon ſo precarious a poſſeſſion, but is as old as hiſtory, and as undeniable as any thing can be, which is proved by the acknowlegement of all nations and ages. We have looked into the hiſtories of moſt of our kings, from the Norman invaſion, to king Charles the IId's reign, and have found they all aſſerted and maintained their dominion of the ſea.

King James II. was buſied about other things, and what navy he had was intended rather to ſecure his arbitrary government by land, than to defend his ſovereignty at ſea. King William, his ſucceſſor, glorioufly aſſerted and maintained it, in conjunction with the Dutch, by giving laws to all nations, in all the ſeas in the world where a royal fleet ever appeared. And queen Anne did with the ſame vigour and ſucceſs uphold that dominion at ſea which king William left her, the French managing their ſea affairs like pirates, and pretending to no dominion but what they got by ſurprize, as corſairs do over ſhips they can maſter.

In the late queen Anne's reign we have an inſtance of her aſſerting her ſovereignty at ſea; for admiral Whetſtone, in July 1706, meeting with a fleet of Swediſh merchantmen, under convoy of a Swediſh man of war, her Majeſty's ſhip the Worceſter fired a gun, as a ſignal to command the Swedes to ſtrike; but the Swediſh captain ſent his lieutenant aboard, to acquaint the Engliſh commander that he had poſitive orders not to ſtrike to any flag whatſoever, even in the Channel itſelf. The captain of the Worceſter receiving that meſſage, inſtead of the ordinary marks of homage to be expected from all foreigners in the Engliſh Seas, fired a ball, which being anſwered with a broad-ſide by the Swede, the Worceſter, and another Engliſh man of war, engaged the Swediſh man of war, killed and wounded about 150 of her men, with ſome loſs on their ſide, and brought her and all the merchant ſhips into the river; nor were they diſcharged 'till ſatisfaction was given the queen for the affront put upon her admiral in her own ſeas. Some inſtances of the ſame nature, though not ſo ſolemn, happened in king William's reign, and will, we hope, be ſufficient to induce other nations not to invade the right which the kings and queens of Great-Britain are as lawfully poſſeſſed of, to the ſovereignty of the Britiſh-Seas, as to the dominion of the Britiſh empire at land.

REMARKS.

It is an obſervation worthy the ſerious attention of every Engliſhman, That empire has always followed trade, travelling (as it were) from one part of the world to another, as commerce has ſhifted its ſtation; and, in all countries, ſtill growing or declining in power, in proportion as traffic has been encouraged or diſregarded. And the commerce of this nation depends on our dominion at ſea.

Cicero ad Attic. ſays, Qui mare teneat, eum neceſſe rerum potiri: which ſhews this to have been the opinion of a very great man, who had been at the head of affairs in a powerful ſtate, above ſeventeen hundred years ago: and the practice of all princes who have lived ſince that time, and have ever deſigned either to extend their dominion, or to render themſelves conſiderable to their neighbours, fully proves the obſervation to be true.

The Romans (who aſpired to nothing leſs than univerſal empire) while their conqueſts were confined within the narrow bounds of Italy, were ſo much prejudiced with the notion of a landed intereſt, that, as Livy relates, they thought it ſcandalous for a man of faſhion to exerciſe any merchandize; and, in conſequence of that prepoſſeſſion, they were not in a capacity to make any figure by ſea, an element little practiſed on by them, and leſs underſtood. But this notion laſted only 'till they had an opportunity to look more abroad into the world: then experience taught them, as they came to quarrel with the Carthaginians (who at that time were the great trading people) that commerce was neceſſary to eſtabliſh their empire, and that not only their conqueſts were at an end, but the poſſeſſion of the territories they had conquered was precarious, unleſs they could acquire and ſecure to themſelves the dominion of the ſea.

We have ſeen that it is not an empty title, which the kings of England have always taken to themſelves, of being ſupreme lords and governors of the ocean ſurrounding the Britiſh ſhore, but a right which they have conſtantly maintained, at the expence of numerous fleets. In that famous accord, made between our great king Edward I. and Philip the Fair of France, it appears, that the French king was by him called to an account for piracies, committed by his ſubjects within the Britiſh Seas: and by that memorable ordinance made at Haſtings, in the reign of king John of England, the honour of the flag (ever claimed by the Engliſh) is decreed to take place univerſally, not barely as a civility, but as a right to be paid (cum debita reverentia) with due deference.

This due maintenance of the ſovereignty of the Britiſh Seas has animated the Engliſh nation to endeavour likewiſe to maintain, in concert with other allies, a ſuperiority of maritime power in general; whereby, from time to time, the ballance of power amongſt the European States has been hitherto preſerved, and ſince the Revolution, the Proteſtant intereſt, and the liberties of millions of people, may be truly ſaid to owe their exiſtence to the MARITIME PROWESS of theſe kingdoms in particular; for if this power had not been occaſionally exerted, the united maritime power of all other ſtates and empires together, could not have prevented that univerſal empire of ſlavery, that has been ſo ſteadily purſued by a neighbouring power. See our article FRANCE.

The nations recorded in hiſtory to have been at any time poſſeſſed of the empire of the ſea, have always eſteemed a neighbouring prince's offering to ſet up a naval power, by building more ſhips of war than were requiſite to ſecure the trade of his ſubjects from piracies, &c. to be as juſt a foundation of political jealouſy, as the raiſing of new forts upon his frontiers, or the levying of a formidable army in a time of profound peace: and, therefore, they have always taken meaſures either to prevent ſuch attempts, or to deſtroy them in their birth. This was the practice of the Romans, and this has been the practice of his Majeſty's royal predeceſſors the kings of England.

The Romans, as ſoon as they had acquired the ſovereignty of the ſea (which they thought not dearly purchaſed with the loſs of above 700 ſhips) immediately entered upon meaſures to preſerve ſo valuable an acquiſition. They grew watchful over this new dominion, and were ſoon alarmed by the ſmalleſt umbrage from any power that did but ſeem to interfere with them in NAVAL AFFAIRS. It was from theſe political conſiderations that they would not permit the Carthaginians to fit out any fleets, and that they forbad ANTIOCHUS (at that time the greateſt king in the Eaſt) TO BUILD MORE THAN TWELVE SHIPS OF WAR.

Upon the like principles his late Majeſty king George acted, when the Spaniſh fleet was deſtroyed by Sir George Byng in the Mediterranean. This ſingle action rendered the king of Great-Britain, at that time, as much maſter of the Mediterranean, as he has been always acknowleged to be ſovereign over the Britiſh Seas. This many years prevented the growth of the naval power of Spain: and did not England and Holland act in concert, from the like motive, when they inſiſted

on the diſſolution of the late Oſtend Eaſt-India company, in the Auſtrian Netherlands? [ſee AUSTRIAN NETHERLANDS, and OSTEND EAST-INDIA COMPANY]: for the chief reaſon given by the maritime powers was, leſt A NEW NAVAL POWER ſhould ariſe in Europe, in conſequence of this commercial eſtabliſhment.

There is no occaſion for troubling my readers with a detail of examples to the preſent purpoſe, ſince nothing is more known in our Engliſh hiſtory, than that our kings have ever been jealous of their neighbours making uſe of any pretext to increaſe their naval ſtrength, and have accordingly judged it of the greateſt importance to fruſtrate ſuch deſigns, though at the riſk of war: for what leſs did our immortal queen Elizabeth riſk, when ſhe ſent to the French king, to prohibit his building any more ſhips of war than what he then had, without her leave firſt obtained? This was an inſtance of wiſdom and reſolution worthy a princeſs who claimed the ſovereignty of the ſea.

Our maritime force is undoubtedly our chief bulwark againſt foreign invaſions, and what hath given us ſo great a weight and influence over our neighbours. It is this only which raiſed us from a little, deſpiſed, inhoſpitable people, to a great, polite, and formidable ſtate. To this we are obliged for our trade, our riches, the improvement of our land, the conſumption of our manufactures, and the poſſeſſion of all our valuable colonies and plantations abroad, as well as the dominion and ſovereignty of thoſe ſeas which ſurround us at home.

It therefore behoves us, in the ſtrongeſt manner, not to ſuffer the royal navy of England to be inſulted, trifled with, or brought under contempt, by friend or foe, under any pretence, or upon any occaſion whatſoever. National honour, once loſt or impaired, is, like the honour of a private perſon, very hard to be retrieved. Thoſe nations which have, for ſeveral ages, ſtood in awe of us, will begin to act the part of bullies, if ever we give them the leaſt reaſon to ſuſpect we are afraid of them. Moſt people are too apt, through vanity and ſelf-love, to conſtrue the effects of lenity, forbearance, and a pacific diſpoſition, as the reſult of puſillanimity, and a ſudden dread of offending them; which may produce another bad conſequence, by depreſſing the ſpirits of our ſailors, and eraſing that laudable partiality for the native valour of their country, which inclines them to believe that no oppoſition, nor inequality of numbers, is able to withſtand it. I think it proper, in the firſt place, to lay before the reader the inſtructions, which (as I am informed) are given to all the captains and lieutenants of our men of war, to this effect.

Inſtructions to the captain.

—Upon your meeting with any ſhip or ſhips within his Majeſty's ſeas (which, for your better guidance herein, you are to take notice extend to Cape Finiſterre) belonging to any foreign prince or ſtate, you are to expect that in their paſſage by you, they ſtrike their top-ſail, and take in their flag, in acknowlegement of his Majeſty's ſovereignty in thoſe ſeas; and if any ſhall refuſe to do it, or offer to reſiſt, you are to uſe your utmoſt endeavours to compel them thereunto, and in no wiſe to ſuffer any diſhonour to be done to his Majeſty.

Inſtructions to the lieutenant.

You are to take upon yourſelf the intire charge and conduct of his Majeſty's ſaid ſhip, and ſtand accountable for the well executing the whole duty of commander thereof, during the abſence, or in caſe of the death of your ſaid commander, with reſpect as well to the printed general inſtructions given to commanders (a copy whereof is hereunto annexed) as any other particular orders of his Majeſty, &c.

I ſhall now give an inſtance or two of the ſtrictneſs with which theſe orders have been executed in former reigns, and begin no higher than that of king James the Firſt, who, though perhaps the moſt inactive monarch that ever ſat upon the Britiſh throne, protected one of the officers of his navy (who had obliged a French ſhip to ſtrike to him under very particular circumſtances) againſt the ſtrongeſt repreſentations of that court, and even refuſed to make them any ſatisfaction himſelf, as appears from cardinal Richlieu's Teſtament Politique, in that chapter treating of the neceſſity which France is under to be powerful at ſea. The cardinal addreſſes himſelf to Lewis the XIIIth in the following terms, viz.

'—England being ſituated as it is, if France was not ſtrong 'in its fleets, might undertake whatever ſhe thought proper 'to the prejudice of France, without apprehending any 'return to her diſadvantage. She might deſtroy our fiſheries, 'diſturb our commerce, and, by blocking up our greateſt 'rivers, oblige our merchants to pay her what tribute ſhe 'ſhould think fit to impoſe upon them. — She might unmo'leſted make deſcents on our iſlands, and even on our con'tinent. — In a word, the ſituation of the native country of 'that proud nation is ſuch, [proud only, I ſay, of preſerv'ing her own, as well as the liberties of thoſe whom France 'would enſlave *] that they have no reaſon to fear the great'eſt powers of the earth; and the ancient hatred † they bear 'this kingdom, might probably make them undertake any 'thing againſt us, ſhould there ever come a time that we 'ſhould be ſo weak as not to have it in our power to act of'fenſively againſt them.

* See the article FRANCE.

† If England bears any hatred to France, ſee the reaſons why, under our article PLANTATIONS, where we have ſet forth the perfidy of the ſtateſmen of that nation, for above a century paſt.

'The inſolence which the Engliſh were guilty of towards 'the duke de Sully, in the reign of the king your father, 'ought to oblige us to put ourſelves in ſuch a poſture, as not 'to ſuffer ſuch an affront another time.

'That duke being appointed by Henry the Great, ambaſſa'dor extraordinary to the court of England, and having 'embarked at Calais, on board a French ſhip, carrying the 'flag of France upon her main topmaſt-head, was no ſooner 'got into the Channel, but being met by an Engliſh yacht, 'that was ſent to receive him, the captain of the yacht 'commanded the French ſhip to ſtrike.

'The duke, thinking his quality of ambaſſador ſufficient to 'protect him from ſuch an affront, manfully refuſed to ſtrike; 'but this refuſal being anſwered by three cannon-ſhot from 'the Engliſh yacht, which pierced his ſhip, and, at the 'ſame time, pierced the hearts of all good Frenchmen, 'force obliged him to do that which reaſon ought to have 'defended him againſt; and to all the complaints he made, 'he could receive no other ſatisfaction nor anſwer from the 'Engliſh captain but this, That as his duty obliged him to 'honour him as an ambaſſador, it obliged him alſo to ſee 'the honour done to his maſter's flag, that was due to the 'ſovereign of the ſeas. — And though king James expreſſed 'himſelf upon this affair in civil terms, his words had no 'other effect than to oblige the duke to find his only ſatis'faction in his own prudence, by feigning himſelf to be 'cured, at the ſame that he felt the greateſt ſmart, and that 'his wound was not to be healed.

'The king your father was obliged to diſſemble upon this 'occaſion; but with a reſolution, upon ſome other oppor'tunity, to ſupport the honour of his crown, by the naval 'force which time ſhould make him maſter of.

'I repreſent to myſelf this great prince, upon that occaſion, 'laying the ſcheme which your majeſty ought now to put in 'execution.'

The war between the parliament of England and the ſtates of Holland, in the year 1652 (the ſharpeſt ſea-war that was ever known between any two nations) was occaſioned by this punctilio of the honour of the flag, which the Dutch admiral, Van Tromp, refuſed to pay to our admiral, the immortal Blake.

In the reign of king Charles the Second, another bloody ſea war was commenced between England and Holland, on the ſame account, with this very particular circumſtance, that the captain of a ſingle yacht, ſent over to Holland to bring home Sir William Temple's lady, was ordered to demand this acknowlegement from the whole Dutch fleet. I confeſs the Engliſh miniſtry, at that time, did this in order to pick a quarrel with Holland; but I mention it only to ſhew the obligation which officers of the navy are under to perform their duty; for whatever the intention of theſe orders might be, the captain was undoubtedly obliged to execute them, under pain of being diſmiſſed the ſervice with infamy at leaſt.

The late king William, of immortal memory, had the ſame regard for this right of the honour of the flag, and made it one of his reaſons for declaring war againſt the late French king, as appears from the following article of the declaration itſelf: 'The right of the flag, inherent in the crown of 'England, hath been diſputed by his, the king of France's 'orders, in violation of our ſovereignty of the Narrow Seas, 'which in all ages hath been aſſerted by our predeceſſors; 'and we are reſolved to maintain the honour of our crown, 'and of the Engliſh nation.'

We ſhall conclude theſe inſtances with a paſſage out of Sir John Borough's treatiſe upon this ſubject.

'The ſovereignty of our ſeas (ſays he) being the moſt pre'cious jewel of his Majeſty's crown, and next under God 'the principal means of our wealth and ſafety, all true Eng'liſh hearts and hands are bound, by all poſſible means and 'diligence, to preſerve and maintain the ſame, even with 'the uttermoſt hazard of their lives, their goods, and for'tunes.'

SEAMEN. Their importance to this kingdom is too well known to need animadverſion; the eſſential point to be conſidered is, how they may be rendered more uſeful to the kingdom than they are, and be kept from going into foreign ſervice, by preferring that of their own country.

It is obſervable, that whenever this kingdom is engaged in a war with any of its neighbours, two great inconveniencies conſtantly follow, one to the king, and one to trade.

I. That

I. That to the king is, That he is forced to preſs ſeamen for the manning of his navy, and force them involuntarily into the ſervice: which way of violent dragging men into the fleet, is attended with ſundry ill circumſtances; as,

(1.) Our naval preparations are retarded, and our fleets always late, for want of men, which has expoſed them not a little, and been the ruin of many a good and well-laid expedition.

(2.) Several irregularities follow, as the officers taking money to diſmiſs able ſeamen, and filling up their complement with raw and improper perſons*.

* This has been the caſe ever ſince the days of the great Sir Walter Raleigh, and it is certainly high time to redreſs a grievance ſo injurious to the public.

As concerning the muſters and preſſes, ſays Sir Walter, for ſufficient mariners to ſerve in his Majeſty's ſhips, either the care therein is very little, or the bribery very great; ſo that of all other ſhipping, his Majeſty's are ever the worſt manned: and at ſuch times as the commiſſions come out for the preſſing of mariners, the officers do ſet out the moſt needy and unable men, and (for conſiderations to themſelves beſt known) do diſcharge the bettter ſort, a matter ſo commonly uſed, that it is grown into a proverb amongſt the ſailors, That the muſter-maſters do carry the beſt and ableſt men in THEIR POCKETS; a cuſtom very evil and dangerous, where the ſervice and uſe of men ſhould come in trial. For many of theſe poor fiſhermen and idlers, that are commonly preſented to his Majeſty's ſhips, are ſo ignorant in ſea-ſervice, as that they know not the name of a rope, and, therefore, inſufficient for ſuch labour. That which might eaſily be redreſſed, if the vice-admiral of the ſhire where men are muſtered, and two juſtices, had directions given to join with the muſter-maſters, for the preſſing of the beſt men, whom they well know, and would not ſuffer the ſervice of their prince and country to be bought and ſold, as a private muſter-maſter would do. Beſides, the captains themſelves of the ſhips, if they be bare and needy (though pity it were that men of ſuch condition ſhould have ſuch charge committed unto them) will oftentimes, for commodity, chop and change away their good men; and therefore it were fitly provided to bridle ſuch odd captains, that neither they themſelves, nor any of their men, ſhould receive his Majeſty's pay but by the pole, and according as they were ſet down in the officers books when they were delivered, without changing of any names, except to ſupply ſuch men as are wanting by death or ſickneſs, upon good teſtimony, under the hands of the maſter, the boatſwain, the maſter-gunner, the purſer, and other officers of the ſhip: for it nearly concerns them to look well thereunto, having daily uſe of them (a).

(a) See Raleigh's Works, by Dr Birch.

(3.) Oppreſſions, quarrelings, and oftentimes murthers, by the raſhneſs of preſs-maſters, and the obſtinacy of ſome unwilling to go.

(4.) A ſecret averſion to the ſervice, from a natural principle, common to the Engliſh nation, to hate compulſion.

(5.) Kidnapping people out of the kingdom, robbing houſes, and picking pockets, frequently practiſed, under pretence of preſſing for ſeamen.

With various abuſes of the like nature, ſome towards the king, others towards the ſubject.

II. To trade; by the extravagant price ſet on wages for ſeamen, which they impoſe on the merchant with a ſort of authority, and he is obliged to give, by reaſon of the ſcarcity of men; and that not from a real want of men, for in the height of a preſs, if a merchantman wanted men, and could get a protection for them, he might have any number immediately, and none without it; ſo ſhy are they of public ſervice.

The firſt of theſe things has coſt the nation more millions of money, during the three laſt wars, than I care to ſay, in theſe three particulars.

(1.) Charge of preſſing on ſea and on ſhore, and in ſmall craft employed for that purpoſe.

(2.) Ships lying in harbour for want of men, at a vaſt charge of pay and victuals for thoſe they had.

(3.) Keeping the whole navy in conſtant pay and proviſions all the winter, for fear of loſing the men againſt ſummer, was done for ſeveral years, beſides bounty-money, and other expences, to court and oblige the ſeamen.

III. The ſecond of theſe, viz. the great wages paid by the merchant, has coſt trade alſo above 20 millions ſterling. The coal-trade gave, in king William's time, a ſpecimen of this, for the firſt three years of the war, 9l. a voyage was given to common ſeamen, who before ſailed for 36s. which, computing the number of ſhips and men uſed in the coal-trade, and of voyages made, at eight hands to a veſſel, does, modeſtly accounting, make 896,000l. difference in one year, in wages to ſeamen in the coal-trade only, at that time. In the ſucceeding wars, the like has taken place, though not quite to ſo great a degree.

For other voyages, the difference of ſailors wages has been 50s. per month, and 55s. per month, and upwards, to foremaſt-men, who before went for 26s. per month, beſides ſubjecting the merchant to the inſolence of the ſeamen, who are not to be pleaſed with any proviſions, will admit no half-pay, and command of the captains even what they pleaſe; nay, the king himſelf can hardly pleaſe them.

For the cure of theſe inconveniencies, various propoſals have been ſubmitted to the public attention; the ſubſtance whereof we ſhall lay before the reader with all brevity.

The firſt propoſal is as follows, viz.

That by an act of parliament, an office, or court, be erected, within the juriſdiction of the court of admiralty, and ſubject to the lord high admiral, or otherwiſe independent, and ſubject only to a parliamentary authority, as the commiſſion for taking and ſtating the public accounts.

In this court or office, or the ſeveral branches of it (which to that end ſhall be ſubdivided, and placed in every ſea-port in the kingdom) ſhall be liſted and entered into immediate pay, all the ſeamen in the kingdom, who ſhall be divided into colleges, or chambers, of ſundry degrees, ſuitable to their ſeveral capacities, with pay in proportion to their qualities, as boys, youths, ſervants, men able and raw, midſhipmen, officers, pilots, old men, and penſioners.

The circumſtantials of this office.

(1.) No captain, or maſter of any ſhip or veſſel, ſhould dare to hire, or carry to ſea with him, any ſeamen but ſuch as he ſhall receive from the office aforeſaid.

(2.) No man whatſoever, ſeaman or other, but applying himſelf to the ſaid office to be employed as a ſailor, ſhould immediately enter into pay, and receive for every able ſeaman 24s. per month, and juniors in proportion, to receive half pay while unemployed, and liberty to work for themſelves, only to be at the call of the office, and leave an account where to be found.

(3.) No ſailor could deſert, becauſe no employment would be to be had elſewhere in the kingdom.

(4.) All ſhips, at their clearing at the cuſtom-houſe, ſhould receive a ticket to the office for men, where would be always choice, rather than ſcarcity, who ſhould be delivered over by the office to the captain or maſter, without any trouble or delay; all liberty of choice to be allowed both to maſter and men, only ſo as to give up all diſputes to the officers appointed to decide.

☞ By this would be avoided the great charge captains and owners are at, to keep men on board before they are ready to go; whereas now the care of getting men will be over, and all come on board in one day; for the captain carrying the ticket to the office, he may go and chuſe his men, if he will, otherwiſe they will be ſent on board him, by tickets ſent to their dwellings, to repair on board ſuch a ſhip.

(5.) For all thoſe men that the captain or maſter of the ſhip takes, he ſhall pay the office, not the ſeamen, 28s. per month (which 4s. per month overplus of wages, will be employed to pay the half-pay to the men out of employ) and ſo in proportion of wages for juniors.

(6.) All diſputes concerning the mutinying of mariners, or other matters of debate between the captains and men, to be tried by way of appeal, in a court for that purpoſe to be erected, as aforeſaid.

(7.) All diſcounting of wages and time, all damages of goods, averages, ſtopping of pay, and the like, to be adjuſted by ſtated and public rules, and laws in print, eſtabliſhed by the ſame act of parliament; by which means all litigious ſuits of this nature in the court of admiralty (which are infinite) would be prevented.

(8.) No ſhip that is permitted to enter at the cuſtom-houſe, and take in goods, ſhould ever be refuſed men, or delayed in the delivering them above five days after demand made, and a ticket from the cuſtom-houſe delivered, general caſes, as arreſts and embargoes, excepted.

The conſequences of this method.

(1.) By this means the public would have no want of ſeamen, and all the charges, and other inconveniencies of preſſing men, would be prevented.

(2.) The intolerable oppreſſion upon trade, from the exorbitance of wages, and inſolence of mariners, would be taken off.

(3.) The following ſums of money ſhould be paid to the office to lie in bank, as a public fund for the ſervice of the nation, to be diſpoſed of by order of parliament, and not otherwiſe; a committee being always ſubſtituted, in the intervals of the ſeſſion, to audit the accounts, and a treaſury for the money, to be compoſed of members of the houſe, and to be changed every ſeſſion of parliament.

(1.) Four ſhillings per month wages advanced by the merchants to the office for the men, more than the office pays them.

(2.) In conſideration of the reducing mens wages, and, conſequently, freights, the owners of ſhips, or merchants, ſhall pay, at the importation of all goods, 40s. per ton freight, to be ſtated upon all goods and ports in proportion, reckoning it on wine-tonnage from the Canaries as the ſtandard, and on ſpecial freights in proportion to the freight formerly paid; and half the ſaid price in times of peace.

Note, This may well be done, and no burthen; for if freights are reduced, as they will be if wages are ſo too, then the merchant may well pay it.

The payment of the aboveſaid ſums being a large bank, for a fund, and it being ſuppoſed to be in fair hands, and currently managed, the merchants ſhall further pay upon all goods ſhipped out, and ſhipped on board from abroad, for and from any port of this kingdom, 4 l. per cent. on the real value, bona fide, to be ſworn to, if demanded: in conſideration whereof, the ſaid office ſhall be obliged to pay and make good all loſſes, damages, averages, and caſualties whatſoever; as fully as by the cuſtom of aſſurances now is done, without any diſcounts, rebates, or delays whatſoever; the ſaid 4 l. per cent. to be ſtated on the voyages to Barbadoes, and enlarged or taken off, in proportion to the voyage, by rules and laws, to be printed and publickly known.

Reſerving only, that then, as reaſon good, the ſaid office ſhall have power to direct ſhips of all ſorts, how, and in what manner, and how long they ſhall ſail with, or wait for, convoys; and ſhall have power (with limitations) to lay embargoes on ſhips, in order to compoſe fleets for the benefit of convoys.

Theſe rules, formerly noted, to extend to all trading by ſea, the coaſting and home-fiſhing trade excepted; and for them it may be ordered,

Firſt, for coals: the colliers being provided with men at 28 s. per month, and convoys in ſufficient number, and proper ſtations from Tinmouth-bar to the river, ſo as they need not go in fleets, but as wind and weather preſent, run all the way under the protection of the men of war, who ſhould be continually cruizing from ſtation to ſtation; they would be able to perform their voyage in as ſhort a time as formerly, and at as low pay, and conſequently could afford to ſell their coals 20 s. per chaldron, as well as formerly at 15 s.

Wherefore, there ſhould be paid into the treaſury appointed at Newcaſtle, by bond to be paid where they deliver, 10 s. per chaldron, Newcaſtle meaſure; and the ſtated price at London to be 27 s. per chaldron in the pool, which is 30 s. at the buyer's houſe, and is far from being dear, in a time of war eſpecially, as it is cheaper than ever was known in a war; and the officers ſhould by proclamations confine the ſeller to that price.

In conſideration alſo of the charge of convoys, the ſhips bringing coals ſhall all pay 1 l. per cent. on the value of the ſhip, to be agreed on at the office; and all convoy-money exacted by commanders of ſhips, ſhall be relinquiſhed, and the office make good all loſſes of ſhips, not goods, that ſhall be loſt by enemies only.

Theſe heads, indeed, are ſuch as would need ſome explication, if the experiment were to be made, and, with ſubmiſſion, would reduce the ſeamen to better circumſtances; at leaſt it ſhould ſeem to bid fair to have them in readineſs for any public ſervice, much eaſier than by all the methods of encouragement that have hitherto been tried.

For, by this method, all the ſeamen in the kingdom would become the king's hired ſervants, and receive their wages from him, whoever employed them; and no man could hire, or employ them, but from him: the merchant ſhould hire them of the king, and pay the king for them; nor would there be a ſeaman in England out of employ, which would prevent their ſeeking ſervice abroad: if they were not actually at ſea, they would receive half-pay, and might be employed in works about the ſhip-yards, ſtores, and naval concerns, in order to keep all things in repair.

By this means, if a fleet or ſquadron was to be fitted out on any ſudden emergency, they would be manned in a week's time, for all the ſeamen in England would be ready: nor would they be ſhy of the royal ſervice, for it is not an averſion to the king's ſervice, nor is it that the duty is harder in the men of war than the merchant-men; neither is it fear of danger which makes our ſeamen lurk and hide themſelves in a time of war, but it is the article of wages is the matter: 24 s. per month in the king's ſervice, and from 40 to 50 s. and upwards per month from the merchant, which is the true cauſe; and the ſeaman is in the right of it, for who would ſerve his king and country, and fight, and run the riſk of being knocked on the head, at 24 s. per month, that can have 50 s. without the like degree of hazard? and 'till this be remedied, in vain are all the encouragements which can be given to ſeamen; for they tend but to make them inſolent, and encourage their extravagance.

Nor would this proceeding be any damage to the ſeamen in general, for 24 s. per month wages, and to be kept in conſtant ſervice, or half-pay when idle, is really better to the ſeamen than 45 or 50 s. per month or upwards, as they now take it, conſidering how long they often lie idle on ſhore, out of pay: for the exorbitant rate of ſeamens wages, though it has been an intolerable burthen to trade, has not viſibly enriched the ſailors, and they may as well be content with 24 s. per month now as formerly.

On the other hand, trade would be ſenſibly revived by it, the intolerable price of freights would be reduced, and the public would reap an immenſe benefit by the payments mentioned in the propoſal: for,

(1.) Four ſhillings per month upon the wages of all the ſeamen employed by the merchant, which if we allow 200,000 ſeamen always in employ, as there cannot be leſs in all the ſhips belonging to England, is 40,000 l. per month.

(2.) Forty ſhillings per ton freight upon all goods imported.

(3.) Four per cent. on the value of all goods exported or imported.

(4.) Ten ſhillings per chaldron upon all the coals ſhipped at Newcaſtle, and 1 per cent. on the ſhips which carry them.

What theſe four articles would pay to the Exchequer yearly, it would be very difficult to calculate: but, perhaps, few ſingle taxes ever given in time of war, have exceeded it.

It is true, out of this the public would be to pay half-pay to the ſeamen, who ſhall be out of employ, and all the loſſes and damages on goods and ſhips; which, though it might be conſiderable, would be ſmall, compared to the payment aforeſaid; for as the premium of 4 per cent. is but ſmall, ſo the ſafety lies upon all men, being bound to inſure: for I believe any one will grant, that it is not the ſmallneſs of a premium ruins the inſurer, but it is the ſmallneſs of the quantity he inſures; and, perhaps, if a premium of 4 per cent. be paid into one man's hand for all goods imported and exported, and any man might be the general inſurer of the kingdom, and yet that premium could never prejudice the merchant adventurer.

So that the large revenue which this ſhould raiſe, would be felt no where; neither poor nor rich would pay the more for coals; foreign goods would be brought home cheaper, and our own goods carried to market cheaper; owners would get more by ſhips, merchants by goods, and loſſes by ſea would be no loſs at all to any body, becauſe repaid out of the public ſtock.

Another unſeen advantage would ariſe by it; we ſhould be able to out-work all our neighbours, even the French and the Dutch themſelves, by ſailing as cheap, and carrying goods as cheap in time of war as in peace; an advantage, which has more in it than is eaſily thought of, and would have a noble influence upon all our foreign traffic. For what could the Dutch or the French do in trade, if we could carry our goods to Cadiz at 50 s. per ton freight, and they give 8 or 10 l. and the like in other places? Whereby we could be able to ſell cheaper, or get more than our neighbours.

There are ſeveral conſiderable clauſes might be added to this propoſal, ſome of great advantage to the general trade of the kingdom, ſome to particular trades, and more to the public; but I avoid being too particular in things which are but the product of a private opinion.

If the government ſhould ever proceed to the experiment, no queſtion but much more than has been hinted at would appear; nor do we ſee any great difficulty in the attempt, or who would be aggrieved at it; and there I leave it, rather wiſhing than expecting to ſee any thing like this undertaken.

Another PROPOSAL ſuggeſted by the judicious Mr Carey, late of Briſtol, merchant, in his *Diſcourſe on Trade*.

That gentleman obſerves, 'That navigation is the medium between our inland and foreign traffic: the latter is carried on by ſhips and ſailors; the former are the ſea-waggons, whereby we tranſport and carry commodities from one market to another; and the latter are the waggoners, who drive and manage them: theſe are a ſort of jolly fellows, who are generally bold in their undertakings, and go through any kind of labour in their own way, with a great deal of chearfulneſs; are undaunted by ſtorms and tempeſts, the ſea being as it were their element, and are allowed by all to be the beſt navigators in the world; they are our wealth in peace, and our defence in war, and ought to be more encouraged than they are in both, but eſpecially in the latter; which might be done, if better methods were uſed to engage them in the ſervice, and better treatment when they are there: now I ſhould think, if no man was forced into the king's ſhips 'till he had been three years at ſea, nor to ſtay there above that time without his free conſent, and then to be permitted to take a merchant's employment ſo much longer, and ſo totois quotois, it would encourage them to come willingly into the ſervice, which they look upon now to be a ſlavery, whereto they are bound for their lives: this, and the manner of preſſing them, hinders very much the making of ſailors, landmen not caring to put their hands to the oar, leſt the next day they ſhould be hauled away to the fleet, though they underſtand nothing of the ſea: by this means our men of war would be manned with able ſeamen, and not with ſuch who only ſtand in the way, and are uſeleſs, when they are moſt wanted; nor do I take embargoes to be any help towards it, for many ſailors do then lie hid, who would appear to ſerve in merchants ſhips, and might be eaſily met with at the return of their voyages: by theſe means, in a ſhort time,

there

there would be a double ſet of mariners, enough both for the ſervice of the fleet and of trade, the laſt of which would every year breed more.

This would alſo prevent great miſchiefs, which ariſe from preſſing ſailors out of merchant-ſhips whilſt on their voyages, many of them being thereby loſt at ſea, and others have been detained in the Weſt-Indies, to the diſcouragement of trade; and it would alſo prevent another miſchief, too much practiſed abroad, where captains of men of war preſs ſailors from one merchant-ſhip, only to make advantage by ſelling them to another.'—Thus far Mr Carey.

There has lately appeared a treatiſe, drawn up with no leſs judgment than zeal towards the public intereſts, entitled, An ESSAY towards a method of ſpeedily MANNING a FLEET, upon any SUDDEN EMERGENCY. — After this ingenious gentleman has ſhewn the neceſſity of the nation being always in a condition to man and equip a reſpectable fleet at ſhort warning, he then modeſtly ſubmits his own propoſal for a voluntary REGISTER for SEAMEN to public conſideration, the ſubſtance of which is as follows, viz.

'I. When a king's ſhip returns from a voyage or cruize, &c. and is to be paid off, the captain or commanding officer ſhould have power to declare to the ſhip's company, that any able-bodied man, deſirous to enter his name, &c. in the regiſter for ſeamen, is at liberty to do it, under the conditions therein mentioned and preſcribed; which are to be then publickly and audibly read to the men, that no perſon may afterwards plead ignorance.

II. The men ſhould be called over by their names, according to the ſhip's book; and each man aſked ſeparately, whether he chuſes to enter his name in the REGISTER or not. If he does not, he ſhould be at full liberty to refuſe it, but having once refuſed it, ſhould not afterwards be admitted, ſo long as a ſufficient number of others offer themſelves to complete the REGISTER.

III. A liſt being thus taken of the names of ſuch as are willing to enter, and are fit for the ſervice, proper columns are to be made for entering, at the ſame time, each man's age, complexion, ſtature, marks, if any trade, county or country, and the city, town, hundred or hamlet, he declares his intentions to go to for the preſent.

IV. A copy of this liſt, ſigned by all the commiſſion and warrant officers on board, is to be forthwith ſent to the admiralty or navy-board, from whence præcipe's or orders will be iſſued to the ſeveral magiſtrates of the cities, towns, &c. to which theſe men go (according to the liſt) to enter the name of every man that comes into his diſtrict, with all his deſcriptions, and the name of the place he laſt came from.

V. A return is to be made to the admiralty, &c. every month, more or leſs, by the mayor, bailiff, or neareſt juſtice of the peace, of the name and deſcription of every regiſtered man that has come into, or left his diſtrict during that month, taking particular care to mention the place he declared an intention to go to; whilſt the other magiſtrate, of or near the place he goes to, makes in the ſame manner his return, ſpecifying the place from whence any new man laſt came.

Let it be taken for granted, ſays this gentleman, that a REGISTER for SEAMEN would be a ſucceſsful and proper method to engage their ſervice: the next point to be conſidered, is what number of men would anſwer that purpoſe.

I ſhall leave that entirely to the wiſdom of my ſuperiors.—But permit me to ſuppoſe at preſent, that the number was to be 10 or 12,000 men; and that each man was to receive after the rate of 5 l. per ann. or 2s. a week, which amounts to 5 l. 4s. a year. The ſum neceſſary to pay 10,000 men, would then be 50,000 l. or 52,000 l. a year, and ſo in proportion for any greater or ſmaller number.

After the rate of 500 men to a ſhip, this number would equip 20 or 24 line of battle ſhips: and if theſe be not ſufficient, this method does by no means preclude the preſſing of vagrants, idle, looſe, and diſorderly men, without any viſible means of maintaining themſelves in an honeſt induſtrious calling. On the contrary, let the magiſtrates exert themſelves, and be every where encouraged to ſeize, impriſon, and convey to the ſeveral ſea-ports, all perſons under that deſcription: and by dividing theſe diſſolute fellows amongſt the ſeveral ſhips, more hands would be added, more ſhips equipped, and the country cleared of theſe noxious irreclaimable villains. This would be preſſing in a legal manner, and perhaps the only method for putting a ſtop to the outrages daily committed in all parts of the town and country.

Fifty thouſand pounds a year may, perhaps, at firſt view, be eſteemed a very large additional expence to the nation: but when the advantages ariſing from it ſhall be conſidered, I flatter myſelf, that every well-wiſher to his country would think that ſum, or even a much larger, well employed. Some few of theſe advantages are as follow:

Firſt, This may be a means of ſaving a large expence to the nation, by deterring our neighbours from any ſudden and raſh attempts upon the rights and privileges of the crown and ſubject. For when they know us in a condition to do ourſelves juſtice, as well as diſpoſed to reſent an injury, they may not be ſo forward in diſturbing our tranquillity and peaceable diſpoſition.

Secondly, A great many lives may hereby be ſpared. For if this ſcheme ſhould prevent inſults and incroachments, which are generally the firſt ſeeds of war; the conſequence is, that many officers and ſeamen who would be engaged, and loſe their lives in that war, are hereby ſaved to the public.

Thirdly, Theſe men, who have been employed in the ſervice of their country in time of war, would, in time of peace, have ſome gratification for their former fatigues and dangers, inſtead of being turned adrift to ſtarve, rob, and murder, as they actually do; or being driven, by neceſſity, into foreign ſervice.

Fourthly, Large annual ſums are now raiſed and paid, as rewards, for apprehending highwaymen, footpads, &c. who are brought to the gallows and gibbet; a great part of which might probably be ſaved, as well as the lives of theſe miſerable wretches, were this ſcheme to take place.

Men who have been forcibly taken from their trade and family, and have been kept four or five years abroad, who have loſt almoſt all the ſkill they had in their ſeveral callings, and, perhaps, been deprived of their friends by death, removals, &c. can ſcarce ſettle immediately to any uſeful and induſtrious way of life, when turned aſhore. But this ſcheme would, in a great meaſure, prevent them from taking any deſperate courſes; it would give them an aſſurance of not wanting ſome proviſion for the future, the want of which generally drives ſuch men to extremities. And as the lords of the admiralty would have a power to diſcharge any man who behaved ill, this would oblige the men to a more ſober and regular behaviour. The very regiſter would be a great check to ſuch irregularities: for, as the place of each man's reſidence, and his deſcription would hereby be well known, he would certainly, ſooner or later, be diſcovered: he would be juſt in the ſame condition as a deſerter from the army, few or none of which eſcape puniſhment.

But, moreover, an encouragement of this ſort might probably draw many of our men out of foreign ſervice, to that of their country again. An advantage of ineſtimable value, as it not only weakens their hands, but ſtrengthens ours.

It is true, they receive, when paid off, the wages due to them: but this only leads them into lewdneſs, debauchery, and bad company; which ſo far corrupt their morals, whilſt the money laſts, that, when it is gone, they aſſociate into bands of the moſt abandoned ſort, and perpetrate all manner of wickedneſs, to enable them to continue in and ſupport the way of life they have fallen into.

As a farther encouragement to be given to ſuch ſeamen as ſhall voluntarily enter themſelves, it is propoſed,

Firſt, No man ſhould be allowed to ply a boat on any river, in any port or harbour, unleſs he be regiſtered, if a regiſtered man offers himſelf for that purpoſe.

Secondly, A worn-out regiſtered man, not admitted into Greenwich-Hoſpital, ſhould be allowed to ply a boat, as above, in preference to any other regiſtered man, and conſequently to any man not regiſtered.

Thirdly, Preference ſhould be given to a man regiſtered before a war, to remain upon the liſt in time of peace (if able and fit for ſervice) before any man regiſtered during the war, and before the peace.

Fourthly, All warrant-officers doing duty on board any ſhip in ordinary, by a deputy, ſhould be obliged to take a deputy from amongſt the regiſtered men (if any ſuch offers, that is fit for the buſineſs) rather than any other man, under a penalty.

Fifthly, A regiſtered man to be received into Greenwich-Hoſpital, in preference to a man not regiſtered; and when ſtruck off the liſt, as no longer fit to ſerve, to be conſtantly received there.

Theſe regulations neceſſarily require the keeping an exact account of the date of each man's regiſtery.

As this ſcheme propoſes the keeping up the number of 10 or 12,000 men, excluſive of thoſe employed on ordinary occaſions in time of peace, it becomes neceſſary, that as ſoon as any regiſtered man is taken into the king's ſervice (except in time of war) another man be admitted to regiſter in his ſtead. I have here inſerted an exception, which, in my humble opinion, had better have been omitted. For if a fund were once raiſed, and appropriated to that ſole uſe, I do not perceive the leaſt inconveniency that could ariſe from continuing that method in time of war likewiſe; that is, when any regiſter for ſervice, the ſame ſhould be completed as ſoon as poſſible: otherwiſe our enemies, knowing that our ſtock of ſeamen is drained, would no longer ſtand in awe of any further armaments. But, in the height of a war, it can ſcarce be ſuppoſed we ſhould have men enough completely to man our fleet, and to fill the regiſter at the ſame time. If ſo many men ſhould be found, then we have

have always 10 or 12,000 men ready upon any occaſion. If, as is moſt likely, men ſhould be wanting, then the fund would thereby be ſo long increaſing, and enabled, at the concluſion of the war, to provide for ſo many more men as ſhould be judged proper.

The only inconvenience I can foreſee that may attend this meaſure is, that, at the end of the war, the regiſter may poſſibly be full, and, conſequently, no room left for ſuch as have ſerved during the war. But that is not at all likely; and if not, then the increaſe of the fund will admit of ſo many additional men, for a time at leaſt: and we preſume to hope, that a ſcheme of this nature will be ſo generally approved, as in time to meet with all the encouragements at this day beſtowed upon other generous and charitable inſtitutions, no one of which can be put in any competition with this, for the importance of, and advantages ariſing from, it, to the nation in general, and every individual.

Perhaps it will be ſaid, That every body is convinced of the neceſſity of encouraging our ſeamen, and having always a certain number ready to be called together at ſhort warning: but the difficulty is, how to find a proper fund for that purpoſe.

How difficult ſoever that may be, if it is neceſſary, if the mercantile intereſt, and our general ſafety, ſuffer by that neglect, the difficulty ſhould be no objection. Large ſums are annually expended in buildings, and other, perhaps, neceſſary works; but ſurely no one of them can be compared to this for expediency, and general advantage.

When our real intereſt is in queſtion, it is not to be doubted but a Britiſh houſe of commons will find the proper reſources.' See An Eſſay towards a Method of ſpeedily MANNING A FLEET upon any SUDDEN EMERGENCY. Printed for Sandby in Fleet-Street.

REMARKS.

In the year 1740, the houſe of commons gave leave to bring in a bill for regiſtering all ſeamen, watermen, fiſhermen, keelmen, bargemen, and ſeafaring men, capable of ſervice at ſea, throughout his Majeſty's dominions; but it being judged by the houſe to be overloaded, and too arbitrarily to affect the liberties of the ſubject, it was dropped; upon which the houſe reſolved itſelf into a committee of the whole houſe, to conſider of heads of a bill for the further and better encouragement of ſeamen to enter voluntarily into his Majeſty's ſervice; in which committee ſeveral reſolutions were agreed to, but nothing further done.—It may be uſeful, however, here to give the ſeveral reſolutions of the houſe of commons upon this occaſion, which are as follow, viz.

1. That a voluntary regiſter of ſeamen will be of great utility to this kingdom.
2. That it ſhall extend to all the dominions of the crown of Great-Britain.
3. That the fraternity of Trinity-houſe of Deptford Strond be intruſted with the management of the ſaid regiſter, with power of appointing inferior officers and ſervants neceſſary for the execution of the ſaid truſt.
4. That a certain ſum of money be paid to every man who is willing to regiſter.
5. That every regiſtered man ſhould be obliged to give an account of the place of his abode to the regiſter office.
6. That the regiſtered men ſhall be divided into claſſes.
7. That a yearly penſion be allowed to every regiſtered man who ſhall be diſabled in fight, over and above ſuch allowances as are now given, and a yearly penſion to every widow of a regiſtered man ſlain in fight, over and above the preſent allowances made to ſuch widow; and if the party leaves any children, that each of them have a yearly penſion, until they arrive at the age of fourteen.
8. That every regiſtered man be exempted from paying the king's or pariſh taxes, or ſerving any pariſh offices, or ſerving in, or contributing towards, the militia.
9. That none be preferred to be petty officers in any of his Majeſty's ſhips but regiſtered men.
10. That all petty officers in merchants ſhips, as boatſwains, gunners, &c. be choſen out of the regiſtered men.
11. That all men who ſhall regiſter themſelves do remain on the regiſter no longer than to a certain age.
12. That all men who ſhall have continued on the regiſter a certain age, do enjoy all the advantages of regiſtered men during life.
13. That all regiſtered men ſhall have the preference of being admitted into Greenwich Hoſpital.
14. That all captains and commanders of his Majeſty's ſhips of war, who ſhall be applied to in foreign parts, ſhall take on board any regiſtered men, and the men ſo taken on board ſhall, from that time, be deemed part of the ſhip's company, and receive wages accordingly.
15. That regiſtered men be allowed to go into the merchants ſervice, when the ſervice of his Majeſty ſhall not require them, and that the proper officers do give them certificates for the ſame.
16. That regiſtered men be intitled to receive their wages in certain proportions.
17. That all ſeamen now abſconding in foreign parts, or at home, on account of running goods, who ſhall enter on board any of his Majeſty's ſhips, and claim the benefit of this regiſter, ſhall be intitled to their pardon, except perſons who have been concerned in actual murder.
18. That all regiſtered men who ſhall be ſummoned to appear on board any of his Majeſty's ſhips, and ſhall neglect or refuſe to do the ſame, ſhall be ſubject to be puniſhed as deſerters.
19. That all foreign ſeamen who ſhall claim the benefit of this regiſter, ſhall be intitled to all the rights and privileges of natural-born ſubjects.
20. That the truſtees of charity ſchools for the education of boys, ſhall be obliged to put forth apprentices to the ſea-ſervice, ſuch as ſhall find maſters willing to take them.
21. That the regiſtered men ſhall wear ſome honourary mark of diſtinction.
22. That the regiſter-office be obliged to give an account to the lord high admiral, or the commiſſioners for executing the office of lord high admiral, for the time being, of all the men that ſhall be regiſtered.
23. That the regiſter-office ſhall, on the receipt of an order from the lord high admiral, or the commiſſioners for executing the office of lord high admiral for the time being, for any number of men contained on the regiſter, iſſue out their order for the ſaid number of men to appear, according to the order directed to them as aforeſaid.

FURTHER REMARKS.

Were an act of parliament to be paſſed for eſtabliſhing 10,000 able ſeamen certain for ever, for the king's ſervice, we may preſume to affirm, that it may be plainly demonſtrated, that the advantages which would accrue therefrom to every part of the nation in general, would render the extraordinary expence of ſuch eſtabliſhment, if any at all, very inconſiderable. Should any one be ſtartled at the very ſound of ſuch a large number of men, without giving himſelf either time to conſult the merits of another propoſal we are about to offer, which may be drawn from what has been ſaid, aſk, in objection to it, what occaſion the government would have, during the time of peace, which may ſometimes hold, very probably, for ten or twenty years, to encumber itſelf with ſuch numbers of a ſet of people, who, in their opinion, muſt be very unneceſſary? we ſhall requeſt of him a candid peruſal of what follows, and doubt not but to find him much better reconciled.

By the advance money that ſhould be given, and the certainty of not being diſmiſſed, after any ſhort expedition, from his Majeſty's ſervice, to make what proviſion they can for themſelves, in that of others, the number of volunteers that would immediately offer themſelves, would very quickly make up the liſt propoſed; nor would the manner in which they ſhould be employed, even at thoſe times when the fleet may have a call but for a very few of them, be a leſs temptation for them to enter.

As his Majeſty's docks and yards do continually maintain a very large number of workmen, in the ſeveral articles relating to the navy, one part of the ſaid ſeamen might, with little prejudice to the hands already employed, be made uſe of in time of peace, in the work there: at firſt, in ſuch parts only of it, as may be moſt eaſily attained in a very little time, 'till by degrees they may arrive to ſuch a tolerable knowlege in the others, as will not only enable them, by the money they ſhall earn, to maintain themſelves and families very comfortably, but render them, when required to their original province of ſailing, more uſeful and expert in the intire management of every particular belonging to the ſhip; whilſt the other part of them, or as many as there may be a call for, provided it does not exceed one half of the number, unemployed in his Majeſty's fleet, ſhall have a permit for a year, to ſail in ſuch veſſels as are coaſters, or make ſhort voyages, ſuch as to France, Ireland, Norway, &c. by which means they will acquire ſuch perfect knowlege of the many rocks and ſands that almoſt intirely ſurround us, that they may prove, when ſummoned again into his Majeſty's navy, of very important uſe, even in the quality of pilots. And to prevent any difficulty, or diſpute, that may ariſe between the maſters of ſuch veſſels and the king's ſailors, that want to ſhip themſelves on board them, the merchants or maſters, bound for any ſuch ports as abovementioned, ſhall be obliged to receive into their veſſels one half of their complement of the KING'S MEN, at the common wages, who ſhall likewiſe have a written power, or authority, granted them, to ſhip themſelves on board any coaſters or veſſels trading as beforementioned, in any port of Great-Britain where they are, provided they do not exceed the number of other hands ſhipped on board of the ſaid veſſels.

A REGISTER may alſo be kept at every port, of the number of hands each veſſel ſhips, that the government may be aſſured of the punctual and ready compliance of the merchants, or captains, in receiving one half of their complement of king's men, without any manner of evaſion or objection, if ſuch offer themſelves. And if it ſhould ſo chance, that many of theſe ſailors ſhould ſeek employment all at the

ſame port, where there were veſſels lying in expectation of hands, there may be ſuch regulations, that no one veſſel ſhould take in more than an equal proportion of the ſaid ſailors. As for inſtance, if three veſſels lay in the ſame port, ſuppoſing each veſſel carry ten hands, and five of his Majeſty's men ſhould offer themſelves only to one of theſe three ſhips, they ſhall not be allowed to go all together in that one veſſel, but ſhall diſtribute themſelves amongſt the three, and that veſſel, whoſe lot it was to have but one, ſhall receive the next king's man that comes to enter himſelf at that port, as his fair dividend.

No owners, or maſters of the veſſels beforementioned, ſhall prefer, in their firſt choice of the hands they propoſe to ſhip, any other ſailors to thoſe belonging to his Majeſty; but if no application is made from any of them, the captains may be at their own diſcretion to receive others for the whole voyage. And for the future eaſe of the ſaid eſtabliſhed number of ſeamen, and to make them in every degree more uſeful to the government, after the expiration of the year, for which the permit was granted to one half of them to go into the merchants ſervice, there may be an exchange of ſtations for the ſame length of time, between them and the other half that were left and employed at home. By theſe meaſures the grandeur and ſecurity of the nation will ſtand upon an immoveable and unperiſhable baſis; and the inconveniencies which it may otherwiſe ſuſtain, from having moſt of the hands in their veſſels, during the time of war, impreſſed, perhaps, juſt as they are clearing out for their voyage, and loaden with commodities which may be in danger of being greatly damaged by ſuch a retardment to their ſailing, will immediately vaniſh, and the approach or declaration of a war carry with it none of the ill effects on the apprehenſions of the trading people, which it may at preſent.

The number of ſailors which the government, upon this ſcheme, may have occaſion to diſtribute amongſt them, ought, very far from being judged an act of compulſion, to be received as the ſtrongeſt inſtance of its lenity, tenderneſs, and regard for their intereſt. The king's men, it is to be preſumed, will be as good, if not better, than what they may otherwiſe be obliged to take up with; nor, if any exigency of affairs ſhould conſtrain the government to call off theſe men into the royal ſervice, can they poſſibly think the loſing a part of their complement an hardſhip, as their voyages will be ſo very ſhort, that they may have time enough, from the firſt ſummons of his Majeſty for his ſailors to return, 'till the time limited for ſuch return (which may be three weeks, or a month) to provide themſelves with a ſupply, and even without being neceſſitated to pay any ſuch exorbitant wages as the ſcarcity and timidity of the ſeamen, during the time of a preſs, exacts from them. If, as I am informed by ſome perſons who pretend to have made a pretty exact computation of the number of ſeamen employed in the home and neighbouring trades, there may really be 30,000, then, were the whole eſtabliſhed number of his Majeſty's ſeamen diſtributed equally among the merchants, in the room of ſome of the others, ſuch ſeamen would be but one third of each ſhip's complement; ſo that the merchants can neither ſcruple to receive ſo few, to the prejudice of the other ſailors, nor think it any grievance to part with them, when his Majeſty's occaſions demand them.

As it is an inherent principle in every Engliſhman, to ſubmit with reluctance to any thing that ſeems to carry a check upon his liberty and free choice; ſo I would not, in this engagement to his Majeſty's ſervice, have men conſtrained to bind themſelves up either for life, or for a long term of years, but chuſe to leave it to their own diſcretion to quit the ſervice when they have an inclination, on this eaſy and reaſonable condition only, that they ſhall be obliged to give a year's notice of their intention, on the failure of which, proper penalties may be thought of to be inflicted. Such an argument as this will be no more than what is entered into almoſt every day between man and man, in every branch or kind of buſineſs; but for their encouragement not only to enter, but to continue in the ſervice voluntarily, I could wiſh an eaſy fund might be found out, whereby the government might be enabled to cloath them from head to foot, once in two years, with a badge of the flag of England, as a peculiar and honourable diſtinction from all other ſailors: thoſe cloaths to be worn by ſuch as work in the yards, only at ſuch times as they ſhall be abſent from their work.

So many brave and ſkilful men, all appearing in a national livery, cannot but affect the minds of every thinking Britiſh ſpectator with the moſt ſenſible ſatisfaction, when he beholds the true protectors of the kingdom's grandeur and happineſs ſo deſervedly cheriſhed; and every foreigner will have the ſtrongeſt ſentiments as well of our gratitude and policy, as of our undoubted ſecurity. The men themſelves, when the neceſſity of affairs may have recourſe to a ſtrong navy, will think themſelves under the greateſt obligations to repay, with extraordinary chearfulneſs and bravery, ſuch extraordinary marks of the nation's bounty and regard for them. For the firſt three years, any able ſeamen may be admitted upon this eſtabliſhment, not exceeding forty years of age, but, after the ſaid three years, none ſhall exceed the age of thirty. And as a further reward and inducement for their long continuance in the ſervice, it is propoſed, that thoſe who have ſerved for ſuch a term of years, or done ſuch ſervices as the diſcretion of the board of admiralty, or the commiſſioners, ſhall judge worthy of it, ſhall receive a ſmall penſion for life, though they are not any way diſabled in the ſervice; and in caſe any of them leaves a widow, ſhe ſhall enjoy for her life one moiety of what was before his allowance; but if any of them quit the ſervice, and afterwards re-enter, they ſhould have but half the benefit of the time they ſerved before. And if any of them, whilſt in the merchants ſervice, ſhould, by any accident that might happen to the veſſel, in uſing their endeavours for its ſafety or otherwiſe, ſuſtain any damage in their limbs, ſo as to render them incapable of earning their bread as ſailors for the future, they ſhould be conſidered, notwithſtanding, as the king's men, and receive the ſame benefit of a penſion, or the hoſpital, as if they had ſuſtained ſuch wounds or damage in the king's own ſhips. And at laſt, to all theſe conſiderable and inducing advantages, I would join that great and moſt neceſſary encouragement of all, the certainty of having their pay, whatever capacity they ſerve in, whether in merchant-ſhips, or the governor's own, on the moſt eaſy regulations both to themſelves, their creditors, friends, or relations, who may be their executors, or poſſeſſed of their powers of attorney, without any unneceſſary delays upon account of unjuſt and vexations claims, and free from exorbitant and unwarrantable deductions, which has been but a too frequent and enormous practice.

During our wars with the French in our late reigns, complaints of this kind were ſo loud, ſo miſerable, and ſo numerous, that they pierced the hearts of every Engliſhman, excepting ſuch as were the principal authors of their oppreſſion, and made a very guilty gain from their miſeries.

In that melancholy time their hardſhips, I have been aſſured, were as great, as if ſome of the perſons to whom a part of the inſpection and management of the naval affairs was entruſted, had been in an actual league with the French to deſtroy them.

That they were impreſſed from their callings at home, or on their return, perhaps, from a tedious Eaſt-India voyage, when they were big with the hopes of refreſhing themſelves on ſhore for a few weeks, and regaining, in their own native air, their health and vigour, which might be impaired by a long continuance in a foreign climate.

This was a grievance that might eaſily allow of a mitigation, and be rendered in ſome part juſtifiable, from the neceſſities of the ſtate at that time, provided they had not been forced into a ſervice, where, from the corrupt management of ſome avaricious perſons, there was not only an uncertainty of receiving the pay they ſhould be intitled to in ſuch ſervice, on any reaſonable terms, but danger of being defrauded of the greateſt part of it, together with a probability, from too ſevere a confinement on board the fleet (which was ſometimes for two or three years together) of forfeiting, by their deaths, the benefit of what was due to them from the merchants, from whoſe ſervice they were ſo abruptly taken, or leaving it, at leaſt, a diſputable legacy to their widows, or other relations.

From this inability of the ſailors to make ſuch convenient returns of their pay as would have been a comfortable ſubſiſtence to their diſtreſſed families, the pariſhes were loaded with inſupportable taxes for their relief, whilſt the purſers were ſuſpected and accuſed, by the miſerable ſufferers, of burthening the ſailors with large demands for the little conveniencies they were obliged to take up of them, that ſome, when they had the favour of having their accounts in ſome manner ſtated, had not, perhaps, one farthing to receive. To this manifeſt diſcouragement of the ſailors, when on board, was owing the abſolute neceſſity of impreſſing them during all thoſe wars, in ſuch a violent manner, that he who could hide himſelf from the diligent purſuit of a preſs-gang, thought it as great happineſs, even though he was almoſt ſtarving all the while, as if he had eſcaped falling into the hands of an Algerine rover; and the merchants have been obliged to advance their wages from 24s. to 50s. and 3l. and upwards, a month per man, after the inconvenience of waiting a long time, before even that would be a ſufficient temptation for any of them to venture. Nor were the colliers forced to give leſs extravagant hire in proportion, for the bringing their veſſels up the river.

I mention theſe inconveniencies, which in the times before named affected not only the merchants and the ſeamen, but the whole nation, not ſo much as an handle for a general outcry againſt the cuſtom of impreſſing men into his Majeſty's fleet, as from a melancholy reflection, that the ſaid œconomy at that time uſed in diſtributing their due encouragement to each ſailor, ſhould force the government to ſuch rough meaſures as it then did, to obtain an able one: whereas, had it been otherwiſe, and each man knew how to come at what he had earned in a leſs dilatory and diſadvantageous manner, I ſincerely believe that above half the money that was allowed for impreſſing men had been ſaved, and that abundance of ſeamen would have thought the glory of ſerving in the navy preferable to ſome advanced wages they might gain from the merchants.

Should

Should any of the methods we have ſuggeſted for executing what is propoſed, appear to the judgment of others, not ſo entirely practicable, as we have the zeal to imagine they may be, we are confident, the numerous advantages preſaged therefrom, for the good of our king and country, will render any errors of that zeal pardonable. To be ſo well fortified in that moſt valuable branch of Great-Britain's ſecurity (its maritime force) as not only to be in a conſtant readineſs to engage in a war, but from the reputation of ſuch an armament, in a capacity to prevent the approaches of one, appeared to me ſuch a deſirable bleſſing, that no difficulties ought to diſcourage any true and honeſt lover of his country, from uſing his utmoſt abilities to obtain it.

To give a chearful and ſuitable encouragement to the ſailors, is no more than an act of juſtice and gratitude due to them as our protectors, and of prudence to ourſelves, as being protected and aggrandized by them. And we have engaged the more ſtrenuouſly in favour of this one point, as it is but too manifeſt, that from a deficiency of ſuch encouragement, and the want of means to make ſome certain proviſion for them, after they are diſcharged from on board the fleet, many out of the numbers that are unemployed at the ſame time, are obliged to go into foreign ſervice, that only great and dangerous poſſibility of rendering our preſent imagined ſuperiority over all other nations precarious for the future; every foreign realm, whoſe intereſt it is to turn its genius to maritime affairs, ſearching diligently after, and receiving greedily, ENGLISH SEAMEN, preferably to thoſe of their own, or any other nation; whilſt others of them, too frequently from a dearth of employment, are tempted to ſupply their neceſſities, by plundering, robbing in the ſtreets, breaking open houſes, &c. too notorious an evidence of which is, that at almoſt every ſeſſions at the Old-Bailey, there has been, at ſuch times, generally one or more ſeamen among the people convicted of capital crimes. A prevention, therefore, of theſe grievances, is to be wiſhed, as much for the ſecurity of the government, as for the eaſe of the people. That the merchants ſhould ſuffer as little as poſſible, either from the damage done to their goods, or the loſing ſome part of the benefit of the foreign markets, from being detained too long in their home ports, by the ſeizure of their men, or by being obliged to give extravagant wages for ſeamen, who, perhaps, may be only foreigners, old men, or boys, as few others will venture themſelves during the time of a preſs, ſhould be the ſpeedieſt caution of a government, whoſe REVENUE is ſo much intereſted in the flouriſhing or oppreſſed condition of the trading part of the nation. That the pariſhes ſhould not be overburthened by an extraordinary charge of poor, which muſt be the caſe, when perſons, who are, perhaps, ſettled in a tolerable way of buſineſs, able to ſupport themſelves and families, are involuntarily hurried on board the fleet; and, in ſhort, that no ſudden preparations for war, ſhould be of ſo ill conſequence to the meaner ſort of people, as to diminiſh the benefit of what they earn by hard labour, by creating any advanced prices on the moſt common neceſſaries, demands the conſideration of their ſuperiors, not leſs from humanity than policy.

Thus, from ſuch regards as theſe being ſhewn for the ſtrength of the kingdom, and the felicity of all the members of it, every thing muſt flouriſh in the moſt delightful manner, the ſovereign fortified againſt all attempts of his enemies, and the people ready to make him the moſt grateful returns for their proſperity.

REMARKS upon the whole of the article SEAMEN.

The reader has now before him, under this article SEAMEN, the ſubſtance of what has been propoſed ſince the Revolution, in regard to the meaſures requiſite to be taken, in order to the ſpeedy manning of the royal navy upon any emergency. Which of theſe propoſals may deſerve the preference, or whether any of them may be eligible, I ſhall not take upon me to declare; the judicious, perhaps, may find ſomething in every one that may deſerve their attention, and may, from the whole, form one better than either. It is obſervable, that the ſenſe of the parliament has been to promote a voluntary regiſter; and the ſcheme propoſed in the eſſay before cited ſeems to be built upon the ſame principles; and, indeed, all compulſory methods upon this occaſion ought to be avoided, becauſe they are likely to have no better effect than the violent means of impreſſing men by force have hitherto had, and, therefore, can by no means anſwer the ſalutary end propoſed. Moreover, whatever hath a tendency to ſtrike at the liberties of the whole ſeafaring body of the people, ſhould be ſtudiouſly guarded againſt in a land of liberty. Nor will the violent and arbitrary example of France, or that practiſed in any other nation, have any weight with Great Britain, to induce her to follow it; and, therefore, every thing that can be urged from topics of this kind, will loſe its weight with a Britiſh parliament. That ſomething effectual is indiſpenſably neceſſary to be done, to anſwer an end ſo much for the ſafety and glory of the kingdom, is agreed on all hands.

The methods which the French and Spaniards have lately taken, have rendered them, in caſe of a war, much more powerful enemies than they were ſome years ago. Our trade can never be ſaid to be ſafe, unleſs our ſhips of war are, at leaſt, equal, if not ſuperior, to theirs in number. That we exceed them as yet in number, as well as in goodneſs of ſhips, is a point not to be diſputed: may this ſuperiority long continue! I think it muſt, and will, if we are not wanting to ourſelves; but it behoves us to have a watchful eye upon their motions. Theſe neighbours of our's are daily increaſing their fleets, and ſending large armaments (in time of peace) to different parts of the globe, in order to make new ſettlements, enlarge their commerce, and protect their ſubjects. It is notorious that the Spaniards, with a high hand, encourage their guarda coſtas in the Weſt-Indies, even to inſolence, as well as injuſtice. And it is allowed that the French, by ſecret methods, and by open and hoſtile attempts, are endeavouring to diſturb and endanger our ſettlements in the Eaſt-Indies, as well as thoſe in America. The preſent ſtate of their maritime power muſt, undoubtedly, be the true cauſe and foundation of all theſe outrages. Such attempts would be uſeleſs and impolitic, if they apprehend any probability of our calling for an immediate reparation of damages; but they are perfectly acquainted with our ſituation, and bid defiance to our number of ſhips in harbour. They know it would be exceedingly difficult for us to equip even a ſmall fleet, upon any ſudden emergency; wherefore they preſume upon our not doing it, 'till we are driven to it by ſome great and abſolute neceſſity. They are apprized of the impediments ariſing from our conſtitution, and the time it takes to man a fleet, let the circumſtances be ever ſo preſſing, and perceive that their ſhips may be at ſea, and poſſibly have ſtruck their ſtroke, before a ſmall ſquadron of our large ſhips can be manned and equipped.

At the concluſion of the laſt war, when the firſt ſhip was paid off, there were, if I miſtake not, 65,000 ſeamen on board his Majeſty's fleet; and yet, when a few ſhips were, a little while ago, to be fitted out for the Eaſt-Indies, we were obliged to have recourſe to ſevere methods, in collecting a ſufficient number of hands to man them, ſo as to ſail in due time. Nay, further, when only four ſhips were ordered, the laſt ſpring, to take on board the troops for Gibraltar and Minorca, they were, if I am rightly informed, detained a conſiderable time, only for want of hands to man the ſhips for ſo ſhort a ſervice. Our ſeamen, as well as artificers, are ſaid to be engaged in foreign ſervice, where they meet with proper encouragement: whereas we take little or no care of them, any longer than whilſt we want their aſſiſtance. Thus when preſs-warrants are iſſued, the poor fellows abſcond, and run any hazards, rather than be forced into the ſervice; the few that voluntarily enter, or are taken in their lurking-holes, are no better than ſlaves; for as new ones are no where to be found, ſo thoſe no ſooner return from a long and hazardous voyage, than they are turned over to other ſhips, and are ſent upon ſome diſtant expedition.

Of our LAWS relating to SEAMEN.

Every ſeaman in the ſervice of the crown, or any ſubject, except of hoys, ſmacks, &c. belonging to London, employed in bringing corn, fiſh, or proviſions, to pay 6d. per month to Greenwich-Hoſpital. Maſters of ſhips to detain the 6d. per month out of ſeamens wages.

The 6d. a month paid by ſeamen, ſhall extend to ſhips belonging to Great-Britain and Ireland, and the iſlands in America, &c. and collectors to be appointed, who may examine all maſters of veſſels; and they to pay the duty before ſhips are cleared, under the penalty of 20l.

Only the ſeamen in the king's ſervice were entitled to a place in Greenwich-Hoſpital; whereupon the following act was made, ſetting forth, that

As there is no proviſion made for ſuch ſeamen in the merchants ſervice, as are diſabled by accidental misfortunes, or for thoſe worn out by age, or for the widows or children of ſuch as ſhall be killed or drowned in the ſaid ſervice; and as the ſeamen in the ſaid ſervice are willing to allow 6d. per month out of their wages, to be applied for the relief of ſuch as ſhall be diſabled or worn out by age, and of the widows and children of thoſe killed in the ſaid ſervice;

It is provided that Alexander Hume, John Briſtow, John Bance, Henry Gough, &c. ſhall be one body corporate and politic, by the name of the preſident and governors for the relief and ſupport of ſick, maimed, and diſabled ſeamen, of the widows and children of ſuch as ſhall be killed, ſlain, or drowned in the merchants ſervice; and that by the ſame name of the preſident and governors, they ſhall have perpetual ſucceſſion; and that they may receive and enjoy in truſt, for the purpoſes of this act, all ſuch ſums of money as are granted, and ſhall be raiſed by virtue of this act, or ſhall be contributed or bequeathed by well-diſpoſed perſons; and that they may at any time hereafter, without licence in mortmain, purchaſe or receive any lands, tenements, or hereditaments, or any eſtate or intereſt therein, ſo that the ſame be only for the ſcite of, or to be converted into, an hoſpital, with offices and appurtenances neceſſary for the ſaid purpoſes.

The

The preſident and governors ſhall provide in the ſaid hoſpital for the reception of ſeamen rendered incapable of ſervice, or ſhall allow them certain penſions, or otherwiſe, as they ſhall think moſt for the advantage of the ſaid charity; and ſhall alſo relieve the widows and children of ſuch ſeamen as ſhall be killed or drowned in the ſaid ſervice, provided ſuch children are not of the age of 14, or if, of that age or upwards, they are incapable of getting a livelihood, by reaſon of lameneſs, blindneſs, or other infirmities, and are proper objects of charity: and ſhall make reaſonable allowances to thoſe who ſhall loſe an eye or limb, or be otherwiſe hurt in fighting, defending, or working the ſhips in which they ſerve, or in loading or unloading the cargoes, or otherwiſe howſoever in doing their duty, in proportion to the damage they ſhall receive, ſo far as the revenues will extend for the ſaid purpoſes, according to ſuch rules, orders, and regulations, as ſhall be eſtabliſhed in purſuance of this act.

No ſeaman ſhall be provided for by a penſion or otherwiſe, as decrepit or worn out, unleſs he ſhall have ſerved five years in the merchants ſervice, and paid 6d. per month out of his wages for that time for the purpoſes of this act.

If any perſon ſhall at one or more payments contribute 50l. for the purpoſes of this act, he ſhall be declared a governor of the ſaid corporation.

Every ſeaman, or perſon employed in any veſſel belonging to a ſubject of England, and every maſter or owner navigating the ſame (other than ſuch apprentices, under the age of eighteen, as are exempted from payment of 6d. per month to the hoſpital at Greenwich, by an act of 2 Anne, and perſons employed on the coaſts of England, in taking of fiſh brought freſh on ſhore; and perſons employed in boats or veſſels that trade only from place to place within any river in England, or in open boats upon the coaſts thereof), and pilots employed on board veſſels, ſhall, after the 29th of September 1747, pay 6d. per month, and proportionally for a leſſer time during their employment, for the purpoſes aforeſaid.

The maſter, owner, or commander, of every veſſel, is to deduct out of the wages, &c. of every ſuch ſeaman, &c. (except as before excepted) the ſaid duty of 6d. per. month, and ſhall pay the ſame to ſuch receivers as the preſident and governors, or the truſtees of the out-ports, ſhall appoint, if ſuch ſeamen, &c. ſhall have or be intitled to any wages, ſhares, or profits.

Thoſe ſeamen who ſhall have been longeſt in the ſaid ſervice, and contributed moſt towards the ſaid duty, ſhall be firſt provided for as worn out or decrepit.

If any ſeaman, or other perſon employed on board any veſſel, ſhall, in the diſcharge of his duty, either on ſhore or on board, break any limb, or be otherwiſe hurt, ſo that immediate care is neceſſary to be taken of him, the preſident and governors of the port of London, and the reſpective truſtees for the out-ports, ſhall provide proper relief for ſuch perſon, until he be ſo well recovered of ſuch hurt, as to be removed and ſent with ſafety to the port to which ſuch veſſel belongs; and the expence thereof, not exceeding 2d. per mile, ſhall be paid by the preſident and governors at the port of London, or by the truſtees for the out-port to which ſuch perſon ſhall be ſent.

If any ſeaman or other perſon ſhall ſerve five years or more in the merchants ſervice, and ſhall have paid the 6d. per month for that time, and ſhall be adjudged by the preſident and aſſiſtants, or the reſpective truſtees, a proper object of relief, he ſhall be provided for at the port where he ſhall have paid the greateſt part of the ſaid duty for the laſt five years of his ſervice.

If it ſhall happen that ſeamen employed in the merchants ſervice, within the limits of this act, ſhall be ſhipwrecked, or taken by the enemy, and on their return from their impriſonment may be travelling with paſſes to the place of their abode, the preſident and governors, and the reſpective truſtees, may relieve them in ſuch manner as they ſhall think proper.

Whereas the united company of merchants of England trading to the Eaſt-Indies, have at their own expence provided for ſuch ſeamen employed by them as have been rendered incapable of ſervice, and have eſtabliſhed a fund for that purpoſe, and are therefore deſirous that the perſons employed in the ſaid ſervice, may be exempted from the payment of the ſaid 6d. per month; it is therefore enacted, that no officer, ſeaman, &c. of any veſſel, employed in the ſervice of the ſaid company, ſhall, during the time of ſuch ſervice, be liable to the payment of the ſaid duty.

No officer or ſeaman, &c. during his employment in the ſervice of the ſaid company, nor the widows or children of ſuch as ſhall be killed or drowned, ſhall be entitled to any benefit by this act, during the time they ſhall be employed in the ſaid ſervice.

The act for making perpetual an act for the better regulation and government of ſeamen in the merchants ſervice, and for extending the proviſions thereof to his majeſty's colonies in America, was made in the 1ſt year of George III.

From and after the 1ſt of May, 1764, all the proviſions, penalties, matters and things, in the act of 2d of Geo. II. are extended to his majeſty's colonies in America; and the forfeitures applicable to Greenwich Hoſpital are to be paid there, to the officer conſtituted by the admiralty; and maſters of ſhips deducting any of the ſaid forfeitures out of the ſeamens wages, and not duly paying over the ſame, forfeit treble the value to the uſe of the ſaid hoſpital.

SHIP-BUILDING, ſee ARCHITECTURE MARINE.

SHIPPING.

The dimenſions, tonnage, and number of guns of ſome men of war built in Spain, the Indies, France, England, and Genoa; and the rules of the Spaniards, French, Engliſh, and Dutch, in regard to their ſailors and mariners, according to Don Geronimo Uztariz, the celebrated Spaniard.

In the collection of the laws of the Indies, and ſome other books publiſhed in Spain, there are inſtructions and directions for building ſhips; and there were plans drawn up by lieutenant-general Don Antonio Gaſtaneta, and approved by his Majeſty, in the years 1713 and 1720. Though both theſe ſchemes met with oppoſition from the variety of opinions uſual upon ſuch occaſions, and the diſagreement between kingdoms in this article, which not only differ from one another in their rules, but even from themſelves in practice, we ought to prefer the plan laid down by this general for his Majeſty's ſhips of war, both from his great experience in navigation, and his ſkill in naval architecture, acquired both by theory and practice; and purſue it at leaſt, 'till his Majeſty ſhall think proper to preſcribe another.

In each of theſe plans are expreſſed the particular dimenſions and other circumſtances, that ought to be obſerved in building men of war and merchant ſhips; however, I ſhall give the dimenſions, number of guns, and men of a ſhip, built after the rules practiſed in Cantabria, and alſo of ſome others built in France, England, Genoa, and Campeachy, within the laſt five and twenty years; and at the ſame time ſay ſomething of our old method of building; that as we obſerved the great diſagreement already mentioned, by comparing our own rules with thoſe of foreigners, we may be moſt likely to diſcover the beſt and ſafeſt plan. This account is taken with great care from the papers drawn up at Cadiz in the year 1718, by ſome officers of his Majeſty, of great experience in the ſea ſervice, who made a very particular ſurvey of theſe and the reſt of the ſhips and frigates of his Majeſty's fleet that year. The extracts which I have taken from this memorial, are as follow:

The ST LEWIS, built in Cantabria in the year 1715, a third rate.

	Span.	cub.	In.
Length by the head of the keel		60 1/3	0
Length on the gun-deck		70 1/2	0
Breadth on the beam		18 1/2	0
Depth		9 1/4	0
Main-tack		19	2
Quarter-deck		17 1/4	0

	Pound.	Guns.
The lower tier	18	26
The ſecond tier	12	26
The third tier	6	8
Total of guns		60

It is to be obſerved, that in manning ſhips of war at Cadiz, they neither obſerve the old cuſtoms of Spain, nor yet that of the French, Engliſh, or Dutch, and therefore I ſhall give each of them diſtinctly.

The number of hands on board the ſhips of the Spaniſh fleet in general, was after the rate of 26 ſailors and 26 marines to a hundred tons. But in the capitana and admiral's ſhip, after the rate of 28 of each ſort to a hundred tons, and upon account of the ſignals a hundred hands more, viz. 50 ſailors and 50 marines, were added to the complement of each ſhip, agreeable to ſeveral royal ordinances, made between the years 1677 and 1682.

To a ſhip of 60 guns were allowed as many gunners, and a fourth more, making in all	75 gunners.
There was added a fourth of this number 75, viz. 18 ſea-officers, which makes	18 ſea-officers
There were ſailors equal in number to both theſe ſums, and a fifth more, or	111 ſailors.
Boys equal to a third part of the ſailors, or	37 boys.
Total	241
To theſe 241 mariners were added the ſame number of marines	241 marines.
Both ſums, in which their officers are included, make	482 hands.

The complement of a French man of war is three men, a gunner, a marine, and a ſailor, to every four pounder.

To a — — — — — 6 pounder,	5	men.
To an — — — — — 8 ———	7	
To a — — — — — 12 ———	9	
To an — — — — — 18 ———	11	
To a — — — — — 24 ———	13	
To a — — — — — 36 ———	15	
So that a ſhip of ſixty guns, viz. the St Lewis, which mounted 26 eighteen pounders, 26 twelve pounders, and 8 ſix pounders, according to this rate, has for her complement -		560 hands
The Engliſh and Dutch ſay, they have a man leſs than the French to every gun, ſo that their complement of ſixty gun ſhips muſt be after this rate - - - -		500 hands
A Spaniſh ſhip's complement for ſixty guns	482	hands.
French - - - -	560	
Engliſh and Dutch - - - -	500	

A diſtinct liſt of the officers, ſailors, marines, &c. making up the 500 hands, which, according to the cuſtom of Spain, were allowed to a ſixty-gun ſhip, including fifteen ſwobbers, that were not reckoned in the 482; becauſe the full complement was ſhipped according to the rate of the men of war, independent of theſe, there having been a reform made in reſpect to the number of marines, which before made up half the ſhip's crew, that they might be reinforced with troops in caſe of their making any invaſion aſhore; but as engagements at ſea are now decided by great guns, ſailors are fitteſt for this ſervice.

Superior officers.

Captain - - - - - -	1	
Lieutenants - - - - -	2	5
Enſigns - - - - - -	2

Boys - - - - -	25	
Sweepers - - - - -	15	

Marines.

Cadets, or guards marine - - - -	8	
Serjeants - - - - -	12	
Corporals - - - - - -	15	155
Marines - - - - - -	120	
Total of the ſhip's crew	500	

To theſe 500 men are appropriated 509 ratios, or allowances per day, in conſideration that 6 ratios are aſſigned to the captain of every large ſhip, and to the cadets or guards marine, during any expedition, half a ratio extraordinary. So that theſe multiplied by 30, the number of days in a month make 15,270 ratios.

The following articles make up a thouſand ratios.

Biſcuit	—	11 Quintals, 25 pounds.
Wine	—	46 Arrobs, 7 azumbres.
Bacon	—	1 Quintal, 9 ½ pounds.
Beef	—	1 Quintal, 46 pounds.
Bacallao	—	86 Pounds.
Cheeſe	—	54 Pounds.
Butter	—	1 Quintal, 25 pounds.
Oil	—	1 Arrob, 2 pounds.
Vinegar	—	1 Arrob, 4 azumbres.
Wood	—	15 Quintals.
Water	—	125 Arrobs.
Salt	—	1 Celemin.

In the 30 ratios, or day-allowances, are included the following articles for every thouſand.

White biſcuit	—	22 ½ Pounds.
Mutton	—	10 Pounds.
Fowls	—	2 4/7 Fowls
Eggs	—	30 Eggs.
Raiſins	—	3 Pounds 10 ounces.
Almonds	—	2 ¾ Pounds.
Sugar	—	14 ⅔ Ounces.
Charcoal	—	15 Pounds.

The ſhip Nueſtra Senora de Begona, built at Genoa, in the year 1703.

Of the ROYAL SHIPPING, or MARINE of FRANCE, and other STATES, being an abſtract from M. DESLANDES, drawn up by the order of, and addreſſed to, the Count DE MAUREPAS, ſecretary of ſtate and of the marine in France.

Every body knows the ſeveral eſtabliſhments of the marine in France; every one knows, at leaſt in the groſs, what pains, what labour, what vaſt ſums of money they have coſt; how many experienced arts and artiſans have been drawn together, all of them, in point of curioſity, as well as utility, worthy the particular attention even of ſuch as are uſed to, and well verſed in, theſe ſort of things. Theſe eſtabliſhments are likewiſe remarkable, by a great number of officers of all ranks, placed in ſuch a relation to each other, as that their ſubordination aſſiſts, and never prejudices, their duty; and as, in the marine, there are three principal objects, that, by turns, command and employ all their care, ſo theſe officers are divided into three claſſes, who have, indeed, different parts aſſigned them, but who, by the diſcharge of their ſeveral duties, contribute all to one great end.

The firſt object of the marine in France is, as it were, a prologue to the reſt; and conſiſts in aſſembling the materials that are proper, in ſorting and in diſpoſing them, ſo as to render them applicable, with the greateſt eaſe, to all the uſes of navigation. Theſe preliminaries relate to the viewing, purchaſing large falls of timber, and appropriating them to their proper uſes, on the knowlege of buying and ſo ting an infinite number of all kinds of commodities, on the manner of employing them, and drawing the greateſt utility from them, in the conſtruction, careening, and equipment of veſſels. It is diſcernable at firſt ſight, that to be maſter in this art, there is required a judicious mixture of theory and practice, joined to a very extenſive genius, perfected by a conſtant experience.

Hence it is that France have never had, in the marine, but two intendants of conſummate abilities, viz. Deſclouſeaux and Vauvre, both choſen by M. de Seignelai, both of them men of elevated genius, who had high conceptions, and who never conſidered difficulties in any other light, than as ſteps conducing to the glory of ſurmounting them.

The ſecond object comprehends the management of the different branches of duty on ſhip-board, and the conduct of ſhips at ſea, or navigation, ſtrictly and properly taken: and this ſuppoſes two parts, viz. the art of piloting and of working: the firſt reſpects the uſe of the compaſs, maritime charts, inſtruments for taking the height of celeſtial bodies, or for meaſuring the ſhip's run, with the rules and conjectures neceſſary to make a good eſtimate [ſee the article NAVIGATION]. The other regards the management of the ſails and of the helm, as well with regard to her courſe, as to the advantages that may be obtained from the winds, and from currents, and with reſpect to the ſhip's driving or altering her courſe through their force *. How many opportunities are there here for exerciſing all the faculties of the human underſtanding!

* Mr Pitot, one of the members of the Royal Academy of Sciences, has given us an excellent work on that ſubject, which far exceeds any hitherto publiſhed. The book mentioned by our author, is entitled, The Theory of working Ships applied to Practice, containing the Principles and Rules for Sailing with the greateſt Advantage poſſible.

The laſt object of the marine ſeems only to comprehend what is acceſſary; and yet this, by little and little, comes to be conſidered as the principal part. The acceſſary conſiſts in certain forms and methods, which are ſettled in every port, in order to bring all expences to a juſt account, fixing the eſtimate, muſter-rolls, and other things of a like nature, and, in ſhort, what is called keeping the ſhip's books. It is true, that, generally ſpeaking, theſe things are neceſſary and uſeful, eſpecially in providing againſt frauds and abuſes; and yet it may be that even theſe frauds and abuſes had better be borne with, than the tedious and troubleſome parade of formalities invented to get rid of them.

To theſe three claſſes anſwer three ſorts of officers, who keep themſelves each to his province, and never pretend to carry their views farther. This is all that is expected at this time of day: ſo that every profeſſion is bounded, and any one of them is thought ſufficient for the exerciſe of one man's capacity.

This is, in groſs, what concerns the royal marine. As to the marine in the hands of private perſons, it is diſtributed through, and flouriſhes in, all the maritime provinces of the kingdom, where it is more or leſs diſtinguiſhed, firſt, according to the degree of fortune, ability, and induſtry of thoſe concerned in it; ſecondly, in proportion to the quantity of gold or ſilver that circulates; thirdly, according to the critical circumſtances, which increaſe and diminiſh, quicken or retard, this circulation. Hence it is, that the ſame places are not always equally powerful, or poſſeſſed of an equal ſhare of trade. Repoſe and inaction frequently ſucceed the greateſt hurry; ſometimes, alſo, that luxury, which follows riches at the heels, as they again are produced by trade; that luxury creates ſuch a diſſipation of wealth, that, before it is well ſeen, it vaniſhes away.

Upon this ſubject I will juſt mention one of thoſe happy obſervations that every body makes, and no body minds. Moſt of our traders burn with vehement deſire of growing rich: to do this, they ſpare neither pains nor labour, but run all hazards, and endure all toil, to attain this end; but when they are once become exceſſively rich, by all their aſſiduity and fatigues, they think of nothing but procuring pompous titles, and noble alliances, of which they find juſt cauſe to repent, every vein of their hearts: they are deſpiſed and ſlighted, while they fooliſhly conſume what with ſuch infinite labour they acquired.

There cannot be then any thing more uſeful for exciting and recompenſing judicious and able traders, than to teach them that ſenſible maxim of the author of Oeconomies Royal and Politic, viz. To baniſh intirely luxury and ſuperfluity, whence their ruin is drawn on, and thereby a wide gap opened in ſociety.

Commerce by ſea is carried on in three different ways: the leaſt conſiderable is that from one port or creek to another, and which is called coaſting: it ſerves principally for maintaining a conſtant correſpondence between all the maritime provinces of the kingdom, by ſupplying from one what is wanting in another. This commerce is ſo much the more advantageous in France, becauſe it incourages induſtry, and may be carried on with equal eaſe and ſafety in almoſt all ſeaſons of the year; whereas, in the northern countries in England, and even in Holland, they are blocked up the beſt part of the winter by the ice, which hems in their veſſels, and expoſes them to greater inconveniencies, by unexpected ſhocks when at ſea: France is, beſides, much leſs expoſed to ſudden inundations of the ſea, and there happen fewer ſhipwrecks on its coaſts than on thoſe of other countries, though even its coaſts are not every where free from danger.

The ſecond kind of maritime commerce is, that which is carried on throughout Europe, and comprehends thoſe real and effectual ſuccours which one country lends another, and by which all its ſeveral kingdoms become reciprocally uſeful.

Theſe ſuccours conſiſt either in the products of their ſoil, in the works of manufacturers, or in curioſities; and it is eaſy

to diſcern, that the better any kingdom is ſtocked with theſe, the more ſtrangers will reſort thereto, and the more trade will flouriſh. The two branches of which it is compoſed in all countries are, as I have ſaid, the product of a fruitful ſoil, and the labours of an induſtrious people.

France, in her hemp and flax from Bretagne; in the ſalts of Broüage, of Marennes, and of Croiſie; in the red wines of Bourdeaux; in the white wines of Anjou; in the brandies of Nantes, of Cognac, and the Iſle of Rhé; in the papers of Auvergne and Angoulême; in the parchments of Normandy, and the gold and ſilver brocades fabricated at Lyons; in all ſorts of grain, wheat, barley, oats, rye, has ſufficient reſources for commerce, which never can fail her. I muſt confeſs, that ſince the revocation of the edict of Nantes, over which we ought to draw a veil, as the moſt unlucky event in the reign of Lewis XIV. I muſt confeſs, I ſay, that many of our manufacturers are naturalized in foreign countries; but there are ſtill enough left in the kingdom, if they were well managed, both to employ its inhabitants, and to inrich them. All that we ought to fear is remiſſneſs, bad working, and, if I may dare to ſpeak out, a ſpirit of fraud and deceit; for we ought not to flatter ourſelves, that through the wiſe rules, and from the authority of many royal ordinances, which direct the obſervations of thoſe rules, our manufactures are no longer ſubject to theſe three ſorts of revolutions.

From the time that Edward the Third drew over a vaſt number of artizans, who eſcaped from the exceſſive cruelty committed by the Spaniards in Ghent, Louvaine, and other cities of Brabant, and made uſe of them for eſtabliſhing in England woollen manufactures, theſe manufacturers have never degenerated, have never loſt their credit or reputation *; they are ſtill on the ſame foot, and furniſh fine cloths of all colours, with which the Engliſh carry on a large trade, as well in Germany, by means of the ſtaple they have eſtabliſhed at Dort, as in the Levant, by the way of Smyrna. Heretofore, neither they nor the Dutch could approach the coaſts of the Grand Seignior's dominions, but under the banner of France [ſee the article LEVANT TRADE], but at this day they trade there in their own name, and in their own right; and one may very ſafely ſay, that, in proportion as their trade has increaſed, our's has ſuffered by many loſſes, bankruptcies, and other cauſes of declenſion, that many very much queſtion whether it will ever be able to recover its ancient luſtre.

The voyages of which I have been hitherto ſpeaking, even ſuch as carry us to the very extremities of Europe, merit only a curſory attention: the true commerce by ſea is that which embraces the other three parts of the globe, that which requires the whole force and ſkill of the nautic art. As the dangers therein are greater, and the riſks run more than ordinary, ſo its profits are alſo very conſiderable; and it is thence that we derive ſo many ſhining fortunes, acquired by lawful means, and which ought never to be confounded with thoſe haſtily raiſed and odious eſtates drawn out of the miſeries of the people, and tinctured, if I may ſo ſay, with their blood.

* We wiſh what Monſieur Deſlandes ſays upon this occaſion was true; but ſome recent inſtances prove the contrary, to the great ſcandal, as well as detriment, of the Engliſh woollen manufacture: but it is to be hoped that the legiſlature will take due notice of a practice ſo pernicious in its conſequences. See the articles ARTIFICERS, MANUFACTURES, MECHANICS, and ROYAL SOCIETY of LONDON.

Almoſt all the nations of Europe carry on, at this day, ſome commerce either with Aſia, Africa, or America; but we are not to conceive from thence, that this renders them all equal. Though the Portugueze are very juſtly conſidered as the reſtorers of the marine, and of navigation, as having heretofore great territories in Aſia, inſomuch, that ſeveral Arab kings were in their pay, and many pagan princes thought themſelves honoured by the commands of theſe new maſters, their authority, however, is now but the ſhadow, and their power but the ſkeleton, of what it was. [See the article PORTUGUEZE EAST-INDIA TRADE.] They ſupport themſelves on the remains of their old reputation, which time has almoſt worn out; and Goa itſelf is no longer known but for its terrible inquiſition, that horrible tribunal *, where no forms of juſtice are obſerved, and where natural equity never finds a place in their decrees. The Hollanders, at preſent, are the great maſters of the commerce in the Eaſt-Indies, which they manage with infinite addreſs, mingling com-

* The hiſtory of this inquiſition was written by a phyſician, who had proved not its ſalutary, but its unjuſt rigours. Happy France, to have looked always with horror on a tribunal which has ſo much dicredited, and rendered ſo odious the Chriſtian name! More happy ſtill, if the prieſts do not, ſome how or other, find means to introduce it under another name!

The phyſician mentioned above, was one Mr Dellon, and a very good book his is; but the beſt that I have ever ſeen on the ſubject, and that which deſerves to be read by every curious perſon, is the Memoires Hiſtoriques pour ſervir a l'Hiſtoire des Inquiſition. A Collogne 1716, 2 vols. 12mo.

plaiſance with a ſpirit of dominion, and having equally recourſe to artifice and force. An ancient writer wiſhed, that arms were always ſubject to the gown; at Batavia, and in the reſt of the Dutch colonies, they are both ſubject to trade.

All the world knows that the beſt part of America belongs to the Spaniards: I muſt confeſs I am a little in the dark as to their title; nor can I poſitively ſay, whether the ill uſage they have given the natives, and the many thouſands of their throats they have cut, has created them a good one: but this is certain, that their power is too extenſive in itſelf, too ruinous, by the conduct of their biſhops and governors, who purchaſe all their dignities and employments, and too much hurt by that fraudulent ſpirit of private gain, which poſſeſſes all who reſide there, to ſubſiſt long. Beſides this, their government grows daily worſe and worſe, there being little union between the principal who manage there, and a kind of inſenſible uſurpation growing up, which the Spaniards themſelves do not perceive, or, which is worſe, affect not to perceive.

The principal fault in the government of theſe vaſt kingdoms appertaining to the Spaniſh monarchy is, that their orders never arrive in time, and, when they do arrive, it is next to an impoſſibility to get them executed; two things which uſually cauſe the miſcarriages of all great affairs.

Within about half a century paſt, the Engliſh have found the true method of managing affairs in America, and without which they will hardly ever ſucceed: all their ſteps in that country are directed with the utmoſt prudence; they ſearch for, and embrace, every new branch of commerce that induſtry can diſcover, or that chance preſents; they protect and perfect all their old colonies, and, at the ſame time, do not neglect planting new; in ſhort, they act as if fortune had reſerved for them, ſome time or other, the intire dominion of that mighty country *.

* The Engliſh reader ſhould be here put in mind, not to be led away with the praiſes beſtowed upon their nation by this writer, and of their wiſdom in conducting their colonies. Theſe are not to be conſidered as genuine and candid repreſentations, flowing from the real ſentiments of the author, but as artificial colourings, neceſſary to raiſe the jealouſy of thoſe to whom he writes, and making his countrymen thereby the more keen for the deſtruction of this kingdom.

As to the advantages, continues this writer, which regard the marine, and which France, in her ſituation, may find in her own proper boſom, they may be reduced to four; of which the firſt, without contradiction, is her ſituation, the moſt commodious, and the moſt advantageous that can be in the world, as well for attacking as defending, and for diſturbing the commerce of others, as for cultivating her own; ſending to all places, and receiving trading veſſels from all parts of the earth: hence it was ſaid to the late Czar, Peter I, whoſe head was always full of great projects, and to the king of Sweden, Charles XII, ſo unfortunately aſſaſſinated before Frederickſhal, That, if any kingdom could aſpire to be the miſtreſs of all her neighbours, it muſt be FRANCE. In effect, ſhe is placed in the middle of Europe: nothing can impede, nothing can prove an obſtacle to her; ſhe commands, on the one ſide, over the ocean, and it ſeems, by the extent of her coaſts, by their turnings and windings, that the ſeas of Spain, Germany, and Flanders, ſtruggle to pay her HOMAGE; on the other, ſhe is bounded by the Mediterranean, looking full upon Barbary, having on her right-hand Spain, at her left Nice, Genoa, the dominions of the Grand Duke, and all the reſt of Italy. What a ſituation is this, if we knew but how to make uſe of it, and if, opening our eyes to our intereſt, we no longer languiſh in ſoft effeminate idleneſs!

The Engliſh and the Dutch are forced to ſtrike out far for whatever is neceſſary to them, and are conſtrained to put out to ſea, in order to reconnoitre and attack their enemies; whereas FRANCE is able to attack them, as it were, hand to hand, to combat with advantage, and to retire with eaſe; which are advantages of no ſmall conſequence at ſea: but, what is ſtill more, foreign veſſels that return from long voyages, worn and beaten by the wind, and by the tempeſts, foul in themſelves, and weakly manned, paſs, as it were, under our eyes, in the view and at the mercy of FRANCE, as cardinal d'Oſſart obſerves, and, in ſpite of themſelves, muſt approach our coaſt. One may eaſily judge what a facility this gives of carrying them off, or, at leaſt, diſturbing their navigation, which muſt turn, ſays the ſame cardinal, to the profit and commodity, to the ſafety, grandeur, and reputation, of the crown of FRANCE.

As to the reſt, all that I have been ſaying here is not to cry up, or to make an elogium on war, in order to turn mens minds thereto, who have, perhaps, but too great an inclination for it already. I know, on the contrary, all the merit of a gentle and moderate government, of a government where juſtice and good faith preſide, where all endeavours are uſed to drive out the ſeeds of hatred and jealouſy, and where no pains are ſpared in the cultivation of

tranquillity

tranquillity and peace; but to avoid being deceived, ſays cardinal Richlieu, we muſt ſleep like the lion, WITHOUT SHUTTING OUR EYES, which ought to be continually open, in order to foreſee the ſmalleſt inconveniencies that may happen. For hence it is that we often ſee in ſtates, that ſuch evils as were imperceptible in their origin, and which were leaſt thought of, are the moſt dangerous, and thoſe which prove of the greateſt conſequences in the end.

In effect, a wiſe prince, and one who has regard to his intereſt, ought to watch attentively over every thing that may contribute to the ſervice, or to the prejudice, of his crown. He ought, with the ſame vigilance, to weigh duly the preſent ſituation of his own kingdom, and of the other kingdoms that ſurround him. While the ballance continues even, an eaſy and pleaſant union will certainly reign; but, as ſoon as this fails, quarrels, animoſities, and diſſentions, will ariſe, and will encreaſe: FRANCE is too clear-ſighted ever to be ignorant of the EXTENT OF HER POWER, and nothing can outrage her more ſenſibly, than to ſuſpect her being ignorant of it. Always ready to DECLARE WAR, ſhe ought, however, never to attempt it unjuſtly; ever in a condition to defend herſelf, ſhe ſhould never be in a diſpoſition to bear injuries: Veniendum tunc ad arma, ſaid Theodoric, king of Italy, cum locum apud adverſarias juſtitia non poteſt reperire; i. e. We are then to have recourſe to arms, when juſtice no longer finds place amongſt our adverſaries.

It is reported, that Henry III. imagined one night that he was in the midſt of a troop of lions, tygers, and leopards, ready to devour him; and the next morning, quite out of his wits, and terrified about the conſequences of a dream, which he ought to have deſpiſed, flew to the caſtle of Madrid, where he kept a great many foreign wild beaſts, and ordered them to be all killed in his preſence. This tragedy ſettled his mind, as idle and ridiculous as it was. Any one might have whiſpered in his ear, The animals that threatened you, were not thoſe in your menagerie, but, on the contrary, your neighbours, always diſpoſed to hurt you, and above all, your MARITIME neighbours.

The ſecond advantage in which we ought to think ourſelves happy is the ſecurity of our coaſts, which in a manner defend themſelves, and which have hitherto defeated all the deſcents that ever were attempted on them. Witneſs thoſe that admiral Tromp would have made in 1674, not only at the mouths of the Loire and of the Groyne, but along the coaſts of Bretagne, Poitou, Saintongue, and Guienne. He found that all was ſo well guarded, and that every where ſo good orders were given, that he durſt attempt nothing conſiderable. Witneſs again the deſcent attempted by the lord Berkley in 1694, at Camaret, in which the Engliſh loſt upwards of 1200 men, with general Talmaſh, who commanded the troops that were debarked. The French, however, oppoſed him with no more than two independent companies of marines and the militia appointed for the defence of the coaſt. Piqued at this unfortunate expedition, lord Berkley attempted ſeveral other deſcents on Normandy and Flanders, none of which, however, were attended with any better ſucceſs.

To this natural ſecurity of our coaſts, which enables us to ſave a mighty expence, may be added the fertility of our MARITIME PROVINCES, as well as thoſe that are waſhed by the ocean; a fertility which renders them extremely agreeable, opulent, and populous, by drawing to them a vaſt concourſe of ſtrangers. All the other kingdoms of Europe, on the contrary, complain of the unlucky ſituation of their coaſts. Here they are abſolutely barren and full of mountains of ſand; there grows nothing that is uſeful, nothing that comes to maturity farther off; both country and people ſeem alike neglected by nature.

Theſe kingdoms, however, have an advantage that is peculiar to them, and which I could almoſt envy them; it is this, that the ſea waſhes their principal cities where the court makes their reſidence, and where we ſee united all the politeneſs attending a royal preſence, with all the force that depends on a maritime ſtrength. We admire there the art and intelligence that is neceſſary to make the ſeveral parts of ſo vaſt a machine move in regular order, and in ſuch a manner as to aſſiſt each other; they take by the hand, if I may be allowed ſo to ſay, riches and conveniencies from all quarters; every body intereſts himſelf in the proſperity of trade *, and none are ſo blind as not to ſee, none ſo obſtinate not to acknowlege, that upon this depends the happineſs of the ſtate.

* It is to be wiſhed, that what this French author ſays, was really the caſe in Great-Britain.

This is what happens every day in Portugal, Muſcovy, Denmark, Sweden, Great-Britain, and Holland, of which all the capital cities ſtand upon, or very near the ſea; Paris, on the contrary, knows nothing of it, but by maimed relations, and, if I may ſo ſpeak, ſtories at ſecond hand. We behold there a voluntary indolence throughout, which concerns itſelf about nothing that does not conduce either to amuſement or to pleaſure; and I am very poſitive, that as to half the things that are conſumed, and half the rarities that are admired there, they know not by what country, or by whoſe induſtry they are ſo obliged.

This ignorance, which is almoſt general, of what is produced in our own country, and what comes from abroad of the neceſſaries of life, or that ſerve to nouriſh lazineſs and increaſe luxury, affords room for that ſlight regard, or rather abſolute contempt, that is had for navigation and commerce *. But this unjuſt contempt would be quickly extinguiſhed, if inſtead of a ſedentary education, always within the ſhadow of the houſe in which they were born, we took care to make ſuch young people travel, as ſeem deſtined, either by their birth or fortune, to the firſt places in the government. If we explain to them exactly all that relates to our colonies, all that is indiſpenſably neceſſary to ſupply the wants of this kingdom, which daily grows more and more: if we inſtructed them in the principal manufactures that employ and enrich our ſeveral provinces, and pointed out to them ſuch as are beginning to decay, and ſuch as, though they are abſolutely decayed, might yet be reſtored, and brought to be of infinite benefit to the kingdom, by preventing going out of great ſums into foreign parts: if, in fine, they were made perfectly to comprehend the three branches that conſtitutue the riches of the kingdom, viz. eſtates in land, trade, and manufactures: if we ſhewed them the connection of theſe three branches, and how they ought mutually to prop and ſupport each other, how the real effects of any country augment in value in proportion as commerce and manufactures are themſelves augmented, and thereby the circulation of gold and ſilver, which is become the ſtandard, the common meaſure of the confidence of the public, and the authority of the ſovereign: if all this ſhould be laid down in a clear and familiar method, and in juſt and evident calculations, in order to avoid loading the memory too much; would not ſuch an education be infinitely more valuable, than thoſe of which we are at preſent ſo fond? Would there not ariſe from thence both greater reſpect for, and greater profit to, the common-weal †?

* This is apparently calculated to animate the French nation to the ſtudious regard of its trade and navigation.

† We are willing to flatter ourſelves that the work wherein we are engaged, will not a little contribute to the cultivation of ſuch kind of knowledge among the nobility, gentry, and merchants of this kingdom. See our article MERCANTILE COLLEGE.

The third advantage which France enjoys is, that the moſt conſiderable armaments may be there made with the greateſt readineſs and facility. She not only draws out of her own ſtores almoſt all the materials requiſite to a maritime force, but ſhe nouriſhes alſo, within the compaſs of her dominions, an infinite number of able artificers, capable of employing theſe materials in the beſt manner.

There are likewiſe amongſt theſe workmen, ſome ingenious diſcoveries, very little known abroad, and which having been made at different times, have paſſed as a kind of legacies from parents to their children. Theſe diſcoveries do not conſiſt in perplexed reaſonings, but in EXPERIMENTS and FACTS, which ſuffice for the current ſervice of the MARINE, where, generally ſpeaking, it is of far greater conſequence to execute quickly, than to think how a thing may be done nicely, and where whatever is performed by mens labour, is preferable to what is done by machines. The concluſion of all this matter is, that we cannot be too careful in preſerving this race of workmen, [ſee our articles ARTIFICERS, MANUFACTURERS, MECHANICS], whoſe induſtry is perpetual, and increaſes as it continues; a race of mean people it is true, but who ſurpaſs, in my humble opinion, the lazy nobility, who make the purſuit of pleaſure their ſole occupation; a nobility, as M. de Sully ſays, among whom we find more mongrel gentlemen, who are fit to make buffoons, gameſters, or porters, than to apply themſelves in a generous way, in carrying arms for the ſervice of their king, or the defence of their country.

What I have been ſaying recals to my mind an excellent remark inſerted by M. Colbert, with his own hand, in the inſtruction which he cauſed to be drawn up in 1681, for the dyeing of wool of all colours, and for improving drugs, and other materials employed therein: 'One cannot look, ſays 'he, on the fertility of France, or ſee ſo great a number of 'lazy fellows, who ſit uſeleſs, and with their arms folded, 'while they might be ſo advantageouſly employed, either in 'the cultivation of the earth, or in many other ways, which 'nature has pointed out for their benefit, in order to live at 'the expence of the blood and ſubſtance of others, without 'blaming the form of government, and negligence of our 'anceſtors, and their attachment to uſeleſs employments; 'which ſerved only to fill their heads with wind and ſmoke, 'and thereby very often produce ſuch ſtorms and tempeſts, 'as went very near deſtroying the ſtate by the fury of civil 'wars.' Before the time of M. Colbert, we were obliged to bring from Holland almoſt every kind of ſea-ſtores, down to the iron-work for our anchors, match, cordage, cables

cables ready made, ſaltpetre, and even cannon powder, as if there had not been in this kingdom forges, hemp, iron, ſaltpetre, ſulphur, or men capable of going through hard labour.

M. Colbert was determined to baniſh foreign manufactures, and to eſtabliſh things of this ſort at home, upon ſo much better footing, as that they ſhould quickly excel thoſe which we formerly employed. He farther reſolved, that we ſhould extract from the natural riches of the kingdom, whatever it was poſſible it ſhould produce. He created in France, ARTS, TASTE, GENIUS, of which, 'till then, France was utterly ignorant, and which ſhe has ſince carried to ſo great a perfection; and with regard to particular manufactories, he brought from countries where ſuch manufactures were in the higheſt perfection, perſons who thoroughly underſtood them, ſettled them in this kingdom, and whoſe poſterity, enriched by his favours, do, even at this day, honour to his choice. How much does ſuch an example deſerve to be followed! and how many illuſtrious ſtrangers would an obliging reception bring amongſt us!

I muſt confeſs, that there are ſome ſorts of commodities and merchandize neceſſary to the marine, which only the northern countries produce. But it will be always eaſy for us to provide ourſelves with theſe, by adhering conſtantly to the two following precautions; the firſt, maintaining a cloſe alliance with one of the three great powers in the Baltic: the ſecond, carrying on all this trade on our own bottoms, without ever receiving them at the ſecond or third hand, without paying commiſſions, which are always heavy and ruinous.

I ſhall here take notice of a very ſenſible regulation that is obſerved in England, that ought to be regarded as the baſis of all her commerce: the Engliſh themſelves are alone permitted to export the commodities of their own country, or to import thoſe of foreign nations. This practice puts that great iſland in continual motion, and is the reaſon that money never circulates there at a price conſiderably above its real value. It likewiſe hinders a ſpirit of indolence from communicating itſelf, and ſpreading from one to another; that dangerous ſpirit, more dejecting, through a too quick ſenſe of evils, than thoughtful how to repair them, and which proves thereby, in the end, the ruin of the ſtate. The connection there is between all the different parts of the ſociety is ſo cloſe, that it is ſimply impoſſible that a ſingle perſon ſhould be hurt, without the reſt feeling the blow.

Though the times were then very perilous and difficult, yet we were not altogether ignorant of the value of ſuch a cuſtom, even in the days of Charles IX. In effect, that prince, ſupported by an ordinance of Henry II, his father, prohibited, about the middle of the year 1567, all his ſubjects to freight any foreign ſhips, and all foreigners exporting French commodities in any other than French bottoms, under pain of confiſcation: ſalt only was excepted on account of the prodigious ſale, which is much ſunk ſince the Hollanders, and other people of the North, have thought fit to purchaſe it in Portugal, and to be content with the ſort that country yields. Will it be believed, that the cutting off ſo antient and ſo valuable a branch of commerce, which cardinal Richlieu eſteemed more than the Spaniſh Indies, is owing to nothing but certain ILL-CALCULATED DUTIES, to which we have endeavoured to ſubject it? What happineſs! could this kingdom be brought once to underſtand, that every operation in FAVOUR of the REVENUE which hurts commerce is miſchievous in itſelf, and that, with regard to commodities that are indiſpenſably neceſſary to life, the conſumption is always proportionable to the duties impoſed upon them.

The only remark as can be made, in ſupport of this, regards the wants we begin to feel in FRANCE, of all ſorts of wood fit to be employed in building. Neither ought this obſervation to be confined only to that ſort of wood, but to all others, that ſerve either for carpenters, makers of carriages, or even which is deſtined for the fire: theſe laſt are particularly grown, almoſt every where, exceſſively ſcarce, and prodigiouſly dear: forges, glaſs-houſes, the luxury of great cities, the too great curioſity exerciſed about dreſſing good cheer, have conſumed prodigious quantities, and we have taken no care to replace them: we feel every where the want of wood, and ſtill we let it every where decay.

Theſe are certainly conſiderations important enough to ſtir up the zeal of ſuch as are intruſted with the management of our WATERS and FORESTS, conſiderations which ought to induce them to ſay, with one of the ableſt men of the Roman empire, That we ought never to felicitate ourſelves on having done any thing, while there is yet any thing that remains to be done; and how many remain to be done which we know not! How many things are they ignorant of, who are intruſted with theſe offices, and of which they will always remain ignorant, while they retain ſo great a concern for their own baſe intereſt *!

* That the royal ſhipping of the kingdom of Great-Britain has been ſubject to much greater expences than has been neceſſary, is a matter which, in the opinion of ſome of the wiſeſt, greateſt, and honeſteſt men in the kingdom, requires ſevereſt ſcrutiny into. This was the ſentiment of a late able miniſter, who, I am perſuaded, would have probed this matter to the bottom, had he lived.

No body can poſſibly doubt that wood, properly ſtiled foreſt-wood, was heretofore much more common than it is at preſent: moſt towns, moſt boroughs, a great part of the abbies, that are at ſuch a diſtance from them at this day, were not only near, but even in the midſt of, theſe woods. I have travelled acroſs a long chain of mountains, which extend from weſt to eaſt, and, in a manner, thwart the whole country of Bretagne: the ancient tradition of the place reports, that all theſe mountains, which in a manner touch one another, were formerly a continued foreſt; and, in effect, having cauſed an infinite number of places to be bored, to the depth of 35 or 40 feet, and have there found, amongſt prodigious ſpoils of the vegetable and animal kingdoms, trees in a manner quite intire, and as found as if they had been but that moment cut down. This could have proceeded from nothing elſe but the quality of the ſoil in which they were planted, a ſoil dry and ſtony, mingled with a red ſand, and particles of iron, eaſily taken up by a knife touched with a loadſtone.

But the greateſt miſchief that has been done to the marine is, that of not having preſerved the foreſts ſituated near the ſea-coaſt, or on the banks of navigable rivers. Theſe foreſts, condemned one after another, have been cut down out of caprice, or under ſeveral frivolous pretences. How much coſt and expence, what an infinite labour, might have been ſpared, if they had ſtill ſubſiſted! It ſeems they made, here tofore, ſome ſuch reflections, and that the governors of MARITIME PROVINCES were particularly charged with the care of WOODS, and with the inſpection of the ſea and rivers; whence it came to paſs, that thoſe governors, officers removeable at the pleaſure of our princes, while as yet ſons never ſucceeded their fathers in their offices, on a ſuppoſition of their inheriting their virtues, took the title of foreſters. This title was principally in vogue under the ſecond race of our kings; and we are aſſured, that Charlemagne was the firſt that beſtowed that title, and that he conferred on a Saxon lord, who ſettled himſelf in Flanders, the coaſts of which were then altogether naked, and expoſed to the incurſions of the Danes.

It is very probable that theſe great foreſters performed the functions of a ſort of officers, who began to be known, in the reign of the emperor Conſtantine, under the titles of comites litoris Saxonici per Britanniam, of comites Cimbrici & Batavici litoris, of duces tractus Aremoricani, &c. Theſe officers were very powerful, and acknowleged none for their ſuperiors but the præfectus prætorio of Gauls; they were equally charged to look to the ſafety of the coaſts, and to the preſervation of the foreſts, caſtles, and other edifices which ſtood in or near the coaſts.

The celebrated John de Tillet, firſt ſecretary to the parliament of Paris, obſerves, that the word Foreſt is derived from an old Low-Dutch term, which ſignifies rivers, as well as woods. He cites, in ſupport of this, ſeveral authentic charters, which are ſtill preſerved in the archives of the palace: amongſt the reſt, one by which Childebert, founding the abbey of St Germain des Prez, yields to it all his rights on the river Seine, as he then held them, adding, as the ſame Tillet obſerves, and as they were his foreſts. The true ſignification of which term is certainly to be learned from hence, that anciently all the banks and ſhores, indeed all the places adjacent to the ſea, and to rivers, were filled with trees; and as they were firſt inhabited, grubbed up, and cultivated, they beſtowed the name of foreſt equally on all places where wood and water were joined. The neighbourhood retained its denomination after it became more peopled; but by degrees, as inhabitants began to increaſe, and barbariſm gave way to ſofter manners, to more poliſhed converſation, and to pleaſures, towns were formed, arts were introduced, and the conveniencies of life were refined and improved every day. It was neceſſary to ſacrifice to theſe uſes a great quantity of wood, in order to give people, if we may ſo ſpeak, room to breathe: hence it came to paſs, that, preſerving a few trees for ornament, they cut down all the reſt, without reflecting, that a very tranſitory ſatisfaction would induce frequent and grievous fits of repentance: in effect, the common complaint throughout almoſt every part of the kingdom is, that there is no wood left, or, at leaſt, that the people are ruined by the expence of its carriage.

The late marquis Seignelai, whoſe views extended to futurity, had formed a deſign of cauſing all the ſea-ſhore to be planted with timber fit for SHIP-BUILDING. I don't know what obſtacle hindered that deſign, which was undoubtedly worthy the moſt clear-ſighted miniſtry: it may be that, after mature deliberation, M. de Seignelai began to diſtruſt the French genius, always ready to ſeize, with ardour, new ſchemes, and to abandon them afterwards out of pure diſtaſte. He was afraid that a project which required an age, or an age and a half, to bring it to perfection, would appear a chimerical project: for the bulk of our nation, through a rapidity and intemperance of taſte, would have us purpoſe and execute at the ſame time, and would have invention and perfection appear almoſt together: works that require great application, ſays cardinal Richlieu, are little agreeable to our humour or natural diſpoſition.

The

The laſt advantage reſpects the order of government, and, in one word, the whole ſyſtem of our marine. The different uſages, regulations, and employments, and all ſorts of labours, are diſpoſed in ſuch a manner, that they enter into, and corroborate each other, ſo as to afford mutual aſſiſtance. We have nothing to fear from what gave ſo much uneaſineſs to the famous duke de Sully, when he became ſuperintendant of the finances: as he found himſelf ſtopped at every turn by a heap of uſeleſs formalities, diſputes, and very ill-founded remonſtrances, he could not help ſaying in a briſk tone, which exceedingly became him, 'Great kingdoms are not governed 'by ſlips of paper, ſkins of parchment, ſtrokes of a pen-knife, 'ſcratches of a pen, vain words, or, in ſhort, by imagina-'tions, fancies, ſhrugs, and grimaces.' The aim of this miniſtry was to quicken, and to render more ſimple the operations of the treaſury; and he was juſtly afraid, that a long train of formalities, and round-about methods, ſhould render the moſt eſſential and deciſive parts of all affairs leſs attended to.

In regard to the marine, it is divided into two corps, who are ſo perfectly well acquainted with their reſpective privileges and prerogatives, as to obſerve one another with ſome degree of jealouſy, and to put each other reciprocally in mind of their duty; and, while one of theſe corps devotes itſelf to the fatigues of war, and diſtinguiſhes itſelf by its firmneſs and bravery, on the moſt ſhining and perilous occaſions, the other, more tranquil in appearance, ſaves it a thouſand cares, and a thouſand inquietudes, which would conſume that body to no purpoſe. Courage begins to grow cold, when deprived of its liberty of acting in its full extent, or when depreſſed by many important cares; it wants only favourable occaſions to appear and diſtinguiſh itſelf: at leaſt, this is what the great M. Turenne believed, eſpecially in the latter part of his life, and which he generouſly expreſſed, with a frankneſs and confidence worthy of ſo great a man. I have, ſaid he, only one thing to do, which is to conquer. Choiſi has put all the frontier places into a ſtate of defence, Du Metz takes care of the artillery, and Jacquier makes it his buſineſs to prevent my ever ſuffering for want of proviſions.

And ſince I have been ſpeaking of M. Turenne, give me leave to report a fine ſaying of his in 1665, to Lewis XIV, who aſked him, in confidence, 'What would be proper to 'be done, in caſe Philip IV. of Spain, who was very ill, 'ſhould happen to die?' M. de Turenne anſwered, upon the ſpot, 'In that caſe, Sire, the augmentation of your ſhips 'of war and gallies, would be of as great utility as the in-'creaſe of your land troops, as well in reſpect to what the 'king of Spain has in the Indies, in Italy, and in Sicily, as 'with regard to Spain itſelf, the entrance of which lies fair 'and open, by the way of Portugal.' An anſwer like this appears to me deciſive; and if we had reaſoned in this manner when the crown of Spain devolved on a branch of the houſe of Bourbon, all had ended well, and we had brought ENGLAND and HOLLAND, joined together, to the laſt EXTREMITY, by weakening their TRADE. I will add further, that, though in virtue of his rank as marſhal-general of the camps and armies of the king, M. de Turenne ought to have given his advice only in that ſort of war which was properly his province, yet, ſuch was the extent of his genius, and ſo quick his apprehenſion of truth, as enabled him to diſcern, that there were certain occaſions in which a MARITIME POWER ALONE ought to be employed, and where one victory at SEA is of equal value to a long ſeries of victories obtained by land: the very perfection of policy is to know how to enter into the differences, which are ſure to eſcape ſuperficial minds.

I return to the eſtabliſhed order in the MARINE of FRANCE: and I muſt confeſs, that what diſtinguiſhes it in a particular manner is, that MILITARY CORPS of which it is compoſed, and which has an air of dignity, which diffuſes itſelf over all its parts. Conſidered in this light, there is not one in EUROPE which ought not to yield to it with reverence. The character of the maritime power of the DUTCH is œconomy, and that of the maritime force of the ENGLISH is activity: the firſt, according to the republican genius, place all honour in ſaving, and direct all their views this way; whatever ſhould contribute to the ſtrength or ſecurity of their ſhips, they pare off to ſave charges, as far as poſſible, and by repeated endeavours this way, they expoſe their veſſels to frequent ſhipwrecks. I lay it down as a thing pretty certain, that, for want of thoſe neceſſary precaution, the DUTCH loſe a third of the ſhips they equip every year. As for the ENGLISH, who are more judiciouſly covetous, they more than recover, by quickneſs and diligence, what they lay out in extraordinary expences.

One of their ſhips makes as many trips in four months, as a Dutchman can in five, or even in ſix; and there is certainly no kind of profit more real, or more certain, than that which ariſes from the ſhortneſs of campaigns, or of voyages at ſea. The French hold a middle character, as it were, between theſe two; without having the œconomy of the Dutch, or the activity of the Engliſh, they ſurpaſs them, without difficulty, in the arrangement and exactneſs of their ſervice; they have gained by this I know not what title, the SUPERIORITY AND EMPIRE.

But there happens from hence ſometimes two inconveniencies. The firſt is, that we think ourſelves checked, as the marquis de Montlue ſays, if we don't march with all the attendance of a prince, and yet this ſometimes leads us into great inconveniencies. It is better to move like a private gentleman, and not to play the prince, than, by ſtraining things to a great height, to run the hazard of bringing upon one ſelf ſome miſchief. The ſecond, that, through too great attention to the procuring every thing neceſſary, we ſometimes go too far, and provide alſo for ſuperfluities; ſo that by an exceſs of prudence, we fall ſhort in expedition. However, it is frequently neceſſary to diſpatch, for ſucceſs depends on a certain degree of boldneſs, and not ſeldom on a ſingle ſtroke. In great affairs, ſays cardinal d'Oſſet, in a letter to M. Villeroy, in order to avoid a great evil, or to gain a great good, one muſt venture, and put ſomething to the riſk, and reſolve at once, and, without delay, to get out of a bad ſituation in the briſkeſt and quickeſt manner poſſible.

It is eaſy to judge, from what I have been ſaying, that French veſſels ought, in general, to be better armed, and better equipped, than thoſe of all other nations. In them there is nothing wanting, as to what is requiſite for the campaign, or for the preſervation of the ſeamen and ſoldiers embarked. For in our marine, we know perfectly well the value of mens lives, and eſteem it the higheſt point of prudence to take all the care that is poſſible for preſerving them.

There is ſtill more than all this; we have in France, as it were, an entire nation, who, exempt from all other charges and impoſitions, apply themſelves entirely to, and think of nothing elſe but, SEA AFFAIRS. Their courſe of life is undoubtedly very thorny and laborious. But as they are bred to it from their infancy, and as they are pleaſed, by a continual variety of objects, they accuſtom themſelves to it by little and little, and paſs from one campaign to another, almoſt without perceiving it: theſe people, with all this, are infinitely brave; of IRON, in point of LABOUR, of STEEL, in point of COURAGE, as Cæſar ſays of the ancient GAULS. They attempt beſides things aſtoniſhing, and, in reſpect to which, nothing but an apprenticeſhip * could have diminiſhed, in their eyes, the peril and the riſque. It is true that our ſeamen have one diſadvantageous quality, which is, that, on the ſlighteſt diſcontent, they withdraw, and go into foreign ſervice: but this fault, however, is not ſingular in them, it is, indeed, the fault of the whole nation; curious after novelties, and full of vain caprice, they often quit the kingdom. Hence it is, that one every-where ſees Frenchmen, and that we find them fighting under every banner, Nullum bellum ſine milite Gallo.

* The claſſes of the marine, is one of the fineſt eſtabliſhments in the kingdom of France, and, at the ſame time, one of the moſt uſeful and advantageous. Mr Armoux and Bonrepos, intendant of the marine, eſtabliſhed them, though, as it but too often happens, the prime miniſter ran away with the credit.

'Theſe claſſes, that our author talks of, are no other than 'the enrolled ſeamen in France, and this was the firſt fixed, 'by an ordinance, dated 22 Sept. 1688: the ſeamen were 'then divided into three claſſes, of which one was obliged 'to ſerve annually on board the king's ſhips, and the other 'two were at liberty to ſerve the merchants. They have 'been ſince diſtributed into five claſſes. In the year 1681, 'there were 60,000 men enrolled.

Behold the principal advantages of which France has a right to boaſt, and which ſhe cannot neglect, but to her ſhame, and to her prejudice. Her ſituation is ſuch, that, I repeat it again, all the nations of Europe cannot help looking upon her with an eye of JEALOUSY. It may be, that I ſhall have an objection ſtarted to me here, of little ſolidity indeed, but which, notwithſtanding, has d zzled and miſled many perſons of merit. 'A maritime power, ſay they with diſ-'dain, however uſeful, however beneficial it may be ſup-'poſed at bottom, draws after it too great an expence, and 'has too ruinous a train at its heels; conſequently it ought 'rather to be abandoned, on account of the immenſe ſums 'it muſt coſt, than preſerved for the ſake of the profits that 'from it enſue.'

To this objection, which they endeavour to render ſo much the ſtronger, by many affected computations, I ſhall offer three things in anſwer, which are not only very weighty, but altogether deciſive; and I hope they will ſtrike the reader in ſo forcible a manner, as to leave him no inclination to demand any farther, or more ample explication.

In the firſt place, it is true, that the marine demands expence, and even expences that are pretty large. But what part of government, what branch of the ſtate does not demand them? Can one ſuſtain a war, can one adjuſt the management of the revenue, can one give a proper air of magnificence to the king's houſhold, can one ſecure the good-will, or entertain correſpondences with foreign nations, without having in one's hands conſiderable ſums of money, and diſpoſing of them in a proper manner, and as neceſſity requires? In great affairs, ſays the cardinal de Retz, one ought never

to

to regard money. A ſovereign is too rich, while diſcovering a noble courage, a greatneſs of ſoul, quick parts, and ſtrong penetration, even in his moſt trival actions, he favours the COMMERCE and MANUFACTURES of his ſubjects. Before him, the cardinal de Richlieu had remarked, 'That 'he ought to be careful in laying up money to ſupply the 'neceſſaries of the ſtate, and religiouſly exact in preſerving 'them, when no occaſions offered for laying them out; but 'that he ought to be equally liberal in employing them 'whenever the good of the public required it, and to do it 'in time, and in proper meaſure; otherwiſe any retardment 'on ſuch occaſions, coſts the ſtate very often extremely dear, 'by making it loſe opportunities that never are to be re-'covered.'

Beſides, if for maintaining the marine, it is requiſite to be continually advancing money, and providing things long beforehand, I dare aver, that the marine will indemnify with uſury, and not be at all ſlow in paying. Is it not that which protects and enlivens trade, both at home and abroad? Is it not that which ſecures all our traders, all our merchants, who are diſperſed through all the different parts of the world; that preſerves them, in the midſt of the Grand Signior's dominions, from pillages and inſults, to which they would be otherwiſe ſubject; that procures them capitulations, and valuable privileges on the coaſt of Barbary, and in the ſeas of the Levant, and enables them to ſail in ſafety, wherever the French flag hath appeared? Is it not that which, in a time of war, keeps off the enemies from our coaſts, which would be otherwiſe ravaged, and preſerves a free paſſage for the navigation between one maritime province to another? In a word, is it not that which ſo amply fills the coffers of our kings, and that which gives their ſubjects ſo favourable an opening for diſcharging their ſuperfluities, by ſending into foreign countries the fruits of their harveſt, or of their induſtry? The abbé de St. Pierre has obſerved, in one of his Political Memoirs, That the ballance of our commerce with foreigners, amounts to, at leaſt, one hundred and fifty millions a year (that is, about 7,000,000l. ſterling) which makes, one month with another, twelve millions and a half. Is it not the maritime power that preſerves this ballance, and by preſerving it, ſuſtains our credit, always on the point of falling, through the jealouſy of our neighbours?

Secondly, If cardinal de Richlieu thoroughly underſtood the thing, and has not carried it too far in his Political Teſtament, we ought to agree, that the principal riches of a ſtate is its reputation, ſo important to a great prince, that it is impoſſible to purpoſe to him any advantage, that can in any degree compenſate the loſs of it. But how is that reputation to be acquired and preſerved, that reputation, I ſay, which Machiavel looked upon to be ſo neceſſary to all ſovereigns, that he called it, The apple of their eyes? How can a prince ever reckon on his fame? Or ſuppoſe it ſhould force ſtrangers, delicate as to point of honour, to acknowlege his ſuperiority, the ſame cardinal de Richlieu has pointed out two methods equally noble and ſure; the firſt is, to entertain in all courts ambaſſadors, whoſe birth, conduct, train, and expence, may do honour to the maſter who employs them; the other, to ſeize, with the utmoſt briſkneſs, whatever has the leaſt tendency to increaſe the domaine of the marine; to cauſe conſiderable ſquadrons to be yearly fitted out, and to let them rendezvous regularly every year at certain places, ſuch as Cadiz, Genoa, before Algiers, at Copenhagen, and in the paſſage of the Sound. It is there, ſo to ſpeak, where all the nations of Europe aſſemble, and where it is proper to ſtrike their eyes, by the appearance of ſtrong ſquadrons. It is there that a prince, who has a good reputation, does more by the bare interpoſition of his name, than others can do, who are leſs eſteemed, with all their menaces and intrigues. I do not ſpeak of ſtill more numerous ſquadrons, that it may be convenient to equip from time to time, and to ſend to America, and into the Eaſt-Indies; it ſuffices me to repeat here what that great miniſter, whom I before cited, has ſaid, that nothing is more indiſpenſable to a ſtate, than its reputation; the diminution of which, however ſlighted it be, may prove a ſtep to create an unlucky diſpoſition towards its abſolute declenſion.

In the third place, if there be any exceſs in the marine, if things relating thereto are ſometimes puſhed too far, it is not that which ought to be accuſed, but the preſent ſyſtem of affairs in this kingdom, in which, to ſay the truth, we ſcarce diſtinguiſh any thing that looks like frugality, œconomy, or diſintereſtedneſs. All things are now executed at a prodigious expence, and all we do is ſwallowed up in pomp and decoration; private intereſt, in moſt mens minds, overballances the love of public good*, and that regard which is due to their country. Happy the hand, who ſhall eſtabliſh things in their natural ſituation! Happy the age, in which there ſhall be ſeen a nobility, accuſtomed from their very infancy to a maſculine and generous virtue, above little intereſts, deſpiſing frivolous occupations, and even life itſelf, when oppoſed to the grandeur of their ſentiment. I would ſhew, ſays the M. de Montlue, to thoſe whom I leave behind me, that I am this day the oldeſt captain in France, that I never ſought repoſe, but endeavoured to acquire honour by doing ſervice to the kings, my maſters, which was the ſole end and aim of my life, flying all thoſe pleaſures and delights, which turn out of the road of virtue and true greatneſs young men, whom God hath endowed with commendable parts, and who are on the point of advancement.

In regard to frugality, it is more neceſſary to ſoldiers, than to any other ſort of men. Is it not then ſhameful, while their life is thick ſtrown with riſks and hazards, to be thinking how they may invent new delights, and pique themſelves on refining luxury and pleaſure? An emperor was, heretofore, treated as looſe and effeminate, becauſe, after his death, a looking-glaſs was found in his tent. What an example this of Roman auſterity! Charles V. being once on the point to take the field, the townſmen of Antwerp and Bruges went to make him a preſent of Flemiſh pictures, of infinite value, in which were repreſented Bacchanalian ſports, marriages, and country feaſts. The emperor, who ſcarce deigned to look upon them, putting on a ſerious air, ſaid, Carry back your preſents, they don't by any means ſuit me, I ſee nothing in them but cramming*.

* Our kings have often endeavoured, though to very little purpoſe, to repreſs, during a war, the expence and ſumptuouſneſs of tables, of which Tacitus ſpeaks well, when he calls them luxurioſos apparatus conviviorum, &c. irritamenta libidinum.

I ought not to forget here, a queſtion that hath been often handled among the Engliſh. They enquire whether the gentry are fitter for maritime ſervice than ſoldiers of fortune, who have nothing to ſubſiſt on, but their merit and their experience? and with them it ſeems to be decided in favour of the latter. It is true, according to cardinal de Richlieu, that all men being equal by nature, muſt ſuffer, with regret, that difference, which protection and riches put between them. It is alſo true, that many, who are obliged to give way, blame, with reaſon, thoſe who command them to ſhew, that though they are inferior to them in power, yet, in merit, they ſurpaſs them.

But without weighing critically what, perhaps, belongs in a peculiar manner to England, I ſhall only ſay, that in France the marine has gained conſiderably ſince it has been compoſed of ſelect youths, and of officers choſen out of the beſt families. It is not that I would exclude certain men, who may be ſaid to be privileged, and who indemnify themſelves from an obſcure birth, by a diſplay of talents ſuperior to any birth. I willingly compare them to that plebeian, ſo famous in the Roman Hiſtory, and to whoſe ſpeech I will give a place here, in order to humble thoſe who want every thing but birth.

'I cannot, ſaid he, expoſe to the eyes of the public, the 'portraits, the triumphs, or the conſulates, of my anceſtors: 'But if you incline to ſee them, I can produce abundance 'of pikes, ſtandards, horſe-harneſs, and other military re-'wards, beſides many wounds. Theſe are my charters, 'theſe are my nobility, which it is true I have not received 'from my fathers, but have purchaſed, by my own proper 'toils, and at the expence of my blood. There is nothing 'of deceit in my words; that is a kind of art with which I 'am abſolutely unacquainted. Virtue is beſt ſeen and diſtin-'guiſhed by her own light. Let thoſe who have been want-'ing to their honour, and have committed baſe and ſcanda-'lous actions, ſeek to varniſh them over by the pomp of 'their diſcourſes; for my part, I never learned the ſciences 'of the Greeks, which I don't ſee have rendered either 'wiſer or more virtuous many of thoſe, who boaſt of be-'ing well verſed in them. But I have learned what the re-'public ought to adviſe and to approve; to attack the ene-'my, to ſuccour ſpeedily ſuch as are under my orders, to 'fear nothing but infamy; to brave, by turns, the ſcorch-'ing heat of ſummer, and the winter's pinching cold; to 'lie upon the ground; and, in fine, to ſuffer all that is moſt 'tedious or tireſome in war.'

Nobility, without doubt, owes its ſplendor to fair and generous actions; but as it degenerates every day, ought we to complain that ſuch actions are revived, and appear in other men? The nobility brigue and intrigue, in order to acquire charges and employments, without ever thinking how to merit, or to execute them. What madneſs in theſe vain men! Their anceſtors have left them, it is true, all that depend on them, riches, great names, and ſhining titles; but they have not left them perſonal merit; that lay beyond the extent of their power; that alone they could not communicate, that alone is the thing not hereditary. They ſay that I am a brutiſh fellow, and without the leaſt tincture of good manners, becauſe I am aſhamed to own a player for my companion, diſdain either ſhewy or effeminate pleaſures, and give leſs wages to my cook than to any other of my

* Patriæ rem unuſquiſque, non ſuam, augere debet. Melius eſt enim pauper in divite, quam dives in paupere imperio verſari. Val. Max. lib. 4. i. e. A man ought to ſtudy to augment the public ſtock, not his own. For it is much better to be poor under a rich government, than to be rich under a poor one.

my domeſtics. What mighty crimes! and yet they are all mine.

I thought this elogium due to ſeveral officers of great merit, who have rendered the marine illuſtrious, by ſo many heavy campaigns; and who, in ſpite of the obſtacles they met with at every turn, in ſpite of their rivals, who ſeem to block up their way to preferment, have acquired it notwithſtanding, and that too with the higheſt applauſe; ſuch, even in late times, was M. de Gué Troüin, as much diſtinguiſhed by his undaunted bravery, as by his ſuperior capacity, who expoſed himſelf rapidly and boldly to all ſorts of dangers, even to thoſe which he had not foreſeen, and which his intrepidity ſeemed to ward off, by not ſuffering them to confound him.'

REMARKS, regarding the laſting ſecurity and glory of the BRITISH EMPIRE.

Thus far Monſ. Deſlandes, who has zealouſly endcavoured to raiſe a ſpirit in France for a boundleſs advancement of the maritime power of that kingdom; and who does not diſcern this to be the grand ſyſtem, which now prevails at that court?

The Romans, though their city was ſituated very conveniently for maritime affairs, not being above fifteen miles diſtant from the Tyrrhenian Sea, and having the river Tyber running through it, capable of receiving the ſmaller veſſels, yet ſeem wholly to have neglected all naval concerns for many years after the building of Rome; and ſome eminent writers have been willing to aſſign this as one of the principal cauſes which preſerved that ſtate ſo long in its primitive innocence and integrity, free from all thoſe corruptions, which an intercourſe with foreigners might probably have brought into faſhion.

But, as an inſtance of what may be done by a vigilant people, we find, that, about the year of the city 492, the Romans obſerving, that the coaſts of Italy lay expoſed to the depredations of the Carthaginian fleet, which frequently made deſcents upon them, and conſidering that the war with that republic was likely to continue, they determined to render themſelves maſters of a naval army: which they accompliſhed, with ſuch wonderful bravery and reſolution, as ſoon to be capable of trying their naval ſtrength againſt their more formidable enemy, and afterwards to give many ſignal defeats to the Carthaginians, who, 'till that time, held the dominion of the ſea uncontеſted, derived down to them from their anceſtors.

Whoever conſiders this fluctuation of power, from the Carthaginians to the Romans, muſt perceive a dangerous parity in that acceſſion of naval ſtrength which has accrued to the crown of France, from the beginning of the reign of Henry IV. to the end of the reign of Lewis XIV. Who could have imagined that France, in ſo ſhort a time, could have been able to equip a fleet capable of diſputing the dominion of the deep againſt the united navies of England and Holland? But after the diminution of her maritime power during the war with queen Anne, who could have ſuſpected that France ſhould have ſo ſpeedily recruited and augmented her navy, ſo as frequently to deride the Britiſh power, before the French had the inſolence to conduct Navarro out of Toulon, and commence that inglorious engagement, wherein a brave Britiſh admiral was not only ſhamefully unaſſiſted by his colleague, but afterwards diſgraced for nobly defending the honour of his country? And who could have thought, that the French after the reduction of their fleets in its two interceptions by the admirals Anſon and Hawke, and after the loſs of 2185 ſhips taken from them by us, during the courſe of the late war, ſhould be able ſo expeditiouſly to reſtore their debilitated navy, and retrieve their commerce to a ſtronger, and in a better condition than it ever enjoyed before? — But all this has been, and now is, unhappily for us, the caſe! which ſhould rouſe Britain from that apathy, ſhe has too long and too tamely ſuffered, while her enemies have been audaciouſly inſulting her in too many parts of the univerſe.

It is the invariable policy of France to amuſe her neighbours with deluſive negociations, while ſhe is ſecretly preparing to afflict them with the rapacity of her arms. See our REMARKS on the article PLANTATIONS. Was not this the unkingly conduct of Lewis XIV. that grand ravager, in his barbarous deſtruction of the Palatinate, and his perfidious invaſion of the United Provinces? Was not this the behaviour of Lewis XV. to her Hungarian Majeſty, when he as unkingly renounced the Pragmatic Sanction, and, inſtead of preſerving the indiviſibility of the Auſtrian inheritance, was the firſt to lop the branches of ſo fair a tree, by his invaſion of Bohemia? And what can Great-Britain expect will be the conſequence of the treaty of Aix la Chapelle, 'for eſtabliſhing a chriſtian, univerſal, and perpetual peace, as well by ſea as land; and for preſerving a ſincere and inviolable friendſhip between the ſeveral high powers at war, both as principals and auxiliaries, their heirs, ſucceſſors, kingdoms, ſtates, provinces, countries, ſubjects, and vaſſals, of what rank or condition ſoever they may be, without any exception either of places or perſons?' Why, from the French nation we can expect nothing but French policy; that is, whenever France is able to unſheath the ſword, ſhe will think it no diſhonour to cancel the moſt ſacred engagements ſhe has made with the pen. This is certainly the policy of France; and this we have been told by ſome of our miniſters themſelves, who, as they are ſo well acquainted with the practice of our moſt inveterate enemy, ought to be perpetually on the guard for our own ſecurity.

The French navy is now grown to an enormous liſt, and our brave admiral Vernon, more than a year ago, ſhewed an account which he had procured of the French navy then in the ports of Breſt and Toulon; whereby it appeared that, excluſive of what were in the harbour of Rochefort, the ſhips of force amounted to near one hundred ſail. What a wonderful augmentation ſince the cloſe of the year 1747, when, according to the moſt accurate accounts of many, the whole royal navy of France amounted to no more than 31 ſhips of the line, from 80 to 90 guns, beſides ſeven frigates; of which 7 were old and unſerviceable, and the remainder too few to attempt any thing in oppoſition to the navy of England! But let us alſo remember, that the Britiſh nation at the ſame time, notwithſtanding the detriment ſhe had ſuſtained by the interception of commerce, and the loſs in the royal navy, was ſtill capable of continuing the maritime war, and of proſecuting it with redoubled vigour; her royal navy in 1747, conſiſting of 126 ſhips of the line, beſides 75 frigates, 43 ſloops, 16 bombs, and 11 fire-ſhips, in all 279, of which 225 were in commiſſion, being 96 more than thoſe in employment at the commencement of the Spaniſh war; but, at the concluſion of the war, in the beginning of 1749, on the reduction of the Britiſh navy, the ſhips continued in commiſſion were only 71 of the line, with 29 frigates, beſides ſloops and tenders for which 10,000 ſailors have been ſince continued in the ſervice of the royal navy.

Therefore, we ought not to be intimidated at the views of France, but rather vigilant in our own.

Every court in Europe knows, that ſuch has been the ſteady conduct of Great-Britain for many years paſt, to act perfectly conſiſtent with her treaties and alliances, and chiefly upon the DEFENSIVE, to preſerve not only the rights and liberties of her own people, but to protect her allies from being oppreſſed and over-run by the power of France, whereby all Chriſtendom muſt have been involved in the calamitous event. England cannot be charged in any reſpect, during the reign of the preſent family eſpecially, with having violated her engagements with any ſtate or empire, or with having attempted to act OFFENSIVELY againſt any power without very great provocation; and the exertion of their maritime ſtrength on theſe occaſions has been with the greateſt moderation, and in order only to preſerve that ballance of power, which has hitherto preſerved the liberties of all Europe. But this will not long continue in the power of Great-Britain, if other nations increaſe and ſtrengthen their maritime power, for the ſake of protecting and extending their trade, and the Engliſh, at the ſame time, do not uſe all poſſible means to keep up theirs: if we are regardleſs of our well-being in this reſpect, our rivals in trade muſt ſooner or later become our ſuperiors, and this muſt produce very injurious and fatal effects to this kingdom. For as trade is the chief ſource of our affluence, and conſequently, the great inſtrument of power, ſo, if we ſuffer our trade to decline for want of due protection by a maritime force, our influence, as a maritime ſtate, and all our preſent affluence and ſecurity, muſt neceſſarily dwindle in a juſt proportion to it. That we may be the better apprized of the ſchemes and meaſures of France for many years paſt to augment her marine, in order one day to aſſert and maintain an aſcendancy over the Engliſh and Dutch in maritime proweſs, we refer the reader further to the article NAVAL AFFAIRS. To make ſtill a further judgment upon concerns of this nature, ſee alſo the articles MARITIME, or MARINE AFFAIRS, NAVAL STORES, BRITISH AMERICA, COLONIES, PLANTATIONS.

As we would not omit any thing eſſential under ſuch intereſting heads, as thoſe we have juſt referred to, we ſhall take notice of a particular or two more, which ſeem to require the ſerious attention of the public at this time: the firſt is, that Spain, as well as France, ſeems at preſent to be engaged in ſuch meaſures, that can ſcarce fail to raiſe not only her royal navy, but her mercantile ſhipping, to a height ſuperior to what it ever was. See the articles CASTILLE, CATALONIA, FACTORS, FLORIDA, MEDITERRANEAN, MANUFACTURES, MARITIME, or MARINE AFFAIRS, NAVAL AFFAIRS. In regard to ſome of our laws relative to ſhipping, ſee the article MASTERS of SHIPS. See alſo MEXICO.

There are likewiſe many other of the leſſer ſtates, that are either raiſing a new maritime power, or augmenting what they have; and as the machinations of certain potentates may hereafter be productive of ſuch alliances, as may one day occaſion a union of maritime power that may prove formidable to Great-Britain, it behoves her to guard betimes againſt thoſe poſſible evils; and more eſpecially ſo, ſeeing

ſeeing that the marine, as well as the finances of our natural ally, the States General, are, by certain intrigues and diſtractions fomented amongſt them, in worſe plight and condition than they have been for half this century: nor is this the only melancholy ſituation of Holland, that may prove diſadvantageous to theſe kingdoms on urgent occaſions; there is another circumſtance, that relates to the affairs of that ſtate, which is no leſs detrimental to the joint intereſt of England and the United Provinces: I mean the preſent unſettled ſtate of the barrier, which has been poſtponed too long, and may be attended with conſequences equally injurious to the common cauſe with what elſe has been intimated. See the articles HOLLAND, FLANDERS, NETHERLANDS. — Theſe conſiderations taken with their united force, ſhould, methinks, have their due weight with Great-Britain to preſerve and augment the power of her royal navy to ſuch a degree, that ſhe may be able to aſſert and maintain that ſuperiority of maritime ſtrength for which ſhe has been ſo long renowned, and which has hitherto proved the ſalvation of the liberties of the whole Proteſtant intereſts. See the articles SEA DOMINION and SEA BRITISH.

Nor does it appear to me, that the augmentation of our royal navy to the height requiſite at this or any other conjuncture, need be ſo great a burthen to the ſtate, as ſome are wont to apprehend; eſpecially if thoſe marine concerns were managed with that œconomy and ſagacity, which many judge neceſſary: and if, beſides this, due meaſures were taken to provide ourſelves wholly with naval ſtores of every kind, and not to be under the neceſſity of taking any from other ſtates, or, at leaſt, ſuch a proportion only as may be politic, in order to uphold and cement ſuch a mutual degree of commercial intereſt as good policy may ſuggeſt; for we cannot expect to be ſellers to all nations, and buyers of none. If, however, we are wiſe enough to ſupply ourſelves with ſuch a proportion of our naval ſtores in general, as will keep the bulk of the treaſure thereon expended within ourſelves, an expence of this kind may, perhaps, add riches to the nation, inſtead of being an incumberance to it. See what I have urged in this light in particular, under the article NAVAL AFFAIRS. See alſo the article NAVAL STORES.

SHROPSHIRE is bounded on the eaſt by Staffordſhire, on the north by Cheſhire, on the ſouth by Worceſterſhire, Herefordſhire, and Radnorſhire, and on the weſt by Montgomery and Denbighſhire in Wales, and is computed to be 134 miles in compaſs. The air of this county is very healthy, as it generally is in ſuch as are mountainous or hilly. The ſoil is various, the hilly parts not being altogether ſo fruitful as the low grounds. Here are mines of coal, copper, lead, iron-ſtone, and lime-ſtone.

SHREWSBURY, the county town, is delightfully ſituated on the Severn. Here is a market every Thurſday for Welch cottons and flannels, of which there are ſold as much as comes to 1000l. a week one with another.

BRIDGNORTH, on the ſame river, is a place of great trade, carried on both by land and water: its markets are well ſtocked with all neceſſaries, and its fairs are reſorted to from moſt parts of the kingdom for horſes, black cattle, ſheep, butter, cheeſe, bacon, linen cloth, hops, and moſt other goods and merchandize. The town is well furniſhed with artificers, who deal in making and ſelling clothes, leather, iron-tools, and the common manufactures of the kingdom, and is as famous as any other for making of ſtockings.

OSWESTRY has a great traffic on its market-day for the Welch flannels and freizes, of which it is the ſtaple.

SIAM, a kingdom of Aſia, beyond the Ganges, in the farther Eaſt-Indies, bounded on the north by the kingdoms of Pegu and Ava; on the eaſt by Cambaya, Lao, Jancoma, and Tanga; on the ſouth by a bay of its own name; and on the weſt by the bay of Bengal; making a ſemicircle of about 450 leagues, though others make it larger, and bounded by Pegu and Lao on the north, the China and Indian Ocean to the eaſt and weſt, with the kingdom of Malacca to the ſouth.

SIAM PROPER, or the UPPER SIAM. The air is very temperate, and the ſoil in general very fat and fruitful. The country abounds with rice, cotton-trees, and others, from whence they extract oils for divers uſes. They have abundance of trees that yield a gum, which is the chief ingredient of the Japan and Chineſe varniſh. The beſt ſort of benjamin comes from hence, it being pure, clear, and white, with little ſtreaks of an amber colour.—They till their lands after the rains, and gather their harveſt of rice after the waters are retired, though ſometimes they do it before, in boats; for, according to ſome hiſtorians, it grows ſo faſt, that the ear is always above water, though it riſes a foot in 24 hours.—The rice which grows where the rivers do not overflow, and which is nouriſhed by great ciſterns, or trenches of rain-water, is more ſubſtantial, durable, and better reliſhed than the other. They raiſe ſeveral ſorts of herbs, pulſe, and roots.— They have alſo lemons, citrons, pomegranates, and oranges, which they call cryſtal ones, becauſe of their value, ariſing from their uſe to ſick people. — In fine, the country abounds with all the fruits of the Indies; the moſt eſtimable is the arrac-tree.— Their fruits are large figs, like ſauſages in form, jaikes, ſhaped like large melons, and of a delicate taſte and ſmell, ſugar-canes, pepper-trees, cocoa's, anana's, and that remarkable plant called ginſeng, which they drink like tea, in a morning faſting.

They have mines of gold and ſilver, lead, tin, iron, loadſtone, marble, agats, ſapphires, cryſtals, antimony, emeralds, and tambank, which is a mixture of copper, with a little gold and ſilver. They have ſteel, of which the inhabitants make ſabres, poignards, and knives, but they are in general bad ſmiths. A diamond-mine was diſcovered here once, but neglected for want of encouragement, becauſe the mines are entailed on the crown, which has the ſole benefit of them.— Here are various kinds of beaſts, as elephants, rhinoceroſes, leopards, tygers, with all the other tame and wild beaſts of the Indies; but they eat little fleſh, and only catch deer, whereof they breed great numbers, for their ſkins, which they ſend yearly to Japan.

They are ignorant of the arts, except the ordinary ſorts of mechanics, but are dexterous at gilding, and beating of gold into plates. They make a coarſe ſort of cotton cloth, and are good at embroidering. The common people employ themſelves in fiſhing, and the better ſort in merchandizing. The women are the chief merchants, ſome of whom trade conſiderably, though none of them get eſtates by foreign trade, that being appropriated to the king.

The chief places are,

CHANTEBON, or as ſome call it, LIAM, ſtands at the mouth of a river of the ſame name, near the gulph of Siam, and in the extreme ſouth-eaſt part of this country. The river is navigable for large ſhips, and there is a tolerable trade carried on here.

BANKASOY, on a river which lies four or five leagues to the eaſt of the bar of Siam, where are two iſlands called the Dutch iſlands, at which ſhips are obliged to ſtay in the ſouthweſt monſoons, when they cannot get water over the bar that bears off it ſouth-eaſt and by ſouth, about nine leagues diſtant. It is a place not much frequented by ſtrangers, though it produces much aquila and ſapan-wood, and elephants-teeth, which are all ſent to the king, who traffics with them. This place is of chief note for ballichang, or a ſauce made of dried ſhrimps, cod, pepper, ſalt, and ſea-weed, or graſs, all mixed, and beaten up to the conſiſtency of thick muſtard. Many hundred tons hereof are expended in Siam, and the adjacent countries.

BANCOCK, or BENCOCK, in an iſland formed by the river Menan. Moſt ſhips bound to India put in here, to give an account from whence they came, as well as of their lading, and complement of men, &c. and to pay cuſtom, the acquittance for which they ſhew at another place up the river, called Canon-Bantenau, within a league of the town of Siam, and then they have liberty to trade any where through the kingdom without paying any thing, but for their cocket, which they are obliged to do on penalty of forfeiting the ſhip.

The capital of the country, and the ſeat of the king, is

SIAM, a large city, formed by three ſtreams of the river Menan, or Memnan, which is generally full of ſhips, prows, &c. 30 leagues from Bontempia.

The Dutch have a factory here, about a mile below the town, on the ſame ſide of the river, and their chief makes a good figure here, though the Siam market takes off but little of European goods; and their greateſt traffic is in tin, ſapan-wood, and deer-ſkins, which they buy up for the Japan market. The Portugueze had a great trade here formerly, 'till they obſtructed the commerce of the natives with the Dutch, and attacked the latter in the river Menan; which ſo incenſed the king, that he became an enemy to the Portugueze ever after, and encouraged the Dutch, whoſe trade here is very advantageous with reſpect to the iſles of Java and Sumatra.

The Engliſh had a factory here for many years, 'till about 1686, the Eaſt-India company had a quarrel with the Siameſe, and withdrew it. The ſuburbs, which are inhabited chiefly by ſtrangers, lie on both ſides of the river.

TENNASERIM is a city of great trade, near a river of its own name, which falls into the bay of Bengal with three mouths, and is above 200 miles north-weſt of Siam, and 20 leagues within the bay, amongſt ſeveral ſmall iſlands.

CUI, or COUIR, is a place on the coaſt hereabouts, which produces great quantities of tin and elephants-teeth; but all are ſent to Siam, for the king's uſe.

MARGUI, MERJEE, ſtands in an iſland near Tennaſerim, 140 miles ſouth-weſt from Siam, and is eſteemed, by ſome, the beſt port in the Indies. It is a ſafe harbour; and the country produces rice, timber, tin, elephants teeth, and aquila-wood. A large number of Engliſh merchants ſettled here formerly, and carried on a conſiderable traffic, but were obliged to quit it in 1687, by the Old Eaſt-India company; who having a mind that the Engliſh here ſhould reſide at Fort St George, threatened the king of Siam with a war, if he did not deliver them up, or force them out of his country: and the officer whom they ſent with the meſſage behaving inſolently to the government, and putting ſome of the Siameſe to

death without cauſe, the enraged populace maſſacred 76 of the Engliſh, by way of revenge. This place, and Tennaſerim, is the road where ſhips from Guzaratte arrive, in June and July, and merchants tranſport their goods from hence over land to Siam.

LIGOR, the capital of a country of the ſame name, which was formerly a kingdom of itſelf, 'till by civil diſſenſions it became a prey to the king of Siam; it ſtands above 380 miles ſouth of Siam. The Dutch have a factory here, which trades in tin and pepper, the country producing abundance of the former, which they engroſs all to themſelves.

SANGOR ſtands on the ſide of a large river, about 12 leagues ſouth of Ligor; it produces tin, elephants-teeth, aquila-wood, and ſome gold; but the inhabitants meet with ſuch diſcouragement in digging for tin, that there is little to be got, and what is manufactured is bought up by the Dutch factory at Ligor.

JONSALAM, or JUNCALAN, or JONKUYLOAN, on the weſtern coaſt, is an iſland within a mile of the continent, but the ſouth end is about three leagues from it. Between this and the continent there is a good harbour for ſhipping, in the ſouth-weſt monſoons, and on the weſt ſide of the iſland; Puton Bay is a ſafe one in the north-eaſt winds; between this iſland and Merjee there are ſeveral other good harbours; but the ſea-coaſt is very thinly peopled, becauſe of great numbers of freebooters, called Salleiters, who inhabit iſlands along the coaſt, and both rob and take people for ſlaves, whom they tranſport to Achim, in Sumatra, and there ſell them: this town often ſuffers by their depredations. Thoſe iſlands afford for traffic ambergreaſe, the horns of the rhinoceros, good maſts, and abundance of tin; but few people dig for it, by reaſon of the abovementioned out-laws; beſides, their governors being generally Chineſe, buy their places at the court of Siam, and fleece the people to reimburſe themſelves: yet the villages on the continent drive a ſmall trade with ſhips that come from Coromandel coaſt and Bengal, but both the buyer and the ſeller deal by retale; ſo that a ſhip's cargo is a long time in ſelling, and the product of the country as long in purchaſing: the iſland is about 80 leagues north-eaſt of Achim, and was formerly called a kingdom.

MARTABAN, or MARTAVAN, once a kingdom independent on the bay of Bengal, which Moll places in the empire of Ava, and the Sanſons ſay it formerly belonged to Pegu, but it is now a province ſubject to Siam. It abounds with corn, medicinal herbs, oil of jeſſamy, roſes, oranges, lemons, figs, pears, cheſnuts, &c. mines of gold, ſilver, iron, ſteel, lead, copper; it has alſo rubico, lacque, benzoin, and they make a ſort of porcelain veſſels, varniſhed black, much eſteemd for keeping liquors. It is ſaid to extend 300 miles from the ſouth to the north, and 115 where broadeſt, from eaſt to weſt. Father Piemento ſays, it formerly yielded three harveſts a year; but about 1597, much of it was laid waſte by the Siameſe. Bouſingault ſays it has ſo good an air, that the inhabitants never have the head-ach. It has Pegu on the north, Siam on the ſouth and eaſt, and the Indian Ocean, and bay of Bengal, on the weſt. The capital, of the ſame name, is a well-built populous town, and has one of the beſt havens in the country, with a free entrance at all ſeaſons, to which ſhips trade from Malacca with pepper, china ware, camphire, &c. and make their returns in rice, which they likewiſe export to Cochin. Moll places it 223 miles north weſt of Siam, on the eaſt ſide of the gulph of Pegu, from which city it ſtands about 92 miles to the ſouth, and it was reckoned its principal haven.

The GOLD and SILVER WEIGHTS of SIAM

Are by tual, which weighs neareſt 9 dwts. 10 grs. and is $9\frac{1}{2}$ dwts. better than ſtandard ſilver.

GREAT WEIGHTS

Are from their coins likewiſe, as

	lb.	oz.	dr.	
80 Tuals is 1 catty, or - -	2	9	$4\frac{3}{4}$	Avoir.
50 Cattys is 1 pecul, or - -	129	0	13	Ditto

But 50 cattys of Siam ſhould make 1 pecul China, of 132lb. for they weigh all their goods by the China dotchin; but it is never found that the king's dotchin at Siam gives more than 129 lb. which ſhould be 132 lb.

COINS.

Their coins are tuals, miams, tuangs, and ſamporſs.

2 Samporſs is - - - - - -	1 Tuang
2 Tuangs - - - - - - -	1 Miam
4 Miams - - - - - - -	1 Tual

Their accounts are kept in cattys, tales, tuals, miams, tuangs, and cowries.

800 Cowries is - - - - - -	1 Tuang
2 Tuangs - - - - - -	1 Miam
4 Miams - - - - - -	1 Tual
4 Tuals - - - - - -	1 Tale
20 Tales - - - - - -	1 Catty

10 miams paſs for a tale China, and 85 tales Siam are always reckoned at 8 tales China.

CUSTOMS.

The Chineſe, Moors, and Banians, pay 8 per cent. cuſtoms. The Engliſh, at preſent, pay no cuſtoms, but pay meaſurage for their ſhips; a ſhip of 200 tons burthen pays from 1150 to 1200 rupees meaſurage, and ſo for other veſſels, in proportion to their burthen.

REMARKS.

In order to make a right judgment of the nature of the Eaſt-India trade in general, and conſequences of the ſame trade to theſe kingdoms in particular, the reader is deſired to conſult the following articles throughout this work, viz. BENGAL, CAMBODIA, CARAVANS, CHINA, COMPANIES, COROMANDEL, DUTCH EAST-INDIA COMPANY, EAST-INDIA COMPANY of ENGLAND, EUROPE, FRANCE, in regard to its Eaſt-India trade in particular; GOLD, with reſpect to the gold brought from the Eaſt-Indies into Europe; JAPAN, INDOSTAN, MONOPOLIES, ORIENTAL TRADE, OSTEND EAST-INDIA COMPANY, PEGU, PORTUGUEZE EAST-INDIA COMPANY.

Under theſe heads, and what we ſhall further lay before the reader in the ſequel, he will find ſuch FACTS, and ſuch argumentative matter ſtated, naturally deducible therefrom, as will enable him to determine within his own breaſt, that great point, whether it is for the intereſt of the nation that the Eaſt-India company ſhould be continued under its preſent conſtitution, or whether it ſhould be annihilated, and the trade laid open to all his Majeſty's ſubjects.

And as the ſubſtance of what has been urged againſt the company will be found faithfully repreſented under the preceding articles, ſo will alſo the anſwers thereunto; but there having lately appeared an anſwer to ſome of the principal objections which have been ſtarted againſt the company, and that in a light ſomething different from what has been given throughout the preceding parts of this work; I ſhould be charged with partiality, if I was to omit this additional argument in favour of the company, ſince I have ſuppreſſed nothing of weight that has been urged in oppoſition to that corporation. Another inducement to this is, that I ſhall ſcarce have another opportunity of ſaying any thing more in relation to the Eaſt-India trade before this work is completed; and, therefore, all evidence in regard to a ſubject of this importance, will be expected to be fairly laid before the public, for their information.

—The ſubſtance of this argument in vindication of the company is as follows, viz.

'The remoteſt traffic is always moſt beneficial to the kingdom's ſtock; for example—Suppoſe pepper to be always worth two ſhillings the pound, and a merchant ſhould fetch it from Holland, and pay there twenty-pence the pound, he will gain well by the adventure; but if he fetch this pepper from the Eaſt-Indies, he cannot give above five-pence the pound to obtain the like gain, clear of all charges; which ſufficiently proves the great advantage we have by purchaſing commodities in remote countries, not only for our own conſumption, but for exportation: ſo that it is plain we make a much greater ſtock by gain upon many commodities, than thoſe nations do where they grow; and ſurely there is not leſs honour and judgment by getting riches in this manner, than by an increaſe of our own means, eſpecially when this latter is advanced for the benefit of the former, as hath been found in the Eaſt-Indies by ſale of our native commodities.

But for the better underſtanding thereof, we muſt diſtinguiſh between the gain of the kingdom and the profit of the merchant; for although the kingdom pays no more for this pepper than is before ſuppoſed, nor for any other commodity purchaſed in foreign countries, more than the ſtranger receiveth from us for the ſame; yet the merchant payeth not only that price, but alſo the FREIGHT, INSURANCE, INTEREST, CUSTOMS, and many other CHARGES, which are exceeding great in long voyages: but all theſe, in the kingdom's account, are but commutations among ourſelves, and no privation of the public ſtock; they remain ſtill in the kingdom.

It is of great importance to the nation, that the price of lands ſhould be improved [ſee our article LANDED INTEREST], which never hath, nor can be done, but by a ſucceſsful foreign trade, the ballance whereof is the only means and rule of our treaſure; that is to ſay, when, either by iſſuing out of the realm yearly, a greater value in wares than we conſume of foreign commodities, we grow rich; or, by ſpending more of ſtrangers goods than we ſell them of our own, we are impoveriſhed: for the firſt of theſe courſes brings in the money which we have; the laſt will carry it away again when we have got it. See our article BALLANCE of TRADE.

It is a true ſaying, That plenty or ſcarcity of money makes all things dear or cheap in a commonwealth [ſee our articles MONEY, CASH, CIRCULATION]; but it is neceſſary to diſtinguiſh the ſeeming plenty of money from that which only is ſubſtantial, and able to perform the work; for there are many

many ways and means to procure money into a kingdom (for a ſhort time) which therefore do not enrich, but rather impoveriſh the ſame, by the ſeveral inconveniencies which ever accompany ſuch alterations; for inſtance, if we ſhould melt down our plate into coin [ſee our article COIN], it would cauſe plenty for a time, yet ſhould we be nothing the richer, but rather this treaſure being thus altered, is made the more apt to be carried out of the kingdom, if we exceed our means by exceſs in foreign wares, or maintain a war by ſea or land, where we do not feed and cloath the ſoldier, and ſupply the armies, with our own native proviſions; by which diſorders our treaſure will be exhauſted, for it is not the merchants exchange by bills that can prevent the laſt of the abovementioned evils. [See the article EXCHANGE.]

But whether it be the ſtranger or the Engliſh merchant brings money into this country, it muſt ever be done upon a valuable conſideration, either for wares carried out already, or after to be exported, which helps us nothing, except the evil occaſions of exceſs or war aforementioned be removed, which will exhauſt our treaſure; for otherwiſe, the money that one man bringeth in for gain, another man ſhall be forced to carry out for neceſſity, becauſe there ſhall ever be a neceſſity to ballance our accounts with ſtrangers, although it ſhould be done with great loſs upon the rate of money, which is exported at great riſk and danger of confiſcations, for neceſſity or gain will ever find ſome means to violate the laws.

So that the treaſure which is brought into the realm by the ballance of our foreign trade, is that money which only doth abide with us, and by which we are inriched; and by this plenty of money thus gotten (and no otherwiſe) do our lands improve; for when the merchant diſpoſes of his cloth well abroad, he preſently buys a greater quantity, which raiſeth the price of wool, and other commodities, which improves the landlord's rents, as the leaſes expire daily; and alſo by this means money being gained, and brought more abundantly into this kingdom, it doth enable many men to buy lands, which muſt make them the dearer; but if our foreign trade come to a ſtop or declination, by neglect at home, or injuries abroad, whereby the merchants are impoveriſhed, and ſo the commodities of the growth and product of the nation leſs iſſued, then do all the benefits abovementioned ceaſe, and our land fall daily in price; wherefore the flouriſhing eſtate of our general trade is the only means to make our lands improve: ſo the particular trade to the Eaſt Indies is a PRINCIPAL INSTRUMENT therein, becauſe it hath much increaſed the general traffic of this kingdom.

In the courſe of a foreign trade there are three degrees of gain; the firſt is that of the commonwealth, which may be done when the merchant (who is the principal agent therein) ſhall loſe. The ſecond is the gain of the merchant, which he ſometimes doth juſtly and worthily effect, although the commonwealth be a loſer. The third is the gain of the king, whereof he is ever certain, even when the commonwealth and the merchant ſhall be both loſers.

It hath been already obſerved, that the commonwealth may be inriched in the courſe of trade, by the ballance of the ſame, when exceſſes are avoided; but it may be affirmed, that ſuch happineſs may be in the commonwealth, when the merchant, for his particular, ſhall have no occaſion to rejoice. As for example: ſuppoſe the Eaſt-India company ſhould ſend out one hundred thouſand pounds in goods, or money, into the Eaſt-Indies, and receive home for the ſame the full value of three hundred thouſand pounds; hereby it is evident, that this part of the public ſtock is trebled: and yet it may be proved, that the company ſhall be loſers by the adventure, if the returns be made in bulky commodities; for the freight, the charges abroad and at home, his Majeſty's duties and cuſtoms, and other charges, will be above two hundred thouſand pounds; which being added to the principal, produceth loſs. And thus we ſee, that not only the kingdom, but alſo the king, may get very much, when the merchant ſhall loſe; which gives good occaſion to conſider how much more the nation is inriched by this trade, when all things paſs ſo happily, that the merchant is a gainer alſo, together with the king and kingdom.

But for the better explaining of that which hath been affirmed as above, we muſt underſtand, that if the ſaid one hundred thouſand pounds ſhould be trebled by the return of ſo much ſilks, and other fine commodities, out of the Indies, then the merchant likewiſe ſhould gain by ſuch an adventure, becauſe thoſe commodities would require but five hundred tons of ſhipping to bring home the ſame, which is but a very ſmall charge, in reſpect of four thouſand five hundred tons of ſhipping, which would be required to lade home the like value in bulky commodities.

The ſecond ſort of gain in the courſe of trade is, when the merchant, by his laudable endeavours, may both bring in and carry out wares and commodities to his advantage, by buying them, and ſelling them to good profit, which is the end of his labours; yet nevertheleſs the commonwealth ſhall decline, and grow poor, by a diſorder in the people, when through pride, and other exceſſes, they conſume more foreign wares in value than the wealth of the kingdom can ſatisfy and pay, by the exportation of our own commodities; which is the very quality of an unthriſt, who ſpends beyond his means. See our articles EXPORTATION and IMPORTATION.

The third ſort of gain is the king's, who is ever ſure to get by trade, when the commonwealth and the merchant ſhall loſe ſeverally, as aforeſaid, or jointly, as it may and ſometimes doth happen when the merchant is unſucceſsful, and when our commodities are overballanced by foreign wares conſumed: but if ſuch diſorders be not prevented, his Majeſty in the end ſhall be the greateſt loſer, when his ſubjects be impoveriſhed.

The ſafety of this kingdom conſiſts not only in its own ſtrength and wealth, but alſo in the laudable and lawful performances of thoſe things, which will weaken and impoveriſh ſuch powerful princes, as either may or are become our enemies in remote countries.

All nations (who have no mines of their own) are enriched with gold and ſilver by one and the ſame means, which is already ſhewed to be the BALLANCE of their foreign trades; and this is not ſtrictly to be done in thoſe countries where the fountain of treaſure is, but rather with ſuch order and obſervations in their trade, and againſt exceſs, as are beforementioned: for ſuppoſe England, by commerce with Spain, may get and bring home five hundred thouſand ryals of eight yearly, yet if we loſe as much by our trade in Turkey, and therefore carry our money thither, it is not then the Engliſh, but the Turks, who have got this treaſure, although they have no trade with Spain, from whence it was firſt brought. But if England having thus loſt with Turkey, does notwithſtanding gain twice as much by France, Italy, and other members of her general trade, then there will remain five hundred thouſand ryals of eight clear gain by the ballance of the ſame; and this compariſon holds between all other nations, both for the manner of getting, and the proportion that is yearly gotten. But if yet a queſtion was made, whether all nations get treaſure, and Spain only loſe it, I anſwer no; for ſome countries by war, or by exceſs, do loſe that which they had gotten, as well as Spain, by war, and want of wares, doth loſe that which was its own.

The induſtrious Hollanders wanting means in their own hands, do find rich mines in his Majeſty's ſeas; golden mines they may be termed, for the States ſo call them in their public proclamations [ſee our article FISHERIES], which they have ſet forth on all occaſions for the better preſervation of their fiſhing: a treaſure it is (indeed) ineſtimable, and an employment moſt profitable: from hence originally proceed the increaſe and maintenance of their people, their arts, their private wealth, their public treaſure, the multitude of their ſhips which fetch materials to build ſhips, the ſwarms of their ſmall veſſels which catch fiſh, to lade their great ſhips which trade with fiſh; the produce whereof doth furniſh them with all their wants of foreign commodities, and make them alſo rich in treaſure, with which treaſure they do alſo enlarge their trade into all the quarters of the world, whereby they become the magazines for England, France, Spain, and other places. In which courſe of trade, they are not leſs injurious to ſupplant others (eſpecially the Engliſh) than they are careful to ſtrengthen themſelves, with more than ordinary diligence; for they know well, that trade hath raiſed their fortunes, and doth feed their hopes.

We have no other means to get treaſure but by foreign trade; for mines we have none: and how this money is gotten in the management of our trade is already ſhown; that it is done by making our commodities, which are exported, to overballance in value the foreign wares which we conſume: ſo that it remains only to ſhew, how our money may be added to our commodities, and being jointly exported, may ſo much the more increaſe our treaſure.

And here let it be ſuppoſed, that our yearly conſumption of foreign commodities is to the value of twenty hundred thouſand pounds, and our exportations to exceed that two hundred thouſand pounds, which ſum it may be affirmed is brought to us in treaſure to ballance the account: but if we add three hundred thouſand pounds more in ready money, into our former exportation in wares, what profit can we have (will ſome men ſay) although by this means we ſhould bring in ſo much ready money, ſeeing that we have carried out the like value?

To this the anſwer is; that when we have prepared our exportation of wares, and ſent out as much of every thing as we can ſpare or vend abroad, it is not therefore ſaid, that then we ſhould add our money thereunto to fetch in more money immediately, but rather firſt to enlarge our trade therewith, by enabling us to bring in more foreign commodities; which being ſent out again into the places of their conſumption, they will in due time much increaſe our treaſure: for though in this manner we do yearly multiply our importations to the maintenance of more ſhipping and mariners, improvements of his Majeſty's cuſtoms, and other benefits, yet our conſumption of thoſe foreign commodities is no more than it was before; ſo that all the ſaid increaſe of commodities brought in, by the means of our ready money ſent out, as aforeſaid, doth in the end become an exporta-

tion

tion unto us of a much greater value than our ſaid monies were, which is proved by the three ſeveral examples following.

Firſt, ſuppoſe that one hundred thouſand pounds ſterling, being ſent in our ſhipping into the eaſt countries, and that it will buy there one hundred thouſand quarters of wheat, clear of all charges on board the ſhips, which being after brought into England and houſed, to export the ſame at the beſt time for vent thereof in Spain or Italy, and that it there ſells for two hundred thouſand pounds to make the merchant but a ſaver, yet by this reckoning we ſee the kingdom hath doubled that treaſure.

But the profit will be far greater when we trade thus with our money in remote countries; as for example, if we ſend one hundred thouſand pounds into the Eaſt-Indies to buy pepper there, and bring it hither, and from hence ſend it to Italy or Turkey, and that it yields there five hundred thouſand pounds, at thoſe places, in regard to the exceſſive charges which muſt be diſburſed in thoſe long voyages in ſhipping, wages, victual, intereſt, cuſtoms, and the like, all which charges the king and the kingdom gain; and it may be here obſerved, that as the public profit by foreign trade is the only means whereby we gain our treaſure, ſo the trade to the Eaſt-Indies (in its proportion) doth far excel all others.

The third example is, where the voyages are ſhort, and the commodities rich, which therefore will not employ much ſhipping, the profit to the kingdom will be far leſs; as when another hundred thouſand pounds ſhall be employed in Turkey in raw ſilks, and brought hither to be exported from hence, the merchant ſhall have good gain, though he ſells for one hundred and fifty thouſand pounds; and thus, take all the voyages together in their medium, the ready monies exported will be returned to us near treble. But if any man will yet object, that theſe returns come to us in wares, and not really in monies as they were iſſued out,

The anſwer is; that if our conſumption of foreign wares be no more yearly than is before ſuppoſed, and that our exportations be ſo mightily increaſed by this manner of trading with ready money, it is not then poſſible (in the courſe of trade) but that all the overballance or difference ſhould return in either money, or ſuch commodities as we muſt export again; which, as is before plainly ſhewed, will be ſtill a greater means to increaſe our treaſure; for it is in the ſtock of a kingdom as in the eſtates of private men, who, having ſtore of wares and merchandize, do not therefore ſay, that they will not venture out or trade with their money (for this would be ridiculous) but do alſo turn that into wares; whereby they multiply their money, and ſo by a continual and orderly change of one into the other grow rich, and when they pleaſe turn all their eſtates into treaſure, for they that have wares cannot want money; for what originally begot the monies ſent out, but our wares?

Neither is it ſaid that MONEY is the life of trade, as if it could not ſubſiſt or paſs current without the ſame; for we know that there has been great trading by way of commutation or barter, when there was but little money ſtirring in the world. There are ſome nations which have ſuch remedies againſt this want, that it can neither decay nor hinder their trade; for they transfer bills of debt, and have other ways whereby they aſſign their credit from one to another daily for very great ſums, with eaſe and ſatisfaction by writing only; whilſt, in the mean time, the maſs of treaſure, which gave foundation to theſe credits, is employed in foreign trade as a merchandize which doth much increaſe their traffic. It is not, therefore, THE KEEPING THE MONEY IN THE KINGDOM, WHICH MAKES A QUICK AND AMPLE TRADE, BUT THE USE OF OUR WARES IN FOREIGN COUNTRIES, AND OUR WANT OF THEIR COMMODITIES, WHICH CAUSES THE VENT and CONSUMPTION ON ALL SIDES.

And here it may be obſerved, that Leghorn is one of the moſt famous places for trade in Europe, and yet the merchant hath but little means to make their returns from thence, but only in ready money; which they may, and do carry away freely at all times, and without cuſtom, to the great advantage of the duke of Tuſcany and his ſubjects, who have been much enriched by the continual great concourſe of merchants, from all the ſtates of princes their neighbours, bringing them money daily to ſupply their want of the ſaid wares; and thus we ſee that the current of merchandize, which carries away their treaſure, becomes a flowing ſtream to fill them again in a greater meaſure with money.

Therefore, let no man doubt but that MONEY muſt ever attend on MERCHANDIZE, for they go together: and it is worthy the noting, that there are princes who are content to part with their treaſure, only to enjoy the trade of the wares which are brought them, for which (to encourage the merchant) they take no cuſtom; whereas we, by ſending out our MONEY, do gain the employment of our SHIPPING, the trade of our WARES, and the profit of the CUSTOMS, which is a TREBLE benefit.

Some men have thought, that thoſe countries which permit money to be carried out, do it becauſe they have few or no wares to trade withal; but we have great ſtores of commodities, and therefore their action ought not to be our example.—To this it may be anſwered, that if we have ſuch a quantity of wares, as doth fully provide us of all things needful from beyond the ſeas, why ſhould we then doubt that our monies ſent out in trade muſt not neceſſarily come back again in treaſure, together with the great gains which it may procure in ſuch manner as is before-mentioned? and on the other ſide, if thoſe nations which ſend out their money, do it becauſe they have few wares of their own, how come they to have ſo much treaſure as we ever ſee in thoſe places, which ſuffer it freely to be exported at all times, and by whomſoever? The anſwer is, Even by TRADING with their MONIES; for by what other means can they get it, having no mines of GOLD or SILVER?

It may now be expected, that I ſhould give my thoughts with reſpect to the great complaints which have been this year publiſhed, againſt the India company's exportation of gold and ſilver bullion; but I chuſe rather to obſerve,

That the foreign bullion exported by the Eaſt-India company, their officers and ſervants, for five years, commencing at Michaelmas 1711, and ending at Michaelmas 1716, amounted to l.	1,636,257
Beſides, more than one tenth part of the whole export, was yearly ſent to the Eaſt-Indies in goods of Engliſh product.	
In five years, from Chriſtmas 1712 to Chriſtmas 1717, the Eaſt-India goods exported from England to foreign parts, amounted on their nett value to - - - - -	3,335,928
Excluſive of the drawbacks and prompt payment allowed the merchants.	
By which it is apparent, that over and above the value of the bullion exported to India, there was a ballance accruing from foreign parts to the amount of - - - - -	1,699,671
Which have been anſwered to Great-Britain by goods, exchange, or bullion. Beſides this ſum,	
The company have paid for cuſtoms in five years to Chriſtmas 1717 - - -	1,848,070
The drawbacks on exportation of goods in the ſame time - - - - -	898,179
So that the remaining ſurplus towards clearing the debt of the nation, amounted to -	949,873

To which is to be added, as a further gain to the nation, all the ſalpetre, drugs, tea, coffee, pepper, cotton, yarn, raw ſilk, muſlins, and callicoes, expended in Great-Britain in the ſaid five years, which otherwiſe muſt have been purchaſed at much dearer rates of our neighbours.

Note, The Eaſt-India company did licence foreign bullion for purchaſe of diamonds, from Michaelmas 1711 to Michaelmas 1716, l. 123,537.

But, becauſe much the greateſt part of the ſaid diamonds are again exported, this ſum is not added to the above bullion.

I ſhall now only obſerve, that I think the trade to the Eaſt-Indies will entirely be loſt to this nation, if it ſhould be laid open; but as I may probably publiſh too much on this ſubject for our natural enemies, or our profeſſed friends and allies to hear at this time, ſo I will defer giving my thoughts thereupon 'till a more proper opportunity offers.' Some Thoughts relating to Trade in general, and to the Eaſt-India Trade in particular, printed for Baldwin.

That the reader may have a ſummary view of what has been urged for and againſt the Eaſt-India trade and company, the following ſhort queries may not be unneceſſary.

I. In favour of the TRADE and COMPANY.

1. Quere. Whether the Eaſt-India trade in general be beneficial or otherwiſe, upon the whole, to the European potentates intereſted therein?

If it has been, and ſtill continues to be, detrimental to the Europeans upon the whole, can it be ſuppoſed that they would be ſo infatuated as to carry on a loſing trade for many years? And,

If it is a commerce detrimental to the reſpective ſtates that are engaged, how comes it to paſs that other nations are endeavouring to eſtabliſh this trade?

If the trade to the Eaſt-Indies could be moſt advantageouſly carried on by the ſeveral powers therein concerned, in a manner free and open to all the ſubjects of theſe powers, how happens it that every one of them ſhould rather prefer large joint-ſtock excluſive companies?

If all the European ſtates, engaged in this trade, carry on the ſame by the means of rich and powerful joint-ſtock corporations, with privileges and immunities excluſive of the ſubjects of ſuch ſtates, and Great-Britain alone was to attempt to carry on this trade different from them all by a regulated company, and to leave the ſame free and open to all his Majeſty's ſubjects—Quere, Could Great-Britain be preſumed to carry the trade on with the like degree of profit and ſafety that other nations do?

Whether the importation of gold from the Eaſt-Indies, and the re-exportation of Eaſt-India commodities to Europe America, and Africa, together with the building, employment of the ſhipping concerned therein, breeding of ſeamen,

the benefits ariſing from freight, aſſurance, cuſtoms, and all other charges, are not of far greater advantage to the kingdom, than the exportation of ſilver is a detriment? And whether, if the trade was laid abſolutely open to all his Majeſty's ſubjects, the exportation of ſilver would not rather be augmented than diminiſhed?

Whether gold and ſilver, or bullion, ought not to be eſteemed by the legiſlature as a commodity, or merchandize, and ſuffered, like other wares, to be freely exported? [See our article BULLION, Vol. I.] And if ſo, whether all objections raiſed againſt the company, by reaſon of their exportation of ſilver, are not inconcluſive, and of no more weight againſt the company than againſt the trade itſelf, if laid open, becauſe it cannot be carried on without ſuch exportation?

Whether, if all the ſilver that has been produced in America was now circulating, as money *, in Europe, Europe would be the richer for it? And whether ſilver, if that was the caſe, would not have been as cheap as tin, or, perhaps, copper?

REMARKS.

* It may be here neceſſary to obſerve, that it muſt be beneficial to trade, that our princes, nobility, and gentry, ſhould wear the richeſt gold and ſilver cloathing, and uſe ſuch utenſils, and adorn their palaces and houſes with thoſe precious metals, as much as the revenues of the crown, or income of the eſtates of the nobility and gentry will admit; only with this difference, that crowned heads may lay out this way, whatever the extent of their revenues will allow; but the nobility and gentry muſt act in this, with ſuch regard to their families, that they may all be properly provided for, whilſt the heir only ſhould fill up ſuch ſplendid appearances.

The reaſon of which is this, that as the gold and ſilver (i. e. money) increaſes in greater proportion than the people increaſe, ſo will the prices of every thing advance, and that in much greater proportion than the rents will or can riſe; wherefore it cannot but be beneficial even for trade, that as much of theſe metals be uſed in ſplendor, as is conſiſtent with the above-mentioned circumſtances; becauſe, by thus keeping ſo much of thoſe metals out of trade, the more juſt diſtinction will it keep up amongſt the ſeveral ranks and ſtations of men, whilſt at the ſame time it will give ſo much greater employment, and that in the moſt nice and curious arts, to mechanics, &c. and to prevent our markets from riſing ſo high, as to hinder the exportation of our commodities, or give too great encouragement to the importation of foreign goods.

I am induced to make this remark, from the practice of the Eaſt-Indians, who, as I have often heard, carry this matter ſo far, as to bury the money they get by trade; as E. Philips, Eſq, p. 7. alſo ſays, that they have, ſince the year 1602, buried above 150 millions of ſilver, which hath been brought into Europe (a).

(a) Money is the tradeſman's working tools, without which he cannot proceed in trade at all; therefore, ſince the increaſe of money amongſt the people will increaſe the price of things in greater proportion than the rents can be raiſed; the more money circulates in trade, the more muſt the traders have in their hands to carry it on; and this will neceſſarily raiſe tradeſmen ſo much nearer the rank of gentry, as the quantity of caſh they circulate is greater in proportion to the rents, than it would be if the prices of things were kept lower, the way above ſuggeſted.

Whether this trade extends to exhauſt our wealth, or whether, on the contrary, our re-exportations of Eaſt-India goods do not, in the BALLANCE of TRADE with other countries, compenſate US for the money paid for them; and whether we could carry on theſe TRADES ſo extenſively, and to that advantage, without Eaſt-India goods to make up our aſſortments, as theſe goods are now, by the preſent channel and courſe of trade, become neceſſary for our foreign markets? But,

Whether, if the trade is laid open, private traders, who are diſunited in their intereſts, can have ſuch large capitals lodged in the Indies, and ſuch a degree of weight and influence there, as are neceſſary to carry on trade with the natives; and whether numbers of ſeparate tradeis going to India will not raiſe the price of the Indian commodities, and leſſen the price of our own?

II. IN OPPOSITION TO THE COMPANY.

Query—If the Eaſt-India trade is ſo eſſentially connected with many other branches of our trade, whether it would not, if laid open, very much enlarge our trade in GENERAL, increaſe our NAVIGATION, and add to the wealth and riches of this kingdom?

Whether this trade is not carried on by the company with greater prejudice to the nation than it would be if made free and open, as they export leſs of its manufactures, and ſet their own price upon what they import, at the expence of the people of Great-Britain?

Whether, if the trade was laid open, a much greater number of ſhips would not be employed in this trade than at preſent, and thoſe the ſtrongeſt and moſt warlike, which, by this means, would be more extenſive and enlarged in places already traded to, and to others hitherto unfrequented; and, conſequently, whether more of our fellow-ſubjects would not find employment both abroad and at home, more of our woollen, and other manufactures, be exported, and we have thoſe goods much cheaper from thence for our own conſumption, which we cannot well be without, and not interfere with our own; and whether thoſe which we re-export, whereby our traffic with them in foreign markets would be very much enlarged, and the conſumers of thoſe goods take them from US, which they now do from OTHER nations?

Would not laying open this trade prove the means to carry on a great coaſt-trade in the Indies, and our coarſe and fine cloths, and other manufactures, in all probability, be ſold in greater quantities than hitherto, and a very great profit ariſe to the kingdom, by the additional freight which our ſhips will be able to make, in carrying of goods and paſſengers from one country to another?

Whether thoſe who may be againſt this trade being laid open, as thinking the nation would be the more exhauſted, ought not to examine what commodities are brought from thoſe parts of the Eaſt-Indies, that take from US the greateſt quantity of our product and manufactures, and in return, give US commodities that we cannot well be without; that are partly re-exported, and that do not interfere with, or hinder the conſumption of, our own; and what from thoſe parts, to which we chiefly export gold and ſilver? And whether upon theſe enquiries it will not be found, that thoſe people who take from US moſt of our product and manufacture, give US in return ſaltpetre, pepper, cowries, &c. indico, and other dyeing goods, as well as drugs of moſt kinds, and very often gold and ſilver, particularly the former, which is afterwards exchanged for goods at Madraſs; and whether thoſe places to which we chiefly ſend gold and ſilver, do not give US, in return, goods MANUFACTURED, INTERFERING WITH, AND HINDERING THE CONSUMPTION OF, OUR OWN, or ſuch as ſerve us only for LUXURY, and whereof a very ſmall value is re-exported to foreign countries independent of Great-Britain?

Whether, therefore, if this trade is now carried on to the diſadvantage of the nation, it would not be the contrary, when laid open; eſpecially if we are as careful as our intereſt obliges us to be, to encourage the different TRADES to SOME of thoſe places, and with ſome of thoſe people, and to diſcourage it to and with others? And whether, if this trade was laid open, under proper regulations and reſtrictions by the LEGISLATURE (whoſe buſineſs it is to diſcourage the trading to all diſadvantageous ports of India, by DUTIES on commodities ſerving only for luxury, or interfering with, or hindering the conſumption of, our own manufactures) the nation would be ſo far from being thereby the more exhauſted, that a more extenſive and beneficial trade would not be carried on, and greater employment given to our navigation and ſeamen? For when a trade is confined to a FEW, who are in no apprehenſion to be outdone by any rival, they are not like to take any extraordinary pains to improve it; whereas, when MANY carry on a TRADE, their induſtry and ingenuity are always at work to outvie one another; and to this it is we owe the increaſe of our trade in the courſe of 100 years paſt, and the extenſiveneſs of our commerce at preſent.

Whether the government, or a number of gentlemen that a REGULATED COMPANY ſhall be compoſed of, cannot apply money to the maintenance of forts and caſtles with good garriſons, as well as a number of gentlemen of whom an excluſive company is compoſed; and whether the ſervants of the government, or the factors of a REGULATED COMPANY, cannot do all in INDIA that the ſervants or factors of an excluſive company can do, touching TRADE, PRESENTS, and ALLIANCES? &c.

SIBERIA, or ASIATIC RUSSIA, formerly denominated GREAT TARTARY, is ſituated between 60 and 130 degrees of eaſt longitude, and between 47 and 72 degrees of north latitude, being bounded by the Frozen Ocean on the north, by the Pacific Ocean, China, and Chineſian Tartary on the eaſt, by the Mogul's and Uſbec Tartars on the ſouth, and by the rivers Oby and Irtis, which ſeparate Aſiatic from European Ruſſia on the weſt, being upwards of 2000 miles in length from eaſt to weſt, and 1500 miles in breadth from north to ſouth; the north of it a cold, barren, uninhabited country, covered with ſnow eight or nine months in the year; the ſouthern provinces, a more fruitful ſoil, but moſt of the natives live a vagrant life like the ancient Scythians and Tartars, depending chiefly on what they take by hunting and fiſhing, or the produce of their flocks and herds: there are very few towns, and very little of the land cultivated, except near Tobolſki the capital, to which part of it the Swediſh priſoners were baniſhed ſome years ago, and to which the Ruſſians ſend moſt of their priſoners and ſome large colonies; but ſtill there want hands to manure the ground, and great part of Siberia remains a deſert. They have ſcarce any trade or manufactures; the principal traffic of the Muſcovites of Siberia, is by ſledges over the lake and frozen country to China in the winter, and they have been endeavouring to find a way into the ſea of Japan and China, by their rivers

which fall into the Frozen Ocean, but have not ſucceeded yet, as I can learn; but they relate they have met with ſome rich mines of ſilver and copper in the mountains of Siberia, which they have begun to work. We include the Calmuc Tartars within the limits of Siberia, as they acknowlege themſelves ſubject to the empire of Ruſſia.

TOBOLSKI, or TOBOLSKA, the chief city of Siberia, is ſituate on the confluence of the rivers Tobol and Irtiſk, in latitude 58, longitude 67. 10, eaſt. It is ſeated on a high hill of a large compaſs, the lower part of which is inhabited by Mahometan Tartars, who drive a good trade up the river Irtiſk, and carry their merchandizes acroſs Great Tartary, quite to China.

This city is, likewiſe, a famed mart for all the commodities which are brought thither, not only from moſt parts of Muſcovy, but likewiſe from Tartary, and other countries: and the concourſe of thoſe merchants doth daily increaſe, and is vaſtly advantageous to the Ruſſians.

Here is plenty of all ſorts of proviſions, and very cheap. An hundred weight of rice is ſold for ſixteen pence, and a good ox for two rixdollars, and the reſt in proportion, eſpecially fiſh, which is here in great plenty and variety; inſomuch that a ſturgeon of forty pounds weight is ſold for five or ſix pence, and the ſame may be ſaid of all kinds of game. In this city are held the ſupreme courts of judicature for all Siberia and Dauria; and here is likewiſe the reſidence of a metropolitan, ſent hither from Moſcow, who has a ſupreme ſpiritual juriſdiction over thoſe two provinces.

The river Irtiſk, which runs along one ſide of the town, is reckoned as rapid as the Danube, and flows thither from the ſouth, and empties itſelf into the Oby. That of Tobol, which runs along the other ſide, and from which the town takes its name, is ſuppoſed to have its ſpring-head from the ſame territory with the Irtiſk, and falls into it a little below it, and both bring a conſtant flow of merchandizes into it all the ſummer.

DEMIANSKI, ſeated on the river Irtiſk, fifty leagues north of Tobolſka, is a town of good traffic.

SOMAROSKOI JAM, is another town of ſome trade on the ſame river, about 50 leagues below Demianſki, and about 20 above its confluence with the Oby.

TINNCEN, TINNEN, alias TINNA, is ſituated in latitude 56. 50, longitude 65. 10, on a river of its name, called alſo TORA: it ſtands about 40 leagues ſouth of Tobolſka, and is a great market for all kinds of furrs. It is large, populous, and ſurrounded with ſtout walls and ramparts; and is chiefly inhabited by Tartars, who are very affable and courteous, and carry on a conſiderable trade with other nations.

JAPANZIN ſtands in latitude 58. 10, longitude 63. 25, about 45 leagues north-eaſt of Tinncen, on the river Toza, and was built for a ſtage for perſons who travelled on this road; as was alſo Vergaleria, the firſt town of Siberia, for thoſe who travelled thence in Perſia. It was built anno 1590, and is the reſidence of a governor, and of a numerous garriſon, who yearly diſtribute out the corn, and other proviſions, to other fortreſſes and garriſons ſeated in countries not tilled.

TARA, ſituate in latitude 57. 5, longitude 71. 45, almoſt in the middle of the province, upon the river Irtiſk, is another conſiderable place for trade, and built by the Muſcovites for the ſecurity of it down that river.

SURGUT is ſeated on the north-eaſt ſide of the river Oby, and is a poor town, thinly inhabited, and worſe built; and in ſhort, in the whole territory of it the people are ſo poor, that they can ſcarcely afford cloaths to keep themſelves warm. They cultivate but little land, and that very indifferently; and ſubſiſt almoſt wholly on their hunting of ſables, ermins, black foxes, beavers, and ſuch-like creatures, with which this territory abounds; ſome of which they catch in traps, others they hunt with dogs, and traffic for their ſkins. The ermines are here the fineſt and largeſt in all Siberia; and the black foxes are in ſuch eſteem, that a ſkin of that ſort is ſold for two or three hundred rubles. Hyenas and beavers are, likewiſe, in great plenty here.

NARIM, in latitude 58. 50, longitude 82. 53, capital of a territory of that name, is, likewiſe, ſituate on the Oby, a little below where that river receives the Keta. It is large and populous, and defended by a ſtrong fortreſs, and a good garriſon of Coſſacs. The territory about it abounds with foxes, beavers, ermines, ſables, &c.

TOMSKAI is a ſtrong frontier town, and the capital of a province of its name. It is ſeated on the river Toza, which falls into the Oby a little below it. It ſtands about 30 leagues ſouth of Narim, latitude 56. 50, longitude 84. 37, eaſt.

Other towns along thoſe rivers above-named are, SIBER, or SIBIER, BERESAI, JURGOET, which laſt ſtands on an iſland in the Oby; and the fortreſs of Comgoſcoi on the river Telt, which hath a good garriſon.

REMARKS.

The inhabitants of this laſt Narim, were a little above 30 years ago ordered to get upon their ſledges, and make what farther diſcoveries they could towards the eaſtern part of this province. They travelled eaſtward through ſeveral waſte and deſert countries, which had, however, abundance of rivers, trees, and a good ſoil; and, at the end of three weeks, found a champaign country, inhabited by a ſort of wild people, who lived in huts, and called themſelves Tingoeſi. They were ſeated along the river Jenizea, which is larger than the Oby, and runs in almoſt a ſtrait courſe northward, the length of 25 degrees, from the lake Baykal, where it riſes, to the Northern Ocean, into which it diſcharges itſelf. This river is obſerved to overflow in ſummer, like the Nile in Egypt, to above 70 leagues of the flat land; during which time, theſe Tingoeſe move up, with all their cattle, towards the mountains, 'till the waters are dried up; and then return, and make the beſt of that fine paſture land.

The next year a new ſet of Muſcovites were ſent with the former, and ſome Samoiedes and Tingoeſe, who were their guides, and here and there their interpreters; and theſe ſtill kept towards the eaſt, not daring to decline towards the ſouth. In their way they met with ſome wild people on this ſide the river Perſida, which is not ſo wide, but is as rapid as the Jenizea; and theſe were a ſtout robuſt people, with little eyes, who made ſigns as if to tell them, that on the other ſide of that river, there was heard an omom, which ſome underſtood of thunder, others of the ſound of bells. The report they made at their return, excited the curioſity of others; and the waiwode ſent thither, the year after, about 700 men, who penetrated again as far as the river Perſida, and encamped there along its banks, waiting for the ſpring, that they might ſee it thawed and open. Here they perceived, when the wind ſat towards them, the confuſed ſound of bells, of men, and horſes, on the other ſide of the river, though they met with no men on this ſide: they fancied likewiſe, that they ſaw ſome veſſels, with their ſails of a ſquare form, ſuch as are uſed in India. In the months of April and May they ſaw, with pleaſure, the whole country covered with variety of flowers, plants, fruits, beaſts, birds, &c. and, by ſlow journeys, returned, and arrived in Siberia in autumn, where they gave an account of what they had ſeen.

This river of Perſida is ſuppoſed to be the boundary of the kingdom of Cathai, on that ſide which lies between India and China, and this gave them great hopes of more conſiderable diſcoveries in proceſs of time; but the troubles which happened in Muſcovy, put an end to the embaſſy they had deſigned to ſend thither, in a ſummer or two. However, the governor of Siberia ſent thither a freſh caravan by land, and a number of covered veſſels down the Oby into the Northern Sea, to diſcover the coaſts of it as far as the mouth of the Jenizea; and the firſt that come, whether by land or water, were to wait for the others a whole year, and then return by the ſame way. Both performed their parts, and made a faithful report of what they had obſerved, which was ſent, ſealed, to the court of Moſcow, to be made uſe of as ſoon as the war was ended. But by the little notice that has ſince been taken of it, it is probable, that the account has been either loſt, or diſcouraged; and that the Muſcovites have returned, in a great meaſure, to their priſtine averſion to all diſcoveries of this kind, and all commerce with other nations: otherwiſe they have very great conveniencies, by means of thoſe rivers, moſt of them navigable, to carry their enquiries a great deal farther after the ſo much deſired NORTH-EAST PASSAGE into CHINA and JAPAN. For inſtance, they have here a large river called the Taas, which falls into the Oby, and which ſeems to come down from a foreſt not far from the Jenizea; whence ſprings another river not far from the former, which falls into the Jenizea; ſo that from the Oby one might, by means of the Taas above mentioned, croſs part of Siberia and Samoieda, and, after about two or three leagues march by land, come to another called the Torgalf, and ſail down it into the Jenizea, the Torgalf having been lately diſcovered by the Tingoeſe and Samoiedes, and found to be navigable, quite into the Jenizea above mentioned.

The Jenizea, ſo lately mentioned, is another river that would no leſs contribute to ſuch uſeful diſcoveries, and, conſequently, may deſerve a particular deſcription in this place. It hath its ſpring-head in ſome lakes near high mountains on the ſouth ſide by Siberia, and thence running towards the northweſt, croſſes the land of the Curges, or Kurgiſſes, where it grows conſiderably larger, by the addition of a great number of brooks and rivers; particularly the Angara, which ſprings out of the lake Baykal above named, and waters the city of Jenizea in the territory of the Tonguſcan Tartars, and called, by moſt travellers, Jenizeſkoi, the Padkamena, and Tonguſca, both of them alſo very conſiderable.

A good way below this it enters into Samoiedia, where it receives, among many of a leſſer ſize, thoſe of Nizaia Tonguſca, which runs through the territories of the Tonguſci, a little below the confluence of which is the monaſtery of Troitzcogo, and ſomewhat lower ſtill, on the oppoſite ſide, the town of Turnganſcoi, where the Turngan falls again into the Jenizea. Next to it, it receives thoſe of the Schoriga, Coreſiga, Gataka, and Ubo; and below theſe one branch of the Guſkina; and a few leagues farther the other, by which is formed the iſland of that name; and, after a great winding

winding along the eaſt ſide of a vaſt ridge of mountains, it divides itſelf, before it falls into the Frozen Sea, and forms a ſecond iſland over-againſt Nova Zembla. We ſhall only obſerve farther, concerning the courſe of this river, that it receives a great number of others, for ſome of which we hardly find any names in maps.

A ſhort account of the many attempts that have been made for the diſcovery of a NORTH-WEST PASSAGE.

The firſt perſon who attempted this diſcovery was John Cabot, employed by Henry VII. of England, towards the end of the fifteenth century, but was prevented from finiſhing his diſcovery by his people mutinying. He was always of opinion there was a paſſage, and that he ſhould have diſcovered it if not prevented by his men.

It was almoſt fourſcore years before another attempt was made, and then undertaken in the year 1576 by Sir Martin Forbiſher, who was ſo little diſcouraged by an unſucceſsful voyage, that he made two more, though with the ſame ſucceſs. In 1583 Sir Humphry Gilbert went on the ſame expedition, but went no farther than Canada, in which voyage he ſettled the cod-fiſhery at Newfoundland. In 1585, Capt. John Davis made an attempt, but without ſucceſs, and two more in the two following years, but without ſucceeding in his great attempt of diſcovering the north-weſt paſſage, though he proceeded to the height of 72 degrees north.

Mr Hudſon, in the year 1610, after having in vain made a trial of the north-eaſt paſſage, attempted the diſcovery of the north-weſt, paſſing through the ſtreights that have ſince borne his name into an open ſea; but was, like John Cabot, prevented from proceeding by a mutiny among his ſeamen, who refuſed to proceed any farther. After him Baffin made three voyages in the years 1612, 1615, and 1616.

In the year 1618, Mr Henry Button, afterwards Sir Henry, attempted to improve upon the diſcoveries made by Mr Hudſon, and wintered at port Nelſon, where, by the extreme cold, he loſt great part of his men. He was the firſt perſon who wintered in thoſe countries.

During theſe attempts of the Engliſh, the king of Denmark, thinking to perfect their attempts by the vicinity of his country, in the year 1605 fitted out two ſhips, and ſent them on the ſame expedition, under the command of Capt. Cunningham, a Scotſman, who ſucceeded no better than the Engliſh; which did not prevent another expedition in the year 1607, when the men mutinied, and obliged the captain to return. This ill ſucceſs only occaſioned the king of Denmark to change the people; and having fitted out two ſhips, ſent them under the command of a Dutchman, named Chriſtian Richardſon, manning his ſhips from Norway and Iceland, but with the ſame ſucceſs, the men mutinying before they ſaw the land of Greenland. In 1619, the Danes ſent Capt. Munk, who wintered there, and loſt all his men but two, with whom he got home in the pinnace, leaving the ſhip behind.

In the year 1631, the Engliſh reſumed the undertaking, and ſent two ſhips, one from London under the command of Capt. Fox, and one from Briſtol under the command of Capt. James, who met near port Nelſon in the month of Auguſt. Fox came home that year, but James wintered in that country, and endured almoſt incredible hardſhips, but at laſt arrived ſafe in England.

The ill ſucceſs of theſe attempts put a ſtop for many years to any ſhips being fitted out for this diſcovery, eſpecially as the Hudſon's-Bay company, which was eſtabliſhed in Charles the IId's time, had taken that diſcovery under their more immediate care, being by their charter obliged to fit out ſhips to ſend on that diſcovery; though we read of only two expeditions, one under the command of Capt. Barlow, who was loſt, and another unſucceſsful under the care of Mr John Scrogg, in the year 1722.

From this time 'till Capt. Middleton's expedition in the king's ſhip Furnace, in the years 1741 and 1742, we hear of no attempt. This voyage occaſioned a controverſy between Arthur Dobbs, Eſq; now governor of North Carolina, and the captain, on his return, but with little ſatisfaction to the public, the principal intent of the voyage, the diſcovery of the paſſage, not being completed.

In the year 1744, an act was paſſed, promiſing a reward of 20,000 l. to be paid by the lords of the treaſury, to any perſons who ſhould ſucceed in diſcovering the north-weſt paſſage. This, with other advantages, which the undertakers propoſed to themſelves by ſuch an attempt, encouraged a ſubſcription for fitting out two ſhips from London, called the Dobbs and California, under the command of the captains Moor and Smith, who ſailed the 20th of May, 1746, and after wintering at port Nelſon in Hudſon's-Bay, to be ready to go on with their expedition early the next year, and making many attempts, which proved to them only the probability of a paſſage, and not the certainty by ſucceſs, they arrived ſafe in Yarmouth-roads on the 14th of October, 1747. The laſt voyages that we have heard of, are thoſe made by Capt. Swaine from Philadelphia, but with as little ſucceſs as any of the former.

Of the NORTH-EAST PASSAGE.

The north-eaſt paſſage has likewiſe been often attempted by the Engliſh, the Dutch, and the Danes, but hitherto unſucceſsfully. There have been, however, as I am informed, ſome diſcoveries made within theſe few years, that have not only a tendency to facilitate ſuch a diſcovery, but are of ſuch a nature, as ſeem to prove demonſtrably the CERTAINTY of ſuch a paſſage: and theſe diſcoveries, if I am rightly informed, are now in the poſſeſſion of an Engliſh gentleman, who has been at no inconſiderable trouble and expence ſilently to come at ſuch intelligence, by reſiding ſeveral years in Ruſſia, and there employing proper people to purſue ſuch meaſures as have been inſtrumental thereunto. Such a happy diſcovery, made by a ſubject of the crown of Great-Britain, muſt not only give eternal glory to the kingdom, but be attended with unſpeakable advantages. As I know ſomething of this gentleman's character, I am confident that he would be the laſt perſon who would offer any thing of this kind to the public, if it was not grounded upon very rational principles.

SICILY. See NAPLES.

SILESIA, a duchy in Germany. This country lies between Bohemia, Moravia, and Luſatia, on the ſouth-weſt, and Poland on the north-eaſt. On the ſide next Bohemia are many barren mountains; but the reſt of the country is good ſoil, abounding with corn, wine, ſweet-cane, or galengal, madder, and flax; and in the mountains which divide it from Moravia are mines of ſilver, the richeſt in Germany: there are others of copper, lead, iron, quickſilver, ſalt, ſalt-petre, and chalk.

TESCHEN, which ſtands between the two rivers Oels and Weichſel, has a good trade in wine and fruit from Hungary, with ſtore of veniſon, wild fowl, and fiſh, and two ſorts of beer, the one of wheat, the other of barley, both much eſteemed.

FREYSTAT, on the river Oels, is noted for mines of iron, and is a great thoroughfare from Cracow to Vienna.

STRIGA ſtands on the river Polſnitz, and is noted for excellent beer, and that remarkable mineral called terra ſigillata.

BRESLAW, which is the metropolis of Sileſia, ſtands at the conflux of the Oder and Olaw, and two other rivers. It is a very populous city, and much frequented by Hungarian, Bohemian, Poliſh, and other foreign merchants. Here is a ſquare near a mile round, where are, on one ſide, three grand warehouſes, about 500 paces in length, like market-halls, full of ſhops, where they ſell ſilks, ſtuffs, fine cloth of all colours, iron wares, &c. and on the other ſide are the houſes of the merchants to whom they belong. But the ſalt-market, in reſpect to the magnificent houſes round it, is reckoned the fineſt of all its ſquares.

CROSSEN ſtands near the conflux of the Oder and Boben: it is a neat old city, and has a conſiderable trade, particularly in linen cloth and earthen ware, by its rivers.

REMARKS.

A miſunderſtanding having ſome time ſubſiſted between the crowns of Great-Britain and Pruſſia, in relation to the SILESIA LOAN, it may be of uſe to poſterity to know the anſwer that was given, by his Britannic Majeſty's order, to the king of Pruſſia's memorial upon that occaſion; and eſpecially ſo, becauſe there is great knowlege therein contained of maritime and commercial affairs, and the whole is drawn up with ſuch extraordinary judgment and accuracy, as will ever do honour to thoſe celebrated lawyers whoſe names are ſuperſcribed thereto.

The duke of NEWCASTLE's LETTER, by his MAJESTY's order, to Monſieur MICHELL, the king of PRUSSIA's ſecretary of the embaſſy, in anſwer to the memorial, and other papers, delivered by Monſieur MICHELL to the duke of NEWCASTLE, on the 23d of November, and 13th of December laſt. Publiſhed by authority. London, printed by Edward Owen, in Warwick-Lane. 1753.

SIR, Whitehall, Feb. 8, 1753.

I loſt no time in laying before the king the memorial which you delivered to me, on the 23d of November laſt, with the papers that accompanied it.

His Majeſty found the contents of it ſo extraordinary, that he would not return an anſwer to it, or take any reſolution upon it, 'till he had cauſed both the memorial, and the Expoſition des Motifs, &c. which you put into my hands ſoon after, by way of juſtification of what had paſſed at Berlin, to be maturely conſidered, and 'till his Majeſty ſhould thereby be enabled to ſet the proceedings of the courts of admiralty here in their true light; to the end that his Pruſſian Majeſty, and the whole world, might be rightly informed of the regularity of their conduct, in which they appear to have followed the only method which has ever been practiſed by nations

tions where diſputes of this nature could happen, and ſtrictly to have conformed themſelves to the law of nations, univerſally allowed to be the only rule in ſuch caſes, when there is nothing ſtipulated to the contrary, by particular treaties between the parties concerned.

This examination, and the full knowlege of the facts reſulting from it, will ſhew ſo clearly the irregularity of the proceedings of thoſe perſons to whom this affair was referred at Berlin, that it is not doubted, from his Pruſſian Majeſty's juſtice and diſcernment, but that he will be convinced thereof, and will revoke the detention of the ſums aſſigned upon Sileſia, the payment of which his Pruſſian Majeſty engaged to the empreſs queen to take upon himſelf, and of which the reimburſement was an expreſs article in the treaties by which the ceſſion of that duchy was made.

I, therefore, have the King's orders to ſend you the report made to his Majeſty upon the papers abovementioned, by Sir George Lee, judge of the Prerogative Court; Dr Paul, his Majeſty's advocate-general in the courts of civil law; Sir Dudley Ryder and Mr Murray, his Majeſty's attorney and ſollicitor-general. This report is founded on the principles of the law of nations, received and acknowleged by authorities of the greateſt weight in all countries; ſo that his Majeſty does not doubt but that it will have the effect deſired.

The points upon which this whole affair turns, and which are deciſive, are,

Firſt, That affairs of this kind are, and can be, cognizable only in the courts belonging to that power where the ſeizure is made; and conſequently, that the erecting foreign courts, or juriſdictions, elſewhere, to take cognizance thereof, is contrary to the known practice of all nations in the like caſes, and therefore a proceeding which none can admit.

Secondly, That thoſe courts, which are generally ſtiled courts of admiralty, and which include both the inferior courts, and the courts of appeal, always decide according to the univerſal law of nations only, except in thoſe caſes where there are particular treaties between the powers concerned, which have altered the diſpoſitions of the law of nations, or deviate from them.

Thirdly, That the deciſions in the caſes complained of appear, by the incloſed report, to have been made ſingly, upon the rule preſcribed by the law of nations; which rule is clearly eſtabliſhed, by the conſtant practice of other nations, and by the authority of the greateſt men.

Fourthly, That in the caſe in queſtion, there cannot even be pretended to be any treaty that has altered this rule, or by virtue of which the parties could claim any privileges which the law of nations does not allow them.

Fifthly, That as, in the preſent caſe, no juſt grievance can be alleged, nor the leaſt reaſon given, for ſaying, That juſtice has been denied, when regularly demanded; and as, in moſt of the caſes complained of, it was the complainants themſelves who neglected the only proper means of procuring it, there cannot, conſequently, be any juſt cauſe, or foundation, for reprizals.

Sixthly, That, even though reprizals might be juſtified by the known and general rules of the law of nations, it appears by the report, and indeed from conſiderations which muſt occur to every body, that ſums due to the king's ſubjects by the empreſs queen, and aſſigned by her upon Sileſia, of which ſums his Pruſſian Majeſty took upon himſelf the payment, both by the treaty of Breſlau, and by that of Dreſden, in conſideration of the ceſſion of that country, and which, by virtue of that very ceſſion, ought to have been fully and abſolutely diſcharged in the year 1745, that is to ſay, one year before any of the facts complained of did happen; could not, either in juſtice or reaſon, or according to what is the conſtant practice between all the moſt reſpectable powers, be ſeized, or ſtopped, by way of reprizals.

The ſeveral facts which are particularly mentioned above, are ſo clearly ſtated and proved, in the incloſed report, that I ſhall not repeat the particular reaſons and authorities alleged in ſupport of them, and in juſtification of the conduct and proceedings in queſtion. The King is perſuaded, that theſe reaſons will be ſufficient, alſo, to determine the judgment of all impartial people in the preſent caſe.

It is material to obſerve upon this ſubject, that this debt on Sileſia was contracted by the late emperor Charles the Sixth, who engaged not only to fulfil the conditions expreſſed in the contract, but even to give the creditors ſuch further ſecurity as they might afterwards reaſonably aſk. This condition has been very ill performed by a transfer of the debt, which had put it in the power of a third perſon to ſeize and confiſcate it.

You will not be ſurprized, Sir, that, in an affair which has ſo greatly alarmed the whole nation, who are intitled to that protection which his Majeſty cannot diſpenſe with himſelf from granting, the King has taken time to have things examined to the bottom, and that his Majeſty finds himſelf obliged, by the facts, to adhere to the juſtice and legality of what has been done in his courts, and not to admit the irregular proceedings which have been carried on elſewhere.

The late war furniſhed many inſtances, which ought to have convinced all Europe how ſcrupulouſly the courts here do juſtice upon ſuch occaſions. They did not even avail themſelves of an open war, to ſeize or detain the effects of the enemy, when it appeared that thoſe effects were taken wrongfully before the war. This circumſtance muſt do honour to their proceedings, and will, at the ſame time, ſhew, that it was as little neceſſary as proper, to have recourſe elſewhere to proceedings intirely new and unuſual.

The King is fully perſuaded, that what has paſſed at Berlin, has been occaſioned ſingly by the ill-grounded informations which his Pruſſian Majeſty has received of theſe affairs; and does not at all doubt, but that, when his Pruſſian Majeſty ſhall ſee them in their true light, his natural diſpoſitions to juſtice and equity, will induce him immediately to rectify the ſteps which have been occaſioned by thoſe informations, and to complete the payment of the debt charged on the duchy of Sileſia, according to his engagements for that purpoſe.

I am, with much Conſideration,

SIR,

Your moſt Obedient,

Humble Servant,

HOLLES NEWCASTLE.

To the KING's Moſt Excellent MAJESTY.

May it pleaſe your Majeſty,

In obedience to your Majeſty's commands, ſignified to us by his grace the duke of Newcaſtle, we have taken the memorial, ſentence of the Pruſſian commiſſioners, and liſts marked A and B, which were delivered to his grace by Monſieur Michell, the Pruſſian ſecretary here, on the 23d of November laſt, and alſo the printed Expoſition des Motifs, &c. which was delivered to his grace the 13th of December laſt, into our ſerious conſideration; and we have directed the proper officer to ſearch the regiſters of the court of admiralty, and inform us how the matter appeared from the proceedings there, in relation to the caſes mentioned in the ſaid liſts A and B, which he has accordingly done.

And your Majeſty having commanded us to report our opinion, concerning the nature and regularity of the proceedings under the Pruſſian commiſſion, mentioned in the ſaid memorial, and of the claim, or demand, pretended to be founded thereupon, and how far the ſame are conſiſtent with, or contrary to, the law of nations, and any treaties ſubſiſting between your Majeſty and the king of Pruſſia, the eſtabliſhed rules of admiralty juriſdiction, and the laws of this kingdom:

For the greater perſpicuity, we beg leave to ſubmit our thoughts upon the whole matter in the following method:

Firſt, To ſtate the clear eſtabliſhed principles of law.

Secondly, To ſtate the fact.

Thirdly, To apply the law to the fact.

Fourthly, To obſerve upon the queſtions, rules, and reaſonings alleged in the ſaid memorial, ſentence of the Pruſſian commiſſioners, and Expoſition des Motifs, &c. which carry the appearance of objections, to what we ſhall advance upon the former heads.

Firſt, As to the law.

When two powers are at war, they have a right to make prizes of the ſhips, goods, and effects, of each other, upon the high ſeas: whatever is the property of the enemy, may be acquired by capture at ſea; but the property of a friend cannot be taken, provided he obſerves his neutrality.

Hence the law of nations has eſtabliſhed,

That the goods of an enemy, on board the ſhip of a friend, may be taken.

That the lawful goods of a friend, on board the ſhip of an enemy, ought to be reſtored.

That contraband goods, going to the enemy, though the property of a friend, may be taken as prize, becauſe ſupplying the enemy with what enables him better to carry on the war, is a departure from neutrality.

By the maritime law of nations, univerſally and immemorially received, there is an eſtabliſhed method of determination, whether the capture be or be not lawful prize.

Before the ſhip or goods can be diſpoſed of by the captor, there muſt be a regular judicial proceeding, wherein both parties may be heard, and condemnation thereupon as prize, in a court of admiralty, judging by the law of nations, and treaties.

The proper and regular court for theſe condemnations, is the court of that ſtate to whom the captor belongs.

The evidence to acquit or condemn, with or without coſts or damages, muſt, in the firſt inſtance, come merely from the ſhip taken, viz. the papers on board, and the examination, on oath, of the maſter, and other principal officers; for which purpoſe there are officers of admiralty in all the conſiderable ſea-ports of every maritime power at war, to examine the captains, and other principal officers of every ſhip, brought in as prize, upon general and impartial interrogatories: if there do not appear from thence ground to condemn, as enemies property, or contraband goods going to the

enemy, there muſt be an acquittal, unleſs, from the aforeſaid evidence, the property ſhall appear ſo doubtful, that it is reaſonable to go into further proof thereof.

A claim of ſhip, or goods, muſt be ſupported by the oath of ſome body, at leaſt as to belief.

The law of nations requires good faith: therefore every ſhip muſt be provided with complete and genuine papers, and the maſter, at leaſt, ſhould be privy to the truth of the tranſaction.

To inforce theſe rules, if there be falſe or colourable papers; if any papers be thrown over-board; if the maſter and officers examined in PREPARATORIO groſsly prevaricate; if proper ſhips-papers are not on board; or if the maſter and crew cannot ſay whether ſhip or cargo be the property of a friend or enemy: the law of nations allows, according to the different degrees of miſbehaviour or ſuſpicion, ariſing from the fault of the ſhip taken, and other circumſtances of the caſe, coſts to be paid, or not to be received, by the claimant, in caſe of acquittal and reſtitution. On the other hand, if a ſeizure is made without probable cauſe, the captor is adjudged to pay coſts and damages: for which purpoſe, all privateers are obliged to give ſecurity for their good behaviour; and this is referred to, and expreſsly ſtipulated by, many treaties *. [See our articles PRIVATEERS, and MARITIME, or MARINE AFFAIRS, and TREATIES of COMMERCE.]

* Treaty between England and Holland, 17 Feb. 1668, art. 13.—Treaty 1 Dec. 1674, art. 10.—Treaty between England and France, at St Germains, 24 Feb. 1677, art. 10.—Treaty of commerce at Ryſwick, Sept. 20, 1697, between France and Holland, art. 30.—Treaty of commerce at Utrecht, 31 March, 1713, between Great-Britain and France, art. 29.

Though from the ſhips papers, and the preparatory examinations, the property does not ſufficiently appear to be neutral, the claimant is often indulged with time, to ſend over affidavits to ſupply that defect: if he will not ſhew the property, by ſufficient affidavits, to be neutral, it is preſumed to belong to the enemy. Where the property appears from evidence not on board the ſhip, the captor is juſtified in bringing her in, and excuſed paying coſts, becauſe he is not in fault; or, according to the circumſtances of the caſe, may be juſtly intitled to receive his coſts.

If the ſentence of the court of admiralty is thought to be erroneous, there is in every maritime country a ſuperior court of review, conſiſting of the moſt conſiderable perſons, to which the parties who think themſelves aggrieved may appeal; and this ſuperior court judges by the ſame rule which governs the court of admiralty, viz. the law of nations, and the treaties ſubſiſting with that neutral power whoſe ſubject is a party before them.

If no appeal is offered, it is an acknowlegement of the juſtice of the ſentence by the parties themſelves, and concluſive.

This manner of trial and adjudication is ſupported, alluded to, and inforced, by many treaties *.

* As appears with reſpect to courts of admiralty adjudging the prizes taken by thoſe of their own nation, and with reſpect to the witneſſes to be examined in thoſe caſes, from the following treaties:—Treaty between England and Holland, 17 Feb. 1668, art. 9 and 14.—Treaty 1 Dec. 1674, art. 11.—Treaty 29 April, 1689, art. 12, 13.—Treaty between England and Spain, 23 May, 1667, art. 23.—Treaty of commerce at Ryſwick, 20 Sept. 1697, between France and Holland, art. 26 and 31.—Treaty between England and France, 3 Nov. 1655, art. 17 and 18.—Treaty of commerce between England and France at St Germains, 29 March, 1632, art. 5 and 6.—Treaty at St Germains, 24 Feb. 1677, art. 7.—Treaty of commerce between Great-Britain and France, at Utrecht, 31 March, 1713, art. 26 and 30.—Treaty between England and Denmark, 29 Nov. 1669, art. 23 and 34. Heineccius, who was privy-counſellor to the king of Pruſſia, and held in the greateſt eſteem, in his treatiſe de Navibus ob vecturam vetitarum mercium commiſſis, cap. 2. § 17 and 18. ſpeaks of this method of trial.
With reſpect to appeals, or reviews:—From treaty between England and Holland, 1 Dec. 1674, art. 12. as it is explained by art. 2. of the treaty at Weſtminſter, 6 Feb. 1715-16.—Treaty between England and France, at St Germains, 24 Feb. 1677, art. 12.—Treaty of commerce at Ryſwick, 20 Sept. 1697, between France and Holland, art. 33.—Treaty of commerce at Utrecht, 31 March, 1713, between Great-Britain and France, art. 31 and 32; and other treaties.

In this method all captures at ſea were tried, during the laſt war, by Great-Britain, France, and Spain, and ſubmitted to by the neutral powers. In this method, by courts of admiralty acting according to the law of nations, and particular treaties, all captures at ſea have immemorially been judged of, in every country of Europe: any other method of trial would be manifeſtly unjuſt, abſurd, and impracticable.

Though the law of nations be the general rule, yet it may, by mutual agreement between two powers, be varied or departed from; and where there is an alteration or exception, introduced by particular treaties, that is the law between the parties to the treaty, and the law of nations only governs ſo far as it is not derogated from by the treaty.

Thus, by the law of nations, where two powers are at war, all ſhips are liable to be ſtopped, and examined to whom they belong, and whether they are carrying contraband goods to the enemy: but particular treaties have enjoined a leſs degree of ſearch, on the faith of producing ſolemn paſſports, and formal evidences of property, duly atteſted.

Particular treaties too have inverted the rule of the law of nations, and, by agreement, declared the goods of a friend, on board the ſhip of an enemy, to be prize; and the goods of an enemy, on board the ſhip of a friend, to be free, as appears from the treaties already mentioned, and many others *.

* Particularly by the aforeſaid treaty between England and Holland, 1 Dec. 1674; and the treaty of Utrecht between Great-Britain and France.

So likewiſe, by particular treaties, ſome goods reputed contraband by the law of nations, are declared to be free.

If a ſubject of the king of Pruſſia is injured by, or has a demand upon, any perſon here, he ought to apply to your Majeſty's courts of juſtice, which are equally open and indifferent to foreigner or native: ſo vice verſa, if a ſubject here is wronged by a perſon living in the dominions of his Pruſſian Majeſty, he ought to apply for redreſs in the king of Pruſſia's courts of juſtice.

If the matter of complaint be a capture at ſea during war, and the queſtion relative to prize, he ought to apply to the judicatures eſtabliſhed to try theſe queſtions.

The law of nations founded upon juſtice, equity, convenience, and the reaſon of the thing, and confirmed by long uſage, don't allow of repriſals, except in caſe of violent injuries, directed or ſupported by the ſtate, and juſtice abſolutely denied, in re minime dubiâ, by all the tribunals, and afterwards by the prince.

* Grotius de Jure Belli ac Pacis, lib. 3. cap. 2. §. 4, 5.
Treaty between England and Holland, 31 July, 1667, art. 31. Repriſals ſhall not be granted 'till juſtice has been demanded according to the ordinary courſe of law.
Treaty of commerce at Ryſwic, 20 Sept. 1697, between France and Holland, art. 4. Repriſals ſhall not be granted, but on manifeſt denial of juſtice.

Where the judges are left free, and give ſentence according to their conſcience, though it ſhould be erroneous, that would be no ground for repriſals. Upon doubtful queſtions, different men think and judge differently; and all a friend can deſire is, that juſtice ſhould be as impartially adminiſtred to him, as it is to the ſubjects of that prince in whoſe courts the matter is tried.

Secondly, As to the FACT.

We have ſubjoined here two liſts, tallying with thoſe marked A and B, which were delivered to his grace the duke of Newcaſtle, by Monſ. Michell, with the ſaid memorial, the 23d of November laſt, and are alſo printed at the end of the ſaid Expoſition des Motifs, &c. from whence it will appear, that as to the liſt A, which contains 18 ſhips, and their cargoes,

4	If ever taken, were reſtored by the captors themſelves, to the ſatisfaction of the Pruſſians, who never have complained in any court of juſtice here.
1	Was reſtored by ſentence, with full coſts and damages, which were liquidated at 2801 l. 12 s. 1 d. ſterling.
3	Ships were reſtored by ſentence, with freight, for ſuch of the goods as manifeſtly belonged to the enemy, and were condemned.
4	Ships were reſtored by ſentence, but the cargoes, or part of them, condemned as prize or contraband, and are not now alleged, in the liſts A or B, to have been Pruſſian property.
5	Ships and cargoes were reſtored by ſentence, but the claimant ſubjected to pay coſts, becauſe, from the ſhip-papers, and preparatory examinations, there was ground to have condemned, and the reſtitution was decreed merely on the faith of affidavits afterwards allowed.
1	Ship and cargo was reſtored by ſentence upon an ap-
—	peal, but, from the circumſtances of the capture, with-
18	out coſts on either ſide.

There need no obſervations upon this liſt. As to the eight caſes firſt above-mentioned, there cannot be the colour of complaint.

As to the four next, the goods muſt be admitted to have been rightly condemned, either as enemy's property or contraband, for they are not now mentioned in the liſts A or B.

If contraband, the ſhip could have neither freight nor coſts, and the ſentences were favourable in reſtoring the ſhips, upon preſumption that the owners of the ſhips were not acquainted with the nature of the cargo, or owners thereof. If enemy's property, the ſhips could not be entitled to freight, becauſe the bills of lading were falſe, and purported the property to belong to Pruſſians.

The ſhips could not be entitled to coſts, becauſe the cargoes, or part of them, being lawful prize, the ſhips were rightly brought in.

As the ſix remaining ſhips and cargoes were reſtored, the only queſtion muſt be, upon the paying or not receiving coſts, which depends upon the circumſtances of the capture, the

fairneſs

fairneſs of the ſhip's documents, and conduct of her crew; and neither the Pruſſian commiſſioners, the ſaid memorial, or ſaid Expoſition des Motifs, &c. alleges a ſingle reaſon why, upon the particular circumſtances of theſe caſes, the ſentences were wrong.

As to the liſt B.

Every ſhip on board which the ſubjects of Pruſſia claim to have had property, was bound to, or from, a port of the enemy; and many of them appeared clearly to be, in part, laden with the goods of the enemy, either under their own, or fictitious names.

In every inſtance where it is ſuggeſted that any part of the cargo belonged to a Pruſſian ſubject, though his property did not appear from the ſhip's papers, or preparatory examinations, which it ought to have done, ſufficient time was indulged to that Pruſſian ſubject, to make an affidavit that the property was bona fide in him; and the affidavit of the party himſelf has been received as proof of the property of the Pruſſian, ſo as to intitle him to reſtitution.

Where the party won't ſwear at all, or ſwears evaſively, it is plain he only lends his name to cover the enemy's property, as often came out to be the caſe, beyond the poſſibility of doubt.

It appears by a letter $\frac{29\text{ May}}{9\text{ June}}$, 1747, from Monſ. Andrié, to his Pruſſian Majeſty, exhibited in a cauſe, and certified to be a true extract by Monſ. Michell, under his hand, that this colourable manner of ſcreening the goods of the enemy was ſtated in the following words:

'Your Majeſty's ſubjects ought not to load on board neutral 'ſhips any goods really belonging to the enemies of England, 'but to load them for their own account, whereby they may 'ſafely ſend them to any country they ſhall think proper, 'without running any riſk: then, if privateers commit any 'damage to the ſhips belonging to your Majeſty's ſubjects, 'you may depend on full juſtice being done here, as in all 'the like caſes hath been done.'

Liſt B contains thirty-three caſes:

2 Two of them never came before a court of juſtice in England, but (if taken) were reſtored by the captors themſelves, to the intire ſatisfaction of the owners.

16 In ſixteen of them, the goods claimed by the Pruſſian ſubject appear to have been actually reſtored, by ſentence, to the maſters of the ſhips in which they were laden; and, by the cuſtoms of the ſea, the maſter is in the place of the lader, and anſwerable to him.

14 In fourteen of the caſes, the Pruſſian property was not verified by the ſhip's papers, or preparatory examinations, or claimant's own affidavit, which he was allowed time to make.

1 And the other cauſe, with reſpect to part of the goods,

— is ſtill depending, neither party having moved for judg-

33 ment *. And ſo conſcious were the claimants that the court of admiralty did right, there is not an appeal, in a ſingle inſtance, in liſt B, and but one in liſt A.

* The Pruſſian has ſince applied for judgment, on the 29th of January, and obtained reſtitution.

Thirdly, To apply the LAW to the FACT.

The ſixth queſtion in the ſaid Expoſition des Motifs, &c. ſtates the right of repriſals to be, Puiſqu'on leur a ſi long tems denié toute la juſtice, qu'ils étoient fondes de demander.

The ſaid memorial founds the juſtice and propriety of his Pruſſian Majeſty's having recourſe to repriſals, becauſe his ſubjects, N'ont pu obtenir juſqu'à preſent aucune juſtice des tribunaux Anglois qu'ils ont reclamès, ou du gouvernment auquel ils ont portè leurs plaintes. And in another part of the memorial it is put, Apres avoir en vain demandè des reparations de ceux qui ſeuls pouvoient les faire.

The contrary of all which is manifeſt, from the above ſtate, and liſts hereto annexed.

In ſix of the caſes ſpecified, (if ſuch captures ever were made) the Pruſſian ſubjects were ſo well ſatisfied with the reſtitution made by the captors, that they never complained in any court whatſoever in this kingdom.

The reſt were judged of by a court of admiralty, the only proper court to decide of captures at ſea, both with reſpect to the reſtitution and the damages and coſts, acting according to the law of nations, the only proper rule to decide by: and juſtice has been done by the court of admiralty ſo impartially, that all the ſhips alleged in liſt A to have been Pruſſian, were reſtored; and all the cargoes mentioned in either liſt, A or B, were reſtored, excepting 15, one of which is ſtill undetermined.

And, in all caſes in both liſts, juſtice was done, ſo intirely to the conviction of the private conſcience of the Pruſſian claimants, that they have acquieſced under the ſentences, without appealing, except in one ſingle inſtance, where the part of the ſentence complained of was reverſed.

Though the Pruſſian claimants muſt know, that, by the law of nations, they ought not to complain to their own ſovereign, 'till injuſtice, in re minime dubiâ, was finally done them, paſt redreſs; and though they muſt know that rule of the law of nations held more ſtrongly upon this occaſion, becauſe the property of the prize was given to the captors, and ought, therefore, to be litigated with them. The Pruſſian, who, by his own acquieſcence, ſubmits to the captors having the prize, cannot afterwards, with juſtice, make a demand upon the ſtate. If the ſentence was wrong, it is owing to the fault of the Pruſſian that it was not redreſſed. But it is not attempted to be ſhewn even now, that theſe ſentences were unjuſt in any part of them, according to the evidence and circumſtances appearing before the court of admiralty, and that is the criterion.

For as to the Pruſſian commiſſion to examine theſe caſes, ex parte, upon new ſuggeſtions, it never was attempted in any country of the world before: prize, or not prize, muſt be determined by courts of admiralty belonging to the power whoſe ſubjects make the capture: every foreign prince in amity has a right to demand that juſtice ſhall be done his ſubjects in thoſe courts, according to the law of nations, or particular treaties, where any are ſubſiſting. If in re minime dubiâ theſe courts proceed upon foundations directly oppoſite to the law of nations, or ſubſiſting treaties, the neutral ſtate has a right to complain of ſuch a determination.

But there never was, nor ever can be, any other equitable method of trial. All the maritime nations of Europe have, when at war, from the earlieſt times, univerſally proceeded in this way, with the approbation of all the powers at peace. Nay, the perſons acting under this extraordinary and unheard-of commiſſion from his Pruſſian Majeſty, don't pretend to ſay, that, in the four caſes of goods condemned here, for which ſatisfaction is demanded in liſt A, the property really belonged to Pruſſian ſubjects: but they profeſs to proceed upon this principle, evidently falſe, that, though theſe cargoes belonged to the enemy, yet being on board any neutral ſhip, they were not liable to enquiry, ſeizure or condemnation.

Fourthly, From the queſtions, rules, reaſonings, and matters alleged in the ſaid memorial, ſentence of the Pruſſian commiſſioners, and Expoſition des Motifs, &c. the following propoſitions may be drawn, as carrying the appearance of objections to what has been above laid down.

First PROPOSITION.

That, by the law of nations, the goods of an enemy cannot be taken on board the ſhip of a friend: and this the Pruſſian commiſſioners lay down as the baſis of all they have pretended to do.

Anſwer. The contrary is too clear to admit of being diſputed: it may be proved by the authorities of every writer upon the law of nations; ſome of different countries are referred to *. It may be proved by the conſtant practice, ancient and modern; but the general rule cannot be more ſtrongly approved, than by the exception which particular treaties have made to it †.

* Il Conſolato del Mare, cap. 273, expreſsly ſays, The enemy's goods found on board a friend's ſhip, ſhall be confiſcated. And this is a book of great authority.
GROTIUS de Jure Belli ac Pacis, lib. iii. cap. 1. § 5. numero 4, in the notes, cites this paſſage in the Il Conſolato, in his notes lib. iii. cap. 6. §. 6.
LOCCENIUS de Jure Maritimo, lib. ii cap. 4. §. 12.
VOET de Jure Militari, cap 5. nu 21.
HEINECCIUS, the learned Pruſſian before quoted, de Navibus ob Vecturam vetitarum Mercium commiſſis, cap. 2. §. 9, is clear and explicit upon this point.
BYNKERSHOEC Quæſtiones Juris Publici, lib. i. cap. 14. per totum.
ZOUCH (an Engliſhman) in his book de Judicio inter Gentes, pars 2 §. 8. numero 6.
Treaty between Great-Britain and Sweden, 23 Oct. 1661, art 12 and 13.—Treaty between Great Britain and Denmark, 29 Nov. 1669, art 2d.—And the paſſport, or certificate, ſettled by that treaty, are material as to this point.

† Treaty between France and England, 24 Feb 1677, art. 3. Treaty of Utrecht between France and England, 1713, art. 17.—Treaty between England and Holland, 17 Feb. 1668, art. 10.—Treaty between England and Holland, 1 Dec. 1674, art. 8.—Treaty between England and Portugal, 10 July, 1654, art. 23.—Treaty between France and the States General at Utrecht, 11 April, 1713, art. 26.

Second PROPOSITION.

It is alleged that lord Carteret, in 1744, by two verbal declarations, gave aſſurances in your Majeſty's name, that nothing on board a Pruſſian ſhip ſhould be ſeized, except contraband; conſequently, that all effects not contraband, belonging to the enemy, ſhould be free, and that theſe aſſurances were afterwards confirmed in writing, by lord Cheſterfield, the 5th of January, 1747.

Anſwer. The fact makes this queſtion not very material, becauſe there are but four inſtances, in liſts A or B, where any goods on board a Pruſſian ſhip have been condemned, and no ſatisfaction is pretended to be demanded for any of thoſe four cargoes and liſts A and B: however, it may be proper to ſhew how groundleſs this pretence is.

Taking the words alleged to have been ſaid by lord Carteret, as they are ſtated, they don't warrant the inferences endeavoured

voured to be drawn from them; they import no new ſtipulation, different from the law of nations, but expreſsly profeſs to treat the Pruſſians upon the ſame foot with the ſubjects of other neutral powers under the like circumſtances, i. e. with whom there was no particular treaty: for the reference to other neutral power, cannot be underſtood to communicate the terms of any particular treaty. It is not ſo ſaid. The treaties with Holland, Sweden, Ruſſia, Portugal, Denmark, &c. all differ. Who can ſay which was communicated? There would be no reciprocity; the king of Pruſſia don't agree to be bound by the clauſes to which other powers have, by their reſpective treaties, agreed. No Pruſſian goods, on board an enemy's ſhips, have ever been condemned here; and yet they ought, if the treaties with Holland were to be the rule between Great-Britain and Pruſſia; nay, if theſe treaties were to be the rule, all now contended for, on the part of Pruſſia, is clearly wrong: becauſe, by treaty, the Dutch, in the laſt refort, are to apply to the court of appeal here.

Treaty of alliance between Great-Britain and Holland, at Weſtminſter, the 6th of February, 1715-16, article 2.

'Whereas ſome diſputes have happened, touching the explanation of the 12th article of the treaty marine, in 1674, it 'is agreed and concluded, for deciding any difficulty upon 'that matter, to declare, by theſe preſents, that, by the 'proviſions mentioned in the ſaid article, are meant thoſe 'which are received by cuſtom in Great-Britain and in the 'United Provinces, and always have been received, and 'which have been granted, and always are granted, in the 'like caſe, to the inhabitants of the ſaid countries, and to 'every foreign nation.'

Lord Carteret is ſaid twice to have refuſed, in which Monſ. Andrié acquieſces, to give any thing in writing, as not uſual in England.

Suppoſing the converſations to mean no more than a declaration of courſe, that juſtice ſhould be done to the Pruſſians, in like manner as to any other neutral power with whom there was no treaty; there was no occaſion for inſtruments in writing, becauſe in England the crown never interferes with the courſe of juſtice. No order, or intimation, is ever given to any judge. Lord Carteret, therefore, knew that it was the duty of the court of admiralty to do equal juſtice, and that they would, of themſelves, do what he ſaid to Monſ. Andrié.

Had it been intended, by agreement, to introduce between Pruſſia and England a variation, in any particular, from the law of nations, and, conſequently, a new rule for the court of admiralty to decide by, it could only be done by a ſolemn treaty, in writing, properly authorized and authenticated; the memory of it could not otherwiſe be preſerved, the parties intereſted, and the courts of admiralty could not, otherwiſe, take notice of it.

But lord Cheſterfield's confirmation, in a letter of the 5th of January, 1747, being relied upon, the books of the ſecretary's office have been ſearched, and the letter to Monſ. Michell is found, which is verbatim as follows:

'Monſieur, à Whitehall, le 5 Janvr, 1747-8.

'Ayant eu l'honneur de recevoir les ordres du roy ſur ce qui 'a formé le ſujet du memoire, que vous m'avez remis, du '8 de ce Mois, N. S. Je n'ai pas voulu tarder à vous in'former, que ſa Majeſté, pour ne rien omettre, par où elle 'peut temoigner ſes attentions envers le Roy votre maitre, 'ne fait nulle difficulté de declarer, qu'elle n'a jamais eu 'l'intention ni ne l'aura jamais, de donner le moindre em'pechement à la navigation des ſujets Pruſſiens, tant qu'ils 'auront ſoin d'exercer leur commerce d'une maniere licite, 'et conformément à l'ancien uſage établi et reconnu parmi 'les puiſſances neutres.

'Que ſa Majeſté Pruſſienne ne peut pas ignorer, qu'il y a 'des traités de commerce qui ſubſiſtent actuellement, entre 'la Grande Bretagne, et certains etats neutres, et qu'au 'moyen des engagements formellement contractés de part et 'd'autre, par ces mêmes traités, tout ce qui regarde la ma'niere d'exercer leur commerce reciproquement, a été finale'ment conſtaté et regle.

'Qu'en même tems il ne paroit point, qu'aucun traité de la 'nature ſuſdite exiſte à preſent, ou a jamais exiſtè, entre ſa 'Majeſté et le roy de Pruſſe; mais, que pourtant, cela n'a 'jamais empeché que les ſujets Pruſſiens n'ayent été favorisès 'par l'Angleterre, par raport à leur navigation, autant que 'les autres nations neutres: et cela ètant, ſa Majeſté ne pre'ſuppoſe pas, que l'ideè du Roy votre maitre, ſeroit d'exiger 'd'elle des diſtinctions, encore moins de preferences, en fa'veur des ſujets à cet égard.

'Que de plus ſa Majeſté Pruſſienne eſt trop eclairée pour ne 'pas connoitre, qu'il y a des loix fixes et etablies dans ce 'gouvernement, dont on ne peut nullement s'écarter; et 'que s'il arrivoit que la marine Angloiſe s'avisâ de faire la 'moindre injuſtice aux ſujets commerçans du Roy votre 'maitre, il y a un tribunal ici, ſavoir, la haute cour de l'ami'rauté, à laquelle ils ſe trouvent en droit de s'addreſſer et de 'porter leurs plaintes; aſſurés d'avance, en pareil cas, qu'on 'leur y rendra bonne juſtice; les procedés juridiques de la'dite cour étant ayant été de tout tems hors d'atteinte, et 'irreprochables; temoin, nombre d'exemples, où des vaiſ'ſeaux neutres, pris illicitement, ont été reſtitutés avec fraix 'et dommages aux proprietaires.

'Voici ce que le Roy m'a ordonné de vour repondre ſur le 'contenu de votre dit memoire; et ſa Majeſté ne ſauroit que 'ſe flatter, qu'en conſequence de ſe que je viens d'avancer, 'il ne reſtera plus rien à deſirer au Roy votre maitre relative'ment à l'objet dont il eſt queſtion; et le Roy s'en croit d'au'tant plus aſſuré, qu'il eſt perſuadé que ſa Majeſté Pruſſienne 'ne voudroit rien demander, qui ne fut équitable.

'Je ſuis avec bien de la conſideration,

'Monſieur,

'Votre très humble, &

'Très obeiſſant Serviteur,

'CHESTERFIELD.'

There need no obſervations. It is explicit, and, in expreſs terms, puts Pruſſia upon the foot of other neutral powers with whom there was no treaty, and points out the proper way of applying for redreſs.

The verbal declarations made by lord Carteret in 1744, which are ſaid to have been confirmed by this letter from lord Cheſterfield, cannot have meant more than the letter expreſſes.

And it is manifeſt, by the above extract from Monſ. Andrié's letter to his Pruſſian Majeſty, that in May 1747, Monſ. Andrié himſelf underſtood, that goods of the enemy, taken on board neutral ſhips, ought to be condemned as prize.

It is evident, from authentic acts, that the ſubjects of Pruſſia never underſtood that any new right was communicated to them.

Before the year 1746, the Pruſſians don't appear to have openly engaged in covering the enemy's property.

The men of war and privateers could not abſtain from captures, in conſequence of lord Carteret's verbal aſſurances in 1744, becauſe they never were nor could be known: and there was no occaſion to notify them, ſuppoſing them only to promiſe impartial juſtice. For all ſhips of war were bound to act, and courts of admiralty to judge, according to the law of nations and treaties.

'Till 1746, the Pruſſian documents were, a certificate of the admiralty, upon the oath of the builder, that the ſhip was Pruſſian built; and a certificate of the admiralty, upon the oath of the owner, that the ſhip was Pruſſian property.

From 1746, the Pruſſians engaged in the gainful practice of covering the enemy's goods, but were at a loſs in what ſhape, and upon what pretences, it might beſt be done.

On board the ſhip 3 Soeurs, was found a paſs, bearing date at Stettin the 6th of October 1746, under the royal ſeal of the Pruſſian regency of Pomerania, &c. alleging the cargo, which was ſhip-timber, bound for Port l'Orient, to be Pruſſian property, and, in conſequence thereof, claiming freedom of the ſhip.

Claiming freedom to the ſhip, from the property of the cargo, being quite new, the propoſition was afterwards reverſed: and on board a ſhip called the Jumeaux, was found a paſs, bearing date at Stettin the 27th of June 1747, under the royal ſeal, &c. alleging the ſhip to be Pruſſian property, and, in conſequence thereof, claiming freedom to the goods.

But this paſs was not ſolely relied on, for there was alſo found on board the ſame ſhip, another paſs, bearing date at Stettin the 14th of June 1747, under the royal ſeal, &c. alleging the cargo to be Pruſſian property.

And it is remarkable, that the oaths, upon which theſe paſſes were granted, appeared manifeſtly to be falſe: and neither of the cargoes to which they relate, are now ſo much as alleged to have been Pruſſian property in ſaid liſts A. or B.

It being mentioned, in the ſaid Expoſition des Motifs, &c. that Monſ. Michell, in September 1747, made verbal repreſentations to lord Cheſterfield, in reſpect to the cargo taken on board the ſaid ſhip called the 3 Soeurs, which was claimed as Pruſſian property; and no mention being made in liſts A and B of the ſaid cargo, we directed the proceedings in that cauſe to be laid before us, where it appears in the fulleſt and cleareſt manner, from the ſhip-papers and depoſitions, that the cargo was timber, laden on the account, and at the riſque of Frenchmen, to whom it was to be delivered at Port l'Orient, they paying freight according to charter-party. That the Pruſſian claimant was neither freighter, lader, or conſignee; and had no other intereſt or concern in the matter, than to lend his name and conſcience: for he ſwore that the cargo was his property, and laden on or before the 6th of October 1746; and yet the ſhip was then in ballaſt, and the whole of the cargo in queſtion was not laden before May 1747.

Several other Pruſſian claims had, in like manner, come out ſo clearly to be merely colourable, that Monſ. Andrié, from his ſaid letter, $\frac{29 \text{ May}}{9 \text{ June}}$, 1747, appears to have been aſhamed of them.

Third PROPOSITION.

That lord Carteret, in his ſaid two converſations, ſpecified, in your Majeſty's name, what goods ſhould be deemed contraband.

Anſwer. The fact makes this queſtion totally immaterial, becauſe no goods condemned as contraband, or which were alleged to be ſo, are ſo much as now ſuggeſted to have been Pruſſian property in the ſaid liſts A and B; and, therefore, whether as enemy's property or contraband, they were either way rightly condemned; and the bills of lading being falſe, the ſhips could not be entitled to freight.

But, if the queſtion was material, the verbal declarations of a miniſter in converſation, might ſhew what he thought contraband by the law of nations; but never could be underſtood to be equivalent to a treaty, derogating from that law. All the obſervations, upon the other part of theſe verbal declarations, hold equally as to this.

Fourth PROPOSITION.

That the Britiſh miniſters have ſaid, that theſe queſtions were decided according to the laws of England.

Anſwer. They muſt have been miſunderſtood, for the law of England ſays, that all captures at ſea, as prize, in time of war, muſt be judged of in a court of admiralty, according to the law of nations, and particular treaties, where there are any.

There never exiſted a caſe, where a court, judging according to the laws of England only, ever took cognizance of prize.

The property of prizes being given during the laſt war to the captors, your Majeſty could not arbitrarily releaſe the capture, but left all caſes to the deciſion of the proper courts, judging by the law of nations and treaties, where there were any: and it never was imagined, that the property of a foreign ſubject, taken as prize on the high ſeas, could be affected by laws peculiar to England.

Fifth PROPOSITION.

That your Majeſty could no more erect tribunals for trying theſe matters than the king of Pruſſia.

Anſwer. Each crown has, no doubt, an equal right to erect admiralty-courts, for the trial of prizes taken by virtue of their reſpective commiſſions; but neither has a right to try the prizes taken by the other, or to reverſe the ſentences given by the other's tribunal. The only regular method of rectifying their errors, is by appeal to the ſuperior court.

This is the clear law of nations, and, by this method, prizes have always been determined, in every other maritime country of Europe, as well as England.

Sixth PROPOSITION.

That the ſea is free.

Anſwer. They who maintain that propoſition in its utmoſt extent, don't diſpute but that when two powers are at war, they may ſeize the effects of each other upon the high ſeas, and on board the ſhips of friends: therefore, that controverſy is not in the leaſt applicable upon the preſent occaſion *.

* This appears from Grotius in the paſſages above cited, lib. iii. cap. 1. ſect. 5. num. 4. in his notes. And lib. iii. cap. 6. ſect. 6. in his notes. See our article SEA DOMINION.

Seventh PROPOSITION.

Great-Britain iſſued reprizals againſt Spain, on account of captures at ſea.

Anſwer. Theſe captures were not made in time of war with any power.

They were not judged of by courts of admiralty, according to the law of nations and treaties, but by rules, which were themſelves complained of, in revenue courts: the damages were afterwards admitted, liquidated at a certain ſum, and agreed to be paid by a convention, which was not performed. Therefore reprizals iſſued, but they were general. No debts due here to Spaniards were ſtopped, no Spaniſh effects here were ſeized. Which leads to one obſervation more.

The king of Pruſſia has engaged his royal word to pay the Sileſia debt to private men.

It is negociable, and many parts have been aſſigned to the ſubjects of other powers. It will not be eaſy to find an inſtance, where a prince has thought fit to make reprizals upon a debt, due from himſelf to private men. There is a confidence that this will not be done; a private man lends money to a prince, upon the faith of an engagement of honour, becauſe a prince cannot be compelled, like other men, in an adverſe way, by a court of juſtice. So ſcrupulouſly did England, France, and Spain adhere to this public faith, that, even during the war, they ſuffered no enquiry to be made, whether any part of the public debts was due to ſubjects of the enemy, though it is certain, many Engliſh had money in the French funds, and many French had money in ours.

This loan to the late emperor of Germany, Charles the VIth, in January 1734-5, was not a ſtate tranſaction, but a mere private contract with the lenders, who advanced their money, upon the emperor's obliging himſelf, his heirs and poſterity, to repay the principal with intereſt, at the rate, in the manner, and at the times in the contract mentioned, without any delay, demurr, deduction, or abatement whatſoever; and, leſt the words and inſtruments made uſe of ſhould not be ſtrong enough, he promiſes to ſecure the performance of his contract, in and by ſuch other inſtruments, method, manner, form, and words, as ſhould be moſt effectual and valid, to bind the ſaid emperor, his heirs, ſucceſſors, and poſterity, or as the lenders ſhould reaſonably deſire.

As a ſpecific real ſecurity, he mortgaged his revenues, ariſing from the duchies of Upper and Lower Sileſia, for payment of principal and intereſt; and the whole debt, principal and intereſt, was to be diſcharged in the year 1745. If the money could not be paid out of the revenues of Sileſia, the emperor, his heirs and poſterity, ſtill remained debtors, and were bound to pay. The eviction or deſtruction of a thing mortgaged, don't extinguiſh the debt, or diſcharge the debtor.

Therefore the empreſs queen, without the conſent of the lenders, made it a condition of her yielding the duchies of Sileſia to his Pruſſian Majeſty, that he ſhould ſtand in the place of the late emperor, in reſpect of this debt.

The ſeventh of the preliminary articles, between the queen of Hungary and the king of Pruſſia, ſigned at Breſlau, the 11th of June, 1742, is in theſe words; 'Sa Majeſté le roi 'de Pruſſe ſe charge du ſeul payement de la ſomme hypothé-'quée ſur la Sileſie, aux marchands Anglois, ſelon le con-'tract ſigné à Londres, le 7me de Janvier, 1734-5.'

The ſtipulation is confirmed by the ninth article of the treaty between their ſaid Majeſties, ſigned at Berlin, the 28th of July, 1742.

Alſo renewed and confirmed by the ſecond article of the treaty between their ſaid Majeſties, ſigned at Dreſden, the 25th of December, 1745.

In conſideration of the empreſs queen's ceſſion, his Pruſſian Majeſty has engaged to her, that he will pay this money, ſelon le contract, and conſequently has bound himſelf to ſtand in the place of the late emperor, in reſpect of this money, to all intents and purpoſes.

The late emperor could not have ſeized this money, as reprizals, or even, in caſe of open war between the two nations, becauſe his faith was engaged to pay it, without any delay, demurr, deduction, or abatement whatſoever. If theſe words ſhould not extend to all poſſible caſes, he had plighted his honour to bind himſelf, by any other form of words, more effectually to pay the money; and therefore was liable at any time to be called upon, to declare expreſsly, that it ſhould not be ſeized as repriſals, or in caſe of war; which is very commonly expreſſed, when ſovereign princes or ſtates borrow money from foreigners. Therefore, ſuppoſing for a moment, that his Pruſſian Majeſty's complaint was founded in juſtice, and the law of nations, and that he had a right to make reprizals in general, he could not, conſiſtent with his engagements to the empreſs queen, ſeize this money as reprizals. Beſides, this whole debt, according to the contract, ought to have been diſcharged in 1745. It ſhould, in reſpect of the private creditors, in juſtice and equity, be conſidered, as if the contract had been performed; and the Pruſſian complaints don't begin 'till 1746, after the whole debt ought to have been paid.

Upon this principle of natural juſtice, French ſhips and effects, wrongfully taken, after the Spaniſh war, and before the French war, have, during the heat of the war with France, and ſince, been reſtored, by ſentence of your Majeſty's courts, to the French owners. No ſuch ſhips or effects ever were attempted to be confiſcated, as enemies property here, during the war; becauſe, had it not been for the wrong firſt done, theſe effects would not have been in your Majeſty's dominions. So, had not the contract been firſt broke, by non-payment of the whole loan in 1745, this money would not have been in his Pruſſian Majeſty's hands.

Your Majeſty's guarantee of theſe treaties is entire, and muſt therefore depend upon the ſame conditions, upon which the ceſſion was made by the empreſs queen.

But this reaſoning is, in ſome meaſure, ſuperfluous; becauſe, if the making any reprizals upon this occaſion, be unjuſtifiable, which we apprehend we have ſhewn, then it is not diſputed, but that the non-payment of this money would be a breach of his Pruſſian Majeſty's engagements, and a renunciation, on his part, of thoſe treaties.

All which is moſt humbly ſubmitted to your Majeſty's royal wiſdom.

GEO. LEE,
G. PAUL,
D. RYDER,
W. MURRAY.

January 18, 1753.

TRANSLATION of the earl of CHESTERFIELD's letter to Monſ. MICHELL.

SIR, Whitehall, Jan. 5, 1747-8.

Having had the honour to receive the king's orders upon the ſubject of the memorial, which you delivered to me on the 8th inſtant, N. S. I would not delay informing you, That his Majeſty, in order to omit nothing, whereby he may ſhew his attention to the king your maſter, makes no difficulty in declaring, That his Majeſty has never had, or will have, any intention to give any interruption to the navigation of the Pruſſian ſubjects, as long as they ſhall take care to carry on their commerce in a lawful manner, and conformable to the ancient uſage as eſtabliſhed and acknowleged amongſt neutral powers.

His Pruſſian Majeſty cannot be ignorant, that there are treaties of commerce actually ſubſiſting between Great-Britain and certain neutral ſtates, and that by means of the engagements formerly contracted on each ſide by thoſe treaties, every thing relating to the manner of reciprocally carrying on their commerce, has been finally ſettled and regulated.

At the ſame time, it does not appear that any ſuch treaty exiſts at preſent, or ever did exiſt, between his Majeſty and the king of Pruſſia: nevertheleſs, that has never hindered the Pruſſian ſubjects being favoured by England, with reſpect to their navigation, as much as other neutral nations: and his Majeſty does not ſuppoſe, that the king your maſter means to require diſtinctions from his Majeſty, much leſs any preferences, in favour of his ſubjects in this point.

His Pruſſian Majeſty is too well informed not to know, that there are in this government fixed and eſtabliſhed laws, which cannot be departed from; and that in caſe any Engliſh ſhips of war ſhould commit the leaſt injuſtice to the trading ſubjects of the king your maſter, here is a tribunal, viz. the high court of admiralty, where they have a right to apply, and make their complaints; and they may be previouſly aſſured, that, in ſuch caſe, impartial juſtice will be adminiſtered to them; the juridical proceedings of the ſaid court being, and having ever been, unimpeached and irreproachable, as appears by numerous examples of neutral veſſels illegally taken, having been reſtored, with coſts and damages, to the proprietors.

This is the anſwer the king has ordered me to give, upon the contents of your ſaid memorial; and his majeſty cannot but flatter himſelf, that, in conſequence hereof, the king your maſter's deſire will be fully anſwered, with relation to the point in queſtion; and of which his Majeſty is the more aſſured, as he is perſuaded that the king of Pruſſia would not require any thing, but what is equitable.

I am, with much Conſideration,

SIR,

Your moſt obedient,

And moſt humble Servant,

CHESTERFIELD.

TRANSLATION of Mr PETER TRAPAUD's declaration of his having made ſatisfaction to the Pruſſians for the damage received by the ſhip St John, No. 16. in liſt A.

In the Expoſition which his Pruſſian Majeſty has publiſhed, of ſuch ſhips of his ſubjects as were taken by the Engliſh in the laſt war, I have obſerved in the liſt A, No. 16, that the ſhip St John, John Groſſe captain, is therein mentioned, as having received ſome damages to the prejudice of the Pruſſian owners. As the fact is known to me, as I was the ſole owner of her cargo, I do hereby as ſuch teſtify the truth, for the ſatisfaction of all whom it may concern. And I cannot conceive, how the Pruſſian ſubjects dare demand an indemnification, which they have already more than received, as I am going to convince them.

In the month of November 1747, I ordered the ſaid ſhip to be freighted at Bourdeaux, and loaded at Libourne with 158 ¾ tons of white wine. On the 1ſt of December following, that ſhip put out to ſea; on the 11th of the ſaid month, ſhe got as far as the Downs, where ſhe was met by an Engliſh privateer, called the Prince of Orange, who ſent ſix of his men on board the Pruſſian ſhip, and had the Pruſſian pilot brought on board him, with the ſhip-papers and documents, in order to their being examined. On the 12th of the ſaid month, as ſhe lay at an anchor, a great ſtorm aroſe from the weſt ſouth-weſt, which obliged the Pruſſian captain, with the conſent of his crew, and of the ſix Engliſhmen who were then on board his ſhip, to cut his cable, in order to drive off to ſea. The ſhip got afterwards into Browerſhaven inlet in Holland, on the 15th of the ſaid month of December, without any other damage, than the loſs of part of her cable and of an anchor, and arrived at Rotterdam the 21ſt of the ſaid month. All this is proved by the declaration of both the captain and his crew, made on the 4th of January, 1748, before Jacob Bremer, notary public in Rotterdam; and afterwards ſworn to on the 6th of the ſaid month, before the commiſſioners of the chamber of maritime affairs.

After the ſhip was unloaded, the captain gave in to me his account for groſs average, conſiſting of the following articles:

1. For the loſs of his cable and anchor.
2. For the maintaining, during eight days, the ſix men who had been put on board his ſhip by the Engliſh privateer.
3. For a paſſport I procured for him, from the Pruſſian envoy at the Hague, which coſt 3 or 4 florins.

I paid him for my ſhare in that groſs average 704 florins, Holland currency, over and above 105 florins which I gave Capt. Groſſe as a preſent, and 10 florins 10 ſtivers I gave as a preſent to the crew of his ſhip: beſides all this, it coſt me 20 florins, or thereabouts, in England, which Meſſrs Simond (brothers) had diſburſed, by my order, for the Pruſſian pilot, who remained on board the privateer, after the ſtorm had parted them.

Thoſe who underſtand the navigation and fitting out of ſhips, muſt allow, that the Pruſſian owners will find themſelves more than reimburſed for all their pretenſions, by means of the 839 florins 10 ſtivers, Holland currency, which I have paid them; and that they cannot, with any foundation, make any other demands.

All that I have alleged above, can be verified by authentic vouchers (except the preſents or gratuities to the captain and his crew, amounting to 115 florins 10 ſtivers, for which I took no receipt). In witneſs whereof I have ſigned this preſent declaration. Rotterdam, January 30, 1753.

PETER TRAPAUD, jun.

LIST of all the PRUSSIAN ſhips taken by BRITISH armaments at ſea, during the laſt war, as well thoſe detained for examination only, as thoſe judicially proceeded upon, together with the judgments given in the admiralty-courts of GREAT-BRITAIN thereupon, tallying with his PRUSSIAN Majeſty's LIST marked A.

No. of ſhips.	Ships, which (if-taken) were reſtored by the captors, upon examination, without either party applying to a court of juſtice.	Ships and goods reſtored, with all coſts and damages attending the capture.	Ships reſtored with freight, according to the bills of lading, for ſuch goods, which were found to be the property of the enemy, and condemned as prize.	Ships and goods reſtored, but without coſts, from circumſtances ariſing from the caſe.	Ships and cargoes reſtored, paying coſts. In theſe caſes, it either appeared, that the ſhip had not the uſual evidence of property, according to the cuſtom of the ſea; or from the ſhip-papers, or examination of the crew, there appeared juſt reaſon to preſume the cargo to belong to the enemy, and the neuter claimant declined proving his property, by ſtrict legal evidence; and obtained reſtitution, on the faith of his own affidavit; and, in theſe caſes, courts of admiralty have always made the like decrees.	Cargoes, or part of them, condemned as contraband, and not now alleged, in liſt A or B, to have been Pruſſian property, and therefore were certainly prize of war.	Appeals from the admiralty decrees.

On the 3d of February, the duke of Newcaſtle received a letter from Mr Wolters, his Majeſty's agent at Rotterdam, incloſing the following declaration:

DANS l'Expoſition que ſa Majeſté Pruſſienne a donnée au public, des vaiſſeaux de ſes ſujets pris par les Anglois dans le derniere guerre; j'ai remarqué dans a liſte A. no 16. que le navire le St Jean, Capit. Jean Groſſe, y eſt notté comme ayant reçû quelques dommages, au prejudice des proprietaires Pruſſiens. Comme le fait m'eſt connu ayant été ſeul propriétaire de ſa cargaiſon, je veux en cette qualité rendre témoignage à la verité, pour ſervir où il appartiendra. D'ailleurs, je ne puis comprendre, comment les ſujets Pruſſiens oſent demander un dedommagement, qu'ils ont deja plus que reçû, comme je vais les en convaincre.

Dans le mois de Novembre 1747, je fis fretter à Bordeaux, et charger à Libourne le dit navire avec 158¾ tonneaux de vin blanc. Le 1er de Dec. ſuivant, ce navire mit en mer; le 11. du dit mois, il ſe trouva à la hauteur des Dunes; là il fut rencontré par le corſaire Anglois, nommé le Prince d'Orange, qui envoya à bord du navire Pruſſien ſix hommes de ſon equipage, et fit venir à ſon bord le pilote Pruſſien avec les papiers de mer, pour en faire l'examen. Le 12. du dit mois, étant à l'ancre ſous les cingles, il s'eleva une furieuſe tempête de la part du W. S. W. qui obligea le capitaine Pruſſien, du conſentement de ſon equipage, et des ſix Anglois pour lors dans ſon bord, de couper le cable pour gagner la mer. Ce navire entra enſuite dans le paſſage de Browerſhave en Hollande, le 15e du dit mois de Decembre, ſans avoir eu d'autre dommage que la perte d'une partie de ſon cable et d'une ancre, et arriva enſuite à Rotterdam le 12e du ſuſdt. mois. Tout ceci eſt conſtaté par la declaration du capitaine et de ſon equipage, paſſée le 4 Janvier 1748, pardevant Jacob Bremer, notaire public dans Rotterdam; enſuite fermentée, le 6e. du dit mois, pardevant les commiſſaires de la chambre de la marine.

Après que le navire fuit dechargé, le capitaine me fit fournir ſon compte d'avaire groſſe, dans lequel il portoit les articles ſuivants:

1. Pour la perte de ſon cable, et de ſon ancre.
2. Pour la nourriture de 8 jours à 6 hommes qui avoient été mis, par le corſaire Anglois, ſur ſon bord.
3. Pour une paſſeport que je lui fis donner à la Haye par l'envoyé de Pruſſe, qui couta 3 à 4 florins.

Je lui payai, pour ma portion, dans cette avaire groſſe, 704 florins, argent courant d'Hollande, en outre 105 florins dont je fis preſent au Capit. Groſſe, et 10. 10ˢ. auſſi de preſent aux matelots, qui compoſoient ſon equipage. Outre tout ceci, il m'en a couté 20 florins ou environ, en Angleterre, pour autant que Meſſ. Simond, freres, avoient debourſé par mon ordre pour le pilote Pruſſien qui etoit reſté à bord du corſaire, lorſque la tempête les ſepara.

Ceux qui ſe connoiſſent en navigation, et en armement de navire, ne pourront diſconvenir, que les proprietaires Pruſſiens ſe trouvent, au moyen de 839. 10ˢ. courans d'Hollande, que je leur ai payés, plus que rembourſés de toutes leurs pretenſions; et s'ils peuvent, avec quelque fondement, en demander d'autres.

Tout ce que j'avance ci deſſus peut ſe verifier par des pieces authentiques, (à la reſerve des preſents, ou gratifications, au capitaine ou à ſon equipage montant á 115, 10ˢ. dont je n'ai pas retiné de quittance,) en vertue dequoi j'ai ſigné la preſente declaration. Rotterdam, ce 30 Janvier 1753.

PIERRE TRAPAUD, le jeune.

The above declaration was ſigned in my preſence; and the original vouchers quoted in the ſame, have been produced to me. Witneſs my hand and ſeal.—Rotterdam, January the 30th, 1753.

R. WOLTERS. (L. S.)

LIST of all the neutral ſhips, taken by BRITISH ſhips during the laſt war, in whoſe cargoes the ſubjects of PRUSSIA claim to have been intereſted; together with the judgments given by his Britannic Majeſty's courts of admiralty thereupon, tallying with his Pruſſian Majeſty's LIST marked B.

SILK-

SILK-WORMS.

MEMOIR upon the breeding of SILK-WORMS in FRANCE, and all other climates where mulberry-trees can be cultivated. By M. de Goyon de la Plombanie.

'A pretty long ſtay which I made in the ſouthern provinces of the kingdom where ſilk-worms are bred, together with what I have read in the beſt authors, have enabled me to ſhew the public, that the method commonly followed for this purpoſe does not anſwer the end propoſed.

In the Indies, and all other places where the climate allows people to breed ſilk-worms on the trees, like our caterpillars, the ſilk is very fine, very ſtrong, and in great abundance. Whence we conceive that a pure and temperate air is neceſſary to thoſe very delicate animals, which muſt be kept very clean, and breathe with difficulty in a confined and thick air, from which they contract diſorders. In thoſe happy eaſtern climates, nature of herſelf performs her operations; but with us, ſhe requires the aſſiſtance of art; art, therefore, ought to correſpond with nature, ſo as to aid her effectually, without ever doing her the leaſt violence.

When I was in Languedoc, I obſerved that in the cold mornings the ſilk-worms were benumbed, and moved but very little, and that, of all the chambers in which they were bred, thoſe which had moſt light, the freeſt air, and were expoſed to the ſouth, ſucceeded infinitely better than the reſt; that thoſe people who were leaſt careful in keeping them clean, could never turn them to account, and, for want of this precaution, a number of them periſhed, after they had been raiſed at a great expence. In this reſpect they are ſo delicate, that the leaſt impure or ſtrong ſmell throws them into convulſions; people of ſtinking breaths, rank reſpiration, or they whoſe ſweat is of a diſagreeable odour, nay, the ſmell of women at certain times, is pernicious to theſe animals, and does them more injury than one would imagine.

A variety of food, gathered from different ſoils and different trees, contributes to render the ſilk unequal: the leaves gathered wet, given after they are faded, or mixed together, without ſeparating the tender from the harſh, the worms eating at intervals, or of what they diſlike, all theſe circumſtances, which too often occur in the method of breeding them practiſed in France, greatly contribute to the little ſucceſs and returns of the manufacture: yet, hitherto, I have not ſeen one perſon employ himſelf as he ought, in finding means to remedy theſe inconveniencies. This conſideration has determined me to communicate to the public my own ideas of the ſubject; and after I ſhall have given a detail of them, any perſon can try the experiment in miniature, that he may aſſure himſelf of the utility of my method.

Some methods which may be uſed in making ſilk in France, ſo as to render it abundant, and of good quality.

Pains muſt be taken to have a number of mulberry-trees; they may be planted in all ſorts of ſoils where they will grow, but they muſt not be ſhaded by any other ſort of trees. Almoſt all the ſoils that produce walnut-trees and elms, will agree with the mulberry: and they muſt be carefully engrafted with that kind whoſe leaf is the moſt broad and ſmooth.

REMARKS upon the different ſoils and qualities of the trees.

All thoſe trees that riſe in light, barren, ſandy grounds, that have little moiſture, will produce the fineſt and ſtrongeſt ſilks; whilſt thoſe which are produced in fertile fat ground, abounding in juice, yield a coarſer and weaker ſilk; young trees, from 6 to 12 years old, will produce ſilk that is neither ſo fine nor ſo good as that from trees of 18 or 20 years growth; ſo that the oldeſt are always to be preferred. It is the ſame caſe with mulberry-trees for ſilk, as with vines for fruit, which is different in quality, according to the different ages of the trees, and the difference of ſoil. Nature always makes one thing atone for another; the old vines, and thoſe that are planted in a meagre ſoil, produce the beſt wine, though in ſmall quantity; thoſe raiſed in a fat ſoil, produce a larger quantity, but of an inferior quality: ſo that both kinds nearly yield the ſame profit. The ſame thing will happen in ſilk, if we do not mix the produce of different ſoils and different trees. This is an eſſential remark for the œconomiſt, though he has not hitherto regarded it. The practice is to mix the leaves, and give them indifferently to the worms; but it has been obſerved, that a worm, fed with leaves of different qualities, always makes an ill-formed ſilk, as may be perceived by the microſcope: worms thus managed will be like a ſpinſter, who puts indiſcriminately flax and hards upon her diſtaff, and cannot poſſibly ſpin thread ſo good and equal, as if it had been made ſolely from one of theſe materials. If the Indian ſilk is ſo beautiful, uniform, and ſtrong, it is becauſe the worms eat only of the leaves of one tree, on which they have been bred, and care is taken to pick the cods, ſo as that the beſt are kept together. From theſe remarks it follows, that we ought to furniſh thoſe little animals with a lodging that would procure to them, as much as poſſible, the ſame advantages they enjoy in thoſe countries where they thrive without care; that is, to ſhelter them from the injuries of our climate, to procure for them a pure temperate air, that ſhall be continually renewed, and give them a great deal of light, which contributes to their health; to clean them gently every time they receive new food, without touching them with the hand, or any ſort of inſtrument: finally, if we cannot ſecure them from the noiſe of thunder, at leaſt, to free them from the ſight of lightning, which gives them more diſturbance, by the quick and violent vibration of their little optic nerves, which incommodes their circulation, and affects them with diſtempers. If care be taken to prevent all theſe dangers, by the means which I am going to deſcribe, we may be aſſured of having worms that will ſucceed to a miracle.

Of the lodging of SILK-WORMS.

When the deſign is to raiſe a great quantity of ſilk-worms, ſo as to profit by the income they will produce, it will be neceſſary to build on purpoſe a lodging wholly detached, for raiſing the worms, proportioned to the quantity of the owner's trees. For example: if the ſcheme is, to make 500 lb. weight of raw ſilk, the lodging muſt be 80 feet long, and 20 feet broad, with three ſtories, comprehending the ground-floor; and every ſtory muſt be 10 feet high, excluſive of the thickneſs of the roofs, which ſhould be plaſtered, if plaſter is to be eaſily got; if not, there muſt be a cieling of boards, joined together as well as poſſible, upon which ſeveral folds of brown paper muſt be glued, to hinder dirt and duſt paſſing from one floor to another, for nothing is more hurtful to the worms.

The houſe ſhall extend from north to ſouth, fronting the eaſt and weſt; the ends oppoſed to the north and ſouth ſhall be built up without any opening, ſo as that there ſhall be no admiſſion either to the north wind or ſouth ſun, which are equally prejudicial to the worms: but the two fronts to the eaſt and weſt ſhall have windows oppoſite to each other, ſix feet broad, and in height from the cieling to the floor, with an interval of four feet only between them. Each of theſe windows muſt be ſhut by two ſaſhes of glaſs, or at leaſt, in lieu of glaſs, be covered with white oiled paper: theſe ſaſhes muſt open ſideways, upon little ſliders, like the ſcenes in the opera; each ſhall be three feet and an inch broad, and ſlide behind the frame of the window, one againſt the other, for the ſake of convenience; and, in order to keep out the lightning in tempeſtuous weather, there ſhall be within ſide, at the top of the window, an umbrella of wax cloth, to exclude every ray of light. When this is to be uſed, the glaſs or paper ſaſhes may be ſhut, by means of a roller, at one end of the apartment, a cord communicating with all the umbrellas may be drawn, ſo as to make them act together at once, either for admitting or excluding the light. Every artiſt will eaſily comprehend the nature of the contrivance. It will alſo be neceſſary to have a ſecond umbrella, of coarſe canvas, on the outſide of every window, which will occaſionally ſerve to break the too violent action of the wind and ſun, and even of the hail, without excluding too much air or light.

Such a building may be executed of wood and mud covered within and without by plaiſter, or lime; if in a country abounding with ſtone, it may be executed in ſtone; the greateſt expence will be in the glaſs-work and umbrellas.

At the two extremities of this houſe there muſt be ſtoves, a foot and a half broad, ſix feet long, and two feet high, made of plates of caſt iron. Round each ſtove, at the diſtance of half a foot, a little wall muſt be built of brick, or tiles, which ſhall ſurround it, ſo as to hinder its heat from being abſorbed by the external air. In this interval however, formed on all parts between the ſtove and the wall, a neceſſary quantity of air ſhall be introduced, by a ventilator, or bellows, made for the purpoſe, to be worked either by the wind, or a little horſe. In cold weather the ſtove muſt be furniſhed with fire, to the neceſſary degree of heat, which may be communicated through the funnels, in the firſt appartment, or hall, in order to be diſtributed; but great care muſt be taken to prevent ſmoke. The air being heated in the intermediate ſpace of the ſtoves, will in like manner be diſtributed through the whole firſt hall by means of a tin pipe, which muſt run the whole length of it, and be furniſhed with ſmall holes, proportioned to the diſtances; that is, the farther they are removed from the ſtove, they muſt be the larger, and more numerous. Thus the air being treated between the furnace and its cruſt, will warm that of the hall, give it a ſuitable degree of temperament, and continually renew that which was foul, and this, as the ſaſhes were ſhut, in going out through the joinings, will reſiſt the external cold air, which would otherwiſe enter.

It will be ſufficient to warm one hall in a houſe conſiſting of three, becauſe that will be enough for rearing the little worms, during the cold mornings of the ſpring; and, when they grow large, they may be diſtributed into the other halls, in the order which we ſhall now deſcribe.

We muſt plant little poſts of oak, half a foot broad on one ſide, and three inches on the other, at the diſtance of ſix feet between them. They muſt be fixed in a line acroſs the hall, and united by ledges of wood, at the diſtance of twelve inches from one another; ſo that the poſts being 10 feet high, there will be nine ledges: an interval of three feet and a half muſt be

be left from one range of poſts to the other, for the convenience of paſſing between them: the ledges being one inch thick, and three inches broad, ſhall be placed horizontally, and mortiſed in each poſt; then boards of fir, a foot broad, and ſix feet long, ſhall be tied to theſe ledges, with bits of leather, or ſheep-ſkin, in the manner of hinges, one on each ſide. Theſe hinges will allow the boards to be raiſed or lowered, like the lid of a coffer; a cord at each end of the boards paſſing through pullies at the roof, and fixed to a hook at the lower part of the poſts, will actuate all the boards of the ſame ſide, like lattices; and if all theſe boards be kept in a horizontal poſition, they will ſerve as ſo many ſhelves, upon which the leaves and the worms may be ſpread. Care muſt be taken to put nothing upon the board which is next to that where the worms ſhall reſide; but when you would renew the leaves, gently raiſe up the board on which the new leaves are placed, ſo that the worms may ſee and ſmell them; they will not fail to go thither, and abandon that on which they were: and this migration will afford them an opportunity to clean the firſt, and prepare it for the reception of new food, when it ſhall be thought proper to furniſh it: and this gentle and continual exerciſe of the ſilk-worms paſſing and repaſſing alternately from one board to another, will keep up their appetites, and ſtrengthen their bodies. In order to make them yield ſilk, they muſt be preſented with bits of ſtraw and heath, in the uſual way; theſe ſmall branches muſt be prepared on the next board, when it is perceived they will no longer eat, but ſeek to depoſit their ſilk, and make their cods.

I ſhall not here treat of the different diſtempers to which the worms are ſubject during their moulding, abundance of authors having already performed that taſk; my ſole aim is to prevent the dangers to which they are expoſed, by deſcribing the attention which ought to be given, and the precautions to be taken in their lodging, in preſerving the air pure and temperate, and in managing the light ſo as to ſtrengthen their bodies, and to excite them to eat.

There muſt be two places for the ſtore of leaves; in one they muſt be wiped upon cloth, or a very clean board, when they are wetted by the rain; and in the other they muſt be preſerved cool and freſh, that they may not be too much faded. Beſides, it muſt be obſerved, that in very hot weather there falls upon the leaves a kind of manna, or honey, which is viſcous, and very pernicious to the ſilk-worms, for it afflicts them with looſeneſs, makes them ſick, and languiſh to death, or, at leaſt, deſtroys the beauty of the ſilk. The duſt of the roads too, that often ſticks to the leaves, incommodes and diſguſts the worms. Theſe inconveniencies may be alleviated, by putting the freſh gathered leaves in oſier baſkets, and rinſing them ſeveral times in pure limpid water, which will waſh away the duſt, honey, or manna. But theſe leaves muſt not be given to the worms until after they have been wiped upon ſheets; and care muſt be taken not to let them lie any time in heaps, except in a very cool place, otherwiſe they will ferment, and become ſtill more pernicious. By the choice of food and regimen the cauſes of diſeaſe are prevented. Over and above theſe precautions, thoſe who have the charge of breeding ſilk-worms will be very attentive in chuſing the cods, and dividing them into three or four claſſes, that they may have the finer ſilk, and that it may not be rendered defective by a mixture of the good with that which is common; afterwards, no pains muſt be ſpared in unwinding the ſilk with all poſſible art, and if the threads break, as will often be the caſe, they muſt be ſupplied by other cods, in the room of thoſe which have broke, and theſe muſt be thrown among the refuſe, as being of a defective ſilk, which would ſpoil the other. This advice I give with great confidence, being perſuaded that thoſe who follow it will find it turn to advantage.

Reflections upon the above Remarks.

This memoir will meet with abundance of oppoſition, eſpecially among people bigoted to old cuſtoms; and therefore I propoſe to write to thoſe only who conduct themſelves by the rules of good ſenſe and reaſon, and are in a condition to profit by the new lights they receive.

What I propoſe is demonſtrated from nature, but, if practiſed, the expence may ſeem to exceed the profit. It may therefore be neceſſary to undeceive thoſe who allow themſelves to be prejudiced againſt this memoir, by furniſhing them with means to try the experiment at a ſmall expence; for it will be prudent to try the ſcheme in miniature, before it is undertaken at large, not only for informing one's ſelf whether or not the author has ſpoke truth, but likewiſe to know if there would be any real advantage in following his advice. In order to avoid all miſtakes, we muſt exactly obſerve the leaſt circumſtances, keep account of the time and expence which have been employed, together with the profits which have been drawn, and to compare this with the uſual method, in due proportion, that we may ſee which of the two is preferable: this ſpirit of curioſity, inquiry, and application, is always uſeful; by ſuch occupation we acquire inſtruction, and are inſenſibly conducted to uſeful and curious diſcoveries, which flatter us the more, as they are the fruit of our own ſtudy and meditation.

To begin we may uſe a cloſet, or any little place, which may reſemble the large building I have deſcribed; that is, be equally windowed, enlightened, aired, and glazed, furniſhed with umbrellas to keep out the lightning, and the joinings may be ſecured with paſted paper. We muſt try to ſupply it with freſh air, to leave nothing that yields a bad ſcent, and without uſing a ſtove, to procure warmth by a proper circulation of warmed air. When this ſmall apartment is put in order, furniſhed with moving boards ſuch as I have deſcribed, ſo as to fill up the whole capacity of the lodging, as much as may be, without impairing the convenience of paſſing; it may be tenanted by a quantity of worms, ſuitable to the extent of the place.

In order to aſcertain the number, we muſt obſerve that one worm, come to its natural growth, occupies the ſpace of two inches ſquare. As it increaſes in bulk it requires more air: and when the ſeaſon is temperate, we run no riſque in opening the caſements in the day-time, but they muſt be carefully ſhut at night. According to this dimenſion, a board four feet long and one broad may hold about 300 worms; and a cloſet 12 feet ſquare, and 10 feet high, will contain 18,000; if we can make 10 ſtories, and three rows of ſhelves, theſe 18,000 may produce as many cods; but as ſome of them always die, I reckon 15,000 may turn to account: 150 cods ought to produce an ounce of ſilk, when they are good; ſo that the 15,000 will yield about ſix pounds of raw ſilk. Thus the curious obſerver will ſee whether his trouble and expence exceed that of the ordinary method, by comparing the charge and profit on each ſide, and by including in this account the loſs which is occaſioned by want of care, he will find, if he is judicious, that his crop will ſometimes be augmented one half, or at leaſt one third. If he is ſatisfied with this experiment, he may afterwards work at large, in proportion to the number of his mulberry-trees, build an houſe for the purpoſe, ſituated on a riſing round, well ſecured from bad winds, and not in a bottom, which is always ſubject to miſchievous fogs and ſqualls of wind.

At the ſame time, he muſt take care to increaſe the culture of his mulberry-trees, without, however, planting ſuch a number as will hinder the cultivation of other neceſſary proviſions, and to make woods of them, as people make coppices; in which caſe the leaves will be finer, and more eaſily gathered, and the wood will ſerve for firing. They may alſo be planted at random, without being ſubject to any ſort of cultivation, for we cannot have too many. This tree, when the ſoil is naturally good, may be uſeful by its wood, in a great many ſhapes: its leaves are a treaſure; the poultry and hogs are fed by its fruit, which, indeed, is eaten by all ſorts of animals.

Remarks before the laſt war.

Under the article British America, particularly under the colony of Georgia, and alſo in our Remarks on that article, I have taken notice of the production of the ſilk-worm, which was the firſt motive to the eſtabliſhment of that plantation, in order to raiſe ſilk for the carrying on, in ſome degree, within ourſelves, that eſtimable manufacture, and to ſave ſome proportion of that ready money we are obliged to expend on the importation of foreign raw ſilk. How it hath come to paſs that a deſign of this kind ſhould miſcarry, in a climate confidently declared, time after time, to be proper for it, has never yet been cleared up to the ſatisfaction of the public; but certainly this is neceſſary, after the nation has been at ſo great an expence on the occaſion. England is not eſteemed a climate ſo ſuitable as Georgia, and other of her plantations on the continent of America, for the brood of this delicate animal; and yet there have been inſtances which ſeem to bid fair for ſucceſs in a deſign of this kind even in England, provided it had been properly and reſolutely purſued by ſome reaſonable public encouragement; but perſeverance and public ſpirit ſeem to be wanting in this kingdom, to bring many important concerns for the benefit of trade to their ultimate perfection, or to give them a fair experimental trial.

How far we have ſucceeded even in England, in regard to the production of the ſilk-worms, may deſerve notice in the following ſingle inſtance, and divers others that might be mentioned: and if ſo, certainly in Georgia, and other contiguous colonies, this matter might be brought to far greater perfection; and this is my chief reaſon for laying before the reader the following experiments, that were made in Chelſea Park, in the months of May, June, and July, 1719. Philoſophical Tranſactions.

April 27, I received a ſmall parcel of ſilk-worms eggs from Languedoc.

May 6, early in the morning I found them hatched of themſelves; the wind ſhifting in the night from eaſt northerly, to the weſt ſoutherly, changing the air of a ſudden to warm, two days before the change of the moon.

After feeding and managing them according to art, through the whole courſe of their four ſickneſſes, they were come to their ſtate of perfection, being then as thick as a man's little finger, and from four to five inches long, of a yellowiſh colour, and, when held againſt the light, they might be ſeen through, as you may an egg, being of the ſame colour and conſiſtence, filled with the matter that makes the ſilk. This

is a certain ſign that they will begin to ſpin in 24 hours, or leſs. They then forſake their food (being very voracious before) and hunt about for a convenient place to fix their hold-faſts for ſupporting the balls, or cones, that they are to make, which they do in a moſt wonderful mathematical manner, with a mixture of a gummy ſubſtance, that ties all together; and when the looſe furzy ſubſtance is taken off, and ſome of the ſilk is wound off, the remainder is ſo ſmooth and compact, ſhining like ſattin, that they are made uſe of for artificial flowers, and eſteemed the beſt of any thing yet known for that purpoſe, for which they are generally kept in boarding-ſchools. I weighed many hundred of theſe ſilk-balls, or cones, which I found to weigh from 35 to 40 grains, with their aurelia's, or chryſalis, within them.

June 27, they began to ſpin, having been hatched ſeven weeks and three days, and in four or five days finiſhed their laborious and curious work; but their balls were not fit to be removed until eight or ten days.

July 7, Monſ. Lachivre began to wind off their ſilk-balls, with a machine that made great diſpatch, winding much fine ſilk in a day. I found that an ounce of ſilk-balls would make about a drachm of fine ſilk; but, to be more certain, I weighed out to the winder 12 pounds of ſilk-balls, at four times, and told the balls in every three pounds as followeth, viz.

The firſt three pounds contained - -	812 Balls
The ſecond three pounds contained - -	842
The third three pounds contained - -	797
The fourth three pounds contained - -	868
So that the whole 12 lb. weight contained	3319 Balls,

Which, when wound off, was found to yield and make one pound and an ounce, or 17 ounces of fine ſilk, and about ſeven ounces of coarſe refuſe, unwound, in all a pound and half, avoirdupoiſe weight, or two pounds Troy; which is as great, or greater, making or yielding, as in any part of the world, and the ſilk as fine. I ſhewed it to a noted ſilk broker, who ſaid it was Italian ſilk (not knowing it was made in England) and worth about 20s. per pound, if I had ever ſo many bales of it, &c.

Now upon this experiment, finding that 3319 ſilk-balls would make one pound and one ounce of fine ſilk, I was deſirous to know what quantity of ſilk might be expected from the worms hatched from one ounce of eggs.

Of which to obtain the knowledge, I made uſe of the following method: by often weighing and telling, I found that 100 eggs weighed but one grain: ſo that if one grain contains 100, a ſcruple muſt contain 2000, and a drachm 6000, and an ounce, at eight drachms to the ounce, muſt contain 48,000 eggs. Now if every egg hatch a worm, and every worm makes a ſilk-ball, there muſt be, from one ounce, 48,000 ſilk-balls; and if 3319 balls will make one pound and one ounce of fine ſilk (which by experience I found they did) then 48,000 ſilk-balls will make 15 lb. 6 oz. of avoirdupoiſe weight in fine ſilk, or 18 lb. 8 oz. of Troy weight, which is very conſiderable. And in the ſame proportion, 1 lb. of ſilk-worms eggs will produce worms ſufficient to make above 180 lb. of ſilk. But allowing for caſualties, and ſuppoſing but 12 lb. of fine ſilk made from the worms and their ſilk-balls, produced from an ounce of ſilk-worms eggs, it will be found much to exceed moſt countries, according to Auguſtino Gallio's computation: for he ſaith, that in the ſouthern parts of France, viz. Languedoc and Provence, they make but 7 or 8 lb. of ſilk from ſilk-worms hatched from an ounce of eggs; and in Breſcia in Italy, but 8, 9, or 10 lb. of ſilk from an ounce of eggs; only in Calabria, where the ſilk-worms and their eggs are larger, they make 11 or 12 lb. of ſilk from an ounce of eggs, which ſtill does not exceed, nay hardly comes up to, what we make in England.

I have only this to add, that experience hath taught me how to hatch ſilk-worms twice in a year, ſo as to have two crops of ſilk in one year; and that the mulberry-trees will have leaves in England twice in a year, without prejudice to either tree or fruit, is moſt certainly true.

REMARKS on our article SILK, ſince the laſt war, and the DEFINITIVE TREATY of PEACE, 1763.

The ſilk we have from Italy is generally thrown, and ſerves for warp for our manufactures, and the greater part we import from PIEDMONT, the whole principality not being larger than a ſmall Engliſh county; yet it is reckoned that the king of Sardinia receives at leaſt 200,000 l. of us yearly for that commodity, and all in ready money, for he hath loaded all our manufactures with very high duties, which is in effect a prohibition, and admits thoſe of France at a ſmall cuſtom; for which reaſon they ſupply his dominions with WOOLLEN MANUFACTURES.

The prices we pay him for THROWN SILK are alſo extravagant, being in general above TWENTY SHILLINGS for every pound; nevertheleſs he appears to be very fond of keeping us dependent upon him; for an engine or machine being erected in this kingdom [ſee DERBYSHIRE] for throwing RAW SILK into ORGANZINE, to prevent the uſe thereof, we are told, he hath prohibited the exportation of RAW SILK out of his dominions; and we have now none from thence but what is got by ſtealth; however, the markets are open in other parts of Italy.

As we have but one water-engine of the quality of that in Derbyſhire for throwing ſilk in this kingdom, if that ſhould be deſtroyed by fire, or any other accident, it would make the throwing fine ſilk among us very precarious; and it is very much to be doubted, whether all the men now living in the kingdom could make ſuch another.

As we have commodious rivers for that purpoſe, whoſe ſtreams hold all the year, and run through large towns, where ſcarcely any manufactures are carried on, it would be matter of great conſequence to our ſilk manufacture to have three or four more erected, according to the model of that at Derby, though at the PUBLIC CHARGE, which would give us hopes of preſerving that manufacture among us for ever; and we ſhould come in for a part of the fine raw ſilk of Granada, Valentia, Murcia, and other provinces in Spain, as well as the products of ſeveral parts of Italy, in exchange for our woollen manufactures, and not be tied down to the ſtrict rules of paying our ready money, as we are now, to the duke of Savoy; and when once fully employed, the profit in a ſhort time might defray the whole expence. See the article SILK.

It certainly is extremely impolitic for us to depend for ſilk imported from any foreign country, provided we can be able to furniſh ourſelves with ſo valuable a material in our own plantation; a matter that has been long hoped for and expected hitherto in vain. Some have attributed this to the unkindlineſs of the climate in our continental colonies; [ſee our article SILK WORMS] but it being aſſerted many years ſince, that Georgia did actually produce ſilk of a good quality, as good, as was then ſaid, as that of the Piedmonteſe itſelf; and yet no conſiderable quantities hitherto having been there produced in ſo many years, many have doubted the veracity of the production. Whether it has been owing to want of the proper care, and effectual encouragement, we cannot ſay; but this others have thought to have been the real cauſe, and not any unfavourableneſs in the clime. It has been judged by many, who have been well acquainted as reſidents in our plantations of Carolina, Virginia, Maryland, and Penſylvania, more northerly climes than Georgia, that thoſe colonies would produce the beſt ſilk, and as fit for organzine as any in the world; for theſe countries afford vaſt numbers of white and other mulberry-trees, which grow wild, and ſpring up almoſt every where in great abundance, which looks as if nature had called us thither to propagate that manufacture, long before now, in thoſe plantations: but if theſe climes are rather too northerly for the delicate tenderneſs of the ſilk-worm; now we are poſſeſſed of the FLORIDAS, the moſt ſoutherly of thoſe continental plantations, we can have no excuſe, if we are wanting in our efforts to attempt this capital material, and that in the moſt effectual and vigorous manner, that the climate will admit of.—It is to be hoped, that no poſſible care, or even expence, that can be afforded, will be ſpared to ſet this deſign a-foot; for in time it certainly will prove of as great advantage to this nation, as any employment in the plantations; the manufacture of ſilk being a more profitable undertaking, where the air and land are happily adapted to raiſing the production needful in competent quantities.

It has been a diſpute, whether the manufacture of ſilk, woollen, or linen, is moſt conſiderable in the world. Many travellers ſay the ſilk manufacture exceeds either of the other two; and they aſſign this reaſon for it, that the people of CHINA, who are computed to be two hundred millions in number, are chiefly cloathed with ſilk garments, which indiſputably demonſtrates it to abound with the greateſt quantity of ſilk of any country in the world, it being there ſo very plentiful and cheap, that ſeveral of the Jeſuits affirm, five ſuits of ſilk there do not exceed the price of one ſuit of woollen in Europe.

Certain it is that Perſia, India, and China, had the manufacture of ſilk long before it came into Europe, the firſt that was brought being in the time of Auguſtus.—We manufacture at preſent very great quantities of thrown and raw ſilk in this kingdom; it is thought to be ſix times, at leaſt, as much as it was about threeſcore years ago; for then we were ſupplied with French and Italian ſilks, all fully manufactured. The vaſt riches of China, ariſing from this manufacture, is ſufficient to demonſtrate the great advantage thereof; and the extraordinary treaſure the duke of Savoy draws into his country by ſilk, which is made in the little principality of Piedmont, as before obſerved, is alſo another inſtance: we may judge, if he draws above 200,000 l. ſterling a year from this kingdom, what his profits are, which he draws from Holland, and other places where the manufacture is carried on to a very great degree.

We are informed the very land for planting of mulberry-trees, in many parts of Italy, is worth from three to five pounds an acre; and gentlemen there, as well as in Sicily, ſell their mulberry leaves to the poor for one half the ſilk they make,

make, and the money is equally divided between them upon ſale of the ſilk; and that the leaves of a tree there have yielded three or four pounds.

Now if the manufacture of ſilk, and the planting of mulberry-trees has raiſed the land to be ſo valuable, and ſome gentlemen receive ſuch conſiderable revenues from their crops of leaves, very great things may be expected by our effectually encouraging and promoting the manufacture of ſilk in our colonies, where as much land may be had for ſixpence, as in Italy for five pounds. And if great numbers of mulberry-trees were planted among the Indian nation, when they ſhall be duly reconciled to our people, bordering on our ſettlements, and ſome ſkilful, good-tempered, perſons employed to inſtruct them in the proper ſeaſons for gathering leaves, and feeding the worms, and rewarding them bountifully for their pains, thoſe people might be brought to be very profitable ſubjects to this nation. The Spaniards, while FLORIDA was in their hands, notwithſtanding their pride, were condeſcending enough to inſtruct ſome of the Indians, under their juriſdiction, to render them very ſerviceable in carrying on and improving the manufactures of indigo, cochineal, and ſeveral others, to the great advantage of New Spain. The French alſo, while they poſſeſſed CANADA, in their ſettlements about the river St. Lawrence and the great lakes, and on the Miſſiſſippi, took a great deal of pains to inſtruct them in every thing they thought might contribute towards enriching their mother-country. They went with them on their long travels in their hunting ſeaſons; and while they had CAPE BRETON, made theſe INDIANS inhabiting that part of the continent, very uſeful to them in their FISHERIES. If the Spaniards and French engaged thoſe people to be ſo ſerviceable to them, I do not ſee it is impoſſible, if kindneſs, juſtice, and good nature was duly exerciſed towards them, but they may be brought to be highly ſerviceable to Great-Britain alſo.

No part of the world ſhould ſeem to be better adapted to the brood of the ſilk-worm than our colonies now are; conſiſtent not only with philoſophic ſpeculation on the various climes and ſituations thereof, but from the unqueſtionable experience of moſt other parts of the world, where this material is produced of the beſt qualities, and the greateſt emolument. It is generally obſerved, that all thoſe countries which afford the beſt ſilk, border upon the ſea, and lie pretty near the ſame latitude; our plantations, the province of Gilon and Nanking, and Chekian in China, all border upon the ſea, and are pretty near the ſame latitude. Thoſe places in Turkey that produce ſilk, border upon the ſea, and Italy and Sicily are, in a manner, environed by the ſea; likewiſe the provinces of Granada, Murcia, and Valentia in Spain; the places that yield the beſt ſilk, as well as Languedoc and Provence in France; all lie upon the ſea.

Provided we ſhould never be able to induce our neighbouring Indians in North-America to become uſeful to us in this valuable production, may not the negroes from Africa prove ſo? As the great advantages that accrue to Portugal and Spain, as well as to ourſelves in our ſugar and tobacco plantations, is by the cheap labour of negroes, may not the ſame cheapneſs of labour be alſo of prodigious benefit to us, if employed in our COLONIES, in producing and making of ſilk? And when that ſeaſon is over, may not the ſame negroes ſervants turn their hands to raiſing and dreſſing of hemp and flax, the charge being little more than their cloathing from England; for the earth there produces proviſions in abundant plenty?

We are told by gentlemen of good intelligence, that the whole charge of making a pound of ſilk in China does not ſtand in above five ſhillings, and almoſt any perſon, man, woman, or child, may work at it; and a man or woman, with a child to aſſiſt in directing the thread of the ſilk, may, with a proper machine, reel from the coocone or ſilk-bag, one pound in a day.

Where we have, at preſent, proper land in our plantations for little or nothing, and might have labour performed as above, it is not unreaſonable to ſuppoſe that ſilk could ſtand us in ſo much as it may do the Chineſe. A manufacture of this kind might be brought, in a little time, to ſo great a degree of perfection, and ſuch quantities raiſed, that I ſhould conceive the labour of negroes employed in this work would produce above twice as much as thoſe that are employed in planting either ſugar or tobacco: and as this nation now greatly inclines to the wearing of ſilk garments in imitation of the French, to the great diſcouragement of our woollen manufactures, the manufacture of ſilk from our plantations would not only enable us to ſupply ourſelves amply therewith, but enable us to export large quantities of ſilk fully manufactured.

SILK MANUFACTURE of CHINA. It may be ſaid that China is the country of ſilk, and ſeems to be an inexhauſtible ſource of that commodity. It not only furniſhes ſilk to a great number of nations in Europe and Aſia, but alſo the emperor, the princes, the mandarins, the literati, the women, and, in a word, all thoſe in eaſy circumſtances, wear habits of ſilk, and are cloathed with ſattin or damaſk; very few, except the vulgar or country people, wear cotton painted blue.

The ſeveral provinces of China furniſh perfectly beautiful ſilks, yet ſuch as come from Tche-hiang are undoubtedly the beſt and fineſt. The Chineſe judge of good ſilk by its whiteneſs, ſoftneſs, and fineneſs; for if, in handling it, it is rough to the touch, it is a bad ſign. Sometimes, to make it look well, they prepare it with a certain rice-water, mixed with lime, which burns it, and renders it incapable of being manufactured when tranſported into Europe.

This is not the caſe with that which is pure, for nothing can be more eaſily wove, and a Chineſe workman will work upon it in an hour without breaking a ſingle thread.

Their looms are very different from thoſe of Europe, and much more ſimple. Two or three windles and a wheel are ſufficient to do it; and, in a word, it is ſurprizing to ſee the ſimplicity of the inſtruments with which they make the moſt beautiful ſtuffs. At Canton there is a ſort of ſilk, which comes from Tong-hing, but it is not comparable to that brought from the province of Tche-hiang, provided this laſt is not too moiſt, which we ought to beware of; for the Chineſe, who are generally wont to cheat, ſometimes put into the heart of the packet one or two parcels of coarſe ſilk, widely different from that on the ſurface. See the article CHINA.

Of this ſilk the moſt beautiful ſtuffs are made in the province of Kiang-nan; for to this province moſt of the good workmen repair, and it furniſhes the emperor with all the ſilks he uſes, and thoſe he makes preſents of to the grandees and lords of his court. The great trade of Canton, where foreign merchants abound, alſo draws a vaſt number of good tradeſmen to it.

They could make ſtuffs as rich as thoſe of Europe, if they were ſure of their ſale; but they generally employ themſelves on the moſt ſimple kind, becauſe the Chineſe are fonder of what is uſeful than of what is beautiful.

They, indeed, make gold ſtuffs, but they do not paſs their gold through the drawing-mill, as they do in Europe, in order to twiſt it with the thread, but are content to gild a long leaf of paper, which they cut into narrow ſlips, with which they cover the ſilk, with a great deal of dexterity.

Theſe ſtuffs are very beautiful at firſt, but do not laſt long; neither are they very proper for wearing apparel, becauſe the air and the moiſture ſoon tarniſh the ſplendor of the gold. They are moſt proper for curious pieces of furniture, and the ornaments of churches; and none but the mandarins and their wives cloath themſelves with theſe ſtuffs, and that very ſeldom.

The pieces of ſilk moſt uſed by the Chineſe are gauzes, both of the plain and flowered kind, of which they make ſummer habits; damaſks of all ſorts and colours; ſtriped ſattins, and the black ſattins of Nankin; corded taffeties, which wear well; ſeveral other ſorts of taffeties, ſome with flowers, and others ſtriped in a beautiful manner; crapes, brocades, and different ſorts of velvets: of this laſt the crimſon is the deareſt, but it is eaſy to be deceived in it; the beſt method of diſcovering the fraud, is to take lemon-juice, mixed with lime, and ſprinkle ſome drops of it on different parts, and, if the colour changes, it is a ſign that it is bad.

The Chineſe alſo make a prodigious number of other ſtuffs, two of which are moſt generally uſed among them.

Firſt, a ſort of ſattin, ſtronger, and leſs gloſſy than that made in Europe. This is ſometimes plain, and ſometimes adorned with flowers, trees, birds, and butterflies.

Secondly, a particular taffety, of which they make drawers, and other ſorts of wearing apparel. It is thick, and yet ſo pliant, that we may fold it and preſs it with our hand, without leaving any mark in it. They alſo waſh it, like other ſtuffs, without loſing a great deal of its luſtre.

The Chineſe workmen give the luſtre to this taffety with the fat of the river-porpoiſe, which they purify by waſhing and boiling; then with a fine bruſh they give the taffety two beds in the ſame direction, on the ſide they intend to render gloſſy. When they work in the night-time, they uſe this fat melted in their lamps inſtead of oil, becauſe its ſmell baniſhes the flies from the place, which is looked upon as a great advantage, ſince theſe inſects, by lighting on the work, are very detrimental to it.

The province of Cang-tong furniſhes a particular ſilk, which is found in large quantities on the trees and in the fields. When it is ſpun, they make a ſtuff of it called kein-tcheou, and this ſilk is produced by ſmall inſects, which nearly reſemble caterpillars. They do not ſpin it round nor oval, as ſilk-worms do, but in very long threads, which adhere to the buſhes and ſhrubs, as the wind puſhes them to one ſide or another. They gather theſe threads, and make of them ſilk ſtuffs, coarſer than thoſe which are ſpun in houſes. Theſe worms are wild, and eat indifferently the leaves of the mulberry, and thoſe of other trees. Perſons unacquainted with this ſtuff, would take it for a rough ſtuff, or a coarſe drugget.

The worms which ſpin this ſilk are of two kinds; and the firſt, which is larger and blacker than our ſilk-worm, is called tſouen-kien; and the ſecond, which is ſmaller, is called tiao-kien. The cotton of the firſt is of a reddiſh grey; but that of the other is blacker; and the ſtuffs made of them retain theſe two colours. It is very cloſe, does not cut, laſts long,

waſhes

waſhes like ſtuff, and, when it is good, ſpots do not ſpoil it, not even thoſe of oil, but come out of their own accord. This ſtuff is much eſteemed by the Chineſe, and is ſometimes as dear as the ſattins and beſt-made ſilks. As the Chineſe are very dexterous in counterfeiting, they make falſe kien-tcheou, with the refuſe of the ſilk of the hiang, and it is very eaſy to be deceived, if we are not very careful.
The workmen of Canton alſo make ribbands, ſilk ſtockings, and buttons, to great perfection.

An ACT of PARLIAMENT for repealing the DUTIES payable on CHINA RAW SILK, and for granting other DUTIES in lieu thereof, made in the year 1750.

'Whereas the duties now payable upon raw ſilk imported from China are a great diſcouragement to the importation thereof: and whereas a conſtant and plentiful ſupply of that valuable commodity to be manufactured in this kingdom, will be a public benefit, and greatly contribute to the increaſe and improvement of the ſilk manufactures: therefore we, your Majeſty's moſt dutiful and loyal ſubjects, the commons of Great-Britain, being deſirous to promote and encourage the manufactures of this kingdom, do moſt humbly beſeech your Majeſty, that it may be enacted, and be it enacted by the king's moſt excellent majeſty, by and with the advice and conſent of the lords ſpiritual and temporal, and commons, in this preſent parliament aſſembled, and by the authority of the ſame, That from and after the 24th of June, 1750, the ſeveral rates, duties, ſubſidies, and impoſitions, now payable upon the importation of raw ſilk of the growth or produce of China, by virtue of ſeveral acts of parliament now in force, ſhall ceaſe, determine, and be no longer paid.
And be it further enacted, by the authority aforeſaid, That from and after the ſaid 24th of June, all raw ſilk imported from China into this kingdom, by the united company of merchants of England trading to the Eaſt-Indies, or by any licence from the ſaid company, ſhall, in lieu of the ſaid rates, duties, ſubſidies, and impoſitions, by this act repealed, as aforeſaid, be charged with, and pay the ſame rates, duties, ſubſidies, and impoſitions, as are now charged upon, and payable for, raw ſilk of the growth or produce of Italy; which ſaid rates, duties, ſubſidies, and impoſitions, by this act granted, ſhall be paid by the ſaid united Eaſt-India company, at the ſame times, and in the ſame manner, as the ſeveral rates, duties, ſubſidies, and impoſitions, by this act repealed, as aforeſaid, have been paid.
And be it further enacted, by the authority aforeſaid, That the ſeveral rates, duties, ſubſidies, and impoſitions, by this act granted, ſhall be raiſed, levied, collected, paid, and applied, in ſuch manner, and for the ſame purpoſes, as the ſaid ſeveral rates, duties, ſubſidies, and impoſitions, by this act repealed, as aforeſaid, are now reſpectively raiſed, levied, collected, paid, and applied; and all the proviſions of or in any act or law now in force for raiſing, levying, collecting, paying, and applying the rates, duties, ſubſidies, and impoſitions, hereby repealed, as aforeſaid, ſhall be in full force, and ſhall be put in execution for raiſing, levying, collecting, paying, and applying the rates, duties, ſubſidies, and impoſitions, by this act granted, as fully and effectually, to all intents and purpoſes, as if the ſaid proviſions were particularly repeated and re-enacted in the body of this preſent act.
And it is further enacted and declared, by the authority aforeſaid, That all raw ſilk of the growth or produce of China, imported after the ſaid 24th of June, ſhall, upon the exportation thereof from this kingdom, be entitled to, and receive the ſame drawbacks and allowances only, as are now by law directed to be paid upon the exportation of raw ſilk of the growth or produce of Italy, any law or uſage to the contrary notwithſtanding.'

An ACT of PARLIAMENT for encouraging the CULTURE of RAW SILK in his MAJESTY's COLONIES, or PLANTATIONS, in AMERICA.

'Whereas it will greatly tend to the increaſe and improvement of the ſilk manufactures of this kingdom, to encourage the growth and culture of ſilk in his Majeſty's dominions in America, may it therefore pleaſe your Majeſty that it may be enacted, and be it enacted, by the king's moſt excellent Majeſty, by and with the advice and conſent of the lords ſpiritual and temporal, and commons, in this preſent parliament aſſembled, and by the authority of the ſame, That from and after the 24th of June, 1750, it ſhall and may be lawful to import any raw ſilks of the growth and culture of any of his Majeſty's colonies, or plantations in America, directly from thence into the port of London, without paying any ſubſidy, cuſtom, impoſition, or other duty whatſoever, for the ſame, ſo as a due entry be firſt made thereof in the cuſtom-houſe, at the time of importation, and in the ſame manner and form (expreſſing the package, marks, and numbers, together with the quantities and qualities of the reſpective goods) as was uſed and practiſed before the making of this act, and ſo as the ſame be landed in the preſence of, and examined by, the proper officer or officers of the cuſtoms appointed for that purpoſe, and ſo as the ſame be imported in ſhips or veſſels that may lawfully trade to his Majeſty's plantations, manned as by law required: and on failure of the ſaid conditions, or directions, herein laſt mentioned, ſuch ſilks ſhall be liable to the payment of the reſpective duties, as if this act had never been made.
Provided always, and be it further enacted, by the authority aforeſaid, That in order to intitle the importer and importers of raw ſilk to the exemption intended by this act, every merchant, or other perſon or perſons whatſoever, who ſhall, after the 24th of June, 1750, load any raw ſilk on board any ſhip or veſſel, in any of the Britiſh colonies or plantations in America, ſhall, before the clearing out of the ſaid ſhip or veſſel from thence, make proof on oath, before the collector and comptroller of the cuſtoms, and naval officer, at the port or place where ſuch raw ſilk ſhall be put on board, or any of them, that the raw ſilk, which he, ſhe, or they, hath, or have, ſhipped on board the ſaid ſhip, or veſſel (expreſſing the quantity thereof) is bona fide of the growth and culture of ſome or one of the Britiſh colonies, or plantations, in America, expreſſing the pariſh or place in ſuch plantation where the ſame was cultivated and produced, and by whom, producing ſuch perſon's oath thereto, made before the governor of ſuch iſland or province, or before the next juſtice of the peace (which oath the ſaid governor, or juſtice of the peace, collector and comptroller of the cuſtoms, and naval officer, or any two of them, are hereby required and impowered to adminiſter without fee or reward) and the maſter, commander, or other perſon taking charge of the ſhip, or veſſel, on board which ſuch raw ſilk ſhall be loaded, ſhall alſo bring with him a certificate, or certificates, from ſuch collector and comptroller of the cuſtoms, and naval officer, or any two of them, as aforeſaid, under their hands and ſeals of office (which certificate, or certificates, ſuch collector and comptroller of the cuſtoms, and naval officer, are hereby required and directed to grant without fee or reward) expreſſing the marks, number, tale, and weight of the raw ſilk in each bale, parcel, or other package whatſoever, ſo ſhipped, or loaded on board ſuch ſhip, or veſſel, with the names, place, or places of abode, of the exporter, or exporters thereof, from the ſaid Britiſh colonies, or plantations, in America, and the name or names, place or places of abode, of ſuch other perſon or perſons, who ſhall have ſworn the goods therein mentioned to have been of the growth and culture of the ſaid Britiſh colonies, or plantations, in America, and the name, or names, of the perſon, or perſons, to whom the ſame are conſigned in the port of London; which certificate, or certificates, the ſaid maſter, commander, or other perſon taking charge of ſuch ſhip, or veſſel, ſhall, on his arrival in the ſaid port of London, deliver to the collector, comptroller, or other chief officer of his Majeſty's cuſtoms at the ſaid port, at or before the entry of the ſaid raw ſilk; and at the ſame time ſhall make oath, before any one of them the ſaid collector, comptroller, or chief officer of his Majeſty's cuſtoms (who are hereby required and impowered to adminiſter the ſame without fee or reward) that the ſaid bales and parcels, and goods mentioned in ſuch certificate, are the ſame bales and parcels, and goods, as were taken on board in the ſaid Britiſh colonies, or plantations, in America; and if any raw ſilk of the growth and culture of the Britiſh colonies or plantations, in America, ſhall, after the ſaid 24th of June, 1750, be imported as herein before mentioned, without ſuch certificate, ſigned and delivered as herein before required, and oath made as before directed, by the maſter, commander, or other perſon taking charge of the ſhip, or veſſel, in which the ſame is imported, all ſuch raw ſilks ſhall be liable to the payment of the reſpective duties, as if this act had never been made, any thing herein before contained to the contrary notwithſtanding.
And be it further enacted, by the authority aforeſaid, That if any perſon or perſons ſhall, from and after the ſaid 24th day of June, 1750, make, or cauſe to be made, an entry, or entries, of any foreign raw ſilk, under the name, or deſcription, of raw ſilk of the growth, or culture, of any of the Britiſh colonies, or plantations, in America, or ſhall mix, or cauſe to be mixed, any foreign raw ſilk with raw ſilk of the growth or culture of the Britiſh colonies, or plantations, in America, with intent to evade the payment of the duties payable on foreign raw ſilk, every perſon or perſons ſo making, or cauſing to be made, ſuch entry, or entries, or mixing, or cauſing ſuch mixture or mixtures to be made, ſhall forfeit and loſe the ſum of 50l. for every ſuch offence, and all ſuch foreign raw ſilk; and in caſe of any mixture, the quantity ſo mixed, both of foreign and Britiſh-plantation culture or growth, or the value thereof, together with the bales, or other packages containing the ſame, ſhall be forfeited, and ſhall and may be ſeized and proſecuted, or the value thereof be ſued for by any officer, or officers, of his Majeſty's cuſtoms; one moiety of which penalties and forfeitures ſhall be to the uſe of his Majeſty, his heirs and ſucceſſors, and the other moiety to him or them that ſhall ſeize, proſecute, or ſue for the ſame, in any of his Majeſty's courts of record at Weſtminſter.
Provided always, that if any doubt or diſpute ſhall ariſe, whether the ſaid raw ſilk, or any part thereof, ſo to be imported as aforeſaid, is of the growth or culture of the Britiſh

colonies or plantations in America, or of foreign growth or culture, the onus probandi ſhall lie on the owner or claimer thereof, and not on the informer and proſecutor; any law, cuſtom, or uſage to the contrary notwithſtanding.

And be it further enacted, by the authority aforeſaid, That if any action or ſuit ſhall be commenced againſt any perſon or perſons for any thing done in purſuance of this act, the defendant or defendants, in ſuch action or ſuit, may plead the general iſſue, and give this act and the ſpecial matter in evidence at any trial to be had thereupon, and that the ſame was done in purſuance and by authority of this act: and if it ſhall appear ſo to have been done, then the jury ſhall find for the defendant or defendants; and if the plaintiff ſhall be nonſuited, or diſcontinue his action, after the defendant or defendants ſhall have appeared, or if judgment ſhall be given upon any verdict or demurrer againſt the plaintiff, the defendant or defendants ſhall and may recover treble coſts, and have the like remedy for the ſame, as defendants have in other caſes by law.'

REMARKS.

Such has been the encouragement given by the legiſlature, to the culture of raw ſilk in our AMERICAN colonies. An ample ſupply of this commodity, however, can be brought only from ASIA, unleſs we make ſome very extraordinary improvements. EUROPE, during the laſt war, did not produce the uſual quantity, nor has the price of ſome particular kinds declined ſince that time: for the conſumption of this article increaſes rather than diminiſhes. The EAST-INDIA company, therefore, having, we preſume, previouſly taken their meaſures, applied to parliament for an alteration of the duty on CHINA ſilk (as we ſee by the preceding act), the obtaining of which affords an encouragement to the importation of it; and, no doubt, by means of the company, we ſhall have a ſufficient quantity *; which will prove highly beneficial to the ſilk manufacture of this kingdom. And,

For the further encouraging this important manufacture, the following act paſſed in the year 1753.

* In 1752 we find accordingly a large ſupply of CHINA raw ſilk arrived.

An act for encouraging the ſilk manufactures of this kingdom, and for ſecuring the duties payable upon the importation of velvets, wrought ſilks, and ſilks mixed with other materials, not manufactured in Great-Britain.

'Whereas the payment of the duties charged and made payable by divers acts of parliament, upon the importation of velvets, wrought ſilks, and ſilks mixed with other materials not manufactured in Great-Britain, is frequently evaded by the ſubtil and fraudulent practices of evil-diſpoſed perſons, to the great diſcouragement of the ſilk manufactures of this kingdom, and the loſs of his Majeſty's revenue: therefore, for preventing ſuch frauds and abuſes for the future, be it enacted by the king's moſt excellent Majeſty, by and with the advice and conſent of the lords ſpiritual and temporal, and commons in this preſent parliament aſſembled, and by the authority of the ſame, That all velvets, wrought ſilks, and ſilks mixed with any other materials (ſuch velvets, wrought ſilks, and ſilks mixed with any other materials, not being manufactured in Great-Britain, and ſuch wrought ſilks, or ſilks mixed as aforeſaid, not being prohibited to be worn therein) which ſhall be imported into this kingdom, after the twenty-ninth day of September, one thouſand ſeven hundred and fifty-three, ſhall after the ſame have been entered at the cuſtom-houſe, and before they are diſcharged by the officers, and delivered into the cuſtody of the importer or his agent, be marked or ſealed at each end of every piece, with ſuch mark or ſeal, and by ſuch officer or officers, as the reſpective commiſſioners of the cuſtoms in Great-Britain ſhall direct and appoint for that purpoſe.

And be it further enacted, by the authority aforeſaid, That from and after the ſaid twenty-ninth day of September, every perſon intending to export any ſuch velvets, wrought ſilks, or ſilks mixed with any other materials, as herein before are mentioned and deſcribed, which ſhall have been imported into this kingdom, after the ſaid twenty-ninth day of September, ſhall before ſuch goods are ſhipped in order to be exported, give notice to the proper officer or officers to be appointed for that purpoſe, by the reſpective commiſſioners of the cuſtoms in Great-Britain, when and where he will pack up the ſaid goods in order to be exported; and the ſaid commiſſioners of the cuſtoms are hereby impowered and required to cauſe ſuch officer or officers, to take care that ſuch ſeals, ſtamps, or marks, be taken off from every piece ſo intended to be exported, without fee or reward; and no perſon ſhall be intitled to the drawback allowed upon the exportation of ſuch velvets, wrought ſilks, or ſilks mixed as aforeſaid, unleſs he ſhall have given ſuch notice as herein before is directed, and until ſuch ſeals, ſtamps, or marks, ſhall be taken off by the proper officer or officers as aforeſaid.

And be it further enacted, by the authority aforeſaid, That from and after the twenty-ninth day of September, one thouſand ſeven hundred and fifty-four, in caſe any velvets, wrought ſilks, or ſilks mixed with any other materials (ſuch velvets, wrought ſilks, or ſilks mixed with any other materials, not being manufactured in Great-Britain, and ſuch wrought ſilks, or ſilks mixed as aforeſaid, not being prohibited to be worn therein) ſhall be found in any ſhop, warehouſe, or other place whatſoever, upon land within this kingdom, not being marked or ſealed as herein before directed, upon both ends of every whole and entire piece, or upon one end of every remnant of ſuch velvet, wrought ſilk, or ſilk mixed as aforeſaid, the ſame ſhall be forfeited, and ſhall and may be ſeized by any officer or officers of the cuſtoms, and ſecured in ſome or one of his Majeſty's warehouſes; and ſuch officer or officers is and are hereby indemnified for ſo doing; and all ſuch velvets, wrought ſilks, or ſilks mixed as aforeſaid, ſo ſeized and ſecured, ſhall, after condemnation thereof in due courſe of law, be publickly ſold to the beſt bidder, and one moiety of the produce ariſing by the ſale of ſuch velvets, wrought ſilks, or ſilks mixed as aforeſaid, ſhall be to the uſe of his Majeſty, his heirs, and ſucceſſors, and the other moiety to the officer or officers who ſhall ſeize and ſecure the ſame as aforeſaid; and the perſon in whoſe cuſtody or poſſeſſion the goods ſo ſeized and ſecured ſhall be found, ſhall alſo, for every ſuch offence, forfeit the ſum of two hundred pounds, to be recovered and divided in manner herein after directed.

And be it further enacted, by the authority aforeſaid, That no velvets, wrought ſilks, or ſilks mixed with any other materials as aforeſaid, which after the twenty-ninth day of September, one thouſand ſeven hundred and fifty-four, ſhall be ſeized and forfeited by virtue of this act, or for any other cauſe of forfeiture, ſhall be conſumed or uſed in this kingdom, but ſhall be exported again, and not ſold otherwiſe than on condition to be exported, and ſhall not be delivered out of the warehouſe wherein the ſame ſhall have been ſecured, until ſufficient ſecurity be given, that the ſame and every part thereof ſhall be exported, and not landed again in any part of Great-Britain.

And be it further enacted, by the authority aforeſaid, That if any perſon or perſons ſhall at any time forge or counterfeit any ſtamp, mark, or ſeal, to reſemble any ſtamp, mark, or ſeal, which ſhall be provided or uſed in purſuance of this act, or ſhall forge or counterfeit the impreſſion of any ſuch ſtamp, mark, or ſeal, upon any goods required by this act to be ſtamped, marked, or ſealed, or ſhall ſell, or expoſe to ſale, any of the ſaid goods with a counterfeit ſtamp, mark, or ſeal thereon, knowing the ſame to be counterfeited; all and every ſuch offender and offenders, their aiders, abettors, and aſſiſtants, ſhall, for each and every ſuch offence, forfeit the ſum of five hundred pounds, and ſhall alſo be adjudged to ſtand on the pillory in ſome public place for the ſpace of two hours.

And be it further enacted, by the authority aforeſaid, That all pecuniary penalties and forfeitures by this act impoſed, ſhall and may be ſued for and recovered in any of his Majeſty's courts of record at Weſtminſter, or in the court of Exchequer at Edinburgh reſpectively, by action, bill, plaint, or information, in the name of his Majeſty's attorney-general, or in the name of his Majeſty's advocate in Scotland, or in the name or names of ſome officer or officers of the cuſtoms; and that one moiety of every ſuch penalty and forfeiture ſhall be to his Majeſty, his heirs, and ſucceſſors, and the other moiety thereof to the officer or officers of the cuſtoms who ſhall inform and proſecute for the ſame.

Provided always, and it is hereby further enacted, That if any officer or officers of the cuſtoms ſhall neglect or refuſe, for the ſpace of one month, to proſecute to effect any perſon or perſons for any pecuniary penalty or forfeiture by this act inflicted upon offenders againſt the ſame, that then it ſhall be lawful for any perſon or perſons whomſoever to ſue for, proſecute, and recover the reſpective pecuniary penalties and forfeitures by this act inflicted, in like manner as is herein before directed with regard to the officers of the cuſtoms; and one moiety of the ſaid reſpective forfeitures, when recovered, ſhall, in ſuch caſe, go and be applied to the uſe of his Majeſty, his heirs, and ſucceſſors, and the other moiety to the perſon or perſons who ſhall ſue or proſecute for the ſame reſpectively.

And be it further enacted, by the authority aforeſaid, That upon every action, bill, plaint, or information, entered and filed as aforeſaid, for any pecuniary penalty impoſed by this act, a capias in the firſt proceſs ſhall and may iſſue, ſpecifying the ſum of the penalty ſued for; and the defendant or defendants ſhall be obliged to give ſufficient bail or ſecurity by natural-born ſubjects, perſons naturalized or denizens, to the perſon or perſons to whom ſuch capias ſhall be directed, to appear in the court out of which ſuch capias ſhall iſſue, at the day of the return of ſuch writ, to anſwer ſuch ſuit or proſecution; and ſhall likewiſe, at the time of ſuch appearance, give ſufficient bail or ſecurity, by ſuch perſons as aforeſaid, in the ſaid court, to anſwer and pay all the forfeitures and penalties incurred for ſuch offence or offences, in caſe he, ſhe, or they ſhall be convicted thereof, or to yield his, her, or their body or bodies to priſon.

And be it further enacted, by the authority aforeſaid, That if any action or ſuit ſhall be commenced againſt any perſon or perſons

perſons for any thing done in purſuance of this act, the defendant or defendants in ſuch action or ſuit may plead the general iſſue, and give this act, and the ſpecial matter in evidence, at any trial to be had thereupon; and that the ſame was done in purſuance, and by authority of this act: and if it ſhall appear ſo to have been done, then the jury ſhall find for the defendant or defendants; and if the plaintiff ſhall be nonſuited, or diſcontinue his action, after the defendant or defendants ſhall have appeared; or if judgment ſhall be given upon any verdict or demurrer againſt the plaintiff, the defendant or defendants ſhall recover treble coſts, and have the like remedy for the ſame as defendants have in other caſes by law. And be it further enacted, by the authority aforeſaid, That if any velvets, wrought ſilks, or ſilks mixed as aforeſaid, ſhall be ſeized by virtue and in purſuance of this act; and if any doubt or queſtion ſhall ariſe, where the ſaid velvets, wrought ſilks, or ſilks mixed as aforeſaid, were manufactured, the proof ſhall lie upon the owner or claimer thereof, and not upon the proſecutor; any law, uſage, or cuſtom to the contrary notwithſtanding.

REMARKS.

Silk is a material for a very conſiderable manufacture; which being brought from abroad raw, we here twiſt, dye, and weave into different goodneſſes, both plain, ſtriped, and flowered, either by itſelf, or mixed with gold and ſilver; ſo richly brocaded, that we are allowed to exceed thoſe from whom we had the art. Of this material alſo are made great quantities of ribbons, ſtockings, and other things; not only to ſerve ourſelves, but alſo to export.

Our importation of raw and thrown ſilk is from Turkey, Italy, Sicily, and India.

1. Thrown ſilk comes chiefly from Leghorn, Genoa, Naples, and Meſſina.

2. Raw ſilk from Turkey, that is, Perſia by the way of Turkey, Bengal in India, and from China.

All this ſilk is manufactured in Great-Britain, very little excepted, which is ſometimes re-exported unwrought, chiefly to Ireland. The growth and increaſe of the conſumption of ſilk in theſe kingdoms, has been much owing to the high duties on French wrought ſilks, particularly their alamodes, luſtrings, [ſee ALAMODES and LUSTRINGS] and rich broad ſilks of every kind; but more eſpecially to the prohibiting the uſe and wearing of EAST-INDIA wrought ſilks, which were formerly worn in England to an extraordinary degree; inſomuch that one ſhip from India, namely, the Taviſtock, brought in one article of wrought ſilk 9000 pieces of damaſk (beſides a great many of ſeveral other ſorts) each of which was worth at market, one with another, 9 l. or more: ſo that the ſaid damaſk only amounted to 89,000 l. ſterling.

At the making of the treaty of Utrecht, the ſtate of the ſilk trade was then repreſented as follows *.

* See The Britiſh Merchant.

'As to our increaſe of the ſilk manufacture at home, this will appear in ſome meaſure by the vaſt increaſe of the importation of raw and thrown ſilks from foreign countries, from Turkey, Italy, and the Eaſt-Indies.

But here I muſt acknowlege, that the importation of ardaſs, or coarſe Perſia ſilk, from Turkey, is vaſtly abated. This has been principally occaſioned by the impoſition of ſuch duties on it as it could not bear. But then this loſs has been in part ſupplied by a vaſt importation of grogram yarns; and beſides this, the importation of bellandine, or white Turkey ſilk, and of ſherbaffee of Perſia, is greater now, than that of theſe and the cheap ardaſs ſilk, joined together, ever was before the beginning of the firſt war. All the work, therefore, that was formerly done with ardaſs ſilks, and is now performed by grogram yarn, together with the whole increaſe of the number of bales imported from that country more than formerly, muſt be placed to the account of the increaſe of the ſilk manufacture in England.

I will not pretend to determine the value of this increaſe; all I will ſay here, ſhall be only to explain it. Suppoſe then, that formerly our annual importation of ardaſs, and other ſilks imported from Turkey, amounted to 1500 bales, and that, at this time, the importation of bellandine and ſherbaffee amounted to 1600 bales of ſilk; at firſt ſight, this would look as if only a hundred bales of ſilk more were brought into the Engliſh manufacture: but if the grogram yarn, which is for the moſt part a new importation, ſhould be allowed to ſupply 500 bales of ardaſs ſilk, and that, nevertheleſs, 1600 bales of raw ſilk from Turkey are imported; then it would be manifeſt, that not only 100, but 600 bales of our preſent annual importation, muſt either be re-exported, or added to our ſilk manufacture. If it ſhall be allowed that the Turkey trade, by this means, furniſhes 600 bales of ſilk per annum to our manufacture, more than it did before, I ſhall be very glad to be informed, whether ſuch a quantity is not ſufficient to produce 80 or 90,000 lb. weight of wrought ſilk? The Turkey merchants, or rather the weavers of Spitalfields, might certainly anſwer this queſtion; and alſo, whether, at leaſt, 600 bales of Turkey ſilk are not brought annually to our looms, more than before the beginning of king William's war.

But we are yet more ſure of our importation of Piedmonteſe and Bergamo ſilks; this amounts to near a thouſand bales in a year, and is wholly new. Of theſe, and other Italian thrown and raw ſilks, we uſe at leaſt 1200 bales annually at our looms more than we did before the beginning of the firſt war. And whence is this prodigious increaſe of our ſilk manufacture, but from the interruption of our commerce with France, and the prohibition of Eaſt-India ſilks?

I have by me an account of the Eaſt-India raw ſilks imported for ſeveral years laſt paſt; the whole quantity, at a medium, will make 400 bales per annum: ſo much of this as is not re-exported, is uſed at the Engliſh looms. If, by theſe ſeveral articles, 2000 bales are uſed at our looms, more than formerly, the weavers will be ready to anſwer, whether the produce will amount to leſs than 280,000 lb. weight of wrought ſilk; and this quantity, at 50 l. per pound, will make the increaſe of our ſilk manufacture 700,000 l. per annum. I am very ready to believe that ſuch has been the increaſe, from what was aſſerted at the bar of the laſt Houſe of Commons, by a gentleman well ſkilled in theſe matters.

He aſſerted, that our manufacture of luſtrings, alamodes, and other black ſilks, for hoods and ſcarves only, amounted to - - -	300,000 l. per ann.
Of ſilks for linings of clothes, in imitation of perſians, to - -	150,000
Of ſilk handkerchiefs -	200,000
The whole of theſe articles -	650,000 l. per ann.

All this, beſides the recovery of ſtuffs and cottons mixed with ſilks, which before were almoſt loſt to this kingdom.

Luſtrings and alamodes are now very little uſed; the ſilks that are uſed in their ſtead, are raſtiegeans and mantua ſilks, which are quite a different fabric. But the whole value, it ſeems, of our black ſilks is 300,000 l. per annum. This is an entire new manufacture to England, with which, before the firſt war, we were wholly ſerved by France. This is not ſuch a prodigious ſum as people may imagine; it amounts to little more than 1 s. 8 d. per annum, for every one of the female ſex; and we may very well conceive, that 300,000 of this ſex are in theſe ſilks every one at the charge of 20 s. per annum, which makes up the whole ſum: but whatever is the quantity, France ſerved us with the whole before.

For brocades, and other rich ſilks, almoſt the whole quantity uſed in England, were the manufacture of that nation, as well as great part of the perſians for linings: and if this laſt ſort made in England amounts to 150,000 l. per annum, the whole of theſe two articles imported, may very well be believed to be the value of 200,000 l. per annum.

The above-mentioned articles, and that of ſilk handkerchiefs, make it credible, that I am not much miſtaken in my computation of 2000 bales of ſilk manufactured by our own looms, more than were before the interruption of the French commerce, and the prohibition of Eaſt-India manufactures: whether ſuch a manufacture, of ſo much value, deſerves our care or our contempt, is the next thing to be conſidered.

In the firſt place, I muſt inſiſt upon it, that the whole price of this increaſe of our ſilk manufacture, from the worm to the mercer's ſhop, is paid to the product of our lands, and to the labour of our people.

There can be no queſtion of the ſilks which are imported raw from Turkey, and manufactured here in England. No bullion is ſent to that country. The raw ſilks are purchaſed there for our woollen manufactures; and as a part of the price of theſe is paid to the land-holder for his wool, and the reſt to the labour of our people that made it up, it muſt be affirmed that the whole value of Turkey raw ſilk, is indirectly paid to our own people, by being paid to them for the goods that are exchanged for it: and as for the whole new value that is ſuperadded to it, for the charge of importing, throwing, weaving, and dyeing of this ſilk, it is entirely, and directly paid to the labour of our own people.

The ſame thing may be affirmed of the raw and thrown Italian ſilks; they are both purchaſed by an over-ballance of Engliſh manufactures exported to that country *; and if the whole value of theſe is directly paid to the Engliſh lands and labour, and if we could not hope to preſerve our Italian markets for them, without taking off their ſilks, it muſt be acknowleged, that our land-holders and labourers are indirectly paid the value of theſe ſilks, by being paid for the goods that are exchanged for them.

* Although ſilver is not ſent out directly to Piedmont, as it is to India, yet, in fact, it is the ſame thing; for the ballance of ſome other trade is carried thither, which otherwiſe would be remitted to us.

The only difficulty is concerning Eaſt-India raw ſilks, which are purchaſed partly by our ſilver, and partly by our manufactures.

factures. But of thoſe it muſt be acknowleged, that the whole price of importing and working them up is paid to the labour of our people. But as Eaſt-India raw ſilks are the leaſt part of our importation *, ſo it is of theſe that we make the greateſt re-exportations, and the countries to which we do it, reimburſe us not only our whole coſt of the re-exported raw ſilk that is imported from the Eaſt-Indies. However, the throwing of raw ſilk employs ſo many little and otherwiſe uſeleſs hands, that I ſhall never quarrel with the Eaſt-India trade for the ſilver it exports for thoſe uſeful materials.

* The caſe is greatly altered, ſince the act of parliament to encourage the importation of China ſilk.

But this can never be ſaid in defence of a trade, which exchanges our ſilver for foreign ſilks already manufactured to the very utmoſt perfection; for what can theſe be ſaid to pay our lands? what to the labour of our people? It were better for us to ſend our money to the Eaſt-Indies than to France, for theſe manufactured ſilks, not only becauſe they are purchaſed cheaper in the former, but becauſe the coſt of a long importation is all paid to our own navigation; beſides that, it were leſs dangerous to enrich a country at ſo great a diſtance, than ſo near a neighbour as the French nation.

But that which I am chiefly aiming at is, that this whole increaſe of the ſilk manufacture in England, is ſo much loſt to other nations: for all that pretend that we are not richer nor more populous than we were before the war, will grant, that our conſumption of wrought ſilks cannot be greater than it was before. Whence then is this increaſe of a manufacture to the value of 700,000l. per ann. gained? and to what countries is it loſt? It muſt be wholly loſt to France and the Eaſt-Indies, and how is this loſs to be proportioned?

Our whole quantity of black ſilks was heretofore brought from France; our own manufacture of this commodity amounts to 300,000l. per ann. France therefore has loſt in this article the ſelling us ſo great a value.

There is no reaſon to believe, that the whole value of Eaſt-India wrought ſilks annually conſumed in England ever amounted to 200,000l. per ann. It remains therefore to make up the whole 700,000l. per ann. that the value of 200,000l. per ann. more in brocades and other rich ſilks muſt have been imported from France.

Then let the cuſtom-houſe accounts make the wrought ſilks imported from France as much or as little as they pleaſe, the increaſe of the ſilk manufacture in England will demonſtrate, that our importation of this commodity from France was heretofore 500,000l. per annum.

By the extraordinary induſtry and ingenuity of our ſilk manufacturers, we have the ſatisfaction to obſerve, that the wear of French ſilks in general, is in this kingdom greatly diſcountenanced, by the wiſe and glorious example of his Majeſty and all the royal family: and, indeed, the fabrics of Spitalfields are now eſteemed to be ſuperior to thoſe of France. We have likewiſe many excellent deſigners among our weavers, which has not a little contributed to the increaſe of this manufacture, to that ſuperlative height to which it is arrived. See the article ENGRAVING. And if our manufacturers would follow the example of the French in making a very light and cheap ſort of ſilks, our exportation of theſe manufactures might reaſonably be expected to increaſe.

The late encouragement given by the legiſlature to the importation of China raw ſilk, it is to be hoped, will have a happy tendency to render a great part of our ſilk manufactures much cheaper than without this ſilk. For,

The China ſilk is not only of excellent ſtaple, but comes at little above one third of the price of Italian Piedmont ſilk. Before the late act, the duty of Bengal raw ſilk being one third more, and China near three times as much as that of the Italian, hindered our being ſupplied ſo fully as we ought, and was a great detriment to the nation; for we pay the duke of Savoy moſtly ready money for what we have from him, which as effectually drains us of our bullion, as the India or China trade does; with this aggravation, that according to Mr Gee, almoſt three pounds of China ſilk may be purchaſed for the money that one pound of Piedmont ſilk coſts us.

Although ſilver, as before obſerved, is not ſent out directly to Piedmont, as it is to India, yet in fact it is the ſame thing; for the ballance of ſome other trade is carried thither, which otherwiſe would be remitted to us.

The ſilk of China will anſwer, in moſt reſpects, the uſe of Italian ſilk, provided we could be conſtantly ſupplied with the fine raw ſilk of which they make their damaſks, ſattins, and other fine manufactures, which, by the curioſity of thoſe ſilks, muſt come up to the goodneſs of Italian ſilk.

The China ſilk that we commonly receive, is purchaſed at Canton, the neareſt port we trade to in China; but their fine ſilk is made in the province of Nankin and Chekiam, where their fine manufactures are carried on, and where prodigious quantities of raw ſilk are made, and the beſt in all China. We have never 'till lately imported any of the ſuperfine here, but two or three ſhips have brought extraordinary good, the beſt of which, we are informed, was brought from Amoy; and doubtleſs, if encouragement was given for the importation of that fine ſilk, it might be thrown here, and our manufactures carried on at a ſmall expence to the nation: the countries of Chekiam and Nankin that produce it, are much to the northward of the places we now trade to, and near Chuſan, about five or ſix hundred miles to the northward of Canton, an iſland in which we formerly had a factory, and were admitted to trade.

That country is very cold in winter, and I have been informed, ſome of our woollen goods have ſold very well there, eſpecially our callimancoes and long-ells.

Beſides, the countries of Chekiam and Nankin are near the heart of the empire, where the greateſt trade is drove; and Nankin being the metropolis of trade in that country, as London is in England, ſhe ſends out her manufactures and merchandize to Canton, as we do to Briſtol, and other outports. But, as Canton is the neareſt port, ſome captains and ſupercargoes raiſe objections againſt going further down the coaſt, alleging that it is a difficult pilotage, and in danger of loſing their paſſage back that year; that the mandarins, and other officers, impoſe upon them, which makes it difficult to trade with them. But when private traders had liberty to go to China, they were of another opinion; they went to thoſe places where they could get moſt money, and the people of Chuſan (where the merchants of Nankin as well as of Hamcheu and Nimpo, two other great trading cities, lodge great quantities of merchandize) would be as ready to cultivate a correſpondence with our captains and ſupercargoes, as the people of Canton are; and it is hoped we may find as much encouragement to trade to thoſe parts, as we now do to Canton, their intereſt being the ſame among them all. A trade of this nature cannot be immediately ſettled, good and prudent management and time muſt do that. Some of our ingenious gentlemen have found, that ſeveral of our commodities, as well as our woollens, would do very well towards the heart of China; and to ſpeak freely, every lover of his country ought to have the advantage thereof in view, as well as his own private gains. If this trade could be fixed, and any quantities vended in that vaſt country, and the fine ſilk above-mentioned imported, it would exceedingly add to the profits we already receive by the Indian trade, and bring thoſe advantages with it, that may enable us to vie with any kingdoms in Europe in the SILK MANUFACTURES; for as cheapneſs and goodneſs always give preference, SILK ſo imported from China will anſwer in both reſpects. And it is to be hoped, improvements of this kind will be readily undertaken by the company, and be an acceptable ſervice to them, as well as to the nation in general.' Joſhua Gee.—And we find that the company, from the preceding act of parliament, have in earneſt engaged in this affair; and we may hope for ſuch ſucceſs in our ſilk manufacture, by means of the Eaſt-India and Turkey raw ſilks, that we may not be outdone therein by any other country.

For more matter relating to the ſilk trade, ſee the article RUSSIA, in regard to the ſilk of Perſia being imported through Ruſſia. See alſo the articles LEVANT TRADE, ORIENTAL TRADE, and TURKEY TRADE, for hints tending to ſome improvements to be made in our ſilk manufactures.

An ACT for explaining, amending, and rendering more effectual, an act made in the nineteenth year of the reign of king Henry the ſeventh, intitled SILK-WORKS.

'Whereas by an act paſſed in the nineteenth year of the reign of king Henry the ſeventh, intitled SILK-WORKS, it is, amongſt other things, ordained and enacted, that no manner of perſon ſhall from thenceforth bring, or cauſe to be brought, into the realm of England, to be ſold, any manner of ſilk wrought by itſelf, or with any other ſtuff, in any place out of the ſaid realm, in ribbands, laces, or girdles, upon pain of forfeiture of all the ſaid ribbands, laces, and girdles, and every of them, in whoſe hands ſoever they be found, or the values of the ſame, the one moiety to the king, and the other moiety unto any of the king's ſubjects that would ſue for the ſame: and whereas notwithſtanding the aforeſaid act, and the other laws now in being, great quantities of foreign manufactures, and particularly ribbands, laces, and girdles, are brought into, and ſold in this kingdom, to the great diminution of the trade and manufactures of this kingdom, and to the great prejudice, hindrance, and impoveriſhment, of great numbers of his majeſty's ſubjects; an evil which, if not timely prevented, will affect and greatly leſſen the public revenue, and greatly diſtreſs the ſilk trade and manufactures of this kingdom: for remedy whereof, be it enacted by the king's moſt excellent majeſty, by and with the advice and conſent of the lords ſpiritual and temporal, and commons, in this preſent parliament aſſembled, and by the authority of the ſame, that if any perſon or perſons ſhall, after the twenty fourth day of June, 1763, import, bring, or convey, or cauſe to be imported, brought, or conveyed, into this kingdom, any ribbands, laces, or girdles, not made and manufactured in Great-Britain, whether the ſame be wrought

wrought of ſilk alone, or wrought of ſilk mixed with any other materials; all ſuch ribbands, laces, and girdles, ſhall be, and the ſame are hereby declared to be forfeited; and the ſame ſhall and may be ſeized and detained by any perſon or perſons whatſoever, in whatever importers, venders, or retailers hands the ſame may be found or diſcovered; and ſhall be diſpoſed of as herein after is mentioned; and the perſon or perſons bringing, conveying, or importing ſuch ribbands, laces, or girdles, into this kingdom, or cauſing the ſame to be ſo brought, conveyed, or imported, ſhall alſo forfeit, for every offence, the ſum of one hundred pounds; and all and every perſon and perſons who ſhall be aiding, abetting, or aſſiſting in the bringing and conveying or importing into this kingdom, any ſuch ribbands, laces, or girdles, as aforeſaid, ſhall ſeverally forfeit and pay the ſum of fifty pounds, over and above any intereſt which he, ſhe, or they, may have, or may have had, in any ſuch ribbands, laces, or girdles.

And be it further enacted by the authority aforeſaid, That all and every perſon and perſons, being a vender or venders, retailer or retailers, of any kind of ribbands, laces, or girdles reſpectively, in whoſe cuſtody or poſſeſſion any ſuch ribbands, laces, or girdles, or any of them, ſhall be found, or who ſhall ſell or expoſe to ſale, any ſuch ribbands, laces, or girdles, as aforeſaid, or who ſhall conceal any ſuch ribbands, laces, or girdles, with intent to prevent the forfeiture or ſeizure of the ſame, ſhall, over and above the forfeiture and loſs of ſuch ribbands, laces, and girdles, and all intereſt which he, ſhe, or they, may have therein, for every ſuch offence, forfeit and pay the ſum of fifty pounds.

And be it further enacted by the authority aforeſaid, That all pecuniary forfeitures and penalties incurred under this act, ſhall be paid, one moiety to our ſovereign lord the king, his heirs, and ſucceſſors, and the other moiety to him or them who will ſue or proſecute for the ſame reſpectively; ſuch of the ſaid penalties which ſhall ariſe in that part of Great Britain called England, to be ſued and proſecuted for in any of his majeſty's courts of record at Weſtminſter, by action of debt, bill, plaint, or information, in which no eſſoin, protection, or wager of law, or more than one imparlance, ſhall be allowed; and ſuch of them as ſhall ariſe in that part of Great-Britain called Scotland, to be ſued and proſecuted for in the court of Exchequer at Edinburgh, in ſuch manner as any penalties and forfeitures for offences againſt the laws touching the cuſtoms may be ſued or proſecuted for there reſpectively.

Provided always, and be it alſo further enacted by the authority aforeſaid, That whenever ſuch ribbands, laces, and girdles, ſhall be found and ſeized in that part of Great-Britain called England, and out of the cities of London and Weſtminſter, and the limits of the weekly bills of mortality, and the ſame ſhall not exceed in value the ſum of twenty pounds, it ſhall and may be lawful for two or more of his majeſty's juſtices of the peace for ſuch county, city, borough, or place, where the ſame ſhall be ſo found and ſeized, upon any information before them, that ſuch ribbands, laces, or girdles, were ſeized as ribbands, laces, or girdles, unduly brought into, and not manufactured within, this kingdom, to hear and determine the ſame, and to procced to condemnation or diſcharge thereof, as ſhall ſeem juſt; any thing herein before contained to the contrary notwithſtanding.

And, for the utter prevention of all and every ſuch ribbands, laces, and girdles, ſeized and condemned as aforeſaid, from ever being made uſe of to the prejudice of the trade and manufactures of this kingdom, be it further enacted by the authority aforeſaid, that all and every ſuch ribbands, laces, and girdles, after condemnation thereof, ſhall, by order of the court, judge or judges, or juſtices, where or before whom ſuch condemnation ſhall be had, be publickly burnt and entirely deſtroyed; but the execution of ſuch order ſhall and may be ſuſpended for ſo long time only as may be thought juſt and meet, for the better attaining the ends of juſtice, with regard to any ſuit or proſecution had, or to be had, for the recovery of any pecuniary penalty or penalties by this act inflicted.

Provided always, and it is hereby further enacted by the authority aforeſaid, That forthwith, after the ſeizure of any ſuch ribbands, laces, or girdles, as aforeſaid, the ſame, until they ſhall be condemned, burnt, and deſtroyed, as aforeſaid, or diſcharged as unduly ſeized, ſhall be depoſited in one of the king's warehouſes belonging to the Cuſtom-houſe, in caſe ſuch ſeizure happens to be within the cities of London or Weſtminſter, or the weekly bills of mortality, where the ſame ſhall be received and admitted at all times by the proper officer or officers there, who is and are hereby impowered and required to receive and preſerve the ſame until they ſhall be condemned, burnt, and deſtroyed, or diſcharged as aforeſaid; and in caſe ſuch ſeizure ſhall be made out of the ſaid cities of London and Weſtminſter, and the weekly bills of mortality, then the ſame ſhall be depoſited in the hands of the chief magiſtrate of ſuch city, town, or place, where the ſame ſhall be ſeized, or in the hands of the conſtable of the next adjacent village, who is and are hereby impowered and required to receive and preſerve the ſame, until they ſhall be condemned, burnt, and deſtroyed, or diſcharged as aforeſaid; and all and every ſuch ribbands, laces, and girdles, may, from time to time, be viewed and inſpected by any perſon or perſons, on behalf of the proſecutor or proſecutors, or of the perſon or perſons intereſted in, or claiming, the ſaid ribbands, laces, and girdles, with the leave of the court, officers, judges, or juſtices, where or before whom any proſecution or ſuit ſhall be carried on for condemnation thereof, or for recovery of any penalty by this act inflicted, who are and is hereby required to make and give ſuch order, from time to time, for that purpoſe, as may be juſt and reaſonable.

And, for the better diſcovering and detecting any offender or offenders againſt this act, be it enacted by the authority aforeſaid, That upon an information in writing made upon oath before any two or more of his majeſty's juſtices of the peace for the reſpective county or place (which information ſhall be ſigned by the party or parties making the ſame) that there is good ground and reaſon to ſuſpect that ſuch ribbands, laces, or girdles, as aforeſaid, have been imported into this kingdom, and are concealed by, or are in the poſſeſſion or cuſtody of any retailer or ſeller of any kind of ribbands, laces, or girdles, contrary to the true intent of this act, it ſhall and may be lawful for ſuch juſtices reſpectively, to iſſue their warrant or warrants to any conſtable or conſtables, or other peace officer or officers, within the ſaid county or place, impowering him or them to ſearch, in the day-time, the houſe or houſes, out-houſe or out-houſes, warehouſes, ſhops, cellars, rooms, and other places, belonging to, or hired, employed, or made uſe of, by ſuch retailer or ſeller who ſhall be ſuſpected to conceal or have in his, her, or their poſſeſſion or cuſtody, any ribbands, laces, or girdles, not made or manufactured within Great-Britain; and if any ſuch ribbands, laces, or girdles, not being made or manufactured within Great-Britain, ſhall be found, to ſeize and carry away the ſame, for the purpoſe of carrying this act into execution, and to diſpoſe thereof as is herein before directed.

And be it further enacted by the authority aforeſaid, That if any action or ſuit ſhall be commenced againſt any perſon or perſons for any thing done in purſuance of this act, the defendant or defendants in ſuch action or ſuit, may plead the general iſſue, and give this act, and the ſpecial matter, in evidence, at any trial to be had thereupon, and that the ſame was done by the authority of this act; and if it ſhall appear to have been ſo done, then the jury ſhall find for the defendant or defendants; and if the plaintiff ſhall be nonſuited, or diſcontinue his action, after the defendant or defendants ſhall have appeared; or if judgement ſhall be given upon any verdict or demurrer againſt the plaintiff, the defendant or defendants ſhall recover treble coſts, and have the like remedy for the ſame, as defendants have in other caſes by law.

Provided always nevertheleſs, and it is hereby enacted, That in every ſuch action, it ſhall and may be lawful for the defendant or defendants, by leave of the court where ſuch action ſhall be depending, at any time before iſſue joined, to pay into court ſuch ſum of money as he or they ſhall ſee fit, as amends for the matter or cauſe complained of in ſuch action; whereupon ſuch proceedings, orders, and judgements, ſhall and may be had, made, and given, in and by ſuch court, as in other actions where the defendant is allowed to pay money into court.

And be it further enacted by the authority aforeſaid, That if any ribbands, laces, or girdles, wrought of ſilk alone, or of ſilk mixed with any other materials, ſhall be ſeized by virtue and in purſuance of this act, and any doubt or queſtion ſhall afterwards ariſe, where the ſaid ribbands, laces, or girdles, ſo wrought as aforeſaid, were manufactured, the proof ſhall lie upon ſuch perſon or perſons, being a vender or venders, retailer or retailers, of any kind of ribbands, laces, or girdles reſpectively, in whoſe cuſtody or poſſeſſion the ſame were found, and not upon the proſecutor or proſecutors, plaintiff or plaintiffs; and in caſe no ſuch proof ſhall be given, that ſuch ribbands, laces, and girdles, were manufactured within Great-Britain, then the ſame ſhall, without any further proceeding, be taken and held to have been manufactured out of Great Britain, and contrary to, and in violation of, this act; any law or cuſtom to the contrary notwithſtanding.

Provided always, and it is hereby declared, That if any ſuch perſon or perſons, in whoſe cuſtody or poſſeſſion any ſuch ribbands, laces, or girdles, as aforeſaid, ſhall be ſeized by virtue and in purſuance of this act (ſuch perſon or perſons not importing or concealing the ſame) ſhall diſcover, upon oath, before any one or more juſtice or juſtices of the peace, the perſon or perſons who ſold ſuch ribbands, laces, or girdles, to ſuch perſon or perſons, in whoſe cuſtody or poſſeſſion the ſame ſhall be ſeized, ſo as that ſuch perſon or perſons ſo ſelling the ſame ſhall or may be proſecuted and convicted according to the intent of this act, as the ſeller thereof, in caſe the ſame ſhall be, or be taken and held to be, within the intent and meaning of this act, manufactured out of Great-Britain; ſuch perſon or perſons ſo diſcovering as aforeſaid, ſhall be, and is and are hereby freed and diſcharged of and from all and every penalties and forfeitures by this act

act inflicted, upon all and every perſon and perſons, being a vender or venders, a retailer or retailers, having in their cuſtody or poſſeſſion, any ſuch ribbands, laces, or girdles, as aforeſaid, not made or manufactured in Great-Britain, and of and from any proof that ſuch ribbands, laces, or girdles, ſo ſeized as aforeſaid, are manufactured in Great-Britain.

Provided alſo, and it is hereby further enacted by the authority aforeſaid, That nothing in this act contained, ſhall extend, or be in any wiſe conſtrued to extend, to ſubject any perſon or perſons whatſoever, who ſhall wear or make uſe of ſuch ribbands, laces, or girdles, as aforeſaid, as part of his, her, or their apparel or dreſs only, to any forfeiture, or to any pecuniary penalty or penalties inflicted by this act, or to any proof that ſuch ribbands, laces, or girdles, are manufactured within Great-Britain.' 3 Geo. III. c. 21.

SILVER, a metal too well known to need a definition. By the art of metallurgy it is found to be the fineſt, pureſt, moſt ductile, and moſt precious, according to its natural properties, of all metals, except gold. See the articles METALLURGY and METALS, and the ſeveral heads from thence referred to.

There are ſilver mines, more or leſs, in all the quarters of the world. See the article MINES. Thoſe of Peru and Mexico, and of ſome other parts of America, are much the richeſt. See the articles AMERICA, PERU, MEXICO, and ORES.

The mineral ſtones or ores, dug out of the earth, are not all of the ſame quality, conſiſtence, or colour; ſome are white and aſh-coloured, others ſpotted with blue or red, and ſometimes with both; others are black: theſe laſt are the richeſt, and the eaſieſt wrought.—Others of a yellowiſh red, and of a greeniſh colour.

The uſual way of ſeparating ſilver from the ore, in Europe, is the ſame as that of gold: i. e. by means of mercury [ſee MERCURY] with the difference only of adding ſalt. See the articles GOLD and REFINING.—How ſilver ore is aſſayed, ſee the article ASSAY.

REMARKS.

In the large way of buſineſs, ſilver and gold ores are treated either by amalgamation with mercury [ſee AMALGAMATION], or by ſmelting and refining them with lead [ſee SMELTING, and REFINING]. That by amalgamation is only uſed where the ore is exceeding rich, particularly at the ſilver mines of Potoſi: for by grinding ſuch rich ores with mercury, the nobler metals will be drank up by it, and may be readily ſeparated from it again by diſtillation; which carries over the quickſilver, and leaves the nobler metals behind. Lead is uſed with the poorer ores, in order to imbibe the richer metals they contain; which it does much after the ſame manner by fuſion, as quickſilver does without it, ſo as to ſeparate the heterogeneous parts, by keeping them floating, and afterwards reſtoring the nobler metals by cupellation.

The large way of ſmelting gold and ſilver ores is analogous to the ſmall one of aſſaying [ſee ASSAY]; all things being proportionably larger, the fire animated with bellows, and the blaſt directed upon the ſurface of the melted metal, ſo as to blow off the lead in the form of litharge, before it is fully vitrified [ſee the article LEAD.] But here the ſilver is not perfectly refined at one operation; ſome proportion of lead ſtill remaining mixed among it, that requires to be burnt out, after the ſame manner, in a ſtronger fire: and even thus it is with great difficulty that ſilver can be obtained pure, or totally ſeparated, either from lead or copper. This large way of working might, perhaps, be improved in reſpect of the veſſel or teſt employed, and the management of the fire, ſo as to work by the means of flame, without the aſſiſtance of bellows.

With regard to the teſt, we are to obſerve, that bone-aſhes, though ever ſo well waſhed and ſifted, are not, perhaps, the fitteſt matter to make teſts of; the teſt ſo made being apt to crack in the fire, unleſs dried, very gently, for many days, before they are uſed. But there is a particular kind of talc, or unvitrifiable ſperth ſtone, that being calcined to fine powder, as it readily may, and made up with a ſmall ſolution of vitriol in water, affords ſuch teſts as may be almoſt immediately uſed without danger of cracking.

Again; the flame of a wind-furnace may be made to play upon the ſurface of the melted metal, ſo as readily to perform this operation, without blowing with bellows, that violently tear away the ſilver along with the lead, in the form of litharge. And this farther convenience may be obtained, that not only ſmaller and cheaper wood, but even pit-coal, ſhall here ſerve for the fuel, provided the ſtructure of the furnace be contrived for the purpoſe. And in ſome places, particularly in Flintſhire, they have of late advantageouſly uſed common pit-coal for teſting in the large way, and the ſame improvement might alſo be made in the ſmall way of aſſaying. The methods of obtaining ſilver in purity are various, and differ according to the metal wherewith the ſilver is mixed or allayed. If copper be mixed therewith, the beſt and cheapeſt way to purify the ſilver is, to calcine it with half its weight of common ſulphur, then melt the whole together, and throw into the pot, at ſeveral times, a due quantity of clean and new iron filings; which will immediately make the ſulphur quit the ſilver, catch hold of the iron, and form a ſcoria at top, leaving the ſilver free from copper, iron, or ſulphur, at the bottom. See the article FLUX.

One method of ſeparating GOLD from SILVER is by QUARTATION. See the article QUARTATION. See alſo that of AQUA FORTIS and AQUA REGIA, as applicable to GOLD and SILVER. See alſo the article REFINING.

Of trafficking in SILVER BULLION, ſee the article BULLION.

Of the fixing a PAR between GOLD and SILVER, ſee the article COIN.

Of ſilver bullion being a commodity, exportable as well as importable like other wares, ſee the articles BULLION and COIN.

Of the quantity of ſpecie requiſite to circulate the commerce of a nation, ſee the articles CASH and CIRCULATION.

Of the augmentation and diminution of coin in denomination, ſee the article COIN.

Sir Iſaac Newton's repreſentation laid before the lords of the treaſury relating to the ſcarcity of SILVER COIN, and the meaſures taken to prevent the ſame. See the article COIN.

Of the laws of England relating to its coin, ſee COIN.

1 W. & M. Queen Anne George I. George II.	I do not find any alteration in the ſtandard of the gold or ſilver down to the preſent time. 22 Carats fine and 2 alloy is the lb. of gold, and 11 oz. 2 dwts fine, and 18 dwts alloy, the ſtandard lb. of ſilver; and the diviſion of the pound gold continues the ſame; that is to ſay, into 44 guineas ½, and the ſilver into the uſual number of crowns, &c. but the guineas have varied in the nominal value ſeveral times, riſing up to xxxs. and declining to xxi, the preſent current value; but never have been reduced again to their intended level of xxs. nor indeed ought: when compared with the Portugal pieces of 3l. 12s. or 1l. 16s. it appears to be better worth xxi s.								15 21

A ſtate of confuſion.

		to the lb. Troy.	
Portugal -	l. 3 12	- 13	l. 46 16 0
Engliſh guineas -	1 1	- 44 ½	46 14 6
			00 1 6
And the Portugal ſtandard worſe ¼ grain		-	00 2 6
Total worſe lb. Troy by ſtandard and tale		-	00 4 0

This, with the difference in point of exactneſs in coining, wherein the Portugal is much more defective than the Engliſh coins, may be very good reaſons for their being refuſed in payments in any of the receipts of the public revenue; but anſwer very well the purpoſe of thoſe who benefit by the irregularity, in trading with the heavier and paſſing off the lighter by tale; and which, if they can turn into guineas or heavy ſilver, make another gain.

How our ſtandard is proportioned to that of other countries, and thence what the true par of exchange is between us, ſee the article COIN, where you will find Sir Iſaac Newton's tables and the explanation thereof, and his repreſentation afterwards to the lords of the treaſury upon our coin.

SKIE, the biggeſt but one of all the weſtern Iſlands of Scotland, is a part of Inverneſs, from which it is divided by a narrow channel. The ſoil is generally a black mould, though there is ſome of a red colour, wherein iron is ſometimes found. The arable land is for the moſt part black, yet affords clay, white, red, and blue; and in ſome places there is fine white marble, various marcaſites, [ſee MARCASITES] agate, and variegated ſtones; cryſtals of ſeveral colours, plenty of free-ſtone and lime-ſtone. Here are the lapis hecticus, the lapis ceraunius (a ſort of cramp-ſtone) and plenty of good ſprings, ſome of wich are medicinal.

It is very high land, both on the coaſt and within the country; and almoſt to the center of the iſland, there are ſeven high mountains that lie near one another. The ſoil is fruitful enough in the low grounds, and produces plenty of thoſe ſpecies of cattle and corn, which are to be found in the other weſtern iſlands; eſpecially of the latter, for it ſupplies the neighbouring continent with barley and oats.

Cod and ling are common upon the coaſt, and herrings in great abundance, for the taking of which here are many convenient harbours and bays, with about thirty rivers that afford ſalmon and other fiſh. [See the article SCOTLAND.] The country is populous, the people handſome, and very healthy. Their cattle are horſes, cows, ſheep, goats, and hogs.

SKINS. After various dreſſings of ſkins, ſome of which are only ſimply preſerving them, others conſiſt in penetrating, ſuppling, and ſtrengthening the ſkin by means of oil on the fleſh ſide only, (for the hair ſide is carefully covered during the operation) our furriers begin by employing the furrs of our common wild beaſts, ſuch as foxes, pole-cats, moles, badgers, otters, rabbets, hares, mountain-cats, and ſome others, and they find means to make them valuable, by the judicious aſſortments they make of the moſt beautiful of them.

The mountain-cat is a very wild animal, bigger than the fox, and which, for its ſparkling eyes, is looked upon by ſeveral naturaliſts to be the lynx of the Ancients. Its ſkin is, perhaps, one of the moſt beautiful in the world. But the creature is found in the foreſts of France as well as in other countries; and people there, as well as in other countries, had rather pay a high price for ſome ſkin of a diſmal colour, and frequently counterfeited and dyed, if they can pleaſe themſelves with the thoughts that it comes from ſome remote clime. It is true, that the northern parts of Europe and America furniſh us with furrs of great ſoftneſs and luſtre *. The countries which ſend us the moſt valuable, are Siberia on the confines of Tartary and Muſcovy, Nova Zembla, Spitſberg, Groenland, Terra de Labrador, or New Britain, and Canada. The Oſtiacks and Samoids †, who inhabit the northern parts of Siberia near the ſea, venture on the ice into uninhabited countries, in order to hunt rain-deer, elks, and foxes. The tributes which the Tartars owe, ſome to the emperor of China, others to the courts of Perſia, Conſtantinople, or Peterſbourg, are paid in furrs only: and thoſe petits-gris, which the French merchants bring from China, probably are not the produce of China, but of Chineſe Tartary.

* Waſſerſchleb's Memoirs.

† Peyrere's Relation of Groenland.

Siberia is the true magazine of fine furrs [ſee the article SIBERIA.] But our merchants do not go into that country, but purchaſe theſe goods either at Archangel or Peterſbourg. The Czars have for a long time paſt claimed the whole property of the moſt valuable product of Siberia, as the fine ſkins, and the gold-duſt which is found in ſome of their rivers: and the ſituation of the country facilitates this ſubjection.

Siberia is open only on the ſide of Tartary, of which it makes a part, and where furrs are of little or no value. To the north and weſt it is defended by the ice: towards Ruſſia it is hemmed in by a ledge of mountains, the paſſages of which are commanded by ſo many forts and barriers, where all thoſe who come out of the country are ſearched with the utmoſt rigour, even to the breaking up of the carriages, to ſee if there is nothing valuable concealed in them. The criminals, who are exiled from Muſcovy to Siberia, are obliged to go a hunting. They are maintained, but their captures belong to her Czarinian Majeſty. The other inhabitants who hunt likewiſe, are not allowed to ſell their goods out of the country: but the beſt ſkins which they have to ſell, muſt be carried to the governor of Siberia. He pays them ſomewhat above the common price, which is a mere trifle; then puts a ſtamp on them, and ſends them to the ſenate of Ruſſia, which diſtributes them at Moſcow, Peterſbourg, Archangel, and other places of trade. They hunt with gins, or long poles, or blunt darts, which either kill or ſtun the beaſt without injuring the ſkin.

The northern furrs in moſt eſteem are the ſable, the black fox, the ermine, and the petit-gris.

The ſable is a ſort of weeſel, found in Biſcay, Pruſſia, Canada, and many other places; but the moſt eſteemed is the Siberian, which we call xibiline: the blackeſt is the moſt valuable. But there are tricks played under the polar circle, as well as in the temperate zone. The Siberians and Ruſſians have found out a way to dye the brown ſable to the colour of that which is naturally of the moſt beautiful black. Lemon-juice is the beſt thing we know to diſcharge this artificial colour, and lay the cheat open.

The deareſt furrs of the Siberian ſable are thoſe which are made of the tips of the tails of this creature, and which can only ſerve for ſmall things.

The black fox, which is as well known as the ſable in the coldeſt countries, and is not common any where elſe, may undeceive us of a vulgar error. Some of them, indeed, are found perfectly white, which would naturally be of another colour in other countries: and ſome, which were brown in ſummer, turn grey or white in winter, and reſume their colour in ſummer: but there are many which never change colour.

Ermine, ſo much eſteemed for its whiteneſs and luſtre, is alſo a kind of pole-cat, or weeſel. Some dictionaries confound it with the ſquirrel, of which we are going to ſpeak; and to increaſe the confuſion, with the Siberian ſable, although they are three different animals. The ſable and ermine differ as much as black and white. In order to heighten the charming white of the ermine, the furriers uſually prick them here and there with little black ſuffs, which are bits of the ſkin of a lamb from Lombardy, which is of a very ſhining black.

The fourth furr, which we have from the North, is the petit-gris. It is the ſkin of the ſquirrel of cold countries. It differs from ours in this, that from brown, like ours, in ſummer, it turns grey in winter, and continues grey after death. Two very different ſorts of furrs are made of this ſkin. The black makes the petit-gris, and the belly is as white, and more ſhining, than ermine. It is bordered on each ſide with a black ſtreak, which is carefully preſerved. When the furr is alternately varied with the back and belly of the ſkin, it is much the richer: and this is what was formerly called the little vair, which frequently occurs in the coats of arms of ſome ancient families.

From that branch of the ſkinner's trade which dreſſes ſkins intire, we may paſs to the other, which generally dreſſes them without the hair. It is ſubdivided into ſeveral claſſes, which have ſome operations in common, and others peculiar to each claſs.

Although there is a great difference between the dreſſes of ſhammoy, allum leather, Hungary leather, Morocco leather, [ſee LEATHER] the tanner, and parchment-maker; yet the ſkins which paſs thro' the hands of theſe ſeveral workmen, ought to have been, for the moſt part at leaſt, waſhed of the blood and impurities in a running water, ſet to drain, worked with the hands, or pounded with wooden peſtles in a tub, or vat; put into the pit (which is made in the ground, and bordered with wood, or ſtone and mortar) filled with water, in which quick lime is diſſolved, in order to looſen the hair, that it may be eaſily rubbed off, without injuring the ſkin; drawn out, and ſet to drain on the edge of the pit; ſtretched on the leg, or horſe, in order to have the hair ſcraped off with a blunt iron knife, or ſometimes with a cylinder of wood; pared off the fleſh and membranes on the fleſh ſide, and of the ſcabs, or roughneſs, on the grain ſide, with a ſharp knife; rubbed with a whetſtone on the ſame horſe, to take off any particles of the lime, or other thing which may occaſion hardneſſes; thickened by different ſorts of powders, whereby they become greater in bulk, and ſo much lighter, as gradually to riſe to the ſurface of the water; ſtretched out green, or half-dried, and piled one over another, or put up ſeparate, after being dried to a cruſt; hung out to air upon poles, lines, or any other way; which muſt be done ſeveral times in dreſſing ſmall ſkins.

This alternate tranſition from the liquid of the air into that of water, and from water into the air, with the aſſiſtance of the lime, ſalts, and oil, opens the inmoſt fibres of the ſkin ſo effectually, as greatly to facilitate the introduction of ſubſtances proper for making them pliant, without rendering them thinner.

Natural philoſophy would be much embarraſſed to ſettle the order and great number of theſe operations, by the dint of reaſon alone. But what the moſt penetrating genius has never been able to invent, frequent handling of the ſame thing brings a man to practiſe with ſucceſs. Common workmen continue to do the ſame thing ſcrupulouſly by habit. One of them more expert than the reſt, and whoſe experience makes up all his philoſophy, overſees the whole, judges of the degree of dryneſs and moiſture, of the hardneſs and ſoftneſs, determines juſtly, and either repeats, lengthens, or ſhortens the proceſſes.

Theſe proceſſes, though really the ſame in the four or five principal dreſſings of leather, are ſo different in regard to the manner of executing them, and the time required in them, that the knowlege of all the minute particulars is requiſite for him only who intends to practiſe the trade. We will content ourſelves with what conſtitutes the true objects of ſome of theſe trades; of the ſkinner, becauſe this is of moſt general concern.

The allum leather-dreſſer dreſſes all ſorts of white leather, from the ox-hide to the lamb-ſkin. He works chiefly for the ſadler and glover. For dreſſing the ſadler's leather, he uſes bran, ſea-ſalt, and allum. For that which the glover uſes, after the common preparatives, he firſt employs bran, and then with ſalt, allum, fine flour, and yolks of eggs, mixed in hot water, he makes a ſort of pap, with which the ſkins are daubed and ſed, in a trough or tub.

The ſhamoy-dreſſer ſoaks in oil not only the ſkin of the true ſhamoy, which is a wild goat, but likewiſe thoſe of all other goats, though much inferior to the true, and even ſheeps-ſkins, which he dreſſes like ſhamoy.

The tanner uſes the bark of young oaks, from 18 to 30 years old, ground in a tanning-mill, in which he ſoaks ſkins more or leſs, according to the different ſervices expected from them, and their chief uſe is to remain firm, and keep out water.

Whereas the tanner's way of dreſſing leather, in lime and tan, takes up two or three years; the Hungary leather-dreſſer allows but three or four weeks to that which paſſes through his hands. He ſupplies the harneſs-makers, ſadlers, belt-makers, and all other trades that uſe not only white and allum leather, or oiled and tanned leather, but alſo ſkins coloured grey with ink, and dreſſed in tallow, which is the diſtinctive work of the Hungarian leather-dreſſer *.

* Our curriers in England dreſs this ſort of leather.

His name (Hongreyun in French) and method came from Hungary, whither a French workman went, by order of Henry IV. to learn the trade by ſtealth, and thereby to lower the price of harneſſes and ſeveral other things made of leather, wanting in his armies.

The tanner in certain caſes, inſtead of tan, uſes redon, which is a plant cultivated in Gaſcony, and very common in Poliſh Ruſſia. It ſerves chiefly for tanning rams and ſheeps-ſkins, which the French call baſſanes: but it is alſo uſed in dreſſing Ruſſia leather, which the Poliſh Ruſſians make a great myſtery of, though there is a very good manufacture of that ſort at St Germain en Laye.

The confit and ſumach are in little uſe but for Morocco leather. The confit, into which goats-ſkins are put after the common preparation, is a large tub of warm water, wherein they are thrown, after having diſſolved therein a very cheap ſubſtance, taken from the animal kingdom, and that is the ſweepings of dog-kennels.

The ſumach is taken from the vegetable kingdom: it is a duſt which comes on the leaves and ſmall branches of the plant called rhus, or ſumach. It is ſumach, with galls and allum, that the Morocco leather-dreſſer chiefly uſes, whoſe intention is to give a grain to goat ſkins, and thereby to render them ſuſceptible of the moſt beautiful colours. They call grain thoſe little wrinkles, or furrows, which run all over the ſurface of Morocco leather, as alſo that of calves and cows-leather, which they bring to a reſemblance of it, by dint of waſhing, pounding, waſhing again, wringing, and folding the ſkins different ways. We ſhall ſay nothing either of the water tinged with ruſt of iron, which ſerves to give a black colour, nor of the lac, and other ſubſtance, which colour the ſkins red, yellow, &c.

The workmen who give the grain, and the moſt lively colours, to the ſkins of ſhamoy, or other goats, and who dreſs calves and ſheeps-ſkins in the ſame manner to imitate Morocco, make a great ſecret of certain parts of their art, which they ſay are the niceſt parts of it. The precautions and miſtruſts of tradeſmen are ſometimes very diverting. In my walks among them, I found a rope-maker who refuſed to let me take a draught of the mechaniſm of making a horſe-girt, without a compulſive order.

As the grain and beautiful dyes of goats-ſkins are the work of the Morocco leather-dreſſers, the laſt preparation and dyes given to certain tanned leather, are the buſineſs of the currier: ſo, likewiſe, when ſkins dreſſed white by the ſkinner, are deſtined for writing or drawing, the parchment-maker puts the finiſhing hand to them.

REMARKS.

Skins, and the hair of beaſts, manufactured, become parchiment and vellum, leather, of which are made ſhoes and boots, ſaddles, harneſs and furniture for horſes, gloves and garments, coaches and chairs, houſhold ſtuffs, covers of books, drinking veſſels, &c. and furrs for cloathing, hats and caps. Theſe branches of trade that are derivable from the ſkin trade, render it a very conſiderable concern, and well deſerving preſervation as much as we can within ourſelves.

The Engliſh have greatly increaſed their quantity of furrs and ſkins of all ſorts, from their northern colonies, ſince they have ſettled and planted northward to Nova Scotia, Annapolis, and other places towards the river Canada.

Theſe ſeveral ſorts of ſkins brought to Europe from theſe parts, are of the following kinds, viz. deer-ſkins, bear, beaver, otter, raccoon, fox, elk, cat, wolf, marten, mink, muſqueſh, fiſher, &c. all which furniſh us with materials within ourſelves to carry on divers valuable and extenſive branches of our commerce, without being obliged to import them from other nations; and for which raw materials we pay in the manufactures of England, Scotland, and Ireland, and thereby the mother-country, as well as our colonies, become more and more inriched. And this is likely to be the caſe to a very conſiderable degree; ſince CANADA is annexed to the crown of Great-Britain by the Treaty of 1763. See AMERICA, CANADA, MISSISSIPPI, INDIAN AFFAIRS in NORTH-AMERICA.

SLAVE TRADE. See AFRICAN TRADE, and ENGLISH AFRICAN COMPANY See alſo DUTCH AFRICAN COMPANY, FRENCH AFRICAN COMPANY, and PORTUGUEZE AFRICAN COMPANY.

SLESWIC, or SOUTH JUTLAND. This duchy is an ancient dependence on the king of Denmark. It has North Jutland on the north, from which it is ſeparated by a line drawn from the city of Bypen, on the German Ocean, to Colding on the leſſer Belt; on the eaſt it is bounded by the Baltic; on the ſouth by the duchy of Holſtein; and on the weſt by the North Sea or German Ocean. Its greateſt length, from the ſouth-eaſt to the north-weſt, is about 86 miles, and its greateſt breadth, from eaſt to weſt, about 60.

It is watered by a great number of rivers, which render it very fruitful; it abounds with meadows and paſtures. The eaſtern part of this duchy lies higher than the weſtern; and in the latter there are large plains, which produce a great plenty of all ſorts of corn.

The iſlands of North Strand, Fora, Sylt, Amron, Rom, and Manoc, belong to this duchy.

It is divided into ſeveral bailiwicks.

The whole duchy of Sleſwic belongs to Denmark, the king having conquered it, during the minority of the duke of Holſtein, in the late war of the North; and the poſſeſſion has been ſecured to him by the guaranty of the kings of Great-Britain and France. The nobility of this province is very powerful, and divided into four circles, which are, thoſe of Haderſleben, Tonderen, Flenſburgh, and Gottorp. The chief towns in the duchy of Sleſwic are as follow:

SLESWIC, or SLEYZWIC, the capital of this duchy, is ſeated on a ſmall arm of the ſea, called the Sley, at the diſtance of about 22 miles from Keil, toward the north-weſt, 38 from Gluckſtadt, to the north-eaſt, and 28 from Lunden, to the eaſt.

In 1100 it was a place of very great trade, and much frequented by merchants from Great-Britain, France, Spain, Flanders, &c. This city was even ſo conſiderable, that Adam Bremenſis, who flouriſhed about the year 1100, called it Civitatem opulentiſſimam ac populoſiſſimam, a moſt rich and populous city: but its trade is now almoſt dwindled to nothing. The ſoil, eſpecially towards the ſouth and eaſt, is not very fruitful, but the town is ſufficiently ſupplied with all neceſſaries of life from the neighbouring country, and the Sley affords abundance of fiſh. They brew beer here, which is not very palatable, but they import ſome from abroad, as well as wine, which is here pretty cheap.

GOTTORP was the ancient ſeat and patrimony of the dukes of Holſtein, the chief branch of which family, after the royal one, took from thence the title or ſurname of Gottorp. It is about ſix miles diſtant from Sleſwic, to the ſouth-weſt, and ſtands on the Sley, which almoſt ſurrounds it, and carries veſſels of ſmall burthen to and from the Baltic.

ECRENFORD ſtands on a little gulph on the Baltic, which makes a very commodious haven, and affords a pretty conſiderable trade, it being one of the ſafeſt ports on that ſhore; it is about 22 miles diſtant from Gottorp to the eaſt, and ſix from Kiel, towards the north.

FREDERICKSTADT, was thus called from its founder Frederick duke of Holſtein and Sleſwic, who built it in the year 1621, peopled it with Hollanders, and granted them great privileges. He endeavoured, alſo, to ſettle a ſilk trade there, and, for that purpoſe, ſent a famous embaſſy to Muſcovy and Perſia, which gave occaſion to Adam Olearius, ſecretary of it, to publiſh an account thereof, in an excellent book

of travels. This town ſtands on the banks of the river Eyder, and is 42 miles diſtant from Sleſwic, towards the weſt, and 42 from Gluckſtadt, to the north.

TONINGEN is alſo ſituated on the river Eyder, 10 miles below Frederickſtadt, and about 14 from the German Ocean. It is not an ancient town, but it has a pretty good trade, which increaſes daily, by means of its commodious harbour, formed by the Eyder.

HUSUM, the capital of a bailiwic of the ſame name, ſtands on the gulph of Hover, and is about 10 miles diſtant from Toningen, to the north, and 20 from the German Ocean. It has a harbour capable of ſmall veſſels; and as the neighbouring country abounds with paſtures, they keep here, every week, a market for cattle; and it has been obſerved, that, in time of war, they have ſold here above 4000 horſes in a year. In the gulph on the weſt of the town, they fiſh vaſt quantities of excellent oyſters.

FLENSBURG, the capital of a bailiwic of the ſame name, is ſo called from the bay, or gulph of Flens, on which it ſtands, and which is formed by the Baltic. The town is about eight miles diſtant from Sleſwic, to the north, and near 30 from Toningen, to the eaſt. The bay, on the bottom of which it ſtands, makes here a fine haven, where ſhips of great burthen may ride ſafe, and come up to the very warehouſes, to load and unload. On the land ſide it is encompaſſed with mountains, which ſhelter it from winds, and ſupply it with water.

APENRAGE ſtands on another gulph of the Baltic, and is 16 miles diſtant from Flenſburg, to the north-weſt, and about 14 from Huſum, to the eaſt. It has a port at the bottom of the bay, which is much frequented by the Daniſh fiſhermen, and affords it a pretty good trade with the adjacent iſlands: this is alſo the chief place of a bailiwic of the ſame name.

HADERSLEBEN is a good ſea-port town, near 20 miles diſtant from Apenrade, to the north. It is watered on the weſt by the lake of Haderſledam, and on the eaſt by the canal, or gulph, called Haderſlebfoerd, which is ſo ſhallow near the town, that veſſels of burthen are obliged to anchor at the diſtance of two miles from it. That gulph into which the lake runs is very narrow, and about nine miles lower falls into the Baltic Sea. The country about this town abounds with fruitful corn-fields, and excellent paſtures, which, together with the fiſh taken out of the lake and gulph, render this a pretty flouriſhing place.

TUNDER, or Tunderen, a ſmall but well-built town, ſtands on the ſouthern bank of the river Wydaw, about 12 miles diſtant from Haderſleben to the weſt, 20 from Huſum to the ſouth, and near 14 from the German Ocean. It lies in a fruitful ſoil, and had formerly a conſiderable trade, which is now loſt, its harbour being choaked up with ſand *.

* This is an inſtance, amongſt numberleſs others in this work, to ſhew that when trade declines, poverty enſues.

The moſt conſiderable iſlands adjacent to the duchy of Sleſwic are as follow:

NORTHSTRAND, in the German Ocean, lies overagainſt the bailiwic and town of Huſum, and was, it is ſaid, ſeparated from the continent by a violent ſtorm. When it became an iſland, it was about 12 miles long, and four broad in ſome places, and in others leſs. Its ſoil is very fruitful, and produced abundance of corn before the great inundation that happened; it had alſo very fat paſtures, where they fed exceeding good cattle: and they uſed to ſend daily to Huſum, and other places, a prodigious number of ſheep, fowls, ducks, and geeſe, and great quantities of butter.

AMRON, or AMROEN, is a ſmall iſland to the north-weſt of Northſtrand, from which it is about ſeven miles diſtant. It is in the form of a creſcent, and is not conſiderable, but for its oyſter-fiſhery.

FORA, VOOREN, FOCTER, or FOCBER, lies towards the north-eaſt of Amron, neareſt the coaſt of Sleſwic, between Northſtrand and Sylt. It belongs to the prefectorſhip of Tunder, and is of an oval figure, about ſix miles in length, and four in breadth. It abounds in cattle and corn, and has about 4200 inhabitants, and ſeveral villages.

SYLT lies to the north of Fora, from which it is ſeparated by the Rode Tift, or Red Channel. It is of a triangular form, about 14 miles long. The greateſt part of its ſoil is nothing but ſand and heath; but towards the eaſt and weſt there are ſome paſtures, where they feed cattle. There are no woods here, and the people are obliged to fetch from the continent what they want for firing. Their number amounts to about 1750 ſouls. A great part of the men and boys ſet out every year for the whale-fiſhery on the coaſt of Iceland, Greenland, and Spitzbergen.

ROM, or ROEM, towards the north-eaſt of Sylt, is about ſeven miles long, and about four broad, and has about 1500 inhabitants, and ſeveral villages. The eaſtern coaſt of the iſland has good paſtures, and on the weſt there are harbours capable to receive middle-ſized veſſels.

There are ſeveral other iſlands on the coaſt of Sleſwic, but they are ſo ſmall and inconſiderable, that they do not deſerve mentioning.

SLIGO, or SLEGO, a county in Ireland, lies full upon the ſea, to the north and north-weſt, where it is alſo bounded by the river Trobis; it has Mayo on the weſt; part of that county, and Roſcommon on the ſouth; and the county of Leitrim on the eaſt. The greateſt extent from north to ſouth, is 35 miles, and from eaſt to weſt, 33; or, as ſome ſay, 44, it being very unequal both ways, and runs out in a point to the north, as far as Donnegal-Bay. It is computed to contain 241,550 acres. Great part of the country is mountainous and boggy, but its lower grounds and bottoms have a good ſoil, both for the ploughman and the grazier.

SLEGO, which lies on a bay of the ſame name, is a market-town, and the only town of note in the county. It has a very commodious harbour, and ſhips of 200 tons may come up to the town-key. The town is populous, but not large, nor is the trade here conſiderable, though much better than in any of the other places beyond it.

SMELTING, among metalliſts, the melting of the metal in the ore, in a ſmelting furnace, in order to ſeparate the metallic from the earthy and other parts. Smelting, in propriety, is reſtrained to the large way of working upon ores from the mines, and reducing them to a pure metal, ſo as to fit the produce for civil, mechanical, and œconomical uſes. For the methods of ſmelting the ſeveral metals from their reſpective ores, ſee the articles COPPER, LEAD, TIN, IRON, GOLD, SILVER, and MERCURY. See alſo the articles ASSAY, FLUX, METALLURGY, MINERALOGY, MINES, MINERALS, ORES, REFINING.

Preparatory to the ſmelting of ores, the following operations are requiſite.

EXPERIMENT I.

The method of roaſting of ores.

We took a pound of the common Corniſh mundic, and breaking it into ſmall lumps, expoſed it upon the grate of a furnace, whilſt the fire was made below, and thus at firſt gently heated and terrified the mundic; but afterwards by degrees increaſed the fire, ſo as to make the lumps glow, or appear red-hot: in which ſtate we kept them for half an hour, or 'till no more ſulphureous vapour, or ſtench, roſe from them.

OBSERVATIONS.

This experiment ſhews the common method of roaſting ores, in order to diſcharge their ſulphureous, arſenical, or antimonial parts, that might otherwiſe hinder their fuſion, or elſe carry off a conſiderable proportion of the truly metallic matter in melting. For fear this metallic matter ſhould fly off, we made the fire gentle at firſt, but increaſed it, by degrees, 'till the lumps became red-hot, otherwiſe the ſulphur would not quit its hold, for ſulphur requires a naked fire, and the aſſiſtance of the open air, before it will burn, or go intirely off.

The richer and more tractable ores have no occaſion to undergo this previous operation of roaſting, but are uſually committed to fuſion ſoon after being dug up, and ſeparated from their ſtone, or mine. However, if they contain any conſiderable quantity of ſulphur, or arſenic, it is uſual to roaſt even theſe a little.

But ſome copper ores are ſo refractory, or hold their ſulphur ſo tenaciouſly, as to require many roaſtings before they will let it go, being either ſtamped or melted after every operation; ſo that all the parts may, at ſeveral times, be equally expoſed to the fire, and have their ſulphur diſcharged.

In the large way of buſineſs, which is ſmelting, this operation is uſually performed in a trench, cut ſomewhat aſlope on the ground, that the air may have the freer acceſs at the bottom; then they place a layer of billet-wood in the trench, and upon this a layer of the ore, in little lumps; and ſo continue, interpoſing a layer of wood and a layer of ore, for three or four ſtories, when the pile being completed, they ſet fire thereto, and make it continue to burn ſlowly for ſeveral days together, during which time there ariſes a large quantity of ſulphureous vapour, that may be perceived to a conſiderable diſtance.

But when the ore, by repeated roaſting, ſtamping, and fuſing, is become tolerably pure, they now finiſh the operation, by throwing it into a particular furnace, having a funnel to increaſe the draught, ſo as to make the fire the ſtronger, and diſcharge the ſulphureous fumes in greater plenty. And this furnace is ſo contrived, that the open flame of the wood may play directly upon the ore; whence all its volatile part is ſeparated, and the remainder left fit for the laſt waſhing and ſtamping.

When the ores contain a large quantity of ſulphur, this uſually ſweats out, and runs down into cavities made on purpoſe to receive it, whence it may be laded out, and caſt into moulds. But perhaps the moſt frugal method of roaſting ores, ſo as to ſave, or collect, all the ſulphur, or arſenic, they contain, is not generally known and practiſed: for, in the common way, a large proportion is loſt, which may be collected, by means of a proper hood, in the form of flowers; and alſo the riſing fume might, by a particular ſtructure of

the

the furnace, be made to paſs into a large veſſel of cold water, and there be condenſed, as we ſee in certain chemical diſtillations and ſublimations.

After the poorer and more ſtubborn ſorts of copper ore have been thus ſucceſſively roaſted, and come to be quenched in water, or waſhed, they often impregnate the water with a vitriolic matter; ſo that ſometimes profit may be made, by evaporating theſe waters, and ſuffering the vitriol to ſhoot: for the acid part of the ſulphur, here ſeparated by the fire, is greatly diſpoſed to enter the metallic part of the ore, and diſſolve it, ſo as to form an actual blue vitriol, or vitriol of copper, which ſells for a conſiderable price.

And here it ſhould be remembered, that ores rarely yield the leſs metal for roaſting, unleſs the fire were made too ſtrong, eſpecially at the firſt: for when the yield proves ſmall, the general complaint of the ſmelters is, that the ore, when ſent to their furnace, was too little roaſted; though indeed the fault is often their own, in neglecting to make the fire ſufficiently briſk and ſtrong from the firſt, which is a very conſiderable ſecret for increaſing the yield of an ore.

There are, however, ſome reaſons to believe, that many imperfect ores loſe conſiderably of their metal by roaſting, eſpecially when they are mixed with arſenical or antimonial matters, which have a known property of volatilizing the impurer metals, and carrying them off in fume: whence, doubtleſs, it is that ſome poor ores and mundics are commonly treated with little ſucceſs.

The remedy, in this caſe, we apprehend to be the due uſe and application of ſome fixing ſubſtances, whether of an abſorbent, alkaline, or neutral nature; ſuch as quick-lime, kelp, or pot aſh, dry river mud, clay, iron-filings, or the like, mixed, or ſtratified, along with the ore. And by certain additions of this kind, we doubt not but the yield of ſome poorer ores might be conſiderably increaſed.

The buſineſs of roaſting of ores may be improved, and reduced to a few eaſy rules. (1.) We ſee it is of two kinds, or ſimple and compound; that is, either with or without addition. No addition is wanted when the ore proves rich, or in itſelf nearly of a metallic nature, as ſome ores are found to be; but additions are principally required, when arſenical, antimonial, or ſulphureous matters are naturally mixed with the ores.

(2.) The fire is to be ſo regulated, from the firſt, that only the lighter, or more volatile, ſulphureous, or arſenical fumes, may go off, otherwiſe the more metallic part alſo would fly away, and, without ſome proper contrivance to catch it, be loſt. Yet the ore muſt feel the force of an open flame at laſt, otherwiſe all the ſulphur, arſenic, antimony, and other immature mineral ſubſtances, will not be diſlodged.

(3.) The more theſe immature ſubſtances abound in the ore, the gentler the fire ſhould be at firſt; and when the greater part of them is thus exhaled, the fire is to be quickened by a freer admiſſion of the external air.

(4.) Laſtly, where ſuch additions are uſed as are not metalline, for example, lime, mud, &c. they ought to be ſeparated by ſtamping and waſhing, before the infuſion, which would otherwiſe be hindered, or uſeleſsly incumbered.

EXPERIMENT II.

The method of ſtamping and waſhing of ores.

We took the mundic roaſted in our former experiment, and beat it fine in a metalline mortar; then ſearced it; and now putting it into a budding-diſh, we waſhed it in ſeveral waters, with care to ſeparate the heavier portion from the lighter, and drying this heavier part, which is always the more metallic.

OBSERVATIONS.

Theſe operations of ſtamping and waſhing are not neceſſary in the richer ſorts of ores, but ſometimes abſolutely required in the poorer and more flinty kinds. If a large quantity of mere ſtony matter adheres to the ore, it is ſometimes knocked off with hammers, ſo as to leave the more metallic part free from this barren or ſuperfluous ſubſtance.

If ſtill the ore proves hard and flinty, it is ſometimes ſoftened by lying, for ſeveral months, expoſed to the open air, which thus renders it fit for the ſtampers, though it ſometimes alſo requires to be ignited, and quenched in water, to fit it for that purpoſe. Thus a large heap of hard, and otherwiſe untractable ore, may be heated red-hot, by interſperſing it with billets, and ſetting them on fire; after which it may readily be quenched, and rendered friable, by throwing cold water upon it, or by driving and paſſing a ſmall ſtream of water through it, from ſome adjacent river. And ſometimes this operation is required to be repeated, before the ore will grow ſoft and tractable.

It is uſual to ſtamp moſt ores in a ſtate of moiſture, or wetneſs, to prevent the avolation of their duſt, or powder, but eſpecially ſuch as require much waſhing to ſeparate their barren and lighter earthy parts, which would otherwiſe uſeleſsly encumber the ſmelting-furnace. To perform this ſtamping the more commodiouſly, a ſtream of water is made to paſs under the ſtampers, ſo as to make various windings and turnings, and, in part, run into certain cavities, made on purpoſe to catch and detain the heavier matter, whilſt the lighter is waſhed away to a greater diſtance by the current.

But the method of waſhing the ores of the nobler metals is more exact and curious, particularly in waſhing of ſand for gold, on the banks of the Rhine and Danube, where gold is frequently found, eſpecially in ſuch places where the ſands are raiſed into large heaps, or a kind of mountains, by the rapidity of the ſtream.

Theſe ſands are uſually waſhed by the hand, in a particular long trough, made with a deſcent, or current, for the purpoſe, and lined at the bottom with flannel, for thus the ſand being artificially agitated with the hand, the lighter and larger ſtony matter riſes uppermoſt, whilſt the heavier deſcends, and is catched in the pores of the woolly cloth at the bottom: in the mean time, the lighter matters are waſhed farther off, by a ſtream running down the declivity: and when the flannel has thus collected a conſiderable quantity of the richer metallic matter, the whole cloth may be eaſily taken off, and rinſed in a proper veſſel of water, where all the metallic matter, before adhering to it, readily falls off, and ſinks to the bottom of the veſſel; where, the water being decanted, the metal may be collected alone, and dried. And this is the method of procuring the gold, where the ſand is fine, or extremely ſmall.

In the large works, or where the gold is mixed with big ſand, gravel, or ſtones, they make uſe of wire ſieves, whoſe meaſh is always of one certain ſize; ſo as readily to tranſmit the fine ſand, or gold duſt, and retain the larger gravel and ſtones behind: for it is extremely rare to meet with any grain of gold, ſo large as a barley-corn, in the ſands of rivers. Whence this method by the ſieve is highly ſerviceable, and conducive to the former operation: for though a large quantity of fine ſand, thus preſſes the ſieve, it may be readily ſeparated in the trough, after the method already deſcribed.

And this may ſuffice to ſhew the general and particular methods of ſtamping and waſhing of ores. We ſee the end of theſe two previous operations, is to get rid of the matters which are not metalline; that ſo the furnace may not be uſeleſsly employed upon ſuch ſubſtances as will themſelves yield no metal in the fire, and only hinder the metallic parts of the ore from coming together, and affording a yield anſwerable to the expence and trouble of the ſuſion.

After the heterogeneous parts have thus been thrown off, by roaſting and waſhing, from the proper earth of the ore, the pure metal now remains to be ſeparated from this earth by ſuſion.

But there are two difficulties, at leaſt one or other of them, always found in this affair. For, (1.) This proper mineral earth, how flexible ſoever it may prove in gold and ſilver, yet ſcarce comes up to the fuſibility of the pure metal, but rather flows thick and ſluggiſh, unleſs the fibre be very intenſe indeed: but 'tis plain, that if this ſubſtance remains viſcous, the moleculæ of the metal cannot ſink through it, in order to form a metalline maſs at the bottom. (2.) Sometimes only, a very ſmall quantity of pure metal lies concealed in a vaſt body of ſuch adhering earth, or wrapped up with the matters of other metals; whence one of theſe two inconveniences muſt ariſe, viz. either that the ſmall quantity of metal cannot well, under ſo great a load of recrement, come into a little maſs; or elſe, if it could, it muſt of neceſſity be ſo violently agitated and toſſed about, by the ſtrong fire required to keep ſo large a bulk of ſlag in fuſion, as in the ebullition to be again involved, as it were, in little drops or bubbles, among the pappy maſs of the ſcoria *.

* Scoria is the droſs, cruſt, or ſlag, found at the top of a melted metal, or metallic matter; being often in the form of a vitrous maſs, or glaſſy matter, and proceeding from the flux employed and united with ſome ſtony recrementitious matter contained there. But when a large proportion of a ſaline flux is uſed, the ſcoria will diſſolve, or give, by the influence of the air.

Theſe two inconveniencies have their two remedies. (1.) The firſt is to add ſuch ſubſtances as promote vitrification, and at the ſame time cauſe a thin flux of the vitrified body. Such ſubſtances [ſee the article FLUX] are for the large work, SAND, FLUXILE MUD, ALKALINE SALTS, TARTAR, NITRE, &c. and for the ſmall, GLASS OF LEAD, a little BORAX, or any compound flux ſalt; the baſis whereof is commonly tartar and nitre. (2.) The ſecond is to add metal itſelf: this is a common way, and ſeems greatly improveable, if it can be brought to anſwer the expence. In this caſe, as a greater maſs of metal cannot, by the ſame fire, be ſo much agitated and toſſed about, as a leſs; or if it could be agitated as much, yet all its particles would cohere more firmly, in a large maſs, than in a ſmall one; hence, by ſuch an additional metal, the little maſs that would otherwiſe be with difficulty collected from the ſeveral falling particles of the melted matter, is artificially enlarged, ſo as to cover the whole bottom of the melting pot; in conſequence whereof, all the ſingle metallic particles that fall afterwards, are eaſily catched and detained below, by the large metalline maſs, which there lies ready to receive them.

The metal uſually employed to encreaſe the maſs in this manner, is lead: but Becher, with great probability of much better ſucceſs, recommends the uſe of ſilver in its ſtead, where the

the perfect metals are expected. For ſilver, in this caſe, does not only remain unaltered by the fire and flux, but alſo by a ſpecific efficacy, not to be known but by tryal, collects together, and fixes the ſame potential atoms of the metallic principles that are lodged in an exceeding ſubtile form, remote from one another, up and down in the ore, and actually deduces them to perfect metal. Upon which property of ſilver it is, that Becher has built his minera arenaria, ſand mine, or inexhauſtible method of extracting the perfect metals out of ſand; where, by uſing ſilver inſtead of lead, he undertakes to produce a ten times greater increaſe of the nobler metals.

But as this latter method can only, or principally, be uſed to profit in the ſeparation of gold from its ore, by fuſion; ſo lead remains a very convenient addition for the reception of ſilver, as performing a double uſe in the operation, viz. by imbibing the metal pure, and at the ſame time promoting the vitrification of the earth, mixed along with the ſilver.

Copper being in itſelf of difficult fuſion, requires ſuch a fire as is able to melt its glaſſy ſcoria ſufficiently thin, at the ſame time that it is melted itſelf; and this it does, unleſs the flints ſhould prove very obſtinate indeed. Hence bare fuſion, ſometimes without any other aſſiſtance, will bring out this metal from its ore, and throw it down into a maſs, the ſcoria here flowing ſo thin, as readily to ſuffer the metalline particles to ſink through it; but when the ore is more ſtubborn, its ſeparation may be promoted by metalline, or other additions, as above-mentioned.

In ſhort, the difficulty of thus ſeparating the metal from its proper earth, is principally founded in the ores of ſilver, gold, and copper; but lead and tin being very fuſible bodies, are much eaſier melted from their adhering mineral matter.

There are, upon the whole, three things to be principally regarded in the ſmelting of ores, viz. (1.) The fuſibility of the metal. (2.) The fuſibility of the ſcoria. And, (3.) The contact or mixture of the metallic matter, with the inflammable part of the coals.

(1.) Different metals run in different manners from their ores. Thus lead, though extremely fuſible in the metal, yet runs with difficulty from the ore, ſo as to require a conſiderable violence of fire. This ſtubbornneſs not belonging to the metal muſt be attributed to the ſtony, ſulphureous, or other mineral matter, wherewith the ore is mixed; which matter ſeems to require a degree of heat, capable of vitrifying the lead, before the metal will run: but then, the lead thus vitrified, recovers a metallic form again, by coming in contact with the coals, eſpecially charcoal.

Tin runs from its ore with greater eaſe than lead, and is therefore ſmelted in much leſs furnaces; but copper requires an intenſe heat, or a blaſt furnace; and iron, the greateſt heat that can be given in a furnace: and both iron and copper abſolutely require immediate contact with the fuel employed. Hence it appears, that each metal muſt have its determinate degree of heat, to run it with advantage from the ore or ſtone.

In order, likewiſe, to obtain the metal from the ore, to beſt advantage, the ſcoria, or ſlag, muſt be neceſſarily made to run thin and fluid; otherwiſe it entangles or inviſcates the metal, and will not let it ſeparate fully. And hence we frequently obſerve, in the aſſaying of copper ores, ſmall grains of metal interſperſed here and there among the ſcoria, that require to be ſeparated by ſtamping and waſhing the whole maſs; which labour might have been prevented, by uſing a proper degree of heat, capable of procuring a thin fuſion, and a ſuitable flux, ſo as to have made all the metal fall to the bottom of the furnace; which it frequently does, when the operation is well performed, by means of a well-adapted flux.

To promote a thin fuſion of the ſlag, in the larger furnace, it is often proper to uſe the more ſoft and fuſible ſands as a flux; and ſometimes that loamy ſand, which the ſmiths employ for the welding of iron; this ſand readily vitrifying, and adhering to the metal in the fire: and, where it will anſwer the charge, even litharge, or droſs of lead, might be uſed for this purpoſe in the larger furnace; for ſcarce any thing procures ſo thin a fuſion of the ſlag as lead.

In the large work, ſulphur is found to adhere tenaciouſly to copper; which metal, therefore, ſeldom comes out pure in the furnace, without repeated fuſions. The beſt method of ſeparating of this ſulphur, is, to uſe a violent heat, no additional flux at all, and the greateſt draught of air that can any way be procured; ſo that all things may conſpire to burn out, or carry off the ſulphur, and introduce in its ſtead, a thing of a different nature, viz. the inflammable matter of the wood and coals, and the vitrification of their aſhes; whereon ductility appears to depend. But where iron is mixed with copper, no better addition is found than ſulphur, and the more ſulphureous marcaſites, or what they, at the ſmelting-huts, call marcaſite-blocks: for the ſulphur which theſe contain, cauſes the copper readily to run away from the iron, and leave it behind in the furnace. And here the power which ſulphur has upon the ſeveral metals, is very remarkable: it renders ſilver almoſt as fuſible as lead: it alſo greatly increaſes the fuſibility of iron, and regulus of antimony; but renders tin much leſs fuſible than it is of itſelf; and lead, even refractory in the fire: whence certain rules might be formed, for the uſe and application of ſulphur to metals, for the improvement of metallurgy. And thus the whole art of ſmelting ſeems to depend upon knowing the degree of heat required by every ore; ſo as to make the ſlag, as well as the metal, run thin, and evaporate or diſcharge the ſulphureous parts; and laſtly, introduce the proper metallic, ductile form, by means of ſome unctuous or inflammable matter.

It ſeems principally owing to a defect in the knowlege of fuſion, that ſo many recrements, or ſlags of metals, anciently thrown, as uſeleſs, from the furnace, have been wrought to conſiderable profit, of late, by more ſkilful workmen; at leaſt, it ſeems more rational to attribute the ſucceſs to this courſe, than to any ſuppoſed growth of metals in ſuch ſlags: ſo, likewiſe, it is currently believed, that lead has grown rich in ſilver, by lying expoſed to the open air, or by long covering churches, or other buildings; whilſt, perhaps, it is rather owing to the unſkilfulneſs of the former workmen, who were not able to ſeparate all the ſilver naturally contained in the lead.

And thus it appears certain, that the ancient metallurgiſts were unacquainted with any way of extracting, to profit, a ſmall quantity of ſilver out of copper; which is now commonly done by ingenious contrivance: whence the ancient copper, found upon temples, or other buildings, frequently contains ſilver. So likewiſe, in the foreſt of Dean, they at this day work the ſlag of their old iron works over again to profit.

SMOLENSKO, a duchy and palatinate in Muſcovy.

This province is ſtiled the great duchy, or palatinate, and extends about 200 miles from eaſt to weſt, though not half the breadth from north to ſouth. It hath on the north, the principality of Bela; on the weſt, Lithuania, unto which it formerly was ſubject, 'till ſubdued by the Muſcovites; on the ſouth, it hath the duchy of Severia; and, on the eaſt, that of Moſcow.

The river Niepper, or Boriſthenes, hath its ſpring-head on the north-eaſt borders of this province, and runs quite a-croſs it, directly from eaſt to weſt. As for the territory, it is not over fertile; but abounds with ſeveral kinds of wild beaſts, whoſe ſkins fetch a good price. It lies from the 55th to the 56th deg. 30 min. of latitude. Its chief cities and towns are,

SMOLENSKO, ZUERCOVA-LOUKI, GRAVISK, DRAGABUSA, and BOGLOVESTINE; all of them inconſiderable, except

SMOLENSKO, capital of the duchy, which is pleaſantly ſituated on the Nieper above-mentioned, near the confines of Lithuania, and is a large and well-built populous city. It is almoſt ſurrounded with woods, wherein are taken the beſt furrs in all Muſcovy.

As it ſtands on the frontiers, between Muſcovy and Poland, it hath often ſhifted from one to the other, 'till yielded, with the whole province, to the czar, by the treaty of 1686.

SMUGGLER, a cant word for one that illegally evades the payment of the duties, laid by the ſtate, on any kind of merchandize.

An Abſtract of the chief LAWS of ENGLAND relating to SMUGGLERS.

By ſtat. 8. Geo. I. cap. 18. Any perſons found paſſing knowingly with any foreign goods landed without due entry and payment of the duties, from any of the coaſts, or within twenty miles thereof, and ſhall be more than five in company, or ſhall carry any offenſive weapons, or wear any maſk or diſguiſe, when paſſing with ſuch goods, or ſhall forcibly reſiſt any officer of the cuſtoms or exciſe, in ſeizing run goods, ſhall be guilty of felony, and tranſported for ſeven years; and if he return before that time, it is felony without benefit of clergy.

And all perſons receiving or buying any goods, wares, or merchandizes, clandeſtinely run or imported, before the ſame ſhall have been legally condemned, knowing the ſame to be ſo clandeſtinely run or imported, being convicted on the oath of one or more credible witneſſes, or confeſſion, before one juſtice of peace, ſhall forfeit 20 l. to be levied by diſtreſs and ſale, &c. and for want of diſtreſs, ſhall be committed to priſon, without bail or mainpriſe, for three months; the one moiety of the above penalty to the informer, the other to the poor of the pariſh where the offence was committed.

All ſeizures of veſſels or boats of 15 tons or under, which ſhall be made after the 25th of March, 1722, by virtue of act, 1 Ann. cap. 7. for granting to her Majeſty new duties of exciſe, &c. and of an act for continuing ſeveral impoſitions, &c. to raiſe money by loan for the ſervice of the year 1710, or any other act relating to the revenue of cuſtoms for carrying uncuſtomed or prohibited goods from ſhips inwards, or for relanding certificate or debenture goods from ſhips outward-bound; and all ſeizures of horſes, or other cattle, or carriages whatſoever, for being uſed in the removing, carriage or conveyance of ſuch goods, contrary to the ſaid acts, are to be examined into, proceeded upon, heard, adjudged, and determined, by two or more juſtices of peace,

peace, reſiding near the place where ſuch ſeizure ſhall be made, whoſe judgment ſhall be final, and not liable to appeal or certiorari. Stat. 8. Geo. I. cap. 18.

Any two juſtices for London and Weſtminſter, ſhall have the like power in determining ſuch ſeizures as ſhall be made within thoſe cities, as any two juſtices of any other county or place have. Ibid.

This act to continue for two years commencing from the 25th of March 1722, and from thence to the end of the next ſeſſions of parliament.

By 6. Geo. II. when any officer of the cuſtoms ſhall neglect to ſeize and proſecute any veſſel, horſes, or carriage, which ſhall be forfeited for running of brandy, ſuch officer being convicted upon the oath of one witneſs, before one juſtice of the peace, ſhall forfeit for every neglect 50 l. one moiety to the king, and the other to the informer, to be levied by diſtreſs and ſale of the offender's goods, by warrant of ſuch juſtice; and, for want of ſuch diſtreſs, ſuch offenders ſhall be committed to priſon for ſix months.

By 9. Geo. II. cap. 35. intitled, An Act for indemnifying perſons who have been guilty of offences againſt the laws made for ſecuring the revenues of cuſtoms and exciſe, and for inforcing thoſe laws for the future, it is enacted, That all his Majeſty's ſubjects, their heirs, &c. who before the 27th of April, 1736, have incurred any penalty by clandeſtine running of goods, &c. making falſe entries of goods, or abuſing officers, &c. ſhall be indemnified, and may plead the ſaid act for their diſcharge; paying only 1 s. 4d. for entering the plea, provided that they ſtop all proceedings brought againſt officers, or their aſſiſtants, for, or concerning any matter, cauſe, or thing, committed by ſuch officer, or his aſſiſtants, on occaſion of any offences, &c. intended by the ſaid act to be releaſed and diſcharged; and in caſe any perſon ſhall claim the benefit of this act, and ſhall afterwards bring an action againſt an officer, &c. ſuch officer, &c. ſhall be diſcharged, may plead the general iſſue, &c. and may recover coſts againſt ſuch plaintiff.

All perſons taking, or being intitled to, the benefit of the ſaid act, and ſhall be afterwards guilty of the like offences, ſhall be liable to be proſecuted for both the former and new offence, and for ſmuggling bonds, &c. The act is not to diſcharge any judgment for monies actually levied, nor the informer's part of the penalty; and all perſons liable to be tranſported for any ſuch offences, committing the like after claiming the benefit of the ſaid act, ſhall ſuffer death as a felon, without the benefit of clergy; and all perſons neglecting to pay compoſition money (before agreed to be paid) ſhall be excluded from the benefit of the ſaid act.

Excepted out of the ſaid act, all ſeizures of goods, veſſels, &c. money due on entry of goods or bond debentures, fraudulently obtained, and actions depending; and the treaſury may compound, in caſes where judgment was given for his Majeſty on the 11th of May, 1736, relating to debentures, &c.

That from and after the 24th of June, 1736, upon information, upon oath, before any one or more juſtices of the peace, that three or more perſons, are or have been, after the ſaid 24th of June, 1736, aſſembled together for any the purpoſes aforeſaid, and are or have been armed with fire-arms, or other offenſive weapons, may grant a warrant for apprehending them, and may (if upon due examination he or they find cauſe) commit them to the next county gaol, there to remain without bail or mainpriſe, until diſcharged by due courſe of law; and upon conviction of their being aſſembled to aſſiſt in the running of goods, they ſhall be tranſported for ſeven years, as other felons, by the acts of 4 and 6 Geo. I. and returning before the expiration of ſuch term, ſhall ſuffer death as felons, without the benefit of clergy.

Any perſon apprehending any other perſon, guilty of any of the laſt-mentioned offences, ſhall have a reward of 50 l. and the like ſum of 50 l. ſhall be paid to any perſon maimed in the apprehending; and if any one is killed, his executors ſhall have 50 l. and an offender diſcovering two or more accomplices, within three months after the offence committed, to the commiſſioners of the cuſtoms, ſhall himſelf be diſcharged, and ſhall be intitled to the like reward of 50 l.

That from and after the ſaid 24th of June, 1736, if two or more perſons are found paſſing together within five miles of the ſea, or a navigable river, with horſe, carts, &c. whereon ſhall be laden ſix pounds weight of tea, or five gallons of brandy, or other ſpirits, &c. not having paid the duty, and having offenſive arms, or being maſked, &c. ſhall be deemed runners of foreign goods, within the meaning of the act of 8 Geo. I. and the proof of the entry, and payment of the duties, ſhall lie on the perſons found with the goods; ſuch perſons, upon conviction, ſhall be adjudged guilty of felony, and be tranſported for ſeven years; and, returning before the expiration of the term, ſhall ſuffer death, without the benefit of clergy.

All goods, weapons, cattle, and package of goods, &c. ſo found, ſhall be forfeited and loſt.

The 50 l. reward to perſons wounded in apprehending, and to the executors of perſons killed, and to the diſcoverers of their accomplices, are to be paid to the reſpective receivers-general, by order of the commiſſioners, on certificate of the judge, of the offender's conviction; and the commiſſioners ſhall adjuſt each perſon's ſhare in caſe of difference.

Upon information, on oath, before one or more juſtices of the peace, that perſons are lurking within five miles of the ſea, or navigable river, and there is reaſon to ſuſpect that they wait with intent to be aiding and aſſiſting in the running, landing, or carrying away, any prohibited or uncuſtomed goods, may grant a warrant for apprehending them; and they not giving a ſatisfactory account, may be ſent to the houſe of correction, and be whipped, and be kept to hard labour for any time not exceeding one month; and the commiſſioners ſhall pay 20s. to the informer, for every offender ſo taken as aforeſaid; yet perſons ſo apprehended, deſiring time to clear themſelves of the accuſation, ſhall only be committed to priſon 'till ſatisfaction or ſecurity be given, not to be guilty of the like offences again.

That after the 24th of June, 1736, perſons offering tea, brandy, &c. to ſale, with or without a permit, may be ſtopped on ſuſpicion, and the perſon ſtopping the ſame may proſecute in his own name; and, on recovery, ſhall be intitled to a third part of the produce on ſale; and the commiſſioners ſhall advance one ſhilling per pound for tea, and one ſhilling per gallon of brandy ſo ſeized, to the proſecutor, 'till ſale.

That after the ſaid 24th of June, 1736, all watermen, carmen, porters, and other perſons whatſoever, found with prohibited or run goods, knowing the ſame to be prohibited or run, being lawfully convicted, on the oath of one or more credible witneſſes, or by confeſſion before one or more juſtices of the peace, where the offence ſhall be committed, or the goods found, ſhall forfeit treble the value; half to the informer, and half to the poor, where, &c. to be levied by diſtreſs, and ſale of the offender's goods, by warrant from the juſtice or juſtices before whom ſuch offender ſhall be convicted; and, for want of diſtreſs, the offender to be committed to the houſe of correction, there to be whipped, and kept to hard labour, for any time not exceeding three months.

Veſſels arriving from foreign parts, with ſix pounds of tea on board, or brandy, &c. in a caſk under ſixty gallons, (except for the uſe of the ſeamen, not exceeding two gallons a man) hovering within a league of the ſhore, all ſuch goods, with the package, ſhall be forfeited.

After 29 Sept. 1736, foreign goods taken in or put out of any veſſel, within four leagues of the Engliſh coaſts, without payment of cuſtoms (unleſs in caſe of apparent neceſſity) ſhall be forfeited, and the maſter, &c. ſhall forfeit treble the value; and the veſſel, if not above 100 tons, ſhall be forfeited; and perſons offering to bribe an officer to connivance, ſhall forfeit 50 l. the forfeitures, one half to the king, and the other to the informer, who ſhall proſecute in any of the courts at Weſtminſter; and actions, &c. for aſſaults upon officers, may be tried in any county of England.

All goods found concealed, after the maſter's report at the cuſtom-houſe, ſhall be forfeited; and the maſter ſhall forfeit treble the value; and perſons forcibly obſtructing or wounding officers on board, in the execution of their offices, ſhall, on conviction, be tranſported, not exceeding ſeven years; and, upon returning before the expiration of the time, ſhall ſuffer death as a felon, without benefit of the clergy.

Officers may go on board coaſting veſſels, and ſearch for prohibited and uncuſtomed goods, and may continue on board during the veſſel's ſtay in the port; and perſons obſtructing ſuch officers, forfeit 100 l. and likewiſe 100 l. penalty is laid on all houſes, men, &c. knowingly harbouring any perſon againſt whom proceſs hath iſſued for obſtructing officers, &c. but no forfeiture herein, unleſs public notice ſhall have been firſt given, in two ſucceſſive gazettes, of ſuch perſon's abſconding, and a writing fixed to the door of the church.

Sheriffs, mayors, &c. on requeſt in writing, of a known ſollicitor for the cuſtoms or exciſe, to grant ſpecial warrants for apprehending offenders; and the perſons granting ſuch warrants, ſhall be ſaved harmleſs from all eſcapes.

But, in trials of ſeizures, judges are to proceed according to the merits of the cauſe, without enquiring into the fact or form of making the ſeizure; and officers and their aſſiſtants, may oppoſe force to force, and when carried before a juſtice for wounding or killing any perſon, in ſuch caſes ſhall be admitted to bail.

The ſaid act ſhall not indemnify any perſon proſecuted by the Eaſt-India company.

Any perſon ſued for any thing done in purſuance of the ſaid act, may plead the general iſſue, and give the ſpecial matter in evidence; and if found for him, ſhall have treble coſt.

Provided, That nothing in the ſaid act ſhall extend to reſtrain his Majeſty's court of king's-bench, or any of the judges thereof, or the court of juſticiary in Scotland, from bailing any perſon committed for felony, by virtue of the ſaid act, in ſuch manner as they may, by law, do in other caſes of felony.

A warrant to bring offenders before a juſtice, upon the aforeſaid ſmuggling act of 9 Geo. II.

Whereas I have been informed upon oath, that ſince the 24th day of June, 1736, A. B. of, &c. C. D. of, &c. and E. F. of

of, &c. have been aſſembled together, for the purpoſe of clandeſtine landing and running of prohibited or uncuſtomed goods, and were armed with fire-arms and other offenſive weapons, contrary to the form of the ſtatute in that caſe lately made and provided: theſe are therefore to require you to apprehend and bring the ſaid A. B. C. D. and E. F. before me, or ſome other juſtice of the peace for this county, to anſwer the premiſes aforeſaid. Given under my hand and ſeal, &c.

By 19 Geo. II. reciting that divers diſſolute perſons aſſociated themſelves to ſupport one another, and appeared in gangs, carrying fire-arms, and have been aiding in running prohibited goods, or liable to duties, or in the illegal landing of goods which have been ſhipped or exported upon debenture or certificate, or in reſcuing the ſame after ſeizure, or in obſtructing the officers of the revenue in their office, and that ſeveral officers had been killed, &c. by the ſaid diſſolute perſons; it is enacted, That if any, to the number of three or more, armed with fire-arms, or other offenſive weapons, ſhall, after the 24th day of July, 1746, be aſſembled in order to be aiding in the illegal exportation of wool, or other goods prohibited to be exported, or the carrying of wool or ſuch other goods, or liable to pay duties which have not been paid or ſecured; or in the illegal relanding of any goods which have been exported upon debenture or certificate; or in reſcuing the ſame after ſeizure from any officer of his Majeſty's revenue, or other perſon or perſons employed by them; or in reſcuing any perſon who ſhall be apprehended for any of the offences made felony by this, or any other act; or in preventing the apprehending any perſon who ſhall be guilty; or in caſe any perſons, to the number of three or more, ſo armed, ſhall, after the ſaid 24th day of July, be ſo aiding; or if any perſon ſhall, after the 24th day of July, have his face blacked, or wear any vizard or other diſguiſe, when paſſing with ſuch goods, or ſhall forcibly reſiſt any of the officers in the ſeizing ſuch goods; or if any perſon, after the ſaid 24th day of July, ſhall maim, or dangerouſly wound, any officer of the revenue, in his attempting to go on board any veſſel within any port of this kingdom, or ſhoot or maim, or dangerouſly wound him when in ſuch veſſel, and in his office; every perſon ſo offending, and convicted, ſhall be adjudged guilty of felony, and ſuffer death without benefit of clergy. And every perſon who ſhall at any time be convicted of any of the ſaid offences in Scotland, ſhall ſuffer death and confiſcation of moveables.

If any perſon ſhall be charged of any of the offences aforeſaid, before one or more of his Majeſty's juſtices of peace, or of the king's-bench, if committed in England; or before the lord juſtice-general, or one of the lords of the juſticiary, or any one or more of his Majeſty's juſtices of the peace in Scotland, if the offence in Scotland, by information of one or more credible perſons upon oath ſubſcribed, ſuch juſtice of the peace, &c. before whom made, ſhall forthwith certify, under his hand and ſeal, and return ſuch information to one of the principal ſecretaries of ſtate to his Majeſty, his heirs or ſucceſſors, who is to lay the ſame before his Majeſty, his heirs, &c. in privy council; whereupon it ſhall be lawful for his Majeſty, his heirs, &c. to make an order, thereby commanding ſuch offenders, &c. to ſurrender, within 40 days after the firſt publication in the gazette, to the lord chief juſtice, or any juſtice of B. R. or to any one juſtice of peace, if the offence in England, or to any of the lords of juſticiary, or to any juſtice of peace in Scotland, if the offence there, who is required, upon ſuch ſurrender, to commit him or them without bail, &c. to the county-gaol or priſon of the place where the ſurrender is, that he may be forth-coming to anſwer; which order the clerks of the privy council ſhall cauſe to be printed in the two ſucceſſive gazettes, and to be ſent to the ſheriff of the county where the offence was, who ſhall, within 14 days after the receipt, cauſe the ſame to be proclaimed between ten in the morning and two in the afternoon, in the market-places, upon two market-days, in two market-towns, near to the place where the offence was committed, and ſhall be fixed in ſome public place in the ſaid towns; and in caſe ſuch offender, &c. ſhall not ſurrender, he eſcaping after ſuch ſurrender, ſhall, from the day appointed to ſurrender, be adjudged to be convicted of felony, and ſhall ſuffer death, as if attainted by verdict and judgment, without benefit of clergy, if the offence is in England; and ſhall be adjudged to be convicted of a capital crime, and ſuffer death and confiſcation, as in caſe of a perſon found guilty of a capital crime, and under ſentence, if the offence be in Scotland; and the court of B. R. or the juſtices of oyer and terminer for the county or place where ſuch perſon is, may award execution againſt ſuch offender, &c. in ſuch manner as if he, &c. had been convicted in B. R. or before juſtices of oyer and terminer, if the offence be in England; and the juſticiary, or the lords of juſticiary in their circuits, may award execution againſt ſuch offender, &c. in ſuch manner as if found guilty and condemned in the ſame court of juſticiary, or in the circuit.

Every perſon who (after the time appointed for ſurrendering) harbours or ſuccours ſuch perſon, knowing him to be ſo charged, and to have been required to ſurrender, and who has not, being proſecuted for the ſame within one year after the offence, and lawfully convicted thereof, ſhall be guilty of felony, and ſhall be tranſported for ſeven years, according to 4 Geo. I. and 6 Geo. I. and if ſuch offender ſhall return into Great-Britain or Ireland before the ſame term, he ſhall ſuffer as a felon, without benefit of clergy.

Nothing therein ſhall prevent any judge or juſtice, or any magiſtrate or miniſter of juſtice whatever, from ſecuring ſuch offender, againſt whom information ſhall be made, and ſuch order in council ſhall be made, by the ordinary courſe of law; and in caſe ſuch offender, &c. ſhall be taken, in order to be brought to juſtice, before the time required to ſurrender, in ſuch caſe, no proceeding ſhall be had upon ſuch order, but he ſhall be brought to trial by due courſe of law.

Every offence by this or any other act relating to the revenue, ſhall be determined in any county in England, as if the fact had been committed therein: provided that no attainder for any offence by this act ſhall make any corruption of blood, loſs of dower, or forfeiture of lands, &c. That if any officer, &c. or other perſon employed in ſeizing wool or other goods, not having paid or ſecured the duty, ſhall be beat, wounded, maimed, or killed, by any offender againſt this act, or if the ſaid wool, &c. be reſcued by perſons armed as aforeſaid, the inhabitants of every rape or lath, or hundred in England, ſhall make full amends for ſuch beating, &c. and for ſuch loſs of goods, and ſhall pay 100 l. for each perſon killed to his executors or adminiſtrators; and ſuch officers, their executors, &c. are enabled to ſue and recover the ſame, the ſum for beating, &c. not to exceed 40 l. The ſum raiſed for that purpoſe to be proportionably aſſeſſed on the inhabitants of ſuch rape, &c. for the damages and expences in recovering the ſame, in ſuch manner as damages and coſts are raiſed in hundreds in caſe of robberies, and for paying the expences according to 8 Geo. II. If the plaintiff be nonſuited, the charges of the defence, &c. to be levied as the ſaid act directs; and every action ſhall be proſecuted in the ſame manner as the ſaid 8 Geo. II. directs.

No perſon to recover, unleſs notice be given of the offence four days after the commiſſion of it unto two inhabitants of ſome town, &c. near the place where the fact was done; and ſhall within eight days after ſuch fact declare, on oath before ſome juſtice of the peace of the county, &c. where the ſame was committed; which examination every juſtice ſhall be obliged to take, whether he or they ſo examined do know the perſon, &c. who committed ſuch fact, or any of them; and if it be declared that he or they knew the perſon, &c. who committed the ſame, or any of them, then he or they ſhall be bound by recognizance to proſecute according to law; and no ſuch perſon or perſons ſhall recover damages by virtue of this act, unleſs he or they, beſides the ſaid notice and recognizance, give ſuch notice, and enter into ſuch recognizance, as perſons robbed are by the ſaid 8 Geo. II. directed to give and enter into.

Provided, That where any offender ſhall be apprehended and convicted of the offence within ſix months after the offence, no hundred, &c. or inhabitant thereof, ſhall make any ſatisfaction for ſuch damages, or pay the ſaid 100 l. to the executors, &c. of ſuch killed perſon.

No action to be brought againſt the inhabitants of any hundred, &c. unleſs the ſame ſhall be commenced within one year after the offence committed.

All perſons who ſhall apprehend, or diſcover ſo as he may be taken, any perſon in England ſo advertiſed, who ſhall not have ſurrendered within forty days, and cauſe him to be brought before the chief juſtice of B. R. or any one of the juſtices of the ſaid court, or any juſtice of the peace for London or Middleſex (who is hereby required to commit ſuch perſon to Newgate for ſuch felony), ſhall have for every ſuch perſon who ſhall be ſo apprehended 500 l. to be paid in one month after execution ſhall be awarded againſt ſuch offender, by the commiſſioners of the cuſtoms or exciſe reſpectively, who are required to receive the applications of ſuch who are concerned, and to determine who are entitled to the ſaid reward and ſhares thereof, and to divide the ſame as they the ſaid commiſſioners, or the major part of them, ſhall think reaſonable. And if any offender, againſt whom no order of council ſhall have been made, ſhall himſelf diſcover any other offender againſt whom ſuch order ſhall have been made, he ſhall be diſcharged of his own offence (if no proſecution commenced) and ſhall have his ſhare of the reward. And if any perſon loſe a limb or an eye, or be otherwiſe maimed, &c. in apprehending or making purſuit after ſuch offender, every ſuch perſon ſhall receive 50 l. over and above any other reward he may be intitled to by this act. And if any perſon, &c. ſhall be killed in the taking or purſuing, &c. then the executors, &c. of ſuch perſon, &c. ſhall have 100 l. All which rewards to be paid by the receiver-general of the cuſtoms, or caſhier of the exciſe.

If any of the ſaid offender or offenders in England ſhall, before his Majeſty's order in council ſhall be made, diſcover two or more accomplices to the commiſſioners, &c. and apprehend them, or cauſe them ſo to be, ſo as they or two of them at leaſt be brought to juſtice and convicted, the offender or offenders ſo diſcovering ſhall have 50 l. and every perſon, &c. ſo diſcovering, ſhall be clear of his or their offence,

for which no profecution ſhall have been commenced, to be paid as aforeſaid. Provided, that nothing in this act ſhall reſtrain B. R. or any of the judges thereof, or the court of juſticiary of Scotland, or any of the judges thereof, from bailing any perſon committed on this act, and not convicted or attainted, in ſuch manner as they may do by law in other caſes of felony.

Perſons guilty of any of the above offences, againſt whom no proſecution ſhall have been commenced, or compoſition made, before the ſaid 24th of June, ſhall be acquitted on the following terms, viz. That he do, before 29 Sept. 1746, enter into his Majeſty's fleet, and ſerve as a ſailor for one year, and before ſuch time regiſter his name, employment, and place of abode, with the clerk of the peace of, &c. in a book, which the ſaid clerk is to keep among the records of the ſeſſions for the ſaid county, &c. and ſhall ſign ſuch regiſter, ſignifying that he claims the benefit of this act, and that he has * entered himſelf with a commiſſion-officer, by name, of his Majeſty's fleet, to ſerve as a ſailor; which entry muſt be as follows:

* N. B. Though the time is expired for entering ſailors, yet it is now of uſe to ſee whether perſons have entered purſuant to the ſtatute.

A. B. claims the benefit of an act of the 19th year of the reign of his Majeſty king George II. and has entered himſelf with a commiſſion-officer of his Majeſty's fleet, and has regiſtered his name in the book kept by the clerk of the peace of this county, riding, or diviſion, this day of purſuant to the directions of the ſaid act.

For which entry ſhall be paid to the clerk of the peace 1 s. And the clerk of the peace is immediately after the ſaid Sept. 29, to tranſmit to the ſaid commiſſioners, an exact account of the perſons who have by ſuch entry entitled themſelves to the benefit of this act.

Perſons who ſhall claim the benefit of this act, and ſhall afterwards commit the like offences, or ſhall within the ſaid year procure their diſcharge, ſhall be ſubject to be proſecuted not only for the new offence, but alſo be liable to the pains they would have incurred, in caſe the above indemnity had not been given.

If any officer of his Majeſty's navy by any means ſuffer ſuch perſon to avoid the ſervice, ſuch perſon ſhall loſe the benefit of the act, and the officer forfeit 500 l.

In caſe any information ſhall be brought to trial on account of the ſeizure of any ſhip as forfeited for illegally carrying goods, or of any wool, goods, wares, or merchandizes as accuſtomed, or illegally carried or exported, or intended ſo to be, or as illegally relanded after having been ſhipped or exported, upon debenture or certificate, wherein a verdict ſhall be found for the claimer thereof, and it ſhall appear a probable cauſe of ſeizure, the judge or court ſhall certify the ſame on the record, and the defendant ſhall not be entitled to coſts, nor ſhall the perſon who ſeized the ſame be liable to any action, &c. And in caſe any ſhall be commenced wherein a verdict ſhall be given for the defendant, the court or judge ſhall certify on the ſaid record, that there was a probable cauſe for ſuch ſeizure, then the plaintiff, beſides his ſhip and goods, or the value thereof, ſhall not have above 2 d. damages, nor any coſts of ſuit, nor ſhall the defendant be fined above one ſhilling. The ſaid act to continue ſeven years. See the Buſineſs of the Cuſtom-houſe at the end of every Letter.

SMUGGLING.

The following are ſome genuine SMUGGLING ANECDOTES, in relation to the ISLE of MAN.

The Iſle of Man is, and has been many years, a common ſtorehouſe for all manner of goods and merchandizes that pay high duties in Great-Britain or Ireland, or are prohibited to be imported into theſe kingdoms.

The merchants in that iſland have conſtant ſupplies of large quantities of tobacco, both in leaf and roll, tea, in cheſts, with all ſorts of Eaſt-India and Dutch goods from Holland: one cargo landed there from Rotterdam, though contrary to law, conſiſted of 345 cheſts of tea: they are likewiſe ſupplied with tobacco and other things from Dunkirk, Oſtend, Norway, and even ſome parts in Great-Britain; with tea and India goods of all ſorts from Gottenburgh and Denmark; with vaſt quantities of brandy and wines from France, and with rum from America: the Scotch and others ſend veſſels to our plantations on purpoſe for that commodity, and land it there, contrary, as is ſuppoſed, to the act of navigation.

Theſe goods are all warehouſed in that iſland, and afterwards put into packages of leſſer quantities and weights, ſuch as may be moſt handy and convenient for running into Great-Britain and Ireland.

There are nine or ten large wherries, and above twenty boats in the iſland, conſtantly employed in the ſmuggling trade, and go weekly from thence, if the weather permits, loaden with high-duty or prohibited goods; the wherries and boats from Piel-town ſupply the eaſt and north parts of Ireland; the Highlands and weſt of Scotland; thoſe from Douglas and Derbyhaven, Wales, Cheſhire, and Lancaſhire; and thoſe from Ramſey, Cumberland, and all the country on each ſide of Solway Firth; but their chief trade is up the river at Boulneſs, into the Scotch borders near Annan.

Ten or twelve of theſe boats are almoſt every week ſeen in a fleet paſſing Whitehaven, all laden, ſteering for the ſaid river, where they land their cargoes at noon-day, the country being all ready to aſſiſt and protect them, in ſuch numbers as no officer dare offer to moleſt.

Theſe cargoes, which generally conſiſt of brandy, rum, tea, and ſilks, are afterwards brought out of the Scotch border on horſeback in the night, under an armed force of fifteen or twenty men, into England, and guarded by them up into the country, 'till they have paſſed all the preventive officers on the Engliſh border.

Thus all the northern counties on this ſide Trent, if not further, are ſupplied from that iſland with theſe commodities at a cheap rate, for the ſmuggler generally buys his brandy and rum there at two ſhillings the gallon, or under, and other goods in proportion, and by paying no duties is enabled to under-ſell the fair trader.

It was ſeveral years ago made appear, that the clandeſtine trade carried on from this iſland, was then above 100,000 l. yearly loſs to the revenue of Great-Britain and Ireland, and it is computed now to be near twice as much, not to mention its carrying away the coin, the detriment to the honeſt merchant, landholder, and even ruin to the labouring people; for being conſtantly ſupplied with brandy, rum, and Dutch geneva, at ſo cheap a price, induces them to drink ſo much as not only weakens their conſtitutions, but corrupts their morals.

There is no other method, it is feared, can be thought on to put a ſtop to this great and growing evil (all the laws hitherto having proved ineffectual), but either by lowering the duties, or purchaſing the iſland of the preſent proprietor.

From July 16, 1753, to July 11, 1754, a manufacturer of tobacco, with eight working men, manufactured and ſhipped off to Ireland 166 hogſheads, containing 8397 rolls, 175,358 pounds neat tobacco. There is now in the Iſle of Man ſeveral workhouſes, in which are employed 50 men and upwards, all workers of Iriſh roll tobacco.—Say but 48 men, that in the ſame proportion with the manufactory in England, will be 996 hogſheads, containing 50,382 rolls, 1,052,148 pounds neat tobacco, which muſt all be run into Great-Britain or Ireland, but chiefly to Ireland.

Iriſh duties on 1,052,148 lb. tobacco, is	l. 24,001 16 7½
Loſs per annum will be Engliſh -	22,155 10 9

N. B. The ſupply for tobacco to the iſland is chiefly from Dunkirk.

Tobacco imported into the Iſle of Man, makes a conſiderable article of the lord proprietor's revenue, who receives half a pound duty on the ſame, which is allowed on all hands, to bring him in 1500 l. per annum.

One factor only, named W. T. for the merchants and dealers in tobacco in Dublin and other parts of Ireland, actually paid near 1000 l. to the proprietor's collector for tobacco only, in the year 1753. And there are three or four more factors in that iſland for tobacco dealers, who pay leſs ſums annually.

Theſe tobaccoes are moſtly manufactured in the iſland into fine pig-tail and coarſe roll, and run into Great-Britain and Ireland.—The working manufacturers were firſt procured from Dublin and Glaſgow; there are not now leſs than fifty of theſe hands, and a number of boys employed in ſeveral workhouſes in the iſland.

Further OBSERVATIONS on the preſent ſtate of SMUGGLING from the ISLE of MAN.

The lords of the treaſury, conſidering the intolerable growing evils ariſing from ſmuggling, ordered (the beginning of this ſummer) the commiſſioners of the cuſtoms to order the ſeveral collectors of his Majeſty's revenue in Great-Britain, to tranſmit to them the moſt accurate eſtimate poſſible of the nature and quantity of the clandeſtine trade carried on in their reſpective diſtricts, with their own obſervations thereon, and their opinions of the moſt feaſible methods of ſuppreſſing the ſame, and whatever elſe might tend to the improvement and better eſtabliſhment of his Majeſty's revenue in the cuſtoms and exciſe, that the ſame might be conſidered by their lordſhips, and laid before parliament, &c. or to that effect. One of theſe orders addreſſed to the collector of the port of———————by the ſecretary of the cuſtoms, I ſaw. The ſaid collector, who is an able and intelligent officer, and with whom I have often conferred on theſe matters, did accordingly acquit himſelf to his principles. He alſo informed me, that the like orders had iſſued from the commiſſioners of the cuſtoms in Ireland to the reſpective collectors in that kingdom, with ſome of whom, the moſt notable, he had kept a cloſe correſpondence on this head, as well as with ſeveral in the ports of Great-Britain. That upon the whole of their informations and eſtimates he found, that the ſmuggling trade from the Iſle of Man alone to Ireland, could not amount to leſs than a loſs of 200,000 l. per ann. to his Majeſty's revenue in that kingdom.—And from the ſaid iſland to England, Wales, and

and Scotland, at leaſt 300,000 l. per ann.—And to the Eaſt India company and the fair trader 200,000 l. per ann. more, in the whole 700,000 l. per annum, excluſive of the horrid conſequences attending the ſaid clandeſtine trade from the ſaid iſle; the chief of which are, the deſtruction of the health, breed, and morals of the Britiſh ſubjects ſtretching round the ſaid iſland.—The death and daggers of their manufactures and agriculture.—The decay and conſumption of the fair trader, and the temptation, and almoſt neceſſity they are thereby daily brought under, of countenancing and connecting themſelves with the ſaid ſmugglers, in order to keep out of a gaol.—The inevitable forerunners of the decay and deſtruction of his Majeſty's cuſtoms and exciſe, if ſuffered to continue much longer.—Add only one conſideration more, the nouriſhing and ſtrengthening the trade and commerce of foreign powers, particularly one, our moſt dangerous neighbour, by deſtroying our own, and draining us conſtantly of our caſh, &c. &c.

A MEMORIAL or petition of the merchants, owners of ſhips, &c. in the ports of Cumberland, has been lately preſented to the lords of the treaſury, ſetting forth the grievances they labour under from the clandeſtine trade carried on from the Iſle of Man [ſee the ſequel], to which I could add many more facts and conſiderations in ſupport thereof, very intereſting.—For inſtance, not one merchant along the coaſt of that county, has for ſeven years paſt, imported and paid duty for any French brandy, the county being glutted with the ſame by the ſmuggling-boats and night-carriers from the Iſle of Man, though for four years paſt, that iſland has been chiefly ſupplied with coarſe Spaniſh brandy from Cette and Barcelona, which they purchaſe there at about 10d. Engliſh, per gallon, and is ſold out again to the ſmuggling-boats in the Iſle of Man, at 18 d. Engliſh, per gallon, the duty on importation of the ſame in the Iſland being but 1 d. per gallon to the lord of the Iſle, and the freight.—This brandy may be bought afterwards on the ſouth and weſt coaſts of Scotland, for about 2 s. 2 d. per gallon in great quantities.

Above 4000 gallons of this brandy were laſt year ſeized at different times, put up to ſale at the cuſtom-houſe at Whitehaven, but it would not fetch even the king's duty. Is not this a plain demonſtration that the country about was ſupplied with it by the ſmugglers at a much lower price? Yet by the ſeizures of brandy brought to that cuſtom-houſe laſt year as juſt mentioned, it is MOST CERTAIN, that not one ſmuggling-boat load from that iſland in a hundred, is taken by the cruizers or coaſt-officers, or any other ways. Almoſt every ſoul along the coaſt of Cumberland, &c. even the beggars and their brats, if they can ſteal any thing to purchaſe coarſe ſugar, drink tea once or twice a day, eſpecially the damnified teas imported from Gottenburgh, &c. into the Iſle of Man, much of which is ſold by the ſmugglers from thence for 6 d. or 1 s. per pound, ſo that the exciſe on this article is dwindled to nothing along the coaſt. By ſuch deplorable means, punch, bumbo, rumbo, and dry drams, have univerſally prevailed among all degrees of people on the coaſts of Great Britain and Ireland lying round the ſaid iſland, to the inconceivable detriment of both the cuſtoms and exciſe, and it leſſens in proportion the conſumption of malt liquor, and the neceſſary motives of brewing it well.

REMARKS on the annexing the Iſle of Man to the crown.

True it is, no leſs than eight ſhips arrived in the Iſle of Man in the compaſs of 14 days in July laſt paſt from foreign parts, with brandy, rum, geneva, tobacco, arrack, teas, ſilks, &c. At one town called Douglas, the ſtreets of which were ſcarce paſſable for ſeveral weeks, on account of the hogſheads, all the warehouſes in the town not being able to contain their cargoes, 'till room was made by running off the ſtock then in cellar. The ſmugglers laſt ſummer marched in the night in bodies of twenty men armed, and as many horſe-loads of brandy, teas, &c. into and through ſome of the towns in Cumberland.—There are no troops in the whole country, except a ſmall garriſon at Carliſle on the eaſt ſide thereof.

The above-mentioned obſervations, together with the following memorial of the merchants, do truly diſcover the preſent ſtate of ſmuggling from the Iſle of Man to the Britiſh dominions.—It remains now to examine the utility of ſuppreſſing the ſame effectually,—The preſent ineffectual means uſed for that end,—And, laſtly, what may effectually and ſpeedily do it.

It is now admitted by all the intelligent, that the abovementioned trivial duties to the lord proprietor of the Iſle of Man do not amount to leſs than 5 or 6000 l. per annum, at one penny a gallon upon ſpirits of all denominations imported there, a halfpenny a pound on tobacco ditto, and 2 ½ per cent. on all dry goods ad valorem: by which, if there were no other lights, a reaſonable judgment might be formed of the bulk of the clandeſtine trade carried on from thence to the Britiſh dominions round them, and the ſhocking loſs it muſt be to his Majeſty's cuſtoms and exciſe in particular, excluſive of the fatal conſequences to his ſubjects.

From which it cannot but be admitted, that the government had better give the lord proprietor of that iſland, and his heirs for ever, a conſideration of 5, or even 10,000 l. a year, for his ſovereignty, than let it remain 12 months more as it is, it being obvious that the ſum the government would ſave thereby, in a year or two, would more than pay ſuch conſideration for ever, at 3 per cent. even excluſive of the annual fair revenue of that iſland, which would then belong to the crown, and may be reckoned at 2000 l.

Thus much in regard to the propriety and neceſſity of purchaſing and annexing it to the crown, and making it a part and parcel of the realm of England, by act of parliament. See the article MAN [ISLE of MAN] and what follows.

It is ſaid (and I believe with reaſon) that the preſent annual expence to the crown, in ſupporting cruizers, and additional coaſt officers, all along the coaſt of the three kingdoms, round the ſaid iſland, and chiefly on account of the ſmuggling from thence, amounts to no leſs than 20,000 l. per annum.

How improper! how injudicious theſe lofty-maſted and decked ſloops and cruizers are for the purpoſe intended, I ſubmit to the cabbin-boy, without repeating any more, than that they do not catch one ſmuggling boat in a hundred.

I ſhall be aſhamed to repeat, that ſuch lofty cruizers muſt be diſcovered by the ſmuggling, open, four-oared boats, with their two low maſts and ſmall ſails, above an hour or two, at leaſt, before the cruizer can diſcover them; the natural conſequence of which is, the boats immediately clap to windward, and ſtand a wide courſe from the cruizer, by which they are ſeldom diſcovered, except in a fog, when it is always calm enough to give the boats an advantage by their oars. Moreover, ſuch cruizers draw too much water to purſue the ſmuggling-boats in ſhore, and, before ſuch can reach them with their boats, their cargoes are landed, and numbers of people always ready to convey them away. So much for the inſignificancy of ſuch cruizers!

I come now to offer effectual means totally to ſuppreſs the ſmuggling from that iſland.

And firſt that of purchaſing and annexing the ſame to the crown, which, indeed, is to be preferred on every account. This would infallibly put a final end to ſmuggling from that iſland; becauſe all ſuch foreign goods as mentioned above, muſt then be brought to the iſland in ſhips of burthen, and landed in one of their four ports, and this could not be done without the knowlege of a king's governor, collector, and the proper officers, in the face of day, the whole coaſt of that iſland being rocky and dangerous, except their four ports, and open boats cannot ſupply them with ſuch goods from France, Holland, Spain, Denmark, and Sweden.

But if the lord proprietor ſhould decline taking a reaſonable conſideration for his ſovereignty thereof, or aſk an unreaſonable one for the ſame, which I would not ſuppoſe, except he ſhould eſtimate the growing revenue thereof in proportion as it has increaſed ſince the year 1736, when he came to the inheritance thereof, viz. to have increaſed from 1000 l. in the aforeſaid duty, to 5000 l. a year: if this ſhould be the caſe, it may properly fall under conſideration, as a moſt important national concern, whether it be not abſolutely neceſſary to have an act of parliament for commiſſioners immediately to inquire into, and aſcertain, the value of the ſaid iſland, and to oblige him to receive ſuch valuable conſideration in lieu thereof, &c. as in the caſe of the heritable juriſdictions in North Britain.

But if meaſures of this kind ſhould be thought improper, I doubt not means may eaſily be found to induce him to alter his inclinations in a ſhort time,—viz. By diſmiſſing the preſent ſett of improper cruizers employed for ſuppreſſing the running trade from that iſland, and employing the annual expence of their eſtabliſhment in fitting out and ſupporting half a ſcore light open boats, or cutters, carrying 9 or 10 men each, having two low maſts, equal to thoſe of the ſmuggling-boats, to ſail and row ſix oars at a time, to be ſtationed on proper cruizes round the ſaid iſland.—Theſe muſt ſee and be ſeen at the ſame time; but being light, and better adapted for ſailing and rowing, and drawing equal water, would ſoon come up with the ſmuggling-boats.

Suppoſe, alſo, the captors were intitled to 40 s. per head for each ſmuggler ſo taken in the fact; and beſides one moiety of the clandeſtine goods then taken, the 40 s. per head to be paid them out of the remaining moiety of the goods, or, in caſe of a deficiency therein, to be inſtantly paid them by the collector of the port where the prize and ſmugglers are landed, upon delivering over to the civil power ſuch captive ſmuggler, or ſmugglers, who are to be impowered to commit the ſaid delinquents to gaol, 'till they can be conveniently turned over to ſerve on board the royal navy for the ſpace of ſeven years at leaſt; ſuch cruizers, nevertheleſs, to be intitled only to one third of the goods taken, except they deliver over to the civil magiſtrate one or more of the ſmuggling delinquents then taken in the fact.

If ſome people ſhould think this puniſhment too light for ſuch atrocious enemies to the public, they have my conſent and approbation either to tranſport them to America for life, or even to exchange them for our Chriſtian ſlaves in Barbary: all which I think much too favourable for ſuch who promote the deſtruction of their fellow-creatures and country at the ſame time.

Upon this laſt method it muſt be obſerved, as the reaſon of its effectualneſs, that at preſent the ſmuggling merchants and factors in the iſland give, for freight to each of the ſmuggling boats, five guineas, which is paid to the ſaid crew immediately, upon their producing a certificate of their having delivered their ſaid cargo to their conſignment in Scotland, England, Wales, &c. But as the captures would be at leaſt as 20 to 1 under this diſpoſition, ſo would the danger to the boat-crews be, on account of the penalties annexed, which would quickly diſcourage all freight at any price: this would ſoon ſtagnate all ſtock on hand in the iſland, ſtop farther importation of ſuch goods, and with it the lord's duties. Moſt of theſe Mank's boatſmen are very hardy able-bodied ſeamen, moſtly married and wedded to their own home, and to whom a ſervitude and abſence of ſeven years, or more, would, I am confident, be a kind of death. In ſhort, SOMETHING MUST SPEEDILY BE DONE TO PUT AN EFFECTUAL END TO THE ENORMOUS SMUGGLING TRADE CARRIED ON FROM THAT ISLAND, OR ALL THE EVILS ABOVE MENTIONED MUST INFALLIBLY CONTINUE.

N. B. No Leeward Iſland rum is now imported into the Iſle of Man, but coarſe, ſtinking North America rum, drawn from molaſſes, carried there by their lumber ſhips from the Leeward Iſlands, particularly French molaſſes, from St Euſtatia. French and Spaniſh wines abound in the iſland, and great quantities of Dutch geneva, very coarſe Spaniſh ſilks, Barcelona handkerchiefs. The Liverpool Guinea-men alſo take in ſtores at the Iſle of Man; and their toys and trinkets imported there from Holland, France, &c. Horrible!

The MEMORIAL before mentioned, of the merchants and owners of ſhips in the port of Whitehaven.—Humbly addreſſed to the right honourable the lords commiſſioners of his MAJESTY's treaſury.

'We the merchants and proprietors of ſhips in the port of Whitehaven, in the county of Cumberland, beg leave to repreſent to your lordſhips the great damage which this nation in general, (and more eſpecially the ports of this county) ſuſtains from the clandeſtine trade carried on from the ISLE of MAN, to the ſeveral parts of Great-Britain and Ireland, and humbly ſubmit to your lordſhips judgment the means we apprehend to be the moſt conducive to remove the ſame.

It is well known that this Iſland is the great ſtorehouſe wherein the French, and other nations, depoſit prodigious quantities of wine, brandy, coffee, tea, ſilks, and other India goods, which are there admitted upon very low duties, and afterwards ſmuggled upon the coaſt of Great-Britain and Ireland, in ſmall boats and wherries, built for that purpoſe; beſides the frauds committed in the article of TOBACCO, which being firſt entered in the ſeveral ports of Great-Britain, for foreign parts, after receiving the drawback, are frequently landed in this iſland, and afterwards run back again in this kingdom and Ireland.

For the carrying on of which clandeſtine trade, the ſituation of the Iſle of Man is extremely commodious, being within ſeven hours ſail of the ſeveral coaſts of England, Scotland, Ireland, Wales.

The loſs, by this illicit trade, to his Majeſty's revenues in the kingdoms of Great-Britain and Ireland, hath, by competent judges, been computed at no leſs than TWO HUNDRED THOUSAND POUNDS annually, beſides the damage to the fair traders in general, and to the honourable Eaſt-India company in particular, which may reaſonably be computed at no LESS SUM. And if the duties alone upon theſe foreign commodities, thus fraudulently imported, amount to ſo exceſſive a ſum, we may judge, in part, what an immenſe treaſure in SPECIE is annually drained from theſe kingdoms, and principally from the circumjacent ſea coaſts, for the purchaſe thereof, which, in the ſame proportion, tends to the impoveriſhing his Majeſty's dominions, and the inriching a neighbouring ſtate, the formidable rival of our power, as well as our commerce.

But the greateſt loſs which the public ſuſtains by this deteſtable trade, proceeds from the alienation of ſuch numbers of his Majeſty's ſubjects from the honeſt arts of life, from agriculture, from manufactures, or from lawful commerce, to an employment which tends both to the deſtruction of their lives, and the debauching of their morals, by the exceſſive importation of ſpirituous liquors.

Theſe evils, though extending in ſome degree to all parts of Great-Britain and Ireland, are yet moſt ſenſibly felt by the port of Whitehaven, and other neighbouring ports of this county, by reaſon of their vicinity to the Iſle of Man.

We beg leave, therefore, to repreſent to your lordſhips the peculiar hardſhips which the trade of this port labours under, from the clandeſtine practices above mentioned, which, of late, have been carried on to a moſt exorbitant height.

A conſiderable trade hath formerly been carried on from the port of Whitehaven, by the exportation of Britiſh manufactures, to Virginia and Maryland, and other of his Majeſty's plantations in America, and the importation of tobacco, and other products of thoſe colonies, and alſo the exportation of coals to Dublin, and other parts of the kingdom of Ireland, by means whereof the commerce of theſe kingdoms hath bee enlarged, his Majeſty's revenues increaſed, and great numbers of able-bodied ſeamen have been raiſed ready upon any emergency, to be applied to the defence of their king and country. Both theſe trades are at preſent in a very declining ſtate, occaſioned chiefly by the exorbitant growth of the ſmuggling trade in the Iſle of Man: for whereas formerly a profitable branch of the trade of this port conſiſted in ſupplying the Iriſh markets with tobacco, this hath been greatly diminiſhed by the manufactories of this commodity which have been ſet up, and greatly increaſed of late in the ſaid iſland, by means whereof thoſe markets are chiefly ſupplied with manufactured tobacco, in a clandeſtine way, to the great prejudice of the trade of this place, and the fair trader in general.

We beg leave likewiſe to repreſent to your lordſhips the difficulties which the coal-trade labours under, as it is at preſent carried on from Whitehaven and the neighbouring ports, to Dublin and other parts of the kingdom of Ireland, ariſing from the ſame cauſe. And whereas, by an act made in the 12th year of his late Majeſty George the Iſt, No goods or commodities whatſoever, other than ſuch that are of the growth, product, or manufacture of the Iſle of Man, are allowed to be brought from the ſaid iſland, into the kingdoms of Great-Britain or Ireland, on any pretence whatſoever, under the penalty of a forfeiture of ſhip and goods; which makes it neceſſary that the owners of ſhips employed in the trade, for the ſafety of their property, ſhould uſe the greateſt caution and circumſpection, in appointing the moſt faithful maſters and ſailors to navigate them that are to be met with, yet it frequently happens that ſmall quantities of prohibited goods are taken on board, on the coaſt of the ſaid iſland, where boats are continually plying to ſupply them, by reaſon whereof, ſhips of great value are forfeited and ſold, to the great prejudice of their innocent proprietors, who are often without redreſs, inaſmuch as the nature of the trade will allow only ſuch low wages to the maſters of coal veſſels, that few perſons who are poſſeſſed of any conſiderable property will accept of that office. By this means, this once-flouriſhing trade is now reduced to a very declining ſtate, few people being willing to venture their ſubſtance upon ſo precarious a foundation.

For the removal of theſe obſtacles to lawful commerce, by which the nation in general (and more eſpecially the port of Whitehaven, and other neighbouring ports) are greatly affected, we humbly beg leave to mention to your lordſhips the expedient, which, by the wiſdom of the legiſlature, has been judged moſt conducive to this end, viz. by purchaſing the ſovereignty of the ſaid Iſland of the right honourable the proprietor, and annexing it to his Majeſty's government; for the carrying of which uſeful deſign into execution, your lordſhips have been veſted with a proper authority.

But if this cannot be effected, we humbly deſire your lordſhips would vouchſafe to take under your conſideration the ſtate of the ſmuggling trade from this iſland, and apply ſuch further remedies as in your wiſdom ſhall ſeem moſt expedient, ſince it is evident from experience, that the laws now in being are not ſufficient to reſtrain the illicit practices complained of, which are grown to ſo exorbitant a pitch, that the ſmuggling boats go publicly in large fleets, and at a common riſk: ſo that when any of his Majeſty's cruizers fall in with them, it is ſcarce poſſible to take more than one at a time, and then the law hath provided no other puniſhment but the loſs of the boat and goods, which loſs is abundantly made up by the ſucceſs of their confederates. But this ſeldom happens, for the cruizers employed in the channel are but ſlow ſailors, and eaſily ſeen at a diſtance, and eaſily avoided, ſo that ſcarce one in a hundred of the ſmuggling boats or wherries ever falls into their hands.

It ſeems neceſſary, therefore, that a greater number of ſmall boats, well manned, ſhould be employed in apprehending theſe ſmuggling veſſels, and that ſome further proviſion ought to be made by law, for the puniſhment of thoſe who are employed in navigating them, either by tranſportation to the Britiſh colonies in America, or by ſending them, for a limited time, on board his Majeſty's navy, or by ſome other way which may be judged more expedient.'

Signed by 40 of the principal merchants and owners of ſhips.

ANNUAL REVENUE of the ISLE of MAN to the LORD PROPRIETOR.

	l.	s.	d.
Lords rents, certain and impropriate tythes	1500	—	—
Fines certain, payable upon deaths of tenants and alienations of eſtates, and fines levied on the people for breach of penal laws, com. annis -	500	—	—
Duties and cuſtoms upon imports neceſſary for the home conſumption of the iſland, com. annis - - -	500	—	—
Duties and cuſtoms on goods imported into the iſland, and afterwards ſmuggled into Great-Britain and Ireland, com. annis - -	4000	—	—
Revenue in groſs - -	6500	—	—

	l.	s.	d.
Revenue in groſs (brought over)	6500	—	—
From which deducting his annual civil liſt	700	—	—
Then his preſent income will be -	5800	—	—
But were the ſmuggling trade ſuppreſſed, whereby the lord would annually loſe the duties ariſing thereon, viz.	4000	—	—
Then the lord's annual income, upon a fair trade, would amount only to	1800	—	—

N. B. Brandy, rum, &c. pay only one penny per gallon duty in the Iſle of Man.

Teas, India goods, &c. pay ad valorem 2 ½ per cent.

By which it is evident how great the importation of clandeſtine goods into the iſland muſt be, to raiſe annually 4000 l. upon ſuch low duties.

But it is now believed theſe low duties amount annually to 6000 l.

The tobacco alone imported into the iſland brings in to the lord, at a halfpenny per pound, 1500 l. per annum.

Further Remarks on Smuggling.

Although the ſmuggling trade carried on by means of the Iſle of Man is exceeding great, and attended not only with very great detriment to the revenue, but of unſpeakable injury to the fair trader, who pays the legal duties for thoſe commodities that others ſmuggle; yet it is to be wiſhed that all the ſmuggling in the kingdom centered in this iſland only, for then the annexing the ſame to the crown of Great-Britain might prove an effectual remedy againſt ſo great an evil. Certain, however, it is, that this illegal and pernicious practice has ſpread itſelf too much over the whole kingdom, and calls aloud for an effectual redreſs, if there is a poſſibility. But while men are weak or wicked enough to perſuade themſelves, that there is nothing criminal in robbing the king of his revenue, or taking a falſe cuſtom-houſe Oath, it is to be feared that thoſe evils will never be extirpated from amongſt us. See the articles Affidavit and Oath.

Nor do mankind ſeem to be ſenſible of the conſequences to the public of thus robbing the royal revenue: for whatever the revenue is illegally plundered of, occaſions the raiſing of new funds, or taxes, to ſupply that deficiency; and this has been the occaſion of the continuance of the national debts and taxes: for if all thoſe ſums of money of which the public revenue has been, ſince the Revolution, deprived, by the infamous practice of ſmuggling, had been ſaved, it is to be queſtioned whether the nation would have been much in debt at this time of day. So that it may be ſaid with truth, that ſmuggling has been one principal cauſe of the continuance of our debts and taxes; and, therefore, ſuch who perpetrate acts of this kind, are the greateſt bane to theſe kingdoms, if the perpetuity of our debts and taxes is one of the greateſt of evils.

Nor does the miſchief thus terminate to the injury and oppreſſion of the community in general; it ſtrikes directly at the immediate ruin and deſtruction of every individual fair and honourable trader in the kingdom; for he that evades the payment of the legal duties upon the commodities wherein he traffics, will, as he can well afford it, underſell him who juſtly pays the duties; and thus the honourable trader muſt either be undone, or turn ſmuggler to prevent it. Whence it is apparent, that one ſmuggler breeds many, and is the ſource of ſo general a depravity in trade, that ſmuggling traders are, in a great meaſure, become the great inſtruments of the ruin of all the reſt.

The ſeverity that has been ſhewn towards the moſt outrageous of theſe miſcreants, has, indeed, had ſuch happy effects, as to break the knot of thoſe terrible banditti; yet this has not ſtruck at the root of the miſchief, and in the opinion of moſt, it can never be extirpated while the temptation from high duties remains ſo great: for where the avoiding them makes the profit great, no riſk, no danger, can prevent mens attempting it; it is throwing out a bait to a greedy fiſh; he will ſnap at it, though ruin enſues. Beſides, it being chiefly the articles of luxury that are ſmuggled, as brandy, tea, French wine, laces, ſilks, &c. it ſpreads their conſumption among the lower claſs of people, who are tempted to imitate, at a leſs expence, the luxuries of their ſuperiors; and the ſame ſmugglers that bring us theſe ſuperfluities, carry off prodigious quantities of raw wool, to the great prejudice of our manufactures, and the nation in general.

High cuſtoms prevent the bartering away our manufactures for foreign goods, not only for our own conſumption, but alſo for exportation, which might enlarge the vent of our goods ten times more than it now is; for if a merchant now exports woollen goods, and would barter them for wines, the duties on them would amount to more than the coſt of his woollen goods; ſo that he muſt have a double capital for ſuch an adventure, or let it quite alone, where the ſales of great quantities of woollen goods are loſt to the nation.

As high cuſtoms enhance the expences of our navigation, the freight muſt be raiſed accordingly, whereby the prices of the ſoap, oyl, and dye ſtuff uſed in manufacturing our wool, are advanced to the maker, and the freights on the cloths, or ſtuffs, exported, being alſo raiſed, are additional clogs upon the ſales of our woollen goods.

High duties prevent the carrying on fiſhing trades, the great nurſeries of ſeamen; whereby our ſailors being few, and their expences raiſed by taxes, they have the higheſt wages of moſt people in Europe, which is another additional advance on the freighters, to the prejudice of our woollen trade, as above.

Great duties taking away ſo great a part of our merchants ſtocks, they are thereby deprived of driving that great trade, and purchaſing thoſe quantities of woollen goods they would otherwiſe do; beſides our merchants riſks in trade being greater than thoſe in Holland, and their loſſes heavier by our cuſtoms, their bankruptcies muſt be more frequent: this ſenſibly affects our manufacturers, who are generally conſiderable creditors; for broken merchants may be well compared to ninepins, one of which ſeldom falls without beating down many others.

High duties recommend foreign manufacturers of fine goods, by making them expenſive, which vanity, on that account, ſoon renders faſhionable; whilſt our own are deſpiſed, though ſuperior in goodneſs, and are a great diſcouragement to our manufactures.

Large cuſtoms are the cauſe of the ſmuggling of wool; becauſe the gain being great by running tea, brandy, and French goods, on account of the high duties, hath raiſed the contraband trade to a great pitch, and the ſmugglers cannot make their returns in any commodity of ſo quick and certain a vent, or that gives ſo good a profit as our wool; for the French being leſs taxed than we, can work cheaper; and their own wool being coarſe, Engliſh and Iriſh wools are ſo much in demand, that they will give great prices for them, for which reaſon they receive vaſt quantities, to the ruin of our manufactures.

High cuſtoms on aſhes, bay ſalt, cotton, copper, coals, drugs, foreign ſoap, flax, fruit, furrs, hemp, iron, leather, linens, oil, paper, rice, tobacco, tallow, threads, tapes, ſilk, and ſugar, being neceſſaries of life, or materials of manufacture, moſt neceſſarily made all our commodities dear, not only to our own people, but to foreigners likewiſe, (though our workmen ſhould have no exciſe to pay) and ſuch diſcouragements give opportunity to foreigners to ſend their manufactures cheaper to foreign markets, and ſmuggle them, in defiance of all laws, into our own country, to the ruin of our manufactures; for all the above cuſtoms are as much taxes on our woollen manufacture, as if they were laid on the wool itſelf, or more; for the workman muſt raiſe the money on the woollen goods he makes, to pay the duties of what he uſes of the above articles, with the advances, in all the hands they paſs through, before they come to him.

'Tis by theſe high duties that we ourſelves drive away our own manufacturers, and prevent our ever getting more; and foreigners could not rival the people of ſo fruitful a country as Britain, if we did not furniſh them with the means, by our high taxes and reſtraints, that are always prejudicial to trade, though deſigned to amend it, and never effect the thing intended, though fortified with the moſt rigorous penal law: of which Mr Locke gives an inſtance, in his Conſiderations, &c. p. 116. 'Tis death in Spain to export money; and yet they who furniſh all the world with gold and ſilver, have leaſt of it among themſelves: trade fetches it away from that lazy and indigent people, notwithſtanding all their artificial and forced contrivances to keep it there; it follows trade againſt the rigour of their laws; and their want of foreign commodities, makes it openly be carried out at noon-day.'

This ſeems to be a parallel of the ſtate we are coming to, and which ſome foreigners may by and by make.

'Tis felony in England to export wool, and yet they who furniſh all the world with wool, have leaſt of the manufacturing of it among themſelves; the ſmuggling trade fetches it away from that exciſed and cuſtom-loaded people, notwithſtanding all their artificial and forced contrivance to keep it there: it follows the ſmuggling trade, againſt the rigour of the laws, and their want of taking off the taxes on their manufactures makes it openly be carried out at noon-day.

By this we ſee that neither death or baniſhment can force trade to an unnatural channel; and it may be compared, in one reſpect, to water, which cannot be compreſſed within its natural dimenſions: the more force is exerted, the ſooner is the veſſel broke that contained it, and the water let looſe never to return.

The great De Wit, in his Memoirs, Ratiſbon edit. p. 77, aſſerts, 'That the navigation, the fiſhery, the trade, and manufactures, which are the four pillars of the ſtate, ſhould not be weakened or encumbered by any taxes; for 'tis they that give ſubſiſtence to the moſt part of the inhabitants, and which draw in all ſorts of ſtrangers, unleſs the neceſſity was ſo great, that the country was threatened with an intire deſtruction, and theſe fundamentals ſhould be attached upon the hopes that theſe taxes would not laſt long; at leaſt haſte ſhould be made, as ſoon as the ſtorm was over, TO TAKE THEM OFF: again, this diſtinction ſhould be made, that

S M U

'that manufactures ſhould not, or cannot be taxed at all, be-
'cauſe they are not fixed to the country, and we muſt fetch
'from foreign countries the ſtuffs and materials to work
'them up.'.

Smuggling ſends away our ſpecie.

Britain having no mines of gold or ſilver, has no other means of getting, or preſerving its treaſure, but by foreign trade. As cuſtoms confine our trade to mere importation, for our own neceſſaries or vanities, and at the ſame time ruin our manufactures; what we want in exports to balance the imports, muſt be paid in ſpecie, making the balance of trade every year more and more againſt us; for as we raiſe the prices of our goods ſo high, by taxes, that foreigners will not take them, and yet continue to import their ſuperfluities, which we now chiefly, and in time muſt intirely, pay for with our gold and ſilver, as appears by the bills of entry in every week we are obliged to do; and our high duties encourage ſmugglers, who have ſeldom a ſettled habitation, or any ſtock of our manufactures by them, to carry out vaſt quantities of SPECIE to purchaſe their cargoes: ſuch large draughts make our mint lie idle; we ſee but little new-coined gold, and hardly any ſilver; we find our money diſappear, and grow ſcarcer every year; our trade decline, and our people ſtarve. In regard to high duties and their effects, ſee further the articles BONDING at the cuſtom-houſe, LABOUR, TAXES, FUNDS, DEBTS [NATIONAL DEBTS] CREDIT [PUBLIC CREDIT.]

That the lowering of the duties on ſome branches ſhould ſeem to be the moſt natural and effectual way to ſuppreſs ſmuggling, and, indeed, to augment the national revenue, may be judged from the lowering of the DUTY ON TEA; the duty thereupon being very conſiderably augmented ſince that time, and the ſmuggling of that commodity proportionably diminiſhed: and this was obtained by the indefatigable application of the right honourable Stephen Theodore Janſſen, Eſq; late lord mayor of the city of London; to whom I am indebted for theſe anecdotes, relating to the ſmuggling carried on by means of the Iſle of Man, and for many other curious particulars, which I ſhall endeavour to render as uſeful to the public as I am able. See LINEN and TEA.

Further REMARKS on SMUGGLING ſince the laſt War.

Since the Reports on the infamous practice of ſmuggling, made by the committee of the houſe of commons, and lately publiſhed by Mr. Alderman Janſſen, now Chamberlain of the city of London, the true idea of thoſe practices ſeems to be revived, and has induced the government, after ſo long and ſhameful difregard of the proper meaſures recommended throughout the ſaid Reports, to put them in execution: and we hear daily of the good effects of the ſalutary means at length exerted.

It is ſaid likewiſe that the Iſle of Man WILL AT LAST BE ANNEXED to the crown of England; that Iſland having been reckoned a PETTY FRANCE, within this kingdom, it being a capital rendezvous for French ſmugglers, and a prodigious magazine for all ſorts of French commodities and manufactures. See the ISLE of MAN. The preſent vigilance of the government, in this reſpect, is not only manifeſt all around the Britiſh and Iriſh coaſts, but is exerted in our American plantations. For the French, under the pretence of carrying on their fiſhery in North America, purſuant to treaty, have been taken ſmuggling in the river St Lawrence, and as well our Britiſh furrs from Canada as their own wares, among Britiſh ſubjects: but his Majeſty's cruizers there, being very active at preſent, it is to be hoped, will put a ſtop to theſe practices of the French in this part of the world.

The goods lately ſeized by the officers of his majeſty's cuſtoms, trading to and from the Iſle of Man, and the Iſles of Guernſey and Jerſey, are ſaid not to amount to ſo little as 300,000 l.

The Dutch, no leſs than the French, alſo make their fiſheries on the coaſts of Great Britain and Ireland ſubſervient to their ſmuggling practices; and therefore there is no leſs need for the officers of the revenue to be watchful over theſe our good friends and allies, leſt we ſhould be as great ſufferers by their ſmuggling arts, as we are by their fiſheries on our coaſts.

England is certainly the beſt market in the world for ſuch ſmugglers to bring their wares to, they ſelling here the deareſt, and fetching the beſt prices, becauſe our own commodities and manufactures ſell the deareſt to our own ſubjects of any in the whole world. This, we apprehend, to be the great inducement to ſmuggling in general in theſe kingdoms; and till the cauſe is effectually removed, it is to be feared, the effect will never greatly ceaſe; for the high duties heighten the temptation to ſome, and the low price of our competitors goods, to others. The immenſity of our national debts, and the tax-incumbrances under which our whole commerce labours, for the payment of intereſt only, and a great proportion of that to foreigners alſo, occaſions the ſmuggling with which we ſo greatly abound in every part of this kingdom; and while people can purchaſe two or three ſmuggled ſuits of clothes, for the price of one, and perhaps, not ſo gay, we cannot ſuppoſe any great obſtruction will be put to ſmuggling.

An abſtract of an act made in the year 1762 for the further improvement of the revenue of cuſtoms; and for the encouragement of officers making ſeizures, and for the prevention of the clandeſtine running of goods into any parts of his Majeſty's dominions.

Veſſels or goods ſeized by the officers of the cuſtoms to be publicly ſold, after condemnation, to the beſt bidder, at ſuch places as the commiſſioners of the cuſtoms ſhall think proper; one moiety of the produce to go to the ſaid officers, and the other to be paid into the exchequer. Officers to be allowed, after all charges deducted, two third parts of the produce upon wrought ſilks, bengals, ſtuffs mixed with ſilk or herba, of Perſian or Indian manufactures, and callicoes, ſeized and condemned in purſuance of act 11, 12 Will. III. the other third to be paid into the exchequer; and upon wool, and other goods enumerated act 12 Geo. II. the produce after all charges; and upon tobacco and ſnuffs burnt, &c. purſuant to act 24 Geo. II. 3d. per lb. and for tobacco ſtalks 1d. per lb. and for tea, not exceeding 2s. 6d. per lb.

Where the produce of any ſeizure ſhall not anſwer the expences of condemnation and ſale, or a verdict be given for the claimant, the charges to be paid out of any branch of the revenue applicable to incidents. The king to direct, by order of council, or proclamation, how the ſhare of ſuch ſeizures as ſhall be made by veſſels in his ſervice, ſhall be divided amongſt the officers and men.

Where any foreign brandy, arrack, rum, or other ſpirits, not being for the ſhip's uſe, ſhall be imported, &c. in any veſſel of 50 tons, or under, the ſame, together with the veſſel and furniture, ſhall be forfeited; and in like manner, where any ſpirits, tea, tobacco, tobacco ſtalks, or ſnuff, are liable to forfeiture by act 9 Geo. II. or act 24 Geo. II. the veſſel on board which the ſame ſhall be found, if under 50 tons, ſhall be forfeited, with her apparel: and the veſſels, &c. ſeized and condemned, are to be diſpoſed of as veſſels of 40 tons, or under, forfeited for importing foreign brandy, &c.——No writ of delivery to be iſſued out of the exchequer for any ſuch veſſel, unleſs the officer delay proceeding to trial and condemnation three terms; and ſecurity be given, in double the value, to return the veſſel upon condemnation. ——Clauſes in act 8 Annæ, & 15, 16 Geo. II. Claimant, upon entering his claim, to give ſecurity in 60 l. to pay coſts; and in default thereof, the goods and veſſel to be condemned. —Clauſes in act 5 Geo. I. The recited clauſes, reſpecting cuſtomable or prohibited goods on board veſſels of 50 tons or under, found hovering on the coaſt of this kingdom, extended to all ſuch like veſſels found hovering on any of the coaſts of Ireland; and the ſaid offences to be tried, and penalties recovered in any of the four courts of Dublin.—Offences in other ports, to be proſecuted in the court of admiralty, or other court of record of the place; and the forfeitures to be divided and applied as theſe in Great-Britain.

REMARKS ſince the laſt Edition.

In the Reports of the committee of the honourable houſe of commons, appointed to enquire into the cauſes of the moſt INFAMOUS PRACTICE of SMUGGLING, and lately publiſhed by Mr Chamberlain Janſſen, late lord mayor and repreſentative of the city of London, it is obſerved, that 'upon the rupture with Spain in 1739, it was clearly foreſeen, that the inſidious practices of France would neceſſarily involve us in a war likewiſe with that power; wherefore it became an indiſpenſible conſideration, what would be the moſt effectual methods to ſtop thoſe channels, through which we were daily pouring in our wealth among the people of that perfidious nation; enriching them with our ſpecie, merely to purchaſe ſuperfluous commodities; and, at the ſame time, impoveriſhing and weakening ourſelves, previous to a war which was upon the point of breaking out with them.

The Britiſh parliament, impreſſed with a deep ſenſe of the mighty evils reſulting from this imprudent and baneful intercourſe, ſeized the earlieſt opportunity of putting a ſtop to it. They were ſufficiently apprized, that this nation paid annually to France, a prodigious ſum of money for French cambric; and that our Eaſt-India company, out of their ſtock then in hand, with what they could import, would be able to furniſh a commodity equally fit for every purpoſe; and therefore very judiciouſly paſſed an act, in 1744, for prohibiting the wear of French cambric; and ſo general was the ſenſe of both houſes, at that juncture, for this prohibition, that ſeveral members declared in their ſpeeches, (doubtleſs in hopes that their example would be univerſally followed) that they took it for granted, not a ſingle member of either houſe would appear in French cambric by that time twelvemonth. This act, however, not anſwering effectually the purpoſe intended, other acts have paſſed ſince to enforce the intention of the firſt; and theſe ſeveral acts have, at laſt, completed the diſuſe of this pernicious commodity among us; and that we may hope for ever.

But the parliament did not ſtop here: for, the next ſeſſion, finding the ſmuggling of tea was got to ſo exorbitant a height, that the large revenue, which ought to have ariſen from it, was ſinking daily; and in danger of ſuffering a much greater diminution, unleſs a ſpeedy remedy were applied; and be-

ing at the ſame time well informed, that one million and a half of pounds weight of the tea ſo ſmuggled in upon us, (together with brandy and other goods) came from France, for all which we paid them our ready money; they paſſed an act, to commence at Midſummer 1745, for taking off one half (being two ſhillings per pound) of the exciſe upon that article; by which wiſe law, the practice of ſmuggling was found immediately to leſſen; and our ſpecie was conſequently, in a great degree, preſerved from being ſent to France. Our India company thereupon increaſed their importation of tea very conſiderably, and the revenue increaſed with a moſt ſurprizing rapidity *; as will fully appear in a large and curious ſheet at the concluſion of this treatiſe. It is computed there have been ſaved to the nation, by theſe two ſalutary laws, not leſs than three hundred thouſand pounds annually; which exorbitant ſum had been ſent in ſpecie from hence to France, before the prohibition of the wear of French cambric; and the check put to the ſmuggling of French tea.

* For ſome years before the paſſing this act, the exciſe and cuſtom upon tea (together) produced but little above one hundred and ſeventy thouſand pounds ſterling, communibus annis. But ſo immenſe has been the increaſe of this branch of the revenue from that period, that upwards of five millions and a half ſterling have been paid into the exchequer, more than would have been, if this act had not paſſed; whilſt the Eaſt-India company has, on the other hand, increaſed her importation of tea, near fifty-three millions of pounds weight.

The ſucceeding ſeſſion, the parliament found, from cuſtom-houſe accounts laid before them, that ſmuggling ſtill continued to a much greater exceſs than could have been ſuſpected, when the act of the laſt ſeſſion paſſed. They were likewiſe ſenſible, that ſuch † numerous and deſperate gangs of men, ſo well mounted and ſo well armed, might greatly add to the diſturbance ‡ already broke out in the kingdom. They knew that theſe banditti carried the earlieſt intelligence to France, into whoſe ports they were freely admitted, although in the time of open war, and an open rebellion; and they alſo knew they were hardy ſailors and ſkilful pilots. All theſe circumſtances were ſo very alarming, that a committee was moved for, and appointed accordingly, to inquire into the cauſes of the moſt infamous practice of ſmuggling, &c. which committee made the two following Reports, that now appear in print for the firſt time.

† See page 7, to 11, of the firſt Report.

‡ The beginning of the winter 1745, when the rebels were in England.

The reader will find, in theſe Reports and the papers annexed, an abundance of particulars, not only new, but uſeful and curious. He will ſee in what manner the laws, for levying the taxes and guarding againſt frauds, have been ſuffered for a long courſe of years to be trampled upon, to the manifeſt detriment of the fair trader, the very affecting diminution of the revenue, and the utter diſgrace of government. He will ſee, with aſtoniſhment, thoſe laws violated by avowed and open acts of force. He will ſee too many inſtances of the infringement of thoſe laws, through the fraudulent connivance of thoſe very officers, who were appointed to ſecure the ſtrict obſervance of them. In a word, he will ſee the revenue plundered, in ſo barefaced a manner, and in ſuch a variety of ſhapes, that he will be ſtruck with amazement, that practices ſo oppoſite to all principles of government, and pregnant with evils of ſuch fatal conſequence, could have been permitted to reign ſo long. And, finally, he will diſcover, in the courſe of theſe ſheets, very probable methods propoſed, (if not very certain ones) for collecting the old taxes, in a due and regular manner; whereby the frequent impoſition of new ones, ſo oppreſſive to our manufactures, and ſo deſtructive to our trade, might have been ſpared; and the loſs of ſome important branches of our commerce thereby prevented.

Jovis, 6 Die Februarii, 1745.

Ordered nemine contradicente, That a committee be appointed to enquire into the cauſes of the moſt infamous practice of ſmuggling, and conſider of the moſt effectual methods to prevent the ſaid practice, and to report their opinion therein to the houſe.

And a committee was appointed accordingly; and all that come to the committee, are to have voices; and the committee have power to ſend for perſons, papers and records.'

Anno tertio Georgii III. regis. Cap. XXII.

'An Act for the further improvement of his Majeſty's revenue of cuſtoms; and for the encouragement of officers making ſeizures; and for the prevention of the clandeſtine running of goods into any part of his Majeſty's dominions.

'Whereas, by an act paſſed in the twelfth year of the reign of his late Majeſty King George the Firſt, intitled, An act for the improvement of his Majeſty's revenues of cuſtoms, exciſe, and inland duties, the commiſſioners of thoſe revenues are reſpectively impowered and directed to cauſe all tea, coffee, foreign brandy, rum, or other foreign exciſeable liquors, which ſhall be ſeized by any officer of the cuſtoms or exciſe, after condemnation, to be publickly ſold to the beſt bidder, at ſuch places as the ſaid commiſſioners ſhall think proper; and to allow the officers making ſuch ſeizures, for their encouragement, one third part of the full ſum ariſing from the public ſale of all ſuch tea, coffee, foreign brandy, rum, or other exciſeable liquors, free from all charges of condemnation and ſale; and to cauſe the remaining part of the produce of ſuch ſales, after paying the reward to the officer, and the charges of condemnation and ſale for ſuch ſeizures, to be paid into the receipt of his Majeſty's exchequer, in lieu of his Majeſty's moiety, as was then practiſed: And whereas, by ſeveral ſubſequent acts of parliament, one moiety of all fines, penalties, and forfeitures, impoſed by any act relating to the duties of exciſe; or any other duty under the management of the commiſſioners of that revenue, is given to his Majeſty, his heirs and ſucceſſors, and the other moiety to him or them who ſhall diſcover, in form, or ſue for the ſame; in purſuance of which laws the officers of exciſe ſeizing any of the commodities herein before enumerated, have been allowed a moiety thereof; but the proviſions in thoſe ſubſequent laws, not extending to ſuch ſeizures when made by officers of the cuſtoms, they have hitherto been allowed only one third of the produce thereof, purſuant to the directions of the before-recited act of the twelfth of George the Firſt: And whereas the power given by the ſaid recited act to the reſpective commiſſioners of the cuſtoms and exciſe, to cauſe the goods therein enumerated to be publickly ſold, has been found very advantageous to the revenue; and if the like power was extended in general to all ſorts of goods, it would prevent many frauds and illicit combinations practiſed by bidders in the court of exchequer, to the great detriment of the public revenue and the fair trader: And whereas it is highly reaſonable and juſt, as well as of public utility, that the officers of the cuſtoms and exciſe ſhould have equal encouragement to be vigilant in the exertion of their duty, to ſuppreſs the pernicious practice of ſmuggling; to which end, may it therefore pleaſe your Majeſty, that it may be enacted, and be it enacted by the king's moſt excellent Majeſty, by and with the advice and conſent of the lords ſpiritual and temporal, and commons, in this preſent parliament aſſembled, and by the authority of the ſame, That from and after the firſt day of May, one thouſand ſeven hundred and ſixty-three, it ſhall and may be lawful to and for the commiſſioners of his Majeſty's cuſtoms, to cauſe all ſhips, veſſels, and boats, and all goods of what kind ſoever they may be (excepting only ſuch veſſels, boats, and goods, as are by law liable to be burnt) which ſhall be ſeized by any officers of the cuſtoms, for unlawful importation, or for non-payment of duties, or for any other cauſe of forfeiture, and condemned according to law, to be ſold publickly to the beſt bidder, at ſuch places as the ſaid commiſſioners ſhall think proper; and all and every officer who ſhall ſeize ſuch goods, ſhall, for his and their encouragement, be allowed, by the ſaid commiſſioners, one moiety of the net produce ariſing by the ſale of ſuch ſeizure, after deducting the charges of condemnation and ſale from the whole; and the ſaid commiſſioners ſhall cauſe the other moiety thereof to be paid into the receipt of his Majeſty's exchequer, in lieu of his Majeſty's ſhare thereof (excepting in thoſe caſes which are otherwiſe provided for by this act) any law, cuſtom, or uſage, to the contrary notwithſtanding.

Provided always, and it is hereby declared and enacted by the authority aforeſaid, That after deducting the charges of condemnation and ſale from the groſs produce of all wrought ſilks, bengals, and ſtuffs, mixed with ſilk or herba of the manufacture of Perſia, China, or Eaſt-India, and all callicoes, painted, dyed, printed, or ſtained there, which ſhall be ſeized and condemned in purſuance of an act paſſed in the eleventh and twelfth years of the reign of the late king William the Third, (intitled, An act for the more effectual employing the poor, by encouraging the manufactures of this kingdom) the ſaid commiſſioners of the cuſtoms ſhall allow to the officer or officers who ſhall ſeize the ſame, two third parts of ſuch net produce, and cauſe the remaining third part thereof to be paid into the receipt of his Majeſty's exchequer; and that for all wool, and any other of the ſpecies of goods enumerated in an act paſſed in the twelfth year of the reign of his late Majeſty king George the Second (intitled, An act for taking off the duties upon woollen and bay-yarn imported from Ireland to England, and for the more effectual preventing the exportation of wool from Great-Britain, and of wool, and wool manufactured, from Ireland to foreign parts) after deducting the charges of condemnation and ſale, the remainder of the produce ſhall be paid to the officer who ſhall ſeize the ſame, in ſuch manner as by the ſaid act is directed; and that for all tobacco, tobacco ſtalks, and ſnuff, which ſhall be burnt or deſtroyed, in purſuance of an act paſſed in the twenty-fourth year of the reign of his late Majeſty king George the Second (intitled, An act for the more effectual ſecuring the duties upon tobacco) the officer or officers ſeizing the ſame, ſhall be paid, in the manner directed by that act, three pence for every pound weight of ſuch tobacco and ſnuff, and one penny for every pound weight of tobacco ſtalks; and that for ſuch tea as ſhall be burnt, or otherwiſe deſtroyed, by order of the reſpective

reſpective commiſſioners of the cuſtoms or exciſe, purſuant to the laws now in being, the officers making the ſeizures ſhall be rewarded in ſuch manner as the ſaid commiſſioners ſhall think proper, ſuch reward not exceeding two ſhillings and ſix-pence for each pound weight of ſuch tea, in lieu of all other allowances; any thing in this or any other act to the contrary notwithſtanding.

Provided alſo, and it is hereby further enacted by the authority aforeſaid, That if the produce of any particular ſeizure, ſold in purſuance of this act, ſhall not be ſufficient to anſwer the expences of condemnation and ſale; or if, upon the trial of any ſeizure, a verdict ſhall be given for the claimant, and the ſhip or goods ſhall not be condemned; in either of thoſe caſes, it ſhall and may be lawful for the commiſſioners of his Majeſty's cuſtoms, to order the charges attending the ſeizing and proſecuting ſuch ſhip or goods, to be paid out of any branch of the revenue of the cuſtoms, which is by law applicable to the payment of incidents; any thing in this, or any other act of parliament to the contrary notwithſtanding.

And whereas, for the more effectual prevention of the infamous practice of ſmuggling, it may be neceſſary to employ ſeveral of the ſhips and veſſels of war belonging to his Majeſty, his heirs and ſucceſſors, on the coaſts of Great-Britain and Ireland, and of the other dominions and colonies belonging to the crown of Great Britain; therefore, for the better encouragement of all the officers and ſeamen employed in ſuch ſervice, to do their duty therein, be it enacted by the authority aforeſaid, That it ſhall and may be lawful to and for his Majeſty, his heirs and ſucceſſors, to direct and appoint the moiety herein before mentioned, or any other part of all and every the ſeizure and ſeizures that ſhall be made by ſuch officers or ſeamen reſpectively, ſo employed as aforeſaid, to be divided amongſt all ſuch officers and ſeamen of ſuch ſhip or veſſel of war, who ſhall make any ſuch ſeizure as aforeſaid, in ſuch proportions, and in ſuch manner, as his Majeſty, his heirs and ſucceſſors, ſhall think fit to order and direct, by any order or orders of council, or by any proclamation or proclamations to be made or iſſued, from time to time, for that purpoſe; and ſuch moiety, or other part of the ſaid ſeizure or ſeizures, ſhall be ſo paid and divided to and amongſt all the officers and ſeamen of ſuch ſhip or veſſel of war accordingly.

And whereas the laws already made to prevent the clandeſtine importing and landing of foreign brandy, rum, ſtrong waters, or other ſpirits, tea, tobacco, tobacco ſtalks, and ſnuff in ſmall veſſels, which hover upon the coaſts of this kingdom, have been found inſufficient for that purpoſe; be it further enacted by the authority aforeſaid, That from and after the firſt day of June, one thouſand ſeven hundred and ſixty-three, if any foreign brandy, arrack, rum, ſtrong waters, or ſpirits of any kind whatſoever, ſhall be imported or brought into Great-Britain, or into any port, harbour, haven, or creek thereof, in any ſhip, veſſel, or boat, of the burthen of fifty tons, or under (except only for the uſe of the ſeamen then belonging to and on board ſuch ſhip, veſſel, or boat, not exceeding two gallons for every ſuch ſeaman) every ſuch ſhip, veſſel, or boat, with all her tackle, furniture, and apparel, and alſo all ſuch brandy, arrack, rum, ſtrong waters, or ſpirits, or the value thereof, ſhall be forfeited and loſt; and where any brandy, arrack, rum, ſtrong waters, or other ſpirits, or any tea, tobacco, tobacco ſtalks or ſtems ſtript from the leaf, or ſnuff, is or are liable to forfeiture, by virtue of an act made in the ninth year of the reign of his late Majeſty king George the Second, intitled, An act for indemnifying perſons who have been guilty of offences againſt the laws made for ſecuring the revenue of cuſtoms and exciſe, and for inforcing thoſe laws for the future; and by another act made in the twenty-fourth year of the reign of his ſaid late Majeſty king George the Second, intitled, An act for the more effectual ſecuring the duties upon tobacco, or either of them, for being found on board any ſuch ſhip or veſſel at anchor, or hovering within the limits of any of the ports of this kingdom, or within two leagues of the ſhore, as is particularly expreſſed in thoſe acts: It is hereby further enacted, That in every ſuch caſe the ſhip or veſſel on board of which ſuch goods ſhall be ſo found, with all her tackle, furniture, and apparel, ſhall alſo be forfeited and loſt, provided ſuch ſhip or veſſel doth not exceed the burthen of fifty tons.

And it is hereby further enacted, by the authority aforeſaid, That every ſhip or veſſel forfeited by this act, ſhall be ſeized and proſecuted, and after condemnation be burnt, deſtroyed, or uſed in his Majeſty's ſervice by the officers of the cuſtoms or exciſe, and the tackle, furniture, and apparel diſpoſed of and divided, and the tonnage aſcertained in the ſame manner as is directed by the laws now in force, with reſpect to veſſels of forty tons or under, forfeited for importing foreign brandy or other ſpirits.

And it is alſo further enacted by the authority aforeſaid, That no writ of delivery ſhall be granted out of the court of exchequer, for any ſhip, veſſel, or boat, that is liable to be burnt, deſtroyed, or uſed in his Majeſty's ſervice, by virtue of this act, or any other act relating to the cuſtoms or exciſe, unleſs the officer ſeizing the ſame ſhall delay proceeding to the trial and condemnation thereof for the ſpace of three terms; and in that caſe, not without good ſecurity being given in double the appraiſed value of ſuch ſhip, veſſel, or boat, to return the ſame upon condemnation, in order to be burnt, deſtroyed, or uſed in his Majeſty's ſervice according to law.

And whereas, by an act paſſed in the eighth year of the reign of her late Majeſty queen Anne, for granting to her Majeſty new duties of exciſe, and upon ſeveral imported commodities; and by another act paſſed in the fifteenth and ſixteenth years of the reign of his late Majeſty king George the Second, for further regulating the plantation trade, and ſeveral other purpoſes; it is amongſt other things enacted, That every perſon, upon entry of any claim in the court where any prohibited or uncuſtomed goods, or any ſhip, veſſel, or boat, ſhall be proſecuted, ſhall be obliged to give ſecurity, in the penalty of thirty pounds, to anſwer and pay the coſts occaſioned by ſuch claim; and in default of giving ſuch ſecurity within the time limited by the courſe of that court, for entering ſuch claim, ſuch goods, ſhips, veſſels, or boats, ſhall be recovered: And whereas many perſons have, from the ſmallneſs of the penalty, been induced to enter groundleſs claims in fictitious names, with a view to put the officers of the revenue to vexatious trouble and delay, as well as to deter them from proſecuting ſeizures legally made, by putting them to an extraordinary expence, oftentimes more than the value of the goods ſeized, which tends very much to the prejudice of the public revenue, and to the diſcouragement of the officers thereof, in the execution of their duty: To remedy therefore this inconvenience for the future, be it enacted by the authority aforeſaid, That from and after the firſt day of May, one thouſand ſeven hundred and ſixty-three, every perſon, upon entry of any claim in the court where any goods, ſhips, veſſels, or boats, ſhall be proſecuted, ſhall be obliged to give ſecurity, in the penalty of ſixty pounds, to anſwer and pay the coſts occaſioned by ſuch claim; and in default of giving ſuch ſecurity within the time limited by the courſe of that court, for entering claims, ſuch goods, ſhips, veſſels, or boats, ſhall be adjudged to be forfeited, and ſhall be condemned; any thing in the before-recited acts, or any other act of parliament, to the contrary notwithſtanding.

And whereas, by certain clauſes in an act made in the fifth year of the reign of his late Majeſty king George the Firſt, intitled, An act againſt clandeſtine running of uncuſtomed goods, and for the more effectual preventing of frauds relating to the cuſtoms; (which clauſes have been continued by ſeveral ſubſequent acts) it was declared and enacted, That where any ſhip or veſſel, of the burthen of fifty tons, or under, laden with cuſtomable or prohibited goods, ſhould be found hovering on the coaſts of this kingdom, within the limits of any port, and not proceeding on her voyage for foreign parts, or to ſome other port of this kingdom, wind and weather permitting, it ſhould and might be lawful to and for any officer or officers of his Majeſty's cuſtoms, to go on board every ſuch ſhip or veſſel, and to take an account of the lading, and to demand and take ſecurity from the maſter, or other perſon having or taking the charge or command of ſuch ſhip or veſſel in that voyage, by his own bond, by him to be entered into, unto his Majeſty, his heirs and ſucceſſors, in ſuch ſum or ſums of money as ſhould be treble the value of ſuch foreign goods then on board, with condition that ſuch ſhip or veſſel, as ſoon as wind and weather, and the ſtate and condition of ſuch ſhip or veſſel permitted, ſhould and would proceed regularly on ſuch voyage, and ſhould land ſuch foreign goods in and at ſome foreign port or ports; and if ſuch maſter, or other perſon, having or taking the charge or command of ſuch ſhip or veſſel, ſhould, upon ſuch demand, refuſe to enter into ſuch bond; or, having entered into ſuch bond, ſhould not depart or proceed regularly on ſuch voyage, as ſoon as wind and weather, and the ſtate and condition of ſuch ſhip or veſſel ſhould permit, unleſs otherwiſe ſuffered to make a longer ſtay by the collector, or other principal officer in his abſence, of ſuch port where ſuch ſhip or veſſel ſhould be, not exceeding twenty days, then, and in either of the ſaid caſes, all the foreign goods ſo on board ſuch ſhip or veſſel, ſhould and might, by any officer or officers of the cuſtoms, by direction of the collector, or other principal officer as aforeſaid, be taken out of and from ſuch ſhip or veſſel, and forthwith brought on ſhore and ſecured; and in caſe the ſaid goods were cuſtomable, the cuſtoms and other duties ſhould be paid for the ſame: and as concerning wool, or any prohibited goods, or other goods liable to forfeiture, which might be found on board ſuch ſhips or veſſels at the time of their unlading as aforeſaid, the ſame were thereby declared to be ſubject to forfeiture, and the officers of the cuſtoms ſhould and might proſecute the ſame, as alſo the ſhip or veſſel, in caſe ſhe ſhould be liable to condemnation, as in the manner therein after mentioned; and that after ſuch goods were ſo taken out of ſuch ſhip or veſſel, and brought on ſhore, and ſecured by ſuch officer or officers, ſuch bonds ſo to be given as aforeſaid, ſhould be void and delivered up, without any fee or reward for taking or delivering up the ſame; and ſuch bond, not being otherwiſe diſcharged, ſhould, on a proper

certificate, returned under the common ſeal of the chief magiſtrate in any place or places beyond the ſeas, or under the hands and ſeals of two known Britiſh merchants upon the place, that ſuch goods were there landed, or upon proof by credible perſons, that ſuch goods were taken by enemies, or periſhed in the ſeas (the examination and proof thereof being left to the judgement of the commiſſioners of the cuſtoms) ſhould be vacated and diſcharged: And whereas the extending of the ſaid clauſes to the reſt of his Majeſty's dominions, may be a means of preventing illicit trade; be it therefore enacted, by the authority aforeſaid, That from and after the firſt day of July, one thouſand ſeven hundred and ſixty-three, the ſaid clauſes, and every part of them, ſhall be extended to all ſhips and veſſels of the burthen of fifty tons, or under, which ſhall be found hovering on the coaſts of Ireland, or any other of his Majeſty's dominions or territories belonging to the crown of Great-Britain; and ſhall be of equal force in every reſpect, in regard to all ſuch ſhips and veſſels found hovering on any of the coaſts aforeſaid, as ſuch clauſes now are, or ſhall be conſtrued to be, in regard to any ſhips or veſſels hovering on the coaſts of this kingdom; and all offences which ſhall be committed againſt the ſaid clauſes, or any part of them, on the coaſts of Ireland, ſhall be tried, and the penalties and forfeitures thereby incurred, ſhall be proſecuted for and recovered in any of his Majeſty's courts of record in Dublin in the ſaid kingdom; and all offences which ſhall be committed againſt the ſaid clauſes, or any part of them, on the coaſts of any other of his Majeſty's dominions or territories (except this kingdom) ſhall be tried, and the penalties and forfeitures thereby incurred, ſhall be proſecuted for and recovered, in any court of admiralty, in the dominion or territory on the coaſt whereof ſuch offence ſhall be committed (which court of admiralty is hereby authorized, impowered, and required, to proceed to, hear, and determine the ſame) or in any court of record in ſuch dominion or territory, at the election of the informer or proſecutor, according to the courſe and method uſed and practiſed there in proſecutions for offences againſt penal laws relating to the cuſtoms or exciſe; and ſuch penalties and forfeitures ſo recovered there, ſhall be divided and applied in ſuch and the ſame manner as penalties and forfeitures recovered in Great-Britain for the like offences are, or in purſuance of this act may be, directed to be divided and applied.

SOAP, a ſort of paſte, either hard and dry, or ſoft and liquid; uſed in cleanſing and bleaching of linen, and for other purpoſes by the dyers, perfumers, fullers, hatters, &c. See BLEACHING and LINEN. Some peculiar ſorts are alſo uſed medicinally.

To make ſoap requires an intimate union of the ſalt of pot-aſhes with oil, or any vegetable or animal fat: this union, in the preſent method of ſoap-making, is procured by a tedious operation, or by long boiling a weak lye of pot-aſh and quick lime with the fat, adding a ſtronger and a weaker lye occaſionally by degrees, 'till the requiſite point to the perfection of the ſoap is hit.

REMARKS.

It might greatly contribute to ſhorten this operation, and eaſe the expence thereof, if a mechanical motion or engine were employed inſtead of fire, to procure this intimate union of the lye and oil. And that ſomething of this kind is practicable, appears from hence; that if, for example, half a pint of the ſoap-boilers ſtrongeſt, or capital lye, as they call it, be briſkly ſhook in a phial, with an ounce or more of oil olive, for half a quarter of an hour, and then the phial be ſuffered to reſt, there will, in a ſhort time after, be found a ſolid cake of tolerable ſoap at the top of the liquor, and may be eaſily preſerved in that form, by breaking the phial, and rendered harder by being expoſed to the air.

The art of ſoap-making depends upon the following particulars. (1.) The nature and quality of pot-aſh. (2.) The nature of oils and fats. And (3.) The ſeveral ways of uniting them to advantage.

(1.) A due enquiry into the nature of pot-aſh [ſee the article POT-ASH, NORWAY] ſhews wherein the ſuperiority of the foreign aſhes, particularly thoſe of Marſeilles, Caſtile, Venice, and Joppa, conſiſts; why the ſoaps, at preſent made in England, fall ſhort of the perfection of ſome foreign ſoaps; and will inform us of the ways whereby even Joppa ſoap might be equalled in England. For ſuch an enquiry will trace out the real phyſical differences betwixt one ſort of pot-aſh and another, with the ways of converting any one of them into the reſt; ſo as to fit them for the ſoap-boiler, glaſs-maker, &c. reſpectively: it ſhews alſo, how the mildeſt pot-aſh is obtainable, for the more curious ſoaps; and eſpecially for thoſe intended to be uſed medicinally, &c. And, by the way, there is room to ſuſpect, that a thorough enquiry into this ſubject, would ſhew the matter of all pot-aſh to be the matter of nitre; or that all the vegetables which yield pot-aſh by calcination, might be brought to afford nitre by putrefaction; or that pot-aſh is nearly the ſame thing, both in nature and ſubſtance, with fixed nitre.

(2.) A due inquiſition alſo into the nature of oils and fats, would ſhew likewiſe, how one ſort might be converted into another, or hard animal fats into liquid oils, and liquid oils into ſolid fats, by digeſting oils with certain coagulating acids, &c.—How all the foreign ſolid oil ſoaps might be imitated in England, and how a great variety of liquid ſoaps might be prepared for many different purpoſes; the foundation of the thing entirely depending upon the uſe of a highly ſubtilized and thin vegetable oil.

(3.) An enquiry into the beſt methods of uniting fixed vegetable ſalts with oils, might naturally ſuggeſt ſeveral machines for the purpoſe; whereby many tons of ſoap ſhould be readily made by means of mills, wrought by the wind or water; and this either with or without fire. It might alſo inform us of ſeveral menſtruums, or connecting mediums, which ſhould, either alone or with little aſſiſtance, procure an intimate union.

SOIL. See the article MANURE, and thoſe others from thence referred to.

SOISSONNOIS. This province, in France, is bounded on the north by Laonois, on the eaſt by Champaigne, on the ſouth by Brie, and on the weſt by Valois. It abounds in corn, paſtures, and wood.

SOISSONS is ſituated in a very agreeable and fruitful vale, on the banks of the river Aione. It is ſeventeen leagues diſtant from Paris to the north-eaſt, and about eight from Rheims to the weſt. It is a large city, well built, and drives a great trade in corn.

SOMERSETSHIRE has Devonſhire on the weſt, Dorſetſhire on the ſouth, the Britiſh channel on the north, and Wiltſhire on the eaſt, and is about 150 miles in circumference. The air is the mildeſt, and the ſoil, for the moſt part, the richeſt in the kingdom: it abounds with grain of all kinds, of which it ſupplies home and foreign markets with vaſt quantities. Its hills afford mines of coal, lead, and copper; woad thrives well here; and teazles, a ſort of thiſtles uſed by cloth dreſſers, grow ſcarce any where elſe; and of lapis calaminaris, without which there is no making braſs, more is dug up here than in all the kingdom beſides.

All ſorts of cloth are manufactured here; as broad and narrow kerſeys, druggets, ſerges, duroys, and ſhalloons, together with ſtockings and buttons; and in the ſouth eaſt parts are made great quantities of linen. The value of the woollen manufacture alone here, in the firſt hands, has heretofore been rated at a million a year.

BRISTOL, the ſecond city in Great-Britain, for trade, wealth, and number of inhabitants, ſtands on the conflux of the rivers Froom and Avon. As to the trade of it, 'tis well known to be the moſt conſiderable, London only excepted, eſpecially to the Weſt-Indies, to which its merchants were the firſt adventurers, and always greater traders in proportion, than that metropolis. Liverpool is now ſaid to vye with them. It was even computed, above 30 years ago, when it employed no leſs than 2000 ſail of ſhips, that the trade, in proportion to the bigneſs of the two cities, was above three times as great as that of London. Indeed the Briſtol merchants had a very good trade to the Weſt-Indies, at the time of the civil war, which they have increaſed much more, not only thither, but to all parts of the world, ſince the Revolution. Before that, they knew little of the Guinea trade, and hardly any thing of the Dutch, the Hamburgh, the Norway, and the eaſt-land commerce; all which have ſince been very flouriſhing here.

In time of peace, 50 Weſt-India ſhips, many of them of conſiderable burthen, have arrived here in a fleet, or very near one another. The ſhopkeepers here, who are in general wholeſale men, have ſo great an inland trade, that they maintain carriers, as the London tradeſmen do, to all the principal counties and towns, from Southampton to the banks of the Trent.

Moreover, by means of thoſe two great rivers, the Severn and Wye, they have the whole trade of South Wales, as it were, to themſelves; and the greateſt part of that of North Wales. And how their trade may be greatly increaſed, ſee the article RIVERS.

The largeſt ſhips lie at Hungroad, four miles down the river; two miles below which is Kingroad, another ſtation, in the merchandize brought to the key by lighters.

One of this city's principal branches of trade, and which has been prodigiouſly increaſed ſince the Revolution, is that to Ireland; from whence it imports tallow, linen, and woollen, and bay-yarn. The Streights trade, for all ſorts of fruit, oil, &c. is very conſiderable.

They have alſo ſome conſiderable manufactures of woollen ſtuffs, particularly cantaloons, which are carried on chiefly by French refugees. Glaſs ware is as plenty and cheap here, as in any place in the world, here being no leſs than fifteen glaſs-houſes, (which are ſerved by the Kingſwood and Mendip-hills coal-mines) ſome for glaſſes, others for bottles.

BRIDGEWATER, on the river Parret, has a pretty good coaſt trade to Briſtol, and all down the Severn to Wales for coals, to Cornwall for ſlate, &c. Its foreign trade is chiefly to Portugal and Newfoundland. Wool is brought hither in good quantities from Ireland, for a trade to which kingdom, this port lies as convenient as any in the Severn ſea. They have, beſides, a great retale trade; and for cheeſe there are few, if any,

any, greater markets in the kingdom, many waggon loads being brought here, on a market day, for Devonſhire.

MINEHEAD has a ſafe harbour in the Briſtol channel, much frequented by paſſengers to and from Ireland; from whence alſo about 40 veſſels come hither yearly with wool, that being its chief trade. Here are ſeveral rich merchants, who have ſome trade alſo to Virginia, and the Weſt-Indies; and they correſpond much with the merchants of Barnſtaple and Briſtol, in their foreign commerce. They ſhip off alſo about 3 or 4000 barrels of herrings yearly, for the Mediterranean, &c.

TAUNTON, on the river Thone, is a populous town, the inhabitants being computed at above 20,000; ſome thouſands of whom are employed in the manufacture of ſerges, duroys, ſagathees, ſhalloons, &c. Some of them, indeed, are, of late years, removed to the neighbouring town of Wellington.

WELLINGTON is chiefly of note for its ſeven weekly fairs, for cattle from the weſt country; and its manufacture is ſerges, druggets, &c.

YEOVIL, or IVEL, is a good large town, on a river of the ſame name. Its chief manufacture is gloves, though ſome cloth is made here, and it has a conſiderable market for corn, cheeſe, hemp, flax, linen, ſail-cloth, &c.

CHIDDER is famed for the fineſt cheeſe in the world, except the Parmeſan: the pariſh is about 23 miles in compaſs, abounding with paſture. 'Tis common here for 3 or 4 dairies to join their milk, to make one great cheeſe of 100, or 150 lb. weight, value ſix-pence a pound on the ſpot. There are, moreover, ſuch great plantations of apples in this pariſh, that 3000 hogſheads of cyder have been made in a ſeaſon, and 36 horſe-loads of apples have been ſent in a week, for 26 weeks together, to Shepton-Mallet, &c. for ſale; and 200 bags of wool are produced in it every year.

BRUTON, on the river Bru, drives a great trade in ſerges and ſtockings.

SHEPTON-MALLET is a populous town, with many very conſiderable clothiers.

Some cloth is alſo made at CROSCOMB, but its chief manufacture is ſtockings.

FROME-SELWOOD is alſo remarkable for its woollen manufacture. The cloths made here, are for the moſt part medleys, of about 7 or 8 ſhillings a yard.

SOUTH SEA COMPANY.

A ſhort HISTORY of the SOUTH SEA COMPANY.

This company was erected by act of parliament, in the ninth year of the late queen Anne, entitled, An act for making good deficiencies, and ſatisfying the public debts, and for erecting a corporation to carry on a trade to the South Sea, and for the encouragement of the fiſhery, &c. The preamble recites, That the debt due to the navy, the army, &c. amounted to 9,000,000 l. and upwards, and thereupon it was enacted, that the duties following ſhould be impoſed for paying an intereſt or annuity, after the rate of 6 per cent. per ann. for all the ſaid ſum, which intereſt amounted to the annual ſum of 568,279 l. 10 s. The duties conſtituting the fund for payment of the ſaid intereſt, were all the impoſitions and duties upon wines, vinegar, tobacco, Eaſt-India goods, wrought ſilk, whale-fins, &c. granted by an act of the 8th of queen Anne, 'till the year 1720, continued by this act to the crown for ever, together with the duties on candles, and money given with apprentices. And the queen was impowered, by letters patent, to form the ſaid creditors, intereſted in the navy-bills, &c. into a company, who, on their ſubſcribing their bills, tickets, debentures, &c. were to be admitted into the joint-ſtock, and become members thereof, in proportion to the ſums due to them. And the ſaid corporation were, by the ſaid act, to be veſted in the ſole trade to and from all kingdoms and lands on the eaſt ſide of America from the river Oroonoko, to the ſouthernmoſt part of Terra del Fuego; and on the weſt ſide thereof, from the ſouthernmoſt part of the ſaid Terra del Fuego, through the South Sea, to the northernmoſt part of America, not exceeding 300 miles from the continent on the ſaid weſt ſide (excepting Brazil, and other places in the poſſeſſion of the king of Portugal, and the country of Surinam in poſſeſſion of the States-General) the company to be ſole proprietors of all iſlands, forts, &c. which they ſhould diſcover within theſe limits, to be held under the annual rent of one ounce of gold.

The crown alſo was impowered, by letters patent, to direct a ſtock to conſiſt of 20 s. in every 100 l. of the capital ſtock of the company, to be raiſed by the members thereof, and employed in improving, enlarging, and carrying on the fiſhery of this kingdom, for the uſe of the company.

In purſuance of this act, the proprietors of the navy-bills, tickets, and any debentures aboveſaid, were incorporated, by the name of The Company of Merchants of Great-Britain trading to the South Seas, and other parts of America, and for encouraging the Fiſhery. And on the peace that followed, anno 1713, the late queen transferred to the ſaid company, the benefit of the ASSIENTO CONTRACT with Spain, which was the furniſhing the Spaniards with ſlaves for their mines and plantations in America, by which they were alſo entitled to ſend a large ſhip annually with European goods, conſiſting chiefly of our woollen manufactures, to the Spaniſh Weſt-Indies. [See the article ASSIENTO CONTRACT.] By an act of 1 Geo. I. cap. 21. the ſum of 822,032 l. 4 s. 8 d. was added to the capital ſtock of the South Sea company, to make it up juſt the ſum of 10,000,000 l. With this large capital, we don't find that the company ever applied themſelves to foreign trade, (which ſeemed to be the principal deſign of incorporating them) unleſs in ſending the ſhip above mentioned with European goods to the Spaniſh Weſt-Indies, and furniſhing the Spaniards with negroes; nor did they make any attempt to promote the fiſhery (another grand deſign in eſtabliſhing this corporation) 'till of late years, and then only by ſending a ſmall number of ſhips annually to fiſh for whales; but what they chiefly make a merit of is, their being inſtrumental to the leſſening of the national debt, and rendering ſome of thoſe debts redeemable, which could not have been redeemed otherwiſe, without a breach of the public faith. They boaſted—That they had not only added above 50 per cent. to the eſtates of all the old proprietors of the ſtock, but had been continually promoting the public good, by ſavings and reductions of intereſt.—That it appeared by a ſtatute of 3 Geo. I. cap. 9. that the capital of the company then amounted to 10,000,000 l. for which a yearly fund of 600,000 l. was payable to them, after the rate of 6 per cent. and that they ſubmitted to accept, after Midſummer 1718, of an annuity of 500,000 l. being after the rate of 5 per cent. per ann. for their ten millions.—That the company agreed alſo to advance the government the further ſum of two millions, for the diſcharge of lottery-tickets that carried 6 per cent. and accepted another fund to pay them an intereſt of 5 per cent. for the ſaid two millions.

That afterwards the South Sea company procured as many annuities, redeemable, and irredeemable, and other public debts, to be ſubſcribed into their ſtocks, as with their original capital amounted to 33 millions and upwards, taking an intereſt of the government of 5 l. per cent. for the preſent, and ſtipulated to take 4 l. per cent. for the whole after Midſummer 1727; by which reduction of intereſt, the nation was provided of a fund uſually called the SINKING FUND; whereby the public would have been enabled to have diſcharged the whole debt within the compaſs of forty years, or very little more, without laying any new burthens on the ſubjects.

And whereas it was objected to them, that the change that was made in the long annuities, by the company's redeeming them at twenty years purchaſe, had brought the nation in debt three millions more than it was before, the annuitants not having paid ſo much money for them by three millions; the company anſwered, that the nation was in debt on account of the annuities, according to the payment ſhe was to make to the annuitants, and according to the time ſhe was obliged to continue thoſe payments; and if their bargain makes no alteration in that matter, if it neither adds to or leſſens thoſe payments, or the time of continuing them, then it leaves the debt of the nation juſt as it found it, neither increaſed nor diminiſhed by it: but if it either leſſens the annual payments, or ſhortens the time of making ſuch payment, it muſt be ſo far ſaid to leſſen the national debt to the annuitants.

In the year 1716, there was publiſhed a calculation of the ſtate of the national debt, in which the long annuities granted at ſeveral times were ſtated and valued, according to the ſums paid into the Exchequer for them, which was about eleven years and a half purchaſe for thoſe in king William's, and under ſixteen years purchaſe for thoſe in queen Anne's, time. This calculation, therefore, ſtates the debt of the nation on the account of the annuities according to the ſums they were firſt granted at.

Becauſe this could neither be reckoned the debt of the nation with regard to the annuitants, nor the value of the annuities. It could not be reckoned the debt of the nation with regard to the annuitants, becauſe the nation had contracted with them not to pay them off at pleaſure, by returning them the money they at firſt paid into the Exchequer, but in an abſolute engagement for the payment of ſuch annuities for a certain term of years: neither could it be reckoned the value of the annuities, for their value muſt be ſtated (as the value of every thing elſe muſt be) not according to what was given for them at firſt, or what they were worth at that time, but according to what they are worth at the time they are propoſed to be purchaſed: for as they then were only of ſuch a value, becauſe money bore ſuch an intereſt, ſo if the ſtate of intereſt is altered ſince that time, the value of ſuch annuities muſt be in the ſame degree altered; for their value muſt riſe in the ſame degree that the intereſt of money decreaſes, which was the reaſon that they were worth above 20 years purchaſe in the year 1720, and therefore could not be purchaſed at a lower rate, unleſs a power had been taken in parliament of fixing the price, which was ſuppoſed to be a ſtep inconſiſtent with the ſafety of the public credit. The ſtating, therefore, the national debt to the annuitant according to the ſums firſt given for them, was a great miſtake.

But yet upon this foundation, that the degree of the debt is to be thus ſtated, an argument is formed, that the buying the annuities by the South Sea company at 20 years purchaſe, makes

makes an addition to the national debt, becauſe here is 3,000,000l. &c. more paid for them than they were at firſt granted at. This ſuppoſes that the nation owed the annuitants no more than their firſt purchaſe money, and could oblige them to take it when they pleaſed; and if this had been the caſe, then it muſt have been granted that the 3,000,000l. &c. given by this bargain, had been ſo far an increaſe to the national debt.

But if this ſuppoſition be contrary to the true ſtate of the caſe, if the faith of the nation was given abſolutely for the payments of ſuch annuities, and for ſuch a term of years, then the debt of the nation to the annuitants muſt be ſtated according to that grant. And then the queſtion will be, whether the nation is upon better terms with the annuitants by this new bargain, than ſhe was without it: and the only way to ſee this clearly, is to ſee whether the nation is to be ſooner quit of her payments to the annuitants, and therefore to pay leſs to them by virtue of this purchaſe, than ſhe muſt have paid to them, had they continued unpurchaſed in their firſt ſtate? At the time this purchaſe was made, the nation was to continue the payment of the annuities for about 83 years.

If, therefore, this term of payment is by this new bargain reduced to a term of years of about half the time, and this be done not by any farther money advanced by the nation, but only by a change made in the manner of her payments, and a change of the ſtate of the annuities, then it muſt be very obvious how much the nation is relieved in her debts to the annuitants. The change made in the manner of the payment is this; the South Sea company buy 100l. annuity with 2000l. ſtock, ſo that the nation is to pay intereſt for 2000l. ſtock inſtead of paying an annuity of 100l. Was the nation to continue this ſame payment to the ſtock, and for the ſame term of years that ſhe was to have continued her payments to the annuities, then it muſt have been granted, that ſhe had neither leſſened nor increaſed her debt by this bargain.

But if by virtue of this new bargain, and by this change in the manner of the payments, that is, by paying intereſt for 2000l. ſtock, inſtead of an annuity of 100l. the nation has not only a redeemable debt to deal with, but is alſo provided with a fund ſufficient for the redeeming or diſcharging of 2000l. ſtock in about half the time ſhe was to have paid the annuitants, then it muſt be equally granted, that ſhe has her debt in this great degree leſſened and relieved by this bargain. Now what is here only ſuppoſed as the effect of this bargain, is the true and real nature of it, and ſuch as it was ſufficiently fitted to produce, which may be thus made plainly to appear. The nation pays intereſt for 2000l. ſtock, inſtead of paying an annuity of 100l. but it is provided for in this contract, that in the year 1727, there ſhould be a reduction of intereſt at one per cent. So that inſtead of the 100l. annuity, there will be only 80l. per ann. paid to the 2000l. ſtock; and this abatement of intereſt, or deduction of 20l. per ann. from the 100l. annuity, will raiſe a fund ſufficient for the diſcharge of the 2000l. ſtock in about half the time that the payment of the annuities was to have been continued. So that by this meer change of the ſtate of the debt, and the manner of the payments, the nation is enabled to diſcharge the whole debt in about 34 years ſooner than it could have been diſcharged had the annuities not been thus purchaſed.—

That notwithſtanding all theſe advantages accruing to the nation by the ſcheme laid by the late South Sea directors, they had been evicted out of their eſtates, however long enjoyed, and by whatever means acquired.

As to the calamities of the year 1720, which altered the eſtates of ſo many private perſons, they ought not to be imputed altogether to the directors, or to the South Sea ſcheme itſelf, but to a more general cauſe; for there was not any order of men in the nation, that had not ſome ſhare in helping forward that general infatuation, and to whom therefore the common calamity ought to be attributed; ſo that it might have been juſtly expected, that every order of men in the kingdom ſhould have been inclined, either to have pardoned or gently puniſhed ſuch a ſtate of things, as they had not been mere ſpectators of. — That had the directors been allowed the benefit of a fair and candid trial, they might very juſtly have pleaded, that they had done nothing privately, or of their own heads; that they were driven into all the ſteps they took, by the irreſiſtable temper of men of all orders; that they had acted openly in the ſight of the legiſlature, and had the orders and authority of general courts for all they did, and their thanks after it was done.

Another cauſe the late directors aſſign for the ſudden riſe of their ſtocks, which occaſioned the calamities in the year 1720, was the Bank bidding againſt them. The propoſition made to the parliament at firſt, ſay they, was only for a voluntary ſubſcription of the proprietors of the irredeemable and redeemable debts into the South Sea ſtock, at the beſt terms the company could agree with them (which was no more than ſelling their ſtock by ſubſcription), a method the Bank has often purſued; and as the miniſtry knew the company had gained a ſum for their proprietors, by taking in part of the lottery 1710, the year before, beſides what they paid the government for ſo doing, they inſiſted the company ſhould pay a ſum of money to the government for the liberty of having the ſaid debts ſubſcribed into their ſtock.

Before this propoſition, the Bank had been applied to for undertaking this matter, but they refuſed it, treating it with contempt. But on the propoſition being made to the houſe of commons, they became bidders of above five millions and a half to the government, by which the ſcheme firſt propoſed was entirely altered, the ſame being then put up to the higheſt bidders; which influenced the minds of all ſorts of people, and was the occaſion of the extravagant riſe of ſtocks, whereby all the miſchievous conſequences to private perſons enſued; for it is plain the nation has received a great advantage by it, and therefore the ill conſequence can only be the increaſing ſome perſons eſtates, and decreaſing the eſtates of others. The ſecond reaſon of the ill conſequences of the ſcheme was owing to the bargain which the Bank ſolemnly made to the South Sea company, and never performed, whereby ſo many perſons were miſled, and thereby very greatly injured.

The company deſire alſo it may be obſerved further, that the directors and managers of that ſcheme were never charged with any frauds or embezzlements of the company's effects.

The late directors alſo in their defence, and in order to ſhew how inſtrumental they have been in reducing the intereſt of money, and putting the national debt in a way of being paid off in a few years, publiſhed a treatiſe, ſtiled, A true State of the South Sea Scheme, &c. wherein they inform us, that the method they firſt propoſed for executing their ſcheme was as follows:

The total of their capital was about -	l. 11,746,000
Total of the annuities and debts to be taken in were about - - -	30,981,000
Which would make the total of their capital	42,727,000

The whole ſum to be taken in by the company being ſo large, and conſiſting of annuities and debts of various kinds, it was judged impracticable to take in the whole at one time, and that by taking them in at different times, prices, and proportions, the proprietors thereof (through apprehenſion of being either entirely left out, or of coming in afterwards at a higher price) would be quickened to make their ſubſcriptions, whereby the execution of the ſcheme would be rendered more eaſy and certain. Though when the ſcheme was firſt formed, the price of the ſtock did not exceed 116l. to 118 per cent. yet it was ſuppoſed, if the propoſal was accepted by the parliament, that the acceptance would ſo much increaſe the credit of the ſtock, as the company might be able to take in the ſaid annuities and debts, at the rates, and in the proportions herein after mentioned: and if the Bank and Eaſt-India company, or either of them, would come in, they were propoſed to be admitted into the firſt ſubſcription at 130 per cent. or even lower, which would nevertheleſs have increaſed the profit to the South Sea company. But as their coming in was uncertain, the calculation was made only upon the other annuities and debts, viz.

6,500,000	Annuities and debts, ſubſcribed at 130 per cent. for the ſtock, would produce ſtock to the ſubſcribers - - -	l. 5,000,000
7,000,000	Ditto, ſubſcribed at 140 per cent. would be ſtock to the ſubſcribers	5,000,000
7,500,000	Ditto, ſubſcribed at 150 per cent. would be ſtock to the ſubſcribers	5,000,000
9,981,000	Ditto, ſubſcribed at 160 per cent. would be ſtock to the ſubſcribers	6,238,125
30,981,000	Total ſtock to the ſubſcribers -	21,238,125
	Stock gained to the company -	9,742,875
	Total ſtock to the company for the annuities and other debts to be taken in - - -	30,981,000
	Then the capital would ſtand thus:	
	Proprietors old capital -	11,246,000
	Proprietors new capital by ſubſcription - - -	21,238,125
	Total proprietors ſtock -	32,984,125
	Stock belonging to their company in their corporate capacity, gained by their ſubſcription -	9,742,875
	Total capital as above -	42,727,000
9,742,875,	Stock to be ſold by the company, at 160 per cent. amounts to in money -	15,588,600
	Out of which deduct to be paid to the public	3,500,000
	Reſt nett profit to the company - -	12,088,600
	The company's funds or income, for about 38,600,000l. at 5 per cent. per ann. -	1,930,000
	For 4,127,000l. at 4 per cent. per ann. -	165,080
	Total	

	l.
Total of the company's income, beſides the allowance to them for charges of management - - - - -	2,085,080
8 l. per cent. for a dividend upon 32,984,125 l. proprietors ſtock comes to - -	2,638,730
Towards which the company's income would be	2,095,080
Wanting to make an annual dividend of 8 per cent.	543,650

Which, by the gradual ſelling the ſtock, and what the company gained on the ſubſcription, would have ſupplied the ſame for above 12 years: before the expiration of which time it was ſuppoſed, the benefit of their trade to Africa, and the grants of Nova Scotia, and of the French part of St. Chriſtopher's, would have been ſufficient to have perpetuated the dividend, if not to have enlarged it. But the commons objecting againſt giving the South Sea company the African trade, Nova Scotia, and that which was the French part of St Chriſtopher's, the South Sea company were prevailed with to leave thoſe advantages out of their propoſals, which were the ſubſtantial things to have ſupported their credit; but ſtill with aſſurance from thoſe in the ADMINISTRATION, of uſing their utmoſt endeavours to obtain them for the company: But the price of South Sea ſtock, from the time of accepting their propoſals to the paſſing the act, riſing very conſiderably, and the Bank and their friends always oppoſing whatever appeared to be for the benefit of the South Sea company, they could never obtain thoſe advantageous grants, which they had much depended on (as ſolid ſupports to the ſtock) though they frequently importuned and preſſed the miniſtry for the ſame.

The extraordinary riſe of the South Sea ſtock before the paſſing the act, together with the oppoſition of the Bank, having defeated the company of thoſe grants and ſettlements which they had depended upon as the ſolid ſupports of the ſtock, as has been already hinted, nothing was left them but the opinion of mankind to enable them to execute the act, which put them under a more than ordinary neceſſity of complying with the general diſpoſition of the people; and, therefore, though their original deſigns and intentions were to have no ſubſcriptions but of the ſeveral annuities and debts that were to be taken in, yet there being, immediately after paſſing of the act, a prevailing notion among many of the proprietors and others without doors (for it did not proceed from the directors) of taking in money ſubſcriptions; and this opinion growing univerſal, the directors found themſelves under a neceſſity to depart from the method they had firſt intended to proceed in, and to begin the execution of the act with a money ſubſcription; to which they were the more eaſily induced, finding the method preſcribed by the act would require a great many months to effect the taking in but a part of thoſe public debts; and that unforeſeen accidents might ſo reduce the price of ſtocks, as wholly to defeat the execution of the act, and yet the company would remain under the obligation of paying to the public 4,667,000 l. though no part of the act ſhould be executed.

A further inducement to admit of a money ſubſcription was, that they might be thereby enabled to pay off ſuch of the redeemable debts, and to offer money to ſuch of the annuitants, as ſhall not be inclined to take ſtock for the ſame, they not being then certain, there would be ſuch an univerſal diſpoſition in thoſe proprietors to accept ſtock for their debts and annuities, as afterwards appeared; but when that diſpoſition did appear, the directors had no occaſion to apply the money to that uſe. By theſe and the like conſiderations, the directors were prevailed on to open a money ſubſcription at 300 per cent. with diſtant times of payment, and without limiting the ſum to be taken in, ſtocks being then 285 per cent.

The method they proceeded in was, that every director took the names of thoſe perſons who applied to them, and the ſums for which they deſired to be admitted into that ſubſcription; which, when brought together, amounted to ſo large a ſum, and the names were of ſo conſiderable perſons, that though their firſt intention was to have had that ſubſcription for no more than one million, or at moſt one million and an half; and though they permitted no perſon to have more than 4000 l. and the ſums deſired were generally reduced, yet the directors found they could not bring the ſubſcription to a leſs ſum than 2,250,000 l. without giving ſuch diſguſt, as might prove prejudicial to the company.

The firſt money ſubſcription being thus fixed, and the ſum it amounted to being 6,750,000 l. of which 60 per cent. being 1,350,000 l. paid down, the directors thought this ſubſcription a ſufficient fund to enable them to execute the reſt of the act, and accordingly came to an unanimous reſolution of taking no more money ſubſcriptions.

But this ſubſcription ſoon ſelling out at a conſiderable profit, it cannot be forgot how impatient perſons of all ranks and degrees were for another money ſubſcription, and by their importunity did prevail on the directors to agree the 28th of April to open one, which was done on the 30th of the ſame month at 400 per cent. of which 40 per cent. was paid down; and the ſame day reſolved it as their opinion, nemine contradicente, not to take any further SUBSCRIPTION in MONEY. This ſubſcription was intended alſo not to exceed a million, but the application to get into it was ſuch, that when the directors came to examine the names and ſums demanded, they found they could not reduce it under a million and half, without giving the greateſt offence.

But the directors thoughts being intent upon executing the act according to their firſt deſign, by taking in the annuities and redeemables, eſpecially the former, on which the parliament had laid ſo great ſtreſs; they (the ſame day it was agreed to open the ſecond money ſubſcription) previouſly reſolved on a ſubſcription for the annuities; which met with ſuch ſucceſs, that in a few days above two-thirds of them were brought in, and on the 19th of May (the price of ſtock being then 375 per cent.) the directors fixed the price for the ſubſcribed annuities at 32 years purchaſe, to be paid as follows, viz.

	For 100 l. per ann.	
Stock 700 l. at 375 per cent.	which amounts to	l. 2625
In money and the company's bonds - -		575
Total for 100 l. per ann. -		3200

This gave great ſatisfaction to all parties concerned, and the ſtock and ſubſcription advanced ſo faſt, that when the parliament roſe, the ſtock was at near 800 per cent. and the ſecond ſubſcription ſold for 500 per cent. profit.

At this time the price of ſtock being about 800 per cent. and the ſecond ſubſcription ſelling for about 500 per cent. advance, and great numbers of thoſe who deſired to be admitted into the third ſubſcription, having requeſted it at 1000 per cent. the directors thought they could not ſet it at a leſs price; but they allowed ſuch times of payment, as with the Midſummer dividend reduced it to about 800 per cent. This met with no blame from any perſon at that time, but, on the contrary, univerſal approbation; as appears by the price this third ſubſcription bore, it ſoon ſelling at 300 per cent. profit.

When this ſubſcription was completed, the directors came again to a reſolution of taking no more money ſubſcriptions, and applied themſelves to take in the remainder of the annuities and redeemables. To which end, on the 8th of July they agreed to open their books on the 12th of that month, to take in part of them; which was accordingly done, and in a few days, moſt of the irredeemables and annuities ſtanding out were ſubſcribed: but ſome of the proprietors of thoſe debts and annuities, by reaſon of their abſence, or other impediments, not having an opportunity to ſubſcribe before the books were ſhut, made great application to the directors to be admitted; who, being unwilling to complete the execution of the act with as much expedition as they could, did, on the 27th of July, reſolve to open books on the 4th of Auguſt following, for taking in the remainder of theſe debts and annuities, and moſt of thoſe which were ſtanding out were then brought in.

On the 12th of Auguſt the price of ſtock, incluſive of the Midſummer dividend, was upwards of 900 per cent. which made the ſtock, excluſive of that dividend, about 820 per cent. The directors agreed to fix the price of the ſubſcribed long annuities at 36 years purchaſe, and the redeemables at 105 per cent. and the price of ſtock to be given for the ſame at 800 per cent. ſo that the redeemables, conſidering they were taken in at 105 per cent. had the ſtock at about 60 per cent. under the current price, which gave general ſatisfaction at that time.

It farther appeared, that the terms allowed for the annuities and redeemables which were ſubſcribed, were very ſatisfactory, becauſe they were ſold at a much higher price than the unſubſcribed; and ſome time after this price was declared in the Gazette, many conſiderable proprietors of the unſubſcribed annuities and debts preſſed and aſked it as a favour to be, and were accordingly admitted to ſubſcribe, and particularly ſeveral foreigners and merchants, intruſted here by them, for their uſe. Although the directors had come to ſeveral reſolutions againſt any further money-ſubſcriptions, thoſe reſolutions were not ſufficient to ſtem the repeated application for the ſame, from multitudes of all ranks; and the proprietors of the ſtock began to clamour at their not being admitted to a ſhare of their proportions in the former ſubſcription, and ſome of them threatened to demand a general court, to order that the proprietors might be admitted to a ſubſcription in proportion to their ſtock; which obliged the directors to take that matter into conſideration: and the ſame day on which they fixed the price of ſtock for the two laſt ſubſcriptions of the annuities and redeemables, they agreed to take a ſubſcription of 20 per cent. on ſtock, for the proprietors only, the ſtock in ſuch ſubſcriptions to be valued at 1000 l. per cent. which, at that time, gave great pleaſure and ſatisfaction to the proprietors, and 40 per cent. was offered for the privilege of that ſubſcription.

But this did not take off the applications for another money-ſubſcription to all perſons indifferently, to which the directors ſhewed a great unwillingneſs; but, by the continued ſolicitations of multitudes of all degrees, and from all parts, they at length conſented to open a fourth money-ſubſcription, on

the 24th of Auguſt, at 1000l. per cent. excluſive of the Midſummer dividend (the third ſubſcription then ſelling at about 300l. per cent. advance) but, to prevent this ſubſcription running to an exceſſive ſum, they agreed that one fifth part, being 200l. per cent. ſhould be paid down, and none be admitted but thoſe who brought their money that very day. The eagerneſs for this ſubſcription was ſo great, that notwithſtanding this precaution, and the directors full intention that this ſubſcription ſhould not exceed a million, yet, in a few hours, there was 1,200,000l. ſubſcribed, although many were excluded, who preſſed very earneſtly to come in. Had not the directors taken that precaution in relation to this fourth ſubſcription, it would probably have ſwelled to a larger ſum than the third, as is manifeſt not only by the eager filling ſo great a ſum (as is mentioned) in ſo ſhort a ſpace, and the numberleſs letters the directors received from perſons who deſired to be admitted into it, but alſo by a memorable reply that a great miniſter of ſtate, ſince dead, made to them, upon their informing him of the method they intended to proceed in, who thereupon told them, That he himſelf had a liſt for above a million for that ſubſcription, and that therefore, if they would proceed in the method they had propoſed, without taking in liſts, as they had done in the third ſubſcription, he deſired that they would publiſh an advertiſement in the Daily Courant, That it was not in his power to ſerve his friends; that thereby he might clear himſelf of the clamour and charge that would ariſe againſt him for having neglected them.

As to the ſubſcriptions for 20 per cent. to be limited to the proprietors only, the ſame was afterwards (for ſeveral reaſons) thought fit, by the general court, to be omitted. The ſpring of the money-ſubſcriptions aroſe from without doors, and not from the directors themſelves, as already mentioned; and one may venture to ſay, thoſe ſubſcriptions were countenanced by the parliament; for that, after the firſt money ſubſcription was taken in, there having ariſen ſome doubts concerning the validity thereof, the parliament were pleaſed to paſs a clauſe in the act, for eſtabliſhing the two inſurance companies, confirming not only the ſubſcription taken, but alſo all ſuch ſubſcriptions as ſhould after be taken, and to make the receipts that ſhould be given out for the ſame aſſignable in law, which they would not have been without authority of parliament.

They obſerve further, that by the original ſcheme, the higheſt calculation of the ſtock was 160l. per cent. and that advance ſupported by ſuch beneficial grants to the company, which, if purſued and ripened into actual execution, would have kept the ſtock at leaſt to that price, without being detrimental to any. But ſeveral public advantages would neceſſarily have ariſen therefrom; as, firſt, the bringing the annuities into a ſtate of redemption, which had been always thought an inſurmountable obſtacle to getting the nation out of debt. Secondly, The reducing the intereſt of the public debts from 5 to 4 per cent. and thereby increaſing the ſinking fund above 540,000l. per ann. by which the whole debt of the nation might have been paid off in about 24 years. Thirdly, The lowering the common rate of intereſt, which would ſoon have followed as a neceſſary conſequence thereof. Fourthly, The trade and revenues of the kingdom would have been increaſed, by the peopling and cultivating Nova Scotia, and the French part of St Chriſtopher's; and eſpecially by enlarging and opening the trade to Africa into the INLAND PARTS of the CONTINENT, which has never yet been done, whereby they could ſcarce have failed of diſcovering the many rich gold mines which unqueſtionably are there, and from thence an immenſe treaſure might have been brought into this kingdom.

The South Sea directors, in the year 1720, inſiſted further, that the ſcheme was originally formed with a deſign of great advantage to the public, as well as to the original proprietors, and, notwithſtanding it received many alterations between its firſt formation and paſſing into an act, and that the execution of that act has been attended with many misfortunes; nevertheleſs there ſtill flow therefrom many and great benefits, as well to the public, as to the original proprietors: and yet the directors of the South Sea company are puniſhed in a manner beyond any precedent known in England, whilſt the projectors and managers of the innumerable BUBBLES ſet up, even without any legal foundation, and with no other intention than that of fraud and cheat, have not been ſo much as called in queſtion. [See the articles ACTIONS and BUBBLES.]

A SCHEDULE of the late DIRECTORS reſpective ESTATES, with their reſpective ALLOWANCES for their ſubſiſtence, and the SUMS taken from them.

	The nett value of the eſtates of the directors, by the report of the ſecret committee.			Their allowance for ſubſiſtence.	The fines, or ſums taken from each director.

This act for the confiſcation of their eſtates was founded upon the following reſolutions of the lords and commons, viz. 2 February, 1720, reſolved by the Houſe of Peers, That the South-Sea directors declaring 30 per cent. dividend for the half year ending at Chriſtmas, and 50 per cent. per ann. for 12 years after, was a villainous artifice, to defraud and delude his Majeſty's good ſubjects.

16 February, 1720,

The ſecret committee of the Houſe of Commons made their report, from whence it appeared that the following portions of South-Sea ſtock were taken in for the ſeveral perſons following, viz.

	l.
For the earl of Sunderland, firſt lord of the treaſury, at the requeſt of James Craggs, ſen. Eſq.	50,000
For the ducheſs of Kendall	10 000
For the counteſs of P.	10,000
For the two nieces of the ducheſs of Kendall	10,000
For Mr Craggs ſenior	30,000
For Charles Stanhope, Eſq;	10,000
For the Swordblade company	20,000

It appeared alſo, that Mr Aiſlabie, chancellor of the Exchequer, had great quantities of the South-Sea ſtock given him, and that a great deal more had been taken in by the members of both Houſes of Parliament.

18 February, 1720,

Reſolved, That the ſetting the ſtock to ſale by ſubſcriptions, at high prices, above the intrinſic value, by the directors, was a groſs and notorious fraud, and one great cauſe of the ſinking the public credit, and bringing upon the nation the diſtreſs it at preſent labours under.

Reſolved, That the adviſing the late directors to ſet the ſtock to ſale by ſubſcriptions, at high and extravagant dividends aboveſaid, by any perſons in the adminiſtration, was a notorious breach of the truſt repoſed in them, to the prejudice of his Majeſty's government, and the intereſt of the kingdom.

20 February,

Reſolved, That the taking in, or holding of ſtock, by the South-Sea company, for the benefit of a member of parliament, or perſon in the adminiſtration, while the company's propoſals, or bill, was depending, without a valuable conſideration, or ſecurity, for the acceptance, or payment, for ſuch ſtock; and the company's paying, or allowing, ſuch perſons the difference ariſing by the advanced price of the ſtocks, were corrupt, infamous, and dangerous practices, highly reflecting on the honour and juſtice of parliament, and deſtructive of the intereſt of his Majeſty's government.

The

The Commons taking into their conſideration that part of the report of the ſecret committee which related to John Aiſlabie, Eſq; a member of that Houſe, Mr Aiſlabie was heard in his defence; and it being plainly proved that he had cauſed a book of accounts between him and Mr Hawes to be burned, and given him a diſcharge for the ballance, amounting to 840,000 l. it was reſolved nemine contradicente (among other things) That the ſaid John Aiſlabie had encouraged and promoted the dangerous and deſtructive execution of the late South-Sea ſcheme, with a view to his own exorbitant profit, and had combined with the late directors of the South-Sea company in their pernicious practices, to the detriment of great numbers of his Majeſty's ſubjects, and the ruin of the public credit, and the trade of this kingdom. They reſolved, alſo, That he ſhould be expelled the Houſe, and committed to the Tower, and a bill brought in for reſtraining him from going out of the kingdom, and from alienating his eſtate, as was done in caſe of the directors.

REMARKS.

The oppoſers of the South-Sea ſcheme ſuggeſted, That the confiſcation of the directors eſtates by the legiſlature was far from being unjuſt; nay, it is affirmed, that ſuch indulgence never was ſhewn before to people in their circumſtances; for though it ſhould be admitted that they were the proprietors of the ſinking fund, that they put the debt of the nation in a way of being paid, and rendered thoſe annuities redeemable which before were irredeemable, yet it was done by ſuch methods as ought never to be countenanced or encouraged. Had they not given out that they were able to make ſuch high dividends, the annuitants had never been drawn in to ſubſcribe their annuities, and others to purchaſe ſtocks at thoſe advanced rates. There is no doubt but the company had great advantages by the public debts being ſubſcribed, and by the high price at which their ſtocks were purchaſed; but what was the company's gain, was the loſs of thouſands and ten thouſands; nor does the competition of the bank at all excuſe the raſhneſs of the South-Sea company, in bidding ſo vaſt a ſum for the ſcheme as they were conſcious could never be paid, by any gains the company could fairly make. They had, it is true, improved their original ſtock, by taking in the debts; the bank ſaw it, and would have been glad to have engroſſed thoſe debts, for the very ſame reaſon the company was ſo fond of them: but one would think both the one and the other infatuated, as well as the people, to bid ſo many millions as they did for the execution of the ſcheme.

There is no doubt but the ſeeing theſe great bodies bidding againſt each other, did contribute to the advancing the price of ſtock; and if it ſhould be admitted that the bank had their ſhare in abuſing the people, and inducing them to part with their fortunes, to purchaſe what had no exiſtence in nature, it is not to be conceived how this ſtep of the bank can excuſe the South-Sea company, who led the way to all theſe extravagancies: and can it be ſuppoſed that the proprietors of the long annuities could ever have been prevailed on to ſubſcribe them, or other people to have given 3 or 400 l. for 100 l. ſtock, if they had not been aſſured by the directors it was worth ſo much, and that they could make dividends in proportion to theſe prices?

The merit, therefore, of procuring the annuities to be ſubſcribed, which before were irredeemable, by giving out that their ſtock was worth more than it really was (ſay the adverſaries of the ſcheme) was no more than the merit of a ſharper; for, had not the annuitants been deceived in the value, they never would have ſubſcribed, and, though the bringing them in might leſſen the national debt, and be a very great advantage to the company, yet, as it was accompliſhed by deceitful arts, has very little merit in it, the government may be very little gainers by the ſcheme, as well as the proprietors of the original ſtock: but if this gain has ariſen from the loſſes innocent people have ſuſtained, who confided in the veracity and probity of the directors, and who depended upon it that the ſtock was of the value they ſet upon it, what excuſe they can make for their conduct, it is not eaſy to ſay.

That there has been only a revolution of mens private eſtates and fortunes, and that what one has loſt another has gained, may be true; but the queſtion is, by what means the loſers were induced to part with their fortunes, and beggar their families? Whether the annuitants were not deceived in the value of ſtock when they ſubſcribed, by the directors ſetting a high price upon it, and aſſuring them they could divide 20, 30, nay 50 per cent? What ſatisfaction is it to a man, that he was tricked into a diſadvantageous contract, and not forced into it? How is public credit ſupported better the one way than the other?

As to the trade to the Spaniſh Weſt-Indies, by the South-Sea company, though it appeared at firſt view very beneficial, inaſmuch as they exported the manufactures of Great-Britain, and received treaſure (chiefly) in return; yet this (it is ſaid) was done with as great advantage formerly, by the way of Cadiz and the flota; and that the fraudulent practices of the company's agents in America have been one principal occaſion of the ill uſage we have met with on that ſide for many years paſt.

The eſtabliſhing a fiſhery, which was another grand motive for erecting the South Sea company, has been no leſs neglected than traffic: they employed 24 ſhips, indeed, for ſome years, but their agents and officers managed ſo ill, that they brought the company greatly in debt upon that article; whereupon they laid it down, though it be one of the moſt beneficial fiſheries the Dutch are engaged in. Thoſe who have their fortunes in South-Sea ſtock, content themſelves, at preſent, with the revenues ariſing from the funds ſettled upon them; and ſome of the moſt wealthy of the proprietors, find means to increaſe their fortunes by ſtock-jobbing. They ſeem to have perfectly forgot the original deſign of their inſtitution; namely, their ſending colonies to South-America, and putting in for a ſhare in the rich traffic of the South-Seas, which has been hitherto monopolized by the Spaniards, which might have been prevented, if this company had exerted themſelves in commerce, inſtead of being made the tools of men in power, who made a ſacrifice of the directors to ſave themſelves. For this really appears to be the caſe, upon an impartial review of this extraordinary affair; and which might be made very apparent from ſome anecdotes now before me, which may one day ſee the light in another ſhape, ſince I have not room for them here.

True it is, that many of the moſt judicious and experienced in commercial affairs, looked upon the South-Sea company, conſidered as an inſtitution for carrying on a trade to the SPANISH INDIES, as a romantic and chimerical project, and ruinous, rather than beneficial, to the national traffic, though the projector of it was cried up by his flatterers, as a perſon of uncommon genius; as a perſon remarkable for his learning, experience, and great ſagacity in public buſineſs.---This ſeems to be apparent, from the preamble of the act for erecting this company, which is as follows.

'Whereas it is of the greateſt conſequence to the honour and welfare of this kingdom, and for the increaſe of the ſtrength and riches thereof, and for the vending the product and manufactures, goods and merchandizes of, or brought into, this kingdom, and employment of the poor, that a trade ſhould be carried on to the SOUTH-SEAS, and other parts in AMERICA, within the limits herein after mentioned; which cannot be ſo ſecurely carried on, as by a corporation with a joint ſtock, EXCLUSIVE OF ALL OTHERS: now, for the better encouragement of all and every the perſon or perſons, who ſhall be or become members of the ſaid company or corporation, to be erected as aforeſaid; and to the end and intent that a trade to the South-Seas, and other parts of America, within the limits* herein after mentioned, may be carried on and promoted for the advantage and honour of this kingdom; be it enacted, &c.'

* What the nation was to expect from the ſtupendous trade that was pretended to be carried on by this company, may be ſeen in a treatiſe publiſhed in the year 1711, intitled, A View of the Coaſts, Countries, and Iſlands, within the Limits of the South Sea Company, &c.

It is plain here, that the company by its firſt inſtitution was to have an excluſive trade, and that our people of Jamaica, by this very act, are deprived of the trade to the South-Sea, which was to the great advantage of themſelves and the whole nation: ſo that this act for erecting this excluſive company of traders, deprived the nation of a very beneficial commerce. And, therefore, whatever might be the gain of the company, it could not be all profit to the nation; only ſo much could be eſteemed the gain of the nation, as the gain of the company exceeded that of the Jamaica merchants.

But what the company's gain has been, and what the loſs of the Jamaica merchants has really been, is notorious enough not to need animadverſion. Nor does it appear, that the company could hope for any profit by this excluſive trade. They were to build FORTS and CASTLES in the SOUTH-SEA, for their ſecurity in countries already ſettled by our enemies, at ſuch a charge, and at ſuch a diſtance from this kingdom. They might, perhaps, as well have thought of building caſtles in the air: for this reaſon, therefore, we might well be allowed to eſteem this project as romantic and chimerical. It was giving up the certain profit of the JAMAICA trade, to that imaginary one of a company, which was ſo far from having any proſpect of advantage by it, that they were in a fair way of loſing ſtock and block.

It is true, the Jamaica traders were not excluded, but only from Buenos Ayres, ſouthwards, and from the South-Sea; they had ſtill left the places in the Atlantic Ocean for themſelves. But the profit they annually introduced from the South-Sea was conſiderable, and the company's act gave it up for nothing.

This was the caſe of the South-Sea project, 'till the peace was made, and 'till the Aſſiento contract made an alteration.

By this the Jamaica traders were entirely excluded from the Spaniſh Indies, and the company's caſtles in the air were turned into an obligation to ſell the Spaniards 4,800 negroes per annum, and a permiſſion to ſend 500 tons of goods to Porto-Bello; but this, inſtead of turning to any account to the company, was ſo managed, as not only to be detrimental to them,

them, but highly injurious to the nation, by giving ſuch umbrage to the court of Spain, as contributed to occaſion a miſunderſtanding between Great-Britain and Spain for many years paſt; and which were not terminated in regard to the company, 'till the treaty concluded and ſigned at Madrid, the 5th of October, N. S. 1750, as we ſhall preſently ſee.

But this Aſſiento contract, however beneficial it might have been rendered, both to the nation and the company, was, by miſmanagement, ſomehow, in carrying into execution, rendered quite otherwiſe; it was, for many years, like the dog in the manger, it neither traded itſelf, nor would ſuffer thoſe that would have done ſo in the like branch.

The act for erecting the South-Sea company deprived Jamaica of trading to the South-Sea; but the Aſſiento contract ſhut them out of the Spaniſh Indies; yet their returns of gold and ſilver from the Spaniſh Indies, in exchange for negroes and other merchandizes, were only 2 or 300,000 l. per annum. Let the Spaniards have deprived us of this trade; but was it fit for ourſelves to give it up?

Thus there was no proſpect of the company's trading under this contract, as the ſtipulations of it were contrived, or getting any thing by it if they did. Could their goods, that were often kept three years in the king of Spain's warehouſes, and under his own lock and key, and in ſo hot a climate, be brought, in the general, to a good market? Or did not one half of them often periſh? Could the Aſſientiſts hope for profit from their negroes, that were to pay a heavy load of duties to the king? A treaty could ſcarce have been contrived of ſo little benefit to the nation; and yet of this kind one might have been ſo deviſed, as to have proved greatly beneficial to the kingdom, as well as to the company, if it had been wiſely and honourably executed.

One would have thought, that after theſe pompous declarations, which we have ſeen in the preamble to the South-Sea act, ſome attempt ſhould have been made to accompliſh ſo great a deſign: but ſo far from it, that ſoon after, and without the leaſt TRIAL, they gave up their pretenſions of trading to the South-Seas, or in any other manner, than was ſtipulated by the Aſſiento contract. Thus, by accepting of the Aſſiento, they excluded themſelves from trading to the South-Seas; and, by the act for incorporating the South-Sea company, all the reſt of the ſubjects of Great-Britain were forbid trading within their limits.—This is the more remarkable, ſince neither the Dutch nor French, nor any other nation, reſtrained their ſubjects from trading to thoſe parts; nor did they neglect to carry on a trade thither, with great profit to themſelves; whilſt thoſe of Great-Britain, by means of the South-Sea company, were denied that *.

* Quere, Whether Great-Britain has not the ſame liberty of trading to the South-Seas, as they had before the South-Sea company was eſtabliſhed as a trading corporation, although that company no longer exiſts as ſuch?

Had the South-Sea company put their original plan in execution, with vigour and honour, it would, indeed, have been a benefit to the kingdom, if not to the proprietors of the ſtock, by the increaſe of our exports and navigators; but the ſending an annual ſhip, under ſuch limitations as was done, though a new method of trade, was ſo far from being a benefit in point of trade, that it certainly leſſened our exports, and conſequently the trade of the kingdom, on a general balance with the Spaniſh nation. Cadiz, Seville, Port St Mary's, &c. were, before this trading company was eſtabliſhed, the places where the merchants, trading to the Indies, informed themſelves what ſpecies and quantities of goods were ſhipped off from time to time; but, on the ſending of the annual ſhips, they were under ſuch uncertainties, that they really declined dealing in our manufactures by theſe channels; which gradually and inſenſibly gave our rivals in this trade an open opportunity to eſtabliſh houſes of trade at theſe ports, and by exerciſing the trade to the Spaniſh Indies, in a way the moſt agreeable to the court of Spain, have greatly ſupplanted us in this once moſt ineſtimable branch of our commerce: and this may, in a great meaſure, be aſcribed to the South-Sea company's method of exerciſing their contract; for although we apprehend, that an Aſſiento under different ſtipulations, and fairly and honourably carried into execution, might have proved beneficial, both to the nation and the company; yet, as that we had was conditioned and exerciſed, it had quite contrary effects.

Thus we find, that the manner of the South-Sea company's exerciſing their trade *, was ſo far from being a benefit to the nation, by an increaſe of our exports and navigation, that it has been manifeſtly inſtrumental to leſſen them, and has only turned trade out of its former channel, which was before beneficial to great numbers of merchants and tradeſmen, as well as to the nation.

* What is here chiefly meant by the South-Sea company's exerciſing of their trade, is that illicit trade with which they were charged ſome years ſince by the court of Spain.

If the annual ſhip, all things conſidered, was of no advantage to Great-Britain, the company's trade, in general, muſt certainly have been of damage to it, and a conſiderable loſs to the proprietors; for the Aſſiento, for negroes only, was allowed, even by the Spaniards, to be a loſing contract; and it was on that expreſs conſideration, that the king of Spain granted the South-Sea company the liberty of ſending an annual ſhip of 500 tons, to the Weſt-Indies. If then the one was a certain loſs, and the other of no advantage, at leaſt not an equivalent, or preferable to the national trade which we had before, they were nothing more than amuſements, and ought to be thrown up, as tending to the prejudice of the proprietors, and the nation in general.

If the commerce of Great-Britain to Spaniſh America has been interrupted, and turned out of its courſe for ſome years, by means of this company, it is no little trouble to aſcertain the real loſs the nation has thereby ſuſtained, beſides the diſadvantages which the nation has many years laboured under, through the miſunderſtandings and heartburnings between this kingdom and Spain. And, as the judicious Mr. Locke obſerves, 'When trade is once loſt, it will be too late, by a 'mis-timed care, eaſily to retrieve it again; for the currents 'of trade, like thoſe of waters, make themſelves CHANNELS, out of which they are afterwards as hard to be di-'verted, as rivers that have worn themſelves deep within 'their banks.'—This is what has been urged in general againſt the South-Sea company, as a trading corporation.—Wherefore, the court of England, we may preſume, experiencing for a ſeries of years, that the court of Spain was greatly irritated with the South-Sea company's conduct, and the court of England having no leſs reaſon, perhaps, to be diſpleaſed with the South-Sea company for their non-compliance with the terms of the late convention between Great-Britain and Spain, which might have prevented the late war: upon theſe conſiderations, we apprehend, it ſeems probable, that the two courts were determined, by the following treaty, to put an end to the trade of this company.

A Treaty concluded and ſigned at Madrid, on the 5th of October, N. S. 1750.

'Whereas by the 16th article of the treaty of Aix-la-Chapelle, it has been agreed between their Britannic and Catholic Majeſties, that the treaty of the ASSIENTO for the commerce of negroes, [ſee the article ASSIENTO] and the article of the ANNUAL SHIP, for the four years of non-enjoyment, ſhould be confirmed to Great-Britain upon the ſame foot, and upon the ſame conditions, as they ought to have been executed before the late war: and the reſpective ambaſſadors of their ſaid Majeſties having agreed, by a declaration ſigned between them, on the $\frac{13}{24}$ June 1748, to regulate, at a proper time and place, by a negociation between miniſters named on each ſide for that purpoſe, the equivalent which Spain ſhould give in conſideration of the non-enjoyment of the years of the ſaid Aſſiento of negroes, and of the annual ſhip granted to Great-Britain, by the 10th article of the preliminaries ſigned at Aix-la-Chapelle, on the $\frac{19}{30}$ April 1748.

Their Britannic and Catholic Majeſties, in order to fulfil the ſaid engagements of their reſpective miniſters, and to ſtrengthen and perfect, more and more, a ſolid and laſting harmony between the two crowns, have agreed to make the preſent particular treaty between themſelves, without the intervention or participation of any third power; ſo that each of the contracting parties acquires, by virtue of the ceſſions which that party makes, a right of compenſation from the other reciprocally: and they have named their miniſters plenipotentiaries for that purpoſe, viz. his Britannic Majeſty, Benjamin Keene, Eſq; his miniſter plenipotentiary to his Catholic Majeſty; and his Catholic Majeſty, Don Joſeph de Carvajal and Lancaſter, miniſter of ſtate, and Dean of his council of ſtate, who, after having examined the points in queſtion, have agreed on the following articles.

ARTICLE I.

His Britannic Majeſty yields to his Catholic Majeſty, his right to the enjoyment of the Aſſiento of negroes, and the annual ſhip, during the four years ſtipulated by the 16th article of the treaty of Aix-la-Chapelle.

ARTICLE II.

His Britannic Majeſty, in conſideration of a compenſation of one hundred thouſand pounds ſterling, which his Catholic Majeſty promiſes and engages to cauſe to be paid, either at Madrid or London, to the royal Aſſiento company, within the term of three months at lateſt, to be reckoned from the day of the ſigning of this treaty, yields to his Catholic Majeſty all that may be due to the company for ballance of accounts, or riſing in any manner whatſoever from the ſaid Aſſiento; ſo that the ſaid compenſation ſhall be eſteemed and looked upon as a FULL and ENTIRE SATISFACTION on the part of his Catholic Majeſty, and ſhall extinguiſh from this preſent time, for the future, and for ever, all right, pretenſion, or demand, which might be formed in conſequence of the ſaid Aſſiento, or annual ſhip, directly or indirectly,

on the part of his Britannic Majesty, or on that of the said company.

ARTICLE III.

The Catholic king yields to his Britannic majesty, all his pretensions or demands in consequence of the said Assiento and annual ship, as well with regard to the articles already liquidated, as to those which may be easy or difficult to liquidate; so that no mention can ever be made of them hereafter on either side.

ARTICLE IV.

His Catholic Majesty consents, that the British subjects shall not be bound to pay higher, or other duties, or upon other evaluations for goods which they shall carry into, or out of the different ports of his Catholic Majesty, than those paid on the same goods in the time of Charles II. king of Spain, settled by the CEDULAS and ORDONNANCES of that king, or those of his predecessors. And although the favour or allowance called Pie del Fardo be not founded upon any royal ordonnance, nevertheless his Catholic Majesty declares, wills, and ordains, that it shall be observed now, and for the future, as an inviolable law; and all the abovementioned duties shall be exacted and levied, now and for the future, with the same advantages and favours to the said subjects.

ARTICLE V.

His Catholic Majesty allows the said subjects to take and gather salt in the island of Tortudos, without any hindrance whatsoever, as they did in the time of the said king Charles II.

ARTICLE VI.

His Catholic Majesty consents, that the said subjects shall not pay any where, higher or other duties than those which his Catholic Majesty's subjects pay in the same place.

ARTICLE VII.

His Catholic Majesty grants, that the said subjects shall enjoy all the rights, privileges, franchises, exemptions, and immunities whatsoever, which they enjoyed before the last war, by virtue of cedulas or royal ordonnances, and by the articles of the treaty of peace and comerce, made at Madrid in 1667; [see the article SPAIN] and the said subjects shall be treated in Spain, in the same manner as the most favoured nation, and consequently, no nation shall pay less duties upon wool, and other merchandizes, which tney shall bring into, or carry out of Spain by land, than the said subjects shall pay upon the same merchandizes, which they shall bring in, or carry out by sea. And all the rights, privileges, franchises, exemptions, and immunitions, which shall be granted or permitted to any nation whatever, shall also be granted and permitted to the said subjects; and his Britannic Majesty consents, that the same be granted and permitted to the subjects of Spain in his Britannic Majesty's kingdoms.

ARTICLE VIII.

His Catholic Majesty promises to use all possible endeavours, on his part, to abolish all innovations which may have been introduced into commerce, and to have them forborne for the future; his Britannic Majesty likewise promises to use all possible endeavours to abolish all innovations, and to forbear them for the future.

ARTICLE IX.

Their Britannic and Catholic Majesties confirm, by the present treaty, the treaty of Aix-la-Chapelle, and all the other treaties, therein confirmed, in all their articles and clauses, excepting those which have been derogated from by the present treaty: as likewise the treaty of commerce concluded at Utrecht in 1713, those articles excepted, which are contrary to the present treaty, which shall be abolished and of no force, and namely, the three articles of the said treaty of Utrecht, commonly called explanatory.

ARTICLE X.

All the reciprocal differences rights, demands, and pretensions, which may have subsisted between the two crowns of Great-Britain and Spain, in which no other nation whatever has any part, interest, or right of intervention, being thus accommodated and extinguished by this particular treaty; the two said most serene kings, engage themselves mutually to the punctual execution of this treaty of reciprocal compensation, which shall be approved and ratified by their said Majesties, and the ratifications exchanged, in the term of six weeks, to be reckoned from the day of its signing, or sooner if it can be done.

In witness whereof, we the above-mentioned ministers plenipotentiaries, that is to say, Benjamin Keene, Esq; in the name of his Britannic Majesty; and Don Joseph de Carvajal and Lancaster, in the name of his Catholic Majesty, by virtue of our full powers, which we have mutually communicated to each other, have signed these presents, and have caused the seals of our arms to be put thereto. Done at Madrid, the 5th of October 1750, N. S.

(L. S.) JOSEPH DE CARVAJAL y LANCASTER.

(L. S.) B. KEENE.

His BRITANNIC MAJESTY's ratification.

George the second, by the grace of God, king of Great-Britain, France, and Ireland, defender of the faith, duke of Brunswic and Lunenburg, arch-treasurer of the holy Roman empire, and prince elector, &c. To all and singular to whom these presents shall come, greeting: Whereas a certain treaty between us and our good brother Ferdinand VI. Catholic king of Spain and the Indies, was concluded and signed at Madrid, the 5th day of October last past, N. S. by ministers plenipotentiaries, sufficiently impowered with orders and authority on each side, in the form and words following.

[Fiat insertio.]

We having considered the above written treaty, have approved, ratified, and confirmed the same, in all and singular its clauses, as by these presents we do approve, ratify, and confirm the same, for us, our heirs and successors, engaging and promising, on our royal word, sacredly and inviolably to perform and observe all and singular its contents; and never to suffer, as far as in us lies, any person to violate the same, or in any manner to act contrary thereto. In witness whereof, we have caused our great seal of Great Britain to be affixed to these presents, signed with our royal hand. Given at our palace at St James's, the 5th day of November, in the year of our Lord 1750, and of our reign the twenty-fourth.

GEORGE R.

His CATHOLIC MAJESTY's ratification.

Don Ferdinand, by the grace of God, king of Castille, of Leon, of Arragon, of the Two Sicilies, of Jerusalem, of Navarre, of Granada, of Toledo, of Valentia, of Galicia, of Majorca, of Seville, of Sardinia, of Cordova, of Corsica, of Murcia, of Jaen, of the Algarves, of Algeeira, of Gibraltar, of the Canary Islands, of the East and West-Indies, islands and Terra Firma, of the Ocean Sea, archduke of Austria, duke of Burgundy, of Brabant, and of Milan, count of Absburg, of Flanders, of Tyrol, and of Barcelona, lord of Biscay, and of Molina, &c. Whereas there having been agreed on and signed at Madrid, on the fifth day of October of this instant year, by Don Joseph de Carvajal and Lancaster, knight of the most illustrious order of the Golden Fleece, my gentleman of the bed chamber in ordinary, my minister of state, and dean of this council, governor of the supreme council of the Indies, president of the committee of commerce and money, and superintendant-general of the posts and mails within Spain, as well those that go out of Spain or come from abroad; and Benjamin Keene, Esq; minister plenipotentiary from the most potent king of Great-Britain to my royal person, by virtue of the full powers that have been given to them by me, and by the said most serene king, a treaty upon the equivalent that Spain is to give in consideration of the four years of the Assiento contract for negroes, and of the grant of the annual ship that Great-Britain has not enjoyed on account of the last war, and about all the differences that did subsist between our two crowns. The said treaty is actually as follows:

[Fiat insertio.]

Therefore, after having seen and examined the said treaty, I have thought proper to approve of and ratify the same; as by virtue of the present I do approve of and ratify the same, in the best and most ample manner I can, promising, in faith of my royal word, to fulfil it entirely in the manner as it is therein contained and expressed: to this end I have ordered the present to be dispatched, which is signed with my hand, sealed with my privy-seal, and countersigned by my underwritten counsellor of state and secretary of the universal dispatch of war, of Indies, marine, and of the revenues. Given at Buen Retiro on the 5th day of December, one thousand seven hundred and fifty.

(L. S.) I THE KING.

CENON DE SOMODEVILLA.

SPAIN is situate on the most western part of all the continent of Europe, and is encompassed on every side by the sea, except on the side of France, from which it is separated by a continued ridge of mountains called the Pyrennees. On the east and south it is bounded by the Mediterranean, the Streights of Gibraltar, and part of the Atlantic Ocean; on the west by the same ocean; and on the north by the sea called the Bay of Biscay and the Pyrennees. Its site is in the temperate zone, between the 36th and 44th degrees of north latitude, and consequently under the sixt, seventh, and eighth

eighth climates; and in length it extends itſelf from the 10th degree of weſt to the third degree of eaſt longitude, that is, 13 degrees from eaſt to weſt, and nine degrees from north to ſouth.

This kingdom is divided into fourteen provinces, viz.

1. Galicia,	6. Catalonia,	11. Eſtramadura,
2. Aſturias,	7. Valencia,	12. Andaluſia,
3. Biſcay,	8. New Caſtille,	13. Granada,
4. Navarre,	9. Old Caſtille,	14. Murcia.
5. Arragon,	10. Leon,	

The ſoil of Spain has been miſrepreſented as dry and barren by ſeveral writers, who appear to have had no knowlege of it. We may even affirm, that its moſt mountainous and barren parts do produce ſomething for uſe. Some are covered with ſtately trees of ſeveral ſorts, either for timber or fuel. The rocky parts abound with wild thyme, marjoram, and other aromatic herbs, which ſerve to feed a vaſt number of ſheep, goats, &c. and give their milks and fleſh a more exquiſite reliſh than any that is fed on the richeſt paſtures; and if theſe happen to be ſcorched with too much heat in ſummer, the cattle are driven down to the ſides of the hills, where they find plenty of thoſe herbs, and meadow grounds well watered by the great number of rivers with which the country abounds; ſo that at the worſt they never want a ſufficient quantity of herbage to ſupply their numerous flocks. Other mountainous and rocky lands produce quantities of a famed plant called by them eſparto, of which they make all kinds of ropes and other cordage.

The Spaniſh wheat is inferior to none, if not the very beſt in Europe, and the common product of it more than the natives can conſume. Barley is here very good, and in ſuch plenty, that it is the common grain for their horſes and mules, inſtead of oats, which are here very ſcarce; and the ſtraw of it ſerves them likewiſe inſtead of hay, of which they make hardly any through the kingdom.

Wine they likewiſe have in ſuch abundance, that the pooreſt people drink it; and as to its goodneſs and the great variety of it, we need ſay the leſs, as moſt men are ſufficiently acquainted with the various ſorts of it; ſuch as the Malaga, Sherry, Galicia, Alicant, Barcelona, and much greater number of others, which ſeldom, if ever, come among us, though nothing inferior to thoſe above named.

As for fruits, they not only have the different ſorts in much higher perfection, which either naturally grow, or which we cultivate with ſo much pains here in England, but likewiſe many others, which, with all our art, cannot be brought by us to any tolerable ripeneſs, and with which we are more eaſily ſupplied from them; ſuch as citrons, lemons, oranges, almonds, raiſins, prunes, olives, dates, figs, cheſnuts, pomegranates, capers, and a multitude of others too tedious to enumerate. The ſame may be ſaid of their herbs, flowers, and medicinal plants, which, though excellent in their kinds, yet grow moſt of them wild here, when in other places they could not be produced without great art and induſtry.

Their oil, wax, and honey, are allowed to be as good as any in the world. Few countries exceed this for plenty, goodneſs and variety of fowl, both wild and tame. Of four footed game, as deer, both red and fallow, hares, rabbets, and particularly wild boars. As for their tame ſwine, all that have had experience of it, allow that the Spaniſh bacon exceeds even that of Weſtphalia. Their ſheep are moſt exquiſite in taſte, but they are ſtill more valuable for their incomparable wool, which all their neighbours, and nobody more than our clothworkers, can teſtify to exceed any in Europe. Above all, we muſt not forget their horſes, greatly famed for their exceeding celerity, thoſe eſpecially that are bred in large quantities in Eſtramadura, and parts adjacent, are reckoned the fineſt and ſwifteſt. Other provinces breed, indeed, great quantities of them, and equally ſerviceable, but neither ſo beautiful nor of ſo great value. The Spaniards were, from the earlieſt ages, very curious in their breeding of good horſes, and very dextrous in the uſe and management of them, eſpecially in the field. As for the other ſervices of that uſeful creature, ſuch as carrying, drawing, plowing, &c. they have here their mules in great quantities, which ſeem much more fitted by nature for ſuch drudgery, as well as for going over the moſt craggy and mountainous parts of the country; being both larger, ſtronger, and ſurer footed, than the horſes, though nothing ſo ſwift. Many of them are 16, and ſome even 17 hands high, and carry very heavy burthens over ſuch rocky parts, and with ſuch eaſe and ſteadineſs, as is quite aſtoniſhing to thoſe who are not accuſtomed to them.

The ſilken manufacture is here ſo encouraged, that we are told, above a million of people are employed in feeding, gathering, and curing ſilk-worms, and in ſpinning, weaving, and making all kinds of ſilks, ſuch as ſattin, damaſk, tabby, velvets, ſhags, and many other ſorts. The ſame may be ſaid of their cotton, hemp, and flax, which likewiſe grow here in large quantities, and employ a proportionable number of hands; not to mention their ſcarlet dye, ſaffron, ſugar, pitch, roſin, and other commodities, that grow above ground.

If we dive into the bowels of the earth, we ſhall find gold, ſilver, quickſilver, which latter they ſend in large quantities, into the Weſt-Indies, their lead, copper, and excellent iron, the beſt of which is dug from the mountains of Biſcay, and is ſent all over Europe, as exceeding any other in goodneſs; they have great plenty of ſulphur, allum, calamine, and other minerals; as likewiſe of jett, agate, cornelian, granates, cryſtal, marble, alabaſter, jaſper, and other ſtones. With relation to their gold mines, it muſt be owned that they have quite neglected them ever ſince they have been able to draw ſuch immenſe quantities of that metal from America. But anciently they had it in as great plenty, or much greater plenty, out of their own.

The healthfulneſs of this country may be gathered, not only from its excellent ſituation and ſerene ſky, but likewiſe from the ſtoutneſs and longevity of its ancient inhabitants, whilſt they gave themſelves up to a habit of exerciſe and temperance; in which laſt they always did, and do ſtill excel all the other nations in Europe.

Having thus far run through all that need be ſaid in general concerning this country, we ſhall now take a view of it, with reſpect to each of its particular kingdoms and provinces, in the ſame order as we have before ranged them.

The kingdom of GALICIA is waſhed on the weſt by the Ocean, on the north by the Cantabrian Sea or Bay of Biſcay, on the eaſt it borders upon Aſturias and Leon, and on the ſouth upon Portugal, from which it is parted next the ſea by the river Minho.

This ſmall kingdom produces wheat, millet, all kinds of herbs, plenty of cattle, eſpecially hogs, whoſe bacon far exceeds that of Weſtphali; ſtrong mules, good horſes, though not large; but it is moſt famed for its noble wines, particularly that of Ribadavia. They have plenty of firing and of timber for building houſes and ſhips. They have likewiſe quarries of fine marble, and ſome flax is here produced, with which they make a pretty good ſort of linen.

CORUNNA, a famed ancient ſea-port town on the Cantabrian Sea, or Bay of Biſcay, called by our ſeamen the Groin. It is by its ſituation well fenced againſt the winds, and againſt the enemy by two ſtrong caſtles. It ſtands between the two famed promontories of Finiſterre and Ortegal, and is wealthy, being a place of conſiderable trade.

The principality of ASTURIAS. This principality lies on the north ſide, along the Bay of Biſcay, borders on the weſt on Galicia; on the ſouth it is divided from Caſtille and Leon by a ridge of mountains, called the Aſturian Mountains, ſince they are the boundaries between that and thoſe two provinces. On the coaſts it reaches to the port Llanes, now Santillana, where it joins a narrow ſlip of land belonging to Old Caſtille, which runs into the ſea between Aſturias and Biſcay. The whole length of Aſturias is about 135 miles, and 60 in breadth. It is generally divided into two parts or diſtricts, the one called Aſturias de Orviedo, and the other of Santillana. But it is farther ſubdivided into ſeven merindades, or liberties, beſides a little province called Liebana.

This little province of LIEBANA is about 27 miles long, and 12 broad. It is one of the moſt craggy and mountainous parts of Spain, exceſſive high, and almoſt inacceſſible. Theſe mountains are called Europæ, and are in full front of the ſea, and produce plenty of corn, wine, fruit, cattle, and game.

The lordſhip of BISCAY. Biſcay, as generally taken, is divided into three provinces, viz. Biſcay properly ſo called, Guipuſcoa, and Alaba or Alava. The whole is bounded on the weſt by that ſlip of Old Caſtille which reaches to the ſea, and, as was hinted under the laſt article, parts Aſturias from Biſcay on the ſouth. The ridge of mountains formerly mentioned as branching from the Pyrennees, parts it from Old Caſtille on the ſouth-eaſt, as the ſame mountains part it again from Navarre, and the river Cidarſo from France on the eaſt, and all the north ſide is waſhed by the Cantabrian Sea, called commonly the Bay of Biſcay.

The country is mountainous and barren, producing neither wheat, barley, wine, nor oil, but abundance of millet-ſeed and fruit, which make cyder in plenty. Some flax is likewiſe produced in their vallies, and abundance of timber for ſhipping on the hills. But their greateſt treaſure lies in their inexhauſtible mines of iron, which is reckoned the beſt in the world, and is tranſported thence into all parts. Here are whole towns of ſmiths, that carry on the ſmithery manufactory, and make all ſorts of iron-work, eſpecially ſwords and fire-arms, very elegant and in great quantities. There is likewiſe a great deal of wool ſhipped off from their ſea-ports into foreign parts, but moſt of it is brought hither from Old Caſtille. Some, however, they have here, but as it is neither ſo fine, nor in any quantity, they manufacture it wholly for their own uſe.

BISCAY, properly ſo called, borders on the weſt upon that ſlip of Old Caſtille which extends itſelf to the ſea, on the ſouth upon Caſtille, and part of Alava eaſtward upon Guipuſcoa, and has the Bay of Biſcay on the north.

BILBOA, though no city, is now the capital of Biſcay, it being a place of great trade, by reaſon it has a good port, ſmall veſſels coming up to the mole, and others of greater bulk lying farther out. The greateſt export here is of their fine wool and exquiſite iron, moſt of the latter in bars; though great quantities of that wrought metal alſo are ſhipped off, ſuch as

ſwords, fire-arms, horſe-ſhoes, and other ſuch-like military neceſſaries. The town ſtands ſix miles diſtant from the ſea on the river Ibaichaval.

GUIPUSCOA follows next, as it runs along the ſame coaſts of the northern Sea or Bay. It borders weſtward upon Biſcay Proper and part of Alava, ſouthward on Alava and Navarre, and eaſtward on Navarre and France.

ST SEBASTIAN, a noted port on the Bay of Biſcay, nine miles from Fuentarabia, and almoſt incloſed with rivers, which fall into the ſea in the neighbourhood of it, particularly that which they call the Branco. The mole will receive two hundred ſhips.

ALAVA borders weſtward on Biſcay and Old Caſtille, ſouthward on Caſtille hill, eaſtward on Navarre, and northward on Guipuſcoa and Biſcay.

The kingdom of NAVARRE. This country is divided from France on the north by the Pyrennees, which alſo cut it into two parts, diſtinguiſhed into Upper and Lower; the former, much the larger, and on the Spaniſh ſide, is the kingdom we are now to ſpeak of; the other beyond theſe mountains is by much the ſmaller, and belongs to France. This we are now upon, borders upon Biſcay and Old Caſtille on the weſt, on Caſtille and Arragon on the ſouth, and eaſtward upon Arragon. Its length is about ninety miles from north to ſouth, and about eighty in breadth from eaſt to weſt.

Navarre is divided into five diſtricts, viz. PAMPELONA, TUDELA, ESTELA, OLITE, and SANGUESSA, which are parted by prodigious high mountains, yet yielding good corn, and other grain, wine, oil, honey, fruits and herbs, and affording plenty of food and paſture for their cattle, beſides an infinite number of fowl, both wild and tame. Theſe mountains produce metals and minerals, and had formerly ſeveral rich mines of gold and ſilver, though now either exhauſted or neglected. Here are likewiſe abundance of fine ſprings, hot baths, and other medicinal waters.

The kingdom of ARRAGON. This kingdom is bounded on the north by the Pyrennees, which divide it from France; on the weſt it has Navarre and New and Old Caſtille; on the ſouth the kingdom of Valencia; and on the eaſt, part of Valencia and the principality of Catalonia. The whole length from north to ſouth is 210 miles, and its breadth between 100 and 120. The country is mountainous, but full of delightful vales, and extraordinary fertile, which produce great plenty of wheat, wine, oil, ſaffron, and fruits of the moſt delicious kind. They breed alſo great quantities of cattle, and abound with all ſorts of fowl, both wild and tame. The mountains are ſaid to have mines of gold, ſilver, and other metals, but little is made of any of them, except iron. Here are likewiſe very conſiderable rivers, and plenty of good fiſh: the moſt remarkable of the rivers is the Turio, which fertilizes a great part of the country, not by an overflow like that of the Nile, but by its ſlow and gentle courſe, which gives opportunity to the huſbandmen and gardeners to cut channels from it to water their lands, inſomuch that we are told their trees will bear fruits three, and often four, times a year; and not only in great plenty, but in ſuch variety, that they reckon no leſs than 400 ſorts produced in this kingdom. Their orchards, gardens, and paſture-grounds, are likewiſe much admired for their continual verdure and fertility. In a word, Arragon is on all theſe accounts, as well as for the extraordinary ſerenity of its air, compared to Egypt. The Mediterranean helps very much to enrich the country, both by foreign traffic, and the great quantity of fiſh which is caught on thoſe coaſts.

SARAGOSSA, the metropolis of this kingdom, is an ancient and opulent city, ſeated almoſt in the heart of it on the bank of the Ebro, and in a fertile and delightful plain, watered with three other rivers, viz. the Xalon, Gallego, and Guerva. It lies in the 41ſt degree of latitude, and in 1 ½ degree of weſt longitude. The city is of an oblong form. It is rich and populous, and carries on a great commerce, and a conſiderable number of trades and manufactures both within and without the walls. The country round about it is very fertile and beautiful, and produces every thing that is neceſſary, comfortable, and delightful; corn, wine, oil, fruits in great plenty and variety, fiſh and fowl of all ſorts, and all chiefly owing to its excellent ſituation.

CATALONIA is bounded on the north by the Pyrennees, by which it is parted from the province of Rouſſillon in France, on the weſt by Arragon, and a ſmall part of Valencia; from the firſt of theſe it is ſeparated by the rivers Naguera and Mataruna, and a ridge of hills, and from the latter by the river Genia. On the ſouth and eaſt it is waſhed by the Mediterranean, and has many convenient ſea-ports along thoſe ſhores. The inland is a mixture of plains and mountains; that part next to France is the moſt mountainous, but farther in, it abounds with delightful and ſpacious plains. The climate, which reaches from 41 to 43 degrees of north latitude, and from one degree to 30 20 eaſt longitude, is therefore neither ſo hot as Andaluſia, nor ſo cold as Aſturia, and the north part of Spain, being moreover ſheltered on the north by the Pyrennees, and on the eaſt by the ſea. This temperature, joined to the many ſtreams and rivers with which the country abounds, makes it exceeding fertile and delightful. Its product, which is here in great plenty, is excellent wheat, rich wine, ſweet oil, exquiſite honey, delicious fruits of all ſorts, abundance of cattle, ſwarms of fowl, wild and tame, vaſt quantities of deer, hares, rabbets, and all other game: good hemp, fine flax, ſaffron, variety of corn, and other grain, herbs, &c. a conſiderable quantity of ſilk, fine wool, fiſh of all ſorts, and in the greateſt plenty, quarries of marble, alabaſter, and jaſper-ſtone, coral taken out of the ſea, ſalt, and many other commodities.

BARCELONA is the capital of this province, and is inferior to few in Europe that are not the courts of princes. It is pleaſantly ſeated on the Mediterranean coaſts, a little below the gulph of Lyons, and opens to the ſea in a beautiful ſemicircle, which, together with its eminence and caſtle, and the beauty of its churches and other ſumptuous edifices, affords a moſt delightful proſpect to the ſhips that ſail by or to it, eſpecially as it ſtands between two conſiderable rivers, the Lobregat and Bezes, which pay their tribute to that ſea on each ſide of it. The coaſt it ſtands upon is a good ſafe road, and the port, though rather too ſmall, hath yet rendered it a place of great trade, eſpecially when Indian commodities were brought from Turkey and Egypt through the Mediterranean. Its ſituation is on a ſpacious plain, at the foot of the mountain Monjuyque. Its territory round is ſtored with all neceſſaries for ſuſtenance and delight, as wheat and other grain, oil, rich wines, fruits of all ſorts, cattle, fowl, honey, wood, and game of all kinds.

TARTAGONA, now the ſecond city in this province, ſtands commodiouſly ſituate, near the coaſt of the Mediterranean, on the brink of a pleaſant hill, at the foot of which is a ſafe and convenient harbour, for ſmall ſhips, between the rivers Gaya and Francoli.

The climate here is ſo temperate, and the ſoil ſo rich and warm, that the trees bear fruit, and bloſſom, in the coldeſt months. The territory is adorned with delightful gardens, orchards, and country-ſeats; the fields abound with corn, wine, oil, flax, hemp, and fruit of all ſorts, in the higheſt perfection, with all kind of fowl and game, and of fiſh from the ſea.

TORTOSA is ſituate on the bank of the Ebro, not far from the ſea, and has a good bay, formed by that river, that comes up almoſt to the walls of it. Without the city is a moſt beautiful plain, 18 miles long, and 6 in breadth, watered by the Ebro, and producing corn, wine, oil, fruit, timber for ſhipping, great quantity of palm-trees, with cattle, fowl, game, and other neceſſaries, beſides ſilk in abundance, which is here made in ſarſenets. Here are likewiſe a great many curious ſprings, which fertilize the plain, and ſupply the city with water, beſides quarries of marble and jaſper, one within two miles of the city, and ſome ſalt-pits.

VICQUE is pleaſantly ſituate, in a kind of peninſula, made by the rivers Ter and Naguerra, which almoſt incompaſs it. It ſtands 36 miles north from Barcelona, at the foot of a hill, near a fertile and delightful plain. On the mountain Moſen, about ſix miles from the city, are found excellent white and purple amethyſts, and topazes: they are dug out of a fat, reddiſh, or yellowiſh earth, and the beſt ſort of theſe laſt are thoſe of the deepeſt violet. In the neighbouring mountains are likewiſe found ſome gold, emeralds, and other precious ſtones, but in ſo ſmall a quantity as not to anſwer the ſearching for them.

CARDONA ſtands about 60 miles diſtant from Barcelona: near this city is a mountain of ſalt, which yields an annual revenue of 30,000 pieces of eight: the ſalt is tranſparent, and, when powdered, is exceeding white.

The kingdom of VALENTIA. This kingdom lies, on the eaſt, along the Mediterranean coaſts, facing the iſlands of Majorca and Ivica, except only a ſmall part towards Catalonia, which is parted from it by the river Cenia; on the north it has the kingdom of Arragon; on the weſt New Caſtille and Murcia; and the ſmall track of it which runs toward the ſouth, borders upon the laſt-named kingdom of Murcia. The greateſt length of Valentia is about 210 miles, and its greateſt breadth about 48.

This whole kingdom is ſo delightful, as to be compared to an earthly paradiſe. The air here is every where ſo temperate, that this part enjoys a perpetual ſpring: the trees are always covered with verdure and bloſſoms, the air very ſerene, and the weather ſo moderate and pleaſant, as never to be either exceſſively hot or cold, nor diſturbed by immoderate rains; upon all which accounts it is univerſally allowed to be the moſt delightful part of Spain, and, by many, even of all the world. The ſurprizing excellence of its ſoil and climate, is the cauſe that the whole country is filled with noblemens and gentlemens ſeats, and covered with exquiſite gardens, pleaſant orchards, delightful groves, fertile fields, and paſture grounds; and where the land is not employed for delight, it produces immenſe plenty of corn, wine, oil, honey, flax, and all kind of herbage; alſo flowers and fruit in great variety. To all which we may add, that the ſugar, rice, and ſilk it produces, one year with another, is reckoned to amount to three millions of pieces of eight. Here are likewiſe mines of gold, ſilver, and other metals, beſides great quantity and

variety of precious ſtones, which formerly amounted to an immenſe value; but they are now wholly neglected. Here is alſo abundance of allum, the beſt and fineſt white lime, and plenty of cochineal.

The earth about Valentia, and other parts of this kingdom, is ſo well cultivated, that, by Mr Willoughby's confeſſion, they generally have five crops a year, eſpecially of mulberry-leaves for ſilk-worms, of wheat, and other grain, grapes, olives, maiz, or Indian wheat, and ſugar-canes.

VALENTIA, the noble and ancient capital of this kingdom, is ſeated on the ſhady banks of the river Turio, over which it has five ſtately bridges, and ſtands about two miles from the ſea. It lies in 39 degrees 20 minutes of north latitude, and about 15 minutes eaſt longitude. Its diſtance from Madrid, the now metropolis of Spain, is about 180 miles, ſouth-eaſt; from Barcelona, ſouth-weſt, about the ſame number; and ſouth from Saragoſſa about 135. Its ſea-port, named Grao, which ſtands on the Mediterranean, about a mile and a half from the city, furniſhes it with every thing either for conveniency or delight, the ſea ſupplying it with an extraordinary variety of fiſh, the neighbouring lake of Albuſera, or little ſea, with great abundance of water-fowl and freſh-water fiſh; and the fertile country about with the greateſt plenty of corn, wine, oil, fruits, herbs, and other proviſions. It is inriched by the number of quality and gentry which live in it, by its great commerce, and the variety of manufactures that are carried on here, eſpecially the woollen, ſo that the cloth that is made here is reckoned the fineſt in all Spain.

ALICANT is a famous city and ſea-port on the Mediterranean, diſtant from Murcia, towards the north-eaſt, 42 miles, 60 ſouth from Valentia, and about 210 from Madrid. It is a place of great trade, by reaſon of its commodious harbour, and well known to the Engliſh, for the delicate wines and delicious fruits, which they bring from thence.

The kingdom of NEW CASTILLE. This country is bounded on the north by Old Caſtille, from which it is every way divided by mountains, which are only known by the names of the countries they run through; on the eaſt it is parted from Eſtramadura, by another chain of them, called Guadalupe, and la Sarena; on the ſouth from Andaluſia, by thoſe called Sierra Morena, and by an imaginary line from Murcia; and on the eaſt by the river Segura, and mountains of Almanza and Requena from Valencia; and from Arragon by thoſe of Maya, Daroka, and Molina. The length of this kingdom, from ſouth to north, is about 180 miles, and pretty near the ſame in breadth, where it is wideſt, but its figure is irregular in the latter.

The country being all inland, and ſurrounded with ſuch high mountains, which contract the ſun's rays as it were into a focus, and, at the ſame time, ſuppreſs the free paſſage of the cooling ſea breezes, its climate is conſequently hotter in ſummer, and colder in winter, than thoſe which lie along the ſea-coaſts, under the ſame latitude. It is nevertheleſs very healthy, and its ſoil generally fertile, producing abundance of wheat, and other grain, plenty of wine, oil, fruit, and herbs, feeds a great quantity of cattle, all ſorts of fowl, wild and tame, and is very well ſupplied with variety of fiſh and green paſture, by the many rivers that run through it.

TOLEDO is built on a high, ſteep, and craggy rock, almoſt inacceſſible on all ſides, and made much more ſo by the courſe of the river Tagus, which encompaſſes it almoſt round, and over which it has two noble bridges. Here are a great number of merchants, tradeſmen, and artificers, eſpecially in the ſilk and woollen manufactures, which two branches alone are ſaid to have employed near 10,000 hands. Toledo is about 36 miles diſtant from Madrid.

TALAVERA DE LA REYNA is delightfully ſeated on the river Tagus, 36 miles weſt from Toledo, and is much famed for its woollen manufacture of ſtuffs, and particularly for an extraordinary kind of fine earthen ware that is made at it.

The kingdom of OLD CASTILLE. Old Caſtille was formerly part of the Roman Tarracconenſis, and borders all the way on the ſouth to New Caſtille, from which it is divided by a ridge of mountains, which change their names according to the places of note they paſs through, as Motina, Siguenca, Segovia, &c. by that chain of them which is called Sierra de Tablada, and by thoſe of Pica and Banos, from Eſtramadura, on the weſt; and by thoſe of Avila and Perina, with the little rivers of Carrion, Piſuerga, and Heban, from Leon on the north-weſt. It is parted again on the north from Aſturias and Biſcay by another ridge of hills, branching out from the Pyrennees; only in the center, between theſe two provinces, it hath a narrow ſlip of land, which reaches quite to the bay of Biſcay; laſtly, on the eaſt, the Ebro and mountains of Doea, for a conſiderable length, part it from Navarre and Arragon. The greateſt extent of this province, from north to ſouth, reaches from 40. 10. to 43. 15. degrees of latitude and from 1. 30. to 4. 10. degrees of weſt longitude; that is, about 180 miles, and near about the ſame number from eaſt to weſt; that is, both ways taken where largeſt, for its figure is very irregular, and not near anſwerable in other parts.

The climate here differs ſomewhat from that of New Caſtille, on account of the country being more mountainous, which makes the ſeveral parts vary, according to their ſituation, the vallies being exceſſive hot, the upper ground proportionably cold and bleak, and others, according to the proximity of the hills, ſend down refreſhing gales, or cauſe a greater reflection of the ſun. But, upon the whole, the ſoil is generally good, in ſome ſenſe or other, the plains yielding plenty of all ſorts of grain, fruit, wine, and other proviſions, the ſides of the hills good paſture for their numerous cattle, and the tops timber for building and fuel. Some of theſe ſummits are ſo high, that they are covered with ſnow all the ſummer, which is carried and ſold to the towns, as is uſual through all Spain, to cool their wine.

WALLADOLID ſtands on the bank of the river Piſuerga, on a pleaſant riſing ground, and a noble proſpect all round it, as itſelf yields a delightful one to the beholders, from its fine ſituation and grand edifices.

This city is populous and opulent through not only the great number of rich and noble families who make their chief reſidence in it, but much more ſo by the large commerce, manufactures, and other inferior trades which are carried on here. The woollen manufacture is here the beſt and moſt conſiderable in all Spain, for here is a vaſt quantity of the fineſt wool produced, from innumerable flocks that are raiſed in the neighbouring plains; and the cloth that is made here is reckoned the beſt in all the world, and in high eſteem both at home and abroad. Here are alſo ſundry other manufactures and trades carried on, with great induſtry and ſucceſs.

The kingdom of LEON. This kingdom, properly ſo called, is now bounded by the Aſturian mountains; on the eaſt it has Old Caſtille, from which it is divided by the mountains of Pernia, and the rivers Carrio and Piſuerga, as far as the Ebro, then by thoſe of Heban and Reganno, 'till you come to the mountains Bonilla de la Sierra; on the ſouth, the mountains of Bannos, and another ridge, divide it from Eſtremadura; and, on the weſt, the rivers of Agueda, Duero, and a chain of mountains, part it from Portugal, as does the ſame ridge of hills continued, from Gallicia. The whole extent of Leon, from north to ſouth, is about 120 miles, that is, from 42 to about 40; and from eaſt to weſt about 90; that is, from 4. 20. to 5. 40. eaſt longitude. The river Duero runs almoſt acroſs the middle of it, leaving one half on the north, and the other on the ſouth.

As this kingdom lies in the ſame climate and latitude with that of Old Caſtille, to which it is contiguous, and is, like it, intermingled with ridges of high hill, capacious vallies, and campaign plains, which occaſion pretty near the ſame degrees of heat and cold, dry and moiſt; its ſoil and temperature differ very little from that, and its ground brings forth near the ſame productions, ſuch as excellent wheat, and other grain, paſture and cattle, fine wines, oil, honey, fruit, game fowl, and the like. The natives are here likewiſe robuſt, hardy, laborious, brave, temperate, and lovers of learning. The mountains have alſo ſome minerals, but chiefly quarries of excellent marble, and veined alabaſter, jaſper-ſtones, and ſometimes others of greater value, as turquoiſes, garnets, amethyſts, &c.

The province of ESTRAMADURA. This province is divided from Portugal, or from the Portugueze Eſtramadura, on the weſt, by the rivers Elya, Caya, and ſome others of leſs note; on the north it joins on the kingdom of Leon, without any noted mountains or rivers to part them; on the eaſt, the mountains of Banos, Pico, and Guadalupe, divide it from Old and New Caſtille; and on the ſouth it is parted from Andaluſia by the chain of hills called Sierra Morena. The rivers Tajo and Guadiana running through it from eaſt to weſt, divide it into three parts; the moſt northern is that which is beyond the Tajo, the next is between that and the Guadiana, and the laſt is that which is ſouth of the Guadiana. The length of the whole province, from north to ſouth, is 150 miles, that is, from 38. to 40. 30 latitude; and in breadth, from eaſt to weſt, about 120, that is, from 4. 40. to 6. 20. weſt longitude.

The climate, indeed, is exceeding hot, and ſomewhat ſultry, being moſtly inland, and wanting thoſe cooling gales which the hills and the ſea communicate to the adjacent provinces; but in all other reſpects it may juſtly be reckoned the pleaſanteſt and moſt fertile not only in all Spain, but perhaps in the world. For an evidence of which, we need but inſtance in the moſt celebrated plains called La Vera de Plaſentia, of which it might ſuffice to ſay, that ſeveral of the Ancients placed the elyſian fields in it, as knowing of no place more delicious and beautiful. This noble plain is about 36 miles in length, and 10 in breadth, and ſo ſweetly delightful, that it invites great numbers of the nobility and gentry to ſpend the ſummer in it. It hath 13 ſmall towns, or villages, and about 5000 houſes, all beautifully ſituated, and neat, and all the reſt is either covered with the greateſt variety of fruit trees which Europe affords, or beautifully variegated and diſpoſed into olive groves, vineyards, gardens, orchards, meadows, and fields, producing plenty of corn, flax, &c. and watered with many pleaſant ſprings and ſtreams, yielding beſides abundance of excellent fiſh, eſpecially trout. Such is, in fine, the product of this valley, that of the territory of only four inconſiderable villages, out of the 13 that are in it, the pro-

duct is said to have amounted, in one year, to 150 tons of oil, 550 of wine, 60,000 bushels of chesnuts, an incredible quantity of wheat, and other grain; whilst other parts of it yielded not only the like, or even larger quantities, in proportion, of the same produce, besides fruits, flax, &c. but likewise abundance of silk, wax, honey, saffron, and such like, besides pasture, and great quantities of cattle.

ANDALUSIA province is divided, on the north, from Estramadura and New Castille, by the Sierra Morena mountains; on the east from Portugal, by the river Chanca, and from Algarve by the Guadiana; on the south it has the ocean, the mouth of the Streights, and part of the Mediterranean; and along the south-east it has the kingdom of Granada.

No province in Spain exceeds this in fertility and commerce; the latter is owing to its maritime situation, and convenient harbour. The great quantity of wine and oil is so extraordinary, as to be almost beyond credit. Their cattle, also, are numberless. Fine oranges, citrons, raisins, almonds, pomegranates, and figs, are the natural growth of this province. They have great plenty of fine salt and sugar, and a celebrated breed of horses.

SEVILLE, its capital, situate on the river Guadalquivir, and in one of the most beautiful plains of Europe.—Here is an India-house, for the regulation of their West-India trade, a fine exchange, and mint.—The silk and silver stuffs are the most considerable manufactures carried on here, with those of soap and pottery-ware.—Without the city are salt-pits, and quarries of marble.—Along the river are many commodious keys, where ships of good burthen may safely lie.

CORDOVA stands on a delightful plain: besides the extraordinary fertility of its soil round about, which supplies it with plenty of fine wheat, oil, fruits, &c. it carries on a great variety of trades and manufactures; and, among the latter, the woollen and silken, of the finest kind, and that of a curious gilt leather. It is famed also for a breed of fine horses.

CADIZ is next in rank to the royal cities; it is very advantageously situated for commerce; the spaciousness of the harbour, seated upon the ocean, so near the Mediterranean, draws thither a concourse of ships and merchants, to purchase the product of Spain, and, of late years, of the West-Indies, which are now first brought hither.

XERES DE LA FRONTERA is well situate on the small river Guadaletta, about six miles from the sea. Its territory is so rich and fertile, that, besides great quantities of wheat, fruit, cattle, and other provisions, it yields 60,000 pipes of sherry yearly. It has also a good brood of horses.

EZIJA seated on the Xenil, and on a delightful plain, producing immense quantities of corn, wine, oil, silk, and cotton.

GIBRALTAR, a well-known sea-port, on the mouth of the Streights. See our article MEDITERRANEAN, for its consequence to Great-Britain, as being now in her possession.

BAEZA, situate about three miles from the Guadalquivir; it is remarkable for the dyeing of very fine scarlet cloth, and making of rich taffeties.

SAN LUCAR DE BARAMEDA, about 45 miles below Seville, and serves as a port to that famed city; it was much more considerable than at present, before the Spanish West-India fleets were allowed to set out from, and return to, Cadiz.

PORT ST MARY is seated on a plain, at the mouth of the Guadaletta river, and is much frequented, on account of its commodiousness.

CARMENA stands in the center of Andalusia, and has very fertile and spacious plains, which produce great plenty of all things.

LUCENA is as delightfully situated as most cities in Europe, few spots of ground producing greater plenty of delicious wine, oil, and choice provisions, than this territory does.

MOGUER, seated on the banks of the river Azige, or Tinto. Its river is remarkable for its colour, or dye, it being impregnated with some mineral, which not only gives a yellow tinge, but petrifies all the sand it runs over.—It has no other good quality, except that of curing worms in cattle.

There are in this province several towns of some note, though under the degree of cities; but as they are not remarkable for any considerable traffic, we shall pass them over in silence.

The kingdom of GRANADA. This kingdom is divided, on the north, from the province of Andalusia, by the mountains of Cazorla, Sierra Morena, Segura, and some others; on the east, another chain of mountains divides it from Murcia; on the south it is contiguous again to Andalusia, without any noted boundaries; and on the west it is bounded and washed by the Mediterranean. The whole length of it, from east to west, is about 210 miles; the greatest breadth exceeds not 72; and the whole circumference somewhat above 500.

This country, besides those immense quantities of corn, wine, oil, fruit, cattle, game, fish, &c. which it hath in common with the finest provinces in Spain, we have already taken notice of; here the most craggy mountains are every where covered with vines, fruit-trees in the highest perfection, and what would to some of our readers appear incredible, if not attested by so many undoubted eye-witnesses, here are bunches of grapes, that, like those of the promised land, are obliged to be carried on a pole, between two men; and some of them, we are assured from persons of veracity, have weighed 40 pounds. Sugar is here likewise cultivated in great plenty, and that which grows here exceeds any in Spain for fineness. Silk is likewise manufactured in such quantities, and great variety, as to be sufficient to serve the whole kingdom, besides what is exported.

Those fields, hills, and other places which are reckoned the most barren, are covered with thyme, marjoram, lavender, and other aromatic herbs, which their cattle feed upon, and give their flesh a delicious and exquisite taste; laurel, myrtle, sweet basil, and other odoriferous shrubs, grow likewise here, to such height and abundance, that they make their hedges of them: so that if we consider it either with respect to its surprizing fertility and plenty of all things for food and delight, or to the admirable prospect of its hills and dales, or the fragrancy of its fruits and herbs, no country seems to approach nearer to the idea we may have of an earthly paradise than this. If we add to all these, its excellent maritime situation, number of commodious harbours and ports, and its vast exports and imports, the number and opulence of its cities, we shall easily own, that this little kingdom must have been one of the noblest and finest in all Spain.

MALAGA is an ancient city, and commodious sea-port. There is nothing but conjecture can be offered about its name; yet, considering the commodiousness of its port, its situation, both for inland and foreign commerce, we need not doubt but it was built in some of the earliest times, and, in all likelihood, passed through the hands of those trading nations which occupied successively the Mediterranean coasts, in one of the pleasantest and most convenient parts of which it stands. As the situation of this place is in a fine fertile plain, surrounded with hills, mountains, and grounds, all of them covered with vines, and the greatest variety of fruits, it may be allowed to yield one of the most beautiful prospects, both from land and sea, of any place on these coasts: and how fine their wines, raisins, almonds, figs, lemons, oranges, and other fruits are, is well known, from the great quantities of them brought hither from thence, besides the vast quantities that are exported into other parts of Europe. Its distance from Madrid is about 260 miles south, and a little to the west; 75 south-east from Seville; and about the same distance south-west from Granada.

ANTEQUERA is pleasantly seated on the banks of the Rio de la Villa, part of the town standing on a hill, and the rest on the plain.

Near this city is a famed salt-pit, three miles in length, near two in breadth, which supplies the whole territory with salt. About eight or nine miles from it is a spring, that dissolves the stone, and brings it away by urine.

This city stands about 220 leagues south from Madrid, 75 south-east from Seville, 72 south-west from Granada, and about 15 south from the sea.

The kingdom of MURCIA borders on the north upon New Castille; on the west it is parted from Granada and Andalusia, by the mountains of Segura, and some others, which stretch themselves into the sea, and partly by the kingdom of Valentia. Its greatest length, from north-west to south-east, is about 100 miles, and its greatest breadth, from north-east to south-west, about 70. Its latitude is from 37 degrees 30 minutes, to 38 degrees 50 minutes; and longitude 1 degree 40 minutes west.

The climate here is somewhat of the hottest; but the soil, though mountainous, is exceedingly fertile, never failing but through extreme drought, and generally yielding great plenty of wheat, barley, wine, oil, fruits, pasture, and honey, in great abundance: but what makes the chief wealth of it is, the great quantity of silk which is here made and exported, and employs the greatest number of hands.

MURCIA, the metropolis of this kingdom, is situate in a spacious and delightful plain, so very fertile, that it often yields an hundred-fold in corn, besides all other grain, wines, oil, mentioned in the general account of the product of the country. Round about this plain are planted an infinite number of mulberry-trees, with whose leaves they feed as many worms as generally make, every year, 210,000lb. weight of silk.

Murcia is computed to be distant about 200 miles south-east from Madrid, 20 north from Carthagena, and about 90 south-west from Valentia.

CARTHAGENA is seated on the side of a hill, on the Mediterranean coast, on the mouth of the river Guadalantin, and is a commodious, as well as one of the most noted sea-ports in Spain. The harbour is likewise well sheltered from storms, by a small island called Escombrada; it has good plenty of fresh water on the shore, and exports great quantity of wool for Italy. The air is so temperate in summer, and so mild in winter, that the trees are every where covered with leaves, blossoms, and fruit. Besides these productions of the earth on the surface, its bowels yield likewise amethysts, garnets, agates, and other such precious stones.

Its distance from Madrid is about 220 miles south-east, 27 south from Murcia, and 86 east from Granada.

ARTICLES of PEACE, COMMERCE, and ALLIANCE, between the CROWNS of GREAT-BRITAIN and SPAIN, concluded in a TREATY at MADRID, the $\frac{12}{22}$ day of May, in the year of our Lord God 1667.

I.

First, It is agreed and concluded, That from this day forward there shall be between the two crowns of Great-Britain and Spain, a general, good, sincere, true, firm, and perfect amity, confederation, and peace, which shall endure for ever, and be observed inviolably, as well by land as by sea and fresh waters; and also between the lands, countries, kingdoms, dominions, and territories, belonging unto, or under the obedience of either of them: and that their subjects, people, and inhabitants respectively, of what condition, degree, or quality soever, from henceforth reciprocally shall help, assist, and shew to one another all manner of love, good offices, and friendship.

II.

That neither of the said kings, nor their respective people, subjects, or inhabitants within their dominions, upon any pretence, may, in public or secret, do, or procure to be done, any thing against the other, in any place, by sea or by land, nor in the ports or rivers of the one or the other, but shall treat one another with all love and friendship; and may, by water and by land, freely and securely pass into the confines, countries, lands, kingdoms, islands, dominions, cities, towns, villages, walled, or without wall, fortified, or unfortified, their havens and ports (where hitherto trade and commerce hath been accustomed) and there trade, buy and sell, as well of and to the inhabitants of the respective places, as those of their own nation, or any other nation that shall be or come there.

III.

That the said kings of Great-Britain and Spain shall take care that their respective people and subjects, from henceforward, do abstain from all force, violence, or wrong; and if any injury shall be done by either of the said kings, or by the people or subjects of either of them, to the people or subjects of the other, against the articles of this alliance, or against common right, there shall not therefore be given letters of reprizal, marque, or counter-marque, by any of the confederates, until such time as justice is sought and followed in the ordinary course of law: but if justice be denied or delayed, then the king, whose people or inhabitants have received harm, shall ask it of the other, by whom (as is said) the justice shall have been denied or delayed, or of the commissioners that shall be, by the one king or the other, appointed to receive and hear such demands, to the end that all such differences may be compounded in friendship, or according to law. But if there should yet be a delay, or justice should not be done, nor satisfaction given within six months after having the same so demanded, then may be given letters of reprizal, marque, or counter marque.

IV.

That between the king of Great-Britain and the king of Spain, and their respective people, subjects, and inhabitants, as well upon sea, as upon land and fresh water, in all and every their kingdoms, lands, countries, dominions, confines, territories, provinces, islands, plantations, cities, villages, towns, ports, rivers, creeks, bays, streights and currents, where hitherto trade and commerce hath been accustomed, there shall be free trade and commerce, in such way and manner, that, without safe-conduct, and without general or particular licence, the people and subjects of each other may freely, as well by land, as by sea and fresh water, navigate and go into their said countries, kingdoms, dominions, and all the cities, ports, currents, bays, districts, and other places thereof, and may enter into any port with their ships, laden or empty, carriage, or carriages, wherein to bring their merchandize, and there buy and sell what and how much they please, and also at just and reasonable rates provide themselves with provisions, and other necessary things for their subsistence and voyage; and also may repair their ships and carriages, and from thence again freely depart with their ships, carriages, goods, merchandize, and estate, and return to their own countries, or to such other place as they shall think fit, without any molestation or impediment, so that they pay the duties and customs which shall be due, and saving to either side the laws and ordinances of their country.

V.

Item, It is likewise agreed, That for the merchandizes which the subjects of the king of Great-Britain shall buy in Spain, or other the kingdoms or dominions of the king of Spain, and shall carry in their own ships, or in ships hired or lent unto them, no new customs, toll, tenths, subsidies, or other rights or duties whatsoever, shall be taken or increased, other than those which, in the like case, the natives themselves, and all other strangers, are obliged to pay; and the subjects aforesaid buying, selling, and contracting for their merchandizes, as well in respect of the prices, as of all the duties to be paid, shall enjoy the same privileges which are allowed to the natural subjects of Spain, and may buy, and lade their ships with such goods, and merchandizes; which said ships being laden, and customs paid for the goods, shall not be detained in port, upon any pretence whatsoever; nor shall the laders, merchants, or factors, who bought and loaded the goods aforesaid, be questioned, after the departure of the said ships, for any matter or thing whatsoever concerning the same.

VI.

And to the end that the officers and ministers of all cities, towns, and villages belonging to either, may neither demand, nor take from the respective merchants and people, greater taxes, duties, stipends, recompences, gifts, or any other charges, than what ought to be taken by virtue of this treaty; and that the said merchants and people may know and understand with certainty what is ordained in all things touching this, it is agreed and concluded, That tables and lists shall be put up at the doors of the custom-houses and register of all the cities, villages, and towns of, or appertaining to, one or the other king, where such rights, and excises or customs, are usually paid; in which, how much, and of what quality, such rights, customs, subsidies, and payments either to the king's, or any of the aforesaid officers, are allowed, shall be put down in writing, declaring as well the species of what is imported, as what is carried out. And if any officer, or any other in his name, upon any pretence whatsoever, in public or secret, directly or indirectly, shall ask or receive of any merchant, or other person respectively, any sum of money, or other thing, by the name of right, due, stipend, allowance, or recompence (though it be by the way of voluntary donative) more or otherwise than aforesaid, the said officer or his deputy being in such manner guilty and convict before a competent judge in the country where the crime is committed, shall be put in prison for three months, and shall pay thrice the value of the thing so received; of which the half shall be for the king of the country where the crime is committed, and the other half for the denunciator, for the which he may sue his right before any competent judge of the country where it shall happen.

VII.

That it shall be lawful for the subjects of the king of Great-Britain, to bring out, and carry into Spain, and all or any lands and dominions of the king of Spain (where heretofore they have used trade and commerce) and trade there with all kind of merchandize, clothes, manufactures, and things of the kingdom of Great-Britain, and the manufactures, goods, fruits, and kinds of the islands, towns, and plantations to him appertaining, and what shall have been bought by English factors on this side, or farther on the other side of the cape of Buena Esperança, without being inforced to declare to whom, or for what price they sell their said merchandize and provisions, or being molested for the errors of the masters of ships, or others, in the entry of the goods; and at their pleasure to return again out of the dominions of the king of Spain, with all or any goods, estates, and merchandize, to any of the territories, islands, dominions, and countries of the king of England, or to any other place, paying the rights and tributes mentioned in the antecedent chapters; and the rest of all their lading which is not brought to land they may detain, keep, and carry away in their said ship or ships, vessel or vessels, again, without paying any right or imposition whatsoever for it, as if therewith they had never been within any bay or port of the Catholic king. And all the goods, estates, merchandize, ships, or other vessels, with any things introduced into the dominions or places of the crown of Great-Britain as prizes, and judged for such in the said dominions and places, shall be taken for goods and merchandize of Great-Britain, comprehended so by the intention of this article.

VIII.

That the subjects and vassals of the most serene king of Great-Britain, may bring and carry to all and singular the dominions of the king of Spain, any fruits and commodities of the East-Indies, it appearing by testimony of the deputies of the East-India company in London, that they are of, or have come from, the English conquests, plantations, or factories, with like privilege, and according to what is allowed to the subjects of the United Provinces by the royal cedulas of Contravando, bearing date the 27th of June, and the 3d of July 1663, and published on the 30th of June, and 4th of July the same year. And for what may concern both the Indies, and any other parts whatsoever, the crown of Spain doth grant to the king of Great-Britain and his subjects, all that is granted to the United States of the Low Countries and their subjects, in their treaty of Munster 1648, point for point, in as full and ample manner as if the same were herein particularly inserted, the same rules being to be observed, whereunto the subjects of the said United States are obliged, and mutual offices of friendship to be performed from one side to the other.

IX.

That the subjects of the king of Great Britain, trading, buying, and selling, in any of the kingdoms, governments, islands, ports, or territories of the said king of Spain, shall have, use, and enjoy, all the privileges and immunities, which

the ſaid king hath granted and confirmed to the Engliſh merchants that reſide in Andaluſia, by his royal cedulas or orders, dated the 19th day of March, the 26th day of June, and the 9th day of November 1645, his Catholic Majeſty by theſe preſents re-confirming the ſame, as a part of this treaty between the two crowns. And to the end that it may be manifeſt to all, it is conſented, That the ſaid cedulas (as to the whole ſubſtance thereof) be paſſed and transferred to the body of the preſent articles, in the name and favour of all and ſingular the ſubjects of the king of Great-Britain, reſiding and trading in any places whatſoever within his Catholic Majeſty's dominions.

X.

That the ſhips, or any other veſſels that ſhall belong to the king of Great-Britain or his ſubjects, navigating into the king of Spain's dominions or any of his ports, ſhall not be viſited by the judges of contraband, or by any other officer or perſon, by his own, or by any other authority; nor ſhall any ſoldiers, armed men, or other officers or perſons, be put on board any of the ſaid ſhips or veſſels; nor ſhall the officers of the cuſtom-houſe of the one or the other party, ſearch in any veſſels or ſhips belonging to the people of the one or the other, which ſhall enter into their regions, dominions, or reſpective ports, until their ſaid ſhips or veſſels are unladen, or until they have carried on ſhore all the lading and merchandize which they declare they reſolve to diſembark in the ſaid port; nor ſhall the captain, maſter, or any other of the company of the ſaid ſhips be impriſoned, or they or their boats detained on ſhore; but in the interim, officers of the cuſtom-houſe may be put on board the ſaid veſſels or ſhips, ſo they exceed not the number of three for each ſhip, to ſee that no goods or merchandize be landed out of the ſaid ſhips or veſſels, without paying ſuch duties as by theſe articles either party is obliged to pay; which ſaid officers are to be without any charge to the ſhip or ſhips, veſſel or veſſels, their commanders, mariners, company, merchants, factors, or proprietors. And when it happens that the maſter or owner of any ſhip ſhall declare, that the whole lading of his ſaid ſhip is to be diſcharged in any port, the entry of the ſaid lading ſhall be made in the cuſtom-houſe after the uſual manner; and if, after the entry made, any other goods be found in the ſaid ſhip or ſhips, more than what are contained in the ſaid entry, eight working days ſhall be allowed them on which they may work (which ſhall be reckoned from the day they began to unlade) to the end, that the concealed goods may be entered, and the confiſcation of them prevented. And in caſe that in the time limited, the entry or manifeſtation of them ſhall not have been made, then ſuch particular goods only, which ſhall be found as aforeſaid, though the unlading be not finiſhed, ſhall be confiſcated, and not any other; nor ſhall other trouble be given, or puniſhment inflicted on the merchant or owner of the ſhip; and when the ſhips or veſſels are reladen, they may have freedom to go out again.

XI.

That the ſhip or ſhips appertaining to the one or the other king, or to their reſpective people and ſubjects, that ſhall enter into any ports, lands or dominions, of the one or the other, and ſhall diſcharge any part of their goods and merchandizes in any port or haven, being conſigned with the reſt to other places, within or without the ſaid dominions, ſhall not be obliged to regiſter or pay the rights of any other goods or merchandize, than of that which they ſhall unlade in the ſaid port or haven, nor be conſtrained to give bond for the goods they ſhall carry to other places, nor any other ſecurity, if it be not in caſe of felony, debt, treaſon, or other capital crime.

XII.

Whereas the one moiety of the cuſtom of all foreign goods and merchandize imported into England, is allowed and returned back to the importer, if the ſaid goods be exported out of the ſaid kingdom within twelve months after their firſt landing, upon oath made that they are the ſame goods which paid cuſtom inwards, and that if they be not re-ſhipped within the ſaid twelve months, yet they may at all times be exported without paying any cuſtom or duty outwards: it is therefore agreed, That if any of the ſubjects of the king of Great-Britain ſhall hereafter land any goods or merchandize, of what growth or nature ſoever they be, in any of the ports of his Catholic Majeſty, and having entered them, and paid the cuſtom by which this treaty ought to be paid, and ſhall afterwards deſire to tranſport them, or any part of them, to any other place whatſoever, for a better market, it ſhall and may be lawful for him or them ſo to do freely, without paying or being demanded any other cuſtom or duty at all for the ſame, he or they making oath, if required thereunto, that they are the ſame goods for which cuſtom was paid at their landing; and in caſe that the ſubjects, people, and inhabitants of the dominions of either part ſhall unlade, or have in any city, town, or village reſpectively, any goods, merchandizes, fruits or eſtates, and have paid the cuſtoms due, according to what hath been declared, and after that, not being able to put them off, ſhall reſolve to remit them to ſome other city, town or village of the ſaid dominions, they may not only do it without difficulty or impediment, and without paying other rights than what were due at their entry, but likewiſe the cuſtom or rights ſhall not be paid again in any other part of the ſaid dominions, bringing certificates from the officers of the cuſtom-houſe, that they were paid before in the due form. And the chief farmers and commiſſioners of the king of Spain's rents in all places, or ſome other officer or officers to be appointed for that purpoſe, ſhall at all times permit and ſuffer the tranſportation of all ſuch goods and merchandizes from place to place, and give ſufficient certificate to the owners thereof, or their aſſignees, of their having paid their cuſtom at their firſt landing, whereby they may be carried to, and landed at, any other port or place of the ſaid juriſdiction, free from all duties or impediments whatſoever, as aforeſaid, ſaving alway the right of any third perſon.

XIII.

That it ſhall be lawful for the ſhips belonging to the ſubjects of the one or other king, to anchor in the roads or bays of either, without being conſtrained to enter into port; and in caſe they be neceſſitated to enter thereinto, either by diſtreſs of weather, fear of enemies, pirates, or any other accident, in caſe the ſaid ſhips be not bound to an enemy's port, and carrying thither contraband goods (whereof without ſome clear proof they ſhall not be queſtioned) it ſhall be lawful for the ſaid ſubjects to return to ſea freely when they pleaſe, with their ſhips and goods, ſo that they do not break bulk, or expoſe any thing to ſale; and that when they caſt anchor, or enter the ports aforeſaid, they be not moleſted or viſited; and it ſhall ſuffice, that in caſe they ſhew their paſſports or ſea-papers, which being ſeen by the reſpective officers of either king, the ſaid ſhips ſhall return freely to ſea without any moleſtation.

XIV.

And if any ſhip or ſhips belonging to the ſubjects and merchants of the one or the other, entering into bays, or in the open ſea, ſhall be encountered by the ſhips of the ſaid kings, or of privateers their ſubjects: the ſaid ſhips, to prevent all diſorders, ſhall not come within cannon-ſhot, but ſhall ſend their long-boat or pinnace to the merchant-ſhip, and only two or three men on board, to whom the maſter or owner ſhall ſhew his paſſports and ſea-letters, whereby not only the ſhip's lading, but the place to which ſhe belongs, and as well the maſter and owner's name, as the name of the ſhip may appear; by which means the quality of the ſhip, and her maſter or owner will be ſufficiently known, as alſo the commodities ſhe carries, whether they be contraband or not; to the which paſſports and ſea-letters, entire faith and credit ſhall be given, ſo much the rather, for that as well on the part of the king of England, as of the king of Spain, ſome counter-ſigns ſhall be given (if it ſhall be found neceſſary) whereby their authenticalneſs may the better appear, and that they may not be in any wiſe falſified.

XV.

If any prohibited merchandize or goods ſhall be exported from the kingdoms, dominions, and territories of either of the ſaid kings, by the reſpective people or ſubjects of the one or the other, in ſuch caſe the prohibited goods ſhall be only confiſcated, and not the other goods; neither ſhall the delinquent incur any other puniſhment, except the ſaid delinquent ſhall carry out from the reſpective kingdoms or dominions of the king of Great Britain, the proper coin, wool, or fuller's earth of the ſaid kingdom, or ſhall carry out of the reſpective kingdoms or dominions of the ſaid king of Spain, any gold or ſilver, wrought or unwrought; in either of which caſes the laws of the reſpective countries are to take place.

XVI.

That it ſhall be lawful for the people and ſubjects of both kings, to have acceſs to the reſpective ports of the one and the other, and there remain, and depart again with the ſame freedom, not only with their ſhips and other veſſels for trade and commerce, but alſo with their other ſhips fitted for war, armed, and diſpoſed to reſiſt and engage the enemy, and arriving by ſtreſs of weather to repair their ſhips, or furniſh themſelves with proviſions; ſo that entering willingly, they be not ſo numerous, that they give juſt occaſion of ſuſpicion, to which end they are not to exceed the number of eight, nor continue in their havens, nor about their ports, longer time than they ſhall have juſt cauſe, for the repair of their ſhips, to take in proviſions or other neceſſary things, much leſs be the occaſion of interrupting the free commerce, and coming in of other ſhips, of nations in amity with either king; and when an unuſual number of men of war, by accident ſhall come unto any port, it ſhall not be lawful for them to come into the ſaid ports or havens, not having firſt obtained permiſſion of the king unto whom the ſaid ports do belong, or the governors of the ſaid ports, if they be not forced thereinto by ſtreſs of weather or other neceſſity, to avoid the danger of the ſea, and in ſuch caſe they ſhall preſently acquaint the governor or chief magiſtrate of the place with the cauſe of their coming; nor ſhall they remain there any longer time than the ſaid governor or magiſtrate ſhall think convenient, or do any act of hoſtility in ſuch ports, that may prove of prejudice to the one or the other of the ſaid kings.

XVII.

XVII.

That neither the ſaid king of Great-Britain, nor the king of Spain, by any mandate, general nor particular, nor for any cauſe whatſoever, ſhall embark or detain, hinder or take for his reſpective ſervice, any merchant, maſter of a ſhip, pilot or mariner, their ſhips, merchandize, clothes or other goods belonging unto the one or the other, in their ports or waters, if it be not that either of the ſaid kings, or the perſons to whom the ſhips belong, be firſt advertiſed thereof, and do agree thereunto; provided that this ſhall not be conſtrued to hinder or interrupt the ordinary courſe of juſtice and law in either country.

XVIII.

That the merchants and ſubjects of the one and the other king, their factors and ſervants, as alſo their ſhips, maſters and mariners, may as well going as coming, upon ſea and other waters, as in the havens and ports of the one and the other reſpectively, carry and uſe all kind of arms, defenſive and offenſive, without being obliged to regiſter them, as alſo upon land to carry and uſe them for their defence, according to the cuſtom of the place.

XIX.

That the captains, officers, and mariners, of the ſhips belonging to the people and ſubjects of either party, may not commence an action, nor hinder or bring trouble upon their own ſhips, their captains, officers, or mariners, in the reſpective kingdoms, dominions, lands, countries, or places of the other, for their wages or ſalaries, or under any other pretence. Nor may they put themſelves, or be received, by what pretext or colour ſoever, into the ſervice or protection of the king of England, or king of Spain, or their arms; but if any controverſy happen between merchants and maſters of ſhips, or between maſters and mariners, the compoſing thereof ſhall be left to the conſul of the nation, but after ſuch manner, as he who ſhall not ſubmit to the arbitrament, may appeal to the ordinary juſtice of the place where he is ſubject.

XX.

And to the end that all impediments be taken away, and that the merchants and adventurers of the kingdoms of Great-Britain be permitted to return to Brabant, Flanders, and other the provinces of the Low Countries, under the juriſdiction of the king of Spain: foraſmuch as it hath been thought convenient, that all, and any the laws, edicts and acts, by which the importation of cloth, or any other woollen manufacture, of what kind ſoever, dyed or undyed, milled or unmilled, into Flanders, or the other provinces, hath been prohibited, be revoked and diſannulled; and that if any right, tribute, impoſition, charge, or money, hath been, with permiſſion, or otherwiſe, put upon clothes, or any of the foreſaid woollen manufactures ſo imported (except the ancient tribute upon every piece of cloth, and proportionably upon every other woollen manufacture, agreeable to the antient treaties and agreements between the then kings of England, and the dukes of Burgundy, and governors of the Low Countries) the ſame ſhould be altogether void, and no ſuch tribute or impoſition from henceforth impoſed, or put upon the ſaid clothes or manufactures, for no cauſe or pretext whatſoever: and that all the Engliſh merchants, trading in any of the ſaid provinces, their factors, ſervants, or commiſſioners, ſhould enjoy from henceforward, all the privileges, exemptions, immunities, and benefits, which formerly have been agreed and given by the aforeſaid ancient treaties and agreements, between the then kings of England, and the dukes of Burgundy, and governors of the Low Countries: it is therefore agreed, That deputies ſhall be named by the king of Great-Britain, who meeting with the marquis of Caſtelrodrigo, or the governor of thoſe provinces for the time being, or any other miniſters of the king of Spain, ſufficiently authorized in this behalf, ſhall friendly treat and conclude hereupon; and alſo ſuch further privileges, immunities, and neceſſary exemptions, ſuitable to the preſent ſtate of affairs, ſhall be granted for the encouragement of the ſaid merchants and adventurers, and for the ſecurity of their trade and commerce, as ſhall be agreed upon in a ſpecial treaty, that ſhall be made between both the kings, touching this particular.

XXI.

The ſubjects and inhabitants of the kingdoms and dominions of the moſt ſerene kings of Great-Britain and Spain reſpectively, ſhall, with all ſecurity and liberty, ſail to and traffic, in all the kingdoms, eſtates, or countries, which are or ſhall be in peace, amity, or neutrality, with the one or the other.

XXII.

And they ſhall not be diſturbed or diſquieted in that liberty, by the ſhips or ſubjects of the ſaid kings reſpectively, by reaſon of the hoſtilities which are or may be hereafter between either of the ſaid kings, and the aforeſaid kingdoms, countries, and ſtates, or any of them, which ſhall be in friendſhip or neutrality with the other.

XXIII.

And in caſe, that within the ſaid ſhips reſpectively, be found, by the aboveſaid means, any merchandize hereunder mentioned, being of contraband and prohibited, they ſhall be taken out and confiſcated, before the admiralty, or other competent judges; but for this reaſon the ſhip, and the other free and allowed commodities which ſhall be found therein, ſhall in no wiſe be either ſeized or confiſcated.

XXIV.

Moreover, for better prevention of the differences which might ariſe touching the meaning of forbidden merchandize, and of contraband, it is declared and agreed, That under this name ſhall be comprehended all fire-arms, as ordnance, muſkets, mortar-pieces, petards, bombs, granadoes, fire-crancels, fire-balls, muſket-reſts, bandeliers, gunpowder, match, ſaltpetre, and bullets; likewiſe, under the name of forbidden merchandize, are underſtood all other arms, as pikes, ſwords, pots, helmets, backs, and breaſts, halberds, javelins, and ſuch armour; under this name is likewiſe forbidden the tranſportation of ſoldiers, horſes, their harneſſes, caſes of piſtols, holſters, belts, and other furniture, formed and compoſed for the uſe of war.

XXV.

Likewiſe to prevent all manner of diſpute and contention, it is agreed, That under that name of forbidden merchandize, and of contraband, ſhall not be comprehended wheat, rye, barley, or other grains or pulſe, ſalt, wine, oil, and generally whatſoever belongs to the ſuſtaining and nouriſhing of life; but they ſhall remain free, and likewiſe all other merchandizes not comprehended in the preceding article; and the tranſportation of them ſhall be free and permitted, although it be to the towns and places of enemies, unleſs ſuch towns and places be beſieged, blocked up, or ſurrounded.

XXVI.

It is alſo agreed, That whatſoever ſhall be found laden by the ſubjects or inhabitants of the kingdoms and dominions of either of the ſaid kings of England and Spain, aboard the ſhips of the enemies of the other, though it be not forbidden merchandize, ſhall be confiſcated, with all things elſe which ſhall be found within the ſaid ſhips, without exception or reſerve.

XXVII.

That the conſul which hereafter ſhall reſide in any of the dominions of the king of Spain, for the help and protection of the ſubjects of the king of Great-Britain, ſhall be named by the king of Great-Britain, and he ſo named, ſhall have and exerciſe the ſame power and authority in the execution of his charge, as any other conſul hath formerly had in the dominions of the ſaid king of Spain; and in like manner the Spaniſh conſul reſiding in England, ſhall enjoy as much authority as the conſuls of any other nation have hitherto enjoyed in that kingdom.

XXVIII.

And that the laws of commerce that are obtained by peace may not remain unfruitful, as would fall out if the ſubjects of Great-Britain, when they go to, come from, or remain in the dominions or lordſhips of the king of Spain, by reaſon of their commerce or other buſineſs, ſhould be moleſted for caſe of conſcience; therefore, that the commerce be ſecure and without danger, as well upon land as at ſea, the ſaid king of Spain ſhall provide, that the ſubjects of the ſaid king of Great-Britain ſhall not be aggrieved contrary to the laws of commerce, and that none of them ſhall be moleſted or diſturbed for their conſcience, ſo long as they give no public ſcandal or offence; and the ſaid king of Great-Britain ſhall likewiſe provide, for the ſame reaſons, that the ſubjects of the king of Spain ſhall not be moleſted or diſturbed for their conſcience, againſt the laws of commerce, ſo long as they give no public ſcandal or offence.

XXIX.

That the people and ſubjects reſpectively of one kingdom, in the dominions, territories, regions, or colonies of the other, ſhall not be compelled to ſell their merchandize for braſs-metal coin, or exchange them for other coin or things, againſt their will; or having ſold them, to receive the payment in other ſpecies than what they bargained for, notwithſtanding any law or other cuſtom contrary to this article.

XXX.

That the merchants of both nations, and their factors, ſervants, and families, commiſſioners, or others by them employed; as alſo maſters of ſhips, pilots and mariners, may remain freely and ſecurely in the ſaid dominions, kingdoms, and territories of either of the ſaid kings, and alſo in their ports and rivers; and the people and ſubjects of the one king, may have, and with all freedom and ſecurity enjoy, in all the lands and dominions whatſoever of the other, their proper houſes to live in, their warehouſes and magazines for their goods and merchandize, which they ſhall poſſeſs during the time for which they ſhall have taken, hired, and agreed for them, without any impediment.

XXXI.

The inhabitants and ſubjects of the ſaid confederate kings, in all the lands and places under the obedience of the one or the other, ſhall uſe and employ thoſe advocates, proctors, ſcriveners, agents, and ſollicitors, whom they think fit, the which ſhall be left to their choice, and conſented to by the ordinary judges, as often as there ſhall be occaſion; and they ſhall not be conſtrained to ſhew their books and papers of account

account to any perſon, if it be not to give evidence for the avoiding law-ſuits and controverſies; neither ſhall they be embarked, detained, or taken out of their hands, upon any pretence whatſoever. And it ſhall be permitted to the people and ſubjects of either king, in the reſpective places where they ſhall reſide, to keep their books of account, traffic, and correſpondence, in what language they pleaſe, in Engliſh, Spaniſh, Dutch, or any other, the which ſhall not be moleſted, or ſubject to any inquiſition. And whatſoever elſe hath been granted by either party concerning this particular, to any other nation, ſhall be underſtood likewiſe to be granted here.

XXXII.

That in caſe the eſtate of any perſon or perſons ſhall be ſequeſtered or ſeized on by any court of juſtice or tribunal whatſoever, within the kingdoms and dominions of either party, and any eſtate or debt happen to lie in the hands of the delinquents belonging bonâ fide to the people and ſubjects of the other, the ſaid eſtate or debts ſhall not be confiſcated by any of the ſaid tribunals, but ſhall be reſtored to the true owners in ſpecie, if they yet remain, and if not, the value of them (according to the contract and agreement which was made between the parties) ſhall be reſtored within three months after the ſaid ſequeſtration.

XXXIII.

That the goods and eſtates of the people and ſubjects of the one king, that ſhall die in the countries, lands, and dominions of the other, ſhall be preſerved for the lawful heirs and ſucceſſors of the deceaſed, the right of any third perſon always reſerved.

XXXIV.

That the goods and eſtates of the ſubjects of the king of Great-Britain, that ſhall die without making a will in the dominions of the king of Spain, ſhall be put into inventory, with their papers, writings, and books of account, by the conſul or other public miniſter of the king of Great-Britain, and depoſited in the hands of two or three merchants that ſhall be named by the ſaid conſul, or public miniſter, to be kept for the proprietors and creditors; and neither the cruzada, nor any other judicatory whatſoever, ſhall intermeddle therein; which alſo in the like caſe ſhall be obſerved in England, towards the ſubjects of the king of Spain.

XXXV.

That a decent and convenient burial-place ſhall be granted and appointed to bury the bodies of the ſubjects of the king of Great-Britain, who ſhall die within the dominions of the king of Spain.

XXXVI.

If it ſhall happen hereafter that any difference fall out (which God forbid) between the king of Great-Britain and the king of Spain, whereby the mutual commerce and good correſpondence may be endangered, the reſpective ſubjects and people of each party ſhall have notice thereof given them in time, that is to ſay, the ſpace of ſix months, to tranſport their merchandize and effects, without giving them in that time any moleſtation or trouble, or retaining or embarking their goods or perſons.

XXXVII.

All goods and rights concealed or embarked, moveables, immoveables, rents, deeds, debts, credits, and the like, which have not with a formal notice of the cauſe, and by a legal condemnation, according to the ordinary juſtice, been brought into the royal exchequer at the time of concluding this treaty, ſhall remain at the full and free diſpoſal of the proprietors, their heirs, or of thoſe who ſhall have their right, with all the fruits, rents, and emoluments thereof; and neither thoſe who have concealed the ſaid goods, nor their heirs, ſhall be moleſted for this cauſe by the exchequers reſpectively; but the proprietors, their heirs, or thoſe who ſhall have their right, ſhall have for the ſaid goods and rights their action at law, as for their own proper goods and eſtate.

XXXVIII.

It is agreed and concluded, that the people and ſubjects of the king of Great-Britain, and of the king of Spain, ſhall have and enjoy in the reſpective lands, ſeas, ports, havens, roads, and territories of the one or the other, and in all places whatſoever, the ſame privileges, ſecurities, liberties, and immunities, whether they concern their perſons or trade, with all the beneficial clauſes and circumſtances which have been granted, or ſhall be hereafter granted by either of the ſaid kings, to the moſt Chriſtian king, the States General of the United Provinces, the Hanſe-Towns, or any other kingdom or ſtate whatſoever, in as full, ample, and beneficial manner, as if the ſame were patticularly mentioned and inſerted in this treaty.

XXXIX.

In caſe any difference or diſpute ſhall happen on either ſide concerning theſe articles of trade and commerce, by either the officers of the admiralty or other perſon whatſoever, in the one or the other kingdom; the complaint being preſented by the party concerned to their majeſties, or to any of their council, their ſaid Majeſties ſhall cauſe the damages forthwith to be repaired, and all things, as they are above agreed, to be duly executed; and in caſe, that in progreſs of time any frauds or inconveniencies be diſcovered in the navigation and commerce between both kingdoms, againſt which ſufficient prevention hath not been made in theſe articles, other proviſions may be hereafter mutually agreed on, as ſhall be judged convenient, the preſent treaty remaining ſtill in full force and vigour.

XL.

It is likewiſe accorded and concluded, that the moſt ſerene and renowned kings of Great-Britain and Spain, ſhall ſincerely and faithfully obſerve and keep, and procure to be obſerved and kept, by their ſubjects and inhabitants reſpectively, all and ſingular the capitulations in this preſent treaty agreed and concluded: neither ſhall they directly or indirectly infringe the ſame, or conſent that the ſame ſhall be infringed by any of their ſubjects or inhabitants. And they ſhall ratify and confirm all and ſingular the conventions before accorded by letters patent reciprocally, in ſufficient, full, and effectual form, and the ſame ſo formed and made, ſhall interchangeably deliver, or cauſe to be delivered faithfully and really, within four months after the date of theſe preſents; and they ſhall then, as ſoon as conveniently may be, cauſe this preſent treaty of peace and amity to be publiſhed in all places, and in the manner accuſtomed.

Dated at Madrid, the $\frac{12}{22}$ day of May, in the year of our Lord, 1667.

The form of letters which ought to be given by the towns and ſea-ports, to the ſhips and veſſels ſetting ſail from thence.

To all to whom theſe preſents ſhall come, We the governor, conſuls, or chief magiſtrate or commiſſioners of the cuſtoms, of the city, town, or province of N. do teſtify and make known, That N. N. maſter of the ſhip N. hath before us, under ſolemn oath declared, That the ſhip N. of tun (more or leſs) of which he is at preſent maſter, doth belong to the inhabitants of N. in the dominions of the moſt ſerene king of Great-Britain. And we, deſiring that the ſaid maſter may be aſſiſted in his voyage and buſineſs, do intreat all perſons in general and particular, who ſhall meet him, and thoſe of all places where the ſaid maſter ſhall come with the ſaid ſhip and her merchandize, that they would admit him favourably, treat him kindly, and receive the ſaid ſhip into their ports, bays, havens, rivers, and dominions, permitting her quietly to ſail, paſs, frequent, and negociate there, or in any other places, as ſhall ſeem good to the ſaid maſter, paying ſtill the toll and cuſtoms which of right ſhall be due, which we will acknowledge gratefully upon the like occaſions. In witneſs whereof, we have ſigned theſe preſents, and ſealed them with the ſeal of our town.

Don PEDRO FERNANDEZ, del campo y Angulo.

WILL. GODOLPHIN.

REMARKS.

The foregoing treaty of 1667, was ſigned May 23, and the next day Sir W. Godolphin, who was ſecretary to our embaſſy, and who was the chief contriver of that treaty, wrote thus to lord Arlington: 'The treaty of commerce, I dare promiſe your lordſhip, comprehends not only all the privileges 'and advantages which this crown hath ever granted to any 'other ſtate or people, but likewiſe ſome conveniencies 'which it hath never yet permitted to any other; for the 'better ſecurity and perfection whereof, I have diligently 'peruſed all the treaties theſe people have made with others, 'and all the royal cedulas they have granted in favour of any 'particular factories: and have not received from our factories any grievance or propoſition of advantage in their commerce to be either remedied or procured for them, which 'we think is not ſufficiently provided for in this treaty.'

And in another letter to his brother, May 25, he ſays, 'I 'will only ſay to you in general of the treaty of commerce, 'That beſides all the freedoms and advantages of trade, 'which this crown hath granted to any other ſtate, we have 'thereby ſeveral conceſſions and conveniences, whereof we 'find no example in their articles with any other. And I 'think they have not made any other theſe hundred years, 'which I have not learned as my leſſon, in order to the 'treating and perfection of this.'

Sir William Godolphin might ſay this, and the world will believe him, ſince after that treaty we paid no more than the moderate duties above mentioned; and ſince the privilege of a judge-conſervator, without which we cannot trade with any ſecurity in that country, and which was only granted before by royal cedulas to our merchants, and might have been revoked by the king, was confirmed to us by that treaty.

This treaty, and that of 1670, [ſee SPANISH AMERICA] being the principal foundation of all ſubſequent treaties that have been made between Great-Britain and Spain, we have judged it eligible to take due notice thereof.

In order to judge the more circumſtantially of the commerce of Spain, and of the political regulations of that kingdom for exerciſing the ſame, and the benefits and advantages to which Great-Britain is entitled, and alſo the preſent turn, views, and ſpirit of the Spaniſh court, in regard to the advancement of their commerce and navigation: ſee the articles ALMOXARISFARGO, ANDALUSIA, BISCAY, CASTILLE,

TILLE, CATALONIA, CORSICA, FACTORS, FISCAL, GRATIA's, MEDITERRANEAN. — See alſo the article SPANISH AMERICA, and the other articles referred to from thence.

Of the FOREIGN EXCHANGES of SPAIN, particularly between MADRID and other principal trading cities of EUROPE.

Many errors have been committed by authors, in relation to the monies of Spain. La Banque renduë facile, upon this ſubject, ſays, in treating of the monies of Spain, that there is 25 per cent. difference between the PLATE MONEY there and the VELLON: but if his commerce had led him to a correſpondence either at Madrid or Cadiz, he would have been acquainted with the two augmentations that Philip V. made there, and that a rial vellon is worth there 8 ½ quarts copper money, ſo that the rial of old plate of exchange money, is worth 16 vellon, and the effective rial of new plate 17; which makes a difference between theſe two ſpecies of rials, as 32 is to 17; that is to ſay, 53 ⅛ per cent. for 100 rials vellon, are worth only 53 ⅛ rials of old plate: as this is the true ſtate of the caſe, it follows, that La Banque renduë facile is miſtaken.

By the word plate is meant ſilver money, whereby muſt be underſtood the money in which ſome merchants keep their accounts; and it is to that is given the name of old plate, which only is uſed for the negociation of the exchanges with foreign places: it is imaginary, as the exchange crown of France, or the livres, ſols, and deniers Tournois, or as the pound ſterling of England; but as it is requiſite in trade to underſtand the reduction of one ſort of money into the other, we ſhall give the inſtruction proper for that purpoſe.

Uſance is reckoned at Madrid, for bills of exchange, of France, Amſterdam, and all Holland, London, Hamburgh, Leghorn, Genoa, Venice, and almoſt of all the trading cities of Europe, 60 days, excluſive of the date; after the expiration of which time there are allowed 14 days grace: Cadiz allows but 6 to bills drawn out of the kingdom of Spain; but to inland bills, there are 14 days grace allowed; after which bills are proteſted for non-payment.

The foreign bankers or remitters at Madrid, Cadiz, Seville, &c. keep their commercial accounts in rials and marvedees old plate.

The ſhopkeepers of Madrid, the cuſtomhouſes, and the tenants of the kingdom, keep their accounts in rials and marvedees vellon, which are called in France billon.

The merchants of Valentia in Spain, keep theirs in piaſtres, ſols, and deniers, which are divided into 20 and 12, as our pound ſterling is into ſhillings and pence.

The piſtole, or doublon of exchange, is 4 piaſtres, or 32 rials exchange.

The piaſtre, or peſo of exchange, is 8 rials exchange, or old plate.

The rial is 34 marvedees, or 16 quarts.

The ducat, or ducado current, is 11 rials, old plate, or 374 marvedees.

The ducat of exchange is 20 ſols d'or, or, for facility of computation, 375 marvedees, or 11 rials 1 marvedee old plate.

The ſol d'or is 12 deniers d'or.

The ſaid piaſtre of exchange, is alſo reckoned at 15 rials vellon and 2 marvedees, or 128 quarts. And,

The rial vellon 34 marvedees vellon, or 8 ½ quarts, effective copper money, in which a bill of exchange is paid at Madrid, if the foreign drawer, or any other does not take care to ſtipulate the payment to be made either in gold or ſilver, whereby there will enſue a loſs to the bearer of the bill of about 1 ½ per cent.

The piſtole of gold, worth 40 rials of 16 quarts, is in France of the ſtandard of 22 carrats, and weighs there 126 grains.

The piaſtre with two globes, worth 170 quarts, is in France of the ſtandard of 10 deniers 19 ½ grains, and weighs there 507 grains.

The METHOD

Of reducing rials vellon, into rials of exchange, or old plate; thoſe into piaſtres of exchange, and thoſe again into rials vellon; piaſtres effective, into rials of exchange, and thoſe into rials vellon; and for underſtanding of the reciprocal values of the ſaid monies between each other.

5005 Rials 16 marvedees vellon, to be multiplied
By 8 ½ quarts, the value of each of thoſe rials.

40040
2502 ½ for the ½.
4 for the 16 marv. 4 marv. vell. making the quart.

42546 ½ Quarts, to be divided by 16 quarts, the value of the rial, or which is more facile take ¼ of ¼ = 1/16, it will give
2659 Rials 5 marved. plate. or exchange: take the ⅛ thereof, and it will give
332 Piaſtres 3 rials, 5 marv. of plate; multiply theſe
By 15 Rials 2 marv. vellon, another value of the piaſtre [of exchange.

1660
332
4980

4980 [Brought over.]
19 : 18 for the 2 marvedees, i. e. for 664 marvedees.
3 : 26 for 2 rials, the ¼ of the multiplicator.
1 : 30 for 1 rial, the ⅛ of that.
0 : 10 for 5 marvedees of plate.

Rials 5005 : 16 marvedees vellon, the ſame as above.

250 Piaſtres effective, 2 rials 12 ½ quarts, alſo effective
At 10 Rials 10 quarts or 5/8, val. of the ſaid piaſt. [or real.

2500
125 for 8 quarts, or ⅛ the ½ of 250.
31 8/32 for ditto, or ⅛ the ¼ of that.
2 4/32 for 2 rials
2 5/32 for 12 ½ quarts } real or effective.

2659 5/32 Rials old plate, the ſame as above, to be multip.
By 16 Quarts, value of the ſaid rial.

15954
2659
2 for 4/32,
½ for 1/32 the ¼ of the 4.

42546 ½ Quarts, as above, to be divided by 8 ½ quarts, the value of the rial of vellon, it gives the 5005 rees, 16 marvedees vellon, as above.

Of the COURSES of EXCHANGE.

MADRID

Upon	Gives		To receive	
Lyons	1 piaſtre exchange,	for	75 ſols Tournois	more or leſs.
Milan	1 ditto	for	100 ſols cur. mon.	more or leſs.
Meſſina	3¼ dit. more or leſs,	for	1 oz. of 30 tarins	more or leſs.
Vienna	190 mar. more or leſs,	for	1 florin of 60 kreutzers.	
Venice	350 ditto, idem,	for	1 ducat of 124 ſoldi ban.	
Geneva	360 ditto, idem,	for	1 crown current money.	

Suppoſe that I am to pay to my correſpondents of the following cities, what I am indebted to them, by remitting to each, according to the courſe of exchange, a bill of exchange, in money of their reſpective countries, I would know what thoſe ſeveral remittances ought to be, according to the following ſums due to my correſpondents, viz.

Courſe of Exchange.

	Rials	Mar	
Of Paris, - - 83 piſtoles	3	:	at 15 liv. 1 ſol the piſtole of 32 rials.
Amſterdam, 7035 rials	——	3	at 97 ¼ d. gros per 1 duc. of 375 mar.
Hamburgh, 7626	——	28	at 93 ¼ gros per idem.
London, - 1387 piaſt.	:	3	at 41 ⅝ d. ſterl. per piaſtre of 8 rees.
Genoa, - 542	5	17	at 133 piaſt. of 8 rees per 100 of 5 lires.
Leghorn, - 425	6	——	at 123 ditto per 100 of 20 ſol d'or.
Rome - 8200 rials	——	——	at 550 marv. per crown d'eſtampe.
Naples, - 6540	——	——	at 300 ditto per ducat of 10 carlins.
Liſbon, - 6647	——	18	at 830 rees per ducat of 375 marv.

Of the EXCHANGE of SPAIN upon FRANCE.

To reduce 83 piſtoles, 3 rials, 5 marvedees of Spain, into livres, ſols, and deniers Tournois, of France, exchange at 15 livres 1 ſol per piſtole of 32 rials of old plate.

OPERATION.

83 piſtoles, 3 rials, 5 marvedees, to be multiplied
By 15 livres 1 ſol of exchange,

415
83

4 liv.	3 ſol.	0 den.	for 1 ſol,	the 1/20 of 83 piſtoles,
0	18	9	for 2 rials,	the 1/16 of the exchange,
0	—	4	for 1 rial,	the 1/32 of that,
0	1	4	for 5 mar.	the ⅐ of the rial,

1250 liv. 12 ſol. 5 den. for which the draught muſt be made upon Paris.

INSTRUCTION.

Multiply the 83 piſtoles, 3 rials, and 5 marvedees, by the price of exchange, and the product 1250 livres, 12 ſols, 5 deniers, will be the ſum to receive at Paris.—For the proof of which, reduce the 1250 livres, 1 ſol, by 80 liards, or ¼ of ſols, the value of the livre, and divide the two products, 100,051, and 1204, the one by the other, and you will have a quotient of 83 piſtoles, and 119 remaining, to be multiplied by 32 rials, the value of the piſtole; and dividing the ſame by the common diviſor above, it will give 3 rials, and 196 for a remainder, to be multiplied by 34 marvedees, the value of a rial; and dividing again, you will have the 5 marvedees old plate to receive at Spain.

If I had due at Lyons 83 piſtoles, 3 rials, and 5 marvedees, and would reduce them into piaſtres, multiply them by 4 piaſtres, the value of the piſtole, and you will have, as below, 332 piaſtres, 3 rials, 5 marvedees, to be multiplied by 75 $\frac{1}{4}$ ſols Tournois, and the product will be 25,012 ſols, 5 deniers, and dividing the ſame by 20, it will produce 1250 livres, 12 ſols, 5 deniers.

EXAMPLE.

83 piſtoles, 3 rials, 5 marv.
4 piaſtres

332 piaſtres, 3 rials, 5 marv.
at 75 $\frac{1}{4}$ ſols Tournois of exchange

1660
2324
83 for $\frac{1}{4}$
18.9 for 2 rials the $\frac{1}{4}$
9.4 for 1 rial the $\frac{1}{8}$
1.4 for 5 mar. the $\frac{1}{7}$ of a rial } of exchange

2|0)2501|2 ſol. 5 den.

1250 liv. 12 ſol. 5 den. the ſame as above.

Exchange upon Paris 15 liv. 1 ſol
20

Exchange upon Lyons 75 $\frac{1}{4}$ ſols.

Of the EXCHANGES of SPAIN upon HOLLAND.

To reduce 7035 rials, 3 marvedees, old plate, i. e. of 16 quarts each, into florins, ſols, and pennings, bank money of Amſterdam, exchange at 97 $\frac{1}{4}$ deniers gros per ducat of 375 marvedees, alſo of old plate.

OPERATION.

7035 rials, 3 marv. to be multiplied
By 34 marv.

28140
211053

239193 marv. to be divided by 375, gives
637 ducats, 17 ſols, 2 deniers,
97 $\frac{1}{4}$ deniers gros, exchange,

4459
5733
159 $\frac{2}{8}$ for $\frac{1}{4}$ of 637 ducats,
48 $\frac{5}{8}$ for 10 ſols, the $\frac{1}{2}$
24 $\frac{2}{8}$ for 5 ſols, the $\frac{1}{4}$
9 $\frac{5}{8}$ for 2 ſols, the $\frac{1}{10}$ } of the exchange.

$\frac{1}{4}$|0)6203|1(

1550 : 15 ſols, 8 penings, banco, for which ſum the draught muſt be made on Amſterdam.

INSTRUCTION.

Reduce the 7035 rials, 3 marvedees, into marvedees, by multiplying them by 34 marvedees, the value of a rial, adding thereto the 3 marvedees, and divide the product by 375 marvedees, the value of the ducat, which gives a quotient of 637 ducats, and a remainder of 318, which being multiplied by 20, and divided as before, gives 17 ſols, with a further remainder of 85, which multiplied by 12, and divided alſo as before, gives 2 deniers.
Multiply theſe 637 ducats, 17 ſols, 2 deniers, by the price of exchange, of 97 $\frac{1}{4}$ deniers gros, and divide by 40, the deniers in a florin, and the remainder will be 31 deniers, the $\frac{1}{2}$ of which is 15 ſols, or ſtivers, to be received in bank money of Amſterdam; for the proof of which ſee the article HOLLAND, for the exchange on SPAIN.

Of the EXCHANGE of SPAIN upon HAMBURGH.

To reduce 7646 rials, 28 marvedees old plate of Spain, into marks, ſol, and pennings lubs, bank money of Hamburgh, exchange at 93 $\frac{1}{2}$ gros, per ducat of 375 marvedees of Spain.

OPERATION.

7646 rials, 28 marv.
34 marv.

1125 129996

12000 gros, divifor)24309252(gives 2025 marks, 12 ſols, 4 penings, bank money, for which the draught muſt be made.

INSTRUCTION.

Reduce the 7646 rials, 28 marvedees, into marvedees, by multiplying them by 34 marvedees, the value of a rial, and multiply the product, 259992 marvedees, by the price of exchange, 93 $\frac{1}{2}$ gros, it will produce 24309252 gros for a dividend.—Multiply alſo the 375 marvedees, the value of a ducat, by 32 gros, the value of a mark lubs, and it will give 12000 gros for a diviſor, and a quotient of 2025 marks lubs, with a remainder of 9252, to be multiplied by 16 ſols, the value of the mark, and dividing by the ſame, it gives 12 ſols lubs, and a further remainder of 4032, to be multiplied by 12 penings, the value of a ſol, and ſtill dividing by the ſame, it gives 4 penings bank money, to receive at Hamburgh; for the proof of which operations, ſee the article HAMBURGH.

Of the EXCHANGES of SPAIN upon ENGLAND.

To reduce 1387 piaſtres (of 128 quarts) 3 rials, 3 marvedees, of Spain, into pounds, ſhillings, and pence ſterling of England, exchange at 41 $\frac{5}{8}$ pence ſterling per piaſtre.

OPERATION.

1387 piaſtres, 3 rials, 3 marvedees, to be multiplied
By 41 $\frac{5}{8}$ pence ſterling, the exchange price.

1387
5548
693 $\frac{4}{8}$ for the $\frac{1}{2}$
173 $\frac{4}{8}$ for the $\frac{1}{8}$ } of 1387
10 $\frac{3}{8}$ for 2 rials the $\frac{1}{4}$
5 $\frac{1}{8}$ for 1 rial the $\frac{1}{8}$ } of the exchange
$\frac{4}{8}$ for 3 marv.

57750 deniers, to be div. by 12 and 20, give 240l. 12s. 6d. ſterling money, for which the draught muſt be made upon London.
This is ſo eaſy that it needs no inſtruction.

Of the EXCHANGE of SPAIN upon GENOA.

To reduce 542 piaſtres (of 128 quarts each) 5 $\frac{1}{2}$ rials of old plate of Spain, into piaſtres of 5 lires, bank money of Genoa, exchange at 133 of the ſaid piaſtres of Spain per 100 of the ſaid piaſtres of Genoa.

OPERATION.

If 133 piaſt. of Sp.=100 of Gen. what are 542 piaſt. 5 $\frac{1}{2}$ rials?
8 100

1064 diviſor. 54200
50 for 4 ri. $\frac{1}{2}$

6.2 for $\frac{1}{2}$ ri. $\frac{1}{16}$

54268.6
8

434150, to be divid. by 1064, gives 408 piaſtres, 8 $\frac{1}{2}$ deniers d'or in bank, for which the draught muſt be made on Genoa.—And 408 : 8 $\frac{1}{2}$
5

2040 lires,
3 $\frac{1}{2}$ ſols of bank.—For proof hereof ſee the article GENOA.

Of the EXCHANGE of SPAIN upon LEGHORN.

To reduce 425 piaſtres, 6 rials, old plate of Spain, into piaſtres of 20 ſols d'or of Leghorn, exchange at 129 piaſtres of Spain per 100 of the ſaid piaſtres of Leghorn.

OPERATION.

If 129 piaſt. of Spain give 100 of Leghorn, what will 425 $\frac{3}{4}$?
100

42500
50
25

42575
to be divided by 129, gives 330 piaſtres, 9 deniers d'or, for which the draught muſt be made on Leghorn.

Of the EXCHANGE of SPAIN upon ROME.

To reduce 8200 rials, of old plate of Spain, into Roman crowns, of 10 Julio's, exchange at 550 marvedees of Spain per crown d'eſtampe of 15 Julio's of Rome.

OPERATION.

OPERATION.

5500 Julio's

278800 mar.
15 Julio's

1394000
278800

)4182000 Julio's, to be divided by 5500, gives 760 Roman crowns, 3 Julio's, 6 bayocks, for which the draught muſt be made upon Rome.

INSTRUCTION.

Reduce the 8200 rials into marvedees, by multiplying them by 34, the value of a rial; multiply alſo the product, 278880 marvedees, by 15 Julio's, the value of a crown d'eſtampe, and you will have 4182000, for a dividend.—Multiply, ſeparately, the price of exchange, 550 marvedees, by 10 Julio's, the value of the Roman crown, and you will have 5500 for a diviſor; and the one being divided by the other, will give a quotient of 760 Roman crowns, and 20 for a remainder, which multiplied by 10 Julio's, the value of the ſaid crown, and divided as before, it will give 3 Julio's, with a further remainder of 35; which again multiplied by 10 bayocks, the value of the Julio, and divided as before, it produces 6 bayocks, to receive at Rome.

Of the EXCHANGE of SPAIN upon NAPLES.

To reduce 6540 rials, old plate, or of 16 quarts of Spain, into ducats, carlins, and grains, of the kingdom of Naples, exchange at 300 marvedees of plate per ſaid ducat of 10 carlins.

OPERATION.

6540 rials, to be multiplied
By 34

26160
19620

222360, to be divided by 300, gives 741 ducats, 2 carlins, for which the draught muſt be made on Naples.

Of the EXCHANGE of SPAIN upon PORTUGAL.

To reduce 6647 rials, 18 marvedees, old plate, into cruſadoes and rees of Portugal, exchange at 830 rees per ducat of 375 marvedees of Spain.

OPERATION.

187593280, to be divided by 150000, gives 1250 cruſadoes, 248 rees, for which the draught muſt be made on Liſbon.

In regard to the weights and meaſures of Spain, and their conformity with thoſe of the principal trading cities of Europe, ſee the article ENGLAND, Vol. I.

SPANISH AMERICA. It was in the time of the emperor Charles V, the firſt king of Spain of that name, that, as the hiſtories of that prince obſerve, the greateſt news arrived to him that ever any one monarch received in a day, ſince the creation of the world; namely, the diſcovery and conqueſt not of a kingdom only, or an empire, but of a new world, which abounded with ſuch immenſe treaſure, that all the Chriſtian world before was not equal to.

In confirmation of this ſuprizing news, Ferdinando Cortez, his general, (whom the emperor, as king of Spain, had ordered upon this expedition) ſent him two ſhips loaded with ſilver, gold, pearl, emeralds, &c. to ſuch a prodigious ſum, that the emperor himſelf could hardly give credit to his ears in the report, or to his eyes when he ſaw the maſs of treaſure.

Succeeding ſhips returning one after another, brought incredible quantities of treaſure, as Cortez, the general, being ſupplied with more forces, extended his conqueſts, 'till the kingdom or empire of Peru was added to that of Mexico, with the inexhauſtible mines of Potoſi; after that the kingdom of Chili, rich in gold, as the other in ſilver. This ſucceſs ſo increaſed both the wealth and dominion of the Spaniſh monarchy, that they have ever ſince been lords of America, and of the chiefeſt empire and kingdoms in that great part of the world.

The Spaniards having ſubdued the country, and rooted out the inhabitants, began ſoon to plant colonies, eſtabliſh governments, and ſettle nations in all that part of the world: and though the Engliſh and French have followed their example more north, and both poſſeſs ſome few iſlands beſides, yet their poſſeſſions in America, compared with thoſe of Spain, bear no great proportion to them. As our acquiſitions there were in the northern parts, where the air was cold and inclement, the ſoil over-run with woods, the ſeas frozen, and the people fierce, the Spaniards thought that part of America not worth taking, having ſo great a poſſeſſion before in the more temperate, warm, and fruitful parts.

Upon the ſettlement of the Spaniards in theſe new conqueſts, and experiencing ſtill the increaſing wealth out go even their higheſt expectations, it ſoon put them upon eſtabliſhing laws of commerce, as well as government, in order to preſerve not the poſſeſſion of the country only, for that they did by ſending over a competent military force, but to ſecure the commerce to themſelves at home, and to prevent any other nation from breaking in upon it, and inriching themſelves by it, at their expence.

To this end, the firſt regulation as a law of property (and which all other nations trading to America have ſince imitated them in) was, that they would ſuffer no ſhips from any other nation to trade to their new colonies, or to enter into their ports, nor any ſhips from thence to return to any other country but Old Spain, from whence they came: in a word, that they would have the whole trade to and from their colonies in New Spain center in Old Spain, which it does to this day, except ſuch part as is carried on illicitly by other nations.

In purſuance of theſe meaſures, the king of Spain erected, in the year 1513, a council of commerce for the Indies at Seville, for regulating this trade; and the king his ſucceſſor, in the year 1556, erected a royal court of juſtice, for determining all controverſies relating to this traffic.

By virtue of theſe regulations, and their ſtrict obſervance, the ſtate of this trade is punctually kept up to the firſt intention of the emperor's council to this day, and is, perhaps, the beſt-eſtabliſhed commerce in the world. Some, among many others, of thoſe prudent and politic regulations, are as follow:

I. No ſhips are allowed to go to any of the king of Spain's dominions in America, without ſpecial licence from him, which licences are iſſued out at his court, or chamber of commerce at Seville, as above.

II. No foreigner, or ſtranger, is allowed to go to the ſaid New Spaniſh dominions in America, in any of the ſaid licenſed ſhips, upon any terms whatſoever, whether to ſettle in the ſaid Weſt-Indies, or only to trade there, Iriſhmen only excepted, and thoſe to be all Roman Catholics.

III. No perſon whatever, though he were a Spaniard born, and the king of Spain's ſubject, can go to the Spaniſh Weſt-India dominions without ſpecial licence, to be obtained at the ſaid Contractation-Office, that is to ſay, without licence from the king.

Theſe fundamentals being previouſly eſtabliſhed, there are then certain limitations to the numbers of ſhips, and the quantity of goods, that is to ſay, the tonnage, or burthen, they ſhall carry, which is always in the breaſt of the members of the Caſa de Contractation, becauſe the quantity of goods ſent ſhould not exceed the demand, and, conſequently, glut the markets, and alſo abate the price, and the profits of the trade; likewiſe it is regulated there, at what times the ſeveral fleets of ſhips ſhall go out, and to what ſeveral places, and when they ſhall be obliged to come away, in order to their return. It is alſo regulated, That all the ſilver, or gold, or jewels, which ſhall be brought over, for whoſe particular private intereſt ſoever it be, ſhall be regiſtered and entered in the ſhip's books of every ſhip, and likewiſe in a general regiſter, in the port from whence the ſhip comes; where alſo it is to be ſeen, and duplicates of which are tranſmitted to the ſaid council at Seville.

As no perſon is allowed to go to New Spain without licence, ſo no religious, no eccleſiaſtics of any kind, are permitted to come back in any of thoſe ſhips, without licence from the ſuperior of the order to whom they belong.

Some particular goods are not permitted to be laden in Old Spain in any of the ſhips, though thoſe ſhips are licenſed to go, thoſe goods being reſerved to the king to export thither in his own name, or to give licence to others to do it; without which licence the ſaid goods are not only prohibited, but forfeited, if taken.

The manner of the fleets going.

The firſt fleet is called the galleons, or galloons: theſe are generally ſeven ſhips, but may be increaſed as the king or the Caſa de Contractation, that is, the Council of Commerce, ſee fit; and they go from Old Spain to and from Carthagena and Porto-Bello, and no where elſe; neither are they allowed to go any where elſe, if they could do it. How often

or

or ſeldom ſoever the galleons go out, the next fleet of galleons never go out 'till the laſt are returned.

The next fleet is called the flota: theſe go to La Vera Cruz, or Crux; they have no ſet time of going out, but the merchants ſend them as the Chamber of Commerce directs, and they give their directions as they ſee the trade calls for it, and as the merchants by their petition, repreſenting the occaſion, can obtain leave.

The ſhips to Buenos Ayres are not to be called a fleet, being ſeldom above two ſhips, and never above four; and do not uſually go out above once in two or three years; and they are generally out two, three, or four years, every voyage.

The Azoga ſhips, vulgarly called the quickſilver ſhips, are ſo called becauſe they carry quickſilver, or mercury, by which the ſilver is wrought and refined in the mines; but not, as ſome think, that they ſhould be loaden with quickſilver.

They are not, ſtrictly ſpeaking, to carry any goods but in particular for the king's account; but they are generally full loaden, notwithſtanding the firſt regulation, and the merchants get ſpecial licences of the king to load, and they generally pay large ſums for thoſe licences.

Note, theſe carry quickſilver and fruit, or ſpice, for the king's account, and ſometimes military ſtores and arms for the forces there; as alſo iron, which is called the king's merchandize: there are alſo petaches, ſent at uncertain times. Theſe are generally but two, and are called advice-boats, becauſe they are ſent either to give advice to the Weſt-Indies of their ſhips being arrived at Old Spain, or of the departure of the fleets, when they have a ſet time determined. Theſe petaches were generally ſmall veſſels and barks, which were diſpatched merely for ſailing; but now the merchants ſtriving to get leave to ſhip goods upon them, they are generally about 350 tons burthen each.

N. B. When the ſhips to Buenos Ayres arrive there, they are to give notice to the governor of the time they intend to depart for Europe; and being obliged to bring back any goods for the king gratis, the notice they are to give to the governor is for him to get ready the king's goods, and is to be given two months before they are to come away: if he neglects it, they may come without it.

When the ſhips go out for New Spain, they go directly, the galleons to Carthagena, and the other ſhips to La Vera Cruz: but, when they come back, they go to the Havannah, and ſtay 'till they get all together, and then beating through the gulph of Florida 'till they come to the height of St Auguſtine, or perhaps to South Carolina, they ſteer away together for Old Spain.

All this commerce, under theſe regulations, and managed as has been ſaid, uſually centered at Seville, now at Cadiz; and it is no wonder that Seville, with the weight of ſo great an affair tranſacted in it, was become rich and populous; no wonder they have ſuch magnificent buildings, and that the exchange for the merchants, as ſome tell us, coſt king Philip II. 950,000 crowns in ready money.

Some have attempted to make calculations of the magnitude and value of this great trade to the Spaniards; but it is not eaſy to be done with accuracy. If the account taken out of the regiſters of the ſaid council of trade may be depended on, it is a prodigy in itſelf, nor can I venture to vouch the truth of it; but they tell us, that, according to the books of that court, from the year 1519, to the year 1619, incluſive, being the firſt hundred years of the trade, the value entered, or regiſtered, beſide all private trade, was 5000 millions, in gold, ſilver, pearl, jewels, and other merchandize, though, for the firſt twenty years, very little was brought; ſo that it was called eighty years, not an hundred.

There is now paſſed above another century, and, if the former account was true, I am perſuaded the amount muſt be extremely increaſed ſince.

For more matter relating to the commerce of SPANISH AMERICA, ſee the articles ACAPULCO, AMERICA, ARMADA, ASSIENTO CONTRACT, ACAPULCO, AZOGA SHIPS, DIRECTION CHAMBER, FLORIDA, FLOTA, GALLOONS, GAUGING of SHIPS, INDIA-HOUSE of SPAIN, INDULTO, LOGWOOD TRADE, MEXICO, PERU, MUSKETO-COUNTRY, PARAGUAY, PERU, REGISTER SHIPS, SOUTH SEA COMPANY.

A TREATY between GREAT-BRITAIN and SPAIN about accommodating differences, preventing depredations, and ſettling a peace in AMERICA: concluded at MADRID, July $\frac{8}{18}$, 1670.

Foraſmuch as the good underſtanding and correſpondence between the Engliſh and Spaniſh nations have been interrupted in America, the moſt ſerene and moſt potent prince, Charles the Second, king of Great-Britain, &c. in order to re-eſtabliſh and regulate the ſame for the future, hath diſpatched Sir William Godolphin his envoy extraordinary into Spain, with full power and authority to conclude ſuch a treaty as ſhall be proper and ſuitable to theſe ends: and that, in like manner, the moſt ſerene and moſt potent prince, the king of Spain, &c. and the queen-regent, Mary Anne, &c. in order to promote ſo good a work, and ſo advantageous to the public, have, on their part, appointed the count de Pegnaranda, counſellor of ſtate, and preſident of the Indies, to confer about, treat, and conclude that affair: they have at laſt mutually ſettled and agreed upon theſe following articles by virtue of their commiſſions.

I. In the firſt place, the ſaid plenipotentiaries, Sir William Godolphin, and the count de Pegnaranda, have in the names of the moſt ſerene kings their maſters agreed, That the articles of peace and alliance made between the crowns of Great-Britain and Spain, at Madrid, the $\frac{13}{23}$ of May, 1667, nor any clauſe therein, ſhall any ways be revoked or be underſtood to be void, or annulled by this treaty, but that the ſame ſhall always continue in their former force, virtue, and power; provided it may be not contrary and repugnant to this convention and articles, or any thing that is contained in them.

II. That there ſhall be an univerſal peace, and a true and ſincere friendſhip in America, as well as in other parts of the world, between the moſt ſerene kings of Great-Britain and Spain, their heirs and ſucceſſors, and between their kingdoms, plantations, eſtates, colonies, forts, towns, iſlands, and territories, without any diſtinction of places belonging to the one or to the other, and between the people and inhabitants in their reſpective dominions, which ſhall for ever endure, and commence from this day, and be inviolably obſerved, as well by land as ſea, and on freſh waters, ſo as that they are to promote the good and proſperity of one another, and to favour and aſſiſt each other with mutual returns of friendſhip, that ſo the offices of good neighbourhood and amity may be diſcharged and augmented amongſt them in all places, as well in thoſe remote countries, as in thoſe nearer home.

III. That alſo, for the future, all enmities, hoſtilities and diſſentions between the ſaid kings, their ſubjects and inhabitants may ceaſe, and be quite laid aſleep, and that both parties do hinder and abſtain from all manner of pillaging, depredations, injuries, and annoyances, as well by land as ſea, and on freſh waters, be they where they will.

IV. The ſaid moſt ſerene kings are to take care that their ſubjects do alſo forbear all acts of violence and hoſtility, and to call in all commiſſions, letters of marque and reprizal; and that they do not otherwiſe give leave to take any prizes, of what nature or kind ſoever they be, to the prejudice of either of the ſaid two kings, or their ſubjects, whether they have been given or granted by them, to their own ſubjects or inhabitants, or to ſtrangers; but are to declare them to be null and of no effect, as they are ſo declared by this treaty. And whoever ſhall act any thing to the contrary, ſhall not only be puniſhed as a criminal, according to the nature of his offence; but ſhall alſo be obliged to make reſtitution and reparation for the loſſes the injured parties have ſuſtained and require of them.

V. Moreover, the ſaid kings renounce, and they have by theſe preſents both of them renounced, and do renounce, all leagues, confederacies, capitulations, and intelligence, had in any manner whatſoever, to the prejudice of one another, that is or may be repugnant to this peace and treaty, and every thing that is contained therein; all and every ſuch clauſes, ſo far as they may reach to the ſaid effect, being annulled and made void, and declared to have no force or virtue in them.

VI. The priſoners, of what ſtate or condition ſoever they be, which are detained by reaſon of any acts of hoſtility hitherto committed in America, ſhall forthwith be ſet at liberty, without any ranſom, or any manner of conſideration for their enlargement.

VII. All offences, damages, loſſes, and injuries, which the nations and people of Great-Britain and Spain may at any time whatſoever, 'till now, have ſuffered on either ſide in America, be the cauſe or pretence what it will, ſhall be utterly effaced and buried in oblivion, in ſuch manner as if the ſame had never happened.

Moreover it is agreed, that the moſt ſerene king of Great-Britain, his heirs and ſucceſſors, ſhall have, hold, keep, and always poſſeſs, in full right of ſovereignty, ſigniory, poſſeſſion, and propriety, all the lands, countries, iſlands, colonies, and other places, be they what they will, lying and ſituate in the Weſt-Indies, or in any part of America, which the ſaid king of Great Britain and his ſubjects now hold and poſſeſs; inſomuch that they neither can nor ought hereafter to be conteſted or called in queſtion for them, upon any account, or under any pretence whatſoever.

VIII. The ſubjects, inhabitants, merchants, captains, maſters of ſhips, and the mariners of the kingdoms, provinces, and territories of each ally reſpectively, ſhall forbear and abſtain from ſailing to, and trafficking in, the ports and havens that have fortifications or magazines, and in all other places poſſeſſed by the other party in the Weſt-Indies: that is, the ſubjects of the king of Great-Britain are not to navigate, nor to traffic in the havens and places that are in the poſſeſſion of the Catholic king in the ſaid Indies; neither are the ſubjects of the king of Spain to navigate, or traffic in the places poſſeſſed therein by the king of Great-Britain. But if, at any time, either of the kings ſhall think it proper to grant the other's ſubjects any general or particular leave or privileges, to ſail to, and traffic in, any of the places under his obedience, the ſaid traffic and navigation ſhall be exerciſed and maintained,

tained, according to the form, tenor, and effect of the ſaid permiſſions or privileges, given and granted to them; for the ſecurity, guaranty, and authority whereof, this preſent treaty and the ratification of it ſhall ſerve.

X. It is alſo agreed, that in caſe the ſubjects and inhabitants belonging to either of the two allies, and their ſhips, whether they be men of war or merchants ſhips, and ſuch as belong to private perſons, ſhould at any time be forced by ſtorm, purſuit of pirates and enemies, or by any other accident whatſoever, to retire and enter into any of the rivers, creeks, bays, havens, roads, and ports, belonging to the other in America, in order to have protection and refuge, they ſhall be received and treated there with all manner of humanity and civility; have all the protection and aſſiſtance of friends, and they ſhall be allowed to refreſh themſelves, and be at liberty, at a reaſonable and the common price, to buy proviſions and other neceſſaries, whether it be for the ſupport of their perſons, or for repairing their ſhips, and the conveniency of their voyages: and they ſhall no manner of way be retarded or hindered to go out of the ſaid ports or roads; but they may do it whenever they have a mind to it, without any let or moleſtation.

XI. In like manner, if any of the ſhips belonging to either one or the other of the allies, their people and ſubjects, ſhall run upon ſand-banks, or be ſhip-wreck'd (which God forbid) within the bounds of the coaſts or dominions of the other, or ſuffer any damage there; the perſons that ſhall be ſhipwrecked, or thrown a-ſhore, ſhall by no means be detained priſoners: but, on the contrary, all manner of aſſiſtance and ſuccour ſhall be given them upon ſuch accidents, and they ſhall have paſſports granted for their return, and free and peaceable paſſage of all of them to their own country.

XII. But when it ſhall ſo happen, that the ſhips, either of the one or the other party, as aforeſaid, ſhall be forced into the ports and havens of the other, through the perils of the ſea, or ſome other urgent neceſſity; in caſe they are three or four together, and may give juſt grounds of ſuſpicion, they are, as ſoon as they arrive there, to let the governor, or the chief magiſtrate of the place, know the cauſe of their coming, and to tarry no longer there, than the ſaid governor or chief magiſtrate will give them leave, and that it ſhall be neceſſary to ſupply themſelves with proviſions, and refit their ſhips; and they are ever to abſtain from putting any wares or bales of goods a-ſhore, to expoſe them to ſale; neither are they to receive any merchandize on board, or do any thing that is contrary to this treaty.

XIII. Both parties are ſincerely and inviolably to obſerve this preſent treaty, and all and every the clauſes contained therein; and they are to be obſerved and punctually fulfilled by the ſubjects and inhabitants of both nations.

XIV. Particular offences ſhall no way be a prejudice to this treaty, and cauſe no enmities or diſſentions between the two nations; but every one ſhall anſwer for what he has done, and be proſecuted for contravening it: neither ſhall the one have recourſe to letters of reprifal, or any other methods of the like nature, to obtain reparation for the offence of the other, unleſs juſtice be actually denied, or unreaſonable delays uſed in adminiſtering the ſame. In which caſe it ſhall be lawful for the king, whoſe ſubject hath ſuſtained the damage and loſs, to have recourſe to the rules and ordinary courſe of the law of nations, 'till reparation be made to the perſon that has been injured.

XV. This preſent treaty ſhall no way derogate from any pre-eminence, right, or ſigniory, which either the one or the other of the allies have in the ſeas, ſtreights, or freſh waters of America; and they ſhall have and retain the ſame, in as full and ample a manner, as of right they ought to belong to them; and it is always to be underſtood, that the freedom of navigation ought by no manner of means to be interrupted, when there is nothing committed contrary to the true ſenſe and meaning of theſe articles.

XVI. That the ſolemn ratification of this treaty and convention ſhall in good and due form be delivered by either party, and reciprocally exchanged in the ſpace of four months, to reckon from this day; and they ſhall in the ſpace of eight months, reckoning from the day of the exchange of the inſtruments (or ſooner if it can be done) be publiſhed in all the proper places within the kingdoms, eſtates, iſlands, and ſignories, of both the allies, as well in the Weſt-Indies as elſewhere.

In witneſs of all and every one of the articles contained in theſe preſents, we, the above-named plenipotentiaries, have ſigned this treaty, and ſet our ſeals to it, at Madrid $\frac{8}{18}$ day of July, in the year of our Lord 1670.

The COUNT DE PEGNARANDA,
(L. S.)
WILLIAM GODOLPHIN,
(L. S.)

See TREATIES.

General REMARKS, by way of query, on the articles of SPAIN and SPANISH AMERICA, as they relate to Great-Britain in particular, BEFORE THE LAST WAR.

1. Whether it is not notorious to the whole world, that Spain for many years, prior to the late war, ſo behaved towards Great-Britain, that the latter was forced into a war with that crown?

2. Is it not equally true, that to prevent the laſt war Great-Britain bore too long with the conduct of Spain, and did her more good offices, in regard to family-eſtabliſhments in Italy, than Spain has deſerved, ſeeing that ſhe made no other recompence for the ſame, after her own turn was ſerved, than that of inſult and depredation upon the Britiſh ſubjects?

3. Whether the firſt giving up the trade of the South-Seas to the South-Sea Company, did not prove a great injury to the trade of Jamaica, and thereby to Great-Britain in general; and whether the Spaniards putting us off with the Aſſiento for Negroes, and an annual ſhip, was an equivalent to ſuch loſs of trade at Jamaica? See the articles SOUTH-SEA COMPANY, ASSIENTO CONTRACT.

4. Whether our abſolutely giving up the Aſſiento to Spain, by treaty, in 1750, for ſo trifling a ſum as 100,000l. in order to give that court no umbrage in relation to an illicit trade, laid to the charge of the South-Sea company, in their exerciſe of the Aſſiento, doth not indicate the moſt cordial diſpoſition in the court of England to live in ſtrict friendſhip and harmony with that of Madrid?

5. Whether, when the Aſſiento was ſo given up, the LOGWOOD TRADE in the bays of Campeachy and Honduras, to which the ſubjects of Great-Britain have a right, ought not to have been ſo regulated as to have prevented future broils on that head, between the two crowns; ſince 100,000 l. was no equivalent for the ASSIENTO? And whether the latter might not have been done, upon conditions perfectly conſiſtent with the honour and intereſt of both nations? See the article LOGWOOD.

6. Whether Spain is not more obliged to Great-Britain for taking off her products of fruit and wines, than ſhe is to any other nation for ſo doing; and whether Spain doth not every day leſſen her imports of the product and manufactures of Great-Britain, and encourage thoſe of our rival nation, in proportion as ſhe diſcourages ours?

7. Whether Spain hath uſed Great-Britain well, by deferring, ſince the laſt peace of Aix la-Chapelle, to regulate the trade of Campeachy and Honduras upon a proper footing; and whether the diſpoſſeſſion of the Britiſh logwood-cutters in the bay of Honduras (if this ſhould prove true) while the two crowns were in treaty upon that very occaſion, is acting conſiſtent with the honour of nations, and that equity and friendſhip which we have a right to expect from a nation for whom we have done ſo much, and borne ſo much for peace ſake?

8. Whether there is not too much reaſon to apprehend, from the preſent conduct of France towards Great-Britain, that the former is certain of the FRIENDSHIP AND ALLIANCE OF SPAIN to act in concert with her againſt our intereſts; and whether, notwithſtanding the pretended friendſhip of Spain to England, ſince the laſt peace, France hath not obtained ſuch an aſcendency over the court of Madrid, as to retard, and at length abſolutely defeat the ratification of any treaty for regulating of the trade of CAMPEACHY AND HONDURAS between the two nations; and whether ſuch regulation hath not been poſtponed from time to time, 'till France and Spain had both raiſed their marine to ſuch a pitch, as to be able to ſurprize Great-Britain, by ſtriking ſome notable blow, greatly detrimental to her intereſts?

9. Whether the Spaniards winking as they do at the illicit commerce carried on by the French at preſent, from the MISSISSIPPI TO MEXICO, and the EXTIRPATION OF THE BRITISH LOGWOOD CUTTERS FROM THE BAY OF HONDURAS, and frequently taking our veſſels engaged in that trade, doth not ſufficiently indicate a ſtrict friendſhip between Spain and France, and a great lukewarmneſs between the former and Great-Britain?

10. Whether the ſtrength that the French are daily gaining upon the MISSISSIPPI, and eſpecially upon thoſe parts bordering on the gulph of Florida; as alſo the abſolute deſtruction of the Indian nation, called the Nautches, and other Indian allies of the Britiſh colonies of Georgia and Carolina, may not forbode an union between SPAIN AND FRANCE on that ſide, hurtful to our moſt ſouthern colonies on the Continent, while France, at the ſame time, may attack Nova Scotia, which was formerly called the DUNKIRK of our NORTH AMERICAN ſettlements, while in the hands of France? And will not this be more ſo, if the French ever once again poſſeſs themſelves of the whole, or of a part of this important colony, as they are poſſeſſed of Cape Breton? See the articles BRITISH AMERICA, CANADA, FLORIDA, LOUISIANA.

11. If there be any juſt foundation ſtill to ſuſpect the ſincerity and friendſhip of Spain, does it not ſeem neceſſary to have a ſtrict eye towards the preſervation of our SUGAR COLONIES, and the NEUTRAL ISLANDS, as well as towards NOVA SCOTIA?

12. Whether, if we find once more that there is no faith to be kept with France, nor with Spain, it is not full time to think of acting upon the offenſive, inſtead of the defenſive only, and that by ſtriking the BOLDEST STROKE which we may have in our power?

13. Whe-

13. Whether the preſent ſtate of the marine of Holland, and, indeed, the indifference and coldneſs of that republic to this nation, together with the unſettled ſtate of their barrier; whether theſe conſiderations, and the good plight and condition of the French and Spaniſh marine, the death of the Grand Seignior, &c. have not excited France to their preſent conduct? See the articles HOLLAND, FLANDERS, and NETHERLANDS.

How Great-Britain may be able to cope with the enemy, ſee the articles NAVAL AFFAIRS, SEA DOMINION, SEA BRITISH, and SEAMEN. See alſo the article MEDITERRANEAN.

REMARKS on the Article SPAIN, ſince the laſt War, and the DEFINITIVE TREATY of PEACE of 1763.

For the Definitive Treaty of 1763, the reader is referred to AMERICA, where appears the ſtate of affairs between Great-Britain, as the ſame is ſettled ſince the laſt war. As we had conquered and poſſeſſed ourſelves of the Havanna, Spain, for the reſtitution thereof, has ceded, by article XX, to the crown of England, the Colony of FLORIDA, with Fort St AUGUSTINE, and the BAY of PENSACOLA, as well as all that SPAIN poſſeſſed on the continent of NORTH AMERICA, to the eaſt, or to the ſouth-eaſt of the RIVER MISSISSIPPI; and, in general, every thing that depends on the ſaid countries and lands, with the ſovereignty, property, poſſeſſion, and all rights acquired by treaties or otherwiſe, which the Catholic king, and the crown of Spain have had, till now, over the ſaid countries, lands, places, and their inhabitants; ſo that the Catholic king cedes and makes over the whole to the ſaid king, and to the crown of Great-Britain, and that in the moſt ample manner and form.

By the VIIth article of the ſaid DEFINITIVE TREATY, that for the future, the CONFINES between the dominions of his Britannic Majeſty, and thoſe of his Moſt Chriſtian Majeſty, in that part of the world, ſhall be fixed irrevocably, by a line drawn along the middle of the RIVER MISSISSIPPI, from its SOURCE to the RIVER IBERVILLE, and from thence by a line drawn along the middle of this river, and the LAKES MAUREPAS and PONTCHARTRAIN, to the ſea; and for this purpoſe, the Moſt Chriſtian king cedes, in full right, and guaranties to his Britannic Majeſty, the RIVER and PORT of MOBILLE, and every thing which he poſſeſſes, or ought to poſſeſs, on the left ſide the RIVER MISSISSIPPI; except the town of the NEW ORLEANS, and the ISLAND in which it is ſituated, which ſhall remain to France; provided that the RIVER MISSISSIPPI ſhall be equally free, as well to the ſubjects of Great-Britain, as to thoſe of France, in its whole breadth and length from its ſource to the ſea, and expreſsly that part which is between the ſaid ISLAND of NEW ORLEANS, and the RIGHT BANK of that RIVER, as well as the PASSAGE both IN and OUT of its MOUTH.—It is further ſtipulated, that the VESSELS belonging to the ſubjects of either nation ſhall not be ſtopped, viſited, or ſubject to the payment of ANY DUTY whatſoever.

By the ſaid treaty it appears, that Great-Britain has obtained for her NORTH AMERICAN COLONIES, the BARRIER OF THE GULPH OF MEXICO, as far as the ſame extends to the RIVER MISSISSIPPI from eaſt to weſt; and alſo the BARRIER of the GULPH of FLORIDA on the eaſt of her colonies, together with the PORTS and HARBOURS of MOBILLE, PENSACOLA, and St AUGUSTINE, and the FREEDOM OF THE NAVIGATION OF THE RIVER MISSISSIPPI. All which ſeem to promiſe a good SECURITY to all our SOUTHERN COLONIES on the CONTINENT; provided we can alſo gain the uninterrupted friendſhip and alliance of the INDIANS neighbouring thereupon; or if that cannot be effectually done, to keep them under due ſubjection to the Britiſh power and dominion.

To accompliſh which now, there does not ſeem any great difficulty, in a little time. For we now, as it were, are in a ſituation to ſurround them by our navigation on the eaſt, weſt, and ſouth, by the Gulph of FLORIDA, the GULPH of MEXICO, and the MISSISSIPPI, on the ſouthern part of the continent.—Which promiſes fair in conjunction to conſtitute a pretty FORMIDABLE BARRIER to our plantations of this ſide. And

By the IVth article of the ſaid Treaty, his Moſt Chriſtian Majeſty renounces all pretenſions which he has heretofore formed, or might form, to NOVA SCOTIA, or ACADIA, in all its parts, and guaranties the whole of it, and with all its DEPENDENCIES, to the king of Great-Britain.—Moreover, his Moſt Chriſtian Majeſty cedes and guaranties to his ſaid Britannic Majeſty, in full right, CANADA, with all its DEPENDENCIES, as well as the ISLAND OF CAPE BRETON, and all the OTHER ISLANDS and coaſts in the GULPH and RIVER of St LAWRENCE, and in general, every thing that depends on the ſaid COUNTRIES, LANDS, ISLANDS, and COASTS, with the SOVEREIGNTY, PROPERTY, POSSESSION, and ALL RIGHTS ACQUIRED BY TREATY OR OTHERWISE; which the Moſt Chriſtian king and the crown of France have had, till now, over the ſaid countries, iſlands, lands, places, coaſts, and their inhabitants; ſo that the Moſt Chriſtian king cedes, and makes over the whole to the ſaid king, and to the crown of Great-Britain; and that in the moſt ample manner and form, without reſtriction, and without any liberty to depart from the ſaid ceſſion and guaranty under any pretence, or to diſturb Great Britain, in the poſſeſſions above mentioned.

As we have ſeen the ſecurity the ſaid treaty promiſes to our colonies on the ſouthern parts of the continent; ſo here likewiſe we ſee the ſecurity it promiſes to our colonies on the northern parts of the continent; which conſidered together afford us the proſpect of our MARITIME SECURITY and PROTECTION, by the means of the three great gulphs in America, that of St Lawrence in the north, MEXICO on the ſouth, Florida on the eaſt, and the navigation of the two great rivers, the MISSISSIPPI, and that of St LAWRENCE, both from the NORTH and from the SOUTH; beſides the additional ſecurity and protection we may derive from the navigation of all the other numerous fine rivers, diſperſed throughout this whole AMERICAN CONTINENT, both large and ſmall, in every part thereof, and all fitted by nature for a perpetual commercial navigation.

The whole country, that is now annexed to the crown of Great-Britain, abounds with very large rivers, which it were endleſs to enter into a detail of, and for which we refer to the maps of the country for their names, courſes, mouths, &c. and content ourſelves with deſcribing a few of the moſt conſiderable, as that of St Lawrence and the Miſſiſſippi.

The river St Lawrence is the largeſt in all North America, and inferior to few in the world, it being computed about 25 or 30 leagues wide at the mouth, and 200 fathoms in depth, and 160 leagues in length; and yet by the help of a good ſouth wind, and the currents, which are pretty ſtrong, may be ſailed, according to Charlevoix, in 24 hours. As to its ſource, though the European miſſionaries have ſailed up it above 700, or near 800 leagues, that is, as far as the LAKE of ALEMIPIGON, yet it is ſtill unknown, unleſs it really ſprings from it, which no one hath yet been able to decide.—That LAKE diſcharges itſelf into that called the UPPER or SUPERIOR, lately mentioned, and this into that of HURON, and this into that of ERIE, or CONTI, and this laſt into that of FRONTENAC, or ONTARIO; all this by means of the SAME RIVER, from which it iſſues out with a ſmooth courſe during the firſt 20 leagues; after which it becomes more rapid during another 30 leagues, that is, till it comes to MONTREAL. From this it reſumes its ſmooth flow quite to that of Quebec, growing ſtill wider as it runs, till it empties itſelf into the ſea above 100 leagues below it: but, according to the report of the wild natives, this famed river ariſes out of another LAKE, farther up, and larger than any of thoſe we have mentioned, and which they call the LAKE of ASSINIPOLIS, or ASSIBOUELS; and this laſt is ſaid by them to lie about 50 or 60 leagues above that of ALEMIPIGON, and is ſuppoſed to have a communication with the NORTHERN SEA; and it is not improbable but a northern paſſage into it may be found by means of this LAKE. There are falls or cataracts, ſuch as that at NIAGARA. The river is, however, deep almoſt all the way, and hath a number of pleaſant iſlands in it, the moſt remarkable of which are COUDRES, ORLEANS, MONTREAL, St JOHN, MISCOU, RICHLIEU, and ſeveral others. The highland is well wooded, and ſome lowlands well inhabited and manured, inſomuch that they yield vaſt crops of corn and other grain, beſides fruits, pulſe, &c. The ſettlements, which are moſtly round the ſhores, are alſo well ſituated and built, and yield a noble proſpect as one ſails by them; the ſame may be ſaid of the reſt.

The river St Lawrence receives ſeveral conſiderable rivers in its courſe, the chief of which are called DESPRAIRIES, or OF THE MEADOWS; the MONS, the TREBLE RIVER, and the large one of SANGUENAY, and St MARGARET, near the mouth of it. All theſe, and other leſs remarkable, fall into it on the north ſide; there are others alſo on the ſouth.

The River MISSISSIPPI runs through the whole province, which the French called LOUISIANA, from north to ſouth, and overflows, at certain ſeaſons, a vaſt quantity of land; it is called by the Spaniards LA PALLISADA, from the prodigious quantities of TIMBER which is ſent down upon it in FLOATS to the ſea. It is navigable above 450 leagues up from its mouth. The ſpring-head is ſtill unknown, tho' the natives ſay, that it flows from a large ſtream that comes down from a hill in the country of the ISATI, about the 50th degree of latitude. We have an extraordinary account of the different nations met with on each ſide of the river, and they are repreſented as an hoſpitable, civil people, and willing to commerce with Europeans; their names and ſituation may be ſeen in the maps. The French made two ſettlements, the one near the LAKE ASSINIPOLIS, which is computed about 30 leagues round; the other among the Choagaſkades, or ſtout people, who live in their neighbourhood.

The MISSISSIPPI receives a great many large rivers into its waves; and the country on both ſides is fertile enough, and

and inhabited by a great variety of nations; for which we refer to Mr Sale's account thereof, who ſailed down it in the year 1638, made ſome ſettlements on each ſide of it, and hath marked the diſtances between all thoſe rivers that fall into it, and of the ſeveral nations that live between them on each ſide of this; the whole amount of which, from the River of the ILLINOIS, towards which he firſt ſet out, down to the mouth of it, he computes to be 653 leagues. The river diſcharges itſelf into the gulph of MEXICO, by two branches, which form an iſland of conſiderable length.

CANADA PROPER has Gaſpé, St. John's Iſle, Miſcou Iſle, Richlieu, the Treble River, Montreal, Iſle Frontenac, Conti, St Francois des Anges, St Alexis, St Michael, and St Joſeph; all which we ſhall juſt intimate, and not enter into a copious deſcription.

Gaſpé is chiefly worth notice, for being the capital of a large territory, called from it Gaſpeſia, extending along the eaſtern coaſt of this province from Cape des Roſſeis, at the mouth of the river St. Lawrence, to another which lies over-againſt CAPE BRETON, which is about 110 leagues, and ſtretches itſelf much farther inland.

St JOHN'S Iſle lies on the Gaſpeſian coaſts, and hath a bay of its name, north of the river St. Lawrence, on the way to the Hollow Iſland; about 60 miles long, and in ſome places 30 in breadth.

Miſcou Iſland lies on the bay of St. Lawrence, eaſt of the ſouthern cape, called Des Chaleurs, on the Gaſpeſian coaſt, and is famed chiefly for its fertility.

RICHLIEU ISLANDS lie on the lake of St Peter, about 12 leagues from the town of Three Rivers, where the government of Montreal begins. There are above 100 of them, forming a ſmall kind of Archipelago at the mouth of the river St Lawrence.

THE THREE RIVERS, ſo called from three rivers which join their currents about a quarter of a mile below it, and fall into the great one of St Lawrence. It was the capital of the French here, and much reſorted to by ſeveral Indian nations, which come down thoſe rivers to it, and trade with it in various kinds of furrs. The country about it is pleaſant and fertile in corn, fruits, &c. and hath a good number of lordſhips and handſome ſeats, and fine fiſheries contiguous.——The town is about 30 leagues diſtant from Quebec, and the ſailing up and down from one to the other, exceeding agreeable, and ſeveral leagues above it.

MONTREAL is ſituated on an iſland of the ſame name, in the river St Lawrence, about 14 leagues long, and 4 wide, where broadeſt, and very fruitful in corn, vegetables, &c. The town has a vaſt trade with the natives. The concourſe of Indians of various tribes is very great, ſome of them coming from places diſtant ſome hundred miles; the fair is kept along the banks of the river, which laſts near three months. The natives bring thither all ſorts of ſurrs, which they exchange for guns, powder, ball, great coats, and other European garments; iron and braſs work, and trinkets of every ſort.

FRONTENAC is a fort on the ſame river, about 100 leagues above Quebec. The ſoil hereabout is ſo well cultivated as to yield all ſorts of European and Indian corn and other fruits, according to Hennipin. Near is a good haven for all ſorts of veſſels to ride in with ſafety.

FORT St FRANCIS ſtands in the iſland of that name, on a bay on the ſouth end of St PETER'S LAKE.

There are ſeveral more of thoſe iſlands under that name, very fertile, abounding with wood, wild fowl, paſture and cattle.

A RIVER that comes down into the LAKE from NEW-YORK, and ſplits itſelf into a great number of branches, makes the country on that ſide very pleaſant and fruitful; and ſo we may ſay of all the other parts of this country.

The PROVINCE of SANGUENAY is another part of Eaſtern CANADA. On the north-eaſt it has the Indian nation Kileſtinoas, on the north-weſt that of the Eſquimaux; on the ſouth-eaſt it is bounded by the river St Lawrence, and on the ſouth-weſt by that of Sanguenay; at the mouth of which is the town of THREE RIVERS before noticed. The river Sanguenay ſprings from the LAKE St JOHN, and falls into that of St Lawrence at the town of Jadouſſac, which, Charlevoix tells us, is navigable by the largeſt veſſels above 25 leagues up. The haven will contain 25 men of war, and has good anchorage and ſhelter from ſtorms. This province is much the ſame, as to its ſoil, climate, and inhabitants, with that of CANADA PROPER, before deſcribed. It yields the greateſt plenty of marble of ſeveral kinds, inſomuch that not only the principal towns, forts, churches, and palaces, but even the houſes of private men are built of it.

QUEBEC, the capital of CANADA, is ſituate on the confluence of the rivers St Lawrence, and St Charles; on the north of the former, and about 140 leagues from the ſea. The haven is ſpacious, and able to contain at leaſt 100 veſſels of the line. A little above this is the city, ſituate on the narroweſt part of the river; but between that, and the iſle of Orleans, is a ſpacious baſon, a full league every way, into which the river St Charles empties itſelf, which flows down from the north-weſt, ſo that it ſtands between the mouth of that river, and the Cape Diamant, on that of St Lawrence. The haven faces the town, and is ſafe and commodious, and about 25 fathom deep.

The ILLINOIS INDIANS live near the LAKE and RIVER of that name, which laſt ſprings from LAKE DAUPHIN, and after a courſe of above 200 leagues, excluſive of its windings, falls at length into the great river Miſſiſſippi. The people live in diſtant villages, on the plains on both ſides of the river, beyond which are large woods and ſloping hills, covered with delightful verdure at leaſt nine months in the year, whilſt the current, which is moſtly ſouth-weſt, is ſo ſmooth and agreeable, that veſſels of a conſiderable ſize may ſail up and down it with eaſe and ſafety, during a courſe of at leaſt 120 leagues, before it falls into the river Miſſiſſippi. The lands on each ſide this river Illinois afford ſuch plenty of paſture, that we ſee them covered with herds of large and ſmall cattle, as well as goats, deer, and other beaſts. The river alſo ſwarms with water-fowl of divers ſorts, ſuch as ſwans, geeſe, cranes, ducks, &c. in prodigious plenty.

Great-Britain being now poſſeſſed of all the territory on the eaſtward of the Miſſiſſippi, we ſhall take notice of ſome other large rivers that fall into it, from FLORIDA. Mr Coxe ſays, that about twelve miles above the mouth of it a branch runs out of it on the eaſt ſide, which, after a courſe of 160 miles, falls into the north-eaſt end of the great bay of SPIRITO SANCTO. That at firſt 'tis very narrow and ſhallow, but, by the acceſſion of ſeveral rivers, becomes a moſt lovely river, is navigable by the greateſt boats and ſloops, and forms pleaſant lakes, particularly that of PONTCHARTRAIN, by which was diſcovered a more ſafe and expeditious communication with the river Miſſiſſippi, to avoid the danger and difficulty of ſailing up that river by its principal mouth; the navigation of which Great-Britain is now intitled to. From this lake they enter into that of MAUREPAS; from which they go on, by means of the canal or river IBERVILLE, into the river Miſſiſſippi. When that cannot be eaſily done, they carry goods by land from the bay into the lake PONT CHARTRAIN, which diſcharges itſelf quite to the country of the Oumas, who are ſeated on the banks of the Miſſiſſippi, a little above New Orleans, and thence purſue that voyage up that river (La Martiniere.)

About 60 leagues higher up, on the eaſt-ſide, is the river Yaſſoona, which comes into the Miſſiſſippi, 2 or 300 miles out of the country, and is inhabited by ſeveral Indian nations. Sixty leagues higher is the river and nation of Chongue, with ſome others on the eaſt of them.—Thirty leagues higher the Miſſiſſippi receives a river that proceeds from a lake about 10 miles diſtant, which is about 20 miles long, and receives four large rivers: 1. The Cuſates, the moſt ſouthern of them, being the river of the Cherokees, a mighty nation, among whom it has its chief fountains. It comes from the ſouth-eaſt, and its heads are among the mountains, which ſeparate the Cherokees from Carolina, and is the great road of the traders from thence to the Miſſiſſippi, and the intermediate places.—Forty leagues above is the Chicazas; this river forms four delicate iſlands, which have each a natien inhabiting them. 2. The river Ouerſpere, which, about 30 leagues to the north-eaſt of the lake, divides into two branches, whereof the moſt ſouthern is called the Black River.—The heads of this river are in that vaſt ridge of mountains that runs on the back of Carolina, Virginia, and Maryland, through which mountains there is a ſhort paſſage to the ſources of the great river Potomack, on the eaſt ſide of them, by which the Indians, who are well acquainted with them, might, BEFORE THE PEACE, in conjunction with the French from the Miſſiſſippi, have harraſſed and annoyed our colonies. 3. The river Ohio, Oyo, or Hohio, which is a vaſt river, and comes from the back of New-York, Maryland, and Virginia. It runs through the moſt beautiful and fruitful countries in the world, and receives 10 or 12 rivers, beſides innumerable rivulets: it is navigable 600 miles. Formerly ſeveral Indian nations dwelt on this river, who have been totally extirpated by the Iroquois, who made this river their uſual road, when they entered into a war with the nations either to the ſouth or weſt. 4. The moſt northerly river that runs into the ſaid lake, and which comes, like the reſt, from the north-eaſt, is Jeremy's river.—Twenty-five leagues above the OHIO is the great iſland of Tamaroas, with a nation over-againſt it, that goes by its name; and another by that of Cohokia, who dwell on the banks of the Chepulſo River.—Thirty leagues higher is the river Chicagou, on the river Illinois; which nation lived upon and about this river, in about 60 towns, and conſiſted of 20,000 fighting men, before they were deſtroyed by the IROQUOIS, and driven to the weſt of the Miſſiſſippi. This is a large pleaſant river, and, about 250 miles above its entrance into the Miſſiſſippi, is divided into two branches: the leſſer comes from north and by eaſt, and its head is within 4 or 5 miles of the weſt ſide of the great lake of MICHIGEN: the biggeſt comes directly from the eaſt, and proceeds from a moraſs within 2 miles of the river Miamiha, which runs into the ſame lake. On the ſouth-eaſt there is a communication be-

twcen theſe two rivers by a land-carriage of about two leagues, 50 miles to the ſouth-eaſt of the lake — The courſe of this river Chegogon is above 400 miles, navigable above half way by ſhips, and moſt of the reſt by ſloops and barges. It receives many ſmall rivers, and forms 2 or 3 lakes, one eſpecially, called Pimeteovi, 20 miles long and 3 broad, which affords great quantities of good fiſh, as the adjacent country does game, both of fowls and beaſts. Several Indian nations inhabit round about. There is a fort erected here called Crevecœur, which is about half way betwixt the gulph of Mexico and Canada, and was formerly the uſual road of the French to and from both, till they diſcovered a ſhorter and eaſier paſſage by the rivers OUABACKE, and the HOHIO, which riſe at a ſmall diſtance from lake ERIE, or ſome rivers which enter it.

Eighty leagues higher, the river Miſſiſſippi receives the MISCONSIAG, a river reſembling that of the ILLINOIS, in breadth, depth, and courſe; and the country adjacent to its branches is alike pleaſant and fruitful. — Sixty miles before it falls into the Miſſiſſippi, it is joined by the river Kikapouz, which is alſo navigable, and comes a great way from the north-caſt. — Eighty miles farther, almoſt directly eaſt, there is a communication by a land-carriage of two leagues with the river Miſcongui, which runs to the north-eaſt, and after a paſſage of 150 miles from the land carriage, falls into the great bay of Ponkeontamis or the Puans, which joins on the north-weſt ſide to the great river of the ILLINOIS.—Higher up the Miſſiſſippi is the river Chabadeba, above which the Miſſiſſippi makes a fine lake 20 miles long, and 8 or 10 broad.—Ten miles above that lake is the river of Tortoiſes, a large fair river, which runs into the country a good way to the north-eaſt, and is navigable 40 miles by the greateſt boats.

The rivers which do not communicate with the Miſſiſſippi, are only two large ones betwixt it and the peninſula of Florida; viz. the Coza and the Potache.

The COZA or COUSSA river, which the French have called MOBILLE, riſes from the Apalachean mountains, with ſeveral heads, of which the moſt northern is at the town and province of Guaxula, at the foot of the mountains. Many rivulets uniting after a courſe of 80 miles, form a river, with ſeveral delightful iſles, in a country wonderfully pleaſant and delightful. — The firſt conſiderable town, or province, is Chiaha, with a river of its own name, which helps to enlarge the Coza, and which is famous for its pearl-fiſhing. From thence the river grows larger and deeper, being reinforced by others from the mountains and the valleys, till it enters the province of Coza, which is reckoned one of the moſt fruitful and pleaſant parts of the country, and very populous. It conſiſts of hills and valleys, rivulets, arable land, and lovely meadows. — Prunes grow naturally in the fields better than can be produced in Spain by culture; and though there are ſome vines that creep upon the ground, there are other which mount, in almoſt all places near the rivers, to the tops of the trees. The Coza river enters the Gulph of Mexico 100 miles ſouth of Manhela, or MOBILLE, as the French have called it. — One of the rivers that enters the Coza is the Chatta, where inhabit Indians of the ſame name. — To the eaſt of the Cozas are the Becues, or Abecaes, who have 13 towns, and dwell on divers rivers, which run into the Coza. It is a very pleaſant country, conſiſting of hills and valleys, and its ſoil is generally more marly or fatter than that of many other provinces. — A little more to the ſouth weſt, between the Abecaes and Chattas, the Ewemalas dwell on a fair river of the ſame name, which coming from the north-eaſt, mingles with the Coza. Mr Coxe ſays, this great river Coza falls into the Gulph of Mexico, 15 leagues eaſt of the great bay of Naſſau or Spirito Santo, or north eaſt of the cape of Myrtle iſland. — The Ullibalys or Allibamous, Chicazas, and Chattas, who are the moſt conſiderable nations upon and between the rivers Coza and Miſſiſſippi, kindly entertained the Engliſh who reſided among them ſeveral years, and CARRIED ON A SAFE AND PEACEABLE TRADE WITH THEM, 'TILL ABOUT THE YEAR 1715, WHEN, BY THE INTRIGUES OF THE FRENCH, THEY WERE EITHER MURDERED, OR OBLIGED TO MAKE ROOM FOR THOSE NEW INVADERS, WHO HAVE SINCE UNJUSTLY POSSESSED AND FORTIFIED THE SAME STATIONS, IN ORDER TO CURB THE NATIVES, AND TO CUT OFF THEIR COMMUNICATION WITH THE ENGLISH TRADERS; WHEREBY THEY ENGROSSED A PROFITABLE TRADE FOR ABOVE 500 MILES; OF WHICH THE BRITISH SUBJECTS WERE A FEW YEARS AGO THE SOLE MASTERS.

The town and fort in the ISLE of DAUPHINE lies about 9 leagues ſouth of Fort Lewis, and 10 leagues weſt of PENSACOLA. The diſtance between the river Coza, and that of Palache or Spirito Santo, to the eaſt, is about 190 miles, and the coaſt between them is deep and bold. — The chief harbour betwixt theſe two rivers, and indeed THE BEST upon all this coaſt of the GULPH OF MEXICO, is PENSACOLA, belonging by the laſt treaty of peace to the crown of Great Britain; it being a large port, ſafe from all winds, which has four fathom at the entrance, and deepens gradually to ſeven, or eight — It lies 11 leagues eaſt of PORT LEWIS AND MOBILLE, 90 weſt from the upper part of the peninſula of Florida, and 158 from the TORTUGAS ISLANDS.—The land here produces pine trees, fit for ſhip-maſts, of which many were cut down by the Spaniards, and carried to VERA-CRUZ, by a ſhip belonging to the FLOTA, that brought proviſions, and returned with timber. There is a communication from hence by land with Apalachy.

APALACHYCOLA is a good harbour, 30 leagues eaſt of the former, and as much from what the Spaniards called the river SPIRITO SANTO. This river enters the Gulph of Mexico about 100 miles from the cod of the bay of Potache, at the north-weſt of the peninſula of Florida, in about north lat. 30. It is not eaſy to find this place, by reaſon of the iſles and lakes before and about it, and though a ſtately river, whoſe mouth makes a large harbour, FROM WHENCE A TRADE WAS CARRIED ON TO THE HAVANNA, by ſmall veſſels, yet it has not above two fathom water and a half, or three fathom at moſt, on the bar; but when that is paſſed, it is very deep and large, and the tide flows higher into it than into any other river upon all the coaſt. On both ſides of it, towards the ſea coaſt, live the nations of the Cuſhetaes, Tallibouſes, and Adgebaches. This river proceeds chiefly from others, which have their origin on the ſouth or ſouth-weſt ſide of the great ridge of hills that divides this country from Carolina, and is ſuppoſed to have a courſe of about 400 miles. — All the channel from hence to the Tortugas iſlands, is called the Bay of Certos. — Here is a communication from hence by land with the PORT OF ST. AUGUSTINE in the GULPH OF FLORIDA.

In the bay of NASSAU, or SPIRITO SANTO, there are four iſlands, which lie from ſouth to north-eaſt for 50 miles, with openings between them a mile or two over. The moſt northerly is that betwixt which and the continent is the entrance of the bay. It is called Myrtle Iſland, about 24 miles in length, but in ſome places very narrow. Some think it is the ſame that the French call L'Iſle des Vaiſſeaux, or the Ships Iſland; which, conſidering its diſtance from Dauphiny iſland, and the convenient ſhelter it affords ſhips from the wind, is not improbable. — The bay is 15 miles broad from Myrtle Iſland to a row of iſlands which run parallel with the main and another bay between them, and ſtretch 50 or 60 miles to the ſouth, as far as one of the ſmaller mouths of the Miſſiſſippi.

BILOCOBY BAY, with another fair harbour, is about 15 leagues to the north-eaſt of the moſt eaſtern branch of the Miſſiſſippi, and a ſmall river near it, called Paſſagoula.

We now ſhall touch on the Peninſula of Florida, which lies betwixt the Gulph of Mexico on the weſt, the Atlantic ocean on the eaſt, and the Straits of Bahama on the ſouth. It is about 100 leagues in length, but not above 30 where broadeſt. The ports and towns of ſtrength and convenience, are St. AUGUSTINE and St. MATTHEO.

St. AUGUSTINE, on the eaſtern coaſt of the peninſula, is about 70 leagues from the mouth of the Gulph of Florida, or channel of Bahama, 30 ſouth of the river Alatamaha, and 47 from the town and river of Savannah. — The city runs along the ſhore at the bottom of a pleaſant hill ſhaded with trees in the form of an oblong ſquare, being divided into four regular ſtreets, which cut each other at right angles. The town is built thickeſt on the north ſide towards the caſtle, about a mile off, called St John's Fort.— There were 50 pieces of cannon mounted on the caſtle, 16 braſs, and ſome 24 pounders. It has a covered way, and the town is intrenched with 10 ſaliant angles, each defended with cannon, and the caſtle is ſecured on the weſt by a moraſs. The port is formed by an iſland and a long point of land, divided from the continent by a river, which falls into the ſea two miles above the fort. The iſland is called Euſtacia, or Metanzas.

Though this place is of pretty good ſtrength, every circumſtance conſidered; yet Sir Francis Drake took it, 1586, and it was plundered by Captain Davis in 1665. In 1702, it was attacked by the Engliſh and Indians of Carolina, under Colonel Moore, who ruined the villages and farms in the open country, and beſieged this town three months; but at the approach of ſome Spaniſh veſſels to its relief, he raiſed the ſiege, and marched back to Charles town, 300 miles by land, leaving the ſhip and ſtores he brought with him to the enemy. — It was beſieged again by General Oglethorpe in 1740, but to little purpoſe.

This port, now belonging to Great-Britain, may be attended with extraordinary advantages to the Engliſh, our ſouthern ſettlements on the continent being hereby ſecured againſt any future attempts of the Spaniards by land; eſpecially, when the utility of the other ports in the Gulph of Mexico is conjunctively conſidered. — Beſides the great ſervice this place may be to our trade, in not only depriving the Spaniards of a port from whence they might annoy us on that ſide, but alſo by enabling us to annoy them upon occaſion, by cruizing on their home-ward-bound ſhips coming from the Gulph of Florida, and the Streights of Bahama.

Another place in the Gulph of Florida, next to St AUGUSTINE, that may be of ſervice to this kingdom on an emergency, is St MATTHEO, about 15 leagues to the north. It is the frontier town of Florida next to Georgia. — The Engliſh beſieged it in 1715, but were obliged to deſiſt with conſiderable loſs.

The ſea upon this coaſt, and off, as far as the Bahama iſlands, which lie oppoſite to it, is termed the Gulph of Florida, which, according to our beſt navigators, is reckoned about 16 or 18 leagues over. And here the mighty current, which upon all the ſouth part of the Gulph of Mexico ſets conſtantly in with a ſtrong ſtream to the weſt, driving ſo all the way to the very coaſt of La Vera Cruz, turns away again to the eaſt, between the iſle of Cuba, and the ſouth coaſt of North-America, and finding no vent 'till it paſſes by Cape Florida, it then turns from ſouth to north, and runs through this gulph into the great Atlantic ocean. For this reaſon it is that all ſhips from Jamaica bound for England come through this gulph to have the benefit of this current, which has ſometimes proved dangerous both to the Engliſh as well as Spaniards. To avoid which the navigators make an allowance of about five points in the COMPASS for the current, and keep as near as poſſible to the Bahama ſide. — But as hazardous as this paſſage has ſometimes proved for ſhips bound to Europe, there remains no other courſe for them to take, except that of the WINDWARD PASSAGE; and in a courſe of above 160 leagues from Cape Morant, the eaſt point of Jamaica, to the north ſide of Crooked Iſland, which is what is called the Windward Paſſage, the Engliſh traders, in time of war, are in continual danger of being taken by the Spaniſh guarda coſtas, beſides the perils of the ſea.

Here it is neceſſary to obſerve, from the judicious navigator Mr Atkins, who in his voyage to the Weſt-Indies ſays, "that ſhips and veſſels may, and often have ſailed through "this channel from the NORTH SIDE OF CUBA to "the BAY OF MEXICO, notwithſtanding the common "opinion on account of the current that is againſt it; that "they keep the BAHAMA ſhore aboard; and that they meet "the wind in ſummer for the moſt part of the channel "eaſterly, which, with a counter-current on ſhore, puſhes "them eaſily through it.

He adds two obſervations of the pilots, in relation to this gulph: "1. This ſtream goes conſtantly out to north-"ward in the middle channel, its force having ſome re-"ſpect (like tides in other countries) to the moon and the "winds; with a counter-current, or at leaſt a ſtillneſs of "the water, on ſhore, that will enable a ſhip to turn through, "be the middle ſtream ever ſo ſtrong; the ſame as in "the Strait of Gibraltar, where, though the current "runs continually into the Mediterranean, ſhips may "work through, keeping the ſhore aboard. 2. The cur-"rent which goes out here ſets for moſt part into the "Gulph of Mexico, between the two capes of Corientes and "Catoche, with counter-currents on ſhore, though not "always ſo, the pilots having obſerved them ſtrong to the "eaſt at the new and full moons."

From the preceding ſuccinct ſurvey of our preſent North American ſettlements, we conceive the following obvious inferences deducible.

1. That it is not the extent and magnitude of our new poſſeſſions in America, which would have proved of any manner of advantage to Great-Britain, if they were inacceſſible by our ROYAL NAVY and our MERCANTILE SHIPPING; or if the whole had not abounded with numerous very large and extenſive inland navigable rivers, whereby we could have an eaſy and ſafe communication with every part belonging to the crown of theſe kingdoms. They would not have been worth our acceptance; and it would have been the moſt infatuated bad policy to have given up our conqueſts, ſurrounded by the ſea, for ſuch new continental acquiſitions.

2. But as our new territories are reſtrained in extent to the confines of the MISSISSIPPI, and the freedom of the navigation of that river ſecured to us from the ſource to the mouth, to the weſtward of our ancient colonies: as in conſequence hereof, and the poſſeſſion of all FLORIDA, we are alſo intitled to the navigation in the BAY of MEXICO to the SOUTHWARD of our ancient colonies, and are become poſſeſſed there of the ports and harbours of the bay of PALACHE, PENSACOLA, and MOBILLE: as we have alſo ſecured to ourſelves the additional ports and harbours of St MATTHEO and St AUGUSTINE, on the ſouth-eaſt ſide of our ancient colonies, and thoſe too in the GULPH of FLORIDA, through which the treaſure of NEW SPAIN paſſes: as we have obtained likewiſe to ourſelves the navigation of the GULPH and RIVER ST LAWRENCE to the northward of our ancient colonies, and the freedom of navigation in theſe parts is ſecured to us by the acquiſition of CAPE BRETON; which by good management may render our navigation here no leſs ſecure than Gibraltar has done that of the Mediterranean: as we have obtained the right of poſſeſſion of CANADA, and all its DEPENDENCIES, ſtill further to ſtrengthen us on the northern ſide of our ancient colonies: as we may be ſaid, at preſent, to enjoy a MARITIME BARRIER to all our ancient continental colonies on the NORTH, EAST, WEST and SOUTH, and a navigable intercourſe, by many very ſpacious and fine rivers among them; whereby we ſhall be able to protect them in their inland, as well as their extenſive maritime parts, and cultivate an internal as well as a maritime commerce with the whole within the Britiſh boundaries; all our colonies will receive greater ſecurity than ever they had before; and therefore we may reaſonably enough preſume they will grow more and more proſperous, and thereby adminiſter greater reciprocal aid, ſuccour and ſupport to each other, as well as to their mother country. For,

3. It is hardly to be doubted but Great-Britain will exert every meaſure that will tend to produce or compel ſuch a union among all our colonies, as will add proportional ſtrength to the whole continent; ſuch a united degree of ſtrength and power, as will, in future, render them a full match for France and Spain, and thoſe their INDIAN ALLIES who may be perfidiouſly inſtigated to annoy them.—We ſhall ſoon be in a capacity, now the boundaries of Great-Britain and France are aſcertained, on the American continent, to manage the INDIANS, ſeeing both nations are limited to their reſpective ſides of the great river Miſſiſſippi. If we cannot, by every fair, upright and equitable method, which we hope will be firſt tried, bring the Indians on our ſide the great river to live in perfect friendſhip and harmony with us, we muſt, for our own ſafety and proſperity, be compelled to carry fire and ſword amongſt them, and drive them on the weſtern ſide of the river: yet we muſt further hope, that we ſhall not be irritated too ſuddenly to this extremity, leſt this ſhould ſtrengthen the hands of our enemies there, and enable them to have thoſe Indians the more under their command, and ſubject to their eternal intrigues and machinations to diſtreſs us. — If we ſhould experience, that the French are not determined to keep the peace, but will ſtir up the Indians to be our perpetual enemies, and will ſecretly ſupply them with arms and ammunition to commit ravages and depredations upon our coloniſts, we muſt be obliged to deprive France of their ſettlement at NEW ORLEANS, and of their navigation on the MISSISSIPPI: this, perhaps, may be much eaſier practicable, than preventing the French from exciting the ſavages to continue in eternal war with us: and 'till the French ſhall be totally extirpated from the whole continent, there is reaſon to fear, they will never deſiſt from influencing the ſavages to our conſtant detriment.

4. It does not, therefore, ſeem at all improbable, that at length what has been ſuggeſted may ſoon come to paſs, and that we ſhall have the whole continent to ourſelves, be unmoleſted either by France or Spain, and bring the Indians under an amicable dominion. For if Spain ſhould interfere to regain Florida, or practiſe any arts to ſtrengthen the Indian nations againſt us, for the ſafety of all our colonies, we muſt be again forced into a rupture with them alſo: and if this ſhould be the caſe, on any occaſion whatſoever, we are certainly now in a better ſituation to carry on a war againſt both Spain and France than ever we were before we obtained our new conqueſts. — With regard to Spain, in this part of America, ſhould we be compelled ſoon to draw the ſword againſt them, our preſent ſituation in the GULPH of MEXICO gives us juſt pretenſions to have as many ſhips ſtationed there, when we ſee reaſon for it, as the Spaniards may have at the Havanna; and what then is likely to become of the HAVANNA and the treaſure from MEXICO? If, upon any contravention of the treaty of peace, on the part of Spain, the court of England ſhould reſolve upon repriſals, will not our preſent ſituation enable us to become maſters of the Spaniſh treaſure from LA VERA CRUZ? See our articles MEXICO, OLD MEXICO, and NEW MEXICO. Muſt not this prove a perpetual alarm to the Spaniards, leſt their FLOTA ſhould fall into Britiſh hands upon any provocation? Are we not alſo better ſituated than before the laſt peace, to intercept their Galloons from PERU, which are obliged to ſail to the Havanna, as well as the FLOTA, and from thence paſs through the GULPH of FLORIDA? And are not our ſhipping ſtationed in the GULPH of MEXICO, and that alſo of FLORIDA, more likely to intercept their treaſures, both from MEXICO and PERU, before they arrive at the Havanna, and alſo after ſailing from thence to Old Spain, than they ever were before? Our ſtations at the BASTIMENTOS, and JAMAICA, for thoſe purpoſes, we have experienced to have been very precarious.— Next to the HAVANNA itſelf, we cannot be better ſituated than we now are, for ſuch important occaſions.

In caſe of a freſh rupture between England and Spain, of which we are ſpeaking, are not the Engliſh, ſituated in the gulph of Mexico and Florida, more likely to reconquer the Havanna than they ever were before? With our ſhips ſtationed at Jamaica on one ſide, and in the gulph of Mexico and Florida on the other, with a force ſuitable to the occaſion, and a reſolution in the court of England to take it, we have little reaſon to fear ſucceſs, while, as was ſaid by a brave Engliſh admiral on another occaſion, IT WAS OPEN AT TOP, let the Spaniards fortify and fortify again. As

our

our northern colonies gave all poſſible aſſiſtance, at the taking of CAPE BRETON, for their future ſecurity; ſo have we not reaſon to believe the like Britiſh ſpirit will manifeſt itſelf in the ſouthern colonies, when we ſhall again beſiege the Havanna? On ſuch an occaſion, may we not expect great aid from Florida, Georgia, and the Carolinas?

The ſpirit of conqueſt is not abated in Britons; and if we have occaſion to exert it again, we may poſſibly carry it farther than the Havanna. Being once again maſters of that, who will hinder us from carrying our conqueſts a ſtep further into the bottom of the gulph of Mexico, and becoming victors of the Mexican treaſure at LA VERA CRUZ? And will not our domeſtic circumſtances of PUBLIC DEBTS and TAXES, eſpecially upon a freſh war with Spain, oblige us to make our enemies contribute as much towards the immediate expence thereof as poſſible, and even to enable us to diſcharge thoſe NATIONAL DEBTS, which they have occaſioned? If this reſolution is not taken in the next war, I ſhould be glad to be informed, how many more ſuch wars as we have already been engaged in, we can afford to undertake? Or, to aſk this queſtion in another manner, what degree of further public debts and taxes can this kingdom bear, before ſhe arrives at her NE PLUS ULTRA of national incumbrances? Or, will people be ſo wild and infatuated as to imagine that we can never be ſo loaded with PUBLIC DEBTS and TAXES, as to be unable to raiſe more money to carry on wars? No man in his ſenſes will aſſert this. — We have ſeen what may naturally enough prove the conſequence of another Spaniſh war ſoon happening with Great-Britain. — Let us now pleaſe ourſelves with the view of the conſequences alſo of a French war falling out at the ſame time; for the one will bring on the other, eſpecially ſince the FAMILY COMPACT has taken place.

It has been obſerved already, that England will find no great difficulty to diſpoſeſs the French of New-Orleans, and deprive them of the navigation of the Miſſiſſippi, owing to our preſent ſituation for the purpoſe. As this ſeems to point out the fate of France in theſe ſouthern parts of the American continent; ſo what may we reaſonably expect will be their doom in the northern parts, where they have as little to defend themſelves from Britiſh powers as they have in the ſouthern? We are already in poſſeſſion of all the territory, and of every place of importance to our ſecurity there. We have CAPE BRETON, which we may render more invincible than the Spaniards can do their Havanna, as being environed by the united force and aid of all our colonies in this part. Is it poſſible that the ſmall iſles of St Pierre and Miquelon ſhould enable France to make head againſt the united ſtrength of all our coloniſts? If France, therefore, quarrels with us again, we ſhould, I am perſuaded, meet with little obſtruction in turning them out of the whole Newfoundland fiſhery: and when they oblige us to do that again, do they not put it once more in our power to deprive them for ever of this their chief fiſhery, which is their nurſery for ſeamen? Can they flatter themſelves, that this nation will evermore be their dupes to reſtore them to this privilege again? They cannot; becauſe our circumſtances will no longer admit of it. The weight of our public debts and taxes, in conſequence of another war, will become ſo unwieldy, that our future ſafety and preſervation will oblige us to keep what we conquer, or to diſpoſe thereof, that the ſame muſt never revert into French hands. See our article WAR. For we are no longer in a capacity to continue the old ſyſtem, to fight to negociate, and negociate to fight again. See CREDIT [PUBLIC CREDIT].

STAFFORDSHIRE is bounded on the eaſt by Warwickſhire and Derbyſhire, on the ſouth by Worceſterſhire, on the weſt by Shropſhire and Cheſhire; which laſt joining Derbyſhire, makes the north border. In compaſs it is 141 miles.

Its air is generally good, as is the ſoil alſo, even the Moorlands, which are mountainous, and therefore reckoned the moſt barren, producing a ſhort, but ſweet graſs, by which they breed as fine large cattle as thoſe of Lancaſhire.

As to ſubterraneous productions, both the Moorlands and Woodlands yield lead, copper, iron, marble, alabaſter, millſtones, coals, ſalt, &c. beſide various ſorts of uſeful earths and clays.

LICHFIELD is a pretty large neat city, within three miles of the Trent.

STAFFORD, the ſhire-town, on the river Sow, is well built, and much increaſed of late, both in wealth and inhabitants, by its manufacture in cloth.

NEWCASTLE UNDER LINE is an antient corporation. The chief manufacture is hats. The cloathing trade alſo flouriſhes here, and the town is ſurrounded with coal-pits.

WOLVERHAMPTON is a populous, well-built town. The chief manufacturers here are lockſmiths, who are reckoned the moſt expert of that trade in England.

WALSAL, pleaſantly ſeated on the top of a hill, has a good market, and in and near it are ſeveral mines of iron, wherewith the townſmen make ſpurs, bridle-bits, ſtirrups, buckles, &c. in which they carry on a conſiderable trade.

PENKRIDGE is noted for its great horſe-fair, reckoned one of the greateſt in the univerſe, eſpecially hunters and road-horſes, which are brought hither from Yorkſhire, and all the horſe-breeding counties in England. 'Tis held the 29th of September.

BURTON is of moſt note for its fine ale, and a manufacture of cloth, which was carried on formerly to greater advantage than at preſent.

STOCK-JOBBING.

Of the Art or Myſtery of trafficking in the PUBLIC FUNDS.

The chief Laws and Statutes concerning Exchange-Brokers, and Stock-jobbing.

Brokers are thoſe perſons that contrive, make, and conclude, bargains and contracts between merchants and tradeſmen, in matters of money and merchandize, for which they have a fee or reward; and they are called Exchange-brokers in ſome of our ſtatutes.

By the ſtatute 8 & 9 W. III. cap. 32. for reſtraining the ill practice of brokers and ſtock-jobbers; no perſon ſhall uſe or exerciſe the office or employment of a broker, in London or Weſtminſter, &c. in making or concluding bargains between merchant and merchant, or others, concerning any wares and merchandizes, or monies to be taken up by exchange, or tallies or orders, bills, notes, ſtock of any company of trade, &c. until ſuch perſon ſhall be admitted and licenſed by the lord mayor and court of aldermen of London. And, upon admittance of any ſuch broker, he ſhall take an oath, that he will truly and faithfully execute the office between party and party, without any fraud or colluſion, according to the purport of the act, &c. Likewiſe, he ſhall give bond to the lord mayor, &c. in the penalty of 500l. for the faithful execution of his office, without any fraud or corrupt practice. The number of ſuch brokers ſhall not, at one time, exceed one hundred; and the lord mayor and court of aldermen ſhall cauſe their names and places of habitation to be publickly affixed on the Royal-Exchange, and other public places: and every ſworn broker, after his admittance, as aforeſaid, ſhall carry about him a ſilver medal, having the king's arms on one ſide, and the arms of the city of London, with his own name, on the other ſide; which he ſhall produce at the concluding of every bargain to the parties concerned, upon pain to forfeit 40s. for every omiſſion.

If any perſon ſhall act as a broker, not being admitted according to this act, he ſhall forfeit 500l. beſides ſuch other forfeitures as he may any ways incur thereby; and in caſe any one ſhall knowingly employ any perſon to deal for him as a broker, or ſtock-jobber, who is not admitted and ſworn as aforeſaid, ſuch perſon ſhall forfeit the ſum of 50l. And if any perſon, not being a ſworn broker, according to this ſtatute, ſhall act and deal in diſcounting tallies or bills, or in ſtock-jobbing, in ſelling ſtock, or any ſecurity upon any funds granted by parliament, he ſhall be liable to the forfeiture of 500l. and to ſtand on the pillory in ſome public place in London, three ſeveral days, for the ſpace of one hour.

Every ſworn broker is to keep a book or regiſter, and therein enter all contracts and bargains that he ſhall make between any perſons, within three days after any contract made, and for omitting ſo to do, he forfeits 50l. And if any ſuch broker ſhall, directly or indirectly, take above 10 per cent. for brokerage, he ſhall, for every offence, forfeit 10l. Alſo, if any ſworn broker deal for himſelf, in the exchange or remittance of monies; or buy any tallies, orders, bills, or ſhares in any joint-ſtock, for his own uſe; or ſhall buy goods or merchandizes to ſell again, or make any profit in buying or ſelling any goods, more than the brokerage allowed, he ſhall forfeit the ſum of 200l. and be for ever incapable to act as a broker.

All policies, contracts, or agreements, upon which any premium is, or ſhall be given or paid, for liberty to deliver, receive, accept, or refuſe any ſhare in any joint-ſtock, tallies, orders, Exchequer-bills, &c. other than ſuch policies and contracts as are to be performed within three days from the time of making the ſame, ſhall be null and void, and every ſuch premium ſhall be paid back: and if any premium be given, contrary to the intent and meaning of this act, with the privity of a ſworn broker; or if any perſon ſhall trade therein as a broker, without being lawfully admitted, and the ſame ſhall come to the knowlege of any ſworn broker, in every ſuch caſe, ſuch ſworn broker ſhall forthwith diſcover the ſame; and, in default thereof, he ſhall be diſabled to exerciſe the trade and office.

And all penalties and forfeitures given by this act, ſhall be recovered by action of debt, &c. in any of the king's courts of record at Weſtminſter, one moiety whereof to go to the king, the other to him that ſhall ſue for the ſame.

By the 6 Geo. I. cap. 18. it is declared, that all undertakings, tending to the common grievance and prejudice of his Majeſty's ſubjects, or great numbers of them, in their trade, commerce,

commerce, &c. and particularly the acting as a corporate-body, by raiſing ſtocks, and the transferring or aſſigning any ſhare in ſuch ſtock, without authority by act of parliament or charter to warrant the ſame; and all acting under any charter formerly granted, for particular purpoſes, by perſons who ſhall endeavour to uſe the ſame charters for raiſing a capital ſtock, or making transfers or aſſignments thereof, not intended by ſuch charter to be raiſed or transferred; and acting under any obſolete charter, &c. ſhall for ever be deemed to be illegal and void.

All ſuch undertakings and attempts, and things whatſoever, for furthering, countenancing, or proceeding therein, and relating thereto, ſhall be deemed public nuſances; and the offenders be liable to fines and puniſhments accordingly, and alſo incur any farther pains, &c. as are provided by the ſtatute of præmunire.

And if any merchant or trader ſhall ſuffer any particular damage in this trade, &c. by occaſion of any undertaking by this act declared unlawful, he may have his remedy for the ſame by action, to be grounded on the ſtatute, againſt the perſon, ſocieties, or partnerſhips engaged in ſuch undertaking, &c. and in every ſuch action the plaintiff ſhall recover treble damages with full coſts.

If any broker, or perſon acting as a broker, for himſelf, or in behalf of others, ſhall bargain, ſell, or buy, or contract for the bargaining, ſelling, or buying, any ſhare or intereſt in any of the undertakings hereby adjudged to be unlawful, or in any ſtock of ſuch undertakers, he ſhall not only be diſabled to act as a broker for the future, but ſhall forfeit 500 l. one moiety to the uſe of the crown, and the other to the informer.

By 7 Geo. II. cap. 8. all contracts which ſhall be entered into, upon which any premium ſhall be given for liberty to deliver or receive, accept or refuſe any public ſtock or ſecurities, and all wagers, puts, and refuſals, relating to the preſent or future price of ſtock or ſecurities, ſhall be void; and all premiums upon ſuch contracts or wagers ſhall be reſtored to the perſon who ſhall pay them; who, within ſix months from the making of ſuch contract, &c. may ſue for the ſame with double coſts: and it ſhall be ſufficient for the plaintiff to allege, that the defendant is indebted to him, or has received to his uſe, the money or premium ſo paid, whereby the action accrued, according to the form of the ſtatute, without ſetting forth the ſpecial matter; and a bill in equity may be preferred for diſcovering any contract or wager, and the premium given, which the defendant ſhall be obliged to anſwer upon oath, &c.

Every perſon who ſhall make any contract, upon which any premium ſhall be given for liberty to put upon, deliver, accept, or refuſe any ſtocks or ſecurities, or any contract in the nature of puts and refuſals, or ſhall lay any wagers, &c. as aforeſaid, (except ſuch perſons who bona fide ſue, and with effect proſecute for recovery of the premium paid by them; and that ſhall voluntarily, before any ſuit commenced, repay, or tender ſuch premium which they ſhall have received; and except thoſe perſons as ſhall diſcover ſuch tranſactions in any court of equity) ſhall forfeit 500 l. And all perſons negotiating or writing ſuch contract, incur the like penalty and forfeiture; which penalties may be recovered by action of debt, or information, in any of his Majeſty's courts of record at Weſtminſter.

No money or other conſideration ſhall be voluntarily given or received, for compounding any difference for the not delivering or receiving any public ſtock or ſecurities; but all ſuch contracts ſhall be ſpecifically executed; and all perſons who ſhall compound any difference, ſhall forfeit 100 l. And no perſon who ſhall ſell ſtock, to be delivered and paid for a certain day, if it be refuſed or neglected to be paid for, ſhall be obliged to transfer the ſame; but it ſhall be lawful for ſuch perſon to ſell ſuch ſtock to any other, and to receive or recover, from the perſon who contracted for the ſame, the damage which ſhall be ſuſtained: and any perſon that ſhall buy ſtock, to be accepted and paid for on a future day, and which ſhall be refuſed or neglected to be transferred, may buy the ſame quantity of ſuch ſtock of any other perſon, at the current market-price, and recover and receive, from the firſt ſeller, the damage ſuſtained.

All contracts made for the buying or transferring of ſtock, whereof the perſons, on whoſe behalf the contract ſhall be made to transfer the ſame, ſhall not at the time of making any ſuch contract be actually poſſeſſed in their own right, or in the name of truſtees, ſhall be void; and every perſon in whoſe behalf, and with whoſe conſent, any contract ſhall be ſo made to ſell ſtock, of which ſuch perſon is not actually poſſeſſed, &c. ſhall forfeit the ſum of 500 l. one moiety to the crown, and the other moiety to them that ſhall ſue for the ſame: and any broker or agent, who ſhall negociate ſuch contract, and ſhall know that the perſon on whoſe behalf the contract ſhall be made, is not poſſeſſed of the ſtock, ſhall forfeit 100 l. to be divided between the king and the proſecutor.

Every broker, or perſon who ſhall act as a broker, receiving brokerage in the buying or diſpoſing of ſtocks, ſhall keep a broker's book, in which he ſhall enter all contracts that he ſhall make, on the day of the making ſuch contracts, with the names of the principal parties, as well buyers as ſellers; and ſuch brokers, who ſhall not keep ſuch book, or ſhall wilfully omit to enter any contract, ſhall, for every ſuch offence, forfeit 50 l. one moiety to his Majeſty, and the other moiety to the perſon ſuing for the ſame.

But nothing in this act ſhall extend to any contracts for the purchaſe or ſale of ſtock, to be made in purſuance of any decree or order of the court of chancery, with the privity of the accomptant-general of that court: nor ſhall any thing in the act hinder any perſon from lending money on ſtock, or contracts for re-delivering or transferring thereon, ſo as no premium be paid for the loan, more than legal intereſt.

REMARKS.

Plain reaſons why STOCK-JOBBING has been, and ſtill continues to be, detrimental to the commerce of this nation.

I. In relation to TRADING COMPANIES, whoſe ſtocks have been jobbed in, without due regard to the advancement of the commerce of the nation, by the means of thoſe trading companies, as was the great plea for their primary inſtitution.

1. Becauſe, when the African trade was firſt eſtabliſhed by a company, it had ſuch reputation, that ſhares therein roſe from 100 l. to 480 l. whereby the artful managers got great eſtates in ſelling ſhares; but after they had made their market, by practiſing on the paſſions of thoſe unexperienced in this kind of myſterious traffic, the ſhares fell from 480 l. to FORTY SHILLINGS; which proved not only unſpeakably prejudicial to that valuable branch of commerce, but injurious to many good families, and deſtructive to numbers of widows and orphans. This was formerly alſo the fate of the HUDSON'S BAY TRADE, the WHALE FISHERY, and SPICE TRADE, &c.

2. Becauſe ſtock-jobbing has been the parent of numberleſs trading bubbles. See our article BUBBLES and ACTIONS.

3. Becauſe jobbing in the South-Sea ſcheme of the year 1720, not only ruined thouſands of families; but did great injury to the public credit of the nation. See our article SOUTH-SEA COMPANY.

4. Becauſe ſtock-jobbing ſchemes have had as fatal effects in France as in England. See the article MISSISSIPPI.

5. Becauſe, in times of danger and difficulty, the ſtocks of trading companies, which muſt be always negociable, are liable, upon every idle rumour, to be raiſed and lowered by the jobbers therein, to anſwer their lucrative purpoſes, and thereby to hurt the PUBLIC CREDIT of thoſe companies, as well as the PUBLIC CREDIT of the nation in general.

6. Becauſe companies may act ſo imprudently, or unjuſtly towards other nations, in the exerciſe of their commerce, as may involve the nation in WARS and PUBLIC DEBTS, as well as ruin numbers of the ſtock-proprietors. See SOUTH-SEA COMPANY, and SPANISH AMERICA.

7. Becauſe the domeſtic traffic in the ſtocks of companies, ſo engroſſes the thoughts of the proprietors, that the national commerce often ſuffers, for want of that money being employed in a free trade; which might prove much more to the advantage of the kingdom, as well as to that of the ſtock-holders themſelves, if they employed the ſame property in the general trade.—☞ Theſe conſiderations may, perhaps, furniſh the weightieſt objections that can be urged againſt all JOINT-STOCK COMPANIES.

8. Becauſe PRIVATE CREDIT is greatly injured hereby; for the monies of the opulent being locked up in theſe channels of domeſtic bubbling, and the ſtock-holders heads wholly engaged in this kind of negociations, induſtrious and ſkilful traders are deprived of thoſe loans of money, which they were wont to have on their PERSONAL SECURITY, at the legal intereſt, wherewith to carry on the ſolid national commerce.—Whence private credit has received unſpeakable detriment, for want of a competency of caſh to circulate the general trade; whereby dealings for READY MONEY, or very ſhort credit, which was greatly the caſe before STOCK-TRADING took place, are quite laid aſide, and long credits enhance the price of our commodities, and bankruptcies have ſince proved more numerous than ever. See our article CREDIT [PRIVATE CREDIT].

II. THE INJURIOUS EFFECTS OF STOCK-JOBBING, WITH REGARD TO THE PUBLIC REVENUE FUNDS.

1. Becauſe the PUBLIC FUNDS, together with companies ſtocks, engroſs that ready money that ſhould otherwiſe be employed in trade, either by the proprietors or others; which would prevent that long credit which is ſo fatally cuſtomary in our trade, that tends to ruin it in all nations where we have any commerce; for, as foreigners know that our manufacturers are obliged to give and take credit at home, ſo they have inſiſted upon long credits abroad. — This prevents all ready money returns, which ruins the merchant as well as the manufacturer.—Whereas, was that money employed in trade, that circulates in the public funds, this practice of long credits would ceaſe both at home and abroad, our commodities go far cheaper to foreign markets than otherwiſe they can do, quick returns be made, our traders ſaved from bankruptcy, and our rivals prevented from ſupplanting us at foreign markets, as they now do.

2. Becauſe

2. Becauſe, while people have opportunity to deal in the funds, they will endeavour, from a ſpirit of indolence, to ſubſiſt on their income that way, and turn their backs on all fair national trade.—This ſinks the trade of the nation, for want of that circulation of money requiſite to carry it on to proper advantage; whereby, inſtead of increaſing in ſkilful traders, we ſwarm in ſtock-holders and ſtock-jobbers, brokers and uſurers: and thus there appears to he plenty of money for funding and jobbing, while the trade of the nation, which alone can enable us to pay the intereſt and principal, is ſtarved for want of money to circulate it the moſt to the public intereſt.

3. Becauſe funding and ſtock-jobbing can never increaſe, but muſt daily leſſen the commerce of the nation, which muſt daily leſſen its real and ſubſtantial wealth, and augment only that which is imaginary.

4. Becauſe this kind of traffic gives foreigners, who are proprietors in our funds, an opportunity at critical conjunctures, to uſe many artifices, in concert with our domeſtic jobbers, to raiſe and fall ſtocks as they pleaſe, draw the real money out of the kingdom, and prejudice or ruin the public credit, to anſwer ſome infamous temporary purpoſes.—Wherefore, to damp the ſpirit of STOCK-JOBBING, we muſt encourage that of COMMERCE; and to uphold the PUBLIC CREDIT, we muſt either leſſen our PUBLIC DEBTS, or uſe a SPUNGE, with which the public creditors have been threatened by ſome of late. See the article MONEY.

SUBSIDY, an aid, tax, or tribute, granted by the parliament to the king upon urgent occaſions, and impoſed upon the ſubjects, according to a certain rate on lands or goods.

SUBSIDY is alſo a duty paid at the cuſtom-houſe upon foreign goods imported into this kingdom. There are various SUBSIDIES granted by acts of parliament, according to the exigencies of public affairs. The SUBSIDY INWARDS, or OLD SUBSIDY. This duty is compoſed of a TONNAGE and POUNDAGE DUTY; which names ariſe from the different regulations, whereby it is impoſed and levied. By the act of 12 Car. II. cap. 4. it is called a TONNAGE DUTY on wines imported, being thereon regulated by a ſum certain on every ton; and it is called a POUNDAGE DUTY on other goods and merchandize imported, being thereon regulated by a CERTAIN PORTION OF A POUND (OR TWENTY SHILLINGS IN MONEY) of a certain RATE or VALUATION fixed in the BOOK OF RATES, which ſee.

TONNAGE is payable (in ready money by 12 Car. II. cap. 4. §. 1. 4. before landing) on all wines imported. 12 Car. II. cap. 4. §. 16. except priſage wines. See PRISAGE. And by the 13 and 14 of Car. II. cap. 2. vinegar, perry, rape of grape, ſyder and ſyder eager, which by the 12 Car. II. cap. 4. were under the common regulation of POUNDAGE, are made ſubject to TONNAGE for this Subſidy: on all which it is to be reſpectively levied and collected according to the ſeveral acts pointed out in the BOOK of RATES.

Another ſubſidy is called the NEW SUBSIDY. It is to be raiſed, levied, and collected, by the ſame rules, orders, and methods, and under the ſame penalties and forfeitures, as ſignified in the ſeveral acts contained in the Book of Rates.

There is a ſubſidy named the ONE-THIRD SUBSIDY, which is the amount of ONE-THIRD of the preceding ſubſidy. This branch, as well as the former ſubſidies, is compoſed of a tonnage and poundage duty, and is payable in all caſes where that is due: it is to be raiſed, ſecured, and paid, by the ſame ways and means, and methods, under ſuch penalties and forfeitures, and ſubject to ſuch rules and directions, as for the NEW SUBSIDY. Therefore it is to be computed by taking one-third part of the net New Subſidy of Tonnage and Poundage.

Another ſubſidy is termed the TWO-THIRDS SUBSIDY; which branch of the cuſtoms, as well as the former ſubſidies, is compoſed of a tonnage and poundage duty, and is raiſed, ſecured, and paid, by the ſame ways and methods, under ſuch penalties and forfeitures, and ſubject to ſuch rules and directions, as before directed for the New Subſidy and the One-third Subſidy. It is an additional ſubſidy of two third parts of the New Subſidy upon all goods liable to the ſaid New Subſidy, except in certain caſes excepted, as per acts of parliament, and contained in the Book of Rates.

There is alſo the SUBSIDY of 1747. This branch is over and above all ſubſidies, additional duties, impoſitions, &c. a poundage duty of twelve-pence in the pound, to be paid in ready money, on all goods and merchandize imported, except for tobacco, whereon it may he ſecured by bond, according to the ſeveral particular rates or values thereof, as rated and valued in the Book of Rates referred to by 12 Car. II. and 11 Geo. I. or by any other act of parliament, &c.

This duty is to be levied and collected by the ſame ways and means, and under the ſame penalties, &c. as are directed for the Old Subſidy. See the concluſion of Letter A, in regard to the BUSINESS OF THE CUSTOM-HOUSE, containing an ENQUIRY whether the merchant-importers of this kingdom are not intitled to certain DISCOUNTS, which they have never yet received.

SUBSIDIES on SPIRITS. By 9 Geo. II. cap. 23. §. 17. all the duties ariſing by ſpirits from September 29, 1736, are united to, and made part of the aggregate fund; and from that time the ſeveral duties then payable on ſpirits imported are accounted for in one ſum, under the title of SUBSIDIES ON SPIRITS. See SAXBY.

SUBSIDY, and ONE PER CENT. OUTWARDS, with the duties on leather, white woollen cloths, foreign goods uſed in dyeing, exported.

THE SUBSIDY OUTWARDS.

By 12 Car. II. cap. 4. §. 2. was granted, as part of the ſubſidy of poundage, and continued therewith to Auguſt 1, 1710.—9 Ann. cap. 6. §. 1. revived from March 1710, for 32 years.—3 Geo. I. cap. 7. §. 1. continued for ever; and is made part of the general fund by that act eſtabliſhed.—This ſubſidy, as well as the Subſidy Inwards, is compoſed of a TONNAGE and a POUNDAGE, and is to be paid in ready money before ſhipping off, in order for exportation.

ONE PER CENT. OUTWARDS.

This duty is payable in ready money, without diſcount, upon all goods and merchandizes liable to SUBSIDY *, exported from any part of Great-Britain, capable of a ſhip or veſſel of 200 tons upon an ordinary full ſea, to any part or place in the Mediterranean ſea, beyond the port of Malaga, in any ſhip or veſſel that hath not two decks, and doth carry leſs than 16 pieces of ordnance mounted, together with two men for each gun, and other ammunition proportionable.

* It is underſtood practically, that FOREIGN GOODS USED IN DYEING, enumerated in the portable Book of Rates, are not liable to this duty of one per cent.

The SUBSIDY granted in the year 1758-9, of poundage upon certain goods and merchandizes to be imported into this kingdom; and by the ſame act, an additional inland duty on coffee and chocolate. This duty is of 12d. in the pound, or 5 per cent. granted on tobacco, foreign linens, ſugar, and other grocery, as the ſame is underſtood in the Book of Rates, except currants; Eaſt-India goods, except coffee and raw ſilks; foreign brandy and ſpirits, except rum of the produce of the Britiſh ſugar plantations; and paper, imported—Said ſubſidy is granted to be paid on goods, as the ſame are valued in the Book of Rates, and to be levied and paid into the Exchequer, as the ſubſidy of 5 per cent. granted by 21 Geo. II. or of the year 1747. See the Concluſion of the Letter A, relating to the BUSINESS OF THE CUSTOM-HOUSE.—Prize goods are to be charged only with the duties payable by act of Geo. II. unleſs taken out of the warehouſes for home conſumption.—Allowance to be made to the importer of tobacco, on paying down the duty.—Bond to be given on non-payment of the duty; and the importers to have the uſual allowances and diſcounts.—Drawback of the duty allowed upon the exportation of goods within 3 years; except for ſuch goods as are by former acts declared no drawback ſhall be paid or allowed on exportation thereof.—Drawback of the duty allowed on paper uſed in printing books in the learned languages in both univerſities, as is preſcribed by act of 10 Annæ.—Like drawback allowed on paper uſed in printing books in the learned languages in the univerſities of Scotland.—A drawback of 3 ſhillings per hundred weight allowed on ſugar refined in Great-Britain, and exported.—Refiner to make oath.—Exporter to make oath.—Searcher to certify the ſhipping thereof, and all other requiſites being performed according to the Book of Rates.

Beſides the ſeveral foregoing ſubſidies payable at the cuſtom-houſe, there are a variety of other duties paid there, under various circumſtances, as the ſame are ſet forth in the portable Book of Rates; in all which the merchant ſhould be well informed, as follow, viz. The PETTY CUSTOMS, or ALIEN'S DUTY, ADDITIONAL DUTY, COMPOSITION ON PETTY SEIZURES, IMPOST ON WINES AND VINEGAR, IMPOST ON TOBACCO, IMPOST 1690, IMPOST 1692, DUTY ON WHALE-FINS, DUTY OF 15 PER CENT ON MUSLINS, DUTY ON SPICES, PICTURES, &c. ADDITIONAL DUTY ON SPICES, PICTURES, AND DUTY ON DRUGS, &c. SECOND 25 PER CENT. ON FRENCH GOODS, COINAGE DUTY ON WINE, AND COINAGE DUTY ON SPIRITS, DUTY ON PEPPER, RAISINS, AND SPICE, DUTY ON CANDLES, ADDITIONAL DUTY ON CANDLES, DUTY ON COALS IMPORTED, AND ON COALS, CULM, AND CINDERS, BROUGHT COASTWISE, ADDITIONAL DUTY ON COALS IMPORTED, AND ON COALS, CULM, AND CINDERS BROUGHT COASTWISE. DUTY ON COALS AND CULM, FOR BUILDING CHURCHES, &c. DUTY ON HOPS, DUTY ON HIDES, SKINS, &c. DUTY ON SOAP AND PAPER, ADDITIONAL DUTY ON SOAP AND PAPER, &c. DUTY ON COALS EXPORTED, DUTY ON SAIL-CLOTH, DUTY ON WROUGHT PLATE, DUTY ON APPLES, DUTY ON WINE 1745, DUTY ON GLASS, DUTY ON LINEN YARN, DUTY ON GUM SENEGA, OF UNRATED GOODS IMPORTED, UNDERVALUED, OF PRISAGE AND BUTLERAGE. And the laſt additional DUTIES on WINES, CYDER, and PERRY, ſee the BUSINESS OF THE CUSTOMS, the end of W.

The following three branches, though no part of the REVENUE OF CUSTOMS, but being payable on foreign GOODS imported, ſhould be here taken notice of, as the EXCISE ON SALT IMPORTED, EXCISE ON LIQUORS IMPORTED, INLAND DUTY ON COFFEE, TEA, AND CHOCOLATE.

REMARKS.

SUBSIDIES, &c. at the Cuſtom-houſe.

In the firſt year after the reſtauration of king Charles the IId. * the parliament paſſed the act, granting the ſubſidy of TONNAGE and POUNDAGE, payable on merchandize imported or exported, as alſo the act for encouragement and increaſe of ſhipping and navigation; and two years after, in order to improve and inforce the execution of thoſe laws, was paſſed the act for preventing frauds, and regulating abuſes in the CUSTOMS: and theſe three acts eſtabliſhed the foundation of the preſent ſyſtem of the cuſtoms, which has been regulated and extended by ſubſequent laws, as occaſions have required.

* Of the cuſtoms payable before the reſtauration, there yet remains a duty on wine, called PRISAGE || or BUTLERAGE, which are ancient duties payable to the crown of England (by prerogative) upon the importation of wines, but are now, and generally have been, granted from the crown by gift or patent.

|| PRISAGE is a certain taking or purveyance of wines to the king's uſe, out of every ſhip bringing wines belonging to the natives of England, except the merchants of London, the Cinque Ports, Southampton and Cheſter, which are exempted by particular charters: to be taken upon the breaking of bulk, or unloading any part of the ſhip's cargo, according to the whole quantity on board, though there be not more than one ton landed.

This duty is either SINGLE or DOUBLE.

SINGLE PRISAGE is one ton, and is due in kind, when the quantity imported amounts to, or exceeds, 10 tons, but is under 20 tons: for if under 10 tons, there is not any priſage due.

DOUBLE PRISAGE is 2 tons, and is due in kind, when the quantity imported amounts to, or exceeds, 20 tons, which is the moſt due out of any one ſhip: one ton to be taken before, and the other behind the maſt, at the pleaſure of the king's butler or priſage-maſter; who may taſte the whole cargo, and chuſe the beſt wines, and fill up the caſks, or chuſe thoſe that are the fulleſt, and take them away, allowing only † 20s. per ton for freight: but it may be compounded for at a certain price, as is the practice in London, &c.

But, in regard to wines imported into Scotland; on a cauſe in the court of Exchequer, between her Majeſty's attorney-general and James Gordon, merchant, it was decreed in the year 1713, that priſage was not payable thereon.

BUTLERAGE is a duty of two ſhillings on every ton of wine imported by merchants, ſtrangers, by Charta Mercatoria ‡, in lieu of priſage, to be paid within 40 days after the wines are landed.

|| 40 Hen. III. 28 Edw. I. 6 Edw. III. 20 Rich. II.
† 28 Edw. I. cap. 2.
‡ 31 Edw. I. cap. 1 and 2. 27 Edw. III. cap. 26.

The ſubſidy granted by the firſt of theſe acts was, by the wiſdom of our anceſtors, contrived on very ſimple, though comprehenſive principles, being payable by a determinate ſum on every ton of wine imported, and every ton of beer exported, and therefore called TONNAGE; and on other goods imported and exported, by a certain portion (generally one ſhilling in the pound ſterling) according to the reſpective valuations in a BOOK OF RATES referred to, and authorized by the ſaid act, and therefore called a POUNDAGE, together with a ſmall duty on WOOLLEN CLOTHS exported; ſo that all goods liable to cuſtoms, except wine imported, beer and woollen cloths exported, were comprehended under this ſimple regulation of poundage; and this ſubſidy, ſo far as it relates to merchandize imported, is known by the name of Cuſtoms, or Old Cuſtoms.

But this ſimplicity of principles was not long adhered to with that care and attention it deſerved; for by 15 and 22 of Car. II. the Subſidy on Corn imported was altered from a poundage duty on the Rates of Valuations, to certain ſums payable by the quarter, according to the ſeveral ſpecies, and the various circumſtances of importation; and by 25 Car. II. whale-fins and whale-oil underwent the like alterations.

In the ſhort reign of king James II. two new duties were granted, the IMPOST ON WINE, and the IMPOST ON TOBACCO; that on wine was ſtrictly on the principles of TONNAGE; but that on tobacco being by a certain ſum payable on each pound weight, no regard was had, ſo as to regulate it by a poundage on the valuation thereof in the Book of Rates. There were other duties laid on, but having been temporary, and not continued, it is not neceſſary to take notice of them.

The neceſſities of the ſtate, in order to ſupport a war againſt France in the reigns of king William and queen Anne, occaſioned the laying on many additional duties of cuſtoms, the two firſt of which were, Impoſitions 1690, and 1692, on merchandizes imported, &c. Though, in drawing the acts for thoſe duties, due regard was not had to the principle of POUNDAGE; yet it was not altogether unattended to, there being many ſpecies of goods in both theſe duties, which are regulated by a poundage duty on their reſpective valuations in the Book of Rates. Some branches are ſtrictly according to the principles of poundage; and ſome being on the plan of the old cuſtoms, are conſonant to the original principles of tonnage and poundage: in other branches, to the number of above 20, laid on during the reigns of king William, queen Anne, king George the Firſt and king George the Second, theſe principles have been either not underſtood, or altogether neglected, except, ſays Mr. Saxby, in the ſubſidy of 1747, which being deſigned as a poundage duty only, and therefore formed on that ſpecies of the principles of the old cuſtoms, was conſtructed with great judgment and ſimplicity; and the more ſo, as it is not incumbered or obſcured with diſcounts.

What Mr. Saxby has here obſerved, we think is liable to objection. For however ſimple and judicious that ſubſidy was conſtructed, we cannot apprehend it ever the more ſo, by reaſon of its being unincumbered with diſcount, in favour of the merchant, as the old ſubſidy, the new ſubſidy, the $\frac{1}{3}$ ſubſidy, and the $\frac{2}{3}$ ſubſidies, are not unincumbered with the allowance of diſcount to the merchants, on conſideration of the preſent payment of the duty. For it is no leſs eaſy to compute the ſubſidy of 1747, with a diſcount of 5 per cent. than either of the other ſubſidies before mentioned. But if the ſubſidy of 1747 is unincumbered with the allowance of diſcount to our merchants, as in the caſes of the other ſaid diſcount, we ſhould be glad to be informed, by what authority the merchants are not intitled to the diſcount on payment of the duties purſuant to the act of 1747? Is not this ſubſidy-act of 1747, founded on that of 12 Car. II? And does not that act allow the merchants the diſcount of 5 per cent. in the 17th rule contained in that act? In what peculiar clauſe or part of the ſubſidy-act of 1747, does it deviate from that particular allowance in the act of 12 Car. II? Is not alſo the ſubſidy-act of 1747, founded on that of the 11th of Geo. I? and is not this latter grounded on that of Car. II.? and wherein does that of Geo. I. deviate from that of Car. II. with relation to the diſcount allowed to the merchant, according to the 27 rules, ſigned Sir Harbottle Grimſtone, Bart. then ſpeaker of the houſe of commons? We can diſcover nothing in the act of 1747, which does repeal the ſaid 17th rule, and thereby deprive the merchants of the diſcount legally allowed them. If we are miſtaken in this matter, we ſhall thankfully be ſet to rights.—We ſtarted our doubts on this point, when we printed the firſt edition of this work; but as we did not judge it eligible to oppoſe the practice of the cuſtom-houſe, leſt we ſhould err in our private judgment, we then computed the duty, conſiſtent with ſuch practice. Since that, we have more deliberately conſidered this affair, and confeſs, that we have not found ſufficient reaſon to diſſipate our doubts; and we have given our reaſons more fully on this occaſion, in the Cuſtom-houſe Buſineſs treated of in this edition at the end of our Letter A; and for the reaſons there urged, we have declined to make any further tabular computation of the duties of cuſtoms, leſt we ſhould miſguide the whole mercantile body in a point that materially concerns their intereſt.

Another motive to induce us to decline theſe computations is, that we are informed that Mr. Saxby of the cuſtom-houſe is about this work already, and has been engaged ſome time therein; becauſe, ſince his Book of Rates was publiſhed, there has been another freſh ſubſidy-act of 1759; which has rendered his former book out of date, with reſpect to the totals of thoſe computed duties that render his book conſiſtent with the laſt ſubſidy-act of 1759.

The remainder of the introduction of Mr. Saxby's Book of Rates is ſpent chiefly in animadverting upon the errors of the books of rates that were compoſed by others, his predeceſſors; on which ſubject it is wiſhed he had dwelt longer, as he ſeems to have intended; ſeeing, as he intimates, that he received great aſſiſtance from ſeveral gentlemen in various departments of the cuſtom-houſe. However, for ſeveral of the judicious obſervations he has made, the public are obliged to him; and we hope and expect that his new Book of Rates will rectify more of the errors of thoſe who treated on the ſame ſubject before him; and that he will render the whole buſineſs of the cuſtoms more intelligible, as well to the merchants as the officers of that revenue.

'The allowances, bounties, and drawbacks payable on Britiſh goods exported, Mr. Saxby obſerves, and the premiums on other goods imported, &c. being a part of buſineſs not ſo immediately obvious to the officers of the cuſtoms, have not been heretofore ſo well digeſted and collected as they might have been; for though part of them have been extremely well done, others have been but ſlightly touched, and ſome quite omitted: but, continues he, as they are now become very numerous, and in regard to bounties and premiums a very extenſive and formidable branch of buſineſs of the cuſtoms, it became neceſſary that the merchants, as well as

officers, ſhould be well inſtructed therein, &c.' In theſe particulars Mr. Saxby's book is more accurate and extenſive than any of thoſe of his predeceſſors. What we would chiefly intimate here is, that theſe candid acknowlegements, and uſeful improvements made by that gentleman, will ſerve to convince us, that there has been as little infallibility in books of rates wrote by officers of the cuſtoms as by others; and therefore it is not impoſſible that there may be miſtakes therein relative to the ſubſidy of 1747, as well as ſo many other points already explained by Mr. Saxby. See the concluſion of our Letter A, with reſpect to the BUSINESS OF THE CUSTOM-HOUSE.

Mr. Saxby concludes his introduction, by remarking, 'that it muſt not be omitted, that a diſtant proſpect and hope that the legiſlature might ſome time undertake to reform and reduce the rates, branches, &c. of this revenue, ſtrongly pointed out the neceſſity of reſtoring and preſerving the true text of the rates, as it would be in vain to attempt any regulations of that kind, till this were well executed; and this naturally leads to further ſpeculations on the ſame ſubject; for the book of rates, of 1660, bears the marks of great antiquity, many of the terms therein being ſo obſolete as not now to be found elſewhere in the Engliſh language; and by comparing it with that of 1642, it is apparent to be no other than an old book of rates of former times, reviſed and corrected, ſo as to ſuit the circumſtances of import and export of that period; and when one conſiders the great alterations and improvements which have been made in every branch of trade and manufactures throughout the world during the laſt age, it may be eaſily conceived that the names and value of ſuch ſpecies of goods as were made and conſumed an hundred years ago, will in many reſpects but ill fit thoſe of the preſent times: but this is a large field to range in; I ſhall therefore for the preſent forbear to explain myſelf further on this ſubject, and ſhall only take the liberty to recommend to the preſent age an aphoriſm of a great man in the laſt: As time changes things for the worſe, ſo ſhould prudence alter them for the better.'—So far Mr. Saxby, who not only gives us hope of a more correct book of rates than we ever had before, but that a general reform may be made in the cuſtoms, by the legiſlature, with reſpect to the rates of goods; which the ſooner the ſame is done, we think the better it will be for the intereſt of the nation. See our INTRODUCTION to this edition.

Before we leave this article, we ſhall only notice another paragraph in Mr. Saxby: 'The branches of the cuſtoms having many of them gone through various alterations of appropriation ſince their firſt eſtabliſhment, the detail of ſuch alterations is herein purpoſely omitted, and no more is inſerted than their preſent ſituation, that being ſufficient for the uſe and inſtruction of the officers.' To which we ſhall only obſerve, that as thoſe alterations of appropriation in this branch of the revenue have never proved injurious to the PUBLIC CREDIT; ſo we may preſume that the like alterations of appropriation in other branches of the revenue could not prove ſo neither; for if the national creditors are ſecure of their intereſt by parliament, they do not ſeem to pay ſo much regard to the appropriation of any peculiar duties or taxes for that purpoſe.

SUFFOLK is a maritime county in England, having the German Ocean on the eaſt, Cambridgeſhire on the weſt, the river Stour on the ſouth, which divides it from Eſſex, and the rivers Ouſe, the Leſs, and Waveney on the north, which part it from Norfolk; and is in compaſs about 140 miles.

The air is very clear and wholſome, even near the ſea-ſhore, becauſe the beach is generally ſandy and ſhelly. As to the ſoil, it is various. Its chief commodities are butter and cheeſe, and the principal manufactures of Suffolk are woollen and linen cloth.

IPSWICH, the county-town, has a conſiderable trade by ſea, but not ſo great as formerly, when its harbour was more commodious. Its chief manufactures are linen and woollen.

ALDBOROUGH, on the coaſt, has a good harbour and trade in the fiſhery, abundance of ſprats, ſoles, and lobſters, being caught in the ſea here.

SUDBURY ſtands on the river Stour, which almoſt ſurrounds it. They drive here a good trade in perpetuanas, ſays, ſerges, &c. The Stour has of late years been made navigable for barges and ſmall craft, as far as Maningtree in Eſſex, which is a great benefit to the trade of this place, and no ſmall addition to its wealth.

EYE is a mean-built town, in the road betwixt Ipſwich and Norwich. Its chief manufacture is bone-lace and ſpinning.

HALESWORTH is a large and populous town on the river Blythe, with a manufacture of linen yarn, of which great quantities are ſold here, ſpun by the women of this town and the adjacent villages.

SOUTHWOLD, a ſmall corporation on the coaſt, has a good harbour. It is a populous town, and drives a conſiderable trade in ſalt, old beer, herrings, ſprats, &c. which laſt are cured here in the ſame manner as herrings at Yarmouth.

LEOSTOFF ſtands on the eaſtermoſt point of England. The chief trade of the inhabitants is fiſhing for cod in the North Sea; and for herrings, mackarel, and ſprats, at home.

STOW-MARKET on the Orwel, has a manufacture of tammies and other Norwich ſtuffs.

WOODBRIDGE, on the river Deben, which being navigable by ſhips of conſiderable burthen to the town, its inhabitants drive a pretty good trade to London, Newcaſtle, Holland, &c. with butter, cheeſe, ſalt, plank, and ſeveral other ſorts of merchandize, in their pinks and boys, which go to and from London every week.

LAVENHAM is a pretty large town on a branch of the river Bret. It has a conſiderable manufacture of ſerges, ſhalloons, ſays, ſtuffs, and ſpinning fine yarn for London; which has flouriſhed the more by ſetting up a wool-hall, of which many hundred loads are ſent from hence in a year. Its fair, which is on Michaelmas-day, is in great repute, eſpecially for good butter and cheeſe.

BILDESTON is noted for its woollen manufacture, but it is a dirty place, and the buildings are mean.

CLARE is another mean-built, dirty town, but has a manufacture of ſays.

HADLEY is a pretty large populous town, and tolerably well built. It is of ſome note ſtill, though of much greater formerly, for a manufacture of woollen cloth.

NEYLAND on the Stour is a large town, and has a manufacture of bays and ſays, which alſo was formerly much greater than now.

STRATFORD on the ſame river, is a thoroughfare-ſtage from Ipſwich to London, of great traffic, and employed in the woollen manufactures. It is ſaid that 300 droves of turkies have paſſed in one ſeaſon over its bridge towards London, computed at 500 in a drove, one with another.

EASTERBERGHOLT is another large handſome village, employed alſo in the woollen manufacture, but not ſo much as formerly.

SUGAR.

The manner in which SUGAR is drawn from the canes.

The Americans having cut their canes above the firſt joint, and freed them from their leaves, make them into bundles and carry them to the mill, which is compoſed of three rollers of an equal ſize, and equally armed with plates of iron, where the canes are to paſs. The roller in the middle is raiſed much higher than the reſt, to the end that the two poles, which are affixed croſsways at the top, and to which the beaſts are yoaked, may turn about freely, without being hindered by the machine. The great roller in the middle is ſurrounded with a cog full of teeth, which bite upon the ſides of the two other rollers adjoining to it, which makes them turn about, grind and bruiſe the canes, which paſs quite round the great roller, and come out dry, and ſqueezed from all their juice.

If by accident the Indian, or whoever feeds the mill with canes, ſhould happen to have his fingers catched in the mill, they muſt immediately cut off his arm, leſt the whole body ſhould be drawn in and ground to pieces: therefore, as ſoon as they ſee any one have his finger or hand catched, the perſon ſtanding by cuts off his arm with a hanger, and he is afterwards cured, and kept for other ſervice. The juice falling into a veſſel which is below the mill, and being drawn off, runs by a little channel into the firſt boiler, which holds about two hogſheads, where it is heated by a ſmall fire, and ſet a boiling, in order to make a very thick ſcum ariſe: the Weſt-Indians keep this ſcum to feed their cattle with. This liquor being well ſcummed is put into a ſecond boiler, where they make it boil again, throwing in, from time to time, warm water, in which they have beat up ſome eggs: having been thus purified, they paſs it through ſtrainers; and, after it has done running, put it into a third boiler, which is of braſs or copper, and then again, upon another refining, into a fourth boiler; and when it begins to cool, and they find it riſes to a grain, they paſs a ſkimmer, or wooden ſpatula, underneath it, from the right to the left, to ſee what quality the graining is of: the ſugar being thus ready, while it remains hot, is caſt into moulds, or earthen-pots with holes in their bottoms, yet ſhut: at the end of twenty-four hours, which is the ordinary time, the ſugar takes to incorporate, the negroes carry their pots into their warehouſes, and after they have opened the holes, and pierced the ſugar, they ſet the moulds upon little pots, or jars, in order to receive the ſyrup or moloſſes which runs from it. When the ſyrup is run from the ſugar, they take it out of the mould, and cut it afterwards with a knife; and this ſugar cut in this manner, is called the grey muſcavado ſugar; which, to be in its perfection, ought to be of a whitiſh grey, dry, have the leaſt fat, or ſmelling of the fire, that may be. This muſcavado is the baſis and foundation of all the other ſugars ſold among us.

It is but little in uſe, though very proper to make ſyrups and coloured comfits.

Of CASSONADE, or POWDER SUGAR.

The caſſonade is made from the grey muſcavado run again, and after it has been clarified, ſtrained, and boiled, and caſt into the moulds, and ſo prepared as we have been ſpeaking before. After the ſyrup is drained out, they lay upon th

ſugar about an inch thickneſs of clay, wetted with common water, that the moiſture which is in the clay, may get through the ſugar, and take away with it whatever fat or bad matter might remain in it: when it will run no longer, and the clay at the top is dry, they take the ſugar out of the moulds, and cut the cakes into three pieces, the top, the middle, and the bottom, which they dry ſeparately, according to their fineneſs. The fineſt powder ſugar is that of Brazil, which is extremely white, dry, and well grained, of a violet taſte and flavour. The caſſonade, or powder ſugar, is much in uſe among the confectioners; above all, that of Brazil, by reaſon that it is leſs ſubject to candy, upon which account the confectioners value it the more. The ſugar, which we improperly call ſugar of ſeven pounds weight, becauſe it as often weighs ten or twelve, is made of the grey muſcavado, formed into loaves, as we have deſcribed before. The ſugar of ſeven pounds is diſtinguiſhed into three ſorts, to wit, the white, the ſecond, and the laſt, which is of a browner colour; the whiter the ſugar is, the better ſtoved, grained, and dried, the more it is eſteemed. The leſs the moulds are, that is, the leſs the loaf is made, and the whiter it is, ſo much the dearer it is.

The uſe of this is to make choice ſyrups, white confects, and to preſerve apricots, and the like.

Of Sugar Royal, and Demy Royal.

The ſugar called royal, from its extraordinary whiteneſs, is made from the ſmall white ſugar, or powder ſugar of Brazil, melted and caſt into a loaf as the former. This ſugar royal ought to be extremely white throughout the whole, that is to ſay, as fine at the top as the bottom, of a clear, compact, ſhining grain, notwithſtanding eaſy to break; which is the general obſervation of ſugars that are well baked, and of a kindly ſort. We ſell, beſides, another ſort we call demy royal, which is a ſmall ſugar-loaf, very white, and wrapped in a blue paper, which comes from Holland.

The Dutch formerly brought us ſugars of eighteen and twenty pounds, wrapped in palm-leaves inſtead of paper; for which reaſon it was called palm-ſugar, which was a white fat ſugar of a good ſort, and a violet taſte. We uſed to have, beſides, another ſugar from the Madeiras; but we have no more of it now, becauſe we have it from ſeveral other iſlands much better.

Of Brown Sugar.

This brown ſugar is one ſort of the muſcavado, which they turn to powder ſugar, and is made of the ſyrup of the ſeven-pound ſugar, after the ſame manner as the others are made. It ought to be of a greyiſh red colour, dry, and not ſmelling of burning; for there is ſome to be met with ſo moiſt, and with ſo much of the burnt ſmell, that it is almoſt impoſſible to uſe it. The uſe of the brown ſugar was formerly very conſiderable, it ſerving to put in clyſters, &c. Theſe moloſſes are better for diſtilling rum than the muſcavado ſugar.

SUGAR COLONIES, British.

Of Barbadoes.

The growing ſucceſs of this ſugar colony promoted the ſettlement of the others, and, as the ſugar plantations increaſed, more hands were required to carry on the works than could, at that time, be ſpared from home. This gave birth to the Guinea trade, for ſupplying thoſe colonies with negro ſlaves; and as the planters flouriſhed and increaſed, ſo did their demands for all ſorts of Britiſh manufactures, and ſuch neceſſaries of life as they could not produce in thoſe climates, which opened another ſcene of trade to the Britiſh merchants, to furniſh theſe new colonies with wine from Madeira.

Theſe branches of trade were of the utmoſt advantage to Great-Britain, foraſmuch as they drew no money out of the kingdom, but yearly brought in large ſums, for Britiſh manufactures exported thither. The trade to this iſland was commonly open and free; for, before the civil war in England, the Dutch ſhips came hither to purchaſe ſugars, as well as the Engliſh; but, ſince the Reſtoration, ſeveral acts of parliament have been made, to confine the trade of the ſugar colonies to Great-Britain, and Britiſh ſhips only; which reſtraints ſoon made London the chiefeſt mart in Europe for ſugar; and, as there was yearly more imported than was neceſſary for home conſumption, the merchants exported the ſurplus to foreign markets, and, by underſelling the Portugueze, who had conſiderable ſugar-works in the Brazils, they gradually beat them almoſt out of all their ſugar trade to the northward of Cape Finiſterre.

This trade of re-exporting ſugars, was carried on for many years with great ſucceſs. Mr. Gee ſays, that, by this trade only, ſuch an increaſe of treaſure and wealth was brought into this kingdom, as yearly added three or four hundred thouſand pounds to the ſtock of the nation; which, in thirty years time, amounted to upwards of ten millions ſterling. Others have computed the clear profits accruing to Great-Britain from the ſugar trade, and thoſe other branches which chiefly depend upon thoſe iſlands, to amount to more than a million a year. A few years ſince, it appeared, by the cuſtom-houſe accounts, that the value of the annual exports from Great-Britain to the ſugar colonies, was five hundred thouſand pounds ſterling; and on importations from thoſe iſlands, more than twelve hundred thouſand pounds per annum. And if the value of our exports to Guinea and the Madeiras, which are the effects of the ſugar trade, were added to the former, it would greatly augment the ſum, and, conſequently, enlarge the profit, which our mother-country received from the ſugar colonies, and the ſeveral branches of trade depending thereon. Certain it is, that while the ſugar trade flouriſhed, both planters and merchants grew immenſely rich, and the trade and navigation of Great-Britain was carried on to a much greater height than ever it was before. And this great ſource of wealth and treaſure to their mother-country, aroſe from ſo ſmall a beginning as a few families ſeeking ſhelter in a deſolate iſland.

This ſhews what may be done by induſtry and trade, rightly applied. When the ſugar trade was at this height, the flouriſhing ſtate of Great-Britain alarmed her neighbours, and put them upon ways to circumvent her in trade, as the only means to put a ſtop to the growing ſtrength of the kingdom, which they feared might become too formidable, from the great increaſe of ſeamen and ſhipping employed in the Weſt-India and Guinea trades, both flouriſhing at the ſame time. Upon a parliamentary enquiry into the ſtate of the trade to Africa, in the year 1728, it appeared to the houſe, that, in three years time only, the number of negroes imported at Barbadoes, Jamaica, and Antigua, amounted to 42,000, beſides what were carried to St Chriſtopher's, Nevis, and Montſerrat.

True it is, however, that our ſugar trade in general has, of late years, greatly declined. The French ſpared no expence or labour to rival Great-Britain in this capital article, they well knowing, if that ſunk, her Guinea and Madeira trades muſt ſink in proportion; for which purpoſe they embraced every opportunity to improve their ſugar plantations, which they have done to a very extraordinary height; and ſuch has been the wiſdom of their councils, that the effect could not be otherwiſe.—For proof of which, ſee our articles French African Trade and Company, and French America, where we have laid before the nation the meaſures which the French have many years taken for that purpoſe.

The French having thus put their ſugar colonies into a flouriſhing condition, the next thing they had in view, was to beat the Britiſh merchants out of the foreign markets for ſugar, and thereby deſtroy their trade for exportation; and this they effected, by giving liberty for their ſhips to carry their ſugars directly to the foreign markets, while ours were obliged to import all into Great-Britain, which enabled them to ſell ſo much cheaper than our merchants could carry it from London, which almoſt put an intire ſtop to that valuable branch of trade to their mother-country.

The firſt declenſion of our exportation trade was attended with ſuch ill conſequences to the ſugar colonies, that it lowered the price of ſugar ſo much at home, as diſcouraged the merchants from ſending to purchaſe ſugars. This obliged the ſugar planters to turn merchant-adventurers in a declining trade, and to ſhip their ſugars upon their own account and riſque. This put a ſtop to the currency of caſh, which was before brought over yearly to purchaſe ſugars, and laid the whole burthen of freight, duty, and commiſſion, upon the plantation, that were formerly paid by the Britiſh merchants: and ſuppoſe but 15,000 hogſheads of ſugar to be ſhipped in a year from this iſland of Barbadoes, on gentlemen's own accounts, theſe three articles will amount to upwards of 60,000 l. ſterling. Another great evil, that followed from the ſame cauſe, was, combinations among the buyers, by which the price of ſugars ſunk ſo low, as greatly to prejudice the planters, and yet turned to the benefit only of a few private perſons, who were the firſt purchaſers, and not at all to that of the conſumers in general; by which that iſland was greatly prejudiced, and this received very little benefit.

The iſland of Barbadoes is generally eſteemed to be little bigger than the Iſle of Wight, and to contain 100,000 acres. About the year 1626, this country was not only unſettled, but uninhabitable, as affording nothing for the ſupport of life, and over-run with ſhrub-wood, which gave a great deal of trouble to the firſt planters; yet, in the ſpace of 50 years, this plantation came to an extraordinary height, and peopled with 50,000 whites, of whom 20,000 were able to bear arms, and 80,000 negroes. Within 20 years after the colony was ſettled, they muſtered 11,000 horſe and foot, which would be incredible, if we had not ſuch proofs of theſe facts as put them beyond doubt.

In ſhort, this iſland roſe to ſuch a pitch in the year 1661, that king Charles II. created, on the ſame day, 13 baronets, in Barbadoes, none of them having leſs than 1000, and ſome of them 10,000 l. a year. At this time their trade actually maintained 400 ſail of ſhips; and it was computed that the running caſh of the iſland was not leſs than 200,000 l. and their annual exportation to Great-Britain, in ſugar, indico, ginger, and other commodities, at leaſt 300,000 l. Theſe

facts

facts demonſtrate the great value of this iſland, at the time we are ſpeaking of; and, by the gradual increaſe of this colony, it has, ſince we firſt poſſeſſed it, contributed beyond conception to the riches of its mother-country.

When this colony was in its moſt flouriſhing condition, which was in the year 1676, there were 400 ſail of ſhips, of 150 tons, one with another, employed annually in this trade; and if we reckon only that the ſea-men, ſhip-builders, and other trades that live by theſe veſſels, amounted, in the whole, to 10,000 ſouls, that will be no immoderate computation. The ſugars that came from Barbadoes, were either ſpent at home, or ſent abroad; and I reckon, that, in the manufacturing the ſugars, and vending them at home and abroad, there might be 20,000 people more employed. To theſe we muſt add, ſuch as got their bread by the goods and manufactures yearly exported from hence to Barbadoes, for almoſt all that the people eat, drink, and wear there, are the product of England; ſo that the computation cannot be thought to riſe too high, if we allow, that in this way 20,000 more get their bread, which will make about 50,000 in the whole, all ſupported here by the labour and induſtry of the whites and negroes in that country. We are next to compute the money brought into this nation by the export of the commodities imported from thence, which was that year allowed to be above 200,000 l. and it was alſo agreed, that as much, or more, had been gained every year, between that time and the Reſtoration.

I ſhall ſay nothing of the money ariſing to the Exchequer from the duties, though this might be computed at 30,000 l. per annum; but that, from the year 1636 to 1656, which is 20 years, this colony produced but half ſo much: and, though it may be true, that, before the year 1640, it did not produce a quarter ſo much, yet, in the remaining part of that period, it certainly brought in a great deal more; and therefore we cannot be far from the truth, in computing that this nation acquired two millions in money, by Barbadoes, in that 20 years. In the next 20, that is, from 1656 to 1676, when it is allowed this iſland was in its moſt flouriſhing condition, there muſt have been gained four millions of money; and allowing for the gradual falling off of this trade, by a multitude of unlucky accidents, but more particularly by the ſettling the French ſugar iſlands, we ſhall compute the laſt 70 years, from 1676 to 1736, at the ſame rate we did the firſt 20 years, and the gains will then amount to SIX MILLIONS: ſo that in the ſpace of 100 years, the inhabitants of Great-Britain have received 12 millions in ſilver, by the means of this plantation, and had 50,000 of her inhabitants maintained by the people of that colony all the time.

I have inſiſted the longer upon this topic, becauſe it may enable us to form ſome notion of what might be made of our plantations, if we attended to them as much as they deſerve; for though it may be, and perhaps is, impoſſible, to improve any of them in proportion to what has been done in Barbadoes, yet we may well enough diſcern from hence, that they might be made inconteſtibly more profitable to us than they now are, or, indeed, than the whole trade that we now poſſeſs; and if, at the ſame time we reflect on this, we likewiſe conſider that there is nothing ſo abſolutely in our power as the improvement of our colonies, it will moſt certainly appear to be the point, which, of all others, imports us moſt.

We are next to ſpeak of the iſland of ST CHRISTOPHER, which was diſcovered by Chriſtopher Columbus. It is ſituated in the latitude 17 degrees, 25 minutes, on this ſide the Line, and is about 75 miles in circuit; the Caribbeans inhabited it when Sir Thomas Warner, an Engliſh adventurer, took poſſeſſion thereof; and Monſ. Deſnambuc, a French gentleman, who commanded for the French in America, took poſſeſſion the ſame day. Theſe two adventurers ſettled this colony harmoniouſly, 'till queen Anne's war broke out, when the Engliſh drove the French intirely from their ſettlements; and the country being yielded to the crown of Great-Britain by the peace of Utrecht, all the French territories were ſold, for the benefit of the public, which muſt have produced a very large ſum, ſince out of it there was 80,000 l. paid for the marriage-portion of her royal highneſs the princeſs of Orange.

There were ſome indeed, who pretended, that notwithſtanding the French part of the iſland of St Chriſtopher's was by far the richeſt, we were no gainers by obtaining it, but that, on the contrary, the French received benefit thereby, becauſe it enabled them to people the reſt of their iſlands more effectually; but whoever conſiders that the ſugars of this iſland are inferior to none in all America, that the plantations were in perfect order, and that the French ventured a war to prevent our ſettling St Lucia and St Vincent, will ſcarce be brought to believe that they parted with a country ready ſettled, and more valuable than both thoſe iſlands, with their goodwill. The treaty of Utrecht was ſo indifferent a treaty, that I think there is no ſort of neceſſity for making it appear worſe than it really was. The ſame perſons who firſt ſettled St Chriſtopher's, likewiſe ſettled NEVIS, about the year 1628; and notwithſtanding the misfortune of being diſpoſſeſſed by the Spaniards, in 20 years time there were at leaſt 4000 people upon the iſland, and they continued increaſing in the ſame manner, by a ſucceſſion of prudent governors, for a conſiderable ſpace. After the Reſtoration, when trade and peace flouriſhed, this iſle enjoyed its ſhare of the benefit, and increaſed the inhabitants and riches; the only enemy they had to ſtruggle with was the hurricane, which generally viſited them once a year.

We are to proceed next to the iſland of MONTSERRAT, which name the Spaniards gave to this iſland, from the reſemblance it has to a mountain in Catalonia, not far from Barcelona.

This iſland flouriſhed, at firſt, more than Antigua; but ſince the lord Willoughby's time, the latter has got, and kept, the ſtart of it. There were 700 men in Montſerrat, 16 years after it was firſt inhabited. As to the climate, ſoil, animals, trade, and productions of this iſle, they are much the ſame with thoſe of the other Caribbee iſlands, only this has more mountains, which are covered with cedars, and other trees, that make it a lovely proſpect from the ſea. The vallies are fruitful, and better ſtored with freſh water than thoſe of Antigua. According to the beſt accounts that have been received from this iſland of late years, it is rather increaſing, both in the number of people, and in the value of their ſettlements, than not; as to the former, it is computed there may be about 4,500 white perſons, and about 12,000 negroes, in this country.

The iſland of BARBUDA lies in the latitude 17 degrees 30 minutes north, is about 15 miles long, and lies north-eaſt from the iſland we were laſt ſpeaking of. The land is low and fruitful, and the Engliſh began to plant it as early as Nevis, Montſerrat, or any other of the Leeward Iſlands, St Chriſtopher's excepted. There are now about 1,200 perſons upon it, and their number is daily increaſing. The proprietor is the honourable Chriſtopher Codrington, Eſq; and he puts in a governor here, having the ſame prerogative as the other lords proprietors, in their ſeveral juriſdictions in America. This iſland has bred great ſtore of cattle, and the inhabitants employ themſelves moſtly in that ſort of huſbandry, corn and proviſions coming generally to a good market in the ſugar iſlands. There is plenty of almoſt all ſorts of tame cattle, as in Europe; and the Engliſh live here much after the ſame manner as they do in the counties in England, only their labour in the field is not ſo hard as here, the country being ſo much hotter.

The next plantation to this, if it may be properly ſo called, is ANGUILLA: it lies in 18 degrees 12 minutes. The country is level and woody, the ſoil fruitful, and the tobacco that grew there formerly was reckoned very good in its kind. They have no great quantities of ſugars upon the iſland, but addict themſelves rather to farming, in which they have had very good ſucceſs; and this it is that enables them to live in the old patriarchal way, every man being a kind of ſovereign in his own family, and no other government there is in Anguilla.

We have now gone through the Leeward Iſlands, except ANTIGUA, which we now take notice of, according to the order of time in its ſettlement. This iſland lies in 16. 11. north latitude, 63 longitude weſt from London: it is about 20 miles in diameter, and 60 in circumference. The climate, though not to be greatly boaſted of, yet it is a very conſiderable and thriving plantation. It has greater plenty of cattle, and particularly veniſon, than any other of the Caribbee iſlands; the animals whereof are much the ſame, as alſo their productions. Their ſugar and tobacco were formerly very indifferent, but the planters have ſince improved their art, and as good muſcavado ſugar is now made there, as in any of our ſugar iſlands: they have alſo clayed ſome ſugar, which was unknown in Antigua about 40 years ago.

Though there is not much tobacco planted in this iſland, what there is at preſent is far preferable to what it was formerly. After Jamaica and Barbadoes, this has been conſidered by ſome as the moſt conſiderable of our iſlands in America; and as there is ſtill a great quantity of land capable of improvement, and it is allowed the people there might make a third more ſugar than they do; and if we conſider what muſt have been gained by our commerce with this iſland for upwards of eighty years, we cannot but judge that it has been highly advantageous to this nation, and well deſerves all concern for its protection.

We have now gone through our chief Leeward Iſlands. As to the general produce, or value, of theſe iſlands, which may ſerve to ſhew of how great conſequence they are to Great-Britain, the beſt account we have been able to obtain, is to the following effect: St Chriſtopher's is the largeſt of all the iſlands, but the middle part of it being extremely mountainous, it is thought that there are not above 20,000 acres of land fit for ſugar, in the whole iſland, which produces about 10,000 hogſheads of that valuable commodity. Antigua contains about 70,000 acres, and produces 16,000 hogſheads of ſugar yearly. Nevis is ſaid to be about 20 miles in circumference, and produces 16,000 hogſheads. Montſerrat, which is leſs than any of them, produces 2,500, and ſometimes 3,000

3,000 hogſheads of ſugar. In Barbuda they breed cattle, and in Anguilla they raiſe corn.

As to the produce of the iſland of JAMAICA, it is not eaſy to give an account thereof in a narrow compaſs; however, we ſhall give the beſt idea of it we can, and in as few words. In the firſt place, it produces large quantities of cocao, of which there ſtill comes more from this than from any of our other plantations; and as it is known to be a very rich and valuable commodity, the reader will probably be pleaſed with a particular account of it. See COCAO.

Piemento is another natural production of Jamaica, from whence it is called Jamaica pepper, alluding to its figure, and the chief place of its growth.

The wild cinnamon-tree, commonly called, though falſely, cortex winteranus, grows in this iſland.

It is not doubted but that there are both ſilver and copper mines in the iſland, though they have not yet been diſcovered by the Engliſh, as it ſeems they were by the Spaniards.

But, after all, it is the ſugar-cane that is the glory of Jamaica, by which the inhabitants have acquired ſuch immenſe riches. It is generally ſaid, that the ſugar from St Chriſtopher's is the beſt in the Leeward Iſlands; but I think it is agreed on all hands, that the ſugar made in Jamaica exceeds that of all our plantations, though it is made there with much greater eaſe, ſince it cures faſter in 10 days in Jamaica, than in ſix months in Barbadoes. There were, in the year 1670, upwards of 60 mills in Jamaica, which were computed to make about 2,000,000 of pounds weight of ſugar; but ſome writers inform us, they make 10 times as much at preſent: whether that computation be right or not, is impoſſible for me to decide; but this is certain, that there is ground enough unoccupied in that country to make much more, ſince it is 140 miles long, and 60 broad; and it contains, according to a moderate computation, 4,000,000 of acres, of which, though there may be about one fourth in which Engliſh ſubjects have property, yet, it is certain, that not above a fourth of that fourth is actually planted, and a great deal of this is employed to other purpoſes than that of raiſing ſugar. It is impoſſible to ſay preciſely what quantity may be made here, becauſe ſeaſons differ, and other accidents intervene: ſome have thought they did not riſe beyond the truth, in affirming that it has heretofore produced 100,000 hogſheads, which, though it appears a prodigious quantity, yet there are many circumſtances that concur to render it credible. As for the number of people in this iſland, they are computed to be, at this time, 70,000 white people, and 120,000 negroes.

We may from hence judge of the real advantages which this iſland affords to Great-Britain; for as all our hiſtories of Jamaica, and almoſt every voyage thither that has been printed, ſpeaks largely of the luxury and expence of all degrees of people there, which is a plain proof of their great wealth and acquiſitions; ſo we may reſt ſatisfied, that, whatever appearance there may be of magnificence among them, yet the real produce of all their labour, and of all their commerce, comes over here to Britain, and maintains and inriches the induſtrious part of our people; ſo that there can be nothing more abſurd or unreaſonable, than to grudge or envy the people ſettled there the great fortunes they acquire and poſſeſs, or to repine at the pomp and ſplendor in which they live, becauſe, whatever it may be in appearance, it is, perhaps, an indifferent reward for their dwelling at ſuch a diſtance from home, and for the hazards and labours they run through to acquire ſuch fortunes; but this will appear much more clearly, if we advert a little to the ſituation of Jamaica, and conſider the vaſt benefits that accrue from thence, in all times, and under all circumſtances, of war as well as peace.

There is conſtantly, in time of war, a conſiderable naval force kept there; and though this be attended with a great expence to the Britiſh nation, yet it certainly is, or at leaſt ought to be, a great comfort to us, that our money is ſpent with our countrymen, that it increaſes the value of their plantation, and, which is ſtill more to our purpoſe, that, ſooner or later, all that is ſpent and circulated there, by ſome channel or other, returns hither; ſo that, at the long run, the nation loſes nothing by the charge ſhe may occaſionally be at in maintaining fleets upon this coaſt. We ought likewiſe to reflect, that, in a time of war, there are many prizes taken and carried into Jamaica, which makes an unuſual, and almoſt incredible plenty of ſilver, and is the true cauſe of the dearneſs and high price of neceſſaries in that country, all which, likewiſe, in time, centers in the mother country: ſo that when we hear of great eſtates raiſed there in a ſhort ſpace of time, it ought to afford us the higheſt ſatisfaction, becauſe thoſe who make thoſe large fortunes, or their immediate deſcendants, come over hither, and either veſt their money in our funds, or purchaſe lands here. Thus a ſtate of war, which implies a ſuſpenſion of trade, produces few of the inconveniencies that uſually attend ſuch a ſuſpenſion, becauſe in Jamaica the very conſequences of war become a kind of trade, and the wealth ariſing from them takes the ſame courſe, and runs in the very individual channels that any other trade would do; that is, they finally inrich, and tend to the benefit of, England.

But, in time of peace, beſides what we draw from Jamaica, conſidered barely in the light of a ſugar plantation, we are to conſider, likewiſe, whatever accrues to the inhabitants from their intercourſe and dealings with other people, ſince whatever they gain is really our gain.

Before we quit this ſubject, it may be neceſſary to take notice of another branch of trade carried on from Jamaica, which has been made the ſubject of much debate; we mean the cutting of logwood in the bay of Campeachy. This matter came to be conſidered with the utmoſt care and circumſpection by the Board of Trade and Plantations, in the year 1717, who ſolemnly reported, That we had an undoubted right to that trade, in which the ſubjects of the crown of England had been maintained and ſupported by former kings, his Majeſty's royal predeceſſors. See the articles LOGWOOD, and LEEWARD ISLANDS in AMERICA.

REMARKS on the Britiſh ſugar colonies before the laſt war.

We have ſeen, in as narrow a compaſs as we poſſibly could, the real value and importance of theſe ſugar colonies to the crown of Great-Britain; and certain it is, it highly becomes the wiſdom of the nation, that all poſſible care be taken to give the inhabitants of thoſe colonies all manner of encouragement, and relief from any hardſhips under which they may labour; ſuch as exorbitant ſalaries to their governors, large ſums levied upon them, without being applied to their ſervice; and the difficulties under which they too often are, in obtaining ſpeedy and effectual juſtice, when perſons in public ſtations are inclined to extend their power too far, with a view to promote their private intereſt. They ſhould likewiſe have all poſſible encouragement given them for recovering that foreign trade they heretofore had, and beating out the French, and other nations, who have interfered therein; ſince in regard to both thoſe points, that the inriching the ſubjects of Great-Britain, by the ballance of trade in general, and augmenting her naval power, are the grand particulars ever to be attended to: for if it could be once brought about that either the old markets for ſugar were retrieved, or new ones opened, there is no doubt that Jamaica, and other of thoſe iſlands where there are lands fit for the purpoſe, uncultivated, would be more fully PLANTED, the inhabitants become more numerous, and their demands for manufactures from Great-Britain conſequently larger than they are at preſent. On the other hand, the ſame diligence and alacrity are requiſite, with regard to the colonies on the continent; and whatever is done to promote the trade of the ſugar colonies, muſt neceſſarily tend to the emolument of our continent plantations, which ſupply the ſugar iſlands with lumber and other things requiſite for carrying on their trade: and if, beſides this, ways and means could be found to open new channels, for the benefit of theſe colonies alſo, it ought to be done, and the protection of all our colonies ſecured by all the power that Great-Britain can poſſibly exert, conſiſtent with her own particular ſafety. See our articles BRITISH AMERICA, COLONIES, PLANTATIONS.

That the French ſugar colonies in America, from a very ſmall beginning, are arrived to an extraordinary pitch of proſperity, even ſince the beginning of queen Anne's reign, is very apparent; and by what wiſe and gradual ſteps they have been ſo highly advanced, deſerves the moſt ſerious attention of this nation. See our article FRENCH AMERICA.

The iſland of Martinico is the chief of theſe French ſettlements: the number of people in this iſland, by which we are obliged to compute the reſt, is affirmed to be 10,000 whites, and 20,000 negroes. Whence it appears that the French are very numerous in theſe iſlands, and they make more ſugar here than we do in the iſland of Barbadoes.—They alſo cultivate here indico, cotton, and cacao, to great advantage, and draw no little profit from the ginger, caſſia, and piemento, of which they export conſiderable quantities. They likewiſe manufacture roucou, for the uſe of dyers, and ſend home variety of medicinal gums, and ſweetmeats. The French ſugar iſlands, beſides, produce ſeveral kinds of very valuable woods, uſed for dyeing, inlaying, and cabinet work, ſuch as roſe-wood, the Indian-wood, and the iron-wood, brazelletto-wood, or fuſtic, and ebony, which is uſed as well by the cabinet-makers as the dyers.—We may add to theſe commodities, raw hides and tortoiſe-ſhells, and then we may have a tolerable comprehenſion of the wealth of the French Weſt-Indies.

Though theſe iſlands produce ſo many eſtimable commodities, yet they ſtand in need of ſupplies of divers eſſential neceſſaries, without which they could not poſſibly ſubſiſt; ſuch as horſes, and cattle of all kinds, corn, roots, dry fiſh, and all ſorts of lumber, of which they receive ſome from Canada, and the reſt from our northern colonies, in exchange for ſugar, tobacco, indico, and other goods, ſent to Canada, and for moloſſes, &c. to our northern colonies.—See our article FRENCH AMERICA, particularly our REMARKS on French America.

The inhabitants of this iſland alſo ſtand in conſtant need of negroes, with which they are now ſupplied by the French Eaſt-India company, by whom the ſlave-trade is now carried on with great regularity, and great advantage to the French colonies and nation. The negroes are ſent to Martinico, where they are purchaſed by the inhabitants of the other iſlands, at a ſettled price, of ſo many hogſheads of ſugar a

head, as in the Spaniſh ports they are bought for ſo many pieces of eight. See the article FRENCH AFRICAN TRADE and COMPANY.—And how our African trade might be greatly advanced, as well for the intereſt of the Britiſh colonies, as of the kingdom in general, ſee our article EAST-INDIA COMPANY, for what we have there humbly ſuggeſted. To what degree the French have increaſed in the commerce of all their ſugar colonies conſidered together, ſee our article FRENCH AMERICA.—But of all the ſugar colonies that the French poſſeſs in America, there is none of more high concernment to them than that of St Domingo.—And ſhould the French once carry their point, and become ſole maſters of this iſland, we may reaſonably believe that, in few years, it would become the richeſt and moſt eſtimable country in that part of the world, eſpecially if the French ſhould abandon their other iſlands, and tranſport their inhabitants thither; and, even in that caſe, there would be no danger of its being over-peopled; and its fertility is ſuch, that they would all find room to exerciſe their induſtry, and that induſtry would be richly rewarded: beſides, this would afford them many advantages; for whereas their other iſlands are ſubject to many inconveniencies, but more eſpecially the want of proviſions, theſe would all be remedied there, and it would afford them an opportunity of increaſing their ſtrength there to ſuch a degree, as would put it out of the power of any of their neighbours to give them much diſturbance. On the contrary, they would ſoon become formidable, both to us and to the Spaniards; which is an evil, that, as it has been foreſeen in time, it is to be hoped due care will be taken to prevent its ever coming to paſs. Can we, therefore, give too much encouragement to our own ſugar colonies, when the French may one day prove ſo formidable to us by means of theirs? Nor can we affect the French in a more tender point than in that of their ſugar colonies, if a rupture at this conjuncture ſhould prove inevitable.

It is not many years ſince the principal inhabitants of Jamaica addreſſed his Majeſty, to ſhew him the decay of their trade and planting intereſt; whereby they repreſented, 'That the low value of their produce might be very juſtly attributed to the great improvement the French have made in their ſugar colonies, by the encouragement given them, particularly in allowing them to export their commodities to foreign markets, without firſt introducing them into any of the ports of France; and from the lowneſs of their duties, they could underſel them. That ſugar, and other commodities produced in the French and Dutch colonies, were frequently imported into Ireland, without introducing them into the ports of Great-Britain, and paying the duties, and, conſequently, thoſe foreigners were ſupplied with proviſions at eaſier rates. That the Britiſh northern colonies imported into Jamaica great quantities of proviſions, and other goods, for which they took no part of the produce of that iſland in exchange, a ſmall quantity of melaſſes excepted, but were paid in bullion, which they carried to Hiſpaniola, and bought ſugar, rum, and melaſſes, for their own uſe: which trade was not only unequal and injurious to the inhabitants of Jamaica, but prejudicial even to the northern colonies, and highly ſo to their mother-country, draining Jamaica of ſo much bullion in favour of France, which otherwiſe might have centered in Great-Britain.'

Though one part of this complaint has been remedied, the other is ſtill ſubſiſting: it is true, ſugar can be exported from the plantations immediately to foreign countries, but the northern colonies ſtill continue to ſupply the French with lumber, which gives them an opportunity of underſelling us both at home and abroad. The caſe is alſo the ſame with the Dutch at Curaſſoa and Surinam, where our northern colonies ſend horſes, whereby they carry on their ſugar-making, which promotes the Dutch colonies in this manufacture: and the Dutch are ſo ſenſible of this advantage, that it is a law, or order, in Surinam, That theſe northern veſſels ſhall not be admitted to trade with them, unleſs they bring ſuch a number of horſes; beſides, they import from the colonies dry goods, whereby the conſumption from Great-Britain and the ſouthern plantations is greatly diminiſhed.

The breed of ſeamen, with the increaſe and encouragement of the navigation of this kingdom, principally depend on our plantation trade and Newfoundland fiſhery; therefore their ſtate and condition ever deſerve the conſideration of our beſt patriots, for preventing the decay, loſs, or deſtruction of the trade and maritime ſtrength of Great-Britain: but we may preſume that this is moſt eſſentially to be done by DESTROYING THE FRENCH SETTLEMENTS, inſtead of encouraging their manufacture: and I wiſh that our gallant admiral Vernon had laid Hiſpaniola in aſhes, which it was once in his power to have accompliſhed, if———

Should the Engliſh be diſpoſſeſſed of Jamaica, which they may ſoon be, if the ſugar-trade is ruined; and however ſome people may believe, we ſhall not only loſe an iſland of very great conſequence to us in point of commerce, but muſt never afterwards expect to be formidable by our naval force in that part of the world, as we have been for many years paſt, by means of that iſland; for, as Dr Davenant has juſtly obſerved, 'The loſs of Jamaica muſt probably be followed with the abſolute ruin of our intereſt in America.'

It was obſerved by a gentleman of Barbadoes in a ſpeech to the council and general aſſembly of that iſland, 'That their neighbour colonies, ſo long kept by foreign fears from improving, were then encouraging trade, increaſing their people, enlarging their plantations, and cultivating their lands: that their fertile ſoil yielded them many crops from one planting, while the ſoil of the Engliſh plantations required the utmoſt art, induſtry, and manure, and that too annually.

We ſhall readily grant that the produce of Jamaica has not been leſs in value than 500,000 l. a year; and a friend to this iſland has acknowledged, that it is capable of producing THREE TIMES what it does at preſent, were but ſome laws made to prevent ſuch quantities of land being monopolized by particular perſons, obliging ſuch perſons as have very great runs of land, and will neither ſettle or ſell the ſame, that they do the one or the other, and to give encouragement for white people to come and reſide in that iſland. But it is quite different at Barbadoes, for no country known to Europeans ever exceeded this in agriculture: it had been ſaid, That if the ſoil of this iſland had not been improved, but dug, and put on board of the ſhips and veſſels that have traded hither ſince the ſettlement, they might have been ſufficient to have carried the whole iſland away: for there is ſuch great induſtry in planting and manuring the ſugar-canes, that, the land being poor, the inhabitants are obliged to dung and improve their plantations like ſo many gardens: and I wiſh the ſame poverty of ſoil is not equally apparent in the other Caribbee Iſlands ſubject to Great-Britain.

It is not above 70 years ago that Martinico was the only ſettlement the French were poſſeſſed of in the Weſt-Indies: ſince which time, they have ſettled Guadalupe, and increaſed their ſettlements in Hiſpaniola ten to one, for which they had an encouragement given them, by the duty laid upon all clayed or refined ſugar imported into France; which duty effectually prohibited, or prevented, either the Engliſh or the Dutch from ſending any thither, and, conſequently, cauſed an increaſe of the French plantations.

About 40 years ago the obſervation was made, That as the French had, within four or five years, beat us almoſt out of our indico trade, ſo it could not be much longer time before our condition would be the ſame with our ſugar trade. The obſervation has been too early verified.

The French endeavoured to ſtrengthen all trade in general; and by giving ſuch tracks of land on Hiſpaniola, as alſo by not permitting any perſon to enjoy more than what he planted and manured, they have become powerful; nay, they did not ſcruple ſaying, That, in a few years, they would have the whole iſland of HISPANIOLA: on which account, in 1709 and 1710, the Britiſh miniſtry were applied to, and it was intended by them that, at the general treaty of peace, it ſhould be demanded for the French to reſtore to the Spaniards ſuch part as they poſſeſſed, by the ceſſion of the whole iſland granted by king Philip to his grandfather; however, this ceſſion was never put in execution, though it was required by France, for her aſſiſtance to Spain in the Mediterranean engagement, in 1744, but refuſed through the intereſt of his preſent Catholic Majeſty, then prince of Aſturias.

By an order iſſued by his Moſt Chriſtian Majeſty, for the better ſettling and peopling his colonies in America, every ſhip or veſſel was obliged, when required, to carry a certain number of people thither, freight free: ſo that, by this encouragement to the increaſe of their inhabitants, and the fertility of the country in producing materials for enlarging and improving their SUGAR-WORKS, as alſo by the great extent of Hiſpaniola, it was obſerved, that the French coloniſts would not only make much greater quantities of ſugar than the Britiſh coloniſts could in their plantations, but at a cheaper price, by being furniſhed with moſt materials for doing thereof within themſelves: whereas the Britiſh iſlands were obliged to be ſupplied from the northern colonies, at a great expence, and, therefore, their product muſt neceſſarily be made up at a much dearer rate than the French; whereby the conſequence would be, that the French, in a little time, muſt beat us out of that moſt valuable article to the whole kingdom, the SUGAR TRADE.

Earthquakes, inundations of the ſea, inſurrections of negroes, blaſts in the canes, and other concomitant circumſtances, have been great impediments to the proſperity of our ſugar plantations, which require lenitives, more than corroſives, in their preſent feeble condition. Upon the whole, our SUGAR TRADE has received a violent blow from the French; our NEWFOUNDLAND FISHERY has decayed by their encroachments; and our TOBACCO COLONIES, if proper care is not taken of that valuable branch of trade, may alſo be outrivalled by the French of LOUISIANA; which muſt give every Engliſhman a very melancholy proſpect, ſince it is by our SUGAR and TOBACCO, and other COLONIES, we have ſuch a ballance in trade on our ſide with Hamburgh, and other parts of the Eaſtland countries, as alſo a profitable trade with the United Provinces; and from our Newfoundland fiſhery, great ſums have been annually brought into England from Spain, Portugal, and Italy: beſides, our northern colonies being dependent on our ſugar ſettlements to take off their product, and having not wherewithal to anſwer the exports to them from Great-Britain, are only valuable as they bear relation

lation to ſuch colonies as are furniſhed by them, which ceaſe on the decay of the trade from whence it ariſes.

Thus ſad and melancholy is our preſent condition, as to theſe branches of our trade and navigation; which muſt be aggravated, from the conſideration of the preſent conduct of the FRENCH in AMERICA.

REMARKS ſince the laſt war, and the peace of 1763.

To what degree many of the before-intimated evils, wherewith we ſeemed to be threatened before the laſt war and peace, may be preſumed to be remedied in time, we refer the reader to our articles AMERICA, BRITISH AMERICA, FRENCH AMERICA, LOUISIANA, MISSISSIPPI, CANADA, FLORIDA, LEEWARD ISLANDS, NEWFOUNDLAND FISHERIES, INDIAN NATIONS, and to the various other articles to which from the preceding we refer.

The ACT continued for granting liberty to carry ſugars from the Britiſh ſugar colonies of the product and manufacture of the ſaid ſugar colonies in America, from the ſaid colonies directly to foreign parts, &c. &c.

Whereas the laws herein after-mentioned, which have by experience been found uſeful and beneficial, are near expiring; it is enacted, That an act made in the twelfth year of the reign of his preſent Majeſty, intitled, An act for granting a liberty to carry SUGARS of the growth, produce, or manufactures of any of his Majeſty's ſugar colonies in America, from the ſaid colonies DIRECTLY TO FOREIGN PARTS, in ſhips built in Great-Britain, and navigated according to law; which was to continue in force for five years, from the ſaid twenty-ninth day of September, one thouſand ſeven hundred and thirty-nine, and from thence to the end of the then next ſeſſion of parliament; and which, by ſeveral ſubſequent acts, made in the ſeventeenth and twenty-fourth years of the reign of his preſent Majeſty, was further continued the firſt day of September, one thouſand ſeven hundred and fifty-ſeven, and from thence to the end of the then next ſeſſion of parliament; ſhall be, and the ſame is hereby further continued, from the expiration thereof, until the twenty-ninth day of September, one thouſand ſeven hundred and ſixty-four, and from thence to the end of the then next ſeſſion of parliament.

In the laſt war Great-Britain conquered the French ſugar colonies of MARTINICO and GUADALOUPE, &c. and upon the conditions ſtipulated in the treaty of peace, concluded in the year 1763, the ſaid ſugar colonies were reſtored again to France. See our article AMERICA, for the treaty at large. The long ſtanding diſputes, concerning the NEUTRAL ISLANDS in America, are finally ſettled in the ſaid treaty. See our article LEEWARD ISLANDS, where the new acquiſitions of colonies in America are repreſented.

In the year 1758, an act was made for encouraging the exportation of rum and ſpirits, of the growth, produce, and manufacture, of the Britiſh ſugar colonies, from this kingdom, and of Britiſh ſpirits made from melaſſes.——An abſtract of the contents.

The duties of cuſtom, payable upon the importation of rum and ſpirits, from the Britiſh ſugar colonies, to be repaid upon the exportation thereof.——And the duties of exciſe to be remitted upon all ſuch as ſhall be exported before payment is made of the ſaid duties.——Exporter to give bond for the due exportation thereof.——Upon producing a certificate of ſuch bond having been given, the rum or ſpirits mentioned therein, are to be delivered out of the warehouſe, and a certificate of the quantity, and ſize and marks of the caſks, &c. to be given therewith, and produced to the officer attending the ſhipping.——Due entry to be made of ſuch delivery.—Bonds given for the duties are to be delivered up, upon oath made of the intended exportation, and certificate produced, &c. of the quantity ſhipped, and that the ſame are proof ſpirits; and alſo of the delivery thereof from the warehouſes, &c.——If part only of the rum or ſpirits mentioned in the bond are certified to be delivered and ſhipped, the quantity is to be indorſed on the bond; and the bond to be delivered up, when the remaining part ſhall be certified to be delivered and ſhipped; provided the ſame be before the time ſtipulated for payment of the duties.——All rum and ſpirits intitled to the ſaid drawback, &c. are to be exported in caſks, containing not leſs than 100 gallons, and in veſſels not leſs than 100 tons burthen.——The quantity delivered out is to be computed according to the gauge taken upon the importation thereof.——If, after delivery, any ſhall be concealed, or not ſhipped within twelve hours, or the caſk be opened, or the ſame be reduced or altered in quantity or quality; ſuch rum or ſpirits are forfeited, and the bond is to be put in ſuit; unleſs the commiſſioners ſee cauſe to forbear the ſame.——Bonds given for exportation are not to be diſcharged, till certificates be produced of the due exportation and landing, and proof made thereof on oath, in manner required by the act for preventing the exceſſive uſe of ſpirituous liquors, &c.——If ſuch rum or ſpirits ſhall not be exported, or ſhall be fraudulently relanded, the ſame, together with the veſſels, cattle and carriages employed therein, are forfeited; and the perſons concerned forfeit double the amount of the duties; and the maſter, &c. if he aſſiſt or connive thereat, is to ſuffer alſo ſix months impriſonment: or if the package be altered before arrival at the place of diſcharge, he forfeits 100 l.——The rum or ſpirits to be exported are to be proof; and the exporter is to give five days previous notice of the ſhipping thereof; and allow the officers to mark the caſks, and take ſamples, paying for the ſame, if demanded; upon penalty of forfeiting 100 l.—If any rum or ſpirits ſhall be altered or reduced in quantity or quality, after being ſhipped, the ſame is forfeited, and the perſons concerned therein forfeit alſo 100 l. and no drawback is to be allowed for the ſame.——Penalty of granting falſe certificate, or of counterfeiting, altering, &c. any oath or certificate, is 500 l. one moiety to the crown, the other to the proſecutor.——An additional drawback of 3 l. 3 s. per ton allowed on all Britiſh-made ſpirits, drawn from melaſſes, exported; oath being made of the truth thereof, and of the duties being duly paid; and certificate produced of the quantity ſhipped, and that the ſame were proof-ſpirits, &c.——The powers, regulations, forfeitures and clauſes, &c. in the recited act, relating to the drawback hereby granted on the exportation of ſpirits; and to the preventing or puniſhing frauds, &c. extended to this act.

SURREY, a county in England, joins on the weſt to Berkſhire and Hampſhire, on the ſouth to Suſſex, on the eaſt to Kent, and it is parted from Middleſex on the north by the river Thames, and is 112 miles in circumference.

The air, as well as the ſoil of the middle and extreme parts, is vaſtly different.

The chief commodities of this county, beſides its corn, are box-wood, walnuts, and fuller's earth, which laſt is ſold at a groat a buſhel at the pits near Ryegate.

SOUTHWARK, though it ſeems a ſuburb of London, yet for extent and number of people, and their trade and wealth, &c. is inferior to few cities in England.

GUILDFORD is a large well-built town on the river Wey, which falls into the Thames. Its market is reckoned one of the greateſt in England for wheat. By the navigation of its river, a great quantity of timber is brought to London, not only from its neighbourhood, but from the woody parts of Suſſex and Hampſhire. It had formerly a conſiderable manufacture of cloth.

KINGSTON upon Thames, is a populous, trading, well-built town. The market is kept in the town, ſo large that it might paſs for a fair.

WANDLESWORTH, or WANSWORTH, is of note for a manufacture of braſs plates and kettles, ſkillets and frying-pans.

FARNHAM on the river Lodden, is a large and populous town, and one of the greateſt wheat-markets in England, eſpecially between All-ſaints-day and Midſummer, when, one day with another, 250 load of wheat, and ſometimes 400 have been ſold here in a day. The plantation of hops hereabouts is alſo very conſiderable, and ſaid to outdo the Kentiſh hop-yards, both in quantity and quality.

GODALMING is the moſt eminent town in the county for making cloth, particularly mixed kerſies and blue ones, ſaid to be the beſt coloured in the kingdom for the Canaries. It ſtands on the Lodden, which abounds with good fiſh, eſpecially pike, and drives a griſt-mill, two paper-mills, and three corn-mills. The beſt whited brown paper is ſaid to come from hence.

CHERTSEY has a bridge over the Thames to Shepperton in Middleſex. Its principal trade is in malt, which it ſends in barges to London.

CROYDON is a large handſome town on the edge of Banſtead-downs. Its market is chiefly for oats and oatmeal for London, though there is a great ſale here too of wheat and barley. The town is encompaſſed with hills, well ſtored with wood, of which great quantities of charcoal are made, and ſent to London.

DORKING is noted for its meal-trade, and its market for poultry, particularly the fatteſt geeſe and the largeſt capons, which are brought hither from Horſham in Suſſex; where it is the buſineſs of all the country for many miles to breed and fatten them.

SUSSEX is bounded on the weſt with Hampſhire, on the ſouth with the Britiſh Channel, on the north with Surrey, and on the eaſt with Kent, and is 170 miles in circumference. Its chief rivers are the Arun, Adur, Ouſe, and Rother; the Arun has lately had a new outlet cut from it, to improve its navigation, which carries barges above Pulborough, and ſhips of 100 tons as high as Arundel; from whence they carry the largeſt and beſt timber in England to the docks of Portſmouth and Plymouth, Chatham, Woolwich, and Deptford.

The air and ſoil of this country are both various, according to the different parts of it. On the ſea-coaſt are very high green hills, called the South-downs, well known to ſuch as deal in wool or ſheep, there being great flocks fed here, whoſe wool, which is very fine, is too often exported clandeſtinely to France by farmers and jobbers, who are called OWLERS. The north-quarter is ſhaded with woods, from which they make abundance of charcoal; and fuel for the iron-works, there being plenty of ore on the eaſt ſide towards Kent, and many great forges, furnaces, and water-mills, for both caſt and wrought iron; which, though it is ſaid to be

more brittle than Spaniſh, yet cannon are caſt with it; and the beſt gunpowder is made in this county.

CHICHESTER has a very great market for corn, and every Wedneſday fortnight here is alſo one of the greateſt cattle markets in England. Its chief manufactures are malt and needles. Here is ſome foreign trade, and a collector, with other officers of the cuſtoms at Dell Key, a ſmall harbour about four miles from the ſea.

LEWES is one of the largeſt and moſt populous towns in the county. It carries on a good trade, and a little river runs through the middle of the town, to which it brings goods in boats and barges from a port eight miles off: on this river are ſeveral iron-works.

SHOREHAM is a populous place, and has a very good harbour for veſſels of conſiderable burthen; and many ſhips are built here both for the navy and merchants ſervice.

RYE is a pretty populous town. Its trade conſiſts in hops, wool, timber, kettles, cannon, chimney-backs, &c. which are caſt at the iron-work at Bakely, four miles from Rye to the north-eaſt, and at Breed five miles to the ſouth-weſt.

BRIGHTHELMSTON, is a pretty large populous town, chiefly inhabited by fiſhermen, as is alſo Newhaven. A pretty many ſmall veſſels bring coals, deals, &c. from Lewes hither, and load from hence with corn, timber, tan, &c. Some ſmall craft are alſo built here.

SWABIA, the circle of, in Germany, is bounded on the north with the Palatinate and Franconia; on the ſouth with Tyrol and Swiſſerland; on the weſt with Alſace; and on the eaſt with Bavaria.

Its air is healthy, and the ſoil generally fruitful: for though ſome parts are mountainous and woody, yet the hills afford mines of ſilver, copper, and other metals, and the foreſts much pine and fir-timber, beſides great ſtore of game, and good breeds of horſes, black cattle, and ſheep; and other parts yield great ſtore of corn, wine and flax. The inhabitants are chiefly employed in making linen cloth, of which they export great quantities. Its chief rivers are the Danube and Neckar, but great part of it is alſo watered by the Rhine.

The uſual diviſion of it is as follows, viz.

The marquiſate of BADEN. This country, which is one of the fineſt in Germany, is extended along the eaſtern banks of the Rhine, having the Palatinate on the north, the Black Foreſt on the eaſt, Alſace on the weſt, and Swiſſerland on the ſouth. It is very populous, and fruitful in corn and wine, but chiefly in hemp, which they ſell to the Dutch and Flemings; they have, alſo, in ſome places, agate, which they poliſh and export.

The chief towns here are only of note on account of their baths, for which they are much frequented.

ORTNAN is ſeparated by the Rhine, on the weſt, from Alſace, has the the Briſgaw on the ſouth, the margraviate of Baden on the north, and the dutchy of Wirtemberg on the eaſt.

The BRISGAW lies on the eaſt ſide of the Rhine, which divides it from Alſace; betwixt Ortnan on the weſt, and the principality of Furſtemberg on the eaſt.

FRIBURG is a large populous city, on the river Threiſem: here are famous lapidaries for poliſhing the granates, jaſpers, and other precious ſtones that are found in Lorrain, and the neighbouring countries.

The territory of SUNTGAW has Montbeliard on the weſt, Upper Alſace on the north, the biſhopric of Baſil, and Mount Jura the principality of Porentru, and the Franche Comte, on the ſouth, and the canton of Baſil on the eaſt. The country, though mountainous, abounds with vines, and great quantities of its corn are tranſported to Swiſſerland, Lombardy, Lorrain, &c. There are no towns of any note for trade, neither in this territory, nor in the county of Montbeliard, nor the biſhopric of Baſil.

The biſhopric of CONSTANCE lies on both ſides of the lake of that name, and on the borders of Swiſſerland.

CONSTANCE, the capital, is a populous rich place, and has a conſiderable trade, by means of its lake, and the neighbourhood of the Rhine.

UBORLINGEN ſtands on the lake of Conſtance; it has a good haven, from whence barges are ſent with wine and fruits to Conſtance, and other cities on the lake, to the great gain of the inhabitants, who are very induſtrious and frugal.

SALMANSWEILER is a ſmall town, but has a good trade in corn.

BUCKORN has a good trade with the neighbouring countries, by the lake.

LINDAW ſtands on the north bank of the lake, by means of which, and the Rhine, it lies ſo convenient for trade, that it is called the Venice of Swabia. Part of the city is built on an iſland in the lake, to which there is a wooden bridge: this part is moſtly inhabited by fiſhermen, watermen, and weavers. This place is ſo conſiderable a ſtaple for goods of divers nations, and its market is ſo frequented by merchants for eight or nine leagues round, as well as others from a great number of towns, that it is ſaid near 1500 load of merchandize enters every week at the gate next to the main land.

The traders both of Swabia and Bavaria amaſs great quantities of corn, ſalt, iron, and copper here, which they ſell to the Swiſs and Griſons; and every Saturday vaſt ſtores of wheat and wine are brought hither by the lake, from Hegow and Tergow; as alſo an incredible quantity of butter and cheeſe is brought from Bregent, and the mountains of Swiſſerland, Appenzel, and the Griſons; beſides fiſh and fruits of all ſorts, and variety of other merchandize, from the neighbourhood, and from the northern countries, and which paſs through Nuremberg and Augſburg, for Italy.

WANGEN ſtands on the river Arg, which falls into the ſame lake, and is noted for a trade in paper and flax, and for the beſt ſickles, which are made here in great numbers, and ſent all over the empire.

BIBRACK ſtands in a pleaſant fruitful valley, ſurrounded with hills. The great trade of this town conſiſts in fuſtians; ſo that, of all the trading companies, the weavers are moſt numerous.

LEUTHIRK, on the river Eſcach, is a ſmall town, but the inhabitants have a good trade in corn, flax, and linen cloth, of which they make great quantities.

KEMPTEN, on the Algow, is one of the ancienteſt cities in Germany. The trade of the place is weaving and whitening linen cloth, which, with its being on the road to Italy, and by the Swiſſers bringing ſalt from Tirol, makes it one of the richeſt cities in Swabia.

MEMMINGEN has a good manufacture and trade in linen, cotton, ſtuffs, and paper, which laſt is reckoned the beſt in Germany.

AUGSBURG, the metropolis of Swabia, ſtands near the confines of Bavaria, at the conflux of the rivers Lech and Werdach, which fall into the Danube 25 miles below it. It is one of the biggeſt and moſt beautiful cities in Germany. Its trade, at preſent, beſides the bank of commerce, and the Tirol wines, with which it almoſt wholly ſupplies Germany, conſiſts in goldſmiths wares, clocks, and ivory, with which, and all kinds of toys, not inferior to thoſe of Nuremberg, it furniſhes Germany, Poland, and the north of Europe; but even in ſeveral of thoſe things, the Engliſh artizans have, of late years, excelled, and ſerved foreign countries, to the great detriment of both Augſburg and Nuremberg, which had, for ſeveral centuries, been in poſſeſſion of this trade.

ULM ſtands on the Danube, which here begins to be navigable; it is a great and very populous city, here being a great number of hands employed in the manufactures of ſtuffs, linen, cotton, and fuſtians; in dreſſing leather, and in the iron, and other manufactures, as well as clock-work; by which this is become one of the richeſt cities in Germany.

NORDLINGEN, the capital of a county, or diviſion, of its name, ſtands on the river Eger. The principal trade carried on here is in linen cloth and dreſſed ſkins. There is a conſiderable yearly fair here, the week after Eaſter, to which merchants bring goods from very remote countries, and return with the manufactures of this.

WIRTEMBERG duchy, in that called Lower Swabia, is bounded on the north by part of Franconia, the archbiſhopric of Mentz, and the Palatinate of the Rhine; on the eaſt by the county of Oetingen, and ſeveral other petty ſtates of Swabia; on the ſouth by the Danube; and on the weſt by the marquiſate of Baden, and the Black Foreſt. It is reckoned the largeſt dominion in the circle of Swabia; and there are few countries in Germany ſo fruitful, it abounding with all ſorts of corn, beſides paſture. Its mountains are full of mines and vineyards, and its vallies of cattle; but being ſurrounded with the Palatinate, Franconia, and Alſace, that are altogether as fertile, the Wirtembergers have hardly any export for their commodities.

ESLINGEN, on the Neckar, is a place of ſome trade, and noted for good baths.

HAILBRON ſtands in a pleaſant fruitful country, on the ſame river, and has a good trade, and ſeveral fairs.

The principal trade of GEMUND is in beads, which they ſend abroad.

HALLE ſtands amongſt rocks and mountains, on the river Kocher, and owes its riſe to its ſpring of ſalt, which, though not ſo white nor piquant as other ſalt, is carried to Nuremberg.

SWEDEN. This kingdom is bounded by the Baltic Sea, the Sound, and the Categate, on the ſouth; by the mountains of Norway on the weſt; by Daniſh, or Norvegian Lapland, on the north; and by Muſcovy on the eaſt.

The ſoil, where capable of cultivation, is tolerably fruitful. For want of induſtry, they have not a competent ſupply of corn, and, therefore, import many ſorts of grain from Livonia. The cattle are ſmall in ſize; their ſheep bear a coarſe wool, fit only to make cloathing for peaſants; their horſes are of a delicate kind.—They have plenty of wild beaſts, which are hunted for their fleſh, as well as their hides and furrs. Fowl, both wild and tame, are in great plenty, and good in their kind.—Their lakes are well ſtored with variety of fine fiſh.—Their woods and foreſts over-ſpread great part of the country, and are, for the moſt part, of pines, fir, beech, birch, alder, juniper, and ſome oak.—They have variety of mines, particularly of copper and iron, and one

of ſilver, adjacent to which, the woods are much deſtroyed for fuel; but that want is ſo well ſupplied from diſtant places, by the conveniency of rivers and winter-carriages, that they have charcoal above ſix times as cheap as in England, though not ſo good in quality.

Iron mines and forges are in great number towards the mountainous parts, where they have the conveniency of water-falls to turn their mills. From theſe, beſides ſupplying the country, there is yearly exported iron to the value of near 300,000l. but of late years the number of theſe forges has been ſo much increaſed, that each endeavouring to underſel others, the price has been much lowered; and ſince the prohibition of foreign manufactures, in exchange of which iron was plentifully taken off, it is grown ſo cheap, that it is found neceſſary to leſſen the number of forges. Neither has that expedient had the effect intended; but, on the contrary, many more are like to fall of themſelves, becauſe they cannot work but with loſs: in which caſe, many thouſands of poor people, whoſe livelihood depends upon theſe forges and mines, will be reduced to a ſtarving condition.

What we have been ſaying in relation to Sweden in general, is, in the main, applicable to Finland, except only that hitherto no mines have been diſcovered there. Its chief commodities are pitch, tar, and all ſorts of wooden ware, cattle, dried fiſh, train-oil, &c.

The country of Sweden has no conſiderable manufactures, and yet they have a very great trade, and are very ſtrong in ſhipping; the reaſon is, the produce of their land, notwithſtanding its northern ſituation and barren ſoil, is an immenſe treaſure, and, in a great meaſure, makes up for their want of manufactures. This product is not only great, but is inexhauſtible in its fund, and is as follows:

Silver,	Iron,	Flax,	Tar,	Furrs,
Copper,	Timber,	Pitch,	Hemp,	Hides.

1. The ſilver; this they have peculiar to themſelves, it being found in no other place in all theſe parts of the world, except in Norway, and this is the product of one mine only, at a place called Nola. The ore in the mine lies 145 fathom deep, the working of which has continued near 300 years, and yet, as they relate, is unexhauſted. The mine itſelf is very curious, and ſtrangers are often carried down to ſee it: it brings in a revenue to the king according to the degree to which it is worked.

2. Their mines of copper and iron are very valuable indeed, and are a fund of wealth conſiderably greater than the mine of ſilver, and which will ſupport Sweden, perhaps, to the end of time: for as the quantity is inexhauſtible, ſo the advantage of working theſe mines is very great. Without this, Sweden, which is otherwiſe a poor and barren place, excepting ſome few vallies and flat countries on the ſea-coaſt, would not be able, on any terms, to import ſuch great quantities of the manufactures and product of other countries as they now do: had they not copper and iron to pay with, they could never import ſuch quantities of wine and brandy, wrought ſilks, and fine linens, from France and Holland; or of broad cloth, fine ſtuffs, wrought iron and braſs, clock-work and watch-work, with other things, from England; but their copper and their iron ſupply them with all things, and the ballance is always very much in their favour: which is not to be wondered at, inaſmuch as before the laſt calamitous war, which drained them both of money and men, the Swediſh nation was a formidable power; and they tell us that Sweden only, without including their provinces in Germany, furniſhed king Charles XII. for his wars, from the time of his firſt expedition againſt the king of Denmark, to his death at Frederickſhall, above 300,000 men for ſoldiers, and 227 tons of gold, either in ſpecie, or bills of exchange, made good in Sweden, or bills at Hamburgh, when exchange failed from Sweden; and this was always made good in copper or iron.

If this be true, and that we add to this the dreadful havock and deſtruction of the mines of copper, and of the iron-works, which the Muſcovites made in their ſeveral invaſions upon them, at the end of that war, and by which the late king of Sweden was obliged to conſent to a diſadvantageous peace, we need not wonder that the Swedes at preſent are in a low condition, in compariſon to what they were, both as to their real wealth and their trade. The Muſcovites carried away 70,000 tons of iron, beſides copper, and did an irreparable damage, by deſtroying the copper mines, which had coſt immenſe ſums to bring to perfection, and by cutting down the woods, which were the life and ſupport of the iron-works, and which will require many years growth to be rendered uſeful for the ſame works.

Yet notwithſtanding all this, we ſee the Swedes, by an application never enough to be commended, begin to recover, and their government and gentry contributing to the repair of the great copper-mines, and of their iron-works, which had ſuffered ſo much; they begin to apply themſelves vigorouſly to agriculture, and even manufactures, and export great quantities, and to fill their coffers again: and, in a few years, it is not doubted but they will be able to make a conſiderable figure, though, perhaps, not quite ſo great as before.

I find no conſiderable manufactures, at preſent, in Sweden for exportation, except ſuch as are the immediate product of the metals above; that is, braſs-wire, drawn from their copper converted into braſs, alſo ſome ſteel, and a great quantity of latten-wire, drawn from their iron. Theſe they export in very great quantities, as they do alſo deals, maſts, timber, pitch, and tar.

A few years ſince they ſet up a coarſe manufacture of woollen cloth in Sweden, which they make with tolerable good ſucceſs, for cloathing their poorer people, and for their armies; but we do not find they export any of it, except ſome into Muſcovy and Poland, and that but lately. However, it is of great advantage to them, as it ſets their poor at work, and finds employment eſpecially for the women and children, who are the moſt uncapable to get their bread in Sweden and Norway of any country in thoſe parts of the world.

All the product of Sweden, except as above, finds no work for women, and therefore it is that in the country villages the women manage the plough and the cart, and till the land as much, and perhaps more, than the men.

As for the men, they are taken up in four employments, in which the women can do no ſervice at all, viz.

1. In the woods, which makes good a proverb in thoſe countries, That the Swedes are born carpenters.

2. In the mines, where they are alſo very ſkilful.

3. In the army, where they are acknowleged to be very good ſoldiers.

4. In the ſhips; but here they make not the beſt ſeamen.

It is almoſt as natural for the countrymen of Sweden to be carpenters or miners, as it is to children to ſuck: they take it juſt as a Dutchman takes to fiſhing, or as a negro to ſwim. In the woods their buſineſs is with the ax or the ſaw, felling timber or ſawing deals, extracting the tar, turpentine, &c. and making the charcoal: all theſe are laborious works, fit only for the men: the like is the working in the mines, or at the forges and ſmelting-huts, which the women can do little or nothing at.

But now they have a woollen manufacture, the women begin to ſpin and card, and weave; and the children have the winding and ſpinning too, in their degree; ſo that many thouſands get their bread, who could not do it before. It is true, their own wool being very coarſe, they can make no great improvements in this manufacture; but they have wool from Poland, and the cloathing the poor is a trade very advantageous: for,

(1.) It furniſhes their poor with cloaths much cheaper than they were before, when the country people were cloathed chiefly with ſheep's-ſkins, dreſſed with the wool on them.

(2.) It employs their own poor, who got nothing before.

(3.) It keeps all that money at home, which went annually abroad for cloathing for the meaner ſort of people, which, notwithſtanding their ſheep-ſkin dreſs, was a very great ſum.

The Swedes have two countries diſtant from their native one, in which they have ſtill ſome intereſt; and theſe are Finland and Pomeren.

1. In Finland they have very few ports left, having loſt Elſingvas and Wiborg to the Muſcovites; however, at Abo, and ſome other ſmall places remaining to them, they drive a conſiderable trade in Swediſh deals, which are very valuable in England and Holland, being of a good durable and uncommon kind of yellow fir.

Alſo they export the beſt maſts for ſhips of any place, except Wiborg, in all thoſe ſeas. The inland country is famed for good horſes, and the Finlanders horſe were once eſteemed the beſt cavalry in all Germany.

2. Pomeren: here the Swedes have ſtill the port of Stralſund, which is a very conſiderable rich trading city, and a good port; and the iſle of Rugen is a large, fruitful, and well-cultivated iſland: and from hence Sweden itſelf, in times of ſcarcity, is often ſupplied with corn.

This country of Pomeren is one of the moſt conſiderable in all the ſeas, for the beſt oak timber and plank; and the Dutch fetch great quantities hence every year, eſpecially of plank; as alſo from Stetin, on the north of the Oder, which formerly belonged to the Swedes. The Swedes themſelves, alſo, have the greateſt part of the oak timber and plank from hence, with which they build their ſhips of war at Carelſcroon.

They export from this country alſo great quantities of corn to Holland, and of linſeed for making of oil, and alſo ſome linen, ſuch as canvas, and other coarſe linens; but the Swedes having quitted the Oder to the Pruſſians, has greatly leſſened their trade on that ſide.

Though Sweden has for many centuries furniſhed a great part of Europe with thoſe neceſſary commodities with which it ſo plentifully abounds, yet either their warlike temper, the idleneſs, or the ignorance of the inhabitants, has formerly kept them from being much concerned in trade, they having given the management and advantage of it too much to ſtrangers, which was for a long time monopolized by the Hanſe-Towns ſituate on the Baltic Sea, 'till the Seven Pro-

vinces of the Netherlands being erected into a republic, became ſharers with them. [See the article HANSE-TOWNS.] Before that time, very little iron was made in Sweden; but the ore, being run into pigs, was tranſported to Dantzic, and other parts of Pruſſia, and there forged into bars. The nation owes the greateſt improvements it has made in trade, to the art and induſtry of ſome ingenious mechanics, whom the cruelty of the duke of Alva drove into theſe parts. Their ſucceſs invited great numbers of the reformed Walloons to remove thither, whoſe language and religion remain in the places they ſettled in, where they erected forges, and other conveniencies for making of iron guns, wire, and all other manufactures of copper, braſs, and iron.

The Swediſh navigation was very inconſiderable 'till queen Chriſtina, at the concluſion of the war in 1664, obtained from Denmark a freedom and cuſtom for all ſhips and merchandize belonging to Swediſh ſubjects, in their paſſage through the Sound [ſee the article DENMARK] and eſtabliſhed in her own dominions that difference of cuſtom which ſtill ſubſiſts between Swediſh and foreign ſhips, and is in the proportion of 4, 5, 6: the firſt being called whole-free, the ſecond half-free, and the laſt unfree: ſo that where a whole-free Swediſh ſhip pays 400 crowns, a half-free one pays 500, and a foreign veſſel 600.

But, as great as this advantage was, it had but little effect, 'till the Engliſh act of navigation bridled the Hollanders, and opened the intercourſe between England and Sweden. Since that time, their commerce has been much augmented, as well as ours, that way, and goods tranſported by both, or either party, according to the various junctures of affairs. When Sweden has been engaged in a war, the Engliſh ſhips have had the whole employ: but, in time of peace, the advantage is ſo great on the Swediſh ſide, and merchants ſo much encouraged by freedom in cuſtoms, to employ their own ſhips, that Engliſh bottoms cannot be uſed in that trade, but only when Sweden is unprovided with a number of ſhips ſufficient for the tranſportation of their own commodities.

The general direction of their trade belongs to the College of Commerce, which conſiſts of the preſident of the Treaſury, and four counſellors, who hear cauſes relating to trade, and redreſs any diſorders that happen. The bank at Stockholm is of great benefit to trade, as well in regard that the king's cuſtoms for that city are paid there, as alſo that the merchants commonly make payments to each other, by bills drawn upon it; which eaſes them of great trouble in tranſporting their money from place to place, that would otherwiſe be very difficult and chargeable. This bank is well conſtituted, and in good credit, as it has the ſtates of the kingdom for its guarantees. See our article BANKING.

The intereſt of England, in the trade of Sweden, may be computed by the neceſſity of their commodities to us, and the vent of our's there. Their copper, iron, tar, pitch, maſts, &c. cannot be had elſewhere, except from America, from whence ſuch ſupplies may certainly be furniſhed: and if ſo, this conſideration ought, in reaſon, to have an influence on the Swediſh councils, and engage them to make the Engliſh trade with them as eaſy as poſſible, leſt we ſhould, in time, ceaſe in the importation of their commodities. As to our exportations thither, they ſcarce amount to one third of what we import from thence, and conſiſt chiefly in cloth, ſtuffs, and other woollen manufactures; of which there was formerly vended there, yearly, to the amount of 50,000 l. Beſides theſe, tobacco, Newcaſtle coals, pewter, lead, tin, fruits, and ſugar, with ſeveral other of our own commodities, are ſold at this market, as alſo good quantities of herrings from Scotland: ſo that, in all, we are ſuppoſed to vend goods to about 100,000 l. a year; whereof, if any more than one half be paid for, it is extraordinary. But the making cloth in Sweden to ſupply the army, &c. which had formerly been endeavoured without ſucceſs, being now encouraged and aſſiſted by the public, and undertaken by ſome Scots, and others, has proved of late, and does ſtill prove, a great hinderance to the vent of our cloth there. And, to favour this undertaking, Engliſh cloth is now (unleſs it be ſuch fine cloths as cannot be made there) clogged with ſuch exceſſive duties, as render the importation of it impracticable. The undertakers have got workmen from Germany, and ſome from England; and, beſides the German wool they uſe, they receive great quantities from Scotland (ſuppoſed to be had from England) without which they cannot work. Yet as at preſent the Engliſh trade in Sweden is of the importance above mentioned, notwithſtanding the abatements aforeſaid, it is conſiderable, and will be ſo, while their commodities continue to be neceſſary to us.

The EXCHANGES of SWEDEN, or STOCKHOLM.

STOCKHOLM Gives *		To receive †
* 15 marks,	cop. mon. more or leſs,	† in France, 1 crown of 60 ſols.
24 ditto,	idem	in Holland, 1 rixdol cur. mon.
25 ditto,	idem	at Hamb. 1 rixdollar banco.
18 ditto,	idem	at Cadiz, 128 quartos.

As Stockholm negociates by exchange only with Amſterdam or Hamburgh, the number of days muſt be ſtipulated for the bill of exchange to run, after the expiration of which, there are no regulated days of grace.

Merchants keep their accounts in rixdollars, copper dollars, and runſticks, reckoning 32 runſticks to a copper dollar, and 6 copper dollars to a rixdollar, valued at 3 Poliſh florins, or about 4 s. 6 d.—They reckon 8 runſticks to a mark, and 4 marks to a copper dollar.—They have a ſtiver dollar, which is called the Swedes rixdollar of Germany, or Poland, worth about 2 s. 3 d. ſterling.—In this ſpecie the cuſtom of all exported goods muſt be paid; and it is divided into 32 ore.—The dollar in which the cuſtom of all imported goods muſt be paid, is the Swediſh copper-plate dollars, which are of double the value of the ſtiver dollar, viz. 90 groſhen, or 3 Poliſh gilders, or 4 s. 6 d. ſterling; the copper-plate dollar they divide into 48 ore.

The exchange with Hamburgh is upon the mark, whereof 20 are reckoned to be par with the ſpecie, or rixdollar banco, of Hamburgh, and they give 24 or 25, more or leſs, of marks, for the ſaid rixdollar.

To Amſterdam they give the ſame for the rixdollar current.

To London they moſtly exchange by the way of Amſterdam, or Hamburgh, but ſometimes exchange may be made directly to London; and then, although they do reckon 20 copper dollars to be par with 20 s. ſterling, yet the courſe is frequently at 28 or 30 of the ſaid copper dollars for the pound ſterling; but this riſe and fall happen according to the courſe of trade.

SWEDISH EAST-INDIA COMPANY.

A ſuccinct HISTORY of the SWEDISH EAST-INDIA COMPANY.

It was the ruin of the late Oſtend Eaſt-India company [ſee the articles AUSTRIAN NETHERLANDS, and OSTEND EAST-INDIA COMPANY] that gave birth to the eſtabliſhment of a Swediſh one, of which one Henry Koning was the chief author, a rich merchant, and one who had a juſt notion of the Eaſt-India commerce. He repreſented to the Swediſh miniſtry, that this was a very favourable juncture to undertake a deſign of this nature; that there were a multitude of places in Africa and the Indies neglected by the Europeans, who had conſtantly followed one the other, and had ſcarce ever undertaken to ſtrike out of the ordinary road; that beſides, there were numbers of perſons who, by the diſſolution of the Imperial company of the Netherlands, were thrown out of buſineſs, and, which was worſe, deprived of the means of returning into their own country, by the ſteps taken to hinder the Oſtend company from carrying on their trade; that, conſequently, there could be nothing eaſier than to procure proper people for carrying this commerce on, and fixing it in ſuch a manner as not to be liable to any hazard, either of loſs by trade, or oppoſition from other powers.

This propoſition being maturely conſidered, it was reſolved to authorize this Henry Koning to aſſociate ſuch perſons as ſhould be willing to contribute to his deſign, and to grant them the following privileges, by virtue of a charter, dated June 14, 1731. The king thereby concedes to Henry Koning and his aſſociates, the liberty of navigating and trading to the Eaſt-Indies for 15 years, from beyond the Cape of Good Hope to the iſlands of Japan, wherever they ſhall think proper or convenient, with this reſtriction only, that they ſhall not trade in any port belonging to any prince or ſtate in Europe, without their permiſſion firſt had and obtained. The ſhips employed in this commerce ſhall conſtantly take in their lading at Gottenburgh, to which port they ſhall return, with all the merchandize they bring home from the Eaſt-Indies, and ſhall there cauſe the ſame to be publickly ſold, as ſoon as conveniently they can. The ſaid Henry Koning and company ſhall pay to the crown of Sweden, during the ſaid 15 years, 100 dalers per laſt for every ſhip they employ, the freight of ſuch ſhips being meaſured before their departure from Gottenburgh; which money is to be paid within ſix months after the ſafe return of the ſaid ſhip from the Indies; and they ſhall likewiſe pay two dalers per laſt, in full ſatisfaction for the town duties.

The ſaid Henry Koning and company may employ, equip, and arm, as many veſſels as they ſhall think proper, provided that thoſe veſſels are built or bought in Sweden, and whatever elſe is neceſſary for equipping and furniſhing them, be had in the Swediſh dominions. But in caſe this ſhould be found at any time impracticable, then the company may provide themſelves with ſhips, or whatever elſe ſhall be found requiſite for their commerce, wherever they ſhall think fit, provided always that they give the preference to, and promote, as far as in them lies, the building, manufactures, and produce of Sweden. The ſaid ſhips ſhall carry the Swediſh flag, and ſhall be furniſhed with paſſports under the king's hand, and alſo from the republic of Algiers. The ſaid company ſhall be at liberty to raiſe what ſum they think fit, for the carrying on their commerce, by a voluntary ſubſcription, or

or otherwiſe, as they think proper; and ſuch as ſhall become ſubſcribers, ſhall be obliged to pay in their money at the times preſcribed, on pain of forfeiting their intereſt in the ſaid commerce.

The company may tranſport what ordnance or ſmall arms they think proper; as alſo SILVER, COINED or UNCOINED, Swediſh MONEY only excepted; and may likewiſe bring from the Indies what kind of goods or manufactures they think fit, without any reſtriction whatever. The veſſels of the company, when freighted ready to ſail, ſhall not be hindered, on any pretence whatſoever; nor ſhall they, at their return, be impeded from entering into the port to which they are conſigned. The goods of the ſaid company may be tranſported at their pleaſure, from place to place within his Swediſh Majeſty's dominions, being firſt furniſhed with proper paſſports, without paying any other duties than thoſe before ſtipulated. The captains of the company's ſhips ſhall have the ſame power for maintaining diſcipline amongſt their crews, as the captains of the KING's ſhips; and, with reſpect to trade, they ſhall conform to the inſtruction given by Henry Koning and company, provided always, thoſe inſtructions are not repugnant to the privileges granted by this charter.

The ſeamen and ſoldiers entering on board the company's ſhips ſhall not be liable to be PRESSED into the king's or any other ſervice; and, on the other hand, it ſhall not be lawful for the company to take into their ſervice any who ſhall have deſerted that of the crown. The ſeamen and ſoldiers belonging to the ſhips in the company's ſervice, and deſerting from them, may be apprehended and detained, but according to the uſual forms of laws, and by the hands of the proper officers. The ſhips belonging to the company being returned, and having landed the merchandize on board them, the ſaid goods ſhall be duty free, excepting only a very ſmall acknowlegement to be paid upon removing them.

The perſons acting under this charter ſhall conſtantly chuſe out of their number at leaſt three directors, who ſhall be all men of diſtinguiſhed probity and known abilities, of which the ſaid Henry Koning ſhall be one; and, in caſe of his demiſe, the members of the company are impowered to make choice of another perſon in his ſtead, provided always, that theſe three directors ſhall be natives of the kingdom of Sweden, at leaſt naturalized Swedes, Proteſtants, and reſident in the king's dominions, unleſs neceſſarily abſent in foreign parts, for the ſervice of the company; in which caſe, the proprietors may ſubſtitute another director at home.

The ſaid Henry Koning, and his aſſociates, may make ſuch regulations for the management of their commerce as they ſhall think proper, provided they be agreeable to this charter. They ſhall render a faithful account to all the perſons intereſted, as well of the profit and loſs, as of the capital of the ſaid company; but they ſhall not be obliged to diſcover the names of their ſubſcribers, or the ſums they ſubſcribed; nor ſhall they be obliged to produce, or ſuffer their books to be inſpected, on any pretence whatſoever. In caſe any of the directors ſhall find that the reſt betray their ſecrets, or are guilty of any other fraud or miſdemeanor, they may apply to the Board of Trade for juſtice and reparation, and, upon due proof, ſuch offender ſhall be ſuſpended from his office of director, and the company ſhall be at liberty to chuſe another in his room.

In like manner, if any of the proprietors ſhall find that the ſaid Henry Koning, and the reſt of the directors, betray their truſt, or are guilty of any frauds, they may make the ſame application, and obtain the ſame redreſs. The ſaid Henry Koning, and company, may employ what number of ſupercargoes, officers, mariners, or ſoldiers, they ſhall think fit, either Swedes or foreigners, who, on their being ſo employed, ſhall enjoy the ſame privileges as if they were born Swedes; and the money employed, either by natives or foreigners, in the capital of this company, ſhall not be liable to any detention or ſeizure.

Such perſons as are intereſted in, or employed by, the company, ſhall be naturalized, according to their reſpective qualities, upon their applying themſelves to the king for that purpoſe. The ſaid Henry Koning, and company, and ſuch as are authorized by them, in caſe they are moleſted, or diſturbed in their commerce, by any perſon, or in any part of the world whatever, ſhall have full power from his Majeſty to obtain ample juſtice and ſatisfaction, by all convenient methods, and ſhall be at liberty to oppoſe force by force, and to conſider ſuch diſturbers as pirates, and enemies to the public peace.

His Majeſty will grant them theſe powers, eſpecially in ſuch commiſſions as their captains ſhall receive, and in caſe, notwithſtanding, they ſhould be attacked, and ſuffer any injury or injuſtice from any nation whatever, in the carrying on of this commerce, his Majeſty, upon due information thereof, will grant them his high protection, and endeavour to procure for them ſpeedy and ample ſatisfaction, either by way of reprizal, or otherwiſe. The reſt of the ſubjects of the crown of Sweden are expreſsly prohibited and forbid to engage in, or interfere with, the trade of the ſaid company, under pain of his Majeſty's high diſpleaſure, and the confiſcation of their veſſels and effects. The king promiſes to alter or augment theſe privileges, upon application from the company, as often, and in ſuch manner, as ſhall be found neceſſary for promoting the trade to the Eaſt-Indies, and the intereſt of the perſons concerned therein.

REMARKS.

There were great expectations formed of this company, for various reaſons; firſt, becauſe they had all the powers granted them that they could reaſonably expect or deſire. Secondly, Becauſe they were not limited in their capital, but allowed to raiſe ſuch ſums, and in ſuch a manner, as they ſhall eſteem moſt for their benefit. Thirdly, From their being prohibited from interfering with the commerce of other nations, and thereby running themſelves and their country into difficulties and diſputes. Fourthly, From their having the king's protection ſecured to them, in ſuch a manner, and for ſuch purpoſes, as might ſerve to anſwer all good ends, without involving the crown of Sweden in any controverſies with the maritime powers, or any other of her allies. And, laſtly, Becauſe from the nature of the preſent conſtitution in Sweden, there ſeemed to be as high ſecurities for the properties of ſuch as intereſted themſelves in this affair, as in any other country whatever.

Theſe expectations were greatly heightened, by the company's meeting with no diſturbance or oppoſition from foreign powers, who neither knowing who the ſubſcribers were, or to what their ſubſcriptions amounted, were the leſs alarmed by this new company; and beſides, ſeeing themſelves ſecure from any apprehenſions of their interfering with the trade already eſtabliſhed in the Eaſt-Indies, found it more difficult to aſſign any rational cauſe of complaint; to which we may add, that the company going on very ſlowly at the beginning, and being a long time before they compleated their ſubſcriptions, or prepared to fit out ſhips for the Indies, it was generally believed, both in England and Holland, that the deſign would come to nothing, and the company would vaniſh of itſelf.

But though the author of this deſign, M. Henry Koning, and his aſſociates, were not haſty in equipping ſhips for the Indies, yet they took care to provide themſelves in every reſpect with what might be found neceſſary for carrying on their ſcheme with ſucceſs. They built for this purpoſe two very large and ſtrong ſhips, one called after the king, the Frederick, the other by the name of the queen, the Ulrica. Theſe they furniſhed in ſuch a manner, as to be equally fit for trade or for defence. They made choice of ſuch ſupercargoes as had not only eſtabliſhed characters both for honeſty and abilities, but were likewiſe well verſed in the particular buſineſs in which they were to be employed, and men of experience in the trade to China. They proceeded with no leſs caution in the choice of their officers and mariners; and though they ſpent full two years in making preparations, yet that loſs of time was well compenſated, by the exactneſs with which thoſe preparations were made: ſo that at the time their ſhips left the harbour of Gottenburgh, they were as well equipped, and in all reſpects as compleatly furniſhed for an Eaſt-India voyage, as any that were employed in that trade by the maritime powers; and the ſame care and diligence they have uſed ever ſince: ſo that it may, with great truth, be ſaid, that as ſcarce any company was better eſtabliſhed at firſt, ſo the affairs of none have been hitherto better conducted.

Their firſt voyages, though not attended with ſo much emolument as might have been expected, were, however, tolerably ſucceſsful; and the company eſtabliſhed their factory on the river of Canton in China, with the conſent of the Chineſe, who were very well pleaſed with their new comers, and well diſpoſed to favour and promote their trade; ſo that they were very ſoon on the ſame footing there with other European nations. At home, indeed, they met with ſome difficulties; for the company being obliged to make uſe of a great many foreigners in all capacities, for the better carrying on of their trade, and there being no nation in Europe naturally more jealous of foreigners than the Swedes, this occaſioned a great clamour, eſpecially among the common people, which, however, was in ſome meaſure got over, by publiſhing an order, that at leaſt two thirds of the mariners ſhould be, for the future, natives of the kingdom; and as the execution of this order was apparently attended with great inconveniencies, it convinced even the vulgar of their miſtake, and that the company had done no more than what they were warranted to do by their charter, and what the circumſtances of their affairs, more eſpecially at the beginning, rendered not only expedient, but neceſſary.

Since that time, the Swediſh company have been very regular, both in fitting out their ſhips, and in their returns, which being ſold to foreigners, have brought in great ſums of money to the kingdom; yet, inaſmuch as a great part of this money has been exported again, for the carrying on this trade, a new complaint has been created thereby, in reſpect to the ſilver carried to the Eaſt-Indies. We need the leſs

admire

admire at this in Sweden, becauſe, though the trade of the kingdom is not large, yet it produces annually a conſiderable ballance in ready money, as is known experimentally here, ſince it is certain that two-thirds of the trade we carry on thither is managed with READY MONEY only; and it is alſo pretty much the ſame thing with other nations who trade thither, the French only excepted, who have a ballance in their favour from the Swedes, which, however, has gradually grown leſs and leſs, in proportion as they have taken more naval ſtores of them of late years, than they did formerly; and as their ſubſidy treaties bring in conſiderable ſums to Sweden, or at leaſt keep the money there, that would otherwiſe be employed in diſcharging the ballance of trade: ſo that the Swedes being uſed to ſee great ſums of money brought in by every other branch of commerce, and being not ſo immediately acquainted with the profits ariſing from this, are the leſs diſpoſed to conſider it as nationally advantageous.

SWITZERLAND is ſurrounded by the territories of France, Germany, and Italy: it is ſeparated from other countries by high mountains. It is divided into various cantons and free provinces, too well known to need a minute deſcription here. Every canton, or province, in ſummer affords good paſture to the ſheep, and in ſome of them there are ploughed fields. A conſiderable part of the cantons, eſpecially that of Bern, the largeſt and moſt conſiderable, is a plain fruitful country, abounding in corn. The largeſt rivers in Europe have their ſource from theſe mountains, particularly the Rhine, the Rhone, the Danube, the Ruſs, and the Inn; and there are many extenſive lakes, as thoſe of Conſtance and Geneva: here are alſo abundance of fine woods, eſpecially of pine and fir-trees. The ſoil produces ſome corn and wine, though not in great quantity, and the fruits of the earth are frequently deſtroyed by ſtorms or cold rains. They abound moſt in cattle, wherein they carry on no inconſiderable trade in the neighbouring countries; and their lakes abound with plenty of fiſh.

A flouriſhing trade is not to be expected in a country ſituate like this, out of the reach of the ſea, and among mountains, paſſable only by mules, without native commodities ſufficient to export, and without any peculiar genius in the natives to erect manufactures. However, the towns of Zurich, Baſil, Schaffhauſen, Geneva, and St Gall, carry on a pretty general traffic; the firſt and laſt of which have ſome manufactures: and Baſil and Schaffhaufen, being ſituate on the frontiers of the empire, are convenient magazines for merchandize to be exchanged between France, Italy, and Germany; which trades bring employment and profit to the inhabitants, among whom are ſome conſiderable merchants.

The Switzers not having a competency of wine or corn within themſelves, are ſupplied with both from the Milaneſe, and the circle of Swabia; and the Tirol, Franche Comté, and Bavaria, ſupply them with ſalt. The ſovereign of each canton is the general ſalt-merchant, and profits by retailing it.—Their neceſſaries for apparel and furniture come likewiſe from abroad.—They make, indeed, ſome coarſe ſtuffs for cloathing their peaſants, but their other people are generally cloathed with the manufactures of other countries. Specie, either of gold or ſilver, is very ſcarce in the circulation of their commerce, from its being locked up in thoſe cantons that have a public treaſury, and for want of proper occaſions to place it at intereſt on good ſecurity; which induces monied people, as well as their public treaſuries, to put it into foreign funds for intereſt ſake.—In conſequence of their ſituation and circumſtances, it is no wonder that the ballance of trade is againſt theſe people; which has put them under the neceſſity of preventing the conſumption of foreign commodities, by ſumptuary laws, which prevent the wear of jewels, gold and ſilver, ſilk, thread, lace, and what is coſtly in apparel; yet theſe meaſures prove no effectual remedy againſt their exportation of ſpecie: nor can any effectual remedy be found for this, but by eſtabliſhing manufactures, which was attempted by numbers of French Proteſtants, who formerly retired hither from perſecution; but, for want of due protection and encouragement, and even toleration by the native citizens, who were weak enough not to ſuffer foreigners to exerciſe their trade in any of their capital cities, they were forced to carry their arts and trades to other countries: and they being but very mean workmen themſelves, there is little hopes, from this miſtaken policy, of ſeeing any conſiderable manufactures flouriſh in theſe cantons. So ridiculouſly obſtinate are theſe people to their trading intereſts, that the poor nobility of the canton of Zurich may not engage in trade without degrading themſelves. See the aſtoniſhing folly hereof, under our articles COMMERCE, FRANCE, ARTIFICERS, and MANUFACTURERS.

Of the EXCHANGES of ST GALL.

Uſances, in regard to the payment of bills of exchange, is reckoned at 14 days after ſight. The days of grace are not regulated there, bills of exchange, according to rigour, being payable 24 hours after the expiration of the uſance.

Some traders keep their accounts in florins, kruitzers, and fenings, money of St Gall; or in florins, kruitzers, and fenings, money of the empire. The florin is 60 kruitzers, and the kruitzer 4 fenings. The effective rixdollar is 102 kruitzers, money of St Gall; the crown of the empire is 2 florins, money of the empire, or 106 kruitzers, money of St Gall. The money of St Gall is regulated, at preſent, at 106 kruitzers. In this money they exchange on the following places:

ST GALL

Gives *		To receive †	
*58 kruitz.	more or leſs,	†at Paris,	1 crown of 60 ſols.

Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE, continued from the End of Letter R.

SAIL-CLOTH.

SAIL-CLOTH, Britiſh-made, the BOUNTY AND REGULATIONS thereon.

—— Britiſh-made, for which bounty has been given on exportation, afterwards relanded, is forfeited; and every perſon concerned in bringing back, or relanding the ſame, forfeits 2 s. for every ell. 12 Ann. c. 16. §. 3. and 27 Geo. II. c. 18. §. 6.

—— Every ſhip or veſſel built in Great-Britain, or his Majeſty's plantations in America, upon her being firſt navigated, is to be furniſhed with a complete ſet of NEW SAILS of SAIL-CLOTH MANUFACTURED in Great-Britain, which ſhall, bona fide, belong to ſuch ſhip, on forfeiture of 50 l. by the maſter thereof. 9 Geo. II. c. 37. §. 4 and 19.—c. 27. §. 11 and 24.—c. 52. §. 3 and 26.—c. 32. §. 3.

—— Every manufacturer muſt affix or impreſs a ſtamp, containing his name and place of abode, on every piece of ſail-cloth made by him. 9 Geo. II. c. 37. §. 3.

—— If any perſon ſhall ſell, or expoſe to ſale, or work up into ſails, any piece of Britiſh ſail-cloth, without BEING SO STAMPED, and be convicted thereof by the oath of a credible witneſs, before one or more juſtices of the peace of the county, &c. where the offence is committed, he is to forfeit 10 l. for every piece. 9 Geo. II. c. 37. §. 3.

—— Any perſon wilfully cutting off, or obliterating ſuch ſtamp, or uſing a ſtamp containing the name and place of abode of any other perſon, is upon conviction to forfeit 5 l. for every offence, to be recovered by diſtreſs and ſale of the offender's goods, by warrant from two or more juſtices, to be applied to the uſe of the informer. 9 Geo. II. c. 37. §. 3.

—— Or canvas, foreign made, uſually entered as HOLLAND-DUCK or vitery canvas, fit to be made uſe of for making ſails, upon importation thereof into Great-Britain, to be ſtamped at landing by a ſtamp, to be provided by the commiſſioners of the cuſtoms, of eight inches diameter, dipped in red-lead, mixed with linſeed-oil well boiled, expreſſing the place and port where they are entered. 19 Geo. II. c. 27. §. 5, 6. and 26 Geo. II. c. 32. §. 3.

—— For counterfeiting ſuch ſtamp, or the impreſſion, or knowingly ſelling any foreign ſail-cloth with a counterfeit ſtamp, the penalty is 50 l. 19 Geo. II. c. 27. §. 6. and 26 Geo. II. c. 32. §. 3.

—— No perſon in Great-Britain, or his Majeſty's plantations in America, may make into ſails or tarpawlins any foreign ſail-cloth or canvas, not ſo ſtamped, on forfeiture thereof;

thereof; and the perſon ſo offending, on conviction thereof by the oath of a credible witneſs before a juſtice of the peace of the county, &c. where the offence is committed, is to forfeit 50l. for every ſail or tarpawling, for the uſe of the informer; to be levied by diſtreſs, and ſale of his goods, by a warrant from two juſtices of the peace of the county, &c. where the offence is committed; and for want of ſuch diſtreſs, to be committed to gaol for ſix months, or untill he pays the penalty. 19 Geo. II. c. 27. §. 7. and 26 Geo. II. c. 32. §. 3.

—— Any perſon making up foreign ſail-cloth or canvas into ſails, muſt place the ſtamps on the after ſide of ſuch ſails, and in ſuch manner, that the number of ſtamps may appear proportionable to the number of bolts or pieces in each ſail, on forfeiture of ſuch ſails, and 10l. for every offence. 19 Geo. II. c. 27. §. 8. and 26. Geo. II. c. 32. §. 3.

—— No perſon may alter or mend a ſail of foreign ſail-cloth or canvas, not ſo ſtamped, on forfeiture of 20l. 19 Geo. II. c. 27. §. 9. and 26 Geo. II. c. 32. §. 3.

—— Every ſail-maker, or other perſon in Great-Britain, or his Majeſty's plantations in America, muſt impreſs, on every new ſail he makes, a ſtamp of eight inches diameter, dipped in lamp-black mixed with linſeed oil well boiled, containing his name and place of abode in plain and diſtinct letters and words at length, on forfeiture thereof, and of ten pound for every new ſail delivered to any captain or maſter of a veſſel without ſuch ſtamp. 19 Geo. II. c. 27. §. 10. and 26 Geo. II. c. 32. §. 3.

—— Sail cloth of the manufacture of Ireland, imported into Great-Britain, (during the continuance of a bounty on exportation granted by an act of the parliament of Ireland, 19 Geo. II.) is ſubject to a new duty. 23 Geo. II. c. 32. §. 1, 3.

——No canvas or ſail-cloth may be imported from Ireland, but in whole and entire bolts or pieces; and if the loops or double threads of the bolts (which are directed to be part of the warp in the middle of that end of the web, which is laſt in weaving) are cut off; or if the bolts have a ſtamp importing the payment of either of the bounties, they ſhall be deemed to have received the bounty. 23 Geo. II. c. 32. §. 2.

—— If any diſpute ariſes about the duty, which ought to be paid, ſuch duty is to be aſcertained in the ſame manner, and under the ſame forfeitures and penalties, as upon goods ſubject to payment of duty ad valorem. 23 Geo. II. c. 32. §. 5.

—— Upon the the importation of canvas, or ſail-cloth, from Ireland, the proper officer of the cuſtoms may open, view, and examine the ſame; and if it appears, that the ſaid bounty has been paid, and no regular entry made at importation, the canvas or ſail-cloth ſo omitted to be entered ſhall be forfeited, and may be ſeized by any officer of the cuſtoms. 23 Geo. II. c. 32. §. 4.

With Regard to Sails.

Sails.— Every maſter of a veſſel, belonging to any of his Majeſty's ſubjects, navigated with, or having on board, any foreign-made ſails, is, at the time of reporting his ſhip, to make an entry and report upon oath of every ſuch ſail, and, before the ſhip is cleared, to pay for them the ſame duty as by 12 Ann. cap. 16. is laid upon foreign-made ſails imported by way of merchandize, on forfeiture of the ſails to his Majeſty, and 50l. for every offence by the maſter; and ſuch ſails are to be ſtamped at the port of entry, in the ſame manner as directed for foreign ſail-cloth. 19 Geo. II. c. 27. §. 1, 2. and 26 Geo. II. 32. §. 3.

—— But if the maſter, before the ſhip is cleared, declares his intention of not paying the duty, and delivers up the ſails to the officer of the cuſtoms, the ſails only are to be forfeited. 19 Geo. II. c. 27. §. 3. and 26 Geo. II. c. 32. §. 3.

—— No captain of a ſhip coming from the Eaſt-Indies liable to this duty or forfeiture for any foreign-made ſails, bona fide, brought from the Eaſt-Indies. 19 Geo. II. c. 27. §. 4. and 26 Geo. II. c. 32. §. 3.

—— Pecuniary penalties and forfeitures by this act (not otherwiſe directed and applied) may be proſecuted in any of his Majeſty's courts of record in Great-Britain, or ſuch of his Majeſty's plantations in America where the offence is committed; one moiety to his Majeſty, the other to the proſecutor. 19 Geo. II. c. 27. §. 12. and 26 Geo. II. c. 32. §. 3.

With Regard to Salt.

Salt—Ships laden with ſalt, hovering on the coaſt, and not proceeding directly to ſome port, may be compelled, by the officers of the cuſtoms or ſalt duties, to come into port; officers to continue on board till the ſalt is unladen, or the ſhip departs for her intended voyage; neglecting to enter and unlade the ſalt, or to proceed on her voyage in 20 days, the ſalt forfeited, and double the value to be recovered of the maſter. 1 Ann. c. 21. §. 7. and 5 Geo. II. c. 6. §. 1.

—— Officers of the cuſtoms or ſalt duties may ſearch any veſſel lying in port, or riding on the ſea coaſts; and if any ſalt, not duly entered, be found on board any veſſel in which it was not imported, it is forfeited, or the value, and the maſter is ſubject to the ſame penalties and forfeitures as if it had been landed without entry. 5 Geo. I. c. 18. §. 22.

—— Officers obſtructed, every offender is to forfeit 40l. 5 Geo. I. c. 18. §. 22.

——Neglecting or refuſing to enter or unlade ſalt for the ſpace of 20 days after a ſhip is come into port, or within that time to depart and proceed regularly on her voyage to ſome other place (unleſs permitted to make longer ſtay by the chief officer of the cuſtoms, the ſalt on board is forfeited, and double the value to be recovered of the maſter. 1 Ann. c. 21. §. 7.

—— Imported in ſhips under 40 tons, or otherwiſe than in bulk (except for the ſhip's proviſions) forfeited, and double the value. 1 Ann. c. 21. §. 8. and 5 Geo. II. c. 6. §. 1.

—— Of the produce or manufacture of Great-Britain or Ireland, or other ſalt coming from Ireland, or the Iſle of Man, may not be imported, or brought into any port or place of Great-Britain, nor taken out of any ſhip or veſſel, nor put on ſhore within any of the ſaid ports or places, upon forfeiture thereof, together with the veſſel, and all her tackle and apparel. 2 and 3 Ann. c. 14. §. 1. and 5 Ann. c. 8. art. 2.

—— Perſons delivering, conveying or aſſiſting, forfeit 20l. each, or ſix months impriſonment. 2 and 3 Ann. c. 14. §. 1. and 5 Ann. c. 8. art. 2.

—— Such ſalt may be ſeized within two months; and if not claimed within 20 days, and ſecurity given for the value, the ſalt and ſhip are to be ſold to the beſt advantage. 2 and 3 Ann. c. 14. §. 2.

Except { Salt (from Ireland or other foreign parts) taken in for the neceſſary proviſion of the ſhip, or for curing fiſh, which may be landed; but entry thereof muſt be made within 10 days after coming into port, and the duties paid or ſecured before landing, upon forfeiture, and double the value. 2 and 3 Ann. c. 14. §. 6. and 5 Geo. I. c. 18. §. 18.
— Salt regularly entered and exported to foreign parts, and the ſhip forced in by ſtreſs of weather, &c. in which caſe the ſalt may be landed within 20 days after coming in, provided the duties be again paid down (before relanding) for the whole quantity of ſalt entered for exportation. 2 and 3 Ann. c. 14. §. 4.

Except { —— Carried coaſtwiſe by certificate. 2 and 3 Ann. c. 14. §. 3.
—— Taken in by fiſhermen to cure fiſh at ſea, upon oath before the ſalt-officer, that it was taken on board from ſome port in Great-Britain, mentioning the place, and not out of any veſſel at ſea. 2 and 3 Ann. c. 14. §. 5.

—— Imported from Jerſey, Guernſey, Sark, and Alderney, liable to the ſame duties as any other foreign ſalt. 5 Geo. I. c. 18. §. 11.

—— From Ireland, or other foreign parts, though taken on board for neceſſary proviſion for the ſhip, or for curing fiſh, not entered within ten days after coming into port, and before the landing, &c. is forfeited, with double the value by the maſter of the ſhip, or the owner of the ſalt. 2 and 3 Ann. c. 14. §. 6. and 5 Geo. I. c. 18. §. 18.

—— Foreign, landed before entry, and the exciſe duty be ſatisfied, or without a warrant from the collector, or officer appointed for the duty on ſalt, is forfeited, or the value thereof, and 10s. per buſhel; and every perſon concerned is to forfeit 100l. 5 and 6 W. III. c. 7. §. 4. and 5 Geo. I. c. 18. §. 24. and 9 and 10 W. III. c. 44. §. 6. and 5. Geo. II. c. 6. §. 1. and 26. Geo. II. c. 3. §. 1.

—— The perſons in whoſe cuſtody ſuch ſalt is found are liable to the ſame penalties, as if they had been the importers, unleſs they make it appear from whom they had it. 1 Ann. c. 21. §. 3.

—— Imbezzled after importation, and before ware-houſeing, the forfeiture is 20s. for every buſhel of 84 lb. 5 Geo. I. c. 18. §. 4. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

—— Cellared and locked up, may not be removed without a warrant or permit for the conveyance, upon forfeiture thereof, beſides 10s. per buſhel, and 20l. for every ſuch offence to be recovered of the importer, and of every perſon concerned in the removal. 5 Ann. c. 29. §. 2.

—— Importers to be charged with the full quantity of ſalt cellared, though upon clearing ſuch cellar or warehouſe there may appear to be a deficiency. 5 Ann. c. 29. §. 17.

—— At the end of every fiſhing ſeaſon, the officer is to take an account of the ſalt remaining, which muſt be forthwith locked up as before; and the proprietors are to deliver them an account, upon oath, of the quantity of fiſh exported

(confirmed

(confirmed by a certificate of the officers of the port of exportation) or of the red or white herrings entered for home conſumption, on which the ſaid ſalt had been uſed. But as to white herrings ſent to foreign markets, immediately ſent from ſea, without being brought into port by the ſociety of the Free Britiſh Fiſhery, the quantity is to be aſcertained by the oath of the ſociety's ſuperintendant before a juſtice of the peace, or officer of the ſalt duties; and a certificate under the hands of their ſecretary and accountant, either that it appears by the letters or accounts from their correſpondents or agents, to whom ſuch fiſh were conſigned, that they have come to their hands, or that ſuch fiſh have been loſt at ſea. 5 Geo. I. c. 18. §. 1. and 8 Geo. I. c. 4. §. 3. 10 and 8 Geo. I. c. 16. §. 3, 6. and 5 Geo. II. c. 6. §. 1. and 26 Geo. c. 3. §. 1. and 26 Geo. II. c. 9. §. 5, 6.

—— But if delivered over by the proprietors to any other perſons for the curing of fiſh, it muſt be ſo expreſſed in his accounts, and made appear by oath or otherwiſe, that it was ſo uſed, upon forfeiture of 50 l. and the perſons to whom delivered muſt, upon oath likewiſe, give an account of the ſalt by them uſed in the curing of fiſh exported; confirmed by the certificate of the officers of the port of exportation. 5 Geo. I. c. 18. §. 1. and 8 Geo. I. c. 4. §. 10. and 11 Geo. I. c. 30. §. 41. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

—— Such ſalt not ſo accounted for within 3 months after the expiration of each year, the forfeiture is 10 s. per buſhel. 5 Geo. I. c. 18. §. 1. and 8 Geo. I. c. 4. §. 10. and 11 Geo. I. c. 30. §. 41. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

—— Such ſalt as cannot be accounted for, having been ſold, given away, or uſed for any other purpoſe, the proprietor, or the perſons to whom delivered, and the buyer, are each of them to forfeit 20 s. per buſhel; 1-3d to the uſe of his Majeſty, and the remainder to the informer or ſuer. 5 Geo. I. c. 18. §. 2. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

—— In default of payment within 14 days, if ſufficient effects cannot be found, the offenders muſt be ſent to the houſe of correction, for any time not exceeding three months. 5 Geo. I. c. 18. §. 2. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

—— Fiſh cured with ſalt, delivered out of warehouſes, not exported while good and merchantable, may be deſtroyed in the preſence of an officer, and his certificate thereof accepted inſtead of that for exportation. 3 Geo. I. c. 4. §. 4.

—— Foreign ſalt from Scotland into England, and all ſalt brought coaſtwiſe — May not be delivered, nor a warrant granted for the landing, till certificate of the true quantity on board, ſigned by the cuſtom and ſalt officers of the loading-port, be produced to the ſalt-officer of the delivering-port, and oath be made before the ſalt-officer by the maſter, mate or boatſwain, that to his knowlege there has not been taken on board any ſalt ſince he came from ſuch port, upon forfeiture of double the value, and 10 s. per buſhel. 5 and 6 W. and M. c. 7. §. 9. and 9 and 10 W. III. c. 44. §. 12. and 5 Geo. I. c. 18. §. 20. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

—— Part only of ſuch ſalt landed, and the ſhip proceeding with the remainder, the quantity delivered muſt be certified by the officers, on the back on the cocket, tranſire or other warrant, or elſe by a ſeparate certificate under the hand and ſeal of the officers. 5 and 6 W. and M. c. 7. §. 9. and 9 and 10 W. III. c. 44. §. 12. and 5 Geo. I. c. 18. §. 20. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

—— Officers at the delivering port may demand a ſight of the permit and cocket, and are to weigh the ſalt upon unlading; and if found to be more in weight than expreſſed in ſuch permit and cocket, the ſurpluſage is forfeited. 10 and 11 W. III. c. 22. §. 12, 13. and 5 Geo. I. c. 18. §. 21. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

—— Maſters refuſing to ſhew the permit and cocket, the ſalt may be ſeized and detained; and if not produced within four days, the ſalt is forfeited. 10 and 11 W. III. c. 22. §. 12, 13. and 5 Geo. I. c. 18. §. 21. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

—— For which the duties have been drawn back, fraudulently relanded, without entry and repayment of the duties; the offender is to forfeit double the value thereof, and 10 s. per buſhel, and to be ſubject to ſuch other penalties and forfeitures, as in caſe of foreign ſalt illegally landed. 5 and 6 W. and M. c. 7. §. 20. and 9 and 10 W. III. c. 44. §. 27. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

—— Landed in Ireland, not to have any drawback, unleſs entered outwards for ſome port in Ireland. 5 Ann. c. 29. §. 13. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

—— Shipped for Ireland — Debentures not to be made out, nor draw-backs allowed, till a certificate, under the hand of the collector of ſome port in Ireland, of the particular quantity there landed, be produced; the draw-back may not be allowed for any more than ſuch quantity. 1 Ann. c. 21. §. 11. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

Except —— The allowances for waſte, being four buſhels for every 40 buſhels of white ſalt, and two buſhels for every 40 buſhels of rock ſalt, 5 Ann. c. 29. §. 14.

—— Shipped for Ireland, and loſt at ſea by ſinking of the ſhip, or taken by enemies; upon due proof made within two years, by the oaths of two credible witneſſes before the juſtices of the peace at the general quarter-ſeſſions, and their certificate thereof produced, the draw-back may be allowed, or the ſecurity vacated. 4 and 5 Ann. c. 12. §. 11. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1. and 26 Geo. II. c. 32. §. 7.

—— After put on board any boat, barge, &c. in order to be exported to foreign parts, may not be taken out, unleſs to be put into the ſhip wherein it is to be exported; nor landed in Great-Britain, except in the preſence of a ſalt-officer, upon forfeiture of the boat, &c. goods, and 20 l. by every perſon concerned, or ſix months impriſonment. 5 Geo. I. c. 18. §. 23. and 26 Geo. II. c. 3. §. 1.

—— Ships laden with ſalt to be exported, drove into port by ſtreſs of weather, or other unavoidable neceſſity, ſalt-officers may go and remain on board till the ſalt be re-entered, or the ſhips proceed on their voyages. 1 Ann. c. 21. §. 12. and 2 and 3 Ann. c. 14. §. 4. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

—— Such ſalt may be relanded, within 20 days, upon due entry and repayment of the duty for the whole quantity entered outwards. 1 Ann. c. 21. §. 12. and 2 and 3 Ann. c. 14. §. 4. 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

—— Refuſing officers to come on board, penalty 20 l. 1 Ann. c. 21. §. 12. 2 and 3 of Ann. c. 14. §. 4. 5 Geo. II. c. 6. §. 1. 26 Geo. II. c. 3. §. 1.

—— Unladen before due entry, or repayment of duty forfeited, with the whole cargo remaining on board. 1 Ann. c. 21. §. 12. and 2 and 3 Ann. c. 14. §. 4. and 5 Geo. II. c. 6. §. 1. and 2 Geo. II. c. 3. §. 1.

—— Shipped for exportation, or to be carried coaſtwiſe — The particular quantity muſt be expreſſed in the cocket, which muſt be ſigned by the ſalt-officer, and given without fee or delay; and if the ſhip puts into any port of Great-Britain, the officers of the cuſtoms and ſalt duty may demand a ſight thereof; and upon oath made before the collector or cuſtomer, that they have juſt cauſe to ſuſpect that there is leſs on board than expreſſed in ſuch cocket, the ſalt may be weighed. 1 Ann. c. 21. §. 13.

—— If, upon weighing, a deficiency be found, after a reaſonable allowance made for waſte, &c. the remainder is forfeited. 1 Ann. c. 21. §. 13.

—— Shipped for exportation, or to be carried coaſtwiſe — Periſhing by the ſinking of the ſhip before gone out of port, and before the exporter is entitled to the drawback; upon proof of ſuch loſs before the juſtices of the peace at the general quarter-ſeſſions, they are to grant the exporter or proprietor a certificate thereof; which being produced to the officers, they are to permit the like quantity, therein mentioned, to be bought, without payment of any duty of exciſe. 2 and 3 Ann. c. 14. §. 10.

—— Or ſuch ſalt loſt, in carrying down the river to be ſhipped for exportation, or loſt after it is ſo ſhipped, and before the exporter is entitled to a debenture, and proof thereof made as above, the certificate ſhall be applied by the collector of the duties on ſalt to diſcharge and vacate the ſecurity given for the duty of ſo much as appears thereby to be loſt. 26 Geo. II. c. 32. §. 6.

—— Not to be ſhipped in order to be ſent coaſtwiſe by a retailer or ſhopkeeper, till it be made appear, by oath or otherwiſe, before the officers, that the duty has been paid, or ſecured to be paid, or that it was bought of ſome other retailer, or ſhopkeeper, that had paid the duty. 5 and 6 W. and M. c. 7. §. 3. and 9 and 10 W. III. c. 44. §. 11. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

—— Upon re ſhipping from any boat, &c. on board any ſhip, to be carried coaſtwiſe, the maſter of the boat, &c. muſt, before any diſpatches be granted, make oath before the ſalt-officer, that it is truly re-ſhipped, and not augmented or diminiſhed, upon forfeiture of double the value, and 10 s. per buſhel. 5 Geo. I. c. 18. §. 25. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

—— Belonging to Britiſh ſubjects that have paid the duty, periſhed or loſt in any port of Great-Britain, or ſhipped coaſtwiſe, and loſt at ſea by ſtorms, &c. upon proof of ſuch loſs, and that it was not occaſioned by leakage or negligence, made by the oaths of two or more credible witneſſes (whereof the maſter or mate to be one) before the juſtices of the peace at the general quarter-ſeſſions, they are to grant a certificate of ſuch proof being made; which being produced to any of the officers appointed to collect the duty upon ſalt, he is to permit the like quantity to be bought free of exciſe. 5 and 6 W. and M. c. 7. §. 21. and 9 and 10 W. III. c. 44. §. 28. and 2 and 3 Ann. c. 14. §. 18. and 8 Geo. I. c. 4. §. 11. and 5 Geo. II. c. 6. §. 1. and 26 Geo. II. c. 3. §. 1.

——Imported, not of the product of Great Britain, to be deemed foreign, and charged accordingly. 5 & 6 W. & M. c. 7. §. 13.

——Exported to the Iſle of Man, Jerſey, or Guernſey, entitled to the drawback. 2 & 3 Ann. c. 14. §. 9.

——Any ſalt-maker, importer of ſalt, or any refiner or proprietor of rock-ſalt, refuſing, upon due requeſt or demand made by the ſalt-officer, in the day-time, or in the night in the preſence of a conſtable or other lawful officer of the peace, to permit ſuch officer to enter his works, warehouſes, or other places, by him made uſe of for making, laying, refining, or keeping of ſalt, is to forfeit 40 l. for every ſuch offence. 1 Ann. c. 21. §. 2.

——Rock-ſalt, ſalt-rock, or refined ſalt, exported to parts beyond the ſeas—The exporter to be paid by the ſalt-officer, for every buſhel of rock-ſalt, or ſalt-rock, after the rate of 65 lb. to the buſhel, and refined ſalt after the rate of 56 lb. to the buſhel; all the duties which have been paid for the ſame, within two days after demand, on a debenture to be prepared by the collector of the cuſtoms, verified by the ſearcher, as to his quantity ſhipped; the oath of the exporter, or his agent, being firſt taken, that the duties were paid, and that it is to be exported beyond the ſeas, and not relanded in Great-Britain; which debenture is to be given without fee or reward. 10 & 11 W. III. c. 22. §. 7. & 1 Ann. c. 21. §. 9.

——Rock or white-ſalt not to be ſhipped on board any veſſel for exportation, or to be carried coaſtwiſe, without being firſt weighed by the officers appointed by the commiſſioners of exciſe, and a permit or certificate of the quantity obtained, upon penalty of forfeiture of the ſalt, and 10s. per buſhel, unleſs the officer refuſes, or does not attend to weigh it, or refuſe a permit or certificate when weighed. 10 & 11 W. III. c. 22. §. 10, 11.

The officer refuſing ſuch permit (which is to be given gratis) is to forfeit 5 l. to the perſon grieved. 10 & 11 W. III. c. 22. §. 10, 11.

Carried coaſtwiſe by cocket or tranſire twenty miles by ſea or more; or from the port of Great-Yarmouth to Leoſtoff or Southwold-bay, although to a member or creek of the port where it is firſt ſhipped off, the allowance to be made for waſte is three buſhels for every 40 buſhels of white ſalt, and one buſhel and a half for every 40 buſhels of rock-ſalt. 5 Ann. c. 29. §. 4. & 6 Ann. c. 12. §. 1.

——The allowance to be made but once, though the ſalt ſhould be carried coaſtwiſe from ſeveral ports, or members of ports. 5 Ann. c. 29. §. 4. & 6 Ann. c. 12. §. 1.

——Foreign, or Engliſh, rock or refined ſalt—The exporter to have no greater allowance on prompt payment, and for waſte, and upon exportation of the ſame, than what was paid or ſecured for the duty at firſt. 5 Ann. c. 29. §. 16. & 5 Geo. II. c. 6. §. 5. & 26 Geo. II. c. 3. §. 1.

——Engliſh to have 9 months, and rock-ſalt 12 months, for payment of exciſe. 5 Ann. c. 29. §. 5.

——Scots—imported into England, to pay 2s. 4d. per buſhel, during the continuance of 2s. 4d. per buſhel on Engliſh ſalt, impoſed by 9 & 10 W. III. c. 4. & 5 Ann. c. 8. art. 8.

——And during the ſaid time, no ſalt may be brought from Scotland to England by land in any manner, upon forfeiture thereof, with the cattle and carriages, and 20s. per buſhel, to be recovered of the carrier or owner; and the perſon carrying the ſame to be impriſoned by any one juſtice of the peace for ſix months, and until the penalty be paid. 5 Ann. c. 8. art. 8.

The BUSINESS of the CUSTOMS,

With regard to SEIZURES and FORFEITURES of ſhips—for the ſeveral cauſes thereof, follows, under the following article, SHIPS.

SEIZURES—of ſhips and goods as forfeited, for unlawful importation and exportation, or for non-payment of duties, may be made only by officers of the cuſtoms, or perſons authorized by warrant from the treaſury, or by ſpecial commiſſion under his Majeſty's great or privy-ſeal; and if made by any other perſons, they are void. 13 & 14 Car. II. c. 11. §. 15.

——Except in the flolowing caſes, viz. { Alamodes, arrack, brandy, cattle, fiſh, goods inwards, Ireland, plantations, wool.

——Officers making colluſive ſeizures of foreign goods, in order to evade the duties, are to forfeit 500 l. and be rendered incapable of ſerving his Majeſty; and the importers or owners are to forfeit treble the value of the goods. 5 Geo. I. c. 11. §. 24.

——Officers or proprietors diſcovering their offences to the commiſſioners of the cuſtoms, within two months, ſo as to convict their accomplices, are to be acquitted. 5 Geo. I. c. 11. §. 25.

——Other perſons ſo diſcovering, within three months, are to have half of his Majeſty's ſhare. 5 Geo. I. c. 11. §. 26.

——Not proſecuted to effect for the bringing of them to trial and condemnation, by the ſeizer or informer, may be ſeized or informed againſt, or an action brought by way of devenerunt, by any other officer, &c. who is to be eſteemed as the true firſt informer or ſeizer. 13 & 14 Car II. c. 11. §. 17.

——Officers or informers may not compound any ſeizure, under one-third part of the appraiſed value, upon forfeiture of office. 13 & 14. Car. II. c. 11. §. 18.

COMPOSITION of PETTY SEIZURES.

All goods ſeized by the officers of the cuſtoms are to be proſecuted to condemnation, either in the court of exchequer, or before the juſtices of the peace, &c. and the king's moiety or ſhare paid in to the proper officers, before any writ or order of delivery may be granted, except in the caſe of the 13 and 14 Car. II. c. 11. §. 30. periſhable goods: but when the ſeizure is ſo ſmall, that the cuſtom thereof does not exceed 40 s. the commiſſioners of the cuſtoms have, by their patent, a power to compound for it: and in that caſe, the king's part is to he paid in to the collector of the port of ſeizure; who is to account for it by the name of COMPOSITION on PETTY SEIZURES; which he is to comprehend under the general head of cuſtoms.

——In all ſuits and informations upon any act concerning the importation of goods, if the property be claimed by any perſon as the importer, the onus probandi is to lie on the owner or claimer. 13 & 14 Car. II. c. 11. §. 28.

——Upon entry of claim to any prohibited or uncuſtomed goods, or to any ſhips, veſſels or boats, ſeized by virtue of any law now in force for the more effectual preventing he exportation of wool; or to any ſhip, veſſel or boat, of 100 tons burthen, or under, ſeized for any other cauſe of forfeiture, the claimer muſt give ſecurity in the penalty of 30 l. in the court where proſecuted, to pay the coſts; in default whereof, within the time limited by the courſe of ſuch court, the goods may be recovered. 8 Ann. c. 7. §. 76. & 15 & 16 Geo. II. c. 31. §. 8.

——Foreign goods ſeized for non-payment of duties, or any other cauſe.—In diſputes, whether the duties have been paid, or the goods have been lawfully imported, or legally compounded for, or condemned, or concerning the place from whence imported, the proof is to lie on the owner or claimer. 12 Geo. I. c. 28. §. 8.

——In ſeizures or informations upon the act of navigation, 12 Car. II. c. 18. the defendant may have a commiſſion out of the high court of chancery, to examine witneſſes beyond the ſeas, and a competent time allowed before trial; and ſuch examination is to be admitted for evidence, as if given viva voce. 13 & 14 Car. II. c. 11. §. 29.

——In every action, ſuit, indictment, information or proſecution, commenced againſt officers of the cuſtoms, &c. for any matter or thing done by virtue, or in purſuance, or execution of this, or any other act relating to the cuſtoms and navigation, the defendants may plead the general iſſue, and give thoſe particular acts, and the ſpecial matter in evidence for their defence, in any of the courts of juſtice; and if, upon trial, a verdict paſs for the defendants, or the plaintiffs diſcontinue or forbear their actions, or become non-ſuited, or judgment be given againſt them, by demurrer or otherwiſe, the defendants are to have [full, double or treble] coſts of ſuit awarded againſt ſuch plaintiffs, &c. 13 & 14 Car. II. c. 11. §. 16. and the ſeveral other acts on which the officers are to proceed.

——Writs of delivery may not be granted out of the court of exchequer for goods ſeized, but upon good ſecurity, and only for ſuch goods as are periſhable, or where the informer defers or delays coming to as ſpeedy a trial, as the courſe of that court will permit. 13 & 14 Car. II. c. 11. §. 30.

——Forfeitures and penalties may be ſued for, proſecuted and recovered by action of debt, bill, plaint, information, or indictment, in his Majeſty's court of exchequer, or any other of his Majeſty's courts of record; wherein no aſſoign, protection, privilege, or wager of law, or any more than one imparlance, muſt be allowed or admitted. 13 & 14 Car. II. c. 11. §. 31. and the other acts which inflict the forfeitures and penalties.

——Except in the following caſes, viz. { Ammunition, aſhes, brandy, candles, coffee, drawbacks, fiſh, goods inwards, Ireland, iron, quarentine, ſails, ſalt, ſhips, ſilk, ſpirits, tobacco, wool.

——Upon ſeizures of goods run or prohibited, and of the veſſels, carriages, horſes, &c. which may be tried before the juſtice of the peace—One or more of the ſaid juſtices may adminiſter an oath to perſons ſkilled in the nature of the goods, &c. ſeized, to view the ſame, and to return the ſpecies, quantity, quality, and value thereof, to the ſaid juſtices, in a limited time, in order that informations may be exhibited for their hearing and determining ſuch ſeizures. 12 Geo. I. c. 28. §. 16.

——After condemnation, by the judgment of ſuch juſtices, the goods, &c. are to be publicly ſold to the beſt bidder, at ſuch places and times as the reſpective commiſſioners ſhall think proper. 12 Geo. I. c. 28. §. 16.

——Of goods liable to duties, forfeited for being ſhipped, or put into any boat, &c. with intent to be exported, or for being unſhipped to be laid on land, out of any ſhip from foreign parts, before the ſaid duties are paid, ſecured, tendered or agreed for, and all forfeitures and penalties; one

moiety

moiety of the rate or value thereof is to be for the uſe of his majeſty, his heirs and ſucceſſors, and the other moiety to the perſon that ſeizes, informs, or ſues for the ſame. 12 Car. II. c. 4. §. 4. and the ſeveral other acts quoted for goods inwards (art. 25.) and thoſe which inflict the forfeitures and penalties.

——Except in the following caſes, viz. { Alamodes, arrack, brandy, callicoes, cattle, coin, Eaſt-India goods coaſtwiſe inwards, muſlins, plantation goods, South-ſeas, tea, tobacco, wool.

——On all trials of ſeizures, the ſeizure, together with the method and form of making it, ſhall be taken to have been done in the manner as ſet forth in the information, without any evidence thereof; and all judges and juſtices of the peace are to proceed to the trial of the merits of the cauſe, without enquiring into the fact, form, or manner of making the ſeizure. 9 Geo. II. c. 35. §. 34.

——In any information brought to trial, on account of the ſeizure of any ſhip or goods, as forfeited, wherein a verdict is found for the claimer, if it appears to the court there was a probable cauſe of ſeizure, and is ſo certified upon the record, the defendant ſhall not be intitled to any coſts, nor the ſeizer liable to any action, indictment, or proſecution. 19 Geo. II. c. 34. §. 16. and 26 Geo. II. c. 32. §. 1.

——In any action, indictment or proſecution, brought againſt any perſon for ſeizing any ſhip or goods, wherein a verdict is given againſt the defendant, if the court ſhall certify upon the record, that there was a probable cauſe of ſeizure, the plaintiff, beſides his ſhip or goods, or the value thereof, ſhall not be intitled to above two-pence damage, nor to any coſts, nor the defendant fined above one ſhilling. 19 Geo II. c. 34. §. 16. & 26 Geo. II. c. 32. §. 1.

——The produce of the ſeizures of prohibited and uncuſtomed goods is to be applied towards the ſupport of his majeſty's houſhold, and of the honour and dignity of the crown. 1 Geo. II. c. 1. §. 4.

The LAWS of the CUSTOMS, with regard to SHEEP.

SHEEP——Lambs or rams, alive, exported: for the firſt offence the exporter, his aiders or abettors, are to forfeit all their goods for ever, and to ſuffer a year's impriſonment without bail or main-prize; and then to have their left hand cut off in a market-town, upon a market-day, and be there publicly nailed up. 3 Hen. VII. c. 2. §. 1. & 8 Eliz. c. 3. §. 1, 2, 4.

——Perſons offending a ſecond time, are to be adjudged felons, and to ſuffer death accordingly. 3 Hen. VII. c. 2. §. 1. 8 Eliz. c. 3. §. 1, 2, 4.

——The offences to be heard and determined by the juſtices of oyer and terminer, gaol-delivery, and juſtices of the peace. 3 Hen. VII. c. 2. §. 1. & 8 Eliz. c. 3. §. 1, 2, 4.

The chief LAWS of the CUSTOMS with reſpect to SHIPS.

SHIPS INWARDS, of 50 tons, or under, laden with cuſtomable and prohibited goods, hovering on the coaſts within the limits of any port, or if laden with brandy, within two leagues of the ſhore, pretending to be bound to foreign parts, and not proceeding on their voyages, the maſter may be compelled to give ſecurity in treble the value of the goods, to proceed and to land them in foreign parts: on default whereof, (unleſs permitted by the collector to make a longer ſtay, which muſt not exceed 20 days) the goods muſt be ſecured, and the duties paid; or if they are wool, or ſuch goods as are prohibited, they will be forfeited. 5 Geo. I. c. 11. §. 8. & 27 Geo. II. c. 18. §. 4.

——After the goods are brought on ſhore, and ſecured by the officers, the bond muſt be delivered up. 5 Geo. I. c. 11. §. 9. & 27 Geo. II. c. 18. §. 4.

——Or if not brought on ſhore, upon producing a certificate, under the common ſeal of the chief magiſtrate of any place beyond the ſeas, or under the hands and ſeals of two known Britiſh merchants there reſiding, teſtifying the landing, or upon due proof that the goods were taken by enemies, or periſhed at ſea, the ſaid bond is to be vacated and diſcharged. 5 Geo. I. c. 11. §. 9. & 27 Geo. II. c. 18. §. 4.

——Maſters of ſuch ſhips ſuffering foreign goods to be put out, or wool, woolfells, mortlings, ſhortlings, yarn made of wool, wool-flocks, fuller's earth, fulling-clay, or tobacco-pipe clay, to be taken in, beſides former penalties, are to ſuffer ſix months impriſonment, without bail or mainprize. 6 Geo. I. c. 21. §. 32.

——The tonnage of ſuch ſhips is to be meaſured and aſcertained by the following rule, viz. Take the length of the keel within board (ſo much as ſhe treads on the ground) and the breadth within board by the midſhip beam, from plank to plank, and half the breadth for the depth: then multiply the length by the breadth, and that product by the depth, and divide the whole by 94; the quotient will give the true contents of the tonnage. 6 Geo. I. c. 21. §. 33.

——Freighted towards Great-Britain or elſewhere, may not be compelled to come into any port of Great-Britain, nor to tarry there againſt the wills of the maſters, &c. and if ſuch ſhip comes voluntarily, or be driven in, part of the goods may be delivered, and the duties paid, and the ſhips be permitted to proceed with the remainder, where the maſters, &c. pleaſe, without payment of duties. 28 Edw. III. c. 13. §. 3. & 20 Ric. I. c. 4. §. 1.

——But no brandy, or other ſpirits, in caſks leſs than 60 gallons, can be reported for exportation. 28 Geo II. c. 21. § 1.

——In diſtreſs—Upon application by, or on behalf of, the commander of any ſhip ſtranded, or being in danger of ſtranding, ſheriffs, or the deputies, juſtices of the peace, all mayors, bailiffs, or other head officer of the corporations and port-towns, conſtables, headboroughs, tything-men, officers of the cuſtoms or exciſe, coroners, and commiſſioners of the land-tax, are required to command the conſtables of the ſeveral ports neareſt the place to ſummon perſons to aſſiſt in preſerving ſuch ſhips and cargoes; and the officers of the cuſtoms, and ſaid conſtables, may command ſhips, riding at an anchor near the place, to aſſiſt by their boats, and as many hands as they can conveniently ſpare: commanders of ſuch ſhips, refuſing or neglecting their aſſiſtance, forfeit 100l. to the commander of the ſhip in diſtreſs. 12 Ann. ſeſſ. 2. c. 18. §. 1. & 4 Geo. I. c. 12. §. 1. & 26 Geo. II. c. 19. §. 6, 9, 16.

——Perſons acting in the preſervation of ſuch ſhips and cargoes, are to be rewarded within thirty days; on default whereof, the ſhips and cargoes may be detained by the officers of the cuſtoms; and in caſe of diſpute about the quantum for ſuch ſervice, three juſtices of the peace may adjuſt the ſame. Provided no perſon appears to claim the goods ſo ſaved, the chief officer of the cuſtoms, in the next port, ſhall apply to three of the neareſt juſtices of the peace, who ſhall put him, or ſome other reſponſible perſon, in poſſeſſion thereof; and if not claimed within twelve months, are to be publicly ſold (or, if the goods be periſhable, forthwith ſold); and after deduction of charges the reſidue is to be tranſmitted into the exchequer, there to remain, to be applied for by the proprietor. 12 Ann. ſeſſ. 2. c. 18. §. 2. & 4 Geo. I. c. 12 §. 1. & 26 Geo. II. c. 19. §. 16.

——Perſons not impowered, entering, or endeavouring to enter, ſhips in diſtreſs, or moleſting the preſervation thereof, or defacing the marks of goods ſaved, before an account thereof be taken, are to make double ſatisfaction within twenty days, or elſe to be put to hard labour for 12 months. Perſons entering ſuch ſhips without leave, may be repelled by force. 12 Ann. ſeſſ. 2. c. 18. §. 3. & 4 Geo. I. c. 12. §. 1. & 26 Geo. II. c. 19. §. 16.

——Goods ſaved from ſhips in diſtreſs, ſtolen, or carried off, the perſon on whom found is to reſtore them to the proprietor, upon forfeiture of treble the value. 11 Ann. ſeſſ. 2. c. 18. § 4. & 4 Geo. I. c. 12. §. 1. & 26 Geo. II. c. 19. §. 16.

——Holes made in the bottoms, &c. of ſhips in diſtreſs, the pump taken away, or any thing done tending to the deſtruction thereof, the perſons ſo offending are to be made guilty of felony, without benefit of clergy. 12 Ann. ſeſſ. 2. c. 18. §. 5. & 4 Geo. I. c. 12. §. 1. & 26 Geo. II. c. 19. §. 16.

——Officers of the cuſtoms abuſing the truſt hereby repoſed in them, are to forfeit treble damages to the party aggrieved, and to be rendered incapable. 12 Ann. ſeſſ. 2. c. 18. §. 7. & 4 Geo. I. c. 12. §. 1. & 26 Geo. II. c. 19. §. 16.

——In diſtreſs, wrecked, ſtranded, or caſt on ſhore, in his majeſty's dominions (whether any living creature be on board or no) any perſon convicted of plundering, taking away, or deſtroying any goods or merchandize, furniture, tackle, apparel, proviſion, or part belonging to her; or of beating, or wounding, with intent to kill; or obſtructing the eſcape of any perſons endeavouring to ſave their lives from her; or of putting out falſe lights, with intent to bring any veſſel into danger, is to ſuffer death as a felon, without benefit of clergy. 26 Geo. II. c. 19. §. 1.

——But if the goods or effects ſtranded, loſt or caſt on ſhore, are of ſmall value, and ſtolen without circumſtances of cruelty, outrage, or violence, the offender may be proſecuted by indictment for petit larceny, and puniſhed accordingly. 26 Geo. II. c. 19. §. 2.

——Such goods being ſtolen, upon information upon oath before a juſtice of the peace, of their being unlawfully conveyed away, or concealed in any place, or of ſome reaſonable ground of ſuſpicion thereof, ſuch juſtice may grant warrants for ſearch; and if they are found there, or in cuſtody of any perſon not legally intitled to keep them, the owner or occupier of the place, or the perſon upon whom they are found, not immediately delivering them upon demand to the owner or perſon lawfully authorized to demand them, or not giving a good account how he came by them, is to be committed to gaol for ſix months, or until he pays the owner treble the value of the goods. 26 Geo. II. c. 19. §. 3.

——Such goods ſtolen, or ſuſpected to be ſo, and offered to ſale, may be ſtopped and ſeized by the perſon to whom they are offered, or by any officer of the cuſtoms or excile, or any peace officer, who muſt carry them, or give notice of the ſeizure, to a juſtice of the peace; and if the perſon who offered them to ſale does not, within ten days, prove, to the ſatis-

ſatisfaction of the juſtice, the property to be in him, or the perſon who employed him, the goods, by order of the juſtice, are to be delivered over to the uſe of the owner, upon payment of reaſonable reward for the ſeizure, to be aſcertained by the juſtice; who is alſo to commit the perſon who offered them to ſale to gaol for ſix months, or until he has paid treble the value of the goods to the owner. 26 Geo. II. c. 19. §. 4.

——Any perſon not employed by the maſter, mariners, or owners, or perſons lawfully authorized, who, in the abſence of thoſe who are ſo, ſhall ſave any ſhip or effects, and cauſe them to be carried into port, or to any cuſtom-houſe near, or other place of ſafe cuſtody, immediately giving notice thereof to ſome juſtice of the peace, magiſtrate, or cuſtom-houſe or exciſe officer, or ſhall diſcover to them where ſuch effects are wrongfully bought, ſold or concealed, ſhall be entitled to a reaſonable reward from the maſter or owners, to be adjuſted, in caſe of diſagreement, in the ſame manner as ſalvage. 11 Geo. I. c. 19. §. 5.

——Upon oath being made before a proper magiſtrate of any ſuch plunder or theft, or of the breaking any ſhip contrary to 12 Ann. ſeſſ. 2. c. 18. the examination taken thereupon in writing is to be delivered to the clerk of the peace of the county, &c. where the fact was committed, or to his deputy, who is to cauſe the offenders to be proſecuted in that county, or any one next adjoining; or, if the fact is committed in Wales, in the next adjoining Engliſh county. The neceſſary charges are to be paid him by the treaſurer of the county, &c. where the fact was committed, and amount to be aſcertained by juſtices of the peace at the general or quarter-ſeſſions. Such clerk of the peace, refuſing or neglecting to proſecute, forfeits 100l. to any perſon who ſhall ſue for it. 26 Geo. II. c. 19. §. 8.

——Such indictments may be laid in the next adjoining county by any other perſon. 26 Geo. II. c. 19. §. 8.

——Ships or Goods stranded.—The juſtice of the peace, mayor, bailiff, collector of the cuſtoms, or chief conſtable neareſt the place, muſt forthwith give public notice for a meeting of the ſheriff, or his deputy, the juſtices of the peace, mayors, or chief magiſtrates, of towns corporate, coroners, and commiſſioners of the land-tax, or any five of them, who are required to give aid in execution of this act. 12 Ann. ſeſſ. 2. c. 18. and to employ proper perſons in ſaving the veſſels or effects, and to examine perſons upon oath concerning them or the ſalvage, to adjuſt the quantum of ſalvage, and diſtribute it among the perſons concerned in caſe of diſagreement; and every one who attends and acts, is to be paid four ſhillings a day for his expences, out of the goods ſaved by his care and direction. 26 Geo II. c. 19. §. 6.

——The charges and rewards for ſalvage not being paid, or ſecurity given for it, within 40 days after the ſervice performed, the officer of the cuſtoms concerned may borrow money to ſatisfy the ſame, upon a bill of ſale under his hand and ſeal of the ſhip and cargo; redeemable, nevertheleſs, upon payment of the principal borrowed, and intereſt at four per cent. per annum. 26 Geo. II. c. 19. §. 7.

——Perſons aſſembled to ſave any veſſel or effects, are to conform to orders in the following ſubordination, as the perſon happens to be preſent. In the firſt place, to the orders of the maſter, or other officers or owners, or perſons employed by them: in the next place, to the orders of officers of the cuſtoms; then of the officers of exciſe; then of the ſheriff or his deputy; then of any juſtice of the peace; then of the mayor or chief magiſtrate of a corporation; then of the coroner; then of the commiſſioners of the land-tax; then of any chief conſtable; then of any petty conſtable, or other peace-officer. Any perſon wilfully acting contrary to ſuch orders, forfeits any ſum not exceeding 5l. to be levied by warrant of a juſtice of the peace; and for non-payment the offender is to be committed to the houſe of correction, not exceeding three months. 26 Geo. II. c. 19. §. 13.

——For aſſaulting, wounding, or beating any perſon lawfully authorized, on account of their acting in the ſalvage of any veſſel or effects, the offender, upon conviction at the aſſizes, or the general or quarter-ſeſſions for the county, &c. where the offence was committed, is to be tranſported for ſeven years. 26 Geo. II. c. 19. §. 11.

——Juſtices of the peace, in caſe of need, may, in the abſence of the high-ſheriff, take ſufficient power of the county, to repel all unjuſt violence, and to enforce the execution of this act. 26 Geo. II. c. 19. §. 12.

——Ships in Diſtreſs.—The officer of the cuſtoms, who acts in preſervation thereof, muſt, as ſoon as conveniently may be, cauſe all perſons belonging to the ſhip, or others who can give an account thereof, to be examined upon oath before a juſtice of the peace, as to the name and deſcription, the name of the commander and owners, and owners of the cargo, of the port from and to which bound, and the occaſion of the diſtreſs. The examination is to be taken in writing, and a copy to be delivered to the officer of the cuſtoms, with a copy of the account of the goods, who is to tranſmit it to the ſecretary of the admiralty, to be publiſhed in the London Gazette, for information of the perſons concerned. 26 Geo. II. c. 19. §. 15.

——Nothing in this act to extend to Scotland. 26 Geo. II. c. 19. §. 18.

——This act not to prejudice any in the right to wrecks, or goods that ſhall be flotſam, jetſam, or logan. 12 Ann. ſeſſ. 2. c. 18. §. 9. & 4 Geo. I. c. 12. §. 1. & 26 Geo. II. c. 19. §. 14, 16.

——Nor to extend to, or any ways affect the ancient juriſdiction and uſage of the admiralty court of the cinque-ports; but the officers thereof are to have the ſame power as other perſons in other ports. 4 Geo. I. c. 12. §. 2. & 26 Geo. II. c. 19. §. 10, 16.

——Theſe acts to be read in every pariſh church or chapel of all the ſea-port towns of this kingdom, on the Sundays next before Michaelmas-day, Chriſtmas-day, Lady-day, and Midſummer-day. 12 Ann. ſeſſ. 2. c. 18. §. 8, 10. & 4 Geo. I. c. 12. §. 1. & 26 Geo. II. c. 19. §. 16.

——Ships inwards—Arriving in the port of London, from foreign parts, may not be above three days in coming from Gravefend to the place of diſcharge, without touching or ſtaying at any wharf, key, &c. adjoining to either ſhore between Gravefend and Cheſter's key, unleſs apparently hindered by contrary winds, &c. or other juſt impediment, to be allowed by the principal officers of the cuſtoms; and in the out-ports they muſt come directly up to the place of unlading, upon forfeiture of 100l. 13 & 14 Car. II. c. 11.

——Upon, or before their arrival, and before any goods are unladen, the maſters or purſers for that voyage muſt, upon oath, make a juſt and true entry of the burthen, contents and lading of their ſhips, with the particular marks, numbers, qualities, and contents of every parcel of goods on board, to the beſt of their knowlege; alſo where laden, of what country built, how manned, who was maſter during the voyage, and who are owners; and muſt anſwer all queſtions concerning the ſame, that ſhall be demanded by the cuſtomer, &c. upon forfeiture of 100l. 1 Eliz. c. 11. §. 5. & 13 & 14 Car. II. c. 11. §. 2.

——And upon making ſuch declaration upon oath before any two principal officers of the port, bulk may be broke in any port allowed by law, and duty paid for no more goods than are entered and landed; but upon arrival at the next port, declaration muſt likewiſe be made upon oath, before the cuſtomer, collector, comptroller, or ſurveyor, or two of them, of the quantity and quality of the goods landed at the firſt port, and to whom they did belong.

——No cuſtomer, collector, or other officer of the cuſtoms, is to clear inwards any ſhip or veſſel liable to the payment of 6 d. per month towards the ſupport of the hoſpital for ſeamen, &c. diſabled in the merchants ſervice, or grant any warrant or other diſcharge, or ſuffer ſuch ſhip to go out of port, till a certificate is produced of payment of the duty, and that the maſter is not more in arrear than three months for the ſame, or is exempted from payment thereof, on forfeiture of 20l. In caſe the certificate is not produced to the tide-ſurveyor when he comes on board to clear the ſhip, the tide-waiters are to be continued at the expence of the maſter, or owners, till it is produced. 20 Geo. II. c. 38. §. 22, 23.

——Ships of War—from parts beyond the ſeas, having any goods on board, may not unlade them, till the captain has ſignified under his hand, to the cuſtomer, collector, and comptroller inwards, the names of every importer, with the marks, numbers, quantity and quality of every parcel of goods, and has anſwered upon oath to ſuch queſtions as ſhall be demanded by the ſaid officers, upon forfeiture of 100l. 13 & 14 Car. II. c. 11. §. 3.

——Such ſhips liable to all ſearches and rules as merchant-ſhips are ſubject to; except victualling-bills and entering. And captains refuſing to make ſuch entries, as well inwards as outwards, the officers may bring all cuſtomable and prohibited goods on ſhore to the king's ſtore-houſe. 13 & 14 Car. II. c. 11. §. 3.

——Any commander, or other officer of any of his majeſty's ſhips or veſſels, receiving, or permitting to be received, any goods or merchandize, other than for the uſe of the ſhip, except gold, ſilver, jewels; and except goods of merchants, wrecked or in imminent danger; and except goods ordered on board by the lords of the admiralty; being convicted thereof by a court-martial, to be caſhiered, and rendered incapable of any office in the naval ſervice; and moreover to forfeit the value of all ſuch goods ſo put on board, or the ſum of 500l. one moiety to the informer, or perſon who ſhall ſue for the ſame, the other to the uſe of Greenwich hoſpital; to be recovered in any court of record at Weſtminſter, or in the high court of admiralty, at the election of the proſecutor; and the court where judgment ſhall be given againſt the offender is, with all convenient ſpeed, to certify the ſame to the lords of the admiralty. 22 Geo. II. c. 33. art. 18. §. 24.

——Ships inwards.—The maſters of any ſhips from foreign parts, or any other perſon, ſuffering any package to be opened, and the goods imbezzled, carried away, or put into any other form or package, after the ſhip comes into the port of diſcharge, are to forfeit 100l. 13 & 14 Car. II. c. 11. §. 4.

Or

—— Or knowing of, or conſenting to, the unſhipping of any goods inwards, without a warrant, and the preſence o an officer, are to forfeit the value of the goods. 13 and 14 Car. II. c. 11. §. 7.

—— Ships belonging to the ſubjects of the French king lading or unlading any goods, or taking in, or ſetting on ſhore, any paſſengers, were to pay to the collector of the cuſtoms at that port, a duty of five ſhillings for every ton burthen, upon forfeiture of 10 l. beſides the duty: to continue as long as a duty of 50 ſols per ton on Britiſh ſhips was collected in France, and three months after. 12 Car. II. c. 18. §. 17. and 14 Car. II. c. 11. §. 24.

—— Watermen, &c. going out from any port to fetch goods from ſuch ſhips, were liable to the payment of this duty, and to forfeit 40 l. 12 Car. II. c. 18. §. 17. and 14 Car. II. c. 11. §. 24.

But this duty is made void by the 11th article of the treaty of commerce, concluded at Utrecht, 1713.

SHIPS OUTWARDS—Bound for parts beyond the ſeas, may not take in any Britiſh goods (fiſh taken by Britiſh excepted) 'till ſuch ſhips are entered by the maſters in the book of the cuſtomer or collector, and comptroller OUTWARDS, with the burthens, the maſters names, the number of guns and ammunition, and to what places bound. 1 Eliz. c. 11. §. 4. and 13 and 14 Car. II. c. 11. §. 3.

—— Before departure out of the port, the maſters are to bring to the ſaid officers a content in writing, under their hands, of the names of every exporter, with the marks and number of the goods; and are, upon oath, to anſwer publickly in the cuſtom-houſe to ſuch queſtions, as ſhall be demanded concerning the ſame, upon forfeiture of 100 l. 1 Eliz. c. 11. §. 4. and 13 and 14 Car. II. c. 11. §. 3.

—— If bound to Ireland with certificate goods, the maſters muſt take with them a duplicate of their contents in writing, certified under the hands and ſeals of the collector and comptroller of the port in Great-Britain, in order to be delivered to the officers of the cuſtoms in Ireland. 8 Ann. c. 13. §. 19.

—— The maſters ſuffering the package of any foreign goods to be opened on board, or put into any other form or package, or unſhipped whilſt the ſhip remains in port, without leave of the principal officers, are to forfeit 100 l. and to ſuffer ſix months impriſonment, without bail or mainprize. 5 Geo. I. c. 11. §. 7. and 27 Geo. II. c. 18. §. 4.

—— May not be detained by the officers above three tides after their arrival at Graveſend, and in the OUT-PORTS not above one tide, after they are ready to ſail, upon forfeiture of office, and rendering damage to the merchant and owner. See the latter end of letter A.

—— FOREIGN-BUILT SHIPS TRADING COASTWISE, ſo employed, bought after the paſſing of this act, are to pay at the port of diſcharge, for every voyage, 5 s. per ton, one moiety for the uſe of the cheſt at Chatham, and the other moiety to the Trinity-houſe at Deptford-ſtrand, 1 Jac. II. c. 18. §. 2.

—— But ſuch ſhips bought before the 29th of September, 1689, and not made free, are to pay only 12 d. per ton. 1 Jac. II. c. 18. §. 3.

—— To be received and recovered as directed for the cuſtoms, by 12 Car. II. c. 4. and 1 Jac. II. c. 18. §. 4.

BRITISH-BUILT, which any where in the Book of Rates are deſigned to entitle the importer or exporters of goods to any abatement or privilege, are to be underſtood, ſhips built in GREAT-BRITAIN, IRELAND, GUERNSEY, JERSEY, or the BRITISH PLANTATIONS in ASIA, AFRICA, or AMERICA, and whereof the maſter, and at leaſt $\frac{3}{4}$ of the mariners, are Britiſh, i. e. his Majeſty's ſubjects of Great-Britain, Ireland, or the ſaid plantations, and have been ſo during the whole voyage, unleſs in caſe of ſickneſs, death, &c. 12 Car. II. c. 18. §. 7. and 13 and 14 Car. II. c. 11. §. 6.

—— But Britiſh ſhips laden with CORN; intitled to the BOUNTY, may be ſailed with the maſter, and at leaſt $\frac{2}{3}$ of the mariners his Majeſty's ſubjects. 1 W & M. c. 12. §. 1.

—— During the preſent war, merchants ſhips may be navigated by $\frac{3}{4}$ foreigners, and $\frac{1}{4}$ Britiſh; and in any future war his Majeſty, by his royal proclamation, may permit them to be navigated in the ſame manner. 13 Geo. II. c. 3. §. 1, 4.

SHIPS BELONGING TO GREAT-BRITAIN OR IRELAND. —Foreign-built ſhips are not to be deemed or paſs as ſhips belonging to Great-Britain or Ireland, 'till the owner has made it appear to the chief officer of the cuſtoms, in the port next to his abode, that he is not an alien, and has made oath before the ſaid officer, that ſuch ſhips were bona fide, and without fraud, by him bought for a valuable conſideration, expreſſing the ſum, as alſo the time, place, and perſons from whom bought, and who are his part-owners, if any (all which part-owners are alſo liable to the ſame oath) and that no foreigner, directly or indirectly, hath any part, intereſt, or ſhare therein: whereupon the officer is to grant a certificate under his hand and ſeal, which he is to regiſter, and return a duplicate thereof to the chief officers of the cuſtoms in London, with the names of the ſeller and part-owners, and the ſum paid. 12 Car. II. c. 18. §. 10.

—— BUT FOREIGN-BUILT SHIPS, that is, not built in any of his Majeſty's dominions of Aſia, Africa, or America, are not to enjoy the privilege of ſhips belonging to Great-Britain or Ireland, although owned or manned by Britiſh (except ſuch ſhips as are taken at ſea by letters of mart or reprifal, and condemned as lawful prize in the court of admiralty) but are to be deemed alien ſhips, and to be liable to aliens duties. 13 and 14 Car. II. c. 11. §. 6.

—— The ALIENS DUTY, or petty-cuſtoms, payable for certain goods imported in ſuch ſhips. See ALIENS.

—— Officers of the cuſtoms may not allow foreign-built ſhips the privilege of ſhips Britiſh-built, or belonging to Great-Britain or Ireland, until a certificate be produced, or proof of the property be made, or until examination whether the maſter and $\frac{3}{4}$ of the mariners are Britiſh; nor allow a foreign-built ſhip the privilege of bringing in goods of the growth of the country, where it was built, 'till examination and proof, upon forfeiture of office. 12 Car. II. c. 18. §. 11.

—— Governors of the Britiſh plantations may not ſuffer foreign-built ſhips to lade or unlade any goods, 'till certificate be produced, and examination be made, whether the maſter and $\frac{3}{4}$ of the mariners are Britiſh, upon forfeiture of their government. 12 Car. II. c. 18. §. 11.

SHIPS belonging to his Majeſty's ſubjects of SCOTLAND—though foreign-built, if regiſtered upon oath, before the firſt of May, 1708, are to be deemed as of the built of Great-Britain. 5 Ann. c. 8. art. 5.

—— A duplicate of the regiſter is to be tranſmitted to the chief officers at the cuſtoms in Edinburgh, and from thence to the port of London, in order to be entered in the general regiſter of all ſhips belonging to Great-Britain (art. 5.) 5 Ann. c. 8. art. 5.

—— Are not to be loſt, or forfeited, for a ſmall thing put therein, not cuſtomed, without the owners knowlege. 38 Edw. III. c. 8. §. 1.

—— Arreſted for unlawful cauſe, the officer being convicted thereof, forfeits 40 l. to be ſued for within two months. 28 Hen. VI. c. 5. §. 1.

—— Wilfully caſt away, burnt or otherwiſe deſtroyed, to the prejudice of the inſurers, or of the merchant that ſhall load goods thereon: the owners, maſters, mariners, or other officers belonging to the ſhip, doing it, or directing or procuring the ſame to be done, are to ſuffer death. 4 Geo. I. c. 12. §. 3.

THE CHIEF LAWS OF THE CUSTOMS WITH REGARD TO SILKS.

SILKS—Wrought, mixed with gold or ſilver, or other materials, ſecretly or clandeſtinely imported, are forfeited with 200 l. by every importer and each of his aſſiſtants, beſides former penalties, and 100 l. by the receiver, ſeller, or concealer. 6 Ann. c. 19. §. 14, 15.

—— Such ſilks are to be ſold by inch of candle at the cuſtom-houſe in London or Edinburgh. 6 Ann. c. 19. §. 14, 15.

—— Wrought by itſelf, or with any other ſtuff, in any place out of this realm, in ribbons, laces, girdles, corſes of cauls, corſes of tiſſue, or points, may not be imported to be ſold, upon forfeiture; but ſilks wrought and unwrought, or raw, may be imported by any perſons. 19 Hen. VII. c. 21. §. 1.

—— THROWN, of the growth or product of TURKEY, PERSIA, EAST-INDIA, CHINA, or any other country (except ITALY, SICILY, and NAPLES, brought directly from thoſe places reſpectively, by ſea, in ſhips legally navigated) may not be imported, on forfeiture thereof. 2 W. & M. c. 9. §. 2.

—— Callicoes, linens, or ſtuffs, printed, painted, ſtained, or dyed, whereſoever found, not having a ſtamp, to denote the payment of duty, are forfeited, with the penalty of 50 l. on the poſſeſſor. 5 Geo. I. c. 11. §. 15.

—— After recovered, may not be delivered out of the cuſtom-houſe warehouſe 'till ſtampt. 5 Geo. I. c. 11. §. 15.

—— RAW, of the growth and culture of the Britiſh plantations in America, may be imported directly from thence into the port of London, FREE OF ALL DUTIES; provided entry is made at the cuſtom-houſe in the ſame manner as before this act, and it is landed in the preſence, and examined by the proper officer of the cuſtoms, and imported in veſſels which may lawfully trade thither, manned according to law. 23 Geo. II. c. 20. §. 1.

—— But to entitle the importer to this exemption, the perſon who ſhips the ſilk in America, muſt, before clearing the ſhip, make oath before the collector and comptroller of the cuſtoms and naval officer, or any two of them, that ſuch ſilk is, bonâ fide, of the growth and culture OF SOME OR ONE OF THE BRITISH COLONIES OR PLANTATIONS IN AMERICA, expreſſing the pariſh wherein, and by whom it was cultivated and produced; who muſt likewiſe make oath thereto before the governor or juſtice of the peace, &c. Upon producing ſuch oath, the collector and comptroller of the cuſtoms and

and naval-officer, or any two of them, are to grant a certificate under their hands and ſeals, expreſſing the marks, numbers, tale, and weight in each bale; with the names and places of abode of the exporter, of the perſon or perſons who have ſworn to the growth and culture, and the name of the perſon to whom conſigned in London; which certificate the maſter of the ſhip is to deliver to the collector, comptroller, or chief officer of the port of London, at or before entry; and at the ſame time make oath, that the bales and parcels, and goods contained in the certificate, are the ſame that were taken on board in the ſaid Britiſh colonies in America. 23 Geo. II. c. 20. §. 2.

—— Any perſon entering foreign RAW SILK as RAW SILK OF THE GROWTH OR CULTURE OF BRITISH PLANTATIONS IN AMERICA, or mixing foreign with that of the Britiſh plantation, in order to evade the payment of the duty, forfeits 50 l. and all the ſilk, together with the bales and packages. 23 Geo. II. c. 20. § 3.

—— In any diſpute about the growth, the ONUS PROBANDI to lie on the owner or claimer. 26 Geo. II. c. 20. §. 4.

—— Wrought or mixed with any other materials, and velvets (not manufactured in Great-Britain, and not prohibited to be worn therein) imported, are after entry at the cuſtom-houſe, and before delivery to the importer, to be marked or ſealed, at each end of every piece, with ſuch mark or ſeal, and by ſuch officer, as the commiſſioners of the cuſtoms ſhall appoint. 26 Geo. II. c. 21. §. 1.

—— Upon exportation, the exporter, before they are ſhipped, muſt give notice to the proper officer, when and where he will pack them up, who is (without fee or reward) to take care that ſuch ſeals, ſtamps, or marks, are taken off from every piece intended to be exported, without which no drawback is to be allowed. 26 Geo. II. c. 21. §. 2.

—— Such goods found in any ſhop, warehouſe, or other place upon land, not ſo marked or ſealed, upon both ends of a whole piece, or one end of a remnant, are forfeited, and may be ſeized by any officer of the cuſtoms, and ſecured in the king's warehouſes; and after condemnation, are to be publickly ſold to the beſt bidder; one moiety of the produce to be for the uſe of his Majeſty, and the other for the officer who ſeized and ſecured them: and the perſon in whoſe poſſeſſion they are found, alſo forfeits 200 l. 26 Geo. II. c. 21. §. 3.

—— Such goods not to be conſumed in this kingdom, but are to be ſold for exportation only, and not to be delivered out of the warehouſe, 'till ſecurity is given accordingly. 26 Geo. II. c. 21. §. 4.

—— For counterfeiting ſuch ſtamp, mark, or ſeal, or the impreſſion thereof, upon the goods above mentioned, or for knowingly ſelling, or expoſing to ſale, the ſaid goods, with a counterfeit ſtamp, the offender, his aiders, abettors, and aſſiſtants, are to forfeit for every offence 500 l. and to ſtand in the pillory for two hours. 26 Geo. II. c. 21. §. 5.

—— The pecuniary forfeitures by this act, may be ſued for in any court of record at Weſtminſter, or the court of exchequer at Edinburgh, by action, bill, plaint, or information, in the name of the attorney-general, or of the advocate in Scotland, or of an officer of the cuſtoms; ½ to his Majeſty, and ½ to the officer of the cuſtoms who informs or proſecutes. 26 Geo. II. c. 21. §. 6.

—— A capias, in the firſt proceſs, may iſſue, ſpecifying the ſum of the penalty ſued for; and the defendant ſhall be obliged to give bail by natural born ſubjects, perſons naturalized, or denizens, for his appearance at the day of the return of the writ; and at ſuch appearance to give ſufficient bail, to anſwer the forfeiture in caſe of conviction. 26 Geo. II. c. 21. §. 8.

—— If any officer of the cuſtoms refuſes or neglects, for one month, to proſecute ſuch offender to effect, any other perſon may do it in the ſame manner, and ſhall be entitled to the ſame ſhare of the forfeiture. 26 Geo. II. c. 21. §. 7.

—— In caſe of any queſtion ariſing where the goods were manufactured, the proof is to lie upon the owner or claimer. 26 Geo. II. c. 11. §. 10.

SILKS, CHINA—Raw ſilk imported from China, by the united Eaſt-India company, is to pay the ſame duties, ſubſidies, and impoſitions, and to be allowed the ſame DRAWBACK, as RAW SILKS of the growth and produce of ITALY. 23 Geo. II. c. 9. §. 2 and 4.

WROUGHT SILKS, BENGALS, and STUFFS, mixed with ſilk or herba, of the manufacture of Eaſt-India, China, or Perſia, and callicoes printed, painted, ſtained, or dyed there, prohibited in Great-Britain; and are, upon importation, to pay only the HALF-SUBSIDY. 11 and 12 W. III. c. 17. §. 1 and 10.

WROUGHT SILKS, ſtuffs, &c. muſlins and callicoes, of the manufacture of Eaſt-India, China, or Perſia, may not be imported into IRELAND, but from GREAT-BRITAIN, upon forfeiture thereof, or the value, and the ſhip, furniture, &c. 5 Geo. I. c. 11. §. 12.——Officers of the cuſtoms conniving thereat in Ireland, forfeit 500 l. and rendered incapable.

THE CHIEF LAWS OF THE CUSTOMS WITH RESPECT TO SILVER.

SILVER—The OLD STANDARD of eleven ounces two penny-weights reſtored. 6 Geo. I. c. 11.

—— The OLD STANDARD of eleven ounces two penny-weights, and the NEW STANDARD of eleven ounces ten penny-weights, continued; and no plate may be made of coarſer allay. 6 Geo. I. c. 11. §. 40.

—— Molten ſilver may not be exported, unleſs marked or ſtamped at Goldſmiths-hall, and a certificate be produced to one of the commiſſioners of the cuſtoms, under the hands of one or more of the wardens, of oath having been made before him or them by the owner, and one credible witneſs, that it is lawful ſilver, and that no part thereof (before molten) was the current coin, nor clippings thereof, nor plate wrought within this kingdom. 6 and 7 W. III. c. 17. §. 5, 6.

—— Shipped, without being ſo marked or ſtamped, and without ſuch certificate, is forfeited, and may be ſeized by the officers of the cuſtoms. 6 and 7 W. III. c. 17. § 6.

—— Molten ſilver or bullion, either in bars, ingots, wedges, cakes, pina's, or any other form, may not be ſhipped, unleſs a certificate be produced to the commiſſioners of the cuſtoms, or four of them, from the court of the lord-mayor and aldermen of London, of oath having been made before the ſaid court, by the owners, and two or more credible witneſſes, that the ſame, and every part and parcel thereof, was, and is, foreign bullion; and that no part thereof (before molten) was the coin of this realm, or clippings thereof, nor plate wrought within this kingdom. 7 and 8 W. III. c. 19. §. 6.

—— Shipped without entry, and ſuch oath and certificate, is forfeited, and may be ſeized by any perſons; and the proprietor forfeits double the value. 7 and 8 W. III. c. 19. §. 7.

—— The maſter of any ſhip belonging to a ſubject, knowingly permitting the ſhipping, forfeits 200 l. and if it be a man of war, the captain likewiſe forfeits his employment, and is rendered incapable of any office, civil or military. 7 and 8 W. III. c. 19. §. 7.

—— Officers granting a cocket, before certificate be produced, and entry made by the commiſſioners, forfeit 200 l. and are rendered incapable of any other place. 7 and 8 W. III. c. 19. §. 8.

—— Seized, proof of its being foreign, &c. is to lie on the proprietor or claimer. 7 and 8 W III. c. 19. §. 9.

—— Watches, ſword-hilts, wrought-plate, and other ſilver manufactures, of the fineneſs of 11 ounces 10 penny-weights to every pound troy, ſo many may be exported yearly, as ſhall be allowed by the commiſſioners of the cuſtoms, or any three of them. 9 and 10 W. III. c. 28. §. 1.

—— But boxes, caſes, or dial-plates, of gold, ſilver, braſs, or other metal, for clocks or watches, may not be exported without the movements made up fit for uſe, with the makers name engraved thereon, upon forfeiture, and 20 l. 9 and 10 W. III. c. 28. §. 2.

SILVER THREAD.

BOUNTY OR ALLOWANCE ON GOLD AND SILVER THREAD, LACE, OR FRINGE, MADE IN GREAT-BRITAIN, EXPORTED.

Silver thread, lace or fringe, made of plate-wire, and ſpun on ſilk, every pound weight avoirdupoiſe * - - -	Bounty	0 5 0
Gold lace, thread, or fringe, made of plate-wire, and ſpun on ſilk, every pound weight avoirdupoiſe * - - -		0 6 8

* 10 Ann. c. 26. §. 62. and 3 Geo. I. c. 7. §. 1.

To be paid to the exporter by the collector of the duties on gilt and ſilver wire, or a debenture, expreſſing the kinds and quantities, to be made forth by the collector of the cuſtoms at the port of exportation, and the ſhipping thereof teſtified by the ſearcher: the exporter firſt making proof upon oath, before the collector of the cuſtoms, that the ſaid thread, lace, or fringe, was actually made after the firſt of July, 1712, and alſo giving ſufficient ſecurity that they ſhall not be relanded in Great-Britain.

THE CHIEF LAWS OF THE CUSTOMS RELATING TO SNUFF.

SNUFF—made, mixed, or coloured with oaker, umber, &c. (except water tinged with Venetian red) or fuſtic, yellow ebony, touch-wood, or other wood, dirt, ſand, or tobacco duſt mixed therewith, is forfeited, with 3 l. for every pound weight, by the maker or ſeller. 1 Geo. I. c. 46. §. 7. The powers and proviſions relating to counterfeit tobacco, are to extend to the abuſes in making and mixing of ſnuff. 5 Geo. I. c. 11. §. 22.

Removed

—— Removed by land—Tobacco or tobacco-ſtalks exceeding 24lb. weight, or ſnuff exceeding 10lb. weight, may not be conveyed from the place of importation to any other place in Great-Britain, without a certificate from the collector, comptroller, or chief officer of the cuſtoms, at the place of importation; and if manufactured, with the importer's oath thereto (if the importer applies for it) that the duties were paid or ſecured at importation, by whom, when, and in what ſhip imported; or with the purchaſer's oath thereto (if he applies for it) atteſting the marks and numbers of the hogſheads, out of which it was taken, from whom purchaſed, and when: if tobacco ſtalks, or SNUFF, or manufactured tobacco, are ſo removed, then the certificate muſt have the importer's oath thereto (if he applies for it) that ſuch ſtalks were ſtripped, or ſuch SNUFF, or manufactured tobacco, was made from one or more hogſheads, for which the duties were by him paid or ſecured at importation; or the purchaſer's oath thereto (if he applies for it) that ſuch ſtalks were ſtripped, or the ſnuff, or MANUFACTURED TOBACCO, was made from one or more hogſheads, which had been delivered and received according to the directions of this act: which certificates ſuch officers are to grant; and after entering in their books, to deliver to the perſon applying for the ſame, without fee or reward for certificate or oath, on forfeiture of 10l. for every offence. 24 Geo. II. c. 41. §. 9.

—— Removed by water.—No tobacco, tobacco-ſtalks, or SNUFF, may be ſhipped on board any veſſel, to be carried by water, from any place in Great-Britain, to any other, until every part thereof is entered at the cuſtom-houſe, at the port neareſt the place where they are ſhipped; and if unmanufactured, it muſt be ſhipped in the original package in which it was imported, preſerving the ſame marks and numbers, but not without a certificate from the collector or comptroller, or chief officer of the cuſtoms, at the port of importation, that the duties thereof were paid or ſecured at importation, by whom, the time when, and in what veſſel imported: if it is tobacco-ſtalks, or SNUFF, or other manufactured tobacco, it is not to be ſo ſhipped, without a certificate from the ſaid officers, that the duties were paid or ſecured at importation, for the tobacco from which they were ſtripped, made, or manufactured: which certificates the ſaid officers are required to grant to the importer, or his known agent, applying for the ſame, without fee or reward, on forfeiture of 10l. for every offence. 24 Geo. II. c. 41. §. 13.

Tobacco, or tobacco-ſtalks, exceeding 24lb. weight, or SNUFF, exceeding 10 pounds weight (which has been removed by water from the place of importation to any other place in Great-Britain) may not be removed afterwards from thence by land, without a certificate from the collector and comptroller, or chief officer of the cuſtoms, at the place to which they were carried by water; that it appears to them by the entry of the certificate, which came with the goods from the place of importation, that the duties thereof were paid or ſecured there, and in what veſſel they were brought by water, and when; and that the perſon applying for the ſame, had made oath to the truth thereof: which certificate ſuch officers are required (after writing it in their books) to deliver to any perſon applying for it. 24 Geo. II. c. 41. §. 22.

—— Any certificate for removal of tobacco, tobacco-ſtalks, or SNUFF, by land or water, is to be deemed a proper one, though the name of the importer is not inſerted therein, provided his name is expreſſed in the bill from which the certificate is prepared. 26 Geo. II. c. 13. §. 5.

—— Tobacco-ſtalks and SNUFF, ſeized and condemned, are to be burnt in the preſence of the collector and comptroller of the cuſtoms, at the place where the goods are at the time of condemnation; or, for want of ſuch, in the preſence of the collector or ſupervifor of exciſe for that diſtrict. 24 Geo. II. c. 41. §. 27, 28.

—— Tobacco-ſtalks or SNUFF, removed from one place to another in greater quantities than by 24 Geo. II. c. 21. is allowed, and not attended with the certificate required, may be ſeized and proſecuted by any officer of the cuſtoms or exciſe; and the proof that it was removed from the port of importation, with a proper certificate, and that the duties thereon were paid or ſecured, is to lie on the claimer, and not on the officer who ſeized it. 26 Geo. II. c. 13. §. 2.

THE CHIEF LAWS OF THE CUSTOMS WITH REGARD TO SPICES.

SPICERY, viz. cinnamon, cloves, mace, and nutmegs, may be imported in Britiſh ſhips, whereof the maſter and $\frac{3}{4}$ of the mariners are Britiſh, from any parts beyond the ſeas; upon licence firſt had from the commiſſioners of the cuſtoms, or any three of them, or from the cuſtomer, or collector and comptroller of the port. 6 and 7 W. III. c. 7. §. 3. and 3 and 4 Ann. c. 4. §. 6. and 8 Ann. c. 7. §. 26. and 6 Geo. I. c. 21. §. 45. and 8 Geo. I. c. 15. §. 19. and 26 Geo. II. c. 32. §. 2.

—— The quantity, quality, and the port of importation, are to be expreſſed in ſuch licences; and if more be found than therein mentioned, it is forfeited. The package to be in caſks or bales, unleſs from the Eaſt-Indies; the bale of cinnamon to weigh net 70lb. or upwards, and each caſk of nutmegs, cloves, or mace, 300lb. or upwards, upon forfeiture thereof. 6 and 7 W. III. c 7. §. 3. and 3 and 4 Ann. c. 4. §. 6. and 6 Geo. I. c. 21. §. 45. and 8 Geo. I. c. 15. §. 19. and 8 Geo. I. c. 18. §. 21. and 27 Geo. II. c. 18. §. 5.

—— The licences are to be delivered up by the maſters at entry of their ſhips, and annexed to the report, with the marks and numbers of each caſk, bale, or parcel, and the quantity and quality endorſed on the back, upon forfeiture of ſhip and goods. 6 Geo. I. c. 21. §. 46. and 8 Geo. I. c. 15. §. 19. and 8 Geo. I. c. 18. §. 21. and 27 Geo. II. c. 18. §. 5.

—— Found on board any ſhip in ſmall parcels, packed in hogſheads, bales, or caſks, are forfeited. 6 Geo. I. c. 21. §. 47. and 8 Geo. I. c. 15. §. 19. and 26 Geo. II. c. 32. §. 2.

THE CHIEF LAWS OF THE CUSTOMS WITH REGARD TO SPIRITS.

SPIRITS, or low wines, brought by ſea coaſtwiſe, without a certificate from the officer of exciſe, where diſtilled, are forfeited; to be ſued for as any other forfeiture by the laws of exciſe. 3 Geo. I. c. 4. §. 17.

THE BOUNTY ON SPIRITS DRAWN FROM BARLEY, MALT, OR OTHER CORN, EXPORTED.

By 6 Geo. II. cap. 17. §. 10. was granted without limitation, viz.

Spirits drawn from barley, malt, or other corn, for every ton thereof - - -	Bounty 1 10 0

To be paid to the exporter by the commiſſioners of the cuſtoms, or other proper officer belonging to them, when barley is at 24s. per quarter, or under, upon ſuch proof of the exportation, as is directed by 1 W. and M. cap. 12. and out of ſuch duties as are liable to the payment or the bounties on corn exported, in the ſame manner as if the reſpective quantity of barley, malt, or other corn, had been exported, allowing that twelve quarters of barley or malt are made uſe of in making one ton of ſpirits. 6 Geo. II. c. 17. §. 10.

THE CHIEF LAWS OF THE CUSTOMS WITH REGARD TO STARCH.

Drawback or repayment of the duty of exciſe on Britiſh-made Starch exported.

Starch *, for every pound weight thereof avoirdupoiſe - - 0 0 1	Drawb.
Starch †, for every pound weight thereof avoirdupoiſe - - 0 0 1	0 0 2

* 10 Ann. c. 26. §. 27. and 3 Geo I. c. 7.
† 12 Ann. ſeſſ. 2. c. 9. §. 13. and 6 Geo. I. c. 4.

To be repaid to the exporter thereof (by the collector of the duties) for ſuch ſtarch, exported to foreign parts by way of merchandize, on a debenture, to be made forth by the collector of the cuſtoms at the port of exportation, expreſſing the true kinds and quantities, and the exportation thereof teſtified by the ſearcher: the exporter having firſt made proof of the payment of the duties (on oath) before the ſaid collector; and alſo having given ſufficient ſecurity, that the ſtarch ſhall not be relanded in Great-Britain. 10 Ann. c. 26. §. 25, 27. and 12 Ann. c. 9. §. 13.

If relanded (over and above the penalty of the bond) forfeited, or the value. 10 Ann. c. 26. §. 26.

STARCH, ſhipped for exportation, and afterwards relanded, is forfeited, or the value, beſides the penalty of the bond. 10 Ann. c. 26. §. 26.

—— Or hair-powder, found in any ſhip, waggon, &c. is ſeizable by officers of exciſe or cuſtoms, upon ſuſpicion of its having been privately made, or clandeſtinely imported, or exported and relanded again after the duty hath been repaid. 4 Geo. II. c. 14. §. 3.

—— Within ten days after ſeizure, the officer is to exhibit an information before three commiſſioners of exciſe, or two juſtices of the peace. 4 Geo. II. c. 14. §. 3.

—— Upon information, the perſon in whoſe poſſeſſion it is found, muſt make it appear, that the duty hath been paid for the ſame, upon penalty of the forfeiture of the goods, with horſes and package, containing the ſame, and 5l. for every hundred weight; and the commiſſioners or juſtices are to proceed to give judgment accordingly. 4 Geo. II. c. 14. §. 3.

—— Suſpected to be privately making or concealed, may be ſearched for by officers of exciſe or cuſtoms, by day or by night (but if by night, in the preſence of a conſtable or other peace-officer) by warrant from the commiſſioners of exciſe, or a juſtice of the peace. 4 Geo. II. c. 14. §. 4.

—— Found privately making or concealing, is forfeited, with all materials and things in which it is contained; and the perſon privately making, or in whoſe poſſeſſion it is found,

found, upon failure of proof that the duty has been paid, forfeits 50 l. and for obſtructing the officers 50 l. 4 Geo. II. c. 14. §. 4.

The chief Laws of the Customs, with Regard to Sugars.

Sugar muſt be imported only in ſhips belonging to Great-Britain or Ireland, or in ſhips of ſuch port where the ſaid goods can only, or moſt uſually are firſt ſhipped for tranſportation, on forfeiture of ſhip and goods. 12 Car. II. c. 18. §. 8.

—— But during the late war with France, this was not to extend to prevent any perſon importing the ſaid goods in ſhipping built in Great-Britain, Ireland, Guernſey, Jerſey, or any of the lands, iſlands, dominions, or territories belonging to his Majeſty, in Aſia, Africa, or America, provided the maſter and $\frac{3}{4}$ of the mariners are Britiſh, or of the country of which the ſaid goods are the growth, production, or manufacture: but if ſuch ſhips are the property of foreigners, although Britiſh-built, the goods are to pay aliens, and all other duties, in the ſame manner as if they were foreign-built. 29 Geo. II. c. 34. §. 19, 20.

—— No ſugars, panelles, ſyrups, or melaſſes of the product of any of the plantations in America, nor any rum or ſpirits of America (except of the growth and manufacture of his Majeſty's ſugar colonies there) may be imported into Ireland, unleſs ſhipped in Great-Britain in ſhips legally navigated, upon forfeiture thereof, or the value, together with the ſhip and all her furniture; — but not to extend to reſtrain the importation of ſugars of the produce of any of the dominions of the king of Spain or Portugal, from any place from whence they might have been lawfully imported before. 6 Geo. II. c. 13. §. 4, 13.

—— Sugar, tobacco, cotton, wool, indigo, ginger, fuſtick or other dyeing wood, rice (except under the regulations in the 11. 12. 13. 14. 15. 16. 17. 18. art.) melaſſes, hemp, copper-ore, beaver-ſkins, or other furs, pitch, tar, turpentine, maſts, yards and bowſprits, of the growth, production, or manufacture of any of the Britiſh plantations in America, Aſia, or Africa, may not be carried from thence, unleſs to ſome other Britiſh plantations, or to the kingdom of Great-Britain only, to be there landed, upon forfeiture of the ſaid goods, or their value, with the ſhip and furniture. 12 Car. II. c. 18. §. 18. and 22 and 23 Car. II. c. 26. §. 10, 11. and 25 Car. II. c. 7. §. 3. and 3 and 4 Ann. c. 5. §. 12. and c. 10. §. 7. and 12 Ann. c. 9. §. 1. and 8 Geo. I. c. 15. §. 25. and c. 18 §. 22. and 11 Geo. I. c. 29. §. 4. and 2 Geo. II. c. 28. §. 6. and c. 35. §. 17. and 3 Geo. II. c. 28. §. 1.

——And if, upon any pretence whatſoever, any goods of the Britiſh plantations in America be landed in Ireland, without being firſt landed in Great-Britain, and the duties thereof there paid, they are forfeited, with the ſhip; $\frac{3}{4}$ without compoſition to his Majeſty, and $\frac{1}{4}$ to the ſuer; unleſs ſtranded or driven in by leakineſs, &c. in which caſe the goods muſt be delivered into the cuſtody of the chief officer of the port, there to remain till re-ſhipped for Great-Britain, for which good ſecurity muſt be taken. 7 and 8 W. III. c. 28. §. 14, 15.

—— Now to extend only to ſugars, tobacco, cotton, wool, indigo, ginger, ſpeckle-wood, or Jamaica wood, fuſtick or other dyeing wood, rice, melaſſes, beaver-ſkins, and other furs, copper-ore, pitch, tar, turpentine, maſts, yards, and bowſprits, of the growth, product, or manufacture of the ſaid plantations. All other goods, of the growth, product, and manufacture of any of the ſaid plantations, may be imported from thence into Ireland (except hops, which are to continue under the regulations of 9 Ann. c. 12. and 1 Geo. I. c. 12.) provided it be in Britiſh ſhipping, whereof the maſter and at leaſt $\frac{3}{4}$ of the mariners are Britiſh. 4 Geo. II. c. 15. §. 1, 2. and 5 Geo. II. c. 9. §. 1.

—— Ships coming to the ſaid plantation to take in any of the following enumerated goods with intent to carry the ſame to ſome other Britiſh plantations, bond not having been firſt given to bring the ſame to Great-Britain only, there muſt be paid for ſuch goods the following duties, viz.

	l.	s.	d.
Sugar, white, the hundred weight -	0	5	0
Sugar, brown, and muſcovadoes the Cwt.	0	1	6
Tobacco, the pound - - -	0	0	1
Cotton-wool, the pound - - -	0	0	$0\frac{1}{2}$
Indigo, the pound - - - -	0	0	2
Ginger, the hundred weight - -	0	1	0
Logwood, the hundred weight - -	5	0	0
Fuſtick, and all other dyeing wood, the Cwt.	0	0	6
Cocoa-nuts, the pound - - -	0	0	1

And ſecurity muſt be taken to carry them to ſuch plantations, or to Great-Britain. 25 Car. II. c. 7. §. 3. and 7 and 8 W. and M. c. 22. §. 8. and 1 Geo. I. c. 12. §. 4.

—— Britiſh, in Aſia, Africa, or America, rum or ſpirits, melaſſes, or ſyrups, ſugars or panelles, of the product of any plantation in America, not in the poſſeſſion of his Majeſty, imported into any of the Britiſh plantations in America, are to pay the following duties in money of Great-Britain, according to the value of 5 s. 6 d. per ounce in ſilver; viz.

	l.	s.	d.
Rum or ſpirits, the gallon - - -	0	0	9
Melaſſes or ſyrups, the gallon - -	0	0	6
Sugars and panelles, the Cwt. - -	0	5	0

and ſo in proportion for a greater or leſſer quantity, to be paid down in ready money before landing. 6 Geo. II. c. 13. §. 1, 2.

—— Britiſh, in Aſia, Africa, or America. — Any of his Majeſty's ſubjects in any veſſel built in Great Britain, and belonging to his Majeſty's ſubjects, of which the major part reſide in Great-Britain, and the reſidue either in Great-Britain, or in ſome of his Majeſty's ſugar colonies in America, or in any veſſel belonging to his Majeſty's ſubjects reſiding in Great-Britain, and navigated according to law, that ſhall clear outwards, from Great-Britain to any of the ſaid colonies, may ſhip ſugars of the growth, produce or manufacture of the ſaid colonies, to carry to any foreign part of Europe; provided a licence be firſt taken out for that purpoſe, under the hands of three of the commiſſioners of the cuſtoms, ſubject to the regulations, and on the conditions, ſtipulated by act of parliament. 12 Geo. II. c. 30. §. 2. and 24 Geo. II. c. 57. §. 7.

—— This act not to extend to granting a liberty to carry any ſugars from the ſugar colonies to Ireland. 12 Geo. II. c. 30 §. 16. and 24 Geo. II. c. 57. §. 7.

—— Of the growth of the Britiſh colonies, exported within a year after the importation, to draw back the reſidue of the ſubſidy. 6 Geo. II. c. 13. §. 9. and 19 Geo. II. c. 23.

The allowance on Britiſh Refined Sugar exported.

		l.	s.	d.
By 9 and 10 W. III. cap. 23. §. 9.	Was granted from 31ſt January, 1699, during the continuance of the new ſubſidy,			
5 Ann. c. 8. art. 6.	Upon ſugar refined in Great-Britain, for every cwt. exported	0	3	0
2 and 3 Ann. c. 9. §. 3.	Was granted during the continuance of the one-third ſubſidy,			
4 — — 6. — 2.				
5 — — 19. — 8.	A further allowance on the ſame, for every cwt. exported	0	1	0
1 Geo. I. —— 12. — 8.				
6 Geo. II. c. 13. §. 10.	Was granted from 24th June, 1753, for five years.			
11 —— 18. — 2.	Further continued for ſeven years.			
19 —— 23. — 1.	Further continued for ſeven years.			
20 —— 32. — 5.	Further continued to 24 June 1756.			
29 —— 26. — 1.	Further continued for three years.			
	A further allowance on the ſame, for every cwt. exported	0	2	0
21 Geo. II. c. 2. §. 6.	Was granted from firſt March, 1747, during the continuance of the ſubſidy 1747,			
	A further allowance on the ſame, for every cwt. exported	0	3	0
	Total bounty	0	9	0

To be paid at the cuſtom-houſe to the exporter within thirty days after the demand thereof; oath being firſt made by the refiner, that the ſugar, ſo exported, was produced from brown and muſcovado ſugar, charged by the acts of 9 and 10 W. III. c. 23. and of 2 and 3 Ann. c. 9. and by 21 Geo. II. c. 2. (that is to ſay, charged with the new ſubſidy, one-third ſubſidy, and ſubſidy 1747.) and that, as he verily believes, the ſame was imported from his Majeſty's plantations in America, and the duty duly paid at the time of importation thereof, the exporter making oath, that the ſame was duly exported, and his Majeſty's ſearcher alſo certifying the ſhipping thereof, and all other requiſites being performed according to the Book of Rates. 9 and 10 W. III. c. 23. §. 9. and 2 and 3 Ann. c. 9. §. 3. and 6 Geo. II. c. 13. §. 10. and 21 Geo. II. c. 12. §. 8.

T.

TAPESTRY, a delicate kind of manufacture, ſerving to adorn apartments with hangings.

Of ſome curious improvements that have been made by Monſ. Le Blon, on the principles of printing, in imitation of painting, and of weaving tapeſtry, in the ſame manner as brocades.

M. Le Blon endeavouring to fix the true harmony of colouring in painting, found that all viſible objects may be repreſented by the three primitive colours, red, yellow and blue; for out of them, all others, even black itſelf, may be compounded. We are beholden to the great Sir Iſaac Newton for the diſcovery of the difference of colours contained in the rays of the ſun, and that the union of them all produces a white, which is light itſelf.

For diſtinction ſake, M. Le Blon calls thoſe colours which are comprehended in the rays of the ſun impalpable colours, and thoſe uſed in painting, material colours. In the material colours, a mixture of all three produces a black or darkneſs, contrary to what is obſerved in the impalpable, which I ſaid juſt now produce white. M. Le Blon takes this phænomenon to be owing to the body or ſubſtance of which thoſe three material colours conſiſt, and to the particles of them being opake, and not tranſparent; for they only reflect certain rays of light, they ſtrike on their ſurfaces; and therefore, when ſmall particles of different colours are placed cloſe together, if they are ſo ſmall that each of them cannot be ſeen ſeparately by the eye, we do not diſcern the colour of each particular atom, but only the blended reflected rays, proceeding from the adjoining particles: thus yellow and red produce an orange, yellow and blue, a green, &c. which ſeems to be confirmed by placing two pieces of ſilk near together, viz. yellow and blue: when, by intermixing of their reflected rays, the yellow will appear of a light green, and the blue of a dark green, which deſerves the farther conſideration of the curious.

He hath reduced the harmony of colouring in painting to certain infallible rules built on this foundation. Whereas, according to the common practice of painters, their colouring is the effect of mere chance or gueſs-work at firſt, but improved by experience, all painters uſually declaring, that there can be no certain rules given for mixing colours. M. Le Blon publiſhed, ſome years ago, an ingenious book on this ſubject, intitled Coloritto; or, The Harmony of Colouring in Painting

By theſe rules he light on the manner of printing any object in its natural colours, by means of three plates, and the three primitive colours; an art attempted and ſought after ever ſince the invention of printing, but in vain, and thought impoſſible, 'till he put it in practice a few years ago. The plates are engraved chiefly after the mezzotinto manner, only the darker ſhades, and ſometimes the outlines, where they are to appear very ſharp, are done with a common graver. Each plate is not completely engraved, but only contrived to take ſuch a portion of the colour as is neceſſary with the other two plates, to make the picture complete.

This art of printing conſiſts in ſix articles.

1. To produce any object with three colours, and three plates. 2. To make the drawings in each of the three plates, ſo as that they may exactly tally. 3. To engrave the three plates, ſo as that they cannot fail to agree. 4. To engrave the three plates in an uncommon way, ſo as that they may produce 3000 and more good prints. 5. To find the three true primitive material colours, and to prepare them, ſo as that they may be imprimable, durable, and beautiful. 6. To print the three plates, ſo as that they may agree perfectly in the impreſſion.

The firſt of which is the moſt conſiderable, comprehending the theoretical part of the invention; and the other five are ſubſervient to bring it into mechanical practice, and of ſuch importance, that if any one of them be wanting, nothing can be executed with ſucceſs or exactneſs. Sometimes more than the three plates may be employed, viz. when beauty, cheapneſs, and expedition require it.

The obſervation of the compounded colours reflected from two pieces of ſilk of different colours, placed near together, firſt gave him the thought of what the effect of weaving threads of different colours would be, when all the threads were ſo fine, as not to be diſtinguiſhed at a ſmall diſtance one from another.

By the ſame principles of producing any viſible object with a ſmall number of colours, he arrived at the ſkill of producing in the loom all that the art of painting requires. An art likewiſe often attempted, but as often abandoned, and declared impoſſible till now, as well as the other, of printing in colours. And it is probable, many improvements may from hence be made in ſeveral trades, eſpecially in combing of wool, where the mixing of ſeveral colours may be of important uſe.

The colours uſed in weaving, being only ſuperficial, and ſo differing from both the impalpable and the material colours, and not being to be ſo cloſely joined or incorporated together as thoſe, will not of themſelves produce a white or black, but only a light cinnamon: wherefore in weaving he hath been obliged to make uſe of white or black threads, beſides red, yellow, and blue; and though he found he was able to imitate any picture with theſe five colours, yet for cheapneſs and expedition, and to add a brightneſs where it was required, he found it more convenient to make uſe of ſeveral intermediate degrees of colours.

There are two ways in uſe at Bruſſels, and at the Gobelins in Paris, for making tapeſtry after the common manner: one they call the flat way, and the other the upright. In the flat way, they have the warp ſtretched in a frame lengthwiſe of the piece: it is made of white worſted, and the pattern lies cloſe under it, ſo that the workman can ſee the figures through the warp: he is provided with bobbins of various colours of ſilk or worſted, as the piece requires: then he takes up with his fingers one thread after another, as they anſwer to any colour in the painting beneath; and with the other hand paſſes the bobbin with the ſame colour, and ſtrikes the threads with an ivory comb. Some of theſe frames are made like a loom, with a warp paſſed through the leiſhes, and treddles for the feet, with which they open the threads of the warp, to paſs a common ſhuttle through them, when it is neceſſary to make a long throw, as is required in grounds, pillars, and tall uprights.

In the upright way the warp runs from top to bottom of the piece; the pattern is placed upright, and cloſe behind it, and the outlines are drawn in charcoal upon the foreſide of the warp. The workman is placed with his back to the light, by which means he can ſee the pattern the better; then he takes up the threads one by one, and paſſes the bobbin as in the other way, and ſtrikes it cloſe with the comb: all which is near as tedious as needle-work itſelf, which is the reaſon why the fineſt tapeſtry comes to ſuch high prices, ſo that none but princes and perſons of diſtinction care to buy it; and what can be had at a moderate price is always coarſe, and of a low taſte: for workmen who have any good notion of painting, and are capable of adjuſting the colours, are not to be had, but for exceſſive wages, which much enhances the price likewiſe: but in M. Le Blon's new way of weaving tapeſtry in the loom with a draw-boy, tapeſtry may be performed almoſt as expeditious as fine brocades: for when the loom is once ſet and mounted, any common draught-weaver, though not acquainted with drawing or painting; nay, hardly knowing what figure he is about, exactly produceth what the painter hath repreſented in the original pattern. And thus a piece of tapeſtry may be woven in a month or two, which, in the common way of working, would, before this invention, take up ſeveral years: and what, in the common way, coſts a thouſand pounds, may, by this means, be afforded finer and better for a hundred. Therefore, it is likely, this woven tapeſtry may become a current merchandize, and that many thouſand induſtrious families may be well employed about it.

The main ſecret of this art conſiſts in drawing the patterns, from which any common draught-weaver can mount the loom;

loom; and when that is done, the piece may be made of any ſize, by only widening the reeds and the warp, and a reverſe may be made with the ſame eaſe; which is done by the boy's pulling the leiſhes up again, in the ſame order in which he pulled them down before; by which contrivance the tapeſtry may be ſuited to any room, whether the light comes in on the right-hand or on the left.

The patterns are painted upon paper, whereon are printed ſquares from copper-plates, and theſe ſubdivided by as many lines as anſwer to the threads of the warp, which run lengthwiſe of the piece; then they try how many threads of the ſhoot anſwer in breadth to every ſubdiviſion of the ſquares. Every thread of the warp goes through a ſmall braſs-ring called a male, or through a loop in the leiſh, and hath a ſmall long weight or lingoe hung below, to counterballance the packthreads, which going from the top of the rings or loops, are paſſed over the pullies, in the table directly over the loom, and are continued nearly in a horizontal poſition on one ſide of the loom to a convenient diſtance, where they are all ſpread on a croſs-piece faſtened to two ſtaples: theſe are called the tail of the mounture; and from each of theſe packthreads juſt by the ſide of the loom, are faſtened other packthreads, called ſimples, which deſcend to the ground; ſo that by pulling theſe ſimple chords, you raiſe any of the threads of the warp at pleaſure; wherefore they faſten a loop or potlart to as many of theſe ſimple chords as there are threads of the warp to be pulled up at every ſhoot, or every throw of the ſhuttle; by which means the ſhoot manifeſts itſelf on the right ſide, where the warp is pulled up: and in ordering this, they are guided by the pattern, on which they count the diſtances of the ſubdiviſions, which contain the ſame colours in the ſame line, and can be ſhot at once: then they faſten potlarts to the ſeveral ſimple chords that draw up the rings, through which thoſe threads of the warp run, which are to lie behind this colour; they tie all theſe loops together, and faſten a piece of worſted or ſilk to the knot, of the ſame colour that the workman is to throw; and the boy, when he pulls each loop, names the colour, that the weaver may take the proper ſhuttle, and ſo on for every colour to be thrown.

Of the upright-way of working TAPESTRY, with relation to TURKEY CARPETS.

The carpets which are made at the royal manufactory of La Savoniere, below the Louvre, at Paris, are, in ſome reſpects, wrought by the upright-way of tapeſtry. The two rollers are placed the ſame way: the warp is braced from the top downward: the chain, with its loops, keeps all the threads of the warp equally perpendicular: the ſtick, which facilitates their croſſing, runs through them in the ſame manner, and ſeparates the foremoſt threads from the reſt: the lizier-pole holds all the ſtrings, which ſerve to draw the fore threads in their turns, and then the oppoſite threads, in order to inſert the ſpindles of woof. But the method of working in this manufactory differs from the upright way of tapeſtry in theſe particulars:

1. The warp is divided, both before and behind, into parcels of 10 threads each, nine white, and one blue; which is regularly continued through the whole width of the piece.
2. The weaver works on the fore-ſide, and conſequently ſees what he does.
3. The deſign, or pattern, is traced in its proper colours, on cartons, tied about the workman, who looks at it every moment, becauſe every ſtitch is marked on it, as it ought to be in his work. By this means he conſtantly knows what colours and ſhades he is to uſe, and how many ſtitches of the ſame colour.
4. In this he is aſſiſted by ſquares, into which the whole deſign is divided: each ſquare is ſubdivided into 10 vertical lines, correſponding with each parcel of 10 threads of the warp: and beſides, each ſquare is ruled with 10 horizontal lines, croſſing the vertical lines at right angles.
5. The workman having placed his ſpindles of woollen, ſilk, or other richer thread near him, begins to work on the firſt horizontal line of one of the ſquares. Theſe lines marked on the carton are not traced on the warp, for this would be endleſs; becauſe an iron wire, which is longer than the width of a parcel of 10 threads, ſupplies the place of a croſs line. This wire is managed by a crook at one end, at the workman's right-hand; towards the other end it is flatted into a ſort of knife, with a back and edge, and grows wider to the point. The workman fixes his iron wire, or rod, horizontally on the warp, by twiſting ſome turns of a ſuitable thread of the woof round it, which he paſſes forward and backward, behind a fore thread of the warp, and then behind the oppoſite thread, drawing them in their turns by their leiſhes. Afterwards, if it be neceſſary, he brings his woof-thread round the wire, in order to begin again to thruſt it into the warp; or elſe he ties it to the wire with a running knot, and lets it hang on it, in order to take another woof, and paſs it into the warp. He continues in this manner to cover the iron rod, or wire, and to fill up a line to the tenth thread of the warp, which is the blue one. He is at liberty either to ſtop here, or go on with the ſame croſs line in the next diviſion. According as he paſſes the thread of the woof round the iron wire, and into the warp, the threads of which he cauſes to croſs one another every inſtant: when he comes to the end of the line, he takes care to ſtrike in, or cloſe again all the ſtitches with an iron reed, whoſe teeth freely enter between the empty threads of the warp, and which is heavy enough to ſtrike in the woof he has uſed. This row of ſtitches is again cloſed and levelled, by a dweet of blue thread doubled, which the workman puts into the warp, ſliding his hand over the whole length of the line he has wrought. He croſſes the ſame threads of the warp, and then ſtretches through them another ſingle blue thread. He beats in theſe two threads, one after another, with his reed: theſe dweets of croſs thread, which are a ſupport to each line, will be hid by the pile on the fore ſide; they indeed diminiſh the beauty of the wrong ſide, but this is of no conſequence.

This done, the workman draws the iron-rod or knife out of the loops of the woof that covered it: and as it is wider towards its end, theſe loops reſiſt its paſſage; but being edged at its fore-part, it cuts them through. Then the workman with his left-hand lays a ſtrong pair of ſhears along the finiſhed line, cuts off the looſe hairs, and thus forms a row of tufts perfectly even, which, together with thoſe before and after it, form the ſhag. One line of this ſort taking in the row of ſtitches and woollen pile, with the two blue threads which ſupport them, ſomewhat ſurpaſs, in thickneſs, the ſpace between the firſt and ſecond croſs line of a ſquare. There muſt be eight wires full of woollen thread, and ſixteen blue threads, to anſwer to the ten croſs lines of a ſquare. By this means the workman always ſees what he is doing. He follows ſtitch for ſtitch, and colour for colour, the place of his pattern which he is at, and paints magnificently without having the leaſt notion of painting or drawing. It does not appear, that the directors of carpet-work among the Mahometans, are better draughtſmen than their workmen, for the Turkey carpets have nothing in them but a ſymmetry of colours.

REMARKS.

Under our articles of ARTIFICERS, CANDIDATE, CARPET, CLOTH, FRANCE, MECHANICS, MANUFACTURERS, and divers other articles, which the reader will obſerve from our GENERAL INDEX, we have ſhewn the great national advantages which ariſe to a trading ſtate from manufactories in general, and how requiſite it is, from time to time, to improve in the old, as well as to invent, or introduce, new manufactures, in order to fall in with the chargeable taſte of foreign nations, that our rivals may not ſupplant us in trade, by their greater vigilance in theſe reſpects.—Under the preceding, and various other heads, we have alſo ſhewn by what gradations many ſtates have increaſed in their mechanical and manufactural arts, and how the French, in particular, have aroſe to ſo great perfection in their manufactures, by ſparing no encouragement, rewards, and honours, upon ſuch ingenious artiſts who have proved the happy inſtruments of introducing any valuable NEW MANUFACTURE into their dominions.—We there have ſeen by what wiſe meaſures this politic and ingenious nation firſt eſtabliſhed their woollen and ſilken fabrics of every ſpecies; how they firſt ſupplied themſelves with the former ſorts of manufactures, which they were wont to take from England, and by what degrees they afterwards have greatly ſupplanted this nation, at moſt of their beſt foreign markets in their woollen goods.—And under our article MEDALS, we ſhall find how they have commemorated thoſe happy æras that have been productive of any bleſſings that have tended to the enlargement of the commerce and navigation of that neighbouring nation.

In the hiſtory of this part of the French polity, it will be difficult to find a ſingle inſtance of any capital ingenious artiſt, that has propoſed to the adminiſtration any laudable undertaking, tending to the improvement of the old, or the eſtabliſhing of new manufactories, who has not been gratefully received, and liberally recompenſed, and this even though he may have for a time proved unſucceſsful in his attempt. By this generous treatment of the induſtrious and ingenious mechanic and manufacturer, it is not to be admired that they have drawn the moſt celebrated artiſts of every claſs into their country, from all corners of the world.—For ſuch national munificence towards theſe people, will ſpread itſelf among them in all countries; and the glory that ſuch a country derives therefrom, will influence theſe artiſts, maugre all laws to prevent it, to forſake their native country, where no due regard is had to their merit.

It would make, I am afraid, but a diſagreeable ſcene: certain I am, that it would not redound to the honour of Great-Britain, if the hiſtory of great numbers of Britiſh, as well as foreign artiſts, who had great talents, and ſtrong impulſes to promote the commerce and navigation of this nation, was properly repreſented, and the difficulties and diſcouragements they have too generally met with; and which hath at length either broke their hearts, by ſhameful attendance and dependance, or forced them into other nations, where they have been careſſed and rewarded, ſuitably to their merit: an hiſtory of this nature, with relation to our own country, compared with a like hiſtory in regard to France, would, I am confident,

confident, give great glory to the one, and no leſs ignominy to the other. Nay, was I to give a ſhort hiſtory of many perſons of this ſtamp, that have ſell within the tether of my own knowlege, and that of ſome gentlemen of my acquaintance, it would be a diſagreeable taſk, becauſe it might be thought an invidious one, with reſpect to our rulers at different times.

There is a difference between the idle and deſigning projector, and the ſolid and well-intentioned artiſt. The former of theſe we have ſufficiently expoſed, under our article PROJECTORS, in order to guard the public againſt ſuch impoſtors, who are as detrimental to the community in general, as ruinous to the private fortunes of thoſe who are inchanted into their magic circle of PROJECTORSHIP.—But how theſe impoſtors may be prevented, and how the meritorious artiſts may be duly encouraged, and improved in their reſpective arts, ſee our articles ARTIFICERS, MECHANICS, PHILOSOPHY EXPERIMENTAL, and ROYAL SOCIETY of LONDON.

Nations that abound not with mines, eſpecially thoſe of gold and ſilver, or ſuch other as will tend to inrich and people the ſtate, muſt depend upon the productions of their lands, or their manufactories, or both: and the two latter are preferable in moſt ſtates to the former, as being more permanent, if wiſely regulated, according to the wants and the taſte of other countries.

Becauſe Great-Britain and Ireland abound with ſuch immenſe quantities of wool, and which is of a quality ſuperior to all other in the world for the fabric of general manufactures; and becauſe the goodneſs of our wool has long been, and ſtill is, a temptation to our competitors in trade to ſmuggle it OUT of our nation, and that chiefly in exchange for their commodities of luxury, which are likewiſe ſmuggled INTO this nation: as our commercial rivals have, chiefly by means of our own wool, greatly ſupplanted us in many of the capital branches of this our ſtaple manufactory, it behoves the wiſdom of the nation duly to cheriſh and encourage every manufacture that has a tendency to the conſumption of this commodity amongſt ourſelves, if no other end could be anſwered by it than that of ſo leſſening the quantity, as to deprive our competitors of having ſo much out of the kingdom as they at preſent obtain.

As theſe manufactural arts have an immediate practical tendency to the improvement of thoſe of DRAWING and PAINTING, this, methinks, ſhould be no indifferent motive with us to the effectual promotion and encouragement of ſuch manufactories; for when theſe new commercial eſtabliſhments take place in the kingdom, and will afford a handſome recompence to the ingenious artiſt in deſign and painting, this will induce numbers to breed up their children, eſpecially thoſe of tender conſtitutions, to ſo genteel an employment, whereby they can obtain an handſome maintenance. But it does not ſeem very politic to expect that numbers of people ſhould apply themſelves to the arts of DRAWING and PAINTING, without firſt being certain that there will be competent buſineſs, by which they may get a tolerable livelihood. But this is not the caſe at preſent; for, if I am rightly informed, we have now more artiſts already in theſe branches than can well live: ſo that if we would increaſe the numbers of theſe artiſts, who certainly would greatly contribute to the improvement of divers of our mechanical and manufactural arts, we muſt previouſly ſettle and eſtabliſh ſuch permanent manufactories as will afford them certain bread.

The beauty and delicacy of our woollen, as well as ſilken manufactures of every kind, greatly depend on the luſtre of their colours; and as there are no manufactures that require a ſuperior beauty and elegancy in this reſpect than thoſe of CARPETS and TAPESTRY, the promotion of theſe will have an inevitable tendency to improvements in the art of DYEING; and every advance towards a further degree of perfection herein is of conſequence to our woollen manufactories in general. See our article DYEING.

Commerce has been conſidered as either active or paſſive; the latter conſiſts in purchaſing more commodities in value of other nations than they do of us; the former does the contrary, and, by ſelling more than we purchaſe, become the ſource of wealth and power. Every new manufactory ſettled in a trading nation, either tends to leſſen the importation of the ſame from foreign ſtates, or to ſupply us with an additional commodity to increaſe our active commerce; and it ſometimes anſwers both theſe ends.

States, no more than private perſons, ſhould loſe ſight of that excellent maxim of Cato, Patrem familias vendacem, non emacem, eſſe oportet: THAT THE MASTER OF A FAMILY OUGHT TO BE A SELLER, AND NOT A BUYER. All the comforts of the head of a family, all the wealth of a city, all the grandeur of a kingdom, depends ſolely upon ſelling much, and buying little, or upon ſelling more than is bought. He that is conſtantly buying more than he ſells, let him be a ſecond Croeſus in treaſure, muſt at length be reduced to the unhappy ſtate of a beggar; for his ſtock is diminiſhed in proportion to the over-ballance of goods bought in. But whoever is conſtantly ſelling more than he buys, let him be poor as Lazarus, muſt, by ſuch a tranſaction, acquire the happy circumſtances of the proſperous; for as much as the ballance is in favour of the amount of the SALES, juſt ſo much is added to his capital. Thus reaſon evinces the truth of it; and we have confirmation hereof in the vigilance of neighbouring nations to make proviſion for ſelling much and buying little.

NEW MANUFACTORIES is the ſure and fundamental proviſion for the introduction of riches and happineſs into a kingdom; and, for the want of theſe, and due improvements in the OLD, will ever occaſion the decline of our trade, and introduce poverty.

Further to evince the truth of theſe principles, we may appeal to experience; for what has been the principal occaſion of the decay of our TURKEY TRADE, but the new-invented woollen fabrics of the French, which have hit the taſte of the Turks, while our's grow more and more out of date among that people? And has not this been cauſed by an unaccountable perverſeneſs in our Engliſh manufacturers not to ſtrike out of the ordinary road, and to hit the goût of the Turks, as well as the French have done? [See our article MANUFACTURES.] If a Turk can purchaſe two ſuits of cloaths a year of the French fabric, for the price that he muſt give for one of the Engliſh, they will give the former the preference; eſpecially ſo, ſince it ſeems he can have them of different, and more beautiful colours, than thoſe of England; and although they may be of a ſlighter manufactory, yet, if the two French ſuits wear as long as one of the Engliſh will, and the Turk can have his fancy better pleaſed, the Engliſhman will ever experience the diſadvantage ariſing from his adhering to his OLD FABRICS, while his rival is daily inventing NEW.

In order to induce our Engliſh manufacturers to turn their thoughts upon emulating the French, in regard to the preſent Turkiſh mode, that the French have ſo beneficially introduced among them, I have, under the article MANUFACTURERS, earneſtly recommended to them the imitation of theſe French woollen fabrics, which are now ſo much in vogue in Turkey, and which have been greatly inſtrumental in ſupplanting us in a conſiderable part of that once valuable and important commerce; and I have the ſatisfaction to inform the public, that my zeal is likely to be attended with the deſired ſucceſs: for not long ſince I have received letters from a very ingenious Engliſh manufacturer, that, in conſequence of my recommendation of ſuch like manufactures to the trial of our Engliſh clothiers, he had chearfully ſet about them; and, within this month, I have received an additional pleaſure, by ſeeing patterns of his FIRST TRIAL, which he has ſent me; and which having laid before ſome of the Turkey merchants, they have great expectations that this ingenious Engliſh artiſt will not only be able to make as good cloths of this kind as the French do, according to the Turkiſh taſte, but to ſell them equally cheap, if not cheaper, than they do. — And if ſo, this will enable us once more to get the ſtart of the French in this commerce, or put us upon a level with them in that important branch of trade.

This is the caſe, likewiſe, with relation to the SPANISH TRADE: for as to the fine Engliſh cloths, no objection can be made to their quality; but the French have got the ſtart of Britain in all the finer ſorts of woollen goods, by making them as fine to the eye, and not of half the ſubſtance as the Britiſh ſuperfines; therefore they can afford to ſell them much cheaper than ours. The policy of theſe our commercial rivals is very remarkable, ſubtile, and conſpicuous to ſuch Britons as are diſpoſed to think on the trade of their country. The French finding they could not make cloth of ſo good a quality as the Britiſh, very judiciouſly attempted to outdo them by cheapneſs, which they have effected; and, in order to take off the natural objection againſt the French cloths, viz. that they are not ſo durable as the Britiſh, they are continually making improvements in their COLOURS [ſee our article DYEING] and, as ſoon as a good approved colour appears, it is more unfaſhionable not to be dreſſed in that colour, than it would be in England to be dreſſed in a ſuit made of blanketing. By this artifice the French ſubjects in this kingdom, and even the Engliſh alſo themſelves in Spain, are inticed into a wear of their cloths, on account of the difference in the price; and the wearers will tell the Spaniſh ſhopkeepers they can have two French coats for the price of one made of Britiſh cloth. The alteration in the faſhionable colours is artfully contrived to return, before a coat of paltry French cloth can be worn out: ſo that the ſuperlative goodneſs of the Britiſh cloth is not regarded by any people of faſhion; and if our countrymen, the manufacturers of cloth in Great-Britain, cannot invent a cloth as cheap as the French, they muſt expect to be beaten by their enemies, not only out of their raw materials (of which the French can have what quantity they pleaſe now, and will be courted to take more, as the trade of England declines) but out of the trade alſo; for there are merchants in ſeveral ports in this kingdom, who have large quantities of the beſt ſuperfine Britiſh cloths, that have lain by them ever ſince the ceſſation of arms previous to the laſt peace.

Nor is this leſs the caſe with reſpect to our PORTUGAL TRADE. For the French have done our commerce in the woollen manufactory with this kingdom an unſpeakable detriment, by a new fabrick of FRENCH BLACK DRUGGETS,

which they have introduced there. Of this I have been apprized from Portugal by an Engliſh gentleman, who has greatly the proſperity and honour of his country at heart; and, in conſequence of what I have obſerved under the article PORTUGAL TRADE, he has promiſed me that I ſhall ſoon receive patterns of theſe BLACK FRENCH DRUGGETS from Portugal; which I ſhall put into the hands of a celebrated Engliſh artiſt in this way, who has given me great hopes, that he likewiſe ſhall be able to beat the French in this manufacture, and put the Engliſh in Portugal upon a par in this trade with the French; which, when done, the public will be duly informed of.

Theſe things are mentioned, with a view only to ſhew that if our manufacturers were to be properly encouraged in making ſuch improvements in their reſpective branches, as would put this nation in a capacity to vie with its competitors in trade, they would never be behind-hand with them.—But if a ridiculous and unaccountable averſion to the introduction of NEW MANUFACTURES among us prevails, our manufacturers may ſtarve by the OLD, and the nation be daily impoveriſhed, while France is rendered more and more proſperous and powerful, by countenancing every valuable NEW invention made in their own, or introduced from other countries.

Manufactures of moderate expence, ſays a judicious writer, and quick growth, may ſafely be left to private adventurers, and run the common chance for ſucceſs; the finer arts will never flouriſh, but under PUBLIC PROTECTION and NOBLE PATRONAGE; no encouragements in the hands of private perſons, are adequate rewards to the man of genius. MONEY is the pay of common men, as praiſe is that of heroes; and HONOUR will ever be found a much ſtronger principle of fine invention, than GAIN. We may apply to the artiſt what Quintillian declares of his young orator—Nolo mihi oratorem dari, quanti ſint ſtudia computaturum—All that was great and noble in ancient wit and art, was produced by honours as well as rewards, by the countenance of PRINCES, and the favour and kind influence of GREAT MEN. Sometimes, indeed, the ſtrength of a warm devotion has ſtruck an enthuſiaſm and paſſion into the works of artiſts, beyond the power of human motives to inſpire. A noble profuſion of HONOURS and BOUNTY raiſed the GOBELINES in France to its preſent height; the united influence of theſe two being generally ſufficient to call forth whatever human induſtry can attain to.

This houſe was the reſidence of two brothers, who firſt brought to Paris the ſecret of dyeing a curious ſcarlet, and failed in ſetting it on foot. Their building went under the popular name of the FOLLY of the GOBELINES for many years, 'till the opprobrium was taken off by a ROYAL EDICT, and the name changed by public authority to the more honourable one of the ROYAL MANSION OF THE GOBELINES. The ſcarlet colour was ordered to be called after the name of the inventors, and the little river Bievre, which runs by the building, received the ſame diſtinction. Theſe in appearance were trifling matters, but will be ſenſibly felt by the man of genius. The ſame year the houſe was purchaſed by the KING, and intitled the MANUFACTORY OF THE CROWN FURNITURE; and proviſion was made by a ROYAL CHARTER, to render the place a perpetual SCHOOL and ſeminary of the curious arts. Here M. COLBERT collected together, from all parts of the world, the moſt able MASTERS and DESIGNERS, as well as inferior artiſts in the fine manufactories. SALARIES were appointed for the DIRECTORS, and PENSIONS for life to the workmen; theſe were TAPESTRY-WEAVERS, ENGRAVERS in ETCHING and METZOTINTOES, GOLDSMITHS, JEWELLERS, CARVERS, and WORKERS in EBONY. In this place was wrought all the magnificent furniture for fourteen ROYAL PALACES, which has ſince been deſervedly the admiration of the world. Particular care was taken, that no part ſhould be furniſhed elſewhere, much leſs from abroad. All honorary preſents to foreign princes and noblemen abroad, and to the ornament of temples and public buildings at home, were made in their beſt performances, inſtead of jewels or money. Many of the ſuperior artiſts invited from foreign countries were made NOBLE, and all of them had various honorary privileges and royal penſions: the whole number, ſuperior and inferior, were comprehended amongſt the natives of France, and made free of Paris, with full liberty to practiſe their trades where they pleaſed, after working for a certain term in the Gobelines. This indulgence extends to all, who ſhall at any time hereafter practiſe the limited time in this foundation. The whole quarter of the Gobelines was exempted from taxes and impoſts, and had a court of judicature peculiar to itſelf, under the title of the court of the ROYAL ARTISTS.

Beſides theſe, there are three other academies in Paris for the polite arts, with various privileges, honours, and penſions, to the members forming the governing part of each ſociety. The academy of painting and ſculpture, that of architecture. and the military one, of late foundation. Precedents inviting our attention and imitation, if the latter may not be ſaid to command it. The two former and the academy of ſciences are copied in SPAIN, and are all equally liberal endowments.

In England, the ſtream of public favour and liberality has turned wholly to the advance of SCIENCES; we have few or no inſtitutions in favour of ARTS, no place of reſidence but for ſpeculation. The Royal Society are indebted to the public only for their name. How uſeful this honourable body has been, and how they may be rendered far more ſo, ſee our article ROYAL SOCIETY.

An academy for the fine arts above-mentioned, under a royal charter, with diſtinguiſhing honours and privileges for the higher members, and ſmall penſions for the lower, might give us a proſpect of ſome perfection in the branches of TAPESTRY-WEAVING, PAINTING, SCULPTURE, and STATUARY, and all the lower trades of elegance depending on fine DESIGN. Without ſome ſuch public inſtitution, they never yet were carried to an height in any country: no private fortune can ſtand out the time neceſſary to train up hands enough to extend the ART into a TRADE: but when once a ſufficient number were made perfect in this ſeminary, private adventurers would be found ready enough to take up the buſineſs; for no place ever wanted a trade, that abounded with working hands well inſtructed therein.—In a word, the THEORETICAL ARTS, and PRACTICAL TRADES thereon depending, ſhould go hand in hand.

TAXES. Under the article REVENUE, we have given a brief narrative of the methods of raiſing money in this kingdom, from the CONQUEST to the REVOLUTION in 1688: under the ſame article we have likewiſe ſhewn, that as this nation enjoyed neither civil nor religious liberty, till the time of our great deliverer King William III.; ſo the whole property of the people was either at the mercy of princes or prieſts, or both; the public revenue was raiſed in an arbitrary and oppreſſive manner; and what the civil power did not wreſt from the people, the eccleſiaſtical did.—We ſhall here give a view of the money that has been raiſed in this nation, ſince the revolution in 1688 to the demiſe of his late majeſty George II. in 1759.

SUMMARY OF THE TOTAL YEARLY SUPPLIES, granted by Parliament, during the Reigns of KING WILLIAM and MARY, WILLIAM III. QUEEN ANNE, KING GEORGE I. and KING GEORGE II.

REMARKS.

We have here a miniature view of the immenſe ſums of money that have been raiſed in this nation, from the year 1688 to the end of the reign of king George II. 1759, to ſupport the four great wars, from the reign of king William to the end of the reign of Geo. II.; but to the concluſion of the ſettlement of the peace in the year 1763, the expence of the laſt war coſt the nation above 50 millions more than the above total; and we have reaſon to be too ſenſible of the prodigious weight of our PUBLIC DEBTS and TAXES, with which the kingdom is at preſent oppreſſed, BY SUFFERING THE ANNUAL EXPENCE TO EXCEED THE ANNUAL REVENUE.

When an increaſe in the ANNUAL EXPENCE became neceſſary for ſecuring and vindicating the honour and rights of the nation; had the ANNUAL REVENUE increaſed in proportion, we ſhould have been at this time unincumbered with PUBLIC DEBTS and TAXES, for the payment of intereſt, and redemption of the PRINCIPAL DEBT.

Had the SUPPLIES been raiſed within the year, this would have been a conſtant check upon our annual expence; and we ſhould not have been ſo wantonly profuſe of the public treaſure as we have been.

Though our commerce and navigation have been greatly enlarged and extended ſince the Revolution; and we have thereby been hitherto enabled to ſupport the immenſe expence, under which we have laboured; yet, if effectual meaſures are not purſued to maintain and preſerve our trade, we ſhall loſe our great and eſſential ſupport of the national fabric.

So great, at preſent, are our TAX-INCUMBRANCES in general, as to occaſion our wares and commodities to come ſo dear to domeſtic purchaſers, that it proves ſo great an encouragement to the SMUGGLING into the kingdom ſuch prodigious quantities of French manufactures and commodities of almoſt every ſort, that it will be impracticable, perhaps, for the wiſeſt adminiſtration to prevent it; unleſs the great cauſe of TAX-INCUMBRANCES is effectually removed, and thereby our native manufactures and commodities are rendered as cheap as thoſe of France.

Nor is the article of ſmuggling only likely to prove a great cauſe of unſpeakable detriment and injury to our commerce, by reaſon of our great load of Tax-incumbrances upon it; but the multitude of our taxes occaſion our manufactures and commodities in general to come ſo dear to foreign nations, that they are not able to purchaſe them, as they were wont heretofore; and therefore, inſtead thereof, they will import thoſe of France, or any other nation whoſe commodities they ſtand in need of, that will come cheaper than thoſe of England; and this will be a motive to foreigners to evade always the beſt COMMERCIAL TREATIES that can be made with foreign nations for the greater encouragement of our trade amongſt them.

KING WILLIAM III.

Has a preſent aid granted, for the extraordinary occaſions.—Raiſes money by a poll, towards the reducing of Ireland.—Has a grant of 1 s. in the pound on land, for one year.—Has the grant of an additional exciſe upon beer, &c.—An act for appropriating certain duties for paying the States-General, &c.—Has a grant of 2 s in the pound on land, for one year.—Has an additional aid of 1 s. in the pound on land, for one year.—Paſſes an act for collecting the duties upon coffee, tea, and chocolate, at the Cuſtom-Houſe, at certain rates over and above what was before payable.—An act for raiſing money by a poll.—Has the grant of certain impoſitions upon beer, &c. for his and his queen's life.—Has the grant of tonnage and poundage for four years.—Has an aid granted of 1,651,702 l. 18 s.—Has a grant of certain impoſitions upon all Eaſt-India goods, &c.—Paſſes an act for the continuance of ſeveral former acts therein mentioned, for laying ſeveral duties upon wines, vinegar, and tobacco.—Paſſes an act for encouraging the diſtilling of malt ſpirits, &c.—Has a grant of ſeveral additional duties of exciſe upon beer, &c.—Has a grant of certain impoſitions upon beer, &c.—Has an aid of 1,651,720 l. 18 s.—Paſſes an act for raiſing money by a poll, for one year.—Has a grant of 2 s. in the pound on land, for one year.—Has a grant of certain additional impoſitions on ſeveral goods and merchandizes, &c.—Paſſes an act for continuing certain bills therein mentioned, and for charging ſeveral joint ſtocks.—Has a grant of 4 s. in the pound for one year.—Has a grant of certain duties upon ſalt, beer, &c.—An act for raiſing money by the poll for one year.—Has a grant of ſeveral duties upon tonnage and poundage, and upon beer, &c.—Has a grant of ſeveral duties upon veſſum, parchment, and paper, for four years.—Paſſes an act for licenſing and regulating hackney-coaches and ſtage-coaches.—Has the grant of tonnage and poundage for five years.—Has a grant of 4 s. in the pound, &c.—Has a grant of certain rates and duties upon marriages, births, and burials, &c. for five years.—Has a grant of ſeveral additional duties upon coffee, tea, &c.—Has a grant for certain duties upon glaſs wares, ſtone and earthen bottles, coals and culm.—Has a grant of 4 s. in the pound for one year.—Act for continuing ſeveral duties granted by former acts upon wine, vinegar, &c.—Has a grant of ſeveral rates, or duties upon houſes, for making good the deficiency of clipping money.—An additional duty upon all French goods and merchandize.—An act for laying ſeveral duties upon low wines, or ſpirits of the firſt extraction.—An act for continuing certain duties upon ſalt, glaſs wares, &c.—Has a grant of ſeveral duties upon vellum, paper, &c.—An act for continuing certain additional impoſitions upon ſeveral goods and merchandizes.—An act for making good the deficiencies of ſeveral funds therein mentioned, &c.—Has the grant of a duty upon leather for three years.—Has the grant of certain duties upon malt, mum, ſweets, cyder, perry, &c.—Has the grant of a farther ſubſidy of tonnage and poundage, for two years three-quarters; and an additional land-tax for one year.—An act to licence hawkers and pedlars, &c.—An aid granted by a land-tax, and ſeveral ſubſidies, &c.—Has a grant of l. 1,484 015 : 1 : 11 ¾, for diſbanding forces, &c.—Has a grant of ſeveral duties upon coals and culm.—A grant of a farther ſubſidy of tonnage and poundage, during life.—Has a grant to himſelf, his heirs and ſucceſſors, of farther duties upon ſtamped vellum, &c.—An act for increaſing the duties upon luſtrings and alamodes.—An aid by a quarterly poll.—An act for raiſing a ſum not exceeding 200,000 l. &c.—An aid for diſbanding the army, of l. 1,484,015 : 1 : 11 ¾.—An act for laying farther duties upon ſweets, &c.—An aid granted by ſale of the forfeited eſtates in Ireland, and by a land-tax.—An Act for laying farther duties upon wrought ſilks, muſlins, &c.—An aid for defraying the expence of the navy, &c. for one year.—Has ſeveral duties granted him upon low wines, &c. and ſeveral additional duties continued upon coffee and tea, &c.—An act for appropriating 3,700 l. weekly, out of certain branches of the exciſe, for public uſes, &c.—An aid by duties upon malt, mum, &c.

REMARKS.

The ſilver monies of king William and queen Mary were the ſame as thoſe of king James, crowns, half-crowns, ſhillings, half-ſhillings, groats, and pieces of three pennies, two pennies, and one penny.

The old hammered ſilver money, which was ſtill current, though it had been long complained of, on account of its being diminiſhed, by the infamous practice of rounding and clipping, was about this time come to ſuch a ſtate, and the ill condition of it increaſed ſo faſt, that there was an abſolute neceſſity for the putting an effectual ſtop to an evil, which rendered all trade and dealing between man and man precarious, and at laſt threatened no leſs than the total deſtruction of all our ſilver coin.

The King accordingly, in his ſpeech to the Parliament, on the 22d day of November, 1695, took notice of this calamity, and recommended it to the conſideration of both Houſes, 'as a matter of the moſt general concern, and the greateſt 'importance.' The Lords, on the 5th day of the following December, reſolved upon an addreſs to his Majeſty, 'deſiring 'him to iſſue out his proclamation, That from ſuch a day, 'or days, as he ſhall think fit, no clipped money of any 'ſort ſhall paſs in payment as the current coin of this kingdom.' And the Commons, on the 10th of the ſame month, came to the following reſolutions:

'That the moſt effectual way to put a ſtop to the miſchief 'which the nation ſuffered by the currency of clipped money, 'was to recoin the ſame:' and, therefore, 'that all clipped 'money ſhould be recoined, according to the eſtabliſhed ſtandard of the Mint, both as to weight and fineneſs. That 'the loſs of ſuch clipped money as was ſilver, and coined at 'the lawful mint of this kingdom, ſhould be borne by the 'public.

'That

TAX

'That a day or days ſhould be appointed, after which no 'clipped crowns or half-crowns, ſhould be allowed in pay-'ment, or to paſs, except only to the collectors and receivers 'of his Majeſty's revenues and taxes, or upon loans or pay-'ments into the Exchequer.
'That a day or days ſhould be appointed, after which no 'clipped crowns or half-crowns ſhould paſs in any payment 'whatſoever.
'That all ſuch crowns and half-crowns, as they came into his 'Majeſty's receipt, ſhould be recoined into milled money.
'That a day or days ſhould be appointed, after which no 'money clipped within the ring ſhould be allowed in pay-'ment, or to paſs, except only to the collectors and receivers 'of his Majeſty's revenues and taxes, or upon loans or pay-'ments into the Exchequer.
'That a day or days ſhould be appointed, after which no 'money clipped within the ring ſhould paſs in any payment 'whatſoever.
'That a day or days ſhould be appointed for all perſons to 'bring in their clipped money, to be recoined into milled; 'after which no recompence ſhould be made for the ſame.
'That a fund or funds ſhould be ſettled, for ſupplying the 'deficiency of the clipped money.'

And an addreſs being preſented, in conſequence of theſe reſolutions, his Majeſty did, by a proclamation of the 19th of the ſame month, reciting the before-mentioned addreſſes of the two houſes, 'command, that after the firſt of January then 'next enſuing, no clipped crowns or half-crowns ſhould paſs 'in any payment, except to his Majeſty's collectors and 'receivers, &c. nor after the 3d of February, in any pay-'ment whatſoever, within London, or 40 miles thereof; 'nor after the 22d of February, in any other part of the 'kingdom; and that after the 13th of February, no ſhilling 'clipped within the ring ſhould paſs in any payment, except 'to his Majeſty's collectors, &c. nor after the 2d day of 'March in any payment whatſoever. And after that the 'ſaid 2d day of March, no other money clipped within the 'ring ſhould paſs, except to his Majeſty's collectors, &c. 'nor after the 2d day of April, in any payment whatſoever.'

And by another proclamation, of the 4th day of January, in the ſame year 1695, reciting the former, and an addreſs of the commons in parliament aſſembled, the receivers and collectors of his Majeſty's taxes and revenues were 'ſtrictly 'charged and commanded, that, until the ſaid ſeveral days 'mentioned in the laſt proclamation, they ſhould receive in 'payment all clipped money of the ſeveral denominations 'therein mentioned, that were of ſtandard ſilver.'

An Abstract of the Accounts of the Great Recoinage in King William's Reign.

	lb.	oz.	dwt.	gr.
Of the ſilver coined in the Tower of London from the 30th day of September, 1695, to the 31ſt day of December, 1699, there was, in 12 general remains of clipped hammered ſilver monies, taken in by the lords of the Treaſury, melted at Weſtminſter into 10,933 ingots, and then ſent to the Mint, the weight of	790,860	1	19	8
There was likewiſe of hammered money and wrought plate imported into the Mint, and there melted, the weight of	696,971	0	16	19
The hammered money and wrought plate imported into the five country mints, made in weight,				
At Briſtol	146,977	0	0	0
At Cheſter	101,660	0	0	0
At Exeter	147,296	0	0	0
At Norwich	83,040	0	0	0
At York	99,023	0	0	0
The total of the hammered and clipped ſilver mon. and of the wrought plate imported, amounted to the weight of	2065,827	2	16	3

	l.	s.	d.
Which makes, at 3 l. 2s. the pound-weight, the ſum of 6,404,064 l. 8s. 6d. but which being coined ſomewhat lighter, though within the remedy allowed, produced really in tale the ſum of	6,435,039	14	9½

There was coined in the Tower of London, during the joint reign of king William and queen Mary; that is to ſay, from the 14th day of February, 1688, to the 28th day of December, 1694,

	l.	s.	d.
In crown gold, the weight of 9,962 lb. 8 oz. 14 grs. making in money, at 44 l. 10s. the pound weight, the value of	443,338	15	6
Brought over	443,338	15	6
In ſterling ſilver, during the ſame time, the weight of 25,492 lb. 4 oz. 18 dwts. 8 grs. making in money, at 3 l. 2 s. the pound weight, the ſum of	79,026	9	4¼
Total value of all the money, both gold and ſilver, coined during the joint reign of king William and queen Mary	522,365	4	10¾
There was coined, during the remaining part of the reign of king William, after the queen's death, in crown gold of the Tower of London, from the 29th day of February, 1694, to the 8th day of March, 1701, the weight of 66,866 lb. 3 oz. 14 dwts. 11 grs. making in money, at the aforeſaid rate of 44 l. 10 s. the pound weight, the value of	2,975,550	16	1
In ſterling ſilver, during the ſame time, in the Tower, the wt. of 1,684,600 lb. 19 dwts. 6 grs. and in the five country mints, the weight of 577,996 lb. making together the weight of 2,262,596 lb. 19 dwts. 6 grs. and which produced in money, at the aforeſaid rate of 3 l. 2 s. the pound weight, the ſum of	7,014,047	16	11¾
Total value of all monies, both of gold and ſilver, coined from the deceaſe of queen Mary to the deceaſe of the king	9,989,598	13	1
And the whole value of all the ſaid monies coined from the king's acceſſion to his death, amounted to the ſum of	10,511,963	17	11¾

Queen Anne

Paſſes an act for the better ſupport of her houſhold, and of the honour and dignity of the crown.—An act for making good deficiencies, and preſerving public credit.—An aid by divers ſubſidies, and a land-tax.—Has 4s. in the pound granted upon land.—Has a ſupply granted to her by ſeveral duties upon malt, mum, cyder, and perry.—An act for continuing the duties upon coals, &c.—An aid by ſale of ſeveral annuities at the Exchequer.—Has ſeveral ſubſidies granted for carrying on the war againſt France and Spain.—Has 4s. in the pound granted upon land.—An aid by continuing the duties upon malt, mum, &c.—An aid for carrying on the war, &c. by ſelling annuities at ſeveral rates.—An additional ſubſidy of tonnage and poundage, for three years.—Has 4s. in the pound again granted upon land.—Paſſes an act for raiſing monies by the ſale of ſeveral annuities, for carrying on the war.—Continues the duties upon malt, mum, &c. for one year.—Continues the duties upon low wines, and upon coffee, tea, &c.—Has a farther ſubſidy granted upon wines and merchandizes imported.—Has 4s. in the pound again upon land.—Continues the duties again upon malt, mum, &c.—An additional ſubſidy of tonnage and poundage continued, &c.—Paſſes an act for laying farther duties on low wines, &c.—Has 4s. in the pound again granted upon land.—Paſſes an act for continuing the duties upon malt, &c.—Paſſes an act for continuing the duties upon houſes, &c.—An act for continuing the duties on low wines, &c.—An act for continuing ſeveral ſubſidies, impoſitions, and duties, and for making the proviſions therein mentioned, to raiſe money by way of loan, for the ſervice of the war, &c.—Has 4s. in the pound again upon land.—Has the duties on malt, mum, &c. continued.—Paſſes an act for raiſing a further ſupply by ſale of annuities, charged on a fund, not exceeding 40,000 l. per annum.—An act for continuing half the tonnage, poundage, and other duties on goods imported, &c.—Act for continuing the half ſubſidies therein-mentioned, viz. on wine, vinegar, tobacco, &c.—Likewiſe the duties upon coffee, chocolate, ſpices, &c.—Has 4s. in the pound again upon land.—Has the duties on malt, &c. again continued.—Has the impoſition on tobacco, India ſtoods, &c. continued.—Has 4s. in the pound again upon land.—Duties on malt, &c. continued.—Duties on coals, &c. continued, and new duties on houſes.—New duties of exciſe, and upon ſeveral commodities, granted.—An act for laying certain duties upon candles, and certain rates upon monies given with clerks and apprentices.—Has ſeveral duties, impoſitions, and additional taxes continued on wine, vinegar, tobacco, &c.—Has 4s. in the pound ſtill upon land.—Duties on malt, &c. again continued.—An act for reviving, continuing, and appropriating certain duties on ſeveral commodities to be exported, &c.—Paſſes an act for eſtabliſhing a general poſt-office, &c.—Paſſes an act for laying certain duties upon hides, ſkins, &c. for 32 years.—Paſſes an

act

act for laying a duty upon hops.—An act for making good deficiencies, and satisfying the public debts, &c.—Passes an act for duties upon coals, for building fifty new churches.---An act for licensing and regulating hackney coaches and chairs, &c.---Has 4s. in the pound still upon land.---Duties upon malt, &c. again continued.---An act for laying several duties upon all soap and paper made in Great-Britain, or imported, &c.---An act for laying additional duties on hides and skins, &c.---Has the whole taxes continued as in other years anno 1712, amounting to 6,656,967 l.---In the next year has 4s. in the pound again upon land.---Duties upon malt, &c. again continued.---Passes an act to raise 1,200,000l. for public uses, by circulating a farther sum in Exchequer bills, &c.---Has 4s. in the pound again upon land.---Duties upon malt, &c. continued.---Passes an act for laying additional duties on soap, paper, and upon certain linens, &c.

REMARKS.

Queen Anne coined of silver the same monies and of the same form as those of king William; excepting that the arms of Nassau in the center of the four larger pieces were now omitted, and that in their room the garter star was again replaced. In the year 1707, the union of the two kingdoms of England and Scotland being completed, and taking place on the first day of May, there was thereupon an alteration made in the royal arms, as represented on the money: England and Scotland being from that time impaled together in the first and third of the four crowned shields, in the second of which France was now placed, and Ireland in the fourth. All the old silver money of Scotland was also upon the same occasion recoined into money of Great-Britain, exactly the same as that coined in England, and only distinguishable from it by the letter E. for Edinburgh, stamped upon all the pieces under her Majesty's head.

There was coined in the Tower of London, during the reign of queen Anne, that is to say, from the 9th day of March 1701, to the 1st day of August 1714,

	l.	s.	d.
In crown gold, the weight of 55,832lb. 2 oz. making in money at the rate of 44l. 10s. the pound weight, the value of - - - - -	2,484,531	8	4
And in sterling silver, the weight of 66,804 lb. 9oz. 15dwts. which produced in money, at the rate of 3l. 2s. the pound weight, the sum of -	207,094	18	4½
Total value of both sorts - -	2,691,626	6	8½

It may be noted, that it appears by the particulars of the accounts from which the foregoing extract was taken, that in the years 1709 and 1711, during which the greatest coinages of silver were made in this reign, there was coined out of wrought plate brought in upon encouragement, the weight of 46,156lb. 11 oz. 2dwts. 3. gr. making in value about 144,000 l. sterling; which was more than two thirds of all the silver coined in the Tower, from her Majesty's accession to her decease.

But there was further coined in this reign at Edinburgh upon the Union, and by the English moniers sent down thither, the weight of 103,346lb. making in tale, at the aforesaid rate of 3l. 2s. the pound weight, the sum of 320,372l. 12s. sterling money; all which was of their first coinage, in the year 1707, or the very beginning of 1708. Besides which, there was again a second coinage soon after, and before the end of the last mentioned year 1708, when some silver that could not conveniently be minted before, was also like the other, converted into current money of Great-Britain: but of this last coinage we have met with no particular account.

When the war begun in this reign, nothing could be more menacing than our prospects. The house of Bourbon despising all treaties, and, as usual, the most solemn engagement, by seizing territories more extensive and considerable, than were ever gained by the most rapid conquests. All the powers of Europe were interested to oppose a monarch thus prepared for their destruction. No period of time afforded men more eminent for wisdom and abilities, and more distinguished by successes equal to their merit. Had not this been the case, notwithstanding the stand that king William made against France, Europe must still have submited to an universal monarchy, which would not have indured any remains of civil or religious liberty.

In confederacies, wherein there are a variety of opposite interests, misfortunes are inevitable. Notwithstanding the several escapes of the enemy, the duke of Marlborough's progress, and the damages the French sustained elsewhere, reduced them to a state of distress and terror: notwithstanding their frontiers were impaired to such a degree, that we gained a secure admission into the defenceless parts of France, had his queen and country supported this great captain; yet we lost by the event every benefit which such advantages would have produced. For the queen unhappily exchanging the able, honest, and successful, for those whose management proved them the reverse, was the cause of our then not duly humbling the perfidious nation of France, who are eternally disturbing the happiness of mankind. No one of our monarchs ever had greater advantages of doing lasting good both at home and abroad, nor any reign been distinguished with such glorious and important events. Germany saved from destruction; the imperial crown preserved on the head of our ally; Flanders subdued; the exorbitant power of France reduced; the union of England and Scotland obtained, are events which will be had in everlasting remembrance. But by a dishonourable peace, how fruitless were these important events rendered? How soon again was the power of France restored to a condition of injuring, oppressing, and terrifying the world? And has not the power of this restless nation been daily aggrandized since this period? And do we not now experience the effect of it? And nothing, perhaps, but the queen's sudden removal, prevented the execution of those schemes in favour of a Popish pretender, which the peace-makers had laid.

KING GEORGE I.

Passes an act for the better support of his household, &c.—An act for rectifying mistakes in the names of the commissioners for the land-tax for the year 1714, &c. — Has an aid by the land-tax for the year 1715.—The duties on malt, &c. continued as in the former reign.—Passes an act for enlarging the fund of the governor and company of the Bank of England, relating to Exchequer bills, &c.—An act for raising 910,000l. for public services, by sale of annuities, &c.—Passes an act for enlarging the capital stock and yearly fund of the South Sea company, &c.—Has the land-tax continued for the years 1715 and 1716.—Duties on malt, &c. again continued.—Passes an act to continue duties for encouraging of the coinage of money, &c.—An act for appointing commissioners to enquire into the estates of certain traitors, and of Popish recusants, and of estates given to superstitious uses, in order to raise money out of them severally for the use of the public.—The land-tax act passed again. — Duties on malt, &c. continued again.—Passes an act for redeeming the duties and revenues, &c.—An act for redeeming several funds of the governor and company of the Bank of England, &c. — An act for redeeming the yearly fund of the South Sea company, &c. —The land-tax continued.—Duties on malt, &c. continued. Land-tax again continued.—As also duties on malt, &c. Passes an act for applying certain overplus monies, and farther sums to be raised, &c.—An act for continuing certain duties upon coals and culm, &c.—An act for redeeming the fund appropriated for payment of the lottery tickets, made forth for the service of the year 1718, &c.—Land-tax again continued.—Duties on malt, &c. continued.—Passes an act for enabling the South Sea company to increase their capital stock and fund, &c.—An act for making forth new Exchequer bills, not exceeding 1,000,000l. at a certain interest.—Passes an act for laying a duty upon wrought plate, &c.—Land-tax again continued.—An act for continuing the duties on malt, &c.—An act for raising a sum not exceeding 500,000l. --- Land-tax continued. --- Duties on malt, &c. continued. --- Passes an act for paying off, and cancelling 1,000,000 l. of Exchequer bills, &c.---An act for reviving and adding 2,000,000 l. to the capital stock of the South Sea company, &c.---An act for reducing certain annuities, &c. --- Passes an act for the more easy assigning or transferring certain redeemable annuities, &c.---An act for granting an aid to the crown, by laying a tax upon Papists, &c.---Passes an act to continue the duties for the encouragement of the coinage of money, &c.---Has an aid granted by a land-tax.---An act for continuing the duties on malt, &c.---An act for repealing certain duties, payable upon coffee, tea, &c. and for paying certain inland duties in lieu of them.---Has an aid again by a land-tax.---An act for rating unrated goods, &c.---An act for continuing the duties on malt, &c.—An act for continuing several annuities to the Bank, 'till Midsummer 1727, &c.---An act for redeeming certain annuities, charged on the civil-list revenues, &c.---An act for the more effectual preventing frauds and abuses in the public revenues, &c.---The land-tax continued.---Has one million granted him, to be raised by a lottery.---The duty on malt, &c. continued.---Has an aid by laying a duty on the victuallers in London and Westminster, &c.---Passes an act for repealing the duties laid on snuff, &c.---An act for laying an imposition of two pennies Scots, upon all ale and beer, brewed and sold in the city of Glasgow.---Passes an act for the improvement of the revenues, &c.---Has an aid granted him by a land-tax.---An act for redeeming certain annuities transferrable at the Bank, &c.---The duty on malt, &c. continued.---Passes an act for granting the sum of 370,000l. to the crown, &c.---Passes an act for the sale of such of the forfeited estates in Scotland as remain unsold, and are vested in the crown.

REMARKS.

The silver monies of king George the Ist were the same as those of queen Anne, and of the same form, excepting that his head was again adorned with laurel, like those of his predecessors, king Charles II. king James II. and king Wil-

liam; and that upon the reverſe of the crowns, half crowns, ſhillings, and half ſhillings, the arms of Brunſwic Lunenburg, &c. uſed by his Majeſty as Elector, were placed in the laſt of the four crowned ſhields, the third of which was now given to Ireland.

There was coined in the Tower of London during the reign of king George I. that is to ſay, from the 2d day of Auguſt 1714, to the 11th day of June 1727,

	l.	s.	d.
In crown gold, the weight of 184,763lb. which, computed at 461l. 14s. 6d. the pound weight, guineas having been ſettled and made current at 21s. each, by his Majeſty's proclamation of the 22d of December 1717, and being therefore no longer eſteemed as pieces of 20s. but of 21s. each, in the mint, produced after that rate in money, the value of - - - - - -	8,492,876	3	6
In ſterl. ſilver, the weight of 75,176lb. making in money, at the rate of 3l. 2s. the pound weight, the ſum of - -	233,045	12	0
And the total value both of the gold and ſilver amounted to - -	8,725,921	15	6

Note, It may be obſerved, that in the year 1718, and then only, there were coined ſome quarter guineas: when the weight of 110lb. in gold was converted into ſuch pieces, of which it conſequently produced about 19,580 in tale.

As ſome natural neceſſities or diſadvantages may be thought favourable to induſtry, ſo ſome have argued that artificial burthens may have the ſame effect. Sir William Temple * aſcribes the induſtry of the Dutch entirely to the neceſſity, proceeding from their natural diſadvantages; and illuſtrates his doctrine by a very ſtriking compariſon with Ireland, where (ſays he) by the largeneſs and plenty of the ſoil, and ſcarcity of people, all things neceſſary to life are ſo cheap, that an induſtrious man, by two days labour, may gain enough to feed him the reſt of the week: which I take to be a very plain ground of the lazineſs attributed to the people. For men naturally prefer eaſe before labour, and will not take pains, if they can live idle; though when, by neceſſity, they have been enured to it, they cannot leave it, being grown a cuſtom neceſſary to their health and to their very entertainment: nor perhaps is the change harder, from conſtant eaſe to labour, than from conſtant labour to eaſe. After which the author proceeds to confirm his doctrine, by enumerating, as above, the places where trade has moſt flouriſhed, in ancient and modern times; and which are commonly obſerved to be in ſuch narrow confined territories, as beget a neceſſity for induſtry.

* Account of the Netherlands, chap. 6.

It is always obſerved in years of ſcarcity, if it be not extreme, that the poor labour more, and really live better, than in years of great plenty, when they indulge themſelves in idleneſs and riot.

This doctrine therefore, conſidered as has been done with regard to taxes, may be admitted in ſome degrees; but beware of the abuſe. Taxes, like neceſſity, when carried too far, deſtroy induſtry, by engendering deſpair; and even before they reach this pitch, THEY RAISE THE WAGES OF THE LABOURER AND MANUFACTURER, AND HEIGHTEN THE PRICE OF ALL COMMODITIES. [For proof of which, ſee our articles LABOUR, DUTIES.] An attentive diſintereſted legiſlature will obſerve the point, when the EMOLUMENT CEASES, AND THE PREJUDICE BEGINS: but as the contrary character is much more common, it is to be feared, that the taxes of England are multiplyed to a degree that will prove highly detrimental to art and induſtry: and therefore the contenders for more and more taxes, upon trade, are enemies to our commerce and navigation: were they as zealous for the reduction, or the annihilation of many of thoſe we already have, they would ſhew themſelves advocates for the proſperity of the nation.

REMARKS on the ſtate of TRADE and LIBERTY ſince the REVOLUTION in 1688.

Upon king William's coming to the crown of theſe kingdoms, early application was made to him for ſeveral regulations tending to the encouragement of trade, and for eſtabliſhing a great many uſeful manufactories among us, which had been kept under by France and others, underſelling the manufactures made at home. This great prince was ever ready to hear all propoſals made upon that occaſion, and gave his utmoſt countenance to all ſuch undertakings; but by the fondneſs of the nation to French commodities ſo much countenanced by king Charles and king James, it was no eaſy matter to bring the people into a due regard for thoſe made at home. However, upon breaking out of the war with France in this reign, and prohibiting French commodities, encouragement was given for erecting ſeveral of theſe manufactories here, as the luſtring, alamode, and other ſilk manufactures for hoods and ſcarves, which the king's royal conſort, the excellent queen Mary, took no ſmall pains to eſtabliſh; for which articles alone, it is allowed, France drew from us above FOUR HUNDRED THOUSAND POUNDS YEARLY. For the ſaving of which to the nation, we were indebted to the happy æra of the Revolution, which not only preſerved us from the tyranny of Popery, but proved the ſalvation of our trade.

At the ſame time the manufacture of glaſs was eſtabliſhed, which before we uſed to have from France, and alſo that of hats and paper. The manufacture of linen was likewiſe ſettled in ſeveral parts of the kingdom, particularly in Somerſetſhire, and Dorſetſhire, where they made extraordinary good linen, in imitation of France; and which ſo increaſed, that in a few years it was computed, in a diſtrict of about ten miles ſquare, they made to the value of one hundred thouſand pounds worth annually. But upon the peace with France, there were ſo many linens run into the weſt, that it put that manufacture under great diſcouragement. At this glorious period alſo the manufactures of copper and braſs were ſet on foot, which are brought to great perfection, and now in a great meaſure ſupply the nation with copper, kettles, and all ſorts of copper and braſs ware, which has ſaved the nation immenſe ſums ſince that time. The making of ſail-cloth, likewiſe, was begun and carried on to great perfection; alſo ſword-blades, ſciſſars, and a great many toys made of ſteel, which formerly we uſed to have from France; in the manufacturing of which, it is ſaid, we now excel all other nations, and not only ſave thoſe great ſums we expended in France, but by means hereof bring in ſome hundred thouſand pounds a year, by our Birmingham and Sheffield manufactories. The ſettling of ſalt-works, and improving of ſalt-ſprings and rock ſalt, hath proved very beneficial here, and ſaves a very great treaſure yearly, which alſo we heretofore paid to France for ſalt; and a great variety of other particulars, which have proved of unſpeakable benefit to the trade of this nation; and therefore, thoſe who are true friends to our commerce, cannot be enemies to this happy revolution.

The meaſures we have mentioned to have been taken in the reign of king William III, in regard to the coin of the kingdom at that time, had all the happy effects that could be expected, in relation both to trade and the public credit: for thereby the greateſt part of the loſs by the recoinage was thrown immediately upon the king, though it was afterwards made good to him by a tax; hereby the loſs was as well divided and equally ſpread, as could well have been contrived. When the ill condition of the money, and the neceſſity of recoining it, was firſt taken into conſideration, ſome were for changing the nominal values of the pieces, as if they had thought ſuch new nominal values would really give to thoſe pieces a different and a greater worth than that which they had before. Among theſe was William Lowndes, Eſq; who, in an otherwiſe very uſeful book, intitled, A Report, containing an Eſſay for the amendment of Silver Coins, preſented to the lords commiſſioners of his Majeſty's Treaſury, on the 12th day of September 1695, advanced this ſcheme; particularly propoſing, that the piece of ſilver of the ſame goodneſs and weight as the undiminiſhed crown-piece, ſhould, for the time to come, be current for ſix ſhillings and three pennies. But this was fully anſwered by the judicious John Locke, Eſq; in his further conſiderations concerning raiſing the value of money; in which, as well as in his former tract on the ſame ſubject, and that of the lowering of intereſt, he has treated of this affair, and of every thing that had relation to it, in ſo clear, ſo ſtrong, and ſo maſterly a manner, as to carry conviction in every page, and to leave nothing to be afterwards added, by ſuch as ſhould again attempt to re-conſider the ſame matters.

And now that we have mentioned theſe two laſt pieces, we cannot but take notice alſo of an excellent diſcourſe publiſhed a little before by the reverend and learned Dr William Fleetwood, afterwards lord biſhop of Ely: I mean his ſermon againſt clipping, preached before the lord mayor, &c. at Guildhall chapel, on Sunday the 16th of December, 1694, upon this text of Gen. xxiii, 16. 'And Abraham weighed to 'Ephron the ſilver which he had named, in the audience of 'the ſons of Heth, four hundred ſhekels of ſilver, current mo-'ney with the merchant.' In which he with great judgment ſet before his audience the nature and conſequences of this pernicious practice; boldly inferred, from the vaſt increaſe of it within a few years, that the avarice of greater and richer men than ſuch as commonly ſuffered for it, muſt have been concerned in it; and wiſely foreſaw the calamities that muſt enſue, if the moſt prudent and conſiderate ſteps were not taken, in the applying of a remedy to ſo great an evil. 'Who 'can tell, ſaid he, whether every ſingle perſon muſt not bear 'his own burthen, and ſtand to the loſs of all that is want-'ing of due weight, of all the money he is maſter of? And 'if he muſt, the cry will be like that of Egypt, loud and 'univerſal; for every family will be a loſer: but it will fall 'ſevereſt upon the poor, who from a little can ſpare none.' This prince greatly increaſed the royal navy.

Theſe are a few of the great things that were done in the reign of king William III, for the intereſt of trade and the

publi

public credit, and which ought never to be forgot by all true Britons.

This great prince had juſt views of the horrid conſequences of the unreſtrained progreſs of the power of France. With great integrity and vigour, therefore, he made it the buſineſs of his life to oppoſe all its miſchievous motions; nor did he grow weary in the glorious toil. He had an enemy who was ever well prepared and provided, while he was often embarraſſed and diſappointed, and rarely attended with triumphant ſucceſs: however, the preſervation of Europe from abſolute ſubjection may juſtly be aſcribed to his arduous endeavours. He knew in what a ſcandalous and mercenary manner his two predeceſſors had ſurrendered themſelves to the will and pleaſure of the enemy, nor was he ignorant of the weak and corrupt condition of many other ſtates. As he proved himſelf a friend to the liberties of Europe, and preſerved its free ſtates from being the oppreſſed provinces of an univerſal monarchy, ſo equally ſincere was his zeal for the religious rights of mankind: he had a juſt deteſtation of Popiſh tyranny and uſurpation on conſcience. In his days, and by his means, the firm and conſiſtent foundations were laid of what is truly valuable in civil or religious affairs. Before his time, avowing the rights of mankind was criminal and diſgraceful: as they had power and opportunity, the ſeveral parties of Chriſtians oppreſſed each other. To him we owe the aſſerting and ſecuring our moſt important immunities and privileges; and to him the intellectual world is indebted for the full freedom of debating all ſubjects, and for avowing and defending their ſentiments with decency.

His laſt work compleated his good deſigns, for conveying to us the great and invaluable bleſſing of the Proteſtant ſucceſſion. Had he been cut off in any of the periods of his glorious ſtruggle for the happineſs of this nation, and the welfare of all Europe, the miſeries and miſchiefs which muſt naturally have followed, would ſurely have equalled all the ſuggeſtions of the moſt melancholy imagination. But the unthinking part of the world, becauſe wholly delivered from the greateſt of calamities, have not been, nor ever will, perhaps, be duly ſenſible.

Queen Anne's miniſtry, upon the treaty of Utrecht, too readily granted the French liberty to fiſh upon the very beſt fiſheries on the north coaſt of Newfoundland, and there to build ſtages to dry them. They alſo granted them CAPE BRETON, WHICH IS SAID TO BE THE VERY BEST SPOT IN ALL THOSE SEAS FOR FISHING. Thus we ſee the French, by their great penetration and knowlege in the affairs of commerce, have gained from us a treaſure equal to a mine of gold; and by means of the Newfoundland fiſhery, they have raiſed their naval power to the height we now experience it. See our article BRITISH AMERICA, where this matter is put in a full light. In ſhort, notwithſtanding the ſucceſs of our arms in this reign, yet moſt of the advantages we gained in king William's time, in point of trade, were in a great meaſure loſt, by the treaty of UTRECHT. And theſe advantages the French have not neglected to improve from that period of time; and the effects of their power, in conſequence hereof, we have now reaſon to dread, unleſs our naval ſtrength is ſo effectually exerted, as to break their meaſures at preſent, and to diſable them ever after from deſtroying the commerce and the liberties of Great Britain; which may now be ſaid to be the only BARRIER that all EUROPE has left, to withſtand the torrent of French and Spaniſh tyranny and oppreſſion.

The confuſed ſtate of the nation at the acceſſion of his late Majeſty KING GEORGE to the crown of theſe kingdoms, is well enough known, as are the ſeveral rebellions that were raiſed to dethrone him, in favour of the Pretender. Notwithſtanding all which, we find this our great monarch not only triumphant in his arms, but even careful in promoting the intereſt of our commerce, at a time when it could have been the leaſt expected. The firſt remarkable particular that we meet with in relation to this important point, is

A CONVENTION made at LONDON, July 26, O. S. 1715, relating to the DUTIES laid on BRITISH WOOLLEN CLOTHS exported to the AUSTRIAN NETHERLANDS.

His Britannic Majeſty's miniſters having complained that the commerce of his ſaid Britannic Majeſty with the Auſtrian Netherlands is very much prejudiced by the high duties of importation laid upon the coarſe woollen cloths ſent from Great-Britain to the ſaid Auſtrian Netherlands, the under-written miniſter and plenipotentiary of his imperial and Catholic Majeſty for the treaty of barrier [ſee the article NETHERLANDS] at Antwerp, declares by theſe preſents, that his Imperial Catholic Majeſty will conſent to the immediate reducing of the duties on the ſaid coarſe woollen cloths, according to the following ſpecification: and that, in all other reſpects, the commerce of the ſubjects of his Britannic Majeſty with the Auſtrian Netherlands ſhall remain, continue, and ſubſiſt, wholly on the ſame foot as it does at preſent, without any alteration, innovation, diminution, or augmentation to be made, under any pretext whatſoever, 'till all the parties intereſted ſhall agree upon a treaty of commerce.

DYED WOOLLEN CLOTHS.

	Fl.	Sols.
A piece of the value of above 60 florins, up to 90	3	10
A piece of the value of above 40 florins, up to 60	2	0
A piece of the value of 40 florins, and under	1	0

MIXED WOOLLEN CLOTHS.

Draps de pié (cloth to lie upon floors) of all ſorts, the piece - - - - - -	0	8

And to reduce the duties of importation on brandies diſtilled from corn coming from Great-Britain and the United Provinces, to three florins the aum, inſtead of eight, which is now paid, you are required, gentlemen, to give forthwith the neceſſary directions in the finances, that the proper orders may be immediately iſſued for this purpoſe, and that the collectors of the duties of importation and exportation may conform themſelves accordingly thereto. Done at the conference at Bruſſels, this 6th of November, 1715.

A copy of the reſolution of the council of ſtate, minuted in the margin of conſultation of the council of the finances the 7th of November, 1715.

Having made our repreſentation to the miniſters of the conference, conformably to this conſultation, and added alſo other reaſons to enforce it, they have newly made this day another more preſſing requiſition to us, by which they inſiſt abſolutely that the former be put in execution, whereupon the council of the finances ſhall iſſue the orders therein ſpecified; but it is underſtood that they ſhall not have force nor effect, unleſs they be approved and ratified by his Imperial and Catholic Majeſty in the treaty of barrier: this laſt clauſe, however, which begins with the words, 'It 'is underſtood,' and ends with the words, 'In the treaty 'of barrier,' ſhall not be inſerted in the orders to be ſent to the collectors.

Order of the council of finances to the collectors of the duties.

The counſellors and commiſſioners of the demeſnes and finances of his Imperial and Catholic Majeſty. Moſt dear and ſpecial friends, we herewith ſend you, with expreſs orders of the council of ſtate appointed for the general government of theſe countries, a copy of the requiſition made to them by the miniſters of the conference, relating to the leſſening of the duties of importation on the coarſe woollen cloth coming from Great-Britain and from the United Provinces, as alſo for reducing the ſaid duties on brandies diſtilled from corn; commanding you, by expreſs order of the ſaid council of ſtate, to take care to regulate yourſelves purſuant thereto, in collecting the ſaid

duties,

duties, and to give notice of it to your ſubalterns. Moſt dear and ſpecial friends, God have you in his holy keeping. Bruſſels, at the council of the ſaid finances, the 12th of November, 1715.

To the collectors of the duties of importation and exportation at

Newport,	Fort St Philip,
Oſtend,	Borgethout,
Bruges,	Mechlen,
Ghent,	Turnhout,
Dendermonde,	Tirlemont.

Extract from the tariff ſettled the 14th of November, 1715.

N. B. A difficulty having ariſen about the intention of the requiſition of the 6th of November, 1715, of which mention is made in the 26th article of the treaty of barrier, it is agreed proviſionally, to cauſe the duties of importation on all the different ſorts comprehended in the above tariff under the denomination of woollen cloths, to be collected according to the tenor of the ſaid requiſition of the 6th of November, 'till his Imperial and Catholic Majeſty, and his Majeſty the king of Great-Britain, ſhall agree upon it otherwiſe; and, in the mean while, the king's collectors and officers ſhall permit the ſaid manufactures to be imported, giving notice, and taking ſecurity for the payment of the overplus duties of importation, on the foot the ſame ſhall be ſettled.

A letter from the Imperial envoy, count Volkra, to the lord viſcount Townſhend, principal ſecretary of ſtate.

My Lord,

You have acquainted me that complaints are made of contraventions to the 26th article of the treaty of barrier, and I have had the honour to communicate to you what count Konigſegg has anſwered thereupon.

I can declare to you beſides, that, for the future, there will be an exact performance of the ſaid 26th article of the treaty of barrier, of the 15th of November, 1715, and of the convention at London, of the 26th of July, 1715, as alſo of the declaration in the tariff of the 14th of November, 1715, that is to ſay, that the duties on the petite draperie (or woollen ſtuffs) of England, will be collected on the foot of the coarſe woollen cloths, according to the diminution expreſſed in the aforeſaid convention at London, without any alteration, 'till it be agreed otherwiſe between the emperor and the king, our maſters; but, in the mean time, the merchants are to give ſecurity to pay the ſurplus, if the matter ſhall be ſo determined between the two reſpective courts.

London, Auguſt $\frac{20}{31}$, 1716.

I am, &c.

The COUNT VOLKRA.

REMARKS.

In order to judge the better of the merits of this COMMERCIAL CONVENTION, ſee our remarks on the article ROYAL EXCHANGE.

The French king having evaded the execution of the 9th article of the treaty of Utrecht, about the demolition of Dunkirk, by making a new canal at Mardyke, the next ſtep taken by this monarch, tending to the benefit of trade and navigation, was making ſtrong remonſtrances, by that able miniſter, John earl of Stair, in 1715, to the court of France, for the demolition of Dunkirk and Mardyke. The effects of which were, that, in 1717, Col. Armſtrong, Mr Alworth, and Mr Laſſels, were appointed commiſſioners to inſpect the demolition of the works at Mardyke, purſuant to the treaty with the late regent of France.

Another great point gained by the court of England, in the year 1715, was the ſigning of the BARRIER TREATY at Antwerp, by the Britiſh, Imperial, and Dutch miniſters.—For the importance whereof, ſee our REMARKS on the articles FLANDERS, HOLLAND, and NETHERLANDS.

In 1715, we find his Majeſty was able to conclude a treaty of commerce between England and Spain; and how greatly that proved to the advantage of the commerce of this kingdom, and how greatly this, and the preceding convention, contributed to ſupply the defects of the Utrecht treaty, ſee our REMARKS on the article ROYAL EXCHANGE.

In Dec. 1717, it being found by experience that guineas, and other gold coin, being too high in value, thereby diminiſhed our quantity of ſilver coin, and proved very detrimental to our trade, the king iſſued a proclamation, declaring, That guineas ſhould be current at no more than 21s. and half-guineas, double-guineas, &c. proportionably; that broad-pieces of 23s. 6d. ſhould be reduced to 23s. and thoſe of 25s. 6d. to 25s. and ſmaller gold pieces in proportion. See the neceſſity and reaſonableneſs hereof, and how beneficial this meaſure proved to our commerce, under our article COIN.

November 11, 1718, at the meeting of the parliament, the king, in his ſpeech, acquaints the Commons, That he had concluded an alliance between the two greateſt princes of Europe, wherein they bound themſelves to ſupport the ſucceſſion to theſe kingdoms in his family. — That to vindicate the faith of his former treaties, as well as to maintain thoſe which he had lately made, and to protect and defend the TRADE of his ſubjects, which had in every branch been violently and unjuſtly oppreſſed by the Spaniards, it became neceſſary for his NAVAL FORCES to check their progreſs — And that, inſtead of liſtening to his reaſonable terms of accommodation, that court had lately given orders at all the ports of Spain, and of the Weſt-Indies, to fit out privateers, and to take our ſhips, &c.—Accordingly the Commons approved the king's meaſures with regard to Spain, and raiſed men and money accordingly. — An order of council alſo is publiſhed, December the 3d, in the ſame year, for making general reprizals on the Spaniards, and letters of marque are granted againſt them. — See our articles REPRIZALS, and MARQUE [LETTERS of MARQUE]. — Thus the naval power of Great-Britain being exerted to protect her commerce, Spain threatens us with the Pretender, and a ſquadron ſails from Cadiz towards England, to carry on this deſign, under the conduct of the duke of Ormond; but was diſabled from purſuing its courſe by a ſtorm. — This was cardinal Alberoni's ſcheme.

December 22, N. S. A convention between the emperor, the king of Great-Britain, and the States-General, relating to the execution of certain articles of the barrier treaty, is ſigned at the Hague.

March 18, 1718-19. An embargo is laid on all ſhips outward bound: and a proclamation publiſhed, for encouraging his Majeſty's ſhips of war and privateers to take prizes from the Spaniards, by ordering them to be diſtributed among the ſailors.— In July 1719, the city of Meſſina ſurrenders to the Imperialiſts, and in the whole ſiege admiral Byng gave great aſſiſtance. After the ſurrender, he lands ſome Engliſh forces, who took the tower of Faro; and that opening a free paſſage for his ſhips, he came to an anchor in Paradiſe-road, and deſtroyed the Spaniſh men of war that lay there, which for a time ruined the naval power of Spain—Which they have now again recruited, and if not again deſtroyed, are likely, in concert with their dear allies the French, to make another attempt to ruin the commerce of theſe kingdoms, and play their Popiſh tool again upon Great-Britain. — May their fate prove always as it hitherto has done!

In reſentment for this treatment againſt our trade and liberties, his Majeſty formed the project to make himſelf maſter of PERU in AMERICA, and accordingly admiral Hoſier ſails towards thoſe parts with a ſquadron of men of war, and was to be joined by others; but this expedition was fruſtrated by the winds. — A deſign alſo was formed by his Majeſty to attack the CORUNNA in SPAIN, and vice-admiral Mighells ſailed from St Helens with ſix men of war, as a convoy to 4000 land forces under the command of lord viſcount Cobham, but they landed at Vigo; and at the firſt ſummons the town ſurrenders, as does alſo the citadel a few days after. — They found there above 100 pieces of cannon, above 2000 barrels of powder, and 8000 muſkets deſigned for the deſcent in England, which they brought away, as alſo ſeveral other pieces that were at Pont à Vedra. — The Engliſh troops being reimbarked at Vigo, the fleet ſails back for England with them, and arrives November 14.— In conſequence of this ſpirit and vigour exerted by our navy, the king of Spain was compelled to diſmiſs his prime miniſter cardinal Alberoni, as a firſt ſtep towards a peace with the emperor, king George and the regent of France.

In 1720, the unhappy affair of the South Sea company was broached. See our article SOUTH SEA COMPANY; which was greatly detrimental to the public credit; notwithſtanding which, from the wiſdom of his Majeſty's councils the public credit was reſtored, and the national debts put into a ſtate of redemption. See our articles CREDIT, [PUBLIC CREDIT] DEBTS, [NATIONAL DEBTS] and FUNDS.

Auguſt 4, 1721, his Majeſty puts an end to the ſeſſion of parliament with a ſpeech, acquainting both houſes, among other things, that he had renewed all our TREATIES of COMMERCE with Spain, upon the ſame foot as they were ſettled before the late war.—October 19, the parliament meets, and his majeſty in his ſpeech recommends to the nation, To improve the favourable opportunity, which the concluſion of a peace with Spain, and between Sweden and Muſcovy at that time, gave, of extending our commerce, upon which, as his Majeſty obſerves, THE RICHES AND GRANDEUR OF THIS NATION CHIEFLY DEPEND: and for that purpoſe, to make the exportation of our own manufactures, and the importation of the commodities, uſed in

the manufacturing of them, as practicable and eaſy as may be, by taking off the duties upon theſe branches, &c.—And to ſupply ourſelves with naval ſtores from our plantations in America.—For the importance of theſe points to the commerce and navigation of the kingdom, ſee our articles MANUFACTURES and NAVAL STORES.

The moſt conſiderable acts paſſed this ſeſſion in regard to trade, were, 1. For taking off the duty upon ſalt uſed in the curing of red and white herrings, and laying a proportionable duty upon all red and white herrings conſumed at home only.—2. An act for giving further encouragement for the importation of naval ſtores.—3. For encouragement of the ſilk manufacture of this kingdom; and for taking off ſeveral duties on merchandizes exported; and for reducing the duties upon beaver-ſkins, pepper, mace, cloves, and nutmegs imported; and for importation of all furrs, of the product of the Britiſh plantations in this kingdom only; and that the two corporations of aſſurances, on any ſuits brought on their policies, ſhall be liable only to ſingle damages and coſts of ſuit. See our article ASSURANCE.

In May 1722, his Majeſty has full information of a conſpiracy formed againſt him; the firſt intelligence of which came from the duke of Orleans, regent of France.—The apprehenſions of this plot did ſo affect the public credit, that South Sea ſtock fell from 90 to 77, and the timorous and diſaffected began a run upon the Bank: but the funds ſoon roſe again to their former value: which ended in the baniſhment of Dr Atterbury, late biſhop of Rocheſter, and the execution of Chriſtopher Layer, &c.

For the ſupport of the trade of our ſugar colonies, his Majeſty made a grant of the iſlands of ST VINCENT and ST LUCIA, near BARBADOES, to John duke of Montague, and a patent paſſed the ſeals for that purpoſe. See the importance of theſe places, under our article BRITISH AMERICA.

In December 1722, the emperor of Germany granted a patent for eſtabliſhing an Eaſt-India company in the Auſtrian Netherlands, but the courts of GREAT-BRITAIN, FRANCE, and HOLLAND, made ſo ſtrong an oppoſition to this deſign, that it was afterwards laid aſide. See our articles AUSTRIAN NETHERLANDS, and OSTEND EAST-INDIA COMPANY.

This year the governors of New-York, Virginia, and Penſylvania, in order to ſupport an intereſt with the Indian nations at Albany, with the SACHIMS, or KINGS of the AMERICAN NATIVES, called the FIVE NATIONS, or RIVER INDIANS, in which all former leagues between theſe governments and the ſaid Indians were confirmed. Likewiſe,

Sir William Keith, governor of Penſylvania, entered into a treaty with the SASQUEHANA INDIANS, wherein thoſe people agreed to remove back into the woods, and leave a tract of 100,000 acres of land for the uſe of the ENGLISH PLANTERS.

April 24, 1724.—His Majeſty puts an end to the ſeſſion of parliament by a ſpeech. The chief acts paſſed in relation to trade, were, 1. For repealing certain duties therein mentioned, payable upon coffee, tea, cacao-nuts, chocolate, and cacao-paſte imported, and for granting certain inland duties in lieu thereof; and for prohibiting the importation of chocolate ready made, and cacao-paſte.—2. For the better viewing, ſearching, and examining, all drugs, medicines, &c. in all places where the ſame ſhall be expoſed to ſale, or kept for that purpoſe, within the city of London and ſuburbs thereof, or within ſeven miles circuit of the ſaid city.—3. For encouraging the GREENLAND FISHERY.

May 16, 1724.—King George ſends a circular letter to the univerſities of Oxford and Cambridge, declaring his intention of appointing two profeſſors of modern hiſtory and languages, one in each univerſity, with a ſtipend of 400 l. per annum a-piece—How a knowlege in theſe eſſentials might tend to enable people of diſtinction who are ſent as ambaſſadors, &c. to foreign courts, to promote the commerce and the honour of the nation, is too obvious to need animadverſion.—And this I doubt not but his Majeſty had chiefly in view: however that deſign has been neglected ſince.

In April 30, 1725.—A treaty of peace is concluded at Vienna, between the emperor and the king of Spain; wherein king Philip renounces all the pretenſions to his dominions in Italy and the Netherlands, and they mutually engage for the reciprocal defence and guaranty of all the kingdoms and provinces which they actually poſſeſſed, and the order of ſucceſſion, as ſettled in their reſpective families, &c.—They alſo ſign a private treaty, wherein the emperor engages to concur in employing force for having Gibraltar reſtored to Spain; to uſe means for placing the Pretender upon the Britiſh throne; and that his daughter, the archduchеſs, ſhould be married to the infant of Spain.—The next day they ſigned a treaty of commerce for ſettling an Eaſt-India company at Oſtend, which gave great umbrage again to the Engliſh and Dutch.

The chief acts paſſed this ſeſſion for the benefit of trade, were, 1. For encouraging the ſilk manufactures of this kingdom. 2. For preventing the clandeſtine running of goods, &c. 3. For rating ſuch unrated goods and merchandize, as are uſually imported into this kingdom, and pay duty ad valorem, upon the oath of the importer; and for aſcertaining the value of all goods and merchandize not inſerted in the former, or preſent book of rates.

January 20, 1725-6.—The parliament meets. The king acquaints both houſes, that the negociations and engagements entered into by ſome foreign powers, which ſeemed to have laid the foundation of new troubles in Europe, and to threaten his ſubjects with the loſs of ſeveral of the moſt advantageous branches of their trade, had obliged him to enter into a defenſive alliance with the moſt Chriſtian king, and the king of Pruſſia, &c.

February 24, 1725-6.—The convention of the royal burghs in Scotland preſents an addreſs to his Majeſty, in which they remonſtrated againſt the malt-tax, as a burthen too heavy for their country to bear: that it rendered them incapable of carrying on the fiſhing trade, and ſuch other branches of commerce and manufacture as Scotland was proper for: that their poverty, and want of coin, the great decay of their trade, and the meanneſs of their grain, were melancholy truths, &c.—Therefore they prayed relief.—They afterwards petitioned the commons concerning it; as did likewiſe the ſhires of Renfrew, Bamff, &c.—In conſequence of which the commons order, that ſome clauſes ſhould be inſerted in the malt-bill, for the ſatisfaction of the Scots, namely, That the produce of it in Scotland, after 20,000 l. paid into the Exchequer, ſhould be applied towards the encouragement of the trade and manufactures of that kingdom, &c.—And king George ſends a letter to the royal burghs of Scotland, to put them in mind of improving their fiſheries and manufactures, with the money granted them for that purpoſe at the Union. See our articles ABERDEENSHIRE and SCOTLAND, for what has been ſince done, for the promotion of the trade of that part of the united kingdom.

May 24, 1726.—King George puts an end to this ſeſſion of parliament with a ſpeech. The chief acts paſſed this ſeſſion were, 1. For giving encouragement to the Greenland fiſhery. 2. To prevent unlawful combinations of workmen employed in the woollen manufactures, and for the better payment of their wages.

The emperor, in conſequence of the alliance before mentioned with his Catholic Majeſty, prohibits the importation of the Engliſh woollen manufactories into Sicily.

Auguſt 20, 1726.—The Eaſt-India company obtain a charter for incorporating their towns of Madraſſpatan, Bombay, and Fort William, to be governed each of them by a mayor and aldermen, who are impowered to make bye-laws, and exerciſe criminal as well as civil juriſdiction, except in caſes of high treaſon.

In the latter part of this year, great preparations were made in Spain for war, both by ſea and land; and a camp of about 20,000 men was formed at St Roch, near Gibraltar, under pretence of rebuilding the caſtle of Old Gibraltar. Upon repeated advices of their real intention, the garriſon was reinforced with three regiments, and the Spaniards afterwards inveſted and opened the trenches before Gibraltar; and tho' ſome did not ſcruple to propagate, that Gibraltar would be given up by the late king, yet we know it was gallantly defended.—For the great importance of this place to the trade of theſe kingdoms, ſee our article MEDITERRANEAN.

January 17, 1726 7.—The parliament meets. His Majeſty opens it with a long and pathetic ſpeech, wherein he acquaints both houſes, with the ſecret and offenſive alliances concluded between the emperor and the court of Spain:—That the placing the pretender upon the throne of this kingdom, was one of the articles of the ſecret engagements; and the giving up the trade of this nation to one power, and Gibraltar and Portmahon to another, was made the price and reward of impoſing upon this kingdom a Popiſh pretender, &c.—The lords and commons reſolve, that the meaſures he had taken were honourable, juſt, and neceſſary, for preventing the execution of the dangerous engagements entered into in favour of the pretender; for preſerving the dominions belonging to the crown of Great-Britain by ſolemn treaties, and particularly thoſe of Gibraltar and Minorca; and for maintaining to his people their moſt valuable rights and privileges of commerce, and the peace and tranquillity of Europe.

March 25, 1727.—General letters of reprizals are granted againſt the Spaniards.—The court of Vienna ſeeming diſpoſed to attack the DUTCH BARRIER in the NETHERLANDS [ſee our articles FLANDERS, HOLLAND, and NETHERLNDS, for the importance hereof to Great-Britain], king George orders an augmentation of 30 companies of foot, and that the 10,000 auxiliaries which England was obliged to ſend to the aſſiſtance of the States, ſhould hold themſelves in readineſs for embarkation.

May 15, 1727.—His Majeſty puts an end to this ſeſſion of parliament with a ſpeech.—The chief acts paſſed this ſeſſion for the benefit of trade, were, 1. For the better regulation of the woollen manufacture, and for preventing diſputes among the perſons concerned therein; and for limiting a time for proſecuting for the forfeiture, appointed by an act of the 12th year of his Majeſty's reign, in caſe of payment of the

workmen's wages in any other manner than in money. 2. For preventing frauds and abuſes in the dyeing trade. 3. For the free importation of cochineal, during the time therein limited. 4. For the better regulation of the linen and hempen manufactures in that part of Great-Britain called Scotland. 5. For encouraging and promoting fiſheries and other manufactures and improvements in Scotland.

The treaty of Hanover having broke the meaſures of Spain and the emperor, preliminary articles for a general pacification are agreed upon at Paris, between the miniſters of the emperor, his Britannic Majeſty, the Moſt Chriſtian king, and the States-General.

By the firſt article, the Oſtend company was to be ſuſpended for the ſpace of ſeven years. By the 5th all hoſtilities were to ceaſe, immediately after the ſigning of the articles: and, by the ſeventh a congreſs was to be opened at Aix-la-Chapelle, in four months from the day of ſigning.

So inconſiſtent have men been in their judgment of this reign, that ſome have thought, that our naval power was not ſo vigorouſly exerted during it, as it ſhould have been, and others that it was exerted to too great lengths, by deſtroying the Spaniſh fleet in the Mediterranean, by Sir George Byng: notwithſtanding theſe different opinions, certain it is, that the latter deſtroyed, at that time, the growing naval power of Spain, and utterly diſappointed the great deſigns of an able and enterprizing miniſter. And the fleets of admiral Hoſier, Sir John Jennings, Sir Charles Wager, and Sir George Walton, abſolutely defeated the Imperial and Spaniſh deſigns before taken notice of.

The invaſion and rebellion in 1718, are leſs remembered than that of 1715, becauſe not one perſon ſuffered death on that account. The rebellion likewiſe intended by the late king of Sweden ſeems to have been forgot, though it gave ſome uneaſineſs to king George's reign; for had that implacable monarch lived, his deſigns againſt Denmark would probably have ſucceeded, and then he would have had leiſure for tranſporting his hardy troops into Scotland.

Had the ſucceſſion of this prince [king George] taken place before the change of the miniſtry at the latter end of queen Anne's reign, it would have been infinitely more happy, not only for the nation, but for the laſting tranquillity of the liberties of Europe. France would then have been compelled to give up the Spaniſh monarchy. By advantages in trading to the dominions of Spain, in Europe and America, and by ſeveral conceſſions, we ſhould have had ample means of repairing the loſſes ſuſtained by a long and expenſive war. The houſe of Bourbon had been reduced within ſuch bounds, as not to have been able to have become the terror and ſcourge of their neighbours, as they ſeem diſpoſed to be at preſent.

King George I. came to a people, who had been corrupted both in their political and religious notions, and had been taught an averſion to our NATURAL ALLIES, and to all FOREIGN PROTESTANTS, while an eſteem and affection for France, and a tenderneſs for many doctrines of POPERY, had been infuſed into them with great ſucceſs; and theſe prejudices had indiſpoſed the nation to ſubmit to a PROTESTANT PRINCE, while the dangers from a POPISH ONE were not attended to. The advantages likewiſe of a proſperous war, and many valuable branches of commerce, had been given up or neglected, and the revenue was loaded with a very heavy debt; and yet the authors of theſe calamities had the art and aſſurance to impute the conſequences of them to the king and his miniſters.

Theſe points ſeem as neceſſary to be inculcated at this time of day, as ever they were.

Notwithſtanding the unhappy affair of the South Sea ſcheme, yet the wiſe meaſures at length purſued, the reduction of intereſt took place, from 6 to 4 per cent. and the NATIONAL DEBTS put into a ſtate of redemption; than which nothing could have a happier tendency to eſtabliſh the public credit, after the year 1720.

GEORGE II.

The reader will obſerve, that conſiſtent with the plan of this work, we have included in the account before given, called A SUMMARY OF THE SUPPLIES AND THE WAYS AND MEANS for the raiſing all monies from the time of the revolution in the year 1688, to the end of the reign of George II. in the year 1759, the ſum total raiſed in each diſtinct year, ſince the ſaid year 1688; by which the reader will eaſily ſatisfy himſelf of the whole ſum raiſed in each reign, by adding the yearly ſums together belonging to each reign.

We ſhall only obſerve, that in the long reign of Geo. II. there was coined as follows, viz.

By WEIGHT.				By TALE.			
lb.	oz.	dwt.	grs.	l.	s.	d.	
249,592	7	12	21	11,662,215	19	3	Gold
98,180	9	6	0	304,360	8	0½	Silver
Total value coined in the reign of Geo. II.				11,966,576	7	3½	

TEA is diſtinguiſhed in name as it differs in colour, flavour, and ſize of the leaf. The chief of ſeveral ſorts are, however, the leaves of the ſame tree, only differing according to the ſeaſons at which they are gathered, and the manner of the drying. To enumerate the ſeveral ſub-diſtinctions were endleſs: the general diviſion is into three kinds; the ordinary green tea, the finer green tea, and the bohea: to one or other of theſe, all the other kinds may be referred. See the article BOHEA, where the nature and qualities of India teas are deſcribed at large.

REMARKS.

Tea being an article of very great conſumption in theſe dominions, and the ſmuggling thereof proving an extraordinary detriment to the PUBLIC REVENUE, a committee of the honourable houſe of commons was appointed in the year 1745, to inquire into the cauſes of the moſt infamous practice of ſmuggling, and conſider of the moſt effectual method to prevent the ſaid practice, and to report their opinion therein to the houſe; and this committee having examined into ſome of the cauſes of the ſaid practice, and conſidered of methods for prevention thereof, came to the following reſolutions, in conſequence of the evidence that was laid before them.

Reſolved, That it is the opinion of this committee, That the high duties charged upon teas and other commodities, have been one cauſe of the infamous practice of ſmuggling.

Reſolved, That it is the opinion of this committee, That the act of indemnity paſſed in the laſt ſeſſion of parliament, for perſons guilty of the infamous practice of ſmuggling, was not extenſive enough for the pardon of ſeveral perſons therein concerned.

Reſolved, That it is the opinion of this committee, That the not effectually proſecuting owners of veſſels uſed in carrying on the pernicious practice of ſmuggling, is another cauſe of that infamous practice.

Reſolved, That it is the opinion of this committee, That the expoſing to ſale the boats, and other veſſels taken from perſons carrying on the practice of ſmuggling, by means of which, ſuch boats or veſſels are often bought by the ſame or other perſons carrying on the ſame pernicious practice, is another cauſe of the continuance, and an encouragement of ſmuggling.

Reſolved, That it is the opinion of this committee, That the eaſy compoſition of the penalties incurred by perſons convicted of running, or being concerned with others in running, landing, or diſpoſing of uncuſtomed goods, is another cauſe of the ſaid pernicious practice.

Reſolved, That it is the opinion of this committee, That the want of proper penalties and puniſhment to be inflicted upon officers of the exciſe and cuſtoms for neglect of duty, or miſbehaviour in their reſpective offices, is another cauſe of the ſaid pernicious practice.

Reſolved, That it is the opinion of this committee, That lowering the duties on tea, and other commodities, would be one means to prevent the ſaid pernicious practice.

Reſolved, That it is the opinion of this committee, That a general act of indemnity to all perſons guilty of any crimes againſt the laws for preventing the running uncuſtomed goods, (except ſuch as have been guilty of murder) will be one other means to put a ſtop to the infamous practice of ſmuggling.

Reſolved, That it is the opinion of this committee, That the burning the boats and other veſſels belonging to, and taken from perſons concerned in the infamous practice of ſmuggling, will be one other means to prevent the ſaid practice.

Reſolved, That it is the opinion of this committee, That the compelling ſeamen and ſeafaring men taken on board any ſhip or veſſel employed in running uncuſtomed goods, or otherwiſe concerned in landing or diſpoſing of the ſame, to ſerve for a certain time on board his Majeſty's ſhips of war, would be one other means to prevent the infamous practice of ſmuggling.

Reſolved, That it is the opinion of this committee, That the giving a reward for the diſcovering and apprehending all ſuch perſons who have followed the infamous practice of ſmuggling either by ſea or land, or as riders, would be another means for putting an end to the infamous practice of ſmuggling.

Reſolved, That it is the opinion of this committee, That the incapacitating all perſons who ſhall hereafter be convicted of running uncuſtomed goods, for voting at elections for members of parliament, will be a means of preventing the infamous practice of ſmuggling.

Reſolved, That it is the opinion of this committee, That the proſecuting ſuch ſubjects of his Majeſty as ſhall reſort to the ports of France, and carry with them intelligence in time of war, as guilty of high treaſon, would be another means of preventing ſmuggling.

This committee of the houſe of commons, appointed at the beginning of the ſeſſions 1745, to inquire into the ſtate of ſmuggling, was brought about by the inceſſant application of the right honourable Stephen Theodore Janſſen, Eſq; late lord mayor of the city of London, and now chamberlain of the ſaid city. In conſequence of which, an act for the reduction of the tea-duty to one half of what it was before, paſſed; and this took place according to the plan formed by that zealous patriot for this purpoſe; which act took place at

Midſummer 1745, to the prodigious increaſe of the public revenue, as will appear by the following particulars.

The act for reducing the tea-duty commenced the 24th of June, 1745. Before this period, the revenue ariſing from tea had been gradually ſinking from 200,000 l. per annum, to about 140,000 l. which laſt ſum aroſe from about 600,000 lb. weight only of tea, which then paid duty.

The preſent ſtate of the revenue, from the great effects of this act, ſtands thus:

	lb. of tea.	Exciſe.	Cuſtom.	
1746	1,900,000	l. 200,000	l. 28,000	
1747	2,000,000	210,000	28,000	
1748	2,600,000	280,000	50,000	Here com-
1749	2,700,000	280,000	50,000	menced
1750	2,700,000	280,000	50,000	the 5 per
1751	2,800,000	310,000	58,000	cent. on
1752	3,000,000	315,000	58,000	dry goods.
1753	3,200,000	325,000	58,000	
		l. 2,200,000	l. 380,000	

l. 2,200,000 total exciſe.
380,000 total cuſtom.

2,580,000
1,120,000 deduct for 8 years, at [140,000 l. per ann.

Benefit by the act 1745, l. 1,460,000

TEA

So that the revenue has been benefited by this act, in eight years, 1,460,000 l. excepting only the 5 per cent. on dry goods, which took place in 1747-8; beſides which, the India company, previous to this act, ſold barely the cargoes of three tea-ſhips annually, whereas they now ſell the cargoes of ſeven tea-ſhips annually, for the leaſt; and if the company receives no benefit from this, it muſt be admitted that their navigation is increaſed, by ſo much, thereby.

The aboveſaid ſaving to the revenue having prevented the laying on of additional taxes, manifeſts the important ſervices that the late right honourable the lord mayor of London has really done, in this reſpect, for theſe kingdoms; and which, it is to be hoped, will neither be forgot by the kingdom in general, or by the government in particular: and to what this ANNUAL SAVING to the nation may amount, in a long courſe of years, is not eaſy to ſay.

Nor is this the only advantage which has accrued to the nation from the indefatigable endeavours of this illuſtrious magiſtrate; it is an experimental confirmation of the truth of two of the principal reſolutions of the aforeſaid committee, viz. 1. That it is the opinion of the committee, That the HIGH DUTIES charged upon teas and other COMMODITIES have been one cauſe of the infamous practice of ſmuggling. 2. That it is the opinion of this committee, That LOWERING THE DUTIES on teas, and other commodities, would be one means to prevent the ſaid pernicious practice.

What other eminent ſervices this honourable gentleman has really done, and has attempted ſtill further to do, for the benefit of the commerce of theſe kingdoms, ſee our articles LINEN, and SMUGGLING.

Mr Alderman Janſſen having, ſince the laſt edition of this work, publiſhed the Reports of the Committee of the Honourable Houſe of Commons, concerning SMUGGLING, together with the following account of the Tea-trade, ſhewing in one view the whole ſtate of the tea importation, conſumption and revenue, from Midſummer 1745, (when the reduction of two ſhillings per pound took place) to New Chriſtmas, 1763; we think it uſeful to introduce the ſame as it ſtands, viz.

TEA Imported by the EAST-INDIA Company, for Twelve Years before the Act paſſed for the Reduction of Exciſe upon TEA, commencing at Midſummer 1745.

From Chriſtmas 1733 to Chriſtmas	1734	720,900 lb.	1740	1464,700 lb.	
	1735	584,100	1741	1261,400	
	1736	635,300	1742	1760,600	
	1737	1648,100	1743	1645,500	
	1738	1041,860	1744	725,700	
	1739	1974,600	1745	882,800	
Total importation for twelve years before the reduction					14,345,560 lb.
Making for the medium of one year's importation					1,195,464

TEA Imported by the Eaſt-India Company, for Seventeen Years ſince the Act paſſed for the Reduction of Exciſe upon TEA, commencing at Midſummer 1745.

From Chriſtmas 1745 to Chriſtmas	1746	2,013,900 lb.	1758	2,795,130 lb.		
	1747	5,213,100		775,000	Embden ſhip	
	1748	3,865,000		156,600	From Holland.	
	1749	2,324,100		210,296	Do. private perſons.	
	1750	4,730,410	1759	3,403,800		
	1751	2,852,870	1760	6,199,300		
	1752	3,109,100		1,079,600

			£58,384,990		£ 2,824,383		£ 3,221,644			£ 2,538,647		

For theſe nine years the average of the Eaſt-India Company's ſale at the candle is here computed at 4 ſhillings per pound certain, which at 25 per cent. is equal to 1 ſhilling per pound.

* This year the tax of 5 per cent. took place, upon dry goods.

** This year the further tax of 5 per cent. upon dry goods, took place at New Lady-day, amounting, with the former cuſtom upon tea, to ſomewhat above 24½ per cent.

N. B It is not pretended that the above account is ſo nicely accurate, as if taken out of the exciſe and cuſtom-houſe books; but a good deal of pains has been taken to bring the ſame to as great an exactneſs as it is poſſible without ſuch peruſal. And, at all events, the reader will be ſufficiently able to judge of the good effects of the Act in queſtion.

Neat receipt of exciſe and cuſtom upon tea, for ſeventeen years and a half, ſince the reduction	£ 8,584,674
Making for the medium of one year	490,553
Exceeding the medium of one year's neat receipt (being 175,222 l. as above) before the reduction (is for 17½ years 5,518,292 l.)	315,331

TEA exported for FOUR YEARS.

From April 1754 to April	1755	—	135,926 lb.	to Ireland	135,241 lb.	to America
	1756	—	101,833	Do.	108,630	Do.
	1757	—	105,140	Do.	89,269	Do.
	1758	—	105,533	Do.	156,621	Do.

Total Exportation, to Ireland and America for four years	lb. 938,193
Making for the medium of one year's exportation	234,548

OBSERVATIONS on the above.

1. THIS experimental trial upon the article of tea, was the firſt of the kind, of any material conſequence, which was ever made to prove, That the lowering of a high duty upon an article of conſumption hath conſiderably advanced the produce of the public revenue upon ſuch article, by occaſioning the ſurpriſing general increaſe of its conſumption.

2. It ſhews, That a foreign commodity, even of a luxurious nature, may become a general article of conſumption, and be rendered faſhionable and habitual, amongſt all ranks and degrees of people, in conſequence of reducing a high duty thereon to a moderate one, and thereby augment the revenue, in proportion to the general augmentation of the conſumption of ſuch foreign commodity.

3. It indicates, the next degree to a demonſtration, that duties upon commodities may be ſtrained to ſo high a pitch, as to cauſe a general diminution in the conſumption, and conſequently to occaſion a proportionable diminution in the public revenue, which uſed to ariſe from the high duty. It excites the unfair trader to act in concert with the ſmuggler, and the latter to hazard his life to reap the advantage which ſo great a temptation lays before him. It induces the conſumer to enter into a cloſe connection with the ſmuggler, in order to come at the commodity, which faſhion and pride have made neceſſary to him, ſince his pocket cannot otherwiſe reach it.

4. It proves, that the revenue has been increaſed, by lowering the former high duty; and that to a ſum ſo conſiderable, as above FIVE MILLIONS AND A HALF STERLING: That the Eaſt India Company, computing their profit on teas at one ſhilling on the pound, has gained above TWO MILLIONS SIX HUNDRED THOUSAND POUNDS STERLING thereby; and, That the nation in general has been proportionable gainers, by the extra increaſe of its navigation.

5. It proves, That the price of teas has fallen ſo very conſiderably, in conſequence of the government's adopting this plan, That the cuſtom of tea-drinking has, ſince, become univerſal throughout the kingdom, amongſt all degrees of people; That the ſmuggling of this article is greatly abated; and, That a ſurpriſing increaſe in the conſumption of ſugars has enſued, to the great improvement of the ſugar colonies, as well as the great increaſe of the revenue, by the duty on ſugars: and all theſe conſequences have naturally attended an increaſe in the conſumption of teas; chiefly and principally owing to the lowering the high duty thereon.

It muſt be obſerved, however, That the total increaſe in the revenue ariſing upon tea, from Midſummer 1745 to New Chriſtmas 1763, as above repreſented, is not wholly to be aſcribed to the reducing the exciſe duty upon tea at that period; the laſt ſubſidies of 1747 and 1759, which have taken place ſince, contributing about SIX HUNDRED THOUSAND POUNDS to the above increaſe; and this ſum has been gained by the revenue in the additional increaſe of the conſumption of ſugars, which has gone hand in hand with that of teas.——But to the produce of the two laſt ſubſidies, the propoſer of the plan for reducing the exciſe upon teas in 1745 lays no fort of claim.

LONDON, March, 1763. STEPH. THEOD. JANSSEN.

TIN is a white ſhining metal, containing a certain blueneſs; it is of ſo pliable a nature, that it may be bent into any form: as to hardneſs, it is between ſilver and lead, ſofter than the former, but conſiderably harder than the latter, and is the lighteſt of all metals: its weight to gold, by computation, is as 3 to 8, and ſomething more.

REMARKS.

For the methods of aſſaying and ſmelting this metal, ſee the articles ASSAY and SMELTING; ſee alſo METALLURGY, ORE, MINERALOGY.

TOBACCO. The manner of planting and ordering tobacco in Virginia is thus: in the twelve days they begin to ſow the ſeed in beds of fine mould, and when the plants be grown to the breadth of a ſhilling, they are fit to replant into the hills: for in their plantations they make ſmall hills, about four feet diſtant from each other, ſomewhat after the manner of our hop-yards. Theſe hills being prepared againſt the plants be grown to the forementioned bigneſs (which is about the beginning of May), they then, in moiſt weather, draw the plants out of their beds, and replant them in the hills, which afterwards they keep with diligent weedings. When the plant hath put out ſo many leaves as the ground will nouriſh to a ſubſtance and largeneſs that will render them merchantable, then they take off the top of the plant: if the ground be very rich, they let a plant put out 12 or 16 leaves before they top it; if mean, then not above 9 or 10, and ſo according to the ſtrength of their ſoil: the top being taken off, the plant grows no bigger; but afterwards it will put out ſuckers between their leaves, which they pluck away once a week, 'till the plant comes to perfection, which it doth in Auguſt: then in dry weather, when there is a little breeze of wind, they cut down what is ripe, letting it lie about four hours on the ground, 'till ſuch time as the leaves, that ſtood ſtrutting out, fall down to the ſtalk; then they carry it on their ſhoulders into their tobacco-houſes, where other ſervants taking it, drive into the ſtalk of each plant a peg, and, as faſt as they are pegged, they hang them up by the pegs on tobacco-ſtalks, ſo nigh each other, that they juſt touch, much after the manner they hang herrings in Yarmouth. Thus they let them hang five or ſix weeks, 'till ſuch time as the ſtem in the middle of the leaf will ſnap in the bending of it; then, when the air hath ſo moiſtened the leaf as that it may be handled without breaking, they ſtrike it down, ſtrip it off the ſtalk, bind it up in bundles, and pack it into hogſheads for uſe.

Sometimes they are forced to plant their hills twice or thrice over, by reaſon of an earth-worm, which eats the root; and when the plant is well grown, they ſuffer damage by a worm that devours the leaf, called a horn-worm (an eruca, or canker-worm) which is bred upon the leaf; if theſe worms be not carefully taken off, they will ſpoil the whole crop.

In the year 1667, in Auguſt, there happened all over Virginia a guſt, or ſtorm, of wind and rain, which continued for three days with ſuch violence, that the like was hardly ever heard of. It began, and continued blowing, at eaſt, with ſuch fierceneſs, that above one half of their crop of tobacco, which was then ſtanding in their fields, was blown away, and torn to pieces: the trees in the woods, all over the country, were blown up by the roots, in innumerable quantities; the waters in the bay, in ſome places, were drove a great way into the woods, and the greateſt part of thoſe that houſed tobacco, had their tobacco-houſes blown down, and their tobacco ſpoiled: ſo that there was not fully one part of three ſaved of what would have been made that year.

The planters houſes are built all along the ſides of the rivers, for the conveniency of ſhipping: they build after the Engliſh manner, whitening the inſide of their houſes with mortar, made of burnt oyſter-ſhells, inſtead of lime.

They have pure and wholeſome water, which they fetch wholly from ſprings, whereof the country is ſo full, that there is not a houſe but hath one nigh the door.

The laws relating to tobacco are at the end of Letter T, on the Buſineſs of the Cuſtoms.

REMARKS.

By a pretty exact computation made a few years ſince, there is annually imported into Great-Britain, between 60 and 70,000 hogſheads of tobacco: we will ſuppoſe 66,000, two-thirds of which are re-exported to France, Germany, Holland, &c. ſo that there remain for home conſumption 22,000 hogſheads; the duties whereof, reckoned at 15 l. per hogſhead (at which in moſt caſes they may be computed) will amount to 330,000 l. Now there is not much above one half of that ſum which comes annually into the Exchequer; ſo that there has been manifeſtly loſt to the public revenue, about 165,000 l. by the frauds at importation, re-exportation, and by bonding the duties.

This is upon ſuppoſition that no part of the 44,000 hogſheads which are exported, was run or re-landed from DUNKIRK, and the iſles of GUERNSEY, JERSEY, and MAN, into ENGLAND, SCOTLAND, and IRELAND, as has evidently appeared to have been the caſe. But, if to this we add only $\frac{1}{8}$ part of what is exported to be re-landed or run (as that, at leaſt, has been ſhewn to be the caſe) there is an additional loſs to the revenue of 75,000 l. more, which ſums together make 240,000 l. See the articles MAN [ISLE of MAN,] SCOTLAND, and SMUGGLING.

To prevent ſuch diſadvantages to the public revenue, which ariſe from this pernicious and deteſtable practice, the expedient which ſeems the moſt eligible is, the ſame that has been ſucceſsfully tried in relation to tea, viz. that of LOWERING THE DUTIES [ſee the article TEA], for it has appeared with reſpect to the article of tea, that in proportion as the temptation to ſmuggling has abated, the leſs detriment has the public revenue ſuſtained. And why the like experiment made upon tobacco may not have the ſame good effect, cannot be proved 'till it be effectually tried. See our article SCOTLAND.

Tobacco being a bulky commodity, gives great employment for our ſhipping, and therefore is a branch of trade that cannot be too much encouraged and protected; eſpecially ſo, ſince our dear friends the French ſeem at preſent to be ſeized with a wonderful longing to eaſe us of the trouble and expence of ſupporting our tobacco colonies any longer. See our article PLANTATIONS, and ſuch others as are from thence referred to.

TRADE.

Some MAXIMS relating to TRADE, that ſhould ſeem to be confirmed in the courſe of this work.

I. That the laſting proſperity of the landed intereſt depends upon foreign commerce. See our article LANDED INTEREST.

II. That the increaſe of the wealth, ſplendor, and power of Great-Britain and Ireland, depend upon exporting more in value of our native produce and manufactures, than we import of commodities from other nations, and bringing thereby money into the kingdom, by the means of freight by ſhipping. See our article BALLANCE of TRADE, and REMARKS on the article FREIGHT.

III. That domeſtic and foreign trade, as they are the means of increaſing the national treaſure, of breeding ſeamen, and of augmenting our MERCANTILE and ROYAL NAVIES, they neceſſarily become the means of our permanent proſperity, and of the ſafety and preſervation of our happy conſtitution. See the articles SEA DOMINION, NAVAL AFFAIRS, SEAMEN, SHIPPING.

IV. That the conſtant ſecurity of the PUBLIC CREDIT, and the payment of intereſt and principal of the public creditors, depend upon the proſperous ſtate of our trade and navigation, and not upon any crafty and chimerical expedients. See the articles CREDIT [PUBLIC CREDIT], DEBTS [NATIONAL DEBTS], FUNDS, MONIED INTEREST.

V. That gold and ſilver is the meaſure of trade, and that they are a commodity, and may be exported, eſpecially in foreign coin, or bullion, as well as any other commodity. See our articles BULLION, COIN, MONEY, EAST-INDIA TRADE in general, EAST-INDIA COMPANY, PEGU, SIAM, and ſuch other articles as we have referred to from the concluſion of the article SILVER, as having an affinity with theſe political points.

VI. That the increaſe of trade and navigation greatly depends, not only upon the increaſe of huſbandry and agriculture, but alſo on the increaſe of ingenious working artiſts of every kind, in order to improve the perfection and delicacy of our OLD MANUFACTURES, and to diſcover ſuch NEW TRADES and MANUFACTURES, as will enable us, at leaſt, to keep pace in wealth and power with our rival nations, if we cannot go beyond them. See our articles AGRICULTURE, HUSBANDRY, MANURE, LANDED INTEREST, ARTIFICERS, MECHANICAL ARTS, MANUFACTURERS, TAPESTRY.

VII. That the ſupport of a conſtant ſucceſſion of TRADING ARTISTS amongſt us of every claſs, greatly depends upon due public encouragement. See the beforementioned articles, and alſo that of CLOTH.

VIII. That the ſupport of a conſtant ſucceſſion of ingenious trading artiſts, generally depends upon the improvements made from time to time in uſeful philoſophy. See our articles CHYMISTRY, PHILOSOPHY-EXPERIMENTAL, ROYAL SOCIETY of LONDON, and divers other articles.

IX. That the conſtant proſperity of our trade and navigation, greatly depends upon the introducing into this nation various wiſe and neceſſary eſtabliſhments and practices for their regulation and encouragement, that other nations have adopted, and we ſeem equally to ſtand in need of. See our article CHAMBER of COMMERCE, with our REMARKS thereon, SEAMEN, for a voluntary regiſter of them, ſo to encourage this body of men, that the arbitrary and diſagreeable practice of preſſing theſe brave fellows may be laid aſide, and the ROYAL NAVY never want hands upon any ſudden emergency. See alſo the articles CANDIDATE, ASPHALTUM, CONSULS, FACTORS, DANCING-

MASTER, DIRECTION-CHAMBER, DIRECTOR of TRADING COMPANIES in FRANCE, INDIA-HOUSE of SPAIN, PAINTING, PAPER-TREE, PATENTS, PORCELAIN [REMARKS thereon], LEVANT TRADE, FRENCH AMERICA, FRENCH AFRICAN TRADE and COMPANY, FRANCE, MEDAL, NAVAL AFFAIRS, SEA DOMINION, SEA BRITISH, SHIPPING.

X. That the conſtant ſupport of our trade and navigation, greatly depends upon the judgment, ſkill, and addreſs, of our BRITISH MERCHANTS and TRADERS in general; and to that end, the courſe of their education, more eſpecially of the former, ſhould be no way inferior to that of any claſs of men in the community. See our article of MERCANTILE COLLEGE.

XI. That the conſtant proſperity of our trade and navigation, greatly depends upon the knowlege thereof, as founded upon national principles, which the Britiſh nobility and gentry ſhall obtain, in order wiſely to regulate the ſame at all times in their legiſlative capacity, for the true intereſts of the kingdom in general. See our article PARLIAMENT [MEMBER of PARLIAMENT.]

XII. That the conſtant proſperity of our trade and navigation, greatly depends upon the knowlege therein, that our miniſters abroad as well as at home ſhall have, in order conſtantly to communicate to the court of England, ſuch matter on commercial affairs, as may procure to their country all advantages in relation thereto, as times and occaſions may happily offer. See our articles CONSUL, COUNCIL of COMMERCE, MARITIME or MARINE AFFAIRS, TREATIES of COMMERCE.

XIII. That as many, and as great eſtates and honours and dignities, have been acquired by the practical arts and political knowlege of commerce, as by any other means whatſoever. See our article COMMERCE.

XIV. That the conſtant proſperity of our trade and navigation, greatly depends on the wiſe regulation of our TAXES, MONEY-AFFAIRS, and the preſervation of the PUBLIC CREDIT; and that ſuch knowlege cannot be obtained, without a due knowlege of trade, as founded on national principles. See the articles REVENUE and TAXES, and ſuch other heads as we refer to therefrom. See alſo the articles CREDIT [PUBLIC CREDIT], DEBTS, [NATIONAL DEBTS], FUNDS, MONEY, MONIED INTEREST.

XV. That the conſtant proſperity of our trade and navigation, depends upon being able to ſell our native produce and manufactures as CHEAP, and as good in QUALITY, in foreign countries, as our trading competitors can afford to do; and that this depends upon the due regulation of our TAXES, and the cultivation of LAND. See our articles DUTIES, EXPORTATION, LABOUR, MANURE, and ſuch other, as we have referred to occaſionally upon this topic throughout our work.

XVI. That the conſtant proſperity of our trade and navigation, depends upon a well-grounded knowlege in political arithmetic; and that depends upon a right knowlege in commercial affairs, the public revenues, and the policy, eſpecially in regard to the trade and money-affairs of foreign nations, and well-timed treaties of commerce. See our articles POLITICAL ARITHMETIC, PEOPLE, POOR, REVENUE, TAXES, TREATIES of COMMERCE.

XVII. That the proſperity of our trade and commerce may be greatly promoted, by encouraging the ſtudy thereof at our UNIVERSITIES, as has been lately done at CAMBRIDGE, by that eminent patriot the late right honourable lord viſcount Townſhend; and alſo by proper private aſſociations to promote the ſame, as has been ſo laudably begun of late in this kingdom. See our article ROYAL SOCIETY of LONDON, with a brief account there of the Society of ARTS, MANUFACTURES, and COMMERCE.

XVIII. That the conſtant proſperity of our trade and navigation, greatly depends upon the knowlege of our country gentlemen in natural hiſtory, and ſuch uſeful philoſophy as we have recommended throughout this work. See our articles BOLE, CLAY, EARTH, FARMING, HUSBANDRY, MINERALOGY, &c. and divers other heads.

XIX. That the conſtant proſperity of our trade and navigation, and the ſupport of the public credit, greatly depends upon the ſuppreſſion of ſmuggling. See our articles MAN [ISLE of MAN], SMUGGLING, TEA, TOBACCO.

XX. That the conſtant proſperity of our trade and navigation, greatly depends upon the ſuppreſſion of the pernicious parts of the buſineſs of ſtock-jobbing, the diſcouragement of bubbles, and the upholding of no excluſive trading companies but ſuch as tend to promote navigation, and to bring a ballance of treaſure into the nation. See our articles ACTIONS, BUBBLES, SOUTH SEA COMPANY, STOCK-JOBBING; ſee alſo COMPANIES and MONOPOLY, and all the chief great foreign trading companies throughout Europe, whoſe hiſtories are briefly given in this work, in order to judge the better how far it may be neceſſary for this kingdom to preſerve, regulate, or annihilate, particular trading corporations.

XXI. That the conſtant proſperity of our trade and navigation, greatly depends upon increaſing the trade of the nation to the utmoſt, between the mother-country and her colonies and plantations in America. See AMERICA, BRITAIN [GREAT-BRITAIN], BRITISH AMERICA, NAVAL STORES, FRENCH AMERICA, SPANISH AMERICA, PORTUGUEZE AMERICA, and all our articles relating to the commerce of Africa.

XXII. That the conſtant proſperity of our trade and navigation, greatly depends upon reſtraining the anti-treaty and unjuſtifiable encroachments of France and Spain on our trade and colony-poſſeſſions; as well in Europe as in America. See, beſides the preceding articles, thoſe of COLONIES, FRANCE, and PLANTATIONS; the latter of which diſplays the perfidy of France to all Europe for this century paſt; and the article FRANCE ſhews how ſteadily that nation has purſued the point of univerſal monarchy, and what ſtrides they have already made thereto, which ſeem to be too little attended to.

XXIII. That the conſtant proſperity of our trade and navigation, greatly depends upon Great-Britain's preſerving a conſtant friendſhip and good underſtanding with the United Provinces, and the preſerving to them a good barrier againſt FRANCE. See our articles FLANDERS, FISHERIES, HOLLAND, NETHERLANDS, and UNITED PROVINCES.

XXIV. That the conſtant proſperity of our trade and navigation, greatly depends upon taking leſs of the produce and manufactures of other nations, as they decline in the importation of our's, and in the taking more of the produce of thoſe countries which increaſe in their imports of our produce and manufactures. See the articles EXPORTATION, IMPORTATION, and SPAIN.

XXV. That the conſtant proſperity of our trade and navigation, greatly depends upon keeping up ſuch a naval power as is able to break the meaſures of France and Spain, or any other potentates, when they are calculated to injure us; and the way to do that effectually, is to deſtroy their trade by ſea, and their royal navies, as we did thoſe of Spain in the year 1718. See the articles NAVAL AFFAIRS, SEA DOMINION, SEA BRITISH.

XXVI. That the conſtant proſperity of trade to our American colonies, greatly depends upon ſecuring NOVA SCOTIA in particular, as a barrier on one ſide to our moſt northern colonies on the continent, and to maintain a dignity and alliance among the Indian nations, as alſo to take CAPE BRETON again out of the hands of France, and deprive them of all ſhare in the Newfoundland fiſheries: and alſo to ſecure and promote, on the other ſide, againſt both France and Spain, the colony of GEORGIA. [See our article BRITISH AMERICA.] Which has been done by the TREATY OF PEACE made in 1763. See AMERICA, FLORIDA, CANADA, and NEWFOUNDLAND.

XXVII. That the conſtant proſperity of the trade of our ſugar colonies, greatly depends on their being always in a condition to prevent a ſurprize from France, as was attempted in the year 1706, and is likely ſoon to be ſo again. That their preſervation depends greatly on ſecuring to ourſelves the poſſeſſion of the NEUTRAL ISLANDS, and annoying as much as poſſible the FRENCH SUGAR ISLANDS, eſpecially MARTINIQUE and HISPANIOLA. See our articles AMERICA, BRITISH AMERICA.

XXVIII. That the conſtant proſperity of the trade and navigation of our ſugar iſlands, greatly depends upon our deſtroying the FRENCH AFRICAN TRADE and ſettlements in Africa, and well fortifying our own ſettlements and factories in that part of the world, and extending the inland trade of Africa. See all our articles relating to the AFRICAN TRADE; and ſee alſo that of the EAST-INDIA COMPANY, wherein are ſuggeſted ſome meaſures, whereby that company might probably be made inſtrumental to the great increaſe of the African trade, and deſtructive of that of France, which is the grand ſupport of all the FRENCH SUGAR ISLANDS. See our articles ENGLISH AFRICAN COMPANY, and FRENCH AFRICAN COMPANY.

XXIX. That the ſecurity and improvement of our trade to ASIA, and the injury to that of FRANCE, would greatly depend upon our diſcovery of the NORTH-EAST PASSAGE to China and Japan; and that, as it is currently reported this diſcovery is very likely to be made by a worthy ſubject of the king of Great-Britain, at a trifling charge, it is certainly for the intereſt of the nation chearfully to encourage it, at the public expence; or the Eaſt-India company ſhould do it, for their own intereſt. See our article SIBERIA.

XXX. That the conſtant proſperity of our trade to ITALY, TURKEY, and the LEVANT, will ever depend on the preſervation of Gibraltar to the crown of Great-Britain. See our article MEDITERRANEAN.

XXXI. That the conſtant ſecurity of our trade to and from our ſugar colonies, and the effectual prevention of the SPANISH DEPREDATIONS IN AMERICA, in particular, will depend upon ſecuring to ourſelves ſome certain POSSESSIONS in America, which may prove of as much ſervice to the protection of our trade in that part of the world, as Gibraltar is to our Italian and Turkey trades.—But what poſſeſſions theſe are, I have had the honour to lay before the *******, whom I thought it my duty to apprize in time of a matter

of

of ſuch conſequence to his kingdoms, as being communicated to me from intelligence not to be doubted of.

XXXII. That the conſtant proſperity of the trade, and the permanent preſervation of the liberties, as well of the United Provinces as of Great-Britain itſelf, would be better ſecured than by any other poſſible means whatever, perhaps; provided that GREAT-BRITAIN and HOLLAND became ONE NATION and ONE PEOPLE, governed by ONE and the SAME SOVEREIGN, according to the conſtitution of England, and to poſſeſs and enjoy the ſame privileges of trade, navigation, and religion, as England does, and the Dutch to contribute to the ſupport of the Britiſh crown, in a proportion ſuitable to their abilities.

Let it be ſuppoſed, for a moment, that this was the caſe, the conſequence would be, that England and Holland, ſo happily united, might increaſe their ſtrength in ASIA to what degree they pleaſed, and keep all other European powers, and even the natives, ſo in ſubjection to them, as to oblige them to take a far greater quantity of our produce and manufactures than they do at preſent, &c.—This would give a new turn to the commerce over all ASIA.

Theſe united potentates might alſo increaſe their power in AFRICA to what degree they pleaſed, and keep the French and Portugueze there in what ſubjection they thought proper. This would contribute ſoon and effectually to the ruin of the French ſugar iſlands, which would of courſe fall into the hands of the maritime powers conjunctively. — Thus becoming maſters of the ſugar trade of the whole world, the wealth and power of both would ſo magnify, that the Proteſtant ſtates might bid defiance to all the oppoſition of France, or any united Catholic powers whatever.

The due exertion of the united ſtrength of theſe maritime potentates, would ſo ſtrengthen the power and intereſt of both in America, as to give law there to the Spaniard, as well as the French, and ever after prevent their inſults and depredations towards the trade and commerce of either.—This would tend to prevent war and bloodſhed hereafter, upon theſe occaſions. See our article VIRGINIA.

With regard to Europe, likewiſe, every one will at once ſee the weight and influence that ſuch a powerful union muſt have. Great-Britain and Holland would then be in a capacity to uphold and maintain, at their OWN EXPENCE, a ſufficient BARRIER for the ſupport and protection of the United Provinces againſt France, and any other combined powers. — Upon this ſuppoſition, the Proteſtant intereſt would have ſuch a formidable bulwark for its ſupport, that the whole Popiſh ſtrength joined to ſubvert it could never effect; and whatever conqueſt theſe Proteſtant maritime powers made in Popiſh countries, either in America, Aſia, or Africa eſpecially, NEED NEVER BE GIVEN UP, AS WE ARE NOW OBLIGED TO DO, AT THE CONCLUSION OF EVERY WAR, THAT FRANCE MIGHT NOT OVERRUN THE UNITED PROVINCES OF THE STATES GENERAL.

This, alſo, would for ever after ſave us the eternal expence of land wars in FLANDERS and GERMANY; for when a ſolid and impregnable barrier was once procured to the Dutch, and the marine of England and Holland were united, and conducted by ONE and the SAME SOVEREIGN, for their mutual ſafety and benefit, the creſt of France WOULD FOR EVER FALL, AND POPERY HAVE NO LONGER A CHANCE TO EXTIRPATE PROTESTANTISM AND LIBERTY FROM THE FACE OF THE WHOLE EARTH.

By this means, the fiſheries of Great-Britain and Holland in Europe and America would become common to both powers; the commerce and navigation of both would be daily increaſing, and none but ſuch Proteſtant powers as ſhould enter into their PROTESTANT CONFEDERACY, need have any ſhare ſcarce in the commerce of the world: and, as empire follows trade, trade would give the PROTESTANT INTEREST the empire of the globe, and gradually tend to extirpate Popery, tyranny, and ſlavery, from the face of the earth. And 'till that comes to be the caſe, GREAT-BRITAIN and HOLLAND, and all the PROTESTANT POWERS, will be ever liable to be diſtracted, and their governments ſubverted, by the machinations of FRANCE. See the article FRANCE, and the ſhocking treachery of that nation, in our REMARKS upon the article PLANTATIONS.

Meaſures of this kind would ſoon give a new turn to the affairs of the United Provinces; they would then truly become the High and Mighty States, inſtead of the Poor and Diſtreſſed, which may one day be their fate, if ſomething is not done to ſupport them effectually, againſt being overrun by France, when a war ſhall break out.

And if the States-General depend upon the ſupport only of Great-Britain, why ſhould not their dominions be annexed to the crown of Great-Britain? They have experienced that their own republican conſtitution is not built upon ſo ſolid a baſis as that of Great-Britain; the people do not enjoy ſo great a ſhare of liberty, nor ſo ſolid ſecurity for their property now, as they would do under their united government. And as to their religon, they will enjoy the ſame toleration under the government of the crown of England as they do at preſent. What hinders then but the wiſe and honeſt men of both ſtates ſhould think ſeriouſly of a matter of this high concernment to the mutual intereſt and happineſs of both? More eſpecially ſo, whilſt the POPISH POWERS are not only making PROTESTANT PRINCES converts to their religion, but daily erecting NEW MONARCHIES for their POPISH PRINCES, the more effectually to enſlave the world. It is, however, enough for me to ſtart the hare; let others hunt it, whom it more nearly concerns, and are well paid for ſo doing. See our articles FLANDERS, HOLLAND, NETHERLANDS, UNITED PROVINCES, and WAR.

REMARKS on our article TRADE ſince the laſt war, and the Definitive treaty of peace of 1763.

Our public debts and taxes having encreaſed by the laſt war to a degree of incredibility in ſo few years, did we not experience it; it becomes incumbent on us; it is indeed now indiſpenſably requiſite, that we ſhould augment our trade, and thereby ſo enrich the nation, as to be able to diſincumber ourſelves of a great part of our national debts and taxes, if we ſhall not be able to get rid of the whole. For if we do not, the immenſe weight of them will ſo impede, clog, and ſtagnate our whole commerce and navigation, as to give our competitors the opportunity to engroſs the whole of our foreign trade out of our hands; ſince they underſold us at moſt foreign markets before the laſt war, and are in a capacity to do it far more ſo than they were then.

If our domeſtic policy is ſuch, that we cannot ſoon leſſen the tax-incumbrances upon our whole trade, France in particular will pour in, by ſmuggling into Great-Britain, an inundation of their cheaper commodities and manufactures; which will inſenſibly deſtroy our own domeſtic trade, ſtarve our induſtrious manufacturers and artiſts, or draw them into their kingdom, to the unſpeakable enrichment of France, and improvement of Great-Britain. The ſame likewiſe will be done in our continental colonies; for while they can have French wares and manufactures from 15 to 40 per cent. cheaper than Engliſh, it is ridiculouſly weak to flatter ourſelves that our coloniſts will purchaſe Engliſh, when they can by any methods whatſoever obtain French. And it is to be feared, that the utmoſt efforts of the government will not be able much to leſſen ſmuggling either in Great-Britain, or in the continent of America; the coaſts being ſo extenſive, in both, though far more ſo in the one than the other, ſince our new acquiſitions in North America: much leſs ſhall we be able to ſuppreſs the infamous practice of ſmuggling in either. So contiguous alſo are our iſland colonies to thoſe of France, and ſo interwoven with them are our new-acquired ones, that France will moſt certainly run away with a great ſhare of the trade, which appertains to the Britiſh empire, by the ſame means of ſmuggling.

TREATIES of COMMERCE and NAVIGATION.

Under the article MARITIME, or MARINE AFFAIRS, we have given the ſubſtance of the moſt eſſential treaties which have had relation to the trade and navigation of the principal ſtates of Europe for above a century paſt: and having occaſionally cited divers others that have taken place ſince, and given the ſubſtance of them, we ſhall here give the reader thoſe together that have not been taken due notice of, as the neceſſity of our matter, or as the brevity of our articles in the dictionary required.

TREATY of NAVIGATION and COMMERCE between the moſt ſerene and moſt potent princeſs ANNE, by the grace of God, queen of Great-Britain, France, and Ireland, and the moſt ſerene and moſt potent prince LEWIS XIV, the moſt Chriſtian king: concluded at Utrecht the 31ſt day of March, O. S. 1713.

I. It is agreed and concluded between the moſt ſerene and moſt potent queen of Great-Britain, and the moſt ſerene and moſt potent the moſt Chriſtian king, That there ſhall be a reciprocal and intirely perfect liberty of navigation and commerce between the ſubjects on each part, through all and every the kingdoms, ſtates, dominions, and provinces, of their royal Majeſties in Europe, concerning all and ſingular kinds of goods in thoſe places, and on thoſe conditions, and in ſuch manner and form, as is ſettled and adjuſted in the following articles.

II. But that the commerce and friendſhip between the ſubjects of the aboveſaid parties may be hereafter ſecure, and free from all trouble and moleſtation, it is agreed and concluded, That if at any time any ill underſtanding and breach of friendſhip, or rupture, ſhould happen between the crowns of their royal Majeſties (which God forbid), in ſuch caſe, the term of ſix months ſhall be allowed after the ſaid rupture, to the ſubjects and inhabitants on each part, reſiding in the dominions of the other, in which they themſelves may retire, together with their families, goods, merchandizes, and effects, and carry them whither they ſhall pleaſe; as likewiſe, at the ſame time, the ſelling and diſpoſing of their goods,

both

both moveable and immoveable, ſhall be allowed them freely, and without any diſturbance; and, in the mean time, their goods, effects, wares, and merchandizes, and particularly their perſons, ſhall not be detained or troubled by arreſt or ſeizure; but rather, in the mean while, the ſubjects on each ſide ſhall have and enjoy good and ſpeedy juſtice, ſo that, during the ſaid ſpace of ſix months, they may be able to recover their goods and effects intruſted as well to the public, as to private perſons.

III. It is likewiſe agreed and concluded, That the ſubjects and inhabitants of the kingdoms, provinces, and dominions of each of their royal Majeſties, ſhall exerciſe no acts of hoſtility and violence againſt each other, either by ſea or land, or in rivers, ſtreams, ports, or havens, under any colour or pretence whatſoever; ſo that the ſubjects of either party ſhall receive no patent, commiſſion or inſtruction, for arming and acting at ſea as privateers, nor letters of reprizal, as they are called, from any princes or ſtates which are enemies to one ſide or the other; nor by virtue, or under colour of ſuch patents, commiſſions, or reprizals, ſhall they diſturb, infeſt, or any way prejudice or damage the aforeſaid ſubjects and inhabitants of the queen of Great-Britain, or of the moſt Chriſtian king; neither ſhall they arm ſhips in ſuch manner as is aboveſaid, or go out to ſea therewith. To which end, as often as it is required by either ſide, ſtrict and expreſs prohibition ſhall be renewed and publiſhed in all the regions, dominions, and territories of each party whatſoever, that no one ſhall in any wiſe uſe ſuch commiſſions, or letters of reprizal, under the ſevereſt puniſhment that can be inflicted on the tranſgreſſors, beſide reſtitution, and full ſatisfaction to be given to thoſe to whom they have done any damage; neither ſhall any letters of reprizal be hereafter granted, on either ſide, by the ſaid confederates, to the detriment, or diſadvantage of the ſubjects of the other, except in ſuch caſes only as juſtice is denied or delayed; to which denial or delay credit ſhall not be given, unleſs the petition of the perſon who deſires the ſaid letters of reprizal be communicated to the miniſter reſiding there on the part of the prince againſt whoſe ſubjects they are to be granted, that, within the ſpace of four months, or ſooner, if poſſible, he may evince the contrary, or procure the performance of what is due to juſtice.

IV. The ſubjects and inhabitants of each of the aforeſaid confederates ſhall have liberty freely and ſecurely, without licence or paſſport general or ſpecial, by land or ſea, or any other way, to go into the kingdoms, countries, provinces, lands, iſlands, cities, villages, towns, walled or unwalled, fortified or unfortified, ports, dominions, or territories whatſoever, of the other confederate in Europe, there to enter, and to return from thence, to abide there, or to paſs through the ſame; and, in the mean time, to buy and purchaſe, as they pleaſe, all things neceſſary for their ſubſiſtence and uſe: and they ſhall be treated with all mutual kindneſs and favour. Provided, however, that in all theſe matters they behave and comport themſelves conformably to the laws and ſtatutes, and live and converſe with each other friendly and peaceably, and keep reciprocal concord by all manner of good underſtanding.

V. The ſubjects of each of their royal Majeſties may have leave and licence to come with their ſhips, as alſo with the merchandizes and goods on board the ſame (the trade and importation whereof are not prohibited by the laws of either kingdom) to the lands, countries, cities, ports, places, and rivers, of either ſide in Europe, to enter into the ſame, to reſort thereto, to remain and reſide there, without any limitation of time; alſo to hire houſes, or to lodge with other people, and to buy all lawful kinds of merchandizes where they think fit, from the firſt workman or ſeller, or in any other manner, whether in the public market for the ſale of things, in mart-towns, fairs, or whereſoever thoſe goods are manufactured or ſold. They may likewiſe lay up and keep in their magazines and warehouſes, and from thence expoſe to ſale, merchandizes brought from other parts; neither ſhall they be in any wiſe obliged, unleſs willingly, and of their own accord, to bring their ſaid merchandizes to the marts and fairs, on this condition, however, that they ſhall not ſell the ſame by retail in ſhops, or any where elſe: but they are not to be loaded with any impoſitions or taxes on account of the ſaid freedom of trade, or for any other cauſe whatſoever, except what are to be paid for their ſhips and goods, according to the laws and cuſtoms received in each kingdom. And moreover they ſhall have free leave, without moleſtation, to remove themſelves, and, if they happen to be married, their wives, children, and ſervants, together with their merchandizes, wares, goods, and effects, either bought or imported, whenſoever and whitherſoever they ſhall think fit, out of the bounds of each kingdom, by land and by ſea, on the rivers and freſh waters, diſcharging the uſual duties, notwithſtanding any law, privilege, grant, immunity, or cuſtom, in any wiſe importing the contrary. But, in the buſineſs of religion, there ſhall be an intire liberty allowed to the ſubjects of each of the confederates, as alſo, if they are married, to their wives and children; neither ſhall they be compelled to go to the churches, or to be preſent at the religious worſhip in any other place: on the contrary, they may, without any moleſtation, perform their religious exerciſes after their own way, although it be forbid, by the laws of the kingdom, privately, and within their own walls, and without the admittance of any other perſons whatſoever. Moreover, liberty ſhall not be refuſed to bury the ſubjects of either party, who die in the territories of the other, in convenient and decent places, to be appointed for that purpoſe, as occaſion ſhall require: and the dead bodies of thoſe who are buried ſhall be no ways moleſted. The laws and ſtatutes of each kingdom ſhall remain in full force, and ſhall duly be put in execution, whether they relate to commerce and navigation, or to any other right; thoſe caſes only being excepted, concerning which it is determined in the articles of this preſent treaty.

VI. The ſubjects of each party ſhall pay the tolls, cuſtoms, and duties of import and export, through all the dominions and provinces of either party, as are due and accuſtomed; and that it may be certainly known what are all the ſaid tolls, cuſtoms, and duties of import and export, it is likewiſe agreed that tables, ſhewing the cuſtoms, port-duties, and impoſts, ſhall be kept in public places, both at London, and in other towns within the dominions of the queen of Great-Britain, and at Roan, and other towns of France, where trading is uſed, whereto recourſe may be had, as often as any queſtion or diſpute ariſes concerning ſuch port-duties, cuſtoms, and impoſts, which are to be demanded in ſuch manner, and no otherwiſe, as ſhall be agreeable to the plain words and genuine ſenſe of the aboveſaid tables. And if any officer, or other perſon in his name, ſhall under any pretence, publicly or privately, directly or indirectly, aſk or take of a merchant, or of any other perſon, any ſum of money, or any thing elſe, on account of right, dues, ſtipend, exhibition, or compenſation, although it be under the name of a free gift, or in any other manner, or under any other pretence, more or otherwiſe than what is preſcribed above: in ſuch caſe, the ſaid officer or his deputy, if he be found guilty, and convicted of the ſame before a competent judge, in the country where the crime was committed, ſhall give full ſatisfaction to the party that is wronged, and ſhall likewiſe be puniſhed according to the direction of the laws.

VII. Merchants, maſters of ſhips, owners, mariners, men of all kinds, ſhips, and all merchandizes in general, and effects of one of the confederates, and of his ſubjects and inhabitants, ſhall, on no public or private account, by virtue of any general or ſpecial edict, be ſeized in any the lands, ports, havens, ſhores, or dominions whatſoever of the other confederate, for the public uſe, for warlike expeditions, or for any other cauſe, much leſs for the private uſe of any one; nor ſhall they be detained by arreſts, compelled by violence, or under any colour thereof, or in any wiſe moleſted or injured. Moreover, it ſhall be unlawful for the ſubjects of both parties to take any thing, or to extort it by force, except the perſon to whom it belongs conſent, and it be paid for with ready money; which, however, is not to be underſtood of that detention and ſeizure which ſhall be made by the command and authority of juſtice, and by the ordinary methods, on account of debt or crimes; in reſpect whereof the proceeding muſt be by way of law, according to the form of juſtice.

VIII. Furthermore it is agreed and concluded, as a general rule, That all and ſingular the ſubjects of the moſt ſerene queen of Great-Britain, and of the moſt ſerene and moſt Chriſtian king, in all countries and places ſubject to their power on each ſide, as to all duties, impoſitions, or cuſtoms whatſoever, concerning perſons, goods, and merchandizes, ſhips, freights, ſeamen, navigation and commerce, ſhall uſe and enjoy the ſame privileges, liberties, and immunities at leaſt, and have the like favour in all things, as well in the courts of juſtice as in all ſuch things as relate either to commerce, or to any other right whatever, which any foreign nation, the moſt favoured, has, uſes, and enjoys, or may hereafter have, uſe, and enjoy.

IX. It is farther agreed, That, within the ſpace of two months after, a law ſhall be made in Great-Britain, whereby it ſhall be ſufficiently provided, that no more cuſtoms or duties be paid for goods and merchandizes brought from France to Great-Britain, than what are payable for goods and merchandizes of the like nature imported into Great Britain from any other country in Europe; and that all laws made in Great-Britain ſince the year 1664, for prohibiting the importation of any goods and merchandizes coming from France, which were not prohibited before that time, be repealed; the general tariff made in France the 18th day of September, in the year 1664, ſhall take place again; and the duties payable in France by the ſubjects of Great-Britain, for goods imported and exported, ſhall be paid according to the tenor of the tariff abovementioned, and ſhall not exceed the rule therein ſettled, in the provinces whereof mention is there made, and in the other provinces the duty ſhall not be payable otherwiſe than according to the rule at that time preſcribed. And all prohibitions, tariffs, edicts, declarations, or decrees, made in France ſince the ſaid tariff of the year 1664, and contrary thereunto, in reſpect to the goods and merchandizes of Great-Britain, ſhall be repealed. But whereas it is urged, on the part of France, that certain merchandizes, that is to ſay, manufactures of wool, ſugar, ſalted fiſh, and the product of whales, be excepted out of the rule of the abovementioned

tariff, and likewiſe other heads of matters belonging to this treaty remain, which having been propoſed on the part of Great-Britain, have not yet been mutually adjuſted, a ſpecification of all which is contained in a ſeparated inſtrument, ſubſcribed by the ambaſſadors extraordinary and plenipotentiaries on both ſides: it is hereby provided and agreed, That, within two months from the exchange of ratifications of this treaty, commiſſaries on both ſides ſhall meet at London, to conſider of, and remove the difficulties concerning the merchandizes to be excepted out of the tariff of the year 1664, and concerning the other heads, which, as is above ſaid, are not yet wholly adjuſted. And at the ſame time the ſaid commiſſaries ſhall likewiſe endeavour (which ſeems to be very much for the intereſt of both nations) to have the methods of commerce on one part, and of the other, more thoroughly examined, and to find out and eſtabliſh juſt and beneficial means on both ſides, for removing the difficulties in this matter, and for regulating the duties mutually. But it is always underſtood and provided, that all and ſingular the articles of this treaty do, in the mean while, remain in their full force, and eſpecially that nothing be deemed, under any pretence whatſoever, to hinder the benefit of the general tariff of the year 1664, from being granted to the ſubjects of her royal Majeſty of Great-Britain, and the ſaid Britiſh ſubjects from having and enjoying the ſame, without any delay or tergiverſation, within the ſpace of two months after a law is made in Great-Britain, as aboveſaid, in as ample manner and form as the ſubjects of any nation, the moſt favoured, might have and enjoy the benefit of the aforeſaid tariff, any thing to be done or diſcuſſed by the ſaid commiſſaries to the contrary, in any wiſe notwithſtanding.

X. The duties on tobacco imported into France, either in the leaf or prepared, ſhall be reduced hereafter to the ſame moderate rate, as the ſaid tobacco of the growth of any country in Europe or America, being brought into France, does or ſhall pay. The ſubjects on both ſides ſhall alſo pay the ſame duties in France for the ſaid tobacco; there ſhall likewiſe be an equal liberty of ſelling it; and the Britiſh ſubjects ſhall have the ſame laws as the merchants of France themſelves have and enjoy.

XI. It is likewiſe concluded, That the impoſition, or tax, of 50 ſols Tournois laid on Britiſh ſhips in France for every ton, ſhall wholly ceaſe, and be from henceforward annulled. In like manner, the tax of 5 s. ſterling laid on French ſhips in Great-Britain for every ton, ſhall ceaſe; neither ſhall the ſame, or any the like impoſitions be laid hereafter on the ſhips of the ſubjects on either ſide.

XII. It is further agreed and concluded, That it ſhall be wholly free for all merchants, commanders of ſhips, and others the ſubjects of the queen of Great-Britain, in all places of France, to manage their own buſineſs themſelves, or to commit them to the management of whomſoever they pleaſe; nor ſhall they be obliged to make uſe of any interpreter or broker, nor to pay them any ſalary, unleſs they chuſe to make uſe of them. Moreover, maſters of ſhips ſhall not be obliged, in loading or unloading their ſhips, to make uſe of thoſe workmen, either at Bourdeaux or in any other places, as may be appointed by public authority for that purpoſe; but it ſhall be intirely free for them to load or unload their ſhips by themſelves, or to make uſe of ſuch perſons in loading or unloading the ſame as they ſhall think fit, without the payment of any ſalary to any other whomſoever; neither ſhall they be forced to unload any ſort of merchandizes, either into other ſhips, or to receive them into their own, or to wait for their being loaded longer than they pleaſe. And all and every the ſubjects of the moſt Chriſtian king ſhall reciprocally have and enjoy the ſame privileges and liberty in all places in Europe ſubject to the dominion of Great-Britain.

XIII. It ſhall be wholly lawful and free for merchants and others, being ſubjects either to the queen of Great-Britain, or to the moſt Chriſtian king, by will, or any other diſpoſition, made either during the time of ſickneſs, or at any other time, before or at the point of death, to deviſe or give away their merchandizes, effects, money, debts belonging to them, and all moveable goods, which they have or ought to have, at the time of their death, within their dominions, and any other places belonging to the queen of Great-Britain, and to the moſt Chriſtian king. Moreover, whether they die, having made their wills, or inteſtate, their lawful heirs and executors, or adminiſtrators, reſiding in either of the kingdoms, or coming from any other part, altho' they be not naturalized, ſhall freely and quietly receive and take poſſeſſion of all the ſaid goods and effects whatſoever, according to the laws of Great-Britain and France reſpectively; in ſuch manner, however, that the wills, and right of entering upon the inheritances of perſons inteſtate, muſt be proved according to law, as well by the ſubjects of the queen of Great-Britain, as by the ſubjects of the moſt Chriſtian king, in thoſe places where each perſon died, whether that may happen in Great-Britain or in France, any law, ſtatute, edict, cuſtom, or droit d'aubeine whatever, to the contrary notwithſtanding.

XIV. A diſpute ariſing between any commander of the ſhips of either ſide and his ſeamen, in any port of the other party, concerning wages due to the ſaid ſeamen, or other civil cauſes; the magiſtrates of the place ſhall require no more from the perſon accuſed, than that he give to the accuſer a declaration in writing, witneſſed by the magiſtrate, whereby he ſhall be bound to anſwer that matter before a competent judge in his own country: which being done, it ſhall not be lawful either for the ſeamen to deſert their ſhip, or to hinder the commander from proſecuting his voyage. It ſhall moreover be lawful for the merchants on both ſides, in the places of their abode, or elſewhere, to keep books of their accounts and affairs, as they ſhall think fit, and to have an intercourſe of letters in ſuch language or idiom as they ſhall pleaſe, without any moleſtation or ſearch whatſoever: but if it ſhould happen to be neceſſary for them to produce their books of accounts, for deciding any diſpute and controverſy, in ſuch caſe they ſhall be obliged to bring into court the intire books or writings, but ſo as that the judge may not have liberty to inſpect any other articles in the ſaid books; neither ſhall it be lawful, under any pretence, to take the ſaid books or writings forcibly out of the hands of the owners, or to retain them, the caſe of bankruptcy only excepted; neither ſhall the ſaid ſubjects of the queen of Great-Britain be obliged to write their accounts, copies of letters, acts, or inſtruments, relating to trade, on ſtamped paper, in French papier timbré, except their day-book, which, that it may be produced as evidence in any law-ſuit, ought, according to the laws, which all perſons trading in France are to obſerve, to be ſubſcribed gratis by the judge, and ſigned with his own hand.

XV. It ſhall not be lawful for any foreign privateers (not being ſubjects of one or of the other confederates) who have commiſſions from any other prince or ſtate in enmity with either nation, to fit their ſhips in the ports of one or the other of the aforeſaid parties, to ſell what they have taken, or in any other manner whatever to exchange either ſhips, merchandizes, or any other ladings; neither ſhall they be allowed even to purchaſe victuals, except ſuch as ſhall be neceſſary for their going to the next port of that prince from whom they have commiſſions.

XVI. The ſhips of both parties being laden, ſailing along the coaſts or ſhores of the other, and being forced by ſtorm into the havens or ports, or coming to land in any other manner, ſhall not be obliged there to unlade their goods, or any part thereof, or pay any duty, unleſs they do of their own accord unlade their goods there, or diſpoſe of any part of their lading: but it may be lawful to take out of the ſhip, and to ſell (leave being firſt obtained from thoſe who have the inſpection of ſea affairs) a ſmall part of their lading, for this end only, that neceſſaries, either for the refreſhment or victualling of the ſhip, may be purchaſed; and, in that caſe, the whole lading of the ſhip ſhall not be ſubject to pay the duties, but that ſmall part only which has been taken out and ſold.

XVII. It ſhall be lawful for all and ſingular the ſubjects of the queen of Great-Britain and the moſt Chriſtian king, to ſail with their ſhips with all manner of liberty and ſecurity, no diſtinction being made who are the proprietors of the merchandizes laden thereon, from any port to the places of thoſe who are now, or ſhall be hereafter at enmity with the queen of Great-Britain, or the moſt Chriſtian king. It ſhall likewiſe be lawful for the ſubjects and inhabitants aforeſaid, to ſail with the ſhips and merchandizes afore mentioned, and to trade with the ſame liberty and ſecurity from the places, ports, and havens of thoſe who are enemies of both or of either party, without any oppoſition or diſturbance whatſoever, not only directly from the places of the enemy, aforementioned, to neutral places, but alſo from one place belonging to an enemy to another place belonging to an enemy, whether they be under the juriſdiction of the ſame prince, or under ſeveral. And as it is now ſtipulated concerning ſhips and goods, that free ſhips ſhall alſo give a freedom to goods, and that every thing ſhall be deemed to be free and exempt, which ſhall be found on board the ſhips belonging to the ſubjects of either of the confederates, although the whole lading, or any part thereof, ſhould appertain to the enemies of either of their Majeſties, contraband goods being always excepted, on the diſcovery whereof matters ſhall be managed according to the ſenſe of the ſubſequent articles. It is alſo agreed, in like manner, that the ſame liberty be extended to perſons who are on board a free ſhip, with this condition, that although they be enemies to both or either party, they are not to be taken out of that free ſhip, unleſs they are ſoldiers, and in actual ſervice of the enemies.

XVIII. This liberty of navigation and commerce ſhall extend to all kinds of merchandizes, excepting thoſe only which follow in the next article, and which are ſignified by the name of contraband.

XIX. Under this name of contraband, or prohibited goods, ſhall be comprehended arms, great guns, bombs, with their fuzees, and other things belonging to them, fire-balls, gunpowder, match, cannon-ball, pikes, ſwords, lances, ſpears, halberds, mortars, petards, granadoes, ſalt-petre, muſkets, muſket-balls, helmets, head-pieces, breaſt-plates, coats of mail, and the like kinds of arms proper for arming ſoldiers,

muſket-

muſket-reſts, belts, horſes, with their furniture, and all other warlike inſtruments whatever.

XX. Theſe merchandizes which follow ſhall not be reckoned among prohibited goods; that is to ſay, all ſorts of cloths, and all other manufactures woven of any wool, flax, ſilk, cotton, or any other materials whatever; all kinds of cloaths and wearing apparel, together with the ſpecies whereof they are uſed to be made; gold and ſilver, as well coined as uncoined; tin, iron, lead, copper, braſs, coals; as alſo wheat and barley, with any other kind of corn and pulſe; tobacco, and likewiſe all manner of ſpices; ſalted and ſmoaked fleſh, ſalted fiſh, cheeſe and butter, beer, oils, wine, ſugars, and all ſorts of ſalt, and, in general, all proviſions which ſerve for the nouriſhment of mankind, and the ſuſtenance of life. Furthermore, all kinds of cotton, hemp, flax, tar, pitch, ropes, cables, ſails, ſail-cloths, anchors, and any part of anchors; alſo ſhip-maſts, plank, boards, and beams, of what trees ſoever, and all other things proper either for building or repairing ſhips; and all other goods whatever, which have not been worked into the form of any inſtrument or thing prepared for war, by land or by ſea, ſhall not be reputed contraband, much leſs ſuch as have been already wrought and made up for any other uſe; all which ſhall wholly be reckoned among free goods, as likewiſe all other merchandizes and things, which are not to be comprehended and particularly mentioned in the preceding article, ſo that they may be tranſported and carried in the freeſt manner by the ſubjects of both confederates, even to places belonging to an enemy, ſuch towns or places being only excepted, as are at that time beſieged, blocked up round about, or inveſted.

XXI. To the end that all manner of diſſentions and quarrels may be avoided and prevented on one ſide and the other, it is agreed, That, in caſe either of their royal Majeſties who enter into this alliance ſhould be engaged in war, the ſhips and veſſels belonging to the ſubjects of the other ally muſt be furniſhed with ſea-letters, or paſſports, expreſſing the name, property, and bulk of the ſhip, as alſo the name and place of habitation of the maſter and commander of the ſaid ſhip, that it may appear thereby that the ſhip really and truly belongs to the ſubjects of one of the princes; which paſſports ſhall be made out and granted according to the form annexed to this treaty. This ſhall likewiſe be recalled every year, that is, if the ſhip happens to return home within the ſpace of a year. It is likewiſe agreed, That ſuch ſhips being laden, are to be provided not only with paſſports, as abovementioned, but alſo with certificates, containing the ſeveral particulars of the cargo, the place whence the ſhip ſailed, and whither ſhe is bound; ſo that it may be known whether any forbidden or contraband goods as are enumerated in the 19th article of this treaty, be on board the ſame; which certificates ſhall be made out by the officers of the place whence the ſhip ſet ſail, in the accuſtomed form. And if any one ſhall think it fit or adviſeable to expreſs in the ſaid certificates the perſon to whom they belong, he may freely do ſo.

XXII. The ſhips of the ſubjects and inhabitants of both their moſt ſerene royal Majeſties, coming to any of the ſea-coaſts within the dominions of either of the confederates, but not willing to enter into port, or being entered, yet not being willing to ſhew or to ſell the cargoes of their ſhips, ſhall not be obliged to give an account of their lading unleſs they are ſuſpected, upon ſure evidence, of carrying to the enemies of the other confederate prohibited goods, called contraband.

XXIII. And in caſe of the ſaid manifeſt ſuſpicion, the ſaid ſubjects and inhabitants of the dominions of both of their moſt ſerene royal Majeſties ſhall be obliged to exhibit in the ports their paſſports and certificates, in the manner before ſpecified.

XXIV. But in caſe the ſhips of the ſubjects and inhabitants of both their moſt ſerene royal Majeſties, either on the ſea-coaſts or on the high ſeas, ſhall meet with the men of war of the other, or with privateers, the ſaid men of war and privaters, for preventing any inconveniencies, are to remain out of cannon-ſhot, and to ſend a boat to the merchant-ſhip which has been met with, and ſhall enter her with two or three men only, to whom the maſter or commander of ſuch ſhip or veſſel ſhall ſhew his paſſport, concerning the property thereof, made out according to the form annexed to this preſent treaty: and the ſhip which ſhall exhibit one ſhall have free paſſage, and it ſhall be wholly unlawful any way to moleſt her, ſearch, or compel her to quit her intended courſe.

XXV. But that merchant-ſhip of the other party which intends to go to a port at enmity with the other confederate, or concerning whoſe voyage, and the ſort of goods on board, there may be juſt ſuſpicion, ſhall be obliged to exhibit, either on the high ſeas or in the ports and havens, not only her paſſports, but her certificates, expreſſing that they are not of the kind of prohibited, which are ſpecified in the 19th article.

XXVI. But if one party, on exhibiting the above ſaid certificates, mentioning the particulars of the things on board, ſhould diſcover any goods of that kind, which are declared contraband or prohibited by the 19th article of this treaty, to be deſigned for a port ſubject to the enemy of the other, it ſhall be lawful to break up the hatches of that ſhip wherein the ſame ſhall happen to be found, whether ſhe belong to the ſubjects of Great-Britain or to France, to open the cheſts, packs, or caſks therein, or to remove even the ſmalleſt parcel of the goods, unleſs the lading be brought on ſhore, in the preſence of the officers of the court of admiralty, and an inventory thereof be made: but there ſhall be no allowance to ſell, exchange, or alienate the ſame in any manner, unleſs, after due and lawful proceſs has been had againſt ſuch prohibited goods, the judges of the admiralty reſpectively ſhall, by a ſentence pronounced, have confiſcated the ſame, ſaving always as well the ſhip itſelf, as the other goods found therein, which, by this treaty, are to be eſteemed free; neither may they be detained on pretence of their being, as it were, infected by the prohibited goods; much leſs ſhall they be confiſcated as lawful prize. But if not the whole cargo, but only part thereof, ſhall conſiſt of prohibited or contraband goods, and the commander of the ſhip ſhall be ready and willing to deliver them to the captor, who has diſcovered them, in ſuch caſe, the captor having received thoſe goods, ſhall forthwith diſcharge the ſhip, and not hinder her, by any means, freely to proſecute the voyage on which ſhe was bound.

XXVII. On the contrary it is agreed, That whatever ſhall be found to be laden by the ſubjects and inhabitants of either party, on any ſhip belonging to the enemy of the other and his ſubjects, the whole, although it be not of the ſort of prohibited goods, may be confiſcated, in the ſame manner as if it belonged to the enemy himſelf, except thoſe goods and merchandizes that were put on board ſuch ſhip before the declaration of war, or even after ſuch declaration, if ſo be it were done within the time and limits following; that is to ſay, if they were put on board ſuch ſhip in any port and place within the ſpace of ſix weeks after ſuch declaration, within the bounds called the Naze in Norway, and the Soundings; of two months, from the Soundings to the city of Gibraltar; of ten weeks in the Mediterranean Sea; and of eight months in any other country or place in the world: ſo that the goods of the ſubjects of either prince, whether they be of the nature of ſuch as are prohibited, or otherwiſe, which, as is aforeſaid, were put on board any ſhip belonging to an enemy before the war, or after the declaration of the ſame, within the time and limits aboveſaid, ſhall no ways be liable to confiſcation, but ſhall well and truly be reſtored, without delay, to the proprietors demanding the ſame; but ſo as that, if the ſaid merchandizes be contraband, it ſhall not be any ways lawful to carry them afterwards to the ports belonging to the enemy.

XXVIII. And that more abundant care may be taken for the ſecurity of the ſubjects of both their moſt ſerene royal Majeſties, that they ſuffer no injury by the men of war or privateers of the other party, all the commanders of the ſhips of the queen of Great-Britain and of the moſt Chriſtian king, and all their ſubjects, ſhall be forbid doing any injury or damage to the other ſide; and if they act to the contrary, they ſhall be puniſhed, and ſhall moreover be bound to make ſatisfaction for all cauſe of damage, and the intereſt thereof, by reparation under the bond and obligation of their perſons and goods.

XXIX. For this cauſe, all commanders of privateers, before they receive their patents or commiſſions, ſhall hereafter be obliged to give, before a competent judge, ſufficient ſecurity, by good bail, who are men able to pay, and have no intereſt in the ſaid ſhip, and are each bound in the whole for the ſum of 1,500 l. ſterling, or 16,500 livres Tournois; or, if ſuch ſhip be provided with above one hundred and fifty ſeamen or ſoldiers, for the ſum of 30,000 l. or 33,000 livres Tournois, that they make intire ſatisfaction for any damages and injuries whatſoever, which they or their officers, or others in their ſervice, commit during their courſe at ſea, contrary to this preſent treaty, or the edicts of either of their moſt ſerene royal Majeſties, publiſhed by virtue thereof, under penalty, likewiſe, of having their ſpecial commiſſion and patents revoked and annulled.

XXX. Both their abovenamed royal Majeſties being willing to ſhew a mutual and equal favour, in all their dominions reſpectively, to the ſubjects of each other, in the ſame manner as if they were their own ſubjects, will give ſuch orders as ſhall be neceſſary and effectual, that juſtice be adminiſtered concerning prizes in the court of admiralty, according to the rules of equity and right, and the articles of this treaty, by judges who are above all ſuſpicion, and who have no manner of intereſt in the cauſe in diſpute.

XXXI. Whenſoever the ambaſſadors of each of their royal Majeſties above named, and other their miniſters having a public character, and reſiding in the court of the other prince, ſhall complain of the unjuſtneſs of the ſentences which have been given, their Majeſties on each ſide ſhall take care that the ſame be reviſed and re-examined in their reſpective councils, that it may appear whether the directions and proviſions preſcribed in this treaty have been obſerved, and have had their due effect: they ſhall likewiſe take care that this matter be effectually provided for, and that right be done to every complainant within the ſpace of three months. However, before or after judgment given, the reviſion thereof ſtill depending, for the avoiding of all damages, it ſhall not be lawful to ſell the goods in diſpute, or to unlade them, unleſs with the conſent of the perſon concerned.

XXXII. A ſuit being commenced between the captors of prizes on one part, and the reclaimers of the ſame on the other, and a ſentence, or decree, being given in favour of the

the reclaimer, that ſame ſentence, or decree, ſecurity being given, ſhall be put in execution, the appeal of the captor to a ſuperior judge in any wiſe notwithſtanding; which, however, is not to be obſerved when judgment has been given againſt the reclaimer.

XXXIII. In caſe that either ſhips of war or merchantmen, forced by ſtorms, or other misfortunes, be driven on rocks or ſhelves on the coaſts of one or the other party, and are there broken to pieces and ſhipwrecked, whatever part of the ſhips or tackling thereof, as alſo of the goods and merchandizes, ſhall be ſaved, or the produce thereof, ſhall be faithfully reſtored to the proprietors, reclaimers, or their factors, paying only the expences of preſerving the ſame, in ſuch manner as it may be ſettled on both ſides concerning the rate of ſalvage [ſee SALVAGE], ſaving, at the ſame time, the rights and cuſtoms of each nation. And both their moſt ſerene royal Majeſties will interpoſe their authority, that ſuch of their ſubjects may be ſeverely puniſhed, who, in the like accident, ſhall be found guilty of inhumanity.

XXXIV. It ſhall be free for the ſubjects of each party to employ ſuch advocates, attornies, notaries, ſollicitors, and factors, as they ſhall think fit; to which end the ſaid advocates and others above mentioned, may be appointed by the ordinary judges, if it be needful, and the judges be required thereto.

XXXV. And, that commerce and navigation may be more ſecurely and freely followed, it is further agreed, That neither the queen of Great-Britain nor the moſt Chriſtian king ſhall receive any pirates or robbers into any of their ports, havens, cities, or towns; neither ſhall they permit them to be received into their ports, or to be protected or aſſiſted by any manner of harbouring or ſupport, by any the ſubjects or inhabitants of either of them: but they ſhall rather cauſe all ſuch pirates and ſea-robbers, or whoever ſhall receive, conceal, or aſſiſt them, to be apprehended, and puniſhed as they deſerve, for a terror and example to others. And all the ſhips, goods, or merchandizes, piratically taken by them, and brought into the ports of the kingdom of either, as much as can be found, although they have by ſale been conveyed to others, ſhall be reſtored to the lawful owners, or their deputies, having inſtruments of delegation, and an authority of procuration, for reclaiming the ſame; and indemnification ſhall be made, proper evidence being firſt given in the court of admiralty for proving the property. And all ſhips and merchandizes, of what nature ſoever, which can be reſcued out of their hands on the high ſeas, ſhall be brought into ſome port of either kingdom, and delivered to the cuſtody of the officers of that port, with this intention, that they be delivered intire to the true proprietor, as ſoon as due and ſufficient proof ſhall have been made concerning the property thereof.

XXXVI. It ſhall be lawful as well for the ſhips of war of both their moſt ſerene royal Majeſties, as for privateers, to their enemies; neither ſhall they be obliged to pay any thing to the officers of the admiralty, or to any other judges; nor ſhall the aforementioned prizes, when they come to and enter the ports of either of their moſt ſerene royal Majeſties, be detained by arreſt; neither ſhall ſearchers, or other officers of thoſe places, make examination concerning them, or the validity thereof; but rather they ſhall have free liberty to hoiſt ſail at any time, to depart and to carry their prizes to that place which is mentioned in their commiſſion or patent, which the commanders of ſuch ſhips of war ſhall be obliged to ſhew. On the contrary, no ſhelter or refuge ſhall be given in their ports to ſuch as have made a prize upon the ſubjects of either of their royal Majeſties. And if perchance ſuch ſhips ſhall come in, being forced by ſtreſs of weather, or the danger of the ſea, particular care ſhall be taken (as far as it is repugnant to former treaties made with other kings and ſtates) that they go from thence, and retire elſewhere as ſoon as poſſible.

XXXVII. Neither of their moſt ſerene royal Majeſties ſhall permit that the ſhips or goods of the other ſhall be taken upon the coaſts, or in the ports or rivers of their dominions, by ſhips of war, or others, having commiſſion from any prince, commonwealth, or town whatſoever; and in caſe ſuch a thing ſhould happen, both parties ſhall uſe their authority and united force, that damage done be made good.

XXXVIII. If hereafter it ſhall happen, thro' inadvertency or otherwiſe, that any contraventions or inconveniencies on either ſide ariſe, concerning the obſervation of this treaty, the friendſhip and good intelligence ſhall not immediately thereupon be broke off, but this treaty ſhall ſubſiſt in all its force, and a proper remedy for removing the inconveniencies ſhall be procured, as likewiſe reparation of the contraventions; and if the ſubjects of the one or the other be found in fault, they only ſhall be ſeverely puniſhed and chaſtiſed.

XXXIX. But if it ſhall appear that a captor made uſe of any kind of torture upon the maſter of the ſhip, the ſhip's crew, or others who ſhall be on board any ſhip belonging to the ſubjects of the other party; in ſuch caſe, not only the ſhip itſelf, together with the perſons, merchandize, and goods whatſoever, ſhall be forthwith releaſed, without any further delay, and ſet entirely free, but alſo ſuch as ſhall be found guilty of ſo great a crime, as alſo the acceſſaries thereto, ſhall ſuffer the moſt ſevere puniſhment, ſuitable to their crime.

This the queen of Great-Britain and the moſt Chriſtian king do mutually engage ſhall be done, without any reſpect of perſons.

Form of the paſſport [ſee the article PASSPORT] to be deſired of and given by the lord high admiral of Great-Britain, &c. or by the lords commiſſioners for executing the office of high admiral of Great Britain, &c. according to the directions of the 21ſt article of this treaty.

To all to whom theſe preſents ſhall come, greeting: We high admiral of Great-Britain, &c [or we commiſſioners for executing the office of high-admiral of Great-Britain, &c.] do make known and teſtify, by theſe preſents, that A. B. of C. the uſual place of his dwelling, maſter or commander of the ſhip called D. appeared before us, and declared by ſolemn oath [or produced a certificate under the ſeal of the magiſtrate, or of the officers of the cuſtoms, of the town and port of E. dated the day of the month of in the year of our Lord 17 of and concerning the oath made before them] that the ſaid ſhip and veſſel D. burthen tons, whereof he is himſelf at this time maſter, or commander, doth really and truly belong to the ſubjects of her moſt ſerene Majeſty, our moſt gracious ſovereign. And whereas it would be moſt acceptable to us that the ſaid maſter, or commander, ſhould be aſſiſted in the affairs wherein he is juſtly and honeſtly employed, we deſire you, and all and every of you, that whereſoever the ſaid maſter, or commander, ſhall bring his ſhip, and the goods on board thereof, you would cauſe him to be kindly received, to be civilly treated, and, paying the lawful and accuſtomed duties, and other things, to be admitted to enter, to remain in, to depart out of your ports, rivers, and dominions, enjoy all manner of right, and all kind of navigation, traffic, and commerce, in all places where he ſhall think proper and convenient; for which we ſhall always be moſt willing and ready to make returns to you in a grateful manner. In witneſs and confirmation whereof we have ſigned theſe preſents, and cauſed our ſeal to be put thereunto.

Given at the day of the month of in the year 17

Form of the certificates to be required of, and to be given by, the magiſtrate, or officers of the cuſtoms of the town and port, in their reſpective towns and ports, to the ſhips and veſſels which ſail from thence, according to the direction of the 21ſt article of this preſent treaty.

We A. B. magiſtrate, or officers of the cuſtoms, of the town and port of C. do certify and atteſt, That on the day of the month of in the year of our Lord 17 D. E. of F. perſonally appeared before us, and declared, by a ſolemn oath, That the ſhip, or veſſel, called G. of about tons, whereof H. I. of K. his uſual place of habitation, is maſter, or commander, does rightfully and properly belong to him, and other ſubjects of her moſt ſerene Majeſty, our moſt gracious ſovereign, and to them alone; that ſhe is now bound from the port of L. to the port of M. laden with the goods and merchandizes hereunder particularly deſcribed and enumerated, that is to ſay, as follows. In witneſs whereof, we have ſigned this certificate, and ſealed it with the ſeal of our office.

Given the day of the month of in the year of our Lord 17

Form of the paſſports and letters which are to be given in the admiralty of France, to the ſhips and barks which ſhall go from thence, according to the 21ſt article of this preſent treaty.

LEWIS count of Thouloufe, admiral of France, to all who ſhall ſee theſe preſents, greeting: We make known, that we have given leave and permiſſion to maſter and commander of the ſhip called of the town of burthen tons, or thereabouts, lying at preſent in the port and haven of and bound for and laden with after his ſhip has been viſited, and before ſailing, that he ſhall make oath, before the officers who have the juriſdiction of the maritime affairs, That the ſaid ſhip belongs to one or more of the ſubjects of his Majeſty, the act whereof ſhall be put at the end of theſe preſents; as likewiſe that he will keep, and cauſe to be kept by his crew on board, the marine ordinances and regulations, and enter in the proper office, a liſt, ſigned and witneſſed, containing the names and ſurnames, the places of birth and abode of the crew of his ſhip, and of all who ſhall embark on board her, whom he ſhall not take on board without the knowlege and permiſſion of the officers of the marine; and in every port or haven where he ſhall enter with his ſhip, he ſhall ſhew his preſent leave to the officers and judge of the marine, and ſhall give a faithful account to them of what paſſed and was done during his voyage: and he ſhall carry the colours, arms, and enſigns of the king and of us, during

his voyage. In witneſs whereof, we have ſigned theſe preſents, and put the ſeal of our arms thereunto, and cauſed the ſame to be counterſigned by our ſecretary of the marine, at the day of 17

Signed LEWIS, COUNT of THOLOUSE,
And underneath by

Form of the act concerning the oath.

We of the admiralty of
do certify, That maſter of the ſhip named in the above paſſport, has taken the oath mentioned therein.
Done at the day of 17

XL. The preſent treaty ſhall be ratified by the queen of Great-Britain and the moſt Chriſtian king, and the ratifications thereof ſhall be duly exchanged at Utrecht, within four weeks, or ſooner, if poſſible.

In witneſs whereof, &c.

Be it known unto all men, That whereas in the 9th article of the treaty of commerce, concluded this day between the moſt ſerene queen of Great-Britain, and the moſt ſerene the moſt Chriſtian king, by their Majeſties ambaſſadors extraordinary and plenipotentiaries, mention is made of ſome heads of matters, which being propoſed on the part of Great-Britain, have not as yet been mutually adjuſted; and therefore it was thought fit to refer them to be diſcuſſed and determined by commiſſioners: we, therefore, the underwritten ambaſſadors, that it may certainly appear what are thoſe heads of matters which are to be referred to commiſſioners, have reſolved to give a particular deſcription of them in this writing, declaring that they are the ſame, and no other than what follow:

I. No manufacture of either kingdom, and the dominions belonging thereunto, ſhall hereafter be ſubject to be inſpected and confiſcated, under any pretence of fraud or defect in making or working them, or becauſe of any other imperfection therein, but abſolute freedom ſhall be allowed to the buyer and ſeller, to bargain and agree for the ſame, as they ſhall ſee good, any law, ſtatute, edict, arreſt, privilege, grant, or cuſtom, to the contrary notwithſtanding.

II. And foraſmuch as a certain uſage, not confirmed by any law, has obtained in ſeveral towns of Great-Britain and France, that is to ſay, that every one, for coming in and going out, ſhall pay a kind of tax, called in Engliſh HEAD MONEY, and in French DU CHEF, it is concluded that neither the ſame, nor any other duty on that account, ſhall any more be exacted.

III. And the Britiſh merchants ſhall not hereafter be forbidden to ſell tobacco to any buyer whom they pleaſe; for which purpoſe, the letting out the duties on the ſaid tobacco to farmers, which has been hitherto practiſed, ſhall ceaſe, neither ſhall ſuch farming be uſed again hereafter.

IV. The following caſe only being excepted, that is to ſay, where Britiſh ſhips ſhall take up merchandizes in one port, and carry them to another port of France, in which caſe, and in no other, the Britiſh ſubjects ſhall be obliged to pay the duties abrogated and aboliſhed by this article, only in proportion to the goods which they take in, and not according to the bulk of the ſhip.

V. Whereas ſeveral kinds of goods contained in caſks, cheſts, or other caſes, for which the duties are paid by weight, will be exported from, and imported into France, by Britiſh ſubjects; it is therefore agreed, that, in ſuch caſe, the aforeſaid duties ſhall be payable only according to the weight of the goods themſelves, but the weight of the caſks, cheſts, and other caſes whatever, ſhall be deducted in ſuch manner and proportion as has been hitherto uſed in England, and is ſtill practiſed.

VI. It is further agreed, That if any miſtake or error ſhall, on either ſide, be committed by any maſter of a ſhip, his interpreter or factor, or by others employed by him, in making the entry, or declaration, of the goods on board his ſhip, for ſuch defect, if ſo be ſome fraud does not evidently appear, neither the ſhip, nor the lading thereof, ſhall be ſubject to be confiſcated; but it ſhall be free for the proprietors to take back again ſuch goods as were omitted in the entry, or declaration, of the maſter of the ſhip, paying only the accuſtomed duties, according to the rates ſettled in the books; neither ſhall the merchants, or the maſter of the ſhip, loſe the ſaid goods, or ſuffer any other puniſhment, if ſo be the ſaid goods ſo omitted were not brought on ſhore before the declaration made, and the cuſtom paid for the ſame.

VII. And whereas the quality of the ſhip, maſter, and goods, will ſufficiently appear from ſuch paſſports and certificates, it ſhall not be lawful for the commanders of men of war to exact any other verification, under any title whatſoever; but if any merchant-ſhip ſhall want ſuch paſſports, or certificates, then it may be examined by a proper judge, but in ſuch manner, as if it ſhall be found, from other proofs and documents, that it truly belongs to the ſubjects of either of the confederates, and contains no prohibited goods, deſigned to be carried to the enemy of the other, it ſhall not be liable to confiſcation, but ſhall be releaſed, together with its cargo, in order to proceed on its voyage; ſince it may often happen, that ſuch papers could not come to the ſhip when ſhe was ſetting ſail from any port, or that they have been loſt by ſome chance or other, or have been taken away from the ſhip. And if, beſides the paſſports and certificates, made according to the form of this treaty, other paſſports and certificates happen to be found in the ſhip, in another form, and perhaps according to the preſcription of treaties made with others, no pretence ſhall be taken from thence of detaining, or in any wiſe moleſting, either the ſhip, or men, or goods. If the maſter of the ſhip named in the paſſports be removed by death, or any other cauſe, and another be put in his place, the paſſports ſhall nevertheleſs retain their force, and the ſhip, and goods laden thereon, ſhall be ſecure.

VIII. It is farther provided on both ſides, and ſhall be taken for a general rule, that a ſhip and goods, although they have remained in the enemy's power for four-and-twenty hours, ſhall not therefore be eſteemed as capture, and be immediately made prize, but, if, on other accounts, they ought to be reſtored, they may be reclaimed, and ſhall be given again to the proprietors.

IX. It ſhall be free both for their royal Majeſties, for the advantage of their ſubjects trading to the kingdoms and dominions of the other, to conſtitute national conſuls, of their own ſubjects, who ſhall enjoy that right and liberty which belongs to them by reaſon of the exerciſe of their function; but as to the places where ſuch conſuls are to be appointed, both ſides ſhall afterwards agree between themſelves.

In witneſs whereof, &c.

Be it known to all men, That whereas in the 9th article of the treaty of navigation and commerce, concluded the 31ſt day of March, 1713, between the moſt ſerene queen of Great-Britain and the moſt ſerene the moſt Chriſtian king, by the ambaſſadors extraordinary and plenipotentiaries of their Majeſties, certain merchandizes, namely, woollen manufactures, ſugars, ſalt-fiſh, and what is produced from whales, are excepted, in general words, from the rule of the tariff made the 18th day of the month of September, in the year 1664, in order to be afterwards referred to the diſcuſſion of commiſſaries: to prevent, therefore, all miſtakes and ambiguity, which might, perhaps, ariſe from ſuch general terms, and to make it more evidently appear, what particular ſorts of goods are to come under the conſideration of the aforeſaid commiſſaries, we the under-written ambaſſadors extraordinary and plenipotentiaries, have declared by theſe preſents, and do declare, that the exception of the above-mentioned merchandizes is to be underſtood in the manner following:

I. Whalebone cut and prepared, fins and oils of whales, ſhall pay, at all places of importation in the kingdom, the duties appointed by the tariff of the 7th of December 1699.

II. Cloths, ratines, and ſerges, ſhall be likewiſe ſubject to the ſame duties of the tariff of the 7th of December 1699; and in order to facilitate the trade thereof, it ſhall be allowed to import them by St Valery upon the Somme, by Rouen, and by Bourdeaux, where theſe goods ſhall be ſubject to viſitation in the ſame manner, as thoſe which are made in the kingdom.

III. Salt fiſh in barrels only are to be imported into the kingdom, and at all places of entrance in the kingdom, countries, and territories, under the dominion of the king, even at all free ports, the duties of landing and of conſumption ſhall be paid, which were appointed before the tariff of 1664, and beſides 40 livres per laſt, conſiſting of 12 barrels, weighing each 300 pounds, for duty of entry; which entry ſhall not be permitted but by St Valery upon the Somme, Rouen, Nantz, Libourne, and Bourdeaux, and ſhall remain prohibited at all other harbours or ports, as well in the ocean as in the Mediterranean.

IV. Refined ſugar, in loaf or in powder, white and brown ſugar-candy, ſhall pay the duties appointed by the tariff of 1699.

In confirmation of which, &c.

At Utrecht, the 28th day of April, in the year 1713.

A TREATY of NAVIGATION and COMMERCE between Great-Britain and Spain, concluded at Utrecht $\frac{\text{Nov. 28,}}{\text{Decem. 9,}}$ 1713.

I. The treaty of peace, commerce, and alliance, between the crowns of Great-Britain and Spain, concluded at Madrid on the $\frac{14}{24}$th day of May 1667 [ſee the article SPAIN], is ratified and confirmed by this preſent treaty.

Their royal Majeſties mutually promiſe, that they will faithfully perform and fulfil all and ſingular the articles of the ſaid treaty, and whatever privileges, conceſſions, grants, or advantages of any kind are therein, or in the cedulas annexed to it, allowed to their reſpective ſubjects; and that they will take care that they ſhall be at all times performed and fulfilled

by their miniſters, officers, and ſubjects; that the ſubjects of the two crowns may enjoy the full effect thereof (except in thoſe things concerning which it is otherwiſe ordained, to mutual ſatisfaction, in the following articles). Moreover, the treaty of 1670, between the crowns of Great-Britain and Spain [ſee the article SPANISH AMERICA], for removing differences, reſtraining depredations, and eſtabliſhing peace between the ſaid crowns, is hereby confirmed and ratified, without prejudice, however, to any contract, or privilege, or licence granted by his Catholic Majeſty to the queen of Great-Britain, or her ſubjects in the treaty of peace lately concluded, or in the ASSIENTO CONTRACT [ſee the articles ASSIENTO CONTRACT and SOUTH SEA COMPANY]; and alſo without prejudice to any liberty or power heretofore enjoyed by the ſubjects of Great-Britain, either by right, ſufferance, or indulgence.

II. No higher duties or cuſtoms of any kind, on goods imported or exported, ſhall be paid by the ſubjects of their royal Majeſties reſpectively, trading to the dominions of their Majeſties, than are exacted from, and paid by, the ſubjects of the moſt favoured nation; and if any foreign nation ſhall hereafter obtain from either ſide, a diminution of the cuſtoms, or any other privileges, the ſame ſhall reciprocally be granted to the ſubjects of each crown. And as it has been agreed as above, touching the rates of duties; ſo it is ordained as a general rule between their Majeſties, That in all lands and places ſubject to the command of their reſpective Majeſties, all and every one of their ſubjects ſhall uſe and enjoy at leaſt the ſame privileges, liberties, and immunities, concerning all impoſts or duties whatſoever, reſpecting perſons, wares, merchandize, ſhips, freighting, mariners, navigation, and commerce, and enjoy the ſame favour in all things, whether reſpecting trade, or any other right whatſoever, which is now, or ſhall be hereafter, enjoyed by the moſt favoured nation; as is ſet forth more at large in the 38th article of the treaty of 1667, ſpecially inſerted in the foregoing article.

III. [The third, fifth, and eighth articles, were not ratified as they ſtood at firſt in the treaty, but a new draught of them, which was annexed, and ſtiled the explanatory articles. We ſhall therefore give our readers only the latter, at the end of this treaty.]

IV. The Catholic king conſents and promiſes, that the ſubjects of Great-Britain reſiding in the provinces of Biſcay and Guipuſcoa, ſhall for the future be allowed to hire houſes or warehouſes for keeping their goods in, and his Majeſty will take care, by repeating his orders for that purpoſe, that they ſhall be at liberty to do this in the ſame manner, and with the ſame privileges, which are enjoyed by the ſaid Britiſh ſubjects in Andaluſia, or any other ports or places in Spain, by virtue of the aforeſaid treaty of 1667, or of any edict or ordinance iſſued by their Catholic Majeſties. The ſubjects of Spain ſhall enjoy the ſame liberty in any ports or places of Great-Britain, with all the privileges belonging to them by the aforeſaid treaty.

V. See the explanation at the end of this treaty.

VI. And as the reſpective ſubjects of their Majeſties ought to enjoy an entire, ſafe, and unmoleſted uſe and liberty of navigation and commerce, whilſt the peace and friendſhip entered into by their Majeſties and their crowns ſhall ſubſiſt, it is provided by their Majeſties, that for any little difference that may ariſe, their ſaid ſubjects ſhall not be deprived of this ſecurity, but, on the contrary, they ſhall enjoy all the benefits of peace until war be declared between the two crowns.

It is further agreed, That if a war ſhould break out and be declared between their Majeſties and their kingdoms (which God prevent), in that caſe, agreeable to the 36th article of the above-mentioned treaty of 1667, the term of ſix months after the declaration of ſuch rupture, ſhall be allowed to the ſubjects of each party reſiding in the dominions of the other, in which they may retire, with their families, goods, merchandizes, ſhips, and effects, and carry them by ſea or land whither they ſhall pleaſe, paying the due and uſual cuſtoms: they ſhall alſo be permitted to ſell and alienate their moveable and immoveable effects, and carry away the price thereof freely and without moleſtation: nor ſhall their goods, wealth, merchandize, and effects, much leſs their perſons, be in the mean time detained or moleſted by any ſeizure or arreſt. But rather in the mean while the ſubjects on each ſide ſhall have and enjoy good and ſpeedy juſtice, ſo that during the ſaid ſpace of ſix months, they may be able to recover their goods and effects intruſted either to the public, or to private perſons.

VII. It is likewiſe agreed, that all loſſes which the ſubjects of either crown ſhall duly prove that they ſuſtained in the beginning of the late war (contrary to the tenor of the 36th article of the above-mentioned article of 1667), whether in moveable or immoveable goods, ſhall be reciprocally made good without delay to them, or to their lawful attornies, heirs, or adminiſtrators; and reſtitution ſhall be made of ſuch goods as were confiſcated and remain, whether they conſiſt of lands, houſes, inheritances, or of whatſoever ſort they be; and for ſuch as cannot be recovered, a juſt and lawful price ſhall be paid: and it is agreed and concluded by their ſaid Majeſties, that the ſaid payments (the claims being fully juſtified as aforeſaid) ſhall be faithfully made and performed by their reſpective treaſurers.

VIII. See at the end of this treaty.

IX. His Catholic Majeſty promiſes, that thoſe merchandizes which are not particularly ſpecified in the table of rates, which is to be drawn up agreeable to the 3d article of this treaty, ſhall be charged with the ſame and no higher duties, in proportion to their value, than the merchandizes mentioned in the ſaid table of rates are charged with. And if any difference ſhould ariſe between the farmers or the officers of the cuſtom-houſe and the merchants, concerning the value of any goods, it ſhall be in the option of the merchant to ſell ſuch merchandizes to the farmer or officer at the price ſet upon them by the farmer; which price ſhall be immediately paid in ready money, the duty only being deducted. The merchant may likewiſe, keeping the reſt of his merchandizes, give a part of them to the farmer or officer at the rate ſet upon them, as hath been mentioned, inſtead of the duty.

X. It is agreed, That in caſe any merchandizes ſhall be brought by the ſubjects of Great-Britain from the coaſt of Africa into Spain, and be admitted to pay the duties, theſe duties being duly paid, the merchandizes ſhall not be charged afterwards, either by the captains-general of the coaſts or commanders of the ports, or any other perſon, under what name or title ſoever, with any further duty, excepting what is payable in general for all merchandizes of the ſame kind at the time of ſale.

XI. The maſters of merchant-ſhips entering into any port of Spain, ſhall be obliged, within 24 hours after their arrival, to exhibit two declarations or inventories of their cargoes, or of that part thereof which they are to unlade there, viz. one to the farmer or officer of the cuſtoms, and another to the judges of contraband: neither ſhall they open their hatches, 'till either the ſearchers come on board, or leave be given them to do it by the farmers of the cuſtom-houſes. No merchandizes ſhall be unladed with any other view than that of being immediately carried to the cuſtom-houſes, agreeable to a permiſſion, which ſhall be given in writing to that end. It ſhall not be lawful, however, for the judges of contraband or other officers of the cuſtoms, under any pretext whatſoever, to open any bags, cheſts, caſks, or other package of any goods whatſoever belonging to the Britiſh ſubjects, whilſt they are carrying to the cuſtom-houſe, and before they are brought thither, nor unleſs the owner or his factor be preſent, who may pay the duties, and take the goods into his own cuſtody. But the judges of contraband, or their deputies, may be preſent when the goods are taken out of the ſhip, and when they are declared and opened in the cuſtom-houſe: and if there be a ſuſpicion of fraud, as for inſtance, that it is intended to ſhew one ſpecies of goods for another, it ſhall be lawful for him to open all the bags, cheſts, or caſks, provided it be done in the cuſtom-houſe and no other place, and in preſence of the merchant or his factor, and not otherwiſe: but when the goods have been ſhewn and carried out of the cuſtom-houſe, and the cheſts, caſks, or other package marked with the ſign or ſeal of the proper officer, no judge of contraband, or other officer, ſhall preſume to open them again, or to hinder them from being carried to the merchant's houſe. Neither ſhall it be lawful for them, under any pretext whatſoever, to hinder the removal of the ſaid goods from one houſe or warehouſe to another, within the walls or compaſs of the ſaid city or place, provided that it be done between the hours of eight in the morning and five in the evening, and previous notice be given to the farmers of the right de alcavalos and cientos, with what intent they are moved; and if it be done in order to their being ſold, thoſe duties, if not paid before, may be paid there, or at the place of ſale; or, if not to be ſold, that the uſual certificate in writing may be given to the merchant. As to the reſt, it ſhall be lawful to carry merchandizes by land or ſea, from any port or place within the king of Spain's dominions to any other port or place, under the conditions expreſſed in the fifth article of this treaty.

XII. The merchandizes imported into, or exported from, the Canary Iſlands by Britiſh ſubjects, ſhall be charged with no higher duties than they paid there in the reign of the late king Charles II. or ſhall be impoſed on them by the new book of rates.

XIII. The ſubjects of each of their Majeſties, who are in debt to the ſubjects of the other, whether the debts were contracted before the beginning of the late war, or within ſix months after it began, or during the war under the protection of letters of ſafe-conduct [ſee the article PASSPORT]; or, laſtly, after a truce was made between the two crowns, ſhall be bound and obliged faithfully to pay them, in the ſame manner as if a war had never broke out between the two crowns; nor ſhall they be ſuffered to raiſe any exceptions to the juſt demands of their creditors on pretence of the war.

XIV. His Catholic Majeſty gives the ſubjects of Great-Britain leave to ſettle and reſide in the town called St Andero, on the conditions expreſſed in the ninth and thirtieth articles of the treaty of 1667. See the article SPAIN.

XV. As

XV. As to the judge conſervator, and others to be ſubſtituted by him, if the privilege of having one be granted to any other foreign nation, the ſame ſhall alſo be granted to the ſubjects of Great-Britain. In the mean time, and 'till ſomething certain be determined in this matter, his Catholic Majeſty will give expreſs orders to all and every judge of his kingdom, and to all other perſons whatſoever to whom the adminiſtration or execution of juſtice is intruſted, and enjoin them, under the ſevereſt penalties, to do juſtice, and cauſe it to be executed, without delay, partiality, or affection, in all cauſes wherein the ſubjects of Great-Britain are concerned.

The Catholic king conſents, that appeals from ſentences given in cauſes relating to Britiſh ſubjects, may be brought before the tribunal of the council of war at Madrid, and no where elſe.

XVI. If this treaty, or any article of it, be violated by any miniſter, or other ſubject, of her Britannic Majeſty, or of his Catholic Majeſty, he ſhall be anſwerable for all the damage thereby occaſioned; and if he be in public office, he ſhall, beſides making ſatisfaction to the perſon injured, as aforeſaid, be deprived of his office.

XVII. The ſubjects of Great-Britain, having brought by ſea, from ſome other ports of Spain, wine, brandy, oil, ſoap, dried grapes, or other commodities, it ſhall be lawful for them, on producing certificates that the duties were paid at the place whence they ſet ſail, to lade the ſame on board their ſhips lying at Cadiz, or there to remove them from one ſhip to another, with conſent of the intendants of the marine, and in preſence of them, or of their deputies, if they chuſe to be there, to prevent any fraud, at a ſeaſonable time to be appointed by the intendants within 24 hours; or to carry them away from thence, without being liable to pay the duty called hondeaxe, or any other duty of import or export.

This treaty ſhall be ratified by the moſt ſerene queen of Great-Britain and by the moſt ſerene Catholic king, and the ratifications thereof exchanged at Utrecht within two months, or ſooner, if it can be done.

In witneſs whereof, &c.

We having ſeen and conſidered the above-written treaty, have approved, ratified, and confirmed the ſame, as we do by theſe preſents, for ourſelves, our heirs and ſucceſſors, approve, ratify, and confirm it, excepting only three articles thereof, viz. the third, fifth, and eighth, concluded at Utrecht, which are to be obſerved and underſtood in the manner and form following:

III. 'Whereas by the late treaty of peace it is agreed and eſtabliſhed as a baſis and foundation, that the ſubjects of Great-Britain, in what regards commerce, ſhall enjoy the ſame liberties and privileges, which they enjoyed in the reign of king Charles II. in all parts of the king of Spain's dominions; which rule is what is alſo to ſerve for a baſis and foundation of the preſent treaty of commerce, and is to be underſtood reciprocally in favour of the king of Spain's ſubjects trading in the dominions of Great-Britain: and as nothing can contribute more to eſtabliſh the commerce to a mutual benefit, than a fixed, clear, and eaſy rule in paying the duties, eſpecially on a moderate footing, and proportionable to the value of the merchandize, in order to prevent the frauds that otherwiſe would be practiſed to the prejudice of the revenue of either crown, which has been often experienced in Spain, where the eſtabliſhed duties by the antient books of rates are exceſſive; in conſideration whereof his Catholic Majeſty, being deſirous to avoid the like conſequences, and to favour, augment, and facilitate, in all that depends upon him, the commerce, in as ample a manner as her Britannic Majeſty deſires, hath conſented on his part to ſuppreſs and make void the different duties payable upon importation and exportation, contained in the antient books of rates, as alſo thoſe that have been impoſed ſince, under any name or pretence whatſoever, and content himſelf with one only duty to be paid upon all goods and merchandize, after the rate of 10 per cent. of their value; and the like duty upon all goods and merchandize, which ſhall be exported out of his dominions, whether the value be made by weight, meaſure, piece, or ad valorem. And the ſame duty ſhall be collected in all the ports of entry in Spain, comprehending thoſe of Arragon, Valencia, and Catalonia, excepting out of this general rule, Biſcaya and Guipuſcoa, whoſe duties of importation and exportation are to remain as they were in the time of Charles II. And that the ſaid 10 per cent. being once paid, the farmers or officers of the cuſtom-houſes where theſe goods ſhall be entered, ſhall be obliged to mark the ſame with the proper ſeals and marks of their office, and alſo give the requiſite diſpatches; by virtue of which the proprietors of the goods may freely tranſport them to all the other parts of Spain, where they pleaſe, without being liable to pay any other duty, impoſition, or charges, to the uſe or benefit of his Catholic Majeſty, in any ports or parts of Spain whatſoever, in reſpect of tranſporting the ſaid merchandize, over and above what they have paid in purſuance of this new arancel, provided in default of which they ſhall be eſteemed to be fraudulently tranſported. But it is to be underſtood, that this is not to extend to the alcavalos, cientos, and millones, in relation to which proviſion is made in the fifth and eighth articles of this treaty.

And foraſmuch as the ambaſſador of England hath repreſented that, to avoid all differences and diſputes for the future, it is abſolutely neceſſary to eſtabliſh a certain valuation or rate of the ſeveral ſorts of merchandize, by which the ſaid duty of 10 per cent. ſhall always be paid, and not altered, either by means of the augmentation or diminution of the price of the ſaid merchandize, which may hereafter happen in the commerce, in any time, or in any part of the kingdom: it is agreed by their Catholic and Britannic Majeſties by their ambaſſadors, that in the term of three months from the ratification of this treaty, or ſooner, if poſſible, commiſſaries, named by both their Majeſties in due form, ſhall meet at Madrid or in Cadiz, who, without loſs of time, ſhall proceed to the forming a new book of rates, in ſuch a manner as to fix and limit what ſhall be paid for the future on all ſorts of merchandize, as well upon importation as exportation; and ſo as that all the different duties which were payable, either before or in the time of Charles II. or ſince, under whatſoever name or pretence, or collected in different cuſtom-houſes or offices, ſhall be comprehended in this only duty, payable in ONE SUM, whether upon importation or exportation, in all the ports of Spain, and ſhall extend to the kingdoms of Arragon, Valencia, and principality of Catalonia, and their dependencies, excepting only the provinces of Guipuſcoa and Biſcaya, of which mention has been already made. And whereas great inſtances have been made by the ambaſſador of Great-Britain, that directions be given to the ſaid commiſſaries that they take care, and above all do obſerve as a fixed rule, that this duty be laid equally and generally in all the ports and cuſtom-houſes of Spain, upon the importation and exportation of all goods and merchandize, after the rate of 10 per cent. of the value, which ſuch goods and merchandize bear in the courſe of trade between the merchants of Cadiz and port St Mary's, to which the ambaſſadors of Spain have conſented; always provided that the goods and commodities which ſhall be imported into the kingdom of Spain, by the ports of Biſcay and Guipuſcoa, and afterwards tranſported into the other provinces depending on the kingdoms of Caſtille and Arragon, ſhall be obliged to pay, at the firſt cuſtom-houſe of entry into the ſaid kingdoms, the duties which ſhall be eſtabliſhed in this new book of rates.

V. To prevent the abuſes that may be committed in collecting the duties called alcavalos and cientos, his Catholic Majeſty conſents, that the ſubjects of her Britannic Majeſty ſhall not be obliged to pay theſe duties, during ſuch time as they think fit to let their merchandize remain in the magazines of the cuſtom-houſes appointed for that purpoſe; but when they ſhall think fit to take out the ſaid goods, either to be tranſported farther into the country, to be ſold in the ſame place, or carried to their own houſes, it ſhall be permitted them ſo to do, upon giving bond with ſufficient ſecurity to pay the ſaid duties of alcavalos and cientos for the firſt ſale, in two months after the date of his bond; upon which he ſhall have receipt given him for the ſaid duties, and the goods ſhall be marked with the proper mark and ſeal of the farmers of the ſaid alcavalos and cientos where ſuch bond and ſecurity ſhall be given for the firſt ſale; after which the ſaid merchandize may be tranſported and ſold by wholeſale, in any port or place belonging to the king of Spain in Europe; and no obſtruction or hinderance ſhall be made upon account of the ſaid duties, nor the proprietors liable to pay a ſecond time in reſpect of the firſt ſale, provided thoſe who carry the ſaid merchandizes produce the receipts and marks of the farmer or proper officer concerned in the collection of theſe duties, or making ſufficient proof of their not being ſold before. But if, on the contrary, any merchant do ſell his goods by retale, he ſhall be obliged to pay the ſaid duties of alcavalos and cientos a ſecond time, under the pains eſtabliſhed by the laws. And his Catholic Majeſty declares, that if any officer of the alcavalos and cientos ſhall exact a ſecond time the ſaid duties on the ſame merchandize when the ſaid receipts and marks have been produced, or ſhall obſtruct their paſſage or tranſportation, or occaſion the leaſt impediment, ſuch officer ſhall be fined 2000 crowns to the benefit of his Majeſty's revenues: and the officers of the cuſtom-houſe ſhall not demand or take for making ſuch receipts or certificates more than 15 real vellon [ſee the article SPAIN], unleſs it be otherwiſe ſettled in the new book of rates.

VIII. His Catholic Majeſty conſents, that the duties commonly called millones, which are payable upon fiſh and other ſorts of domeſtic proviſions, ſhall not be demanded in the firſt ports or cuſtom-houſes of entry in Spain, during ſuch time as the proprietors will let them remain in the warehouſes appointed for that purpoſe. But in caſe the owners ſhall deſire to take them out, either to ſend into the country, ſell them in the place, or carry them to their own houſes, they are then to give bond, with good ſecurity to pay the ſaid duty of millones, in the two months after date of the ſaid bond, upon which the neceſſary diſpatches are to be given them. And the ſaid merchandize ſhall be marked with the ſeals or marks

of the farmers of the millones, where the ſaid duties were ſecured; after which the ſaid goods may be tranſported to, and ſold in, the places where they are to be conſumed, without paying any duties of millones. His Catholic Majeſty alſo declares, that if after the receipts are produced, any officer, belonging to the farmers of the millones, ſhould exact a ſecond time the ſame duties on the ſame goods, or ſhould oppoſe their paſſage, tranſport, or ſale, or occaſion the leaſt impediment, the ſaid officer ſhall be fined 2000 crowns for the benefit of his Majeſty's revenues.'

ANNE, by the grace of God, queen of Great-Britain, France, and Ireland, defender of the faith, &c. To all and ſingular to whom theſe preſents ſhall come, greeting. Whereas the right reverend father in God, our right truſty and well-beloved counſellor, John biſhop of Briſtol, our ambaſſador extraordinary and plenipotentiary, dean of Windſor, and regiſter of our moſt noble order of the garter, did on our part, together with the plenipotentiaries of the moſt ſerene Catholic king, conclude and ſign at Utrecht, on Nov. 28, Decem. 9. 1713, a treaty of commerce between the crowns of Great-Britain and Spain, and at the ſame time a ſeparate article was concluded, made between the ſaid plenipotentiaries, who were ſeverally furniſhed with ſufficient authorities, and is as follows:

Separate ARTICLE.

'By the preſent ſeparate article, which ſhall be altogether of the ſame validity, as if it was inſerted word for word in the treaty of commerce, this day concluded between their royal Majeſties of Great-Britain and Spain, and ſhall for that end be ratified as well as the ſaid treaty; his Catholic Majeſty conſents that it ſhall at all times hereafter be lawful for the Britiſh ſubjects, who ſhall live in the Canary Iſlands for the ſake of their trade, to nominate ſome one perſon being a ſubject of Spain, who ſhall execute the office of judge-conſervator there, and ſhall take cognizance, in the firſt inſtance, of all cauſes relating to the commerce of the Britiſh ſubjects; and his royal Majeſty promiſes that he will grant commiſſions to ſuch judge-conſervator ſo named, together with the ſame authority and all the privileges which the judges-conſervators have formerly enjoyed in Andaluſia. And if the Britiſh ſubjects ſhall deſire to have more judges of that ſort there, or to change thoſe that are appointed every three years, it ſhall be allowed and granted them. His Catholic Majeſty conſents likewiſe, that appeals from the ſentences of the ſaid judge-conſervator, ſhall be brought before the tribunal of the council of War at Madrid, and no where elſe.

In witneſs whereof, we the underwritten ambaſſadors extraordinary and plenipotentiaries of her ſacred Majeſty of Great-Britain, and of his ſacred Catholic Majeſty, have ſigned and ſealed theſe preſents at Utrecht, Nov. 28. Decem. 9. in the year of our Lord 1713.

JOH. BRISTOL. (L. S.)
DUC. DE OSSUNA. (L. S.)
EL MARQUE DE MONTELEON. (L. S.)

We having ſeen and conſidered this ſeparate article, have approved, ratified, and confirmed, as we do by theſe preſents approve, ratify, and confirm the ſame, promiſing and engaging our royal word that we will faithfully and inviolably keep all and ſingular the things therein contained, and that we will not ſuffer any thing to be done contrary thereunto. For the greater teſtimony and validity whereof, we have ſigned this inſtrument with our royal hand, and cauſed our great ſeal of Great-Britain to be affixed thereunto. Given at our caſtle at Windſor, the 7th day of February, 17$\frac{13}{14}$, in the 12th year of our reign.

The MEASURES taken by our ſovereign the late king GEORGE I. to remedy ſome of the defects of the treaty of Utrecht, taken notice of under our articles REVENUE and TAXES.

TREATY of COMMERCE between Great-Britain and Spain, concluded at Madrid the 14th of December, 1715.

Whereas notwithſtanding the treaties of peace and commerce, lately concluded at Utrecht the 13th of July, and the 9th of December 1713, between his Catholic Majeſty, and her late Majeſty the queen of Great-Britain, of glorious memory, there remained ſtill ſome differences about trade and the courſe thereof; and his Catholic Majeſty and the king of Great-Britain being inclined to maintain and cultivate a firm and inviolable peace and friendſhip, in order to attend to this good end, they have by their two miniſters under written, mutually and duly qualified, cauſed the following articles to be concluded and ſigned.

I. The Britiſh ſubjects ſhall not be obliged to pay higher or other duties, for goods coming in, or going out of the ſeveral ports of his Catholic Majeſty than thoſe they paid for the ſame goods in king Charles the IId's time, ſettled by ſchedulas and ordinances of the ſaid king, or his predeceſſors: and although the indulto, commonly called pie del fardo, be not grounded on any royal ordinance, nevertheleſs his Catholic Majeſty declares, wills, and ordains, that it be obſerved, now and hereafter, as an inviolable law; which duties ſhall be exacted and raiſed, now and for the future, with the ſame advantages and favours to the ſaid ſubjects.

II. His Majeſty confirms the treaty made by the Britiſh ſubjects, with the magiſtrates of St Andero in the year 1700.

III. His Catholic Majeſty permits the ſaid ſubjects to gather ſalt in the iſle of Tortugas, they having enjoyed this liberty in the reign of king Charles II. without interruption.

IV. The ſaid ſubjects ſhall pay no where any higher or other duties, than thoſe paid by the ſubjects of his Catholic Majeſty in the ſame places.

V. The ſaid ſubjects ſhall enjoy all the rights, privileges, franchiſes, exemptions, and immunities whatſoever, which they enjoyed before the laſt war, by virtue of the royal ſchedulas or ordinances, and by the articles of the treaty of peace and commerce made at Madrid in 1667 [ſee the article SPAIN], which is hereby fully confirmed; and the ſaid ſubjects ſhall be uſed in Spain in the ſame manner as in the moſt favoured nation, and conſequently all nations ſhall pay the ſame duties on wool and other merchandizes, coming in and going out to ſea. And all the rights, privileges, franchiſes, exemptions, and immunities, that ſhall be granted, and allowed to the ſaid ſubjects, the like ſhall be granted, obſerved, and permitted to the ſubjects of Spain, in the kingdoms of his Majeſty the king of Great-Britain.

VI. And, as innovations may have been made in trade, his Catholic Majeſty promiſes on his part to uſe his utmoſt endeavours to aboliſh them, and for the future to cauſe them to be avoided: in like manner the king of Great-Britain promiſes to uſe all poſſible endeavours to aboliſh all innovations on his part, and for the future to cauſe them by all means to be avoided.

VII. The treaty of commerce made at Utrecht, the 9th of December, 1713, ſhall continue in force, except the articles that ſhall be found contrary to what is this day concluded and ſigned, which are hereby aboliſhed and rendered of no force, and eſpecially all the three articles, commonly called explanatory. And theſe preſents ſhall be approved, ratified, and exchanged on each ſide, within the ſpace of ſix weeks, or ſooner, if poſſible. In witneſs whereof, and by virtue of our full powers, we have ſigned theſe preſents at Madrid, the 14th of December, in the year 1715.

M. DE BEDMAR. (L. S.) GEORGE BUBB. (L. S.)

TREATY of COMMERCE betwixt Anne queen of Great-Britain and Peter king of Portugal, concluded at Liſbon the 27th of December, 1703.

Whereas the league and ſtrict friendſhip, which is between the moſt ſerene and moſt potent princeſs Anne queen of Great-Britain, and the moſt ſerene and moſt potent Peter king of Portugal, requires that the commerce of both the Britiſh and the Portugal nations ſhould be promoted as much as poſſible; and her ſacred royal Majeſty of Great-Britain, hath ſignified to his ſacred royal Majeſty of Portugal, by the moſt excellent John Methuen, Eſq; member of the Engliſh parliament, and ambaſſador extraordinary in Portugal, that it would be very acceptable to her, if the woollen cloths, and the reſt of the woollen manufactures of Britain, might be admitted into Portugal, the prohibition of them being taken off: that this matter may be treated and tranſacted, they have given their full powers and commands; that is to ſay, her ſacred Majeſty of Great-Britain to the aboveſaid moſt excellent John Methuen, and his ſacred Majeſty of Portugal to the moſt excellent Don Emanuel Telles Silvius, marquis of Alegrete, &c. one of the three directors of the treaſury, and one of the firſt gentlemen of the bedchamber, and counſellor of ſtate to his ſacred royal Portugueze Majeſty: who, by virtue of the full power to them reſpectively granted, having maturely and diligently conſidered the matter, have agreed upon the following articles.

I. His ſacred royal Majeſty of Portugal promiſes, both in his own name, and that of his ſucceſſors, to admit, for ever hereafter, into Portugal, the woollen cloths, and the reſt of woollen manufactures of the Britons, as was accuſtomed 'till they were prohibited by the laws, nevertheleſs upon this condition.

II. That is to ſay, that her ſacred royal Majeſty of Great-Britain ſhall, in her own name, and that of her ſucceſſors, be obliged for ever hereafter to admit the wines of the growth of Portugal into Britain; ſo that at no time, whether there ſhall be peace or war between the kingdoms of Great-Britain and France, any thing more ſhall be demanded for theſe wines by the name of cuſtom or duty, or by whatſoever other title, directly or indirectly, whether they ſhall be imported into Great-Britain in pipes or hogſheads, or other caſks, than what ſhall be demanded from the like quantity or meaſure of French wine, deducting or abating a third part of the cuſtom or duty. But if at any time this deduction or abatement of cuſtoms, which is to be made as aforeſaid, ſhall in any manner be attempted and prejudiced, it ſhall be juſt and lawful for his ſacred royal Majeſty of Portugal, again to prohibit the woollen cloths, and the reſt of the Britiſh woollen manufactures.

III. The

III. The moſt excellent lords the plenipotentiaries promiſe and take upon themſelves, that their above-named maſters ſhall ratify this treaty, and within the ſpace of two months the ratification ſhall be exchanged.

For the faith and teſtimony of all which things, I the plenipotentiary of her ſacred royal Majeſty of Great-Britain have confirmed this treaty, by the ſubſcription of my hand, and by the ſeal of my coat of arms. And the moſt excellent lord the plenipotentiary of his ſacred royal Majeſty of Portugal, for avoiding the controverſy about precedence between the two crowns of Britain and Portugal, hath ſubſcribed another inſtrument of the ſame tenor, changing only what ought to be changed for that reaſon.

Given at Liſbon, the 27th of the month of Decem. 1703.

JOHN METHUEN. (L. S.)

A DECLARATION and ENGAGEMENT concerning the rights and privileges of the Britiſh merchants in the kingdom of Sicily, made at Utrecht the 8th of March, N. S. $17\frac{12}{13}$.

Whereas by ſeveral treaties of peace, alliance, commerce, and navigation, formerly made between the kingdoms of Great-Britain and Spain, and at this time ſubſiſting, but more particularly by the treaty concluded at Madrid, the $\frac{13}{23}$d of May, in the year 1667, and the cedulas annexed thereunto, proviſion was made for the freedom, ſecurity, and perfect eaſe of the commerce of the Britiſh ſubjects trading in the kingdoms and provinces of Spain; the obſervance and uſage of which treaties have hitherto been received in the kingdom of Sicily, in the ſame manner as in any other the dominions of Spain, and have remained there in full force, except ſome variations which have been introduced in the courſe of time; for the rectifying whereof, according to the rule of thoſe treaties, Great-Britain has juſtly inſiſted hitherto.

Wherefore, on occaſion of transferring the kingdom of Sicily to his royal highneſs the duke of Savoy, her ſacred Majeſty of Great-Britain, being watchful to preſerve the rights and privileges of her ſubjects trading in the ſaid kingdom, and being likewiſe willing to preſerve to the Sicilians the privileges they have in Great-Britain, which are ſo very dear to the moſt ſerene the duke of Savoy, hath been graciouſly pleaſed to give inſtructions to her underwritten miniſters plenipotentiaries, to agree with the miniſters plenipotentiaries of his royal highneſs of Savoy, about making declarations mutually upon this ſubject. In purſuance thereof, the ſaid miniſters plenipotentiaries of his royal highneſs, in the name of their moſt ſerene maſter, do moſt ſolemnly declare and promiſe, that during the reign of the aforeſaid moſt ſerene duke in Sicily, as likewiſe of his heirs and ſucceſſors, the Britiſh merchants are henceforward to have, and ſhall effectually have, uſe, and enjoy, all thoſe rights, privileges, liberties, and entire ſecurity, as to their perſons, goods, ſhips, ſeamen, trade, and navigation, in the ſaid kingdom of Sicily; which, by virtue of the treaties made between Great-Britain and Spain, they have hitherto enjoyed, or ought to enjoy; and, to that end that all abuſes which deviate from the tenor of the ſaid treaties ſhall be forthwith removed, and the rights and privileges acquired to the Britiſh ſubjects, by virtue of the aforeſaid treaties, ſhall not on any occaſion, or under any pretence, ever be violated or leſſened. And if hitherto any more favourable privileges have been granted, or ſhall hereafter be granted, to the merchants of any other foreign nation any way relating to the perſons of the traders, their ſhips, goods, duties, or the buſineſs of merchandizing, the Britiſh merchants ſhall likewiſe in all reſpects, and in the fulleſt manner enjoy the ſame.

And in like manner, the miniſters plenipotentiaries of Great-Britain do, in the manner of her Majeſty, confirm that the Sicilians ſhall hereafter enjoy the ſame privileges and liberties, which they have hitherto enjoyed, or ought to have enjoyed, as ſubjects of the king of Spain, by virtue of the aforeſaid treaty of the year 1667.

In witneſs and confirmation whereof, &c.

TREATY of AMITY, COMMERCE, and NAVIGATION, between Great-Britain and Ruſſia, concluded at St Peterſburgh, December 2, 1734.

I. The peace, friendſhip, and good correſpondence, which happily ſubſiſt between their Ruſſian and Britannic Majeſties, ſhall be confirmed and eſtabliſhed by this treaty, ſo as from henceforward there ſhall be between the crown of all the Ruſſias on one ſide, and the crown of Great-Britain on the other, as likewiſe between the ſtates, countries, realms, dominions, and territories, which are under their obedience, a true, firm, and perfect peace, friendſhip, and good underſtanding, which ſhall endure and be inviolably maintained for ever, as well by ſea as by land, and on all freſh waters; and the people, ſubjects, and inhabitants on both ſides, of whatſoever condition or degree, ſhall behave with entire good-will towards each other, and give each other all poſſible aid and aſſiſtance, without doing or offering the leaſt wrong or damage whatſoever.

II. There ſhall be an entire freedom of navigation and commerce throughout all the dominions of the two contracting parties in Europe, where navigation and commerce are at this time permitted, or ſhall be permitted hereafter, by the contracting parties to the ſubjects of any other nation.

III. The ſubjects of both contracting parties may enter at all times into all the ports or towns of either of the contracting parties, with their ſhips, veſſels, or carriages, into which the ſubjects of any other nation are permitted to enter, to trade or abide there; and the mariners, paſſengers, and veſſels, whether Ruſſian or Engliſh, even though there be any ſubjects of any other ſtrange nation among the crew, ſhall be received and treated in like manner as the moſt favoured nation; and the mariners and paſſengers ſhall not be forced to enter into the ſervice of either of the contracting parties, which may have occaſion for their ſervice. And the ſubjects of both contracting parties may buy all kind of neceſſaries which they ſhall ſtand in need of, at the current price; and repair and refit their ſhips, veſſels, or carriages, and furniſh themſelves with all manner of proviſions for their ſubſiſtance and voyage, abide and depart at their pleaſure, without moleſtation or impediment, provided they conform themſelves to the laws and ordinances of the reſpective ſtates of the ſaid contracting powers, where they ſhall ſo arrive or continue.

IV. The ſubjects of Great-Britain may bring by ſea or by land, into all or any of the dominions of Ruſſia, wherein the ſubjects of any other nation are permitted to trade, all ſorts of goods and merchandizes, whereof the importation and traffic are not prohibited; and in like manner the ſubjects of Ruſſia may bring into all or any of the dominions of Great-Britain, wherein the ſubjects of any other nation are allowed to traffic, all ſorts of merchandizes of the produce and manufacture of the dominions of Ruſſia, whereof the importation and traffic are not prohibited, and likewiſe all merchandizes of the produce or manufacture of Aſia, provided that it is not actually prohibited by any law now in force in Great-Britain; and they may buy, and export out of the dominions of Great-Britain, all manner of goods and merchandizes, which the ſubjects of any other nation may buy therein and export from thence, and particularly gold and ſilver, wrought or unwrought, excepting the ſilver coined money of Great-Britain.

V. The ſubjects of Great-Britain, if they happen not to have rixdollars to pay therewith the cuſtom, and other duties payable on the goods they enter, may pay in current money, at the rate of 125 copyks for one rixdollar.

VI. Engliſh ſhips that come to load or unload merchandizes belonging to the ſubjects of Great-Britain, ſhall be uſed with all kindneſs and diſpatch, according to the regulations, without being detained in any manner whatſoever, on pain of the penalties mentioned in the regulations: and ſhould the ſubjects of Great-Britain enter into any contract with any chancery, or college, for the delivery of any goods or merchandizes, on their giving notice that the ſame are ready to be delivered, they ſhall be received, agreeable to the time appointed in the contract, after which, the account ſhall be adjuſted and ſettled, in ſuch a time as it was agreed upon in the contract between the chancery, or college, and the Engliſh merchants.

VII. It is ſtipulated, that in any town or place of Ruſſia, where any other nations are admitted, the ſubjects of Great-Britain may pay for goods bought the ſame currency as has been received for goods ſold, unleſs there be any particular agreement to the contrary.

VIII. It is ſtipulated, that the ſubjects of Great-Britain may bring to Ruſſia all ſorts of goods or merchandizes, and carry them through the dominions of Ruſſia, the ſhorteſt or moſt convenient way, to Perſia, paying 3 per cent. in rixdollars, ad valorem, for duties and tranſit of the ſaid goods, and no more, under any pretence whatſoever. Nevertheleſs, the Engliſh merchants ſhall be obliged to agree with the Ruſſian ſubjects for the carriage charges, either by water or by land, making them a reaſonable allowance for the ſame; and the moſt ſtrict orders ſhall be given, that the Engliſh merchants may meet with all diſpatch and eaſe upon the road. They likewiſe may bring from Perſia any goods or merchandizes, and carry them through Ruſſia with the ſame liberty and eaſe, paying only 3 per cent. in rixdollars, ad valorem, for duties and tranſit, reckoning the rixdollars as uſual in the Ruſſian cuſtoms. And in order to prevent all frauds of Engliſh ſubjects, and all vexation and delay of Ruſſian officers, Engliſh merchants ſhall declare the goods deſigned to be carried through Ruſſia, either to or from Perſia, at the firſt Ruſſian place they arrive, which ſhall be received and admitted on the bill of lading, policy, or regiſter, according to the value declared, on which a duty of 3 per cent. ſhall be paid, without opening or unpacking the merchandizes, any more than is abſolutely neceſſary to ſatisfy the Ruſſian officer that the merchandizes ſpecified in the bill of lading, policy, or regiſter, and no other, or others, are contained in the bale in which the merchandizes are packed. But in caſe the Ruſſian officer have any grounds to ſuſpect that the goods are not declared to their right value, within 20 per cent. then the Ruſſian officer, paying to the merchant the value declared, and 20 per

cent. over and above it, without any deduction, may take the goods and diſpoſe thereof. After the Ruſſian officer's inſpection, which is to be done without vexation or detriment to the goods or package, he ſhall fix leaden ſeals to the packs, or bales, that contain the goods, number and mark them, and deliver to the merchant a certificate of the payment of the duties; and by virtue of that certificate, leaden ſeal, mark, and number, they ſhall have a free paſſage through Ruſſia, either going to or coming from Perſia, without any obſtacle or moleſtation: but ſhould the merchants not carry any or all the bales through Ruſſia, according to the declaration, or ſhould the ſeals be taken off, and any goods taken out in Ruſſia, if there is any reaſon to ſuſpect ſuch a conduct, in oppoſition to the true ſenſe and meaning of this article, ſuch merchant ſhall be fined, and pay the whole value declared of the pack, or bale, that ſhall be wanting, or to which the ſeal ſhould not be found.

IX. It ſhall be permitted to the ſubjects of both contracting parties reciprocally, in all accuſtomed places of export, to load on board their own ſhips, veſſels, or carriages, or any other, all merchandizes bought by them, excepting only ſuch as are prohibited to be exported, and freely to ſend or carry away the ſame, provided they have paid the duties, and ſuch ſhips, veſſels, or carriages, have been cleared according to law.

X. The ſubjects of either party ſhall pay no more cuſtom or duties, on the importation or exportation of goods, than what the ſubjects of any other nation pay for the ſame goods. And in order to prevent any frauds in the duties on either ſide, the merchandizes which ſhall be found to have been ſmuggled in without paying the duties, ſhall be confiſcated, and no other puniſhment inflicted on the merchant of either ſide.

XI. The ſubjects of either party may freely paſs, repaſs, or travel, in all countries which now are, or hereafter ſhall be at enmity with the other of the ſaid parties, places actually blocked up or beſieged only excepted, provided they do not carry any warlike ſtores or ammunition to the enemy: as for all other effects, their ſhips, paſſengers and goods ſhall be free and unmoleſted.

XII. Cannons, mortars, fire-arms, piſtols, bombs, granadoes, bullets, balls, fuzees, flints, matches, powder, ſaltpetre, ſulphur, cuiraſſes, pikes, ſwords, belts, pouches, cartouche-boxes, ſaddles and bridles, in any quantity beyond what may be neceſſary for the ſhip's proviſion, and may properly appertain to, and be judged neceſſary for, every man of the ſhip's crew, or for each paſſenger, ſhall be deemed ammunition of war; and if any ſuch be there found, they may ſeize and confiſcate the ſame according to law: but neither the veſſels, paſſengers, or the reſt of the goods, ſhall be detained for that reaſon, or hindered from purſuing their voyage.

XIII. In caſe of a rupture between the contracting parties, (which God forbid) effects or veſſels of the ſubjects of either party ſhall not be detained or confiſcated, but there ſhall be the ſpace of one year at leaſt allowed them, wherein they may ſell, diſpoſe, carry off, or ſend away their effects, and tranſport their perſons.

XIV. The merchants, mariners, veſſels, or effects of either party, ſhall not be arreſted or forced into ſervice, without their own conſent, under any pretence whatſoever; and if any ſervant, or mariner, deſerts his ſervice or veſſel, he ſhall be delivered up: but nothing contained in this article is to be ſo underſtood, as to tend to the hinderance or obſtruction of the ordinary courſe of juſtice on either ſide.

XV. In caſe of wreck on any part of the dominions of the contracting parties, all ſorts of aſſiſtance ſhall be given the unfortunate; no violence ſhall be done them, nor ſhall their effects, ſaved either by themſelves or others, or drove aſhore, be hidden or detained from them; neither ſhall they be hurt, under any pretext whatſoever, but they ſhall be preſerved for them, and they ſhall pay what is reaſonable, for the aſſiſtance given to their perſons, ſhips, or effects.

XVI. Engliſh merchants may buy, build, or rent houſes, and ſell or diſpoſe of them, either at St Peterſburgh, Moſcow, in the German Slabod, Aſtracan, and Archangel; and in thoſe places their houſes ſhall be exmpted from lodging ſoldiers; in all other places they may likewiſe buy, ſell, or rent houſes, but there they ſhall be ſubject to quartering ſoldiers, equally as other inhabitants. Ruſſian merchants may alſo build, buy, or rent houſes in Great-Britain or Ireland, and ſell or diſpoſe of them, provided they qualify themſelves for that purpoſe, in the like manner as the ſubjects of any other the moſt favoured nations are obliged to do, and they ſhall be free of lodging ſoldiers, and have a free exerciſe of the Greek religion, either in their houſes, or any place appointed for that purpoſe.

XVII. Paſſports ſhall be given to all Engliſh ſubjects that might have a mind to retire from Ruſſia, two months after having given notice thereof, without obliging them to give any ſecurity, if in that time there appear no juſt cauſe to detain them, without obliging them to apply for their paſſports any where elſe than to the college of commerce, or any other that may hereafter be ſubſtituted for the ſame. The ſame care and diſpatch to depart, the Ruſſian ſubjects ſhall have in the dominions of Great-Britain, according to what is cuſtomary in that country on ſuch occaſions.

XVIII. Engliſh merchants that take into their ſervice, or hire any ſervants in Ruſſia, with ſuch paſſports as the court of juſtice thinks proper to regiſter, ſhall afterwards not be obliged to pay for the ſame to the maſters of thoſe ſervants, any more than what the Engliſh merchants and the ſervants agreed between them; but the Engliſh merchants ſhall not keep the ſervants longer than the time allowed them by the paſſports of their maſters, and without poker meſnoys no ſervant ſhall be taken into ſervice, or hired: and if the merchants take a ſecurity for the honeſty of the ſervant, and it happen that the ſervant do not behave well, and cheat ſome body, the merchant ſhall not anſwer for it, but the ſecurity. Ruſſian merchants ſhall have the ſame reciprocal ſecurity and juſtice in the dominions of Great-Britain, for the ſervants they may there hire, agreeable to the laws of the land.

XIX. All affairs of Engliſh merchants in Ruſſia ſhall be under the cognizance only of the college of commerce, or any other court that may be appointed hereafter, in lieu of this college, to take cognizance of foreign merchants affairs, and no other. Ruſſian merchants in the dominion of Great-Britain ſhall be under the protection of the laws of that kingdom, as all other foreigners are, and ſhall be treated as the moſt favoured nation.

XX. Engliſh merchants ſhall not be obliged to produce their books or papers to any body whatſoever, unleſs to bear witneſs in courts of juſtice; nor ſhall their books or papers be taken away and detained from them, neither ſhall their effects be diſtrained or ſold, under any pretence whatſoever, except in caſe of a bankruptcy, and then only by decree of the college of commerce, or any other court that may be hereafter appointed, in lieu of that college, to take care of the affairs of foreign merchants; and Ruſſian merchants in Great-Britain ſhall be protected by the laws, as the preceding article directs.

XXI. In caſe of a law ſuit, four reputable perſons among the foreign merchants ſhall be named by the college of commerce, to inſpect into the books and papers of the plaintiff, if the caſe require it, and their report to the college of commerce ſhall be a ſufficient evidence.

XXII. The cuſtom-houſe ſhall take care to examine the Ruſſian merchants ſervants, when they ſign bargains, whether they have orders or powers of their maſters for ſo doing: if not, they ſhall not be truſted. The ſame ſhall be obſerved in regard to the Engliſh merchants ſervants, and the bargains ſhall be for the maſters account, who, if they have given orders or powers to their ſervants, ſhall then be anſwerable as if they had made the bargain themſelves. All Ruſſian ſervants employed in ſhops ſhall alſo be regiſtered, and their tranſactions.

XXIII. If any Ruſſian merchants indebted to Engliſh merchants, quit the place where they lived, and retire into the country, and it happen that during their abſence, petitions be brought againſt them, proving the debt, then the college of commerce ſhall ſummon them thrice, allowing a ſufficient time for their appearance before the college; but ſhould they not appear, the college ſhall condemn them, and ſend an expreſs, at the charge of the plaintiff, to the governors, with orders to put the ſentence in execution, obliging the debtor to pay his debt.

XXIV. The Ruſſian merchants that come with their goods ſhall enter them as ſoon as poſſible at the cuſtom-houſe, and, when ſold, ſhall write down the quantity, weight and meaſure, as the regulations direct.

XXV. The bracks ſhall be equitably eſtabliſhed, and ſet in good order; the brackers ſhall be anſwerable for the quality of the goods, and falſe package, and ſubject to pay the loſſes, on proof being brought againſt them.

XXVI. Regulations ſhall be eſtabliſhed for removing abuſes which there may be in the package of hides and threads; in the interim, if any diſpute ariſe between buyer and ſeller, in regard to the tare of any goods, the cuſtom-houſe ſhall decide it, according to reaſon and equity.

XXVII. For a greater convenience and encouragement of the trade of Great-Britain, it is agreed that the following Engliſh woollen goods ſhall hereafter pay no more duty than what is ſet down in this article, viz. Engliſh cloth for ſoldiers ſhall pay no more than two copyks, in rixdollars, for each archine; the coarſe cloth of the county of York, known in the Ruſſian tariff by the name of koſtrogi, ſhall pay no more than two copyks, in rixdollars, for each archine; broad flannels only one copyk, in rixdollars, for each archine; and narrow flannels, but three quarters of a copyk, in rixdollars, for each archine.

XXVIII. It is agreed and concluded that the ſubjects of both parties ſhall be reſpected and treated, in their reſpective dominions, in like manner as the moſt favoured nation; and the ſubjects of Ruſſia which ſhall come into England, in order to learn arts and commerce there, ſhall be protected, favoured, and inſtructed: likewiſe, if any Ruſſian veſſels ſhall be met with out at ſea by any Engliſh veſſels, they ſhall in no wiſe be hindered or moleſted by them, provided they comport

port themſelves in the Britiſh Seas in the accuſtomed manner; but on the contrary, they ſhall be favoured by them, and that in the very ports or havens belonging to the dominions of Great-Britain.

XXIX. Peace, amity, and good underſtanding, ſhall continue for ever between the contracting parties; and as it is uſual to limit treaties of commerce for a certain ſpace of time, it is agreed between the contracting parties that this ſhall continue for the ſpace of fifteen years, to be computed from the day of ſigning this preſent treaty: and that before the expiration of the ſaid term, they ſhall come to a further mutual agreement for renewing and prolonging the ſame.

Articles of PEACE and COMMERCE between the moſt high and renowned prince George II, &c. and the moſt high and glorious, mighty, and right noble prince, Muley Hammet Dahebby, Ben Muley Iſmael, Ben Muley Zeridh, Ben Muley Aly, king and emperor of the kingdom of Fez and Morocco, &c. January 14, 1728.

I. That all Moors or Jews ſubject to the emperor of Morocco ſhall be allowed a free traffic, viz. to buy or ſell for 30 days in the city of Gibraltar, or iſland of Minorca, and not to reſide in either place, but to depart with their effects, without let or moleſtation, to any part of the ſaid emperor of Morocco's dominions.

II. That the king of Great-Britain's ſubjects reſiding in Barbary ſhall not be obliged to appear before the cadi, or juſtice of the country; but only the governor of the place, and his Britannic Majeſty's conſuls, are to take cognizance of, and adjuſt the differences they may have with the natives of the country.

III. That the menial ſervants of his Britannic Majeſty's ſubjects, though natives of the country, either Moors or Jews, be exempt from taxes of all kinds.

IV. That all his Britannic Majeſty's ſubjects, as well paſſengers as others, taken by any of the emperor of Fez and Morocco's cruizers, on board any foreign ſhip or veſſel whatever, ſhall immediately be ſet at liberty, and ſent to the city of Gibraltar.

V. That there be permiſſion for buying proviſions, and all other neceſſaries, for his Britannic Majeſty's fleet, or city of Gibraltar, at any of the emperor of Fez and Morocco's ſea-ports, at the market prices, and the ſame to be ſhipped off without paying cuſtom, as has been extorted lately, contrary to the treaty of peace ſubſiſting.

VI. All the other articles, being fifteen in number, concluded, agreed, and adjuſted, by the honourable Charles Steward, Eſq; on the behalf of his Britannic Majeſty, and by his excellency baſhaw Hamet Ben Aly, Ben Abdalla, and his imperial Majeſty's treaſurer, Mr Moſes Ben Hatter, a Jew, on behalf of the ſaid king of Fez and Morocco, ſhall ſtand good, and be of the ſame force, as in the reign of the moſt high and renowned prince George I, king of Great-Britain, &c. of glorious memory, and the high and glorious, mighty and right noble prince, Albumazer Muley Iſmael, late emperor of Morocco. And it is farther agreed, That all the articles aforementioned, as well the fifteen, as theſe additional ones, ſhall, in twenty days after the date hereof, be publiſhed in the Arabic language, and affixed on the gates of all the ſea-port towns in his imperial Majeſty's dominions. Signed and dated at the court of Mequinez. January 14, $17\frac{27}{28}$.

A TREATY of PEACE and FRIENDSHIP between the king of Great-Britain and the emperor of Morocco, in 1751.

George the Second, by the grace of God, king of Great-Britain, &c. duke of Brunſwic and Lunenburg, arch-treaſurer, and prince elector of the Holy Roman Empire, &c. to all to whom theſe preſents ſhall come, greeting: Whereas a treaty for eſtabliſhing peace and friendſhip was concluded and ſigned on the 15th of December, 1734, and copied the 15th of Rabbei the Firſt, in the year 1164, which is, in Engliſh ſtile, the 15th day of January, 1750, O. S. and the additional articles of peace and commerce, concluded and ſigned at the court of Fez, on the 1ſt of February, 1751, N. S. between us and the high, glorious, potent, and noble prince, Mulay Abedela, Ben Mulay Iſmael, Ben Mulay Seriph, Ben Mulay Aly, king and emperor of the kingdoms of Fez, Morocco, &c. by William Petticrew, Eſq; our conſul-general, on our part, and by the alcaide Habed Lohah Ben Hamed Limury, firſt miniſter, on the behalf, and by order of, the ſaid king of Fez and Morocco, in the words and form following:

The TREATY of PEACE between his Majeſty George the Second, king of Great-Britain, &c. and Mulay Abedela, Ben Iſmael, king and emperor of Fez, Mequinez, Morocco, &c.

I. For eſtabliſhing peace and friendſhip, it is agreed and concluded for firm and valid, both by land and ſea, in all the dominions of both powers, that the Engliſh in general ſhall and may, now, and at all times hereafter, enjoy and continue in peace and friendſhip with the emperor and his ſubjects, and be well uſed and reſpected by the emperor's ſubjects, agreeable to the order and commands of the emperor.

II. That ſuch number or quantity of paſſports as may be neceſſary, be tranſmitted to the emperor, indented in ſuch manner as ſhall tally with the paſſports that ſhall be received by the Engliſh merchants in England; and if an Engliſh man of war meets with any merchant ſhips belonging to the emperor, ſuch merchant ſhips ſhall be obliged to produce and ſhew their paſſports, given to them by the Engliſh conſul.

III. If any diſpute ſhall happen between the Engliſh and the emperor's ſubjects, the ſame not to be determined by a judge, but ended and adjuſted by the Engliſh conſul and the coyed, that is, the mayor of the town where ſuch diſpute ſhall happen.

IV. That none of the emperor's ſubjects ſhall, at any time, forcibly enter the houſes of the Engliſh, or any place belonging to them, or take and carry away any of their goods and effects, unleſs they have leave and authority from the emperor ſo to do: that if any of the emperor's ſubjects ſhall hire any Engliſh ſhip to carry and convey goods from one part of the emperor's dominions to another, and ſhall happen by ſtreſs of weather, or any other occaſion, to touch at any place or places in the voyage, ſuch ſhip or ſhips ſhall not be obliged to pay any thing for the ſhelter or aſſiſtance they may receive; and that no Engliſh whatever, or any of their ſervants (though not Engliſh) ſhall be liable to pay the tax impoſed upon the emperor's ſubjects, called the poll-tax.

V. That the fifteen articles of peace made and concluded between king George the Firſt and Mulay Iſmael, are hereby agreed to and confirmed, with his Majeſty king George the Second, as good and valid, and ſhall be faithfully kept and obſerved, together with the aforeſaid four articles.

TREATY of PEACE between his Majeſty George the Second, king of Great-Britain, &c. and Mulay Abedela Ben Iſmael, king and emperor of Fez, Mequinez, Morocco, &c.

I. That if any Engliſh ſhall happen to be on board any ſhip, or ſhips, enemies to the emperor, that may be taken by the emperor's ſhips, ſuch Engliſh ſhall be well treated, delivered into the hands of the Engliſh conſul, and have liberty to go where they pleaſe: this article to continue in force for ſix months from the concluſion of this peace; in which time, it is required that notice ſhall be given by the king of Great-Britain to all the Engliſh ſubjects, not to embark on board any of the emperor's enemies ſhips; for after that time, if the Engliſh ſhall ſo embark, the blame muſt be their own, as no regard will be had to them more than the emperor's enemies.

II. If any of the emperor's ſubjects ſhall be made ſlaves, and eſcape to an Engliſh man of war, or to Gibraltar, Port Mahon, or any of the Engliſh dominions, that they ſhall be protected, and with all convenient ſpeed ſent to their reſpective homes. The like treatment to be given to the Engliſh who ſhall be ſlaves, and eſcape to any part of the emperor's dominions.

III. If any Engliſh ſhall contract any thing to be paid to the emperor's ſubjects, notes ſhall be given for the ſame; and in like manner the ſame to be obſerved by the emperor's ſubjects in the Engliſh dominions; and if it ſhall happen that ſuch ſubjects of either power cannot write, to get ſome perſon to write ſuch notes for them.

IV. That no excuſe be made, or ignorance of this peace pretended, the ſame ſhall be publiſhed and declared to all the ſubjects of both powers, both what is now agreed on, and the articles concluded with king George the Firſt; which declaration ſhall be ſigned by each power, and by them kept, to prevent diſputes. This treaty was concluded the 15th of December, 1734, and copied the 15th of Rabbei the Firſt, in the year 1164, which is, in Engliſh ſtile, the 15th of January, 1750.

ADDITIONAL ARTICLES of PEACE and COMMERCE between the moſt high, illuſtrious, and moſt renowned prince, George the Second, &c. and the high, glorious, mighty, and moſt noble prince, Mulay Abedela, Ben Mulay Iſmael, Ben Mulay Seriph, Ben Mulay Aly, king and emperor of the kingdoms of Fez, Morocco, Taffilete, Sus, &c.

I. It is agreed on and concluded, That from henceforward there ſhall be, between his Majeſty of Great-Britain, prince and elector of Hanover, &c and the king of Fez and Morocco, their heirs and ſucceſſors, a general, true, and perfect peace for ever, as well by land as by ſea and freſh waters; and alſo between the lands, kingdoms, dominions, and territories belonging to, or under the juriſdiction of his Britannic Majeſty in Germany, and thoſe appertaining to the king of Fez and Morocco; and their ſubjects, people, or inhabitants reſpectively, of what condition, degree, or quality ſoever, from henceforth reciprocally ſhall owe the other all friendſhip;

ſhip; and that all ſhips, veſſels, paſſengers with their effects, trafficking voluntary, or compelled by enemies, diſaſters of the ſeas, or any accident whatſoever, to the coaſts of the emperor of Fez and Morocco's dominions, being his Britannic Majeſty's ſubjects in Germany, ſhall from henceforth be treated according to the ſaid regulations, as ſpecified by the treaties of peace now ſubſiſting between his Britannic Majeſty and the king of Fez and Morocco.

II. It is agreed that all ſhips and veſſels belonging to his Britannic Majeſty in Germany, ſhall carry a proper paſs, and that a copy of ſuch paſs, with the heads of the ſaid paſſes, ſhall be ſent to his Britannic Majeſty's conſul reſiding in Barbary, to the end that he may deliver the ſame to the commanders, or captains, of the king of Fez and Morocco's ſhips of war, or cruizers, to the end that due regard may be had to this peace, and that no commander or captain may offend through ignorance; and all commanders or captains of ſhips or veſſels belonging to his Britannic Majeſty's ſubjects in Germany, meeting with any ſhip or veſſel belonging to the king of Fez or Morocco, or his ſubjects, if the commander of ſuch ſhip or veſſel produce a paſs, ſigned by the governor of the city they belong to, with a certificate from the Engliſh conſul, and, in caſe of his death or abſence, from the major part of the Engliſh merchants reſiding in the ſaid place, in ſuch caſes, the ſaid ſhip or veſſel ſhall purſue freely her voyage, without hindrance or moleſtation.

III. It is agreed that the king of Great-Britain's ſubjects ſhall not be obliged to appear before juſtices of the country in any cauſe, but that only the governor of the city, and his Britannic Majeſty's conſul, ſhall take cognizance of, and adjuſt the difference or ſuits they may have with the Moors, or other inhabitants in the dominions of the king of Fez and Morocco.

IV. It is agreed that no governor or officer under the king of Fez and Morocco ſhall, without the king's ſpecial order, viſit or regiſter the dwelling-houſes or magazines of any of his Britannic Majeſty's ſubjects reſiding in Barbary; and that all Britiſh ſhips taking freight in any port of the king of Fez and Morocco, to carry to other ports of the ſaid kingdom, ſhall be exempted from all port-charges, as uſual, in whatever port they may put in; and that the conſul, and the other Britiſh merchants, ſhall be freely allowed to have Moors, or Jews, as their interpreters and brokers, who ſhall be exempted from all taxes, as likewiſe all their domeſtic ſervants.

All the other articles, being fifteen in number, concluded, agreed, and adjuſted, by the admiral Charles Stewart, on the behalf of his Britannic Majeſty, and by his excellency baſhaw Hamet Ben Alay Ben Abdalla, and his Imperial Majeſty's treaſurer, Mr Moſes Benatar, on behalf of the ſaid king of Fez and Morocco, ſhall ſtand good, and be of the ſame force, as in the reign of the moſt high, illuſtrious, and renowned prince, George the Firſt, king of Great-Britain, &c. of glorious memory, and the high, mighty, and moſt noble prince, Mulay Iſmael, late emperor of Morocco, as likewiſe the other articles, being three in number, agreed and concluded by John Leonard Sollicoffree, Eſq; on behalf of his Britannic Majeſty, and his excellency baſhaw Hamet Ben Aly Ben Abdalla on behalf of the king of Fez and Morocco.

It is agreed on and concluded, that all the articles aforementioned, being eighteen in number, with theſe additional articles, that are tranſlated into the Arabic language, copies thereof be ſent to all his Imperial Majeſty's alcaides, and officers of all the ports in his dominions, there to be read by the cady or chief juſtice, in public aſſembly, and afterwards to remain depoſited, either in the hands of the judge, or the alcaide of the port, that recourſe may be had thereto on all occaſions which may occur; and that the ratifications of the ſaid articles ſhall be made within the term of ſix months, or ſooner, if poſſible, in Spaniſh, which ſhall be received, and be of equal force. Dated and ſigned at the court of Fez, on the 1ſt of February, 1751, N. S.

Signed ABDELHOVAH ALY MOORY.

TREATY of PEACE between his Majeſty George the Firſt, king of Great-Britain, &c. and Muli Iſmael, ſon of Muli Alli Sherife, king of Fez, Mequinez, Morocco, &c.

I. In order to eſtabliſh peace between the powers, both by land and ſea, and all their reſpective dominions, it is agreed on, that the Engliſh may now, and always hereafter, be well uſed and reſpected by our ſubjects, agreeable to the orders and commands of the emperor.

II. That all Engliſh men of war and merchant-ſhips, that ſhall come to any part of the emperor's dominions, to trade or otherwiſe, and ſhall have on board a cargo not proper for vending in the place where they ſhall come, may depart with the ſame to any other part of the emperor's dominions, and ſhall pay duty but once for the ſame; and that no duty at all ſhall be paid for any war implements, ſuch as fire-arms, ſwords, and any thing belonging to the army, as alſo for materials of all kinds for ſhip-building; and if any Engliſh ſhip ſhall arrive at any of the emperor's ports, with any merchandize deſtined for any other part of the world, that no duty ſhall be paid for ſuch merchandize, but ſhall depart with the ſame, without any manner of moleſtation. If any Engliſh ſhip ſhall be thrown upon the emperor's coaſts by ſtreſs of weather, or otherwiſe, the ſame ſhall be protected, and may ſafely depart, without any ill uſage or interruption. In like manner ſhall be treated the emperor's ſubjects happening to be thus thrown on the coaſt of Great-Britain, or the dominions thereto belonging.

III. That all the Engliſh ſhips and emperor's ſhips may paſs and repaſs the ſeas without hinderance, interruption, or moleſtation, from each other; nor ſhall any money, merchandize, or any demand be made or taken, by the ſhips of either power from each other; and if any ſubjects of any other nation ſhall be on board either the Engliſh or the emperor's ſhips, they ſhall be ſafely protected by both parties.

IV. If the emperor's men of war meet with any Engliſh ſhips, and ſhall want to ſee their paſſports, they are to ſend a boat, with two men of fidelity, to peruſe the ſaid paſſports, who are to return without any farther trouble, and then both ſides to proceed quietly on their reſpective voyages; the ſame uſage to be received by the emperor's merchant-ſhips from the Engliſh men of war, who ſhall allow the paſſports made out by the Engliſh conſul, and, if the conſul ſhall not be preſent to make them, then the paſſports made out by the Engliſh merchants to be good and valid.

V. If the Engliſh men of war, privateers, or letter of marque ſhips ſhall take prizes from any nation with whom they ſhall be at war, they ſhall have liberty to bring and diſpoſe of the ſame in any of the emperor's dominions, without any duty or charge whatſoever.

VI. If any Engliſh ſhip ſhall by ſtorm, or in flying from her enemy, come upon the emperor's coaſts, the ſame ſhall be ſafely protected, and nothing touched and taken away, but ſhall be under the direction of the Engliſh conſul, who ſhall ſend the goods and people where he ſhall think fit.

VII. It is the mutual agreement of the king of Great-Britain and the emperor, that the emperor do iſſue out orders to all parts of his dominions, for the well uſing of all the Engliſh ſubjects, and that particular places be appointed for the burial of their dead; that the conſuls, brokers, ſhall freely go on board any ſhip, without interruption; that the Engliſh conſuls, merchants, and other ſubjects of Great-Britain, may ſafely travel by land with effects, without any hindrance whatever; and if any Engliſh ſettled in the emperor's dominions ſhall be deſirous to return home, that they may ſo do, with their families, goods, and effects, without interruption: if any Engliſh die, the effects of ſuch to be taken under the care of the conſul, to be diſpoſed of as directed by the will of ſuch perſon, and, if no will, for the benefit of ſuch perſon's next heir; and if any debts ſhall be owing to ſuch deceaſed perſon, the ſame to be paid by order of the governor, or any other perſon in power, where ſuch perſon ſhall die; and that a ſubject of the emperor's be appointed to demand and receive the ſame, and depoſit the ſame in the hands of the Engliſh conſul, for the aforeſaid uſes. If any Engliſh ſhall contract debts in the emperor's country, and remove from thence without ſatisfying the ſame, no other perſons ſhall be liable to pay ſuch debts. The like uſage and treatment the ſubjects of the emperor are to receive in the king of Great-Britain's dominions; and that the king may ſend as many conſuls to the emperor's dominions as he ſhall think neceſſary.

VIII. That no Engliſh merchant, captains of ſhips, or other perſon or perſons whatſoever, that are Engliſh ſubjects, ſhall be forced to ſell any of their goods for leſs than the real value; and that no captain, maſter, or commander of any Engliſh ſhip ſhall be compelled, without their own will and conſent, to carry any goods or merchandizes for any perſon or perſons, whatſoever; nor ſhall any ſailor be forced away from any Engliſh ſhip.

IX. If any quarrel or diſpute ſhall happen between any Engliſhman and a Muſſu'man, by which hurt to either may enſue, the ſame to be heard before, and determined by the emperor only; and if an Engliſhman, who may be the aggreſſor, ſhall make his eſcape, no other Engliſhman ſhall ſuffer upon his account; and if two Engliſhmen ſhall quarrel, to be determined by the Engliſh conſul, who ſhall do with them as he pleaſes: and if any quarrel or diſpute ſhall happen between Muſſulmen in England, or in any of the Engliſh dominions, by which hurt may enſue, the ſame to be heard before one Chriſtian and one Muſſulman, and to be determined according to the laws of Great-Britain.

X. If it ſhall happen that this peace, by any means, ſhall be broke, the conſul, and all other Engliſh, ſhall have ſix months time to remove themſelves, with their families and effects, to any place they pleaſe, without interruption, and that all debts owing to them ſhall be juſtly paid to them.

XI. If any Engliſh in the emperor's dominions, or the emperor's ſubjects in the Engliſh dominions, ſhall maliciouſly endeavour to break the peace, ſuch of them who ſhall be proved to ſo intend, ſhall by each power be puniſhed for ſuch offence, each power to take cognizance of their own ſubjects.

XII. If any of the emperor's ſubjects ſhall purchaſe any commodity in the Engliſh dominions, they ſhall not be impoſed on in price, but pay the ſame as is ſold to the Engliſh.

XIII. That

XIII. That not any of the Spaniſh, whether captains, ſailors, or other perſons, under the Engliſh government in Gibraltar or Port-Mahon, ſhall be taken or moleſted, ſailing under Engliſh colours, with paſſports.

XIV. That no excuſe be made, or ignorance pretended, of this peace, the ſame ſhall be publiſhed and declared to all the ſubjects of each power, which declaration ſhall be ſigned by each power, and kept by them to prevent diſputes.

XV. If any man of war ſhall be on the emperor's coaſts, that are enemies to the Engliſh, and any Engliſh men of war, or other Engliſh ſhips, ſhall happen to be, or arrive there alſo, that they ſhall not in any manner be hurt, or engaged by their enemy; and when ſuch Engliſh ſhips ſhall ſail, their enemies ſhips ſhall not ſet ſail under forty hours afterwards.

And if, after the concluſion of this peace, any ſhip ſhall happen to be taken by either powers, within ſix months after the proclamation of the peace, that the ſame, with the people and effects, ſhall be reſtored. Made and declared in the preſence of the emperor's ſervant, Ahammad Baſha, ſon of Alli, ſon of Abdalla, by the authority given to him by the emperor. Dated this 23d of January, in the year 1721, Engliſh ſtile. Wrote and given to Charles Stewart, Eſq; the Engliſh ambaſſador, in the ſeventh year of the reign of our late royal father, king George the Firſt.

We having ſeen and conſidered the abnve-written treaty, with the additional articles, have approved, ratified, and confirmed the ſame, in all and ſingular their clauſes, as by theſe preſents we do approve, ratify, and confirm the ſame for us, our heirs and ſucceſſors, engaging and promiſing, on our royal word, ſacredly and inviolably to perform and obſerve all and ſingular their contents, and never to ſuffer, as far as in us lies, any perſon to violate the ſame, or in any manner to act contrary thereto. In witneſs whereof, we have cauſed our great ſeal of Great-Britain to be affixed to theſe preſents, ſigned with our own royal hand. Given at our court at Kenſington, the thirty-firſt day of July, in the year of our Lord 1751, and of our reign the 25th.

GEORGE R.

ARTICLES of PEACE and COMMERCE between the moſt ſerene and mighty prince Charles II. by the grace, &c. and moſt illuſtrious lords the baſha, dey, and aga, governors of the famous city and kingdom of Algiers, &c. concluded by Arthur Herbert, Eſq; admiral of his Majeſty's fleet, April 10, O. S. 1682.—With the few alterations made and included at the renewal thereof in 1686: all which are, for diſtinction, in a different character.

I. In the firſt place it is agreed and concluded, That from this day, and for ever forwards, there be a true, firm, and inviolable peace between the moſt ſerene king of Great Britain, France, and Ireland, &c. and the moſt illuſtrious lords the baſha, dey, and aga, governors of the city and kingdom of Algiers, and between all the dominions and ſubjects of either ſide; and that the ſhips, or other veſſels, and the ſubjects and people of both ſides, ſhall not henceforth do to each other any harm, offence, or injury, either in word or deed, but ſhall treat one another with all poſſible reſpect and friendſhip; and that all demands and pretenſions whatſoever, to this day, between both parties, ſhall ceaſe and be void.

II. That any of the ſhips or other veſſels, belonging to the ſaid king of Great-Britain, &c. or to any of his Majeſty's ſubjects, may ſafely come to the port of Algiers, or to any other port or place of that kingdom, there freely to buy and ſell, paying the uſual cuſtoms of 10 per cent. as in former times, for ſuch goods as they ſell; and the goods they ſell not, they ſhall freely carry on board, without paying any duties for the ſame: and that they ſhall freely depart from thence whenſoever they pleaſe, without any ſtop or hinderance whatſoever. As to contraband merchandizes, as powder, brimſtone, iron, planks, and all ſorts of timber fit for building of ſhips, ropes, pitch, tar, fuſils, and other habiliments of war, his ſaid Majeſty's ſubjects ſhall pay no duty for the ſame to thoſe of Algiers.

III. That all ſhips, and other veſſels, as well thoſe belonging to the ſaid king of Great-Britain, or to any of his Majeſty's ſubjects, as thoſe belonging to the kingdom or people of Algiers, ſhall freely paſs the ſeas, and traffic, without any ſearch, hinderance, or moleſtation, from each other; and that all perſons or paſſengers, of what country ſoever, and all monies, goods, merchandizes and moveables, to whatſoever people or nation belonging, being on board any of the ſaid ſhips or veſſels ſhall be wholly free, and ſhall not be ſtopped, taken or plundered, nor receive any harm or damage whatſoever from either party.

IV. That the Algiers ſhips of war, or other veſſels, meeting with any merchant-ſhips, or other veſſels, of his ſaid Majeſty's ſubjects, not being in any of the ſeas appertaining to his Majeſty's dominions, may ſend on board one ſingle boat, with two ſitters only, beſides the ordinary crew of rowers; and that no more ſhall enter any ſuch merchant-ſhip, or veſſel, without expreſs leave from the commander thereof, but the two ſitters alone; and, upon producing a paſs under the hand and ſeal of the lord high admiral of England and Ireland, or of the lord high admiral of Scotland, for the ſaid kingdoms reſpectively, or under the hands and ſeals of the commiſſioners for executing the office of lord high admiral of any of the ſaid kingdoms, that the ſaid ſhip ſhall proceed freely on her voyage; and that, altho', for the ſpace of fifteen months next enſuing after the concluſion of this peace, the ſaid commander of the merchant ſhip, or veſſel, produces no ſuch paſs, yet if the major part of the ſeamen of the ſaid ſhip, or veſſel, be ſubjects of the ſaid king of Great Britain, the ſaid boat ſhall immediately depart, and the ſaid merchant-ſhip, or veſſel, ſhall freely proceed on her voyage: but that, after the ſaid fifteen months, all merchant-ſhips, or veſſels, of his ſaid Majeſty's ſubjects, ſhall be obliged to produce ſuch a paſs as aforeſaid. And any of the ſhips of war of his ſaid Majeſty, meeting with any ſhips, or other veſſels of Algiers, if the commander of any ſuch ſhip or veſſel ſhall produce a paſs, confirmed by the chief governors of Algiers, and a certificate from the Engliſh conſul there reſiding, or if they have no ſuch paſs, or certificate, yet if, for the ſpace of fifteen months next enſuing the concluſion of this peace, the major part of the ſhip's company be Turks, Moors, or ſlaves belonging to Algiers, then the ſaid Algiers ſhips or veſſels ſhall proceed freely; but that after the ſaid fifteen months, all Algiers ſhips or veſſels ſhall be obliged to produce ſuch a paſs and certificate as aforeſaid.—THE ONLY ALTERATION IN THIS REGARDS THE FIFTEEN MONTHS TERM ALLOWED FOR PASSES, &c.

V. That no commander, or other perſon, of any ſhip or veſſel of Algiers, ſhall take out of any ſhip or veſſel of his ſaid Majeſty's ſubjects, any perſon or perſons whatſoever, to carry them any where to be examined, or upon any other pretence; nor ſhall they uſe any torture or violence to any perſon, of what nation or quality ſoever, being on board any ſhip or veſſel of his ſaid Majeſty's ſubjects, upon any pretence whatſoever.

VI. That no ſhipwreck belonging to the ſaid king of Great-Britain, or to any of his ſubjects, upon any part of the coaſt belonging to Algiers, ſhall be made, or become prize; and that neither the goods thereof ſhall be ſeized, nor the men made ſlaves, but that all the ſubjects of Algiers ſhall uſe their beſt endeavours to ſave the ſaid men and their goods.

VII. That no ſhip, or any other veſſel of Algiers, ſhall have permiſſion to be delivered up, or go to Sallee, or any place in enmity with the ſaid king of Great-Britain, to be made uſe of as corſairs, or ſea rovers, againſt his ſaid Majeſty's ſubjects.

VIII. That none of the ſhips, or other ſmaller veſſels of Algiers, ſhall remain cruiſing near, or in ſight of his Majeſty's city and garriſon of Tangier, or of any other his Majeſty's roads, havens, ports, towns, and places, nor any way diſturb the peace and commerce of the ſame. TANGIER NOW OMITTED.

IX. That if any ſhip, or veſſel, of Tunis, Tripoly, or Sallee, or of any other place, bring any ſhips, veſſels, men, or goods, belonging to any of his ſaid Majeſty's ſubjects, to Algiers, or to any port or place in that kingdom, the governors there ſhall not permit them to be ſold within the territories of Algiers.

X. That if any of the ſhips of war of the ſaid king of Great-Britain do come to Algiers, or to any other port or place of that kingdom, with any prize, they may freely ſell it, or otherwiſe diſpoſe of it at pleaſure, without being moleſted by any: and that his ſaid Majeſty's ſhips of war ſhall not be obliged to pay cuſtoms in any ſort; and that if they ſhall want proviſions, victuals, or any other things, they may freely buy them at the rates in the market.

XI. That when any of his ſaid Majeſty's ſhips of war ſhall appear before Algiers, upon notice thereof given by the Engliſh conſul, or by the commander of the ſaid ſhips, to the chief governors of Algiers, public proclamation ſhall be immediately made to ſecure the Chriſtian captives: and if, after that, any Chriſtians whatſoever make their eſcape on board any of the ſaid ſhips of war, they ſhall not be required; nor ſhall the ſaid conſul or commander, or any other of his Majeſty's ſubjects, be obliged to pay any thing for the ſaid Chriſtians.

XII. That from and after the time that the ratification of this treaty by the king of Great-Britain, ſhall be delivered to the chief governors of Algiers, no ſubjects of his ſaid Majeſty ſhall be bought or ſold, or made ſlaves in any part of the kingdom of Algiers, upon any pretence whatſoever. And the ſaid king of Great-Britain ſhall not be obliged, by virtue of this treaty of peace, to redeem any of his ſubjects now in ſlavery, or who may be made ſlaves before the ſaid ratification; but it ſhall depend abſolutely upon his Majeſty, or the friends and relations of the ſaid perſons in ſlavery, without any limitation or reſtriction of time, to redeem ſuch, or ſo many of them, from time to time, as ſhall be thought fit, agreeing for as reaſonable a price as may be, with their patrons or maſters, for their redemption, without obliging the ſaid patrons or maſters, againſt their wills, to ſet any at liberty, whether they be ſlaves belonging to the beylic (or public), the gallies, or ſuch as belong particularly to the baſha,

dey, aga, or any other perſon whatſoever. And all ſlaves, being his Majeſty's ſubjects, ſhall, when they are redeemed, enjoy the abatements of the duty due to the royal houſe, and of the other charges, by paying ſuch reaſonable ſums as any ſlaves of other nations uſually pay when they are redeemed.

XIII. That if any ſubject of the ſaid king of Great-Britain happen to die in Algiers, or in any part of its territories, his goods or monies ſhall not be ſeized by the governors, judges, or other officers of Algiers, who likewiſe ſhall not make any enquiry after them: but the ſaid goods or monies ſhall be received and poſſeſſed by ſuch perſon or perſons, whom the deceaſed ſhall, by his laſt will, have made his heir or heirs, in caſe they be upon the place where the teſtator deceaſed. But if the heirs be not there, then the executors of the ſaid will, lawfully conſtituted by the deceaſed, ſhall, after having made an inventory of all the goods and monies left, take them into their cuſtody without any hinderance, and ſhall take care the ſame be remitted, by ſome ſafe way, to the true and lawful heirs; and in caſe any of his ſaid Majeſty's ſubjects happen to die, not having made any will, the Engliſh conſul ſhall poſſeſs himſelf of his goods and monies, upon inventory, for the uſe of the kindred and heirs of the deceaſed.

XIV. That no merchants, being his majeſty's ſubjects, and reſiding in or trading to the city and kingdom of Algiers, ſhall be obliged to buy any merchandizes againſt their wills, but it ſhall be free for them to buy ſuch commodities as they ſhall think fit: and no captain or commander of any ſhip or veſſel belonging to his ſaid majeſty's ſubjects, ſhall be obliged, againſt his will, to lade any goods to carry them, or make a voyage to any place whither he ſhall not have a mind to go. And neither the Engliſh conſul, nor any other ſubject of the ſaid king, ſhall be bound to pay the debts of any other of his Majeſty's ſubjects, except that he or they become ſureties for the ſame, by a public act.

XV. That the ſubjects of his ſaid Majeſty in Algiers or its territories, in matter of controverſy, ſhall be liable to no other juriſdiction but that of the dey, or the divan, except they happen to be at difference between themſelves, in which caſe they ſhall be liable to no other determination but that of the conſul only.

XVI. That in caſe any ſubject of his ſaid Majeſty, being in any part of the kingdom of Algiers, happen to ſtrike, wound, or kill a Turk, or a Moor, if he be taken, he is to be puniſhed in the ſame manner, and with no greater feverity than a Turk ought to be, being guilty of the ſame offence; but if he eſcape, neither the ſaid Engliſh conſul, nor any other of his ſaid Majeſty's ſubjects, ſhall be in any ſort queſtioned and troubled therefore.

XVII. That the Engliſh conſul now, or at any time hereafter, reſiding at Algiers, ſhall be there, at all times, with entire freedom and ſafety of his perſon and eſtate, and ſhall be permitted to chuſe his own terjiman (interpreter) and broker, and freely to go on board any ſhips in the road, as often and when he pleaſes, and to have the liberty of the country; and that he ſhall be allowed a place to pray in, and that no man ſhall do him an injury, in word or deed.

XVIII. That not only during the continuance of this peace and friendſhip, but likewiſe, if any breach or war happens hereafter to be between the ſaid king of Great-Britain and the kingdom of Algiers, the ſaid Engliſh conſul, and all others his ſaid Majeſty's ſubjects, inhabiting in the kingdom of Algiers, ſhall, always and at all times, both of peace and war, have full and abſolute liberty to depart and go to their own, or any other country, upon any ſhip or veſſel, of what nation ſoever they ſhall think fit, and to carry with them all their eſtates, goods, families, and ſervants, without any interruption or hinderance.

XIX. That no ſubject of his ſaid Majeſty, being a paſſenger, and coming or going with his baggage, from or to any port, ſhall be any ways moleſted or meddled with, although he be on board any ſhip or veſſel in enmity with Algiers: and in like manner, no Algerine paſſenger, being on board any ſhip or veſſel in enmity with the ſaid king of Great-Britain, ſhall be any way moleſted, whether in his perſon or in his goods, which he may have laden on board the ſaid ſhip or veſſel.

XX. That at all times, when any ſhip of war of the king of Great-Britain's, carrying his ſaid Majeſty's flag at the main top-maſt head, ſhall appear before Algiers, and come to an anchor in the road, immediately upon notice thereof given by his Majeſty's conſul, or ſome officer from the ſhip, to the dey and regency of Algiers, they ſhall, in honour to his Majeſty, cauſe a ſalute of 21 cannon to be ſhot off, from the caſtles and forts of the city, and that the ſaid ſhip ſhall return an anſwer by ſhooting off the ſame number of cannon.

XXI. That preſently after the ſigning and ſealing of theſe articles by the baſha, dey, aga, and chiefs of Algiers, all injuries and damages, ſuſtained on either part, ſhall be quite taken away and forgotten, and this peace ſhall be in full force and virtue, and continue for ever: and for all depredations and damages that ſhall be afterwards committed or done by either ſide, before notice can be given of this peace, full ſatisfaction ſhall immediately be made, AND WHATSOEVER REMAINS IN KIND SHALL BE INSTANTLY RESTORED.

XXII. That in caſe it ſhall happen hereafter, that any thing is done or committed contrary to this treaty, whether by the ſubjects of the one or the other party, the treaty notwithſtanding ſhall ſubſiſt in full force, and ſuch contraventions ſhall not occaſion the breach of this peace, friendſhip and good correſpondence, but the party injured ſhall amicably demand immediate ſatisfaction for the ſaid contraventions, before it be lawful to break the peace: and if the fault was committed by any private ſubjects of either party, they alone ſhall be puniſhed, as breakers of the peace and diſturbers of the public quiet. And our faith ſhall be our faith, and our word our word.

Confirmed and ſealed, in the preſence of Almighty God, April 10, of Jeſus 1682, of the Hejira 1093, Abrir 11.

This is the treaty which remains ſtill in force, and has been ever ſince referred to when any renewals, with additional articles have been made by our ſucceeding ſovereigns. It was (mutatis mutandis) renewed and confirmed, April 5, 1686, by Sir William Soame, Bart. when he was going ambaſſador extraordinary from king James II. to the Grand Signior, with ſcarce any alterations, except literals, and what elſe has been obſerved. In 1691, Thomas Barker, Eſq; ſent for by Shaaban-Hojia, then dey of Algiers, renewed and confirmed the ſame, without alteration or addition.

In 1700, Capt. Munden, jointly with Robert Cole, Eſq; then conſul for our nation at Algiers, renewed and confirmed the ſame, with the following additional articles.

I. We the moſt excellent and moſt illuſtrious lords, Muſtafa dey, Ali baſha, and Muſtafa aga, governors of the moſt famous and warlike city and kingdom of Algiers, do, by theſe preſents, renew and confirm the peace we ſo happily enjoy, with William, king of Great-Britain, France, and Ireland, defender of the Chriſtian Faith, and his ſubjects, made in the year of Jeſus, 1682 (of the Hejira 1093, and renewed four years after) in every part and article, more particularly that of the eighth, wherein it is expreſſed, that no ſhip or veſſel belonging to our government of Algiers, ſhall cruize near, or in ſight of, any of the roads, havens, or ports, towns, or places belonging to the ſaid king of Great-Britain, or any way diſturb the peace and commerce of the ſame: and in compliance with the ſaid eighth article of that treaty, we do ſincerely promiſe and declare, that ſuch orders ſhall for the future be given to all our commanders, that under a ſevere penalty, and our utmoſt diſpleaſure, they ſhall not enter into the channel of England, nor come, or cruize in ſight of any part of his Majeſty of Great Britain's dominions any more for the time to come.

II. That whereas it had been declared, that all ſhips and veſſels belonging to the ſubjects of the ſaid king of Great-Britain ſhould have paſſes, &c. by the laſt day of September, in this preſent year of Jeſus 1700: we do by theſe declare, at the deſire of Capt. John Munden, commander in chief of his ſaid Majeſty's ſhips in the Mediterranean, and Robert Cole, Eſq; his Majeſty's conſul, now reſiding at our city of Algiers, on behalf of their great maſter, that no paſſes ſhall be required or expected from any of the Engliſh ſhips or veſſels, in any part of the world, but that they ſhall proceed on their voyage, without producing, or ſhewing a paſs to any of our cruizers, 'till the laſt of September 1701. And after that time is expired, and any ſhip of England be ſeized, not having a paſs, we do hereby declare, that the goods in that ſhip ſhall be prize; but the maſter, men, and ſhip, ſhall be reſtored, and the freight immediately paid to the ſaid maſter, to the utmoſt value as he ſhould have had, if he had gone ſafe to the port whither he was bound.

III. That whereas Capt. John Munden has given us good aſſurance that he had a great affront ſome years paſt, from ſome of our rude ſailors at our mole, we do hereby promiſe, that, at all times, whenever any of the king of Great-Britain's ſhips of war ſhall come to this place, order ſhall be immediately given to an officer of the government who ſhall attend at the mole, all the day-time, during their ſtay here, to prevent any ſuch diſorders for the future, that no miſunderſtanding may happen between us: and in any ſuch caſe, the officer at the mole ſhall ſecure the perſon or perſons ſo offending, who ſhall be puniſhed with the utmoſt ſeverity. By the help of God, and if he pleaſe, theſe articles, now made between us, ſhall be maintained. To the truth whereof, we have hereunto ſet our hands and ſeals, Algiers, in the year of the Hejira 1112, which is in the Chriſtian account Auguſt 20, 1700.

In 1703, admiral Byng, afterwards lord viſcount Torrington, renewing the peace for queen Anne with the ſame Muſtafa dey, inſerted the two new articles, which are as follow: the preliminary one being only a confirmation of the foregoing, for which reaſon it is omitted.

I. That whereas, by the ſaid articles of peace, made and concluded by admiral Herbert in 1682, it was agreed, that the ſubjects of England ſhould pay 10 per cent. cuſtom for the goods they ſhould ſell at Algiers, or in the dominions thereof; now, for the better ſettling and maintaining a good commerce between the ſubjects of England and thoſe of Algiers, it is agreed and declared, that, from henceforwards, the Engliſh ſhall pay but 5 per cent. cuſtom; and that contraband goods, as is declared before, ſhall not pay any cuſtom.

II. And it is farther agreed and declared, that all prizes taken by any one of the ſubjects of the ſaid queen of Great-Britain, and all ſhips and veſſels built and fitted out in any of his Majeſty's plantations in America, that have not been in England, ſhall not be moleſted, in caſe of their not having paſſes: but that a certificate in writing, under the hands of the commanding officers who ſhall take any prizes, and a certificate under the hand of the governors or chiefs of ſuch American colonies or places where ſuch ſhips were built or fitted out, ſhall be ſufficient paſſes for either of them. And our faith ſhall be our faith, and our word our word.

Algiers, confirmed and ſealed, in the preſence of Almighty God, October 28, in the year of Jeſus 1703, of the Hejira 1115.

This was again renewed in the reign of his late Majeſty king George I. when, in 1716, admiral Baker had orders to viſit Tripoly, Tunis, and Algiers. With the two firſt, as will appear in the enſuing pages, he confirmed our former treaties in perſon; but to Algiers he deputed the Argyle and Cheſter, two of his Majeſty's ſhips, to whoſe commanders, Capt. Coningſby Norbury, and Capt. Nicholas Eaton, in conjunction with Mr Thomas Thompſon, then acting as conſul in the abſence of his brother Samuel Thompſon, Eſq; he gave a full power to ratify and confirm all the above treaties, with theſe following new articles.—After the preamble, the firſt article concludes thus:

I. If any demands or pretenſions ſhall be now left depending, between the ſubjects or others of either party, they ſhall be amicably redreſſed, and full ſatisfaction ſhall be made to each other, according to the truth and juſtice of their claim: nor ſhall any of the ſame be cancelled, or made void by this treaty.

II. That as the iſland of Minorca in the Mediterranean Sea, and the city of Gibraltar in Spain, have been yielded and annexed to the crown of Great-Britain, as well by the king of Spain, as by the ſeveral powers of Europe engaged in the late war, it is now hereby agreed and fully concluded, that from this time forward for ever, the ſaid iſland of Minorca and city of Gibraltar, ſhall be eſteemed, in every reſpect, by the government and people of Algiers, to be part of his Britannic Majeſty's dominions, and the inhabitants thereof be looked upon as his Majeſty's natural ſubjects, in the ſame manner as if they had been born in any other part of the Britiſh territories: and they, with their ſhips and veſſels wearing Britiſh colours, and being furniſhed with proper paſſes, ſhall be permitted freely to trade and traffic in any part of the dominions of Algiers, and ſhall paſs without any moleſtation whatſoever, and ſhall have the ſame liberties and privileges that are ſtipulated in this, and have been made in any other treaties in behalf of the Britiſh nation and ſubjects; and therefore none of the cruizers of Algiers ſhall, at any time, cruize within ſight of the ſaid iſland of Minorca and city of Gibraltar.

III. That if any Engliſh ſhip ſhall receive on board any paſſengers and goods belonging to the kingdom of Algiers, the Engliſh ſhall defend the ſaid Algerines and their goods, ſo far as lies in their power, and not deliver them to their enemies. And the better to prevent any unjuſt demands being made upon the crown of Great Britain, and to avoid diſputes and differences that may ariſe, all goods and merchandizes that ſhall from henceforwards be ſhipped by the ſubjects of Algiers, on board the ſhips or veſſels of Britiſh ſubjects upon freight, ſhall be firſt regiſtered in the office of cancellaria, before the Britiſh conſul reſiding in the port where they are ſo ſhipped; and the quantity, quality, and value thereof ſhall be expreſſed; and the conſul is to manifeſt the ſame in the clearance given to the ſhip or veſſel before it ſhall depart, to the end that, if any cauſe of complaint ſhould happen hereafter, there may be no greater claim made on the Britiſh nation, than what by this method may be proved juſt and equitable.

IV. That if any of the Algerine cruizers ſhall meet with ſhips provided with ſcallop paſſes, of either ſhips or ſatias, that ſhall fit with thoſe delivered to them by the Britiſh conſul, they ſhall paſs free and unmoleſted. Algiers, October 29, 1716.

ARTICLES of PEACE and COMMERCE, between his moſt ſacred Majeſty George, &c. and the moſt excellent lords, Ali baſha, Haſſain Ben Ali bey, Cara Muſtafa dey, the aga, and the divan of the moſt noble city of Tunis, and the whole body of the militia of the ſaid kingdom. Renewed and concluded, A. D. 1716, by John Baker, Eſq; vice-admiral, &c.

I. That all former grievances and loſſes, and other pretenſions between both parties, ſhall be void and of no effect; and from henceforward a firm peace for ever, free trade and commerce, ſhall be and continue between the ſubjects of his moſt ſacred Majeſty George, king of Great-Britain, &c. and the people of the kingdom of Tunis, and the dominions thereunto belonging. But that this article ſhall not cancel or make void any juſt debt either in commerce or otherwiſe, that may be due from any perſon or perſons to others of either party; but that the ſame ſhall be liable to be demanded and be recoverable as before.

II. That the ſhips of either party ſhall have free liberty to enter into any port or river belonging to the dominions of either party, paying the duties only for what they ſhall ſell, tranſporting the reſt without any trouble or moleſtation, and freely enjoy any other privileges accuſtomed: and the late exaction that has been upon the lading and unlading of goods at Goletta and the Marine, ſhall be reduced to the ancient cuſtoms in thoſe caſes.

III. That there ſhall not be any ſeizure of any ſhips of either party, at ſea or in port, but that they ſhall quietly paſs without any moleſtation or interruption, they diſplaying their colours: and for prevention of all inconveniencies that may happen, the ſhips of Tunis are to have a certificate under hand and ſeal of the Britiſh conſul, that they belong to Tunis: which being produced, the Engliſh ſhip ſhall admit two men to come on board them peaceably, to ſatisfy themſelves they are Engliſh; and, although they have paſſengers of other nations on board, they ſhall be free, both they and their effects.

IV. That if any Engliſh ſhip ſhall receive on board any goods or paſſengers belonging to the kingdom of Tunis, they ſhall be bound to defend them and their goods, ſo far as lies in their power, and not deliver them unto their enemies; and the better to prevent any unjuſt demands being made upon the crown of Great Britain, and to avoid diſputes and differences which may ariſe, all goods and merchandizes that ſhall, from henceforward, be ſhipped by the ſubjects of this government, either in this port or any other whatſoever, on board the ſhips or veſſels belonging to Great-Britain, ſhall be firſt entered in the office of cancellaria, before the Britiſh conſul reſiding at the reſpective port, expreſſing the quantity, quality, and value of the goods ſo ſhipped; which the ſaid conſul is to certify in the clearance given to the ſaid ſhip or veſſel before ſhe departs, to the end that, if any cauſe of complaint ſhould happen hereafter, there may be no greater claim made on the Britiſh nation, than by this method ſhall be proved to be juſt and equitable.

V. That if any of the ſhips of either party ſhall, by accident of foul weather, or otherwiſe, be caſt away upon the coaſt belonging to either party, the perſons ſhall be free, and the goods ſaved and delivered to their lawful proprietors.

VI. That the Engliſh which do at preſent, or ſhall at any time hereafter, inhabit in the city or kingdom of Tunis, ſhall have free liberty, when they pleaſe, to tranſport themſelves with their families and children, though born in the country.

VII. That the people belonging to the dominions of either party ſhall not be abuſed with ill language, or otherwiſe ill treated; but that the parties ſo offending, ſhall be puniſhed ſeverely according to their deſerts.

VIII. That the conſul, or any other of the Engliſh nation, reſiding in Tunis, ſhall not be forced to make their addreſſes, in any difference, unto any court of juſtice, but to the Bey himſelf, from whom only they ſhall receive judgment; this in caſe the difference ſhould happen between a ſubject of Great-Britain, and another of this government, or any other foreign nation; but if it ſhould be between any two of his Britannic Majeſty's ſubjects, then it is to be decided by the Britiſh conſul only.

IX. That the conſul, or any other of the Engliſh nation, ſhall not be liable to pay the debts of any particular perſon of the nation, unleſs obliged thereunto under his hand.

X. That as the iſland of Minorca, in the Mediterranean Sea, and the city of Gibraltar in Spain, has been yielded and annexed to the crown of Great-Britain, as well by the king of Spain, as by all the ſeveral powers of Europe engaged in the late war; now it is hereby agreed and fully concluded, that from this time forward for ever, the ſaid iſland of Minorca and city of Gibraltar, ſhall be eſteemed in every reſpect by the government of Tunis, to be part of his Britannic Majeſty's own dominions, and the inhabitants thereof to be looked upon as his Majeſty's natural ſubjects, in the ſame manner as if they had been born in any part of Great-Britain; and they with their ſhips and veſſels wearing the Britiſh colours, ſhall be permitted freely to trade and traffic in any part of the kingdom of Tunis, and ſhall paſs without any moleſtation whatſoever, either on the ſeas or elſewhere, in the ſame manner, and with the ſame freedom and privileges, as have been ſtipulated in this and all former treaties, in behalf of the Britiſh nation and ſubjects.

XI. And the better and more firmly to maintain the good correſpondence and friendſhip, that hath been ſo long and happily eſtabliſhed between the crown of Great-Britain and the government of Tunis, it is hereby agreed and concluded, by the parties before-mentioned, that none of the ſhips or veſſels belonging to Tunis, or the dominions thereof, ſhall be permitted to cruize, or look for prizes of any nation whatſoever, before or in ſight of the aforeſaid city of Gibraltar, or any of the ports of the iſland of Minorca, to hinder or moleſt any veſſels bringing proviſions and refreſhments for his Britannic Majeſty's troops and garriſons in thoſe places, or give any diſturbance to the trade or commerce thereof; and if any prize ſhall be taken by the ſhips or veſſels of Tunis,

within

within the ſpace of ten miles of the aforeſaid places, it ſhall be reſtored without any diſpute.

XII. That all the ſhips of war belonging to either party's dominions, ſhall have free liberty to uſe each others ports, for waſhing, cleaning, or repairing any their defects, and to buy and to ſhip off any ſort of victuals, alive or dead, or any other neceſſaries, at the price the natives buy at in the market, without paying cuſtom to any officer: and whereas his Britannic Majeſty's ſhips of war do frequently aſſemble and harbour in the port of Mahon, in the iſland of Minorca, if at any time they, or his Majeſty's troops in garriſon there, ſhould be in want of proviſions, and ſhould ſend from thence to purchaſe ſupplies in any part of the dominions belonging to Tunis, they ſhall be permitted to buy cattle alive or dead, and all other kind of proviſions at the prices they are ſold at in the market, and ſhall be ſuffered to carry them off, without paying duty to any officer, in the ſame manner as if his Majeſty's ſhips were themſelves in the port.

XIII. That in caſe any ſhips of war belonging to the kingdom of Tunis, ſhall take, in any of their enemies ſhips, any Engliſhmen, ſerving for wages, they are to be made ſlaves; but if merchants or paſſengers, they are to enjoy their liberty and effects unmoleſted.

XIV. That in caſe any ſlave in the kingdom of Tunis, of any nation whatſoever, ſhall make his eſcape, and get on board any ſhip belonging to the dominions of his ſacred Majeſty the king of Great Britain, &c. the conſul ſhall not be liable to pay the ranſom, unleſs timely notice be given him to order that none ſuch be entertained; and then if it appears that any ſlave has ſo got away, the ſaid conſul is to pay to his patron the price for which he was ſold in the market; and if no price be ſet, then pay three hundred dollars, and no more.

XV. And the better to prevent any diſpute that may hereafter ariſe between the two parties, about ſalutes and public ceremonies; it is hereby agreed and concluded, that whenever any flag-officer of Great-Britain ſhall arrive in the bay of Tunis, in any of his Majeſty's ſhips of war, immediately upon notice given thereof, there ſhall be 25 cannon fired from the caſtle of Goletta, or other the neareſt fortification belonging to Tunis, according to cuſtom, as a royal ſalute to his Britannic Majeſty's colours, and the ſame number ſhall be returned in anſwer thereto by his Majeſty's ſhips; and it is hereby ſtipulated and agreed, that all ceremonies of honour ſhall be allowed to the Britiſh conſul who reſides here, to repreſent in every reſpect his Majeſty's perſon, equal to any other nation whatſoever, and no other conſul in the kingdom to be admitted before him in precedency.

XVI. That the ſubjects of his ſacred Majeſty of Great-Britain, &c. either reſiding in or trading to the dominions of Tunis, ſhall not, for the time to come, pay any more than three per cent. cuſtom on the value of goods or merchandize, which they ſhall either bring into or carry out of this ſaid kingdom of Tunis.

XVII. It is moreover agreed, concluded, and eſtabliſhed, that at whatſoever time it ſhall pleaſe the government of Tunis to reduce the cuſtoms of the French nation no leſs than they pay at preſent, it ſhall always be obſerved that the Britiſh cuſtoms ſhall be 2 per cent. leſs than any agreement that ſhall for the future be made with the ſaid French, or that ſhall be paid by the ſubjects of France.

XVIII. It is moreover agreed, concluded, and eſtabliſhed, that in caſe any Britiſh ſhip or ſhips, or any of the ſubjects of his Majeſty of Great-Britain, ſhall import at the port of Tunis, or any other port of this kingdom, any warlike ſtores, as cannons, muſkets, piſtols, cannon powder, or fine powder, bullets, maſts, anchors, cables, pitch, tar, or the like; as alſo proviſions, viz. wheat, barley, beans, oats, oil, or the like; for the ſaid kinds of merchandize, they ſhall not pay any ſort of duty or cuſtom whatever.

We the parties before mentioned, having ſeen and peruſed the preceding articles, do hereby approve, ratify, and confirm, the ſeveral particulars therein mentioned; and they are to remain firm for ever, without any alteration. In teſtimony of which we do hereunto ſet our hands and ſeals in the preſence of Almighty God, in the noble city of Tunis, the 30th day of Auguſt, old ſtile, and the year of our Lord Jeſus Chriſt, 1716, being the 26th day of the moon Ramadam, and the year of the Hejira 1128.

(L.S.) J. Baker. (L.S.) (L.S.) (L.S.)

Articles of Peace and Commerce, between his moſt ſacred Majeſty George, by the grace, &c. and the moſt excellent lords Mahomet bey, Yuſouf dey, Shaaban rais, the divan, and the reſt of the officers and people of the city and kingdom of Tripoly, renewed, concluded, and ratified, this 19th of July 1716, by John Baker, Eſq; vice admiral, &c.

I. In the firſt place, it is agreed and concluded, that from this time forward for ever, there ſhall be a true and inviolable peace, between the moſt ſerene king of Great-Britain, and the moſt illuſtrious lords and governors of the city and kingdom of Tripoly in Barbary, and between all the dominions and ſubjects of either ſide: and if the ſhips and ſubjects of either party ſhall happen to meet upon the ſeas, or elſewhere, they ſhall not moleſt each other, but ſhall ſhew all poſſible reſpect and friendſhip.

II. That all merchant-ſhips belonging to the dominions of Great-Britain, and trading to the city or any other part of the kingdom of Tripoly, ſhall pay no more than three per cent. cuſtom for all kinds of goods they ſhall ſell; and as for ſuch as they ſhall not ſell, they ſhall be permitted freely to embark them again on board their ſhips, without paying any ſort of duty whatſoever, and ſhall depart without any hinderance or moleſtation.

III. That all ſhips and other veſſels, as well thoſe belonging to the ſaid king of Great Britain, or to any of his Majeſty's ſubjects, as thoſe belonging to the kingdom or people of Tripoly, ſhall freely paſs the ſeas, and traffic where they pleaſe, without any ſearch, hinderance, or moleſtation, from each other: and that all perſons or paſſengers, of what country ſoever, and all monies, goods, merchandizes and moveables, to whatſoever people or nation belonging, being on board any the ſaid ſhips or veſſels, ſhall be wholly free, and ſhall not be ſtopped, taken, or plundered, nor receive any harm or damage whatſoever, from either party.

IV. That the Tripoly ſhips of war, or any other veſſels thereunto belonging, meeting with any merchant-ſhips, or other veſſels of the king of Great-Britain's ſubjects (not being in any of the ſeas appertaining to any of his Majeſty's dominions) may ſend on board one ſingle boat, with two ſitters, beſides the ordinary crew of the rowers; and no more but the two ſitters to enter any of the ſaid merchant ſhips, or any other veſſels, without the expreſs leave of the commander of every ſuch ſhip or veſſel: and then, upon producing to them a paſs under the hand and ſeal of the lord high admiral of England, or the commiſſioners for executing of the ſaid office, the ſaid boat ſhall preſently depart, and the merchant-ſhip or ſhips, veſſel or veſſels, ſhall proceed freely on her or their voyage. And though the commander or commanders, of the ſaid merchant ſhip or ſhips, veſſel or veſſels, produce no paſs from the lord high admiral of England, or &c. yet, if the major part of the ſhips or veſſels company be ſubjects to the ſaid king of Great-Britain, the ſaid boat ſhall preſently depart, and the merchant-ſhip or ſhips, veſſel or veſſels, ſhall freely proceed on her or their voyage: and any of the ſaid ſhips of war, or other veſſels of his ſaid Majeſty, meeting with any ſhip or ſhips, veſſel or veſſels, belonging to Tripoly, if the commander or commanders of any ſuch ſhip or ſhips, veſſel or veſſels, ſhall produce a paſs, ſigned by the chief governors of Tripoly, and a certificate from the Engliſh conſul reſiding there; or, if they have no ſuch paſs or certificate, yet if the major part of their ſhips company or companies be Turks, Moors, or ſlaves belonging to Tripoly, then the ſaid Tripoly ſhip or ſhips, veſſel or veſſels, ſhall proceed freely.

V. That no commander or other perſon, of any ſhip or veſſel of Tripoly, ſhall take out of any ſhip or veſſel of his ſaid Majeſty's ſubjects, any perſon or perſons whatſoever, to carry them any where to be examined, or upon any other pretence, nor ſhall uſe any torture or violence unto any perſon, of what nation or quality ſoever, being on board any ſhip or veſſel of his Majeſty's ſubjects, upon any pretence whatſoever.

VI. That no ſhipwreck belonging to the ſaid king of Great-Britain, or to any of his Majeſty's ſubjects, upon any part of the coaſt belonging to Tripoly, ſhall be made or become prize; and that neither the goods thereof ſhall be ſeized, nor the men made ſlaves, but all the ſubjects of Tripoly ſhall do their beſt endeavours to ſave the ſaid men, and their effects.

VII. That no ſhip or any other veſſel of Tripoly, ſhall have permiſſion to be delivered up, or to go to any other place in enmity with the ſaid king of Great-Britain, to be made uſe of as corſairs at ſea againſt his Majeſty's ſubjects.

VIII. That if any ſhip or veſſel of Tunis, Algiers, Tetuan, or Sallee, or of any other place being in war with the ſaid king of Great-Britain, bring any ſhips or veſſels, men or goods, belonging to his ſaid Majeſty's ſubjects, to Tripoly, or to any port or place in that kingdom, the governors there ſhall not permit them to be ſold within the territories of Tripoly.

IX. That if any ſubject of the king of Great-Britain happens to die in Tripoly, or its territorities, his goods or monies ſhall not be ſeized by the governors or miniſters of Tripoly, but ſhall all remain with the Engliſh conſul.

X. That neither the Engliſh conſul, nor any other ſubject of the ſaid king of Great-Britain, ſhall be bound to pay the debts of any other of his Majeſty's ſubjects unleſs they become ſurety for the ſame by a public act.

XI. That the ſubjects of his ſaid Majeſty in Tripoly, or its territories, in matter of controverſy, ſhall be liable to no other juriſdiction but that of the dey or divan, except they happen to be at difference between themſelves, in which caſe, they ſhall be liable to no other determination but that of the conſul only.

XII. That in caſe any ſubject of his Majeſty, being in any port of the kingdom of Tripoly, ſhall happen to ſtrike, kill,

or wound a Turk or Moor, if he be taken, he is to be punished in the same manner, and with no greater severity, than a Turk ought to be, being guilty of the same offence: but if he escape, neither the said English consul, nor any other of his said Majesty's subjects, shall be in any sort questioned or troubled on that account.

XIII. That the English consul now, or at any time hereafter, residing at Tripoly, shall be there at all times with intire freedom and safety of his person and estates, and shall be permitted to chuse his own interpreter and broker, and freely go on board any ship in the road, as often and when he pleases; and to have the liberty of the country; and that he shall be allowed a place to pray in, and that no man shall do him any injury in word or deed.

XIV. That not only during the continuance of this peace and friendship, but likewise if any breach or war happen to be hereafter, between the said king of Great-Britain and the city and kingdom of Tripoly, the said consul, and all other his Majesty's subjects inhabiting in the kingdom of Tripoly, shall always, and at all times, both of peace and war, have full and absolute liberty to depart, and go to their own country, or any other, upon any ship or vessel, of what nation soever they shall think fit, and carry with them all their estates, goods, families, and servants, though born in the country, without any interruption or hinderance.

XV. That no subject of his said Majesty, being a passenger from or to any port, shall be any way molested and meddled with, though he be on board any ship or vessel in enmity with Tripoly.

XVI. That if any ships of war of the said king of Great-Britain come to Tripoly, or to any other port or place of that kingdom, with any prize, they may freely sell it, or otherwise dispose of it at their own pleasure, without being molested by any: and that his Majesty's said ships of war shall not be obliged to pay customs in any sort; and that, if they shall want provisions, victuals, or any other things, they may freely buy them at the rate in the market.

XVII. That when any of his Majesty's ships of war shall appear before Tripoly, upon notice thereof given by the English consul, or by the commanders of the said ships, to the chief governors of Tripoly, public proclamation shall be immediately made, to secure the Christian captives; and if, after that, any Christians whatsoever make their escape on board any of the said ships of war, they shall not be required back again, nor shall the said consul or commander, or any other his Majesty's subjects, be obliged to pay any thing for the said Christians.

XVIII. That all merchant-ships coming to the city or kingdom of Tripoly (though not belonging to Great-Britain) shall have free liberty to put themselves under the protection of the British consul, in selling and disposing of their goods and merchandize, if they shall think proper, without any hinderance or molestation.

XIX. That at all times, when any ship of war, of the king of Great-Britain, &c. carrying his said Majesty's flag, appears before the said city of Tripoly, and comes to an anchor in the road, immediately after notice thereof given by his said Majesty's consul, or officer from the ship, unto the dey and government of Tripoly, they shall, in honour to his Majesty, cause a salute of twenty-seven cannon to be fired from the castle and fort of the city; and that the said ship shall return an answer, by firing the same number of cannon.

XX. That no merchant-ship belonging to Great-Britain, or any other nation under the protection of the English consul, being in the port of Tripoly, shall be detained from proceeding to sea on her voyage longer than three days, under pretence of arming out the ships of war of this government, or any other whatsoever.

XXI. That no subject of the king of Great Britain, &c. shall be permitted to turn Mussulman in the city and kingdom of Tripoly (being induced thereunto by any surprize whatsoever) unless he voluntarily appears before the dey or governors, with the English consul's interpreter, thrice in twenty-four hours space, and every time declares his resolutions to become a Mussulman.

XXII. That the most serene king of Great-Britain's consul, residing in Tripoly aforesaid, shall have liberty, at all times when he pleases, to put up his said serene Majesty's flag on the top of his house, and there to continue it spread as long time as he pleases; likewise the said consul to have the same liberty of putting up and spreading the said flag in his boat, when he passes on the water; and no man whatsoever to oppose, molest, disturb, or injure him therein, either by word or deed.

XXIII. That whereas the island of Minorca, in the Mediterranean Sea, and the city of Gibraltar, in Spain, have been yielded up and annexed to the crown of Great Britain, as well by the king of Spain, as by all the several powers of Europe engaged in the late war: now it is hereby agreed and fully concluded, That from this time forward, for ever, the said island of Minorca, and city of Gibraltar, shall be esteemed, in every respect, by the government of Tripoly, to be part of his Britannic Majesty's own dominions, and the inhabitants thereof to be looked upon as his Majesty's natural subjects, in the same manner as if they had been born in any part of Great-Britain; and they, with their ships and vessels wearing British colours, shall be permitted freely to trade and traffic in any part of the kingdom of Tripoly, and shall pass without any molestation whatsoever, either on the seas or elsewhere, in the same manner, and with the same freedom and privileges, as have been stipulated in this and all former treaties, on behalf of the British nation and subjects.

XXIV. And whereas in the treaty of peace concluded in the reign of king Charles II, in the year 1676, by Sir John Narborough, Knt. an article was inserted, by which the ships and vessels of Tripoly were not permitted to cruize before, or in sight of, the port of Tangier, then belonging to Great-Britain: now it is hereby concluded and ratified, That, in the same manner, none of the ships or vessels belonging to Tripoly shall cruize, or look for prizes, before or in sight of the ports of the island of Minorca, and the city of Gibraltar, or to disturb or molest the trade thereof, in any manner whatsoever.

XXV. That all and every the articles in this treaty shall be inviolably kept and observed between his most sacred Majesty of Great-Britain, and the most illustrious lords and governors of this city and kingdom of Tripoly, and all other matters not particularly expressed in this treaty, and provided for in any former, shall still remain in full force, and shall be esteemed the same as if inserted here. Dated in the presence of Almighty God, in the city of Tripoly, this 19th day of July, 1716, according to the Christian computation; and of the Mussulman Hejira, the 10th of the moon Shaaban, 1128.

Whitehall, December 10, 1751.

ADDITIONAL ARTICLES to the antient treaties subsisting between his Majesty and the dey and government of Algiers, agreed to by the present dey Mahomet, and his Majesty's plenipotentiaries, the honourable Augustus Keppel, and Ambrose Stanyford, his Majesty's agent and consul-general at Algiers.

That all packet, or express-boats, bearing his Majesty's commission, which shall be met by any of the cruizers of Algiers, shall be treated with the same respect as his Majesty's ships of war, and all due respect shall be paid to his Majesty's commission; and both at meeting and at parting they shall be treated as friends; and if any of the Algerine cruizers commit the least fault or violence against them, the captains, or raziers, so offending, shall, on their arrival at Algiers, and proper complaint being made of them, be most severely punished, without admitting of their excuses. Dated at Algiers, the 3d of June, 1751; and in the year of the Hegeira 1164, the 20th day of the moon Regil.

By the KING, a PROCLAMATION, requiring passes formerly granted to ships and vessels trading in the way of the cruizers belonging to the governments on the coasts of Barbary, to be returned into the office of admiralty of Great-Britain, and other passes, of different forms, to be issued.

GEORGE R.

Whereas by our proclamation bearing date the 31st day of December, in the third year of our reign, we did charge and command all our loving subjects, who then were, or should be possessed of any passes for ships and vessels belonging to our subjects trading to Portugal, the Canaries, Guinea, the Indies, into the Mediterranean, or elsewhere, in the way of the cruizers of the government of Algiers (except such passes as had been granted to ships gone, or going to the East-Indies, or other remote voyages, where they could not be timely furnished with new passes) that they should, within the space of twelve months, to be computed from the first day of March then next, return the same, and furnish themselves with passes of a new form, under the hands and seals of our commissioners for executing the office of high admiral of Great-Britain and Ireland, in lieu thereof, for their several ships and vessels, in such manner as by the said recited proclamation was directed. And whereas it hath been humbly represented unto us, That it may have happened that, during the late war, several passes granted pursuant to the said recited proclamation, may, either by accident or undue means, have fallen into the hands of foreigners, who, by colour of such passes, may carry on their trade: We, taking the premises into our royal consideration, and judging it necessary to put a speedy stop to all such indirect practices, which do not only tend to the prejudice of our trading subjects, but may occasion a misunderstanding between us and the governments on the coast of Barbary, for preventing thereof, have thought fit, by the advice of our privy-council, to publish this our royal proclamation, and do hereby declare, that all such passes of the present form now in being, shall not continue in force longer than 'till the 1st day of April, 1752 (except such passes as have been granted to ships gone, or going to the East-Indies, or other remote voyages, where they cannot be timely furnished with new passes). And we do hereby strictly charge and command all our loving subjects, who are or shall be possessed of any such passes, that they do before the 1st day of April, 1752, return the same (except such as are before excepted) into the office of the admiralty of

Great-Britain, or to the reſpective collectors of our cuſtoms at the out-ports of Great-Britain and Ireland, or to the governors of ſome of our foreign plantations or dominions, in order to their being cancelled, and that they do furniſh themſelves with paſſes of a new form, under the hands and ſeals of our commiſſioners for executing the office of high-admiral of Great-Britain and Ireland, in lieu thereof, for their ſeveral ſhips and veſſels, according to the treaties ſubſiſting between us and the ſaid governments on the coaſt of Barbary, and the regulations made by our royal father of glorious memory, by order in his privy-council, on the 14th day of June, in the year 1722, and our inſtructions given to our ſaid commiſſioners for executing the office of high admiral of Great-Britain and Ireland touching the ſame. And whereas many ſhips and veſſels belonging to our loving ſubjects, continue ſeveral years trading from port to port in the Mediterranean, without returning home, whereby they cannot ſo conveniently procure their paſſes to be exchanged, we do hereby, for the eaſe of our trading ſubjects, publiſh and declare our pleaſure, That upon the application of any owner of any ſhip or veſſel, or other ſubſtantial merchant, to the office of the admiralty of Great-Britain, and oath made by him of the property of ſuch ſhip or veſſel, and that three-fourths of the company are our ſubjects, according to an act made in the twelfth year of the reign of our royal predeceſſor, king Charles the Second, (intitled, An Act for encouraging and increaſing of ſhipping and navigation;) and upon entering into the uſual bond for the return of ſuch paſs at the end of the voyage, it ſhall and may be lawful for our commiſſioners for executing the office of high admiral of Great-Britain and Ireland, or our high admiral of Great-Britain and Ireland for the time being, and they are reſpectively impowered to make out a new paſs for ſuch ſhip or veſſel, and ſend the ſame to ſuch of our conſuls in the Mediterranean as the ſaid owner or merchant ſhall deſire, with directions to ſuch conſul, that, upon application to him from the maſter of the ſhip for which the paſs is made out, and ſurrendering up his old paſs, and entering into a like bond for the return of ſuch new paſs, he ſhall deliver out the ſaid new paſs to ſuch maſter, and tranſmit the old one, with the bond, to the office of admiralty of Great-Britain. And in order more effectually to hinder, for the future, any abuſes that may be attempted by foreigners, relating to the new paſſes to be iſſued as aforeſaid, we do hereby further declare our royal will and pleaſure, That all ſuch new paſſes to be hereafter iſſued, for any ſhips or veſſels belonging to any of our ſubjects of the iſland of Minorca, or Gibraltar, ſhall be made out in a particular form, different from the form of the new paſſes to be iſſued for ſhips and veſſels belonging to any other part of our dominions, and that ſuch paſſes ſhall be lodged with the reſpective governors, lieutenant-governors, or commanders in chief, for the time being, of the ſaid iſland of Minorca, or Gibraltar, and iſſued out only by them, according to the regulations made by our ſaid royal father in council, as aforeſaid: and the ſaid reſpective governors, lieutenant-governors, and commanders in chief, are hereby charged and required not to iſſue or deliver out any ſuch paſſes to any perſons whatſoever, other than ſuch as are really our ſubjects, inhabiting in the ſaid iſland of Minorca, or Gibraltar, reſpectively, and ſtrictly to conform themſelves to the regulations and inſtructions made and given as aforeſaid. And we do hereby further publiſh and declare, That, by our orders made this day in our privy-council, we have ordered and directed, That the proper officers of our cuſtoms, in the ſeveral ports of our kingdoms of Great-Britain and Ireland, do demand of the maſters of all merchant-ſhips, ſo ſoon as they ſhall return into port from a foreign voyage, all paſſes granted as aforeſaid, which ſhall be in their poſſeſſion, to be produced to the ſaid reſpective officers of our cuſtoms; and that, if the ſame ſhall appear to be of an older date than twelve months, for ſhips and veſſels trading on this ſide the Streights Mouth, or for ſhips and veſſels trading to a greater diſtance, in caſe the voyages of ſuch laſt-mentioned ſhips and veſſels ſhall be determined, then ſuch paſſes ſhall be delivered up to the ſaid reſpective officers of our cuſtoms, and be by them returned to the office of the admiralty of Great-Britain: and in caſe the maſter of any ſuch ſhip or veſſel ſhall refuſe to produce or deliver up ſuch paſſes, according to the true intent of our order, then the ſaid officers ſhall certify the name of every ſuch maſter, and of the ſhip or veſſel, to our commiſſioners for executing the office of high admiral of Great-Britain and Ireland, or our high admiral of Great-Britain and Ireland for the time being, to the end that directions may be given for putting the bond, entered into on the granting any ſuch paſs, in ſuit. And all our governors, lieutenant-governors, and commanders in chief of any of our iſlands, colonies, or plantations, conſuls reſiding in foreign parts, and all other our officers and miniſters whatſoever, and all our loving ſubjects whom it may concern, are hereby expreſsly required and commanded to yield due obedience unto, and ſtrictly to obſerve all the orders, inſtructions, regulations, and directions before mentioned, on pain of our high diſpleaſure.

Given at our court at St James's, the 29th day of March, 1750, in the twenty third year of our reign.

GOD ſave the KING.

At the court at St James's, the 29th day of December, 1751, preſent the King's Moſt Excellent Majeſty in council.

Whereas his Majeſty was pleaſed by his proclamation, bearing date the 29th day of March, 1750, to declare, That all paſſes of the preſent form now in being, which had been granted for ſhips and veſſels belonging to his Majeſty's ſubjects trading in the way of the cruizers of the government of Algiers, ſhould not continue in force longer than until the 1ſt day of April, 1752 (except ſuch paſſes as had been granted to ſhips gone, or going, to the Eaſt-Indies, or other remote voyages, where they could not be timely furniſhed with new paſſes) and his Majeſty did thereby ſtrictly charge and command all his ſubjects, who were or ſhould be poſſeſſed of any ſuch paſſes, that they ſhould, before the ſaid 1ſt day of April, 1752, return the ſame (except ſuch as are before excepted) into the office of the admiralty of Great-Britain, or to the reſpective collectors of the cuſtoms at the out-ports of Great-Britain and Ireland, or to the governors of ſome of his Majeſty's plantations and dominions, in order to their being cancelled; and that they ſhould furniſh themſelves with paſſes of a new form, under the hands and ſeals of the commiſſioners for executing the office of the lord high admiral of Great-Britain and Irand, in lieu thereof, for their ſeveral ſhips and veſſels, as by the ſaid recited proclamation is directed:—And whereas, ſince the iſſuing the ſaid proclamation, it has been agreed by and between his Majeſty and the dey of Algiers, that the paſſes of the preſent form ſhould not expire ſo ſoon as the 1ſt day of April, 1752, but be continued, and remain in force, until the 30th day of October, 1752, at which time the paſſes of the new form are to commence, except only in the caſe of ſhips going to the Eaſt-Indies, or other remote voyages, whoſe paſſes are to continue good for the ſpace of three years, from the 30th day of October, 1751. His Majeſty, with the advice of his privy-council, doth therefore hereby declare and order, That the paſſes of the preſent form do continue in force until the ſaid 30th day of October, 1752: upon which day, the paſſes of the new form ſhall commence and take place, except in the caſe of ſhips going to the Eaſt-Indies, or other remote voyages, whoſe preſent paſſes are to remain good for three years from the ſaid 30th day of October, 1752. And his Majeſty doth hereby charge and command all his ſubjects who ſhall be poſſeſſed of any ſuch paſſes, that they do, before the ſaid 30th day of October, 1752, return the ſame (except ſuch as are before excepted) into the office of the admiralty of Great-Britain, or to the reſpective collectors of the cuſtoms at the out-ports of Great-Britain and Ireland, or to the governors of ſome of his Majeſty's plantations or dominions, in order to their being cancelled; and that they do furniſh themſelves with paſſes of a new form, under the hands and ſeals of the commiſſioners for executing the office of lord high admiral of Great-Britain and Ireland, in lieu thereof, agreeable to the requiſites of his Majeſty's afore-mentioned proclamation of the 29th of March, 1750.—Whereof all perſons whom it may concern are to take notice, and conform themſelves to his Majeſty's pleaſure, hereby ſignified.

WILLIAM SHARPE.

The PRIVILEGES of an ENGLISHMAN, in the kingdoms and dominions of PORTUGAL. Contained in the treaty of peace concluded by Oliver Cromwel. And various laws, decrees, &c. at ſundry times, and on divers occaſions, made by the kings of Portugal, in favour of the ENGLISH NATION. To which is added the king of Portugal's new law, concerning the diamonds found in the Braſils.

Six PRELIMINARY ARTICLES, treated of and agreed upon between the ambaſſador extraordinary from the king of PORTUGAL, and the ſtate counſellor of parliament; in the name of the republic of ENGLAND. Done in London, in the year 1652.

ARTICLE I.

That between the aboveſaid, by the one and the other party, it is agreed, and likewiſe the ſaid ambaſſador has thought fit to give his word, in the name of the king, that all thoſe Engliſhmen who by any means are held in cuſtody, either upon account of ſecurities, or pledge, or by any other means whatſoever, occaſioned by the controverſies ariſen between the one and the other people, in any of the dominions of Portugal, who by prince Rupert have been carried from hence, or put into its port of Liſbon, ſhall be delivered and ſet at liberty, and their ſecurities diſcharged, or made of none effect.

ARTICLE II.

It was agreed with the ſaid ambaſſador, who gave his word in the name of the king, to deliver immediately the ſhips,

monies,

monies, and goods belonging to the Engliſh, which are retained in any of the places in the dominions of the king of Portugal, that they ſhall be delivered without any farther delay, in the ſame ſpecie, in caſe they remain in the ſame goodneſs and value, as they were in when they were taken and retained; and if they are become worſe, or of leſs value or goodneſs in ſpecie; or if, by reaſon of the detention, they are any ways decayed, and become of leſs worth; or if they are loſt; in theſe caſes they ſhall be paid for, and ſatisfaction ſhall be given for them, according to the juſt price or value they bore at the time they were taken. And as touching the reparation of the damages, it ſhall be ordered in the manner as the council have declared their ſentiments, by letter bearing date the 15th of November 1651. And the ſaid ambaſſador obliged himſelf to give ſatisfaction for the whole.

ARTICLE III.

It was agreed upon by the one and the other party, That all thoſe who were the authors or helpers to kill the Engliſhmen mentioned in the petition, which the counſel exhibited to the ſaid ambaſſador, who have been found or taken in any places in the dominions of the king of Portugal, or who may be found for the future, ſhall be puniſhed by the ſaid king, according to the merits of their crimes; or they ſhall be penally delivered with their accuſations to the parliament, to be by them chaſtized; and the ſame, being ſubjects to the ſaid king of Portugal, ſhall be puniſhed for their malefactions, as alſo thoſe who were their accomplices or abettors, and the reſt of the above-mentioned of any degree or condition whatſoever; and alſo ſuch as after this treaty ſhall be named by the parliament of the republic of England; and if they abſcond, or run away to the ports of the ſaid king, they ſhall be puniſhed. And the ſaid ambaſſador gave his word, in the name of his king, to obſerve this article.

ARTICLE IV.

It was agreed upon between the aboveſaid on both parts, That the king of Portugal, in the name of, i. e. in lieu of thoſe expences made by this republic, the which the counſel declared to the ſaid ambaſſador, they might, in right of this nation, liquidate from the goods of the Portugueſe that were occupied or taken by repriſal, which amounted to 14,246l. 11s. ſhall pay to the parliament 50,000l. in good and lawful money of England, in the manner herein after declared, that is to ſay, 20,000l. or as much Portugueſe money as is equal to it in value, which ſhall be paid to that perſon whom the parliament or council of ſtate may appoint to receive it in Liſbon, on the firſt of March next enſuing after this treaty, or within the ſpace of one month, as it ſhall appear by a writing under the ſaid ambaſſador's hand, wherein it ſhall be expreſſed, that the ſaid ſum ſhall be paid in Liſbon; and afterwards ſhall be paid 15,000l. of the ſame good and lawful money of England, on the laſt day of the month of July, 1653, O. S. and in like manner the laſt 15,000l. (which makes the ſum of 50,000l.) on the firſt day of the month of November, 1653, O. S. and that the two laſt payments ſhall be made here in the city of London.

In the ſame article it was agreed upon, that as to the ſum which by agreement is to be paid in Liſbon money, if any thing ſhould be wanting of the intire ſum, the whole ſhall be made good, and paid by the ſaid king of Portugal; becauſe it is to be underſtood, that all that entire ſum and quantity ought to be returned to the parliament in good and lawful money of England; and the ſaid ambaſſador, in the name of his king, obliged himſelf to pay the 50,000l. in the payments and monies above declared and repreſented.

ARTICLE V.

It was agreed upon between the one and the other parties aboveſaid, That all the ſhips and goods of the Engliſh, which have been brought to Portugal by Rupert and Maurice, or by any of their ſhips, and there made uſe of, or are any-where there detained, left, or by their order carried from thence, ſhall immediately be reſtored to their owners; or inſtead thereof full ſatisfaction and reparation ſhall be made. The which above-mentioned things the ſaid ambaſſador has given his word, in the name of his king, to obſerve and perform.

ARTICLE VI.

Between the aboveſaid of the one and the other parties, it was agreed upon, That as well the ſhip called the Converſion, as all other ſhips belonging to this republic of England, and all whatſoever veſſels of this republic, that by Rupert, or by any of the ſhips of his fleet, have been carried to Portugal, and are in poſſeſſion of the king of Portugal, or any of his ſubjects, or before this have been taken and applied to uſe, or which by any authority have been taken as prize, ſhall be reſtored again, with all their apparel, preparations, guns, and inſtructions; and juſt recompence ſhall be made for the retention of them; to which the ſaid ambaſſador gave his word, in the name of his king, to perform the contents of this article: in faith and teſtimony whereof, the ſaid ambaſſador has ſigned theſe ſix preliminary articles with his own hand, and ſealed them with his ſeal.

Given on the 29th day of December, in the year of our Lord, 1652.

Articles of PEACE, ALLIANCE, and COMMERCE, concluded between the moſt ſerene lord protector of England, Scotland and Ireland, on the one part; and the moſt ſerene king of Portugal, and of the Algarves, on the other part. Done at Weſtminſter, on the 10th of July, in the Year 1654.

ARTICLE I.

In the firſt place, that there ſhall be a good, true, and firm peace, between the republic of England, and the moſt ſerene king of Portugal, and between the regions, countries, dominions, and principalities, under the empire of the one and the other, and the people, ſubjects, and the inhabitants of both, of any condition, rank, or dignity whatſoever, as well by land as by ſea, in rivers and freſh waters; in ſuch manner that the people and ſubjects ſhall favour and ſuccour one the other, with reciprocal good will, and honeſt affection; and that neither of the ſaid parties, nor their people, ſubjects, or inhabitants, ſhall commit, or attempt any thing againſt the other, in any place, either by land or ſea, or in the harbours or rivers of either; nor ſhall they conſent to, or aſſiſt in any war, council, or treaty, to the prejudice of the other party; nor ſhall either of the ſaid parties houſe or harbour the rebels or fugitives of the other in any of their countries, kingdoms, dominions, ports, or frontiers.

ARTICLE II.

That between the republic of England and the king of Portugal and their people, ſubjects, and inhabitants, as well by land as by ſea, in rivers and freſh waters, in all and every one of the regions, countries, dominions, territories, provinces, iſlands, colonies, cities, towns, villages, ports and frontiers, there ſhall be free commerce in thoſe places, in which there is at preſent, or has been commerce in time paſt; in ſuch manner that without permit or other licence, general or ſpecial, as well by land as by ſea, in rivers and freſh waters, the people, ſubjects and inhabitants, of either of the parties, may go, enter and navigate in the ſaid dominions and kingdoms, and in all their cities, towns, harbours, coaſts, bays, and places, with carriages, horſes, packs, and ſhips, as well loaden as to be loaden, carry merchandizes, buy, ſell, and at the current prices to procure proviſions, and what neceſſaries they may want for their ſtay and voyage, to repair their ſhips and carriages, whether their own or ſuch as are hired or borrowed, and with the ſame liberty to depart from thence with their goods, merchandizes, and all other things whatſoever, either to their own or foreign countries, as they ſhall think fit; and that without any hindrance or impediment, ſaving, however, all the laws and ſtatutes of each place.

ARTICLE III.

That the people and inhabitants of this republic ſhall be at liberty to buy up all ſorts of wares, goods and merchandizes, and the ſame to uſe and enjoy in the kingdoms, provinces, territories, and iſlands of the king of Portugal, at the firſt hand, either in ſmall parcels or by wholeſale, in whatſoever number and ſize, when and whereſoever they pleaſe; neither ſhall they be compelled to buy them of the farmer of the cuſtoms or monopoliſts, nor ſhall they be obliged to buy at any fixed price. They may alſo at diſcretion ſell, traffic, and freely carry away, any ſorts of goods, wares, and merchandize, whatſoever, from the ſaid kingdoms and dominions, paying only the duties and cuſtoms in the conſulado due on the goods they carry out, as they were paid the 10th of March, 1653-4, O. S.

And, as to their buying and ſelling by the intervention of brokers, the ſaid people of this republic, ſhall enjoy and uſe the ſame liberties, privileges and exemptions as the Portugueſe themſelves; nor ſhall they be treated with more rigour than the ſame inhabitants and natives; and that which is called the ancient charter, and all the privileges and immunities that heretofore have been granted to the Engliſh at any time, by all or any of the kings of Portugal, ſhall be confirmed by edicts, to the end that the people and natives of the ſaid republic may enjoy them, together with all other privileges and immunities which are already granted, or ſhall be granted from the time to come, to any nation, kingdom, or republic, in alliance with the ſaid king of Portugal.

ARTICLE IV.

That, whenever the people and natives of this republic arrive with their ſhips in the harbours of the king of Portugal, the ſaid people and natives ſhall not be conſtrained, by the miniſters, officers, and ſubjects of the ſaid king of Portugal, to load, or put on board their ſhips, any other ſorts or quantities of goods and merchandize, but only ſuch as ſhall be by them approved of: neither, while they ſtay in the ſaid harbours, ſhall there be put on board their ſhips, any more than two guards, or officers, at moſt; and in the unloading their ſhips, there ſhall be no unneceſſary delays. And if the ſaid ſhips, which are loaden with dry goods, ſhould not be unloaded within the ſpace of ten days, and the ſhips loaden with fiſh and proviſions, within the ſpace of 15 days, after their entrance into the port, they ſhall not, however, be obliged to pay any ſtipend, or ſum of money, or any ſalary to the ſaid guards, or officers, nor upon their account be at any farther expences, more than for the ſaid ten or fifteen days reſpectively.

ARTICLE V.

If it ſhould ſo happen that the ſubjects of the moſt ſerene king of Portugal, or others, within the kingdoms and dominions of the ſaid king, ſhould be impriſoned, and their goods and merchandize ſeized, ſtopped, and detained, by the office of the court of inquiſition, or by its judges, or miniſters, or by the king's exchequer; and ſhould owe any money, or come to be indebted to any of the people of this republic, the ſaid debts ſhall be fully and intirely paid out of the above-ſaid goods, and merchandize, within ſix months next enſuing after the impriſonment, and ſeizure of the goods as aboveſaid, without hindrance, or any moleſtation, from the ſaid tribunal, or its judges, or miniſters; but, if among the ſaid goods and merchandize, ſo ſeized and held, there ſhould remain in being, any goods and merchandize belonging to the ſaid people and natives, the ſame ſhall immediately be reſtored to them.

ARTICLE VI.

That the captains, maſters, officers, and mariners of the ſhips of this republic, or of any of its people, ſhall not attempt to ſue, or in any wiſe moleſt, the ſaid ſhips or people of this republic, within the ſaid kingdoms and dominions of Portugal, on account of their wages, or ſalary, under pretence of their profeſſing the Romiſh religion; nor ſhall they, under this or any other pretence, apply themſelves to the ſervice of the king of Portugal, or by any other means leave the ſhips whereunto they belong; and if they become delinquents, and offend in this point, their names being taken account of, they ſhall be chaſtiſed by the magiſtrates and officers of the place, and compelled to return to their ſhips; and if they cannot be found, it ſhall be lawful for the maſters of ſuch ſhips, or veſſels, to detain their cloaths, goods, or wages, for the ſatisfaction of damages.

ARTICLE VII.

That the conſuls, who ſhall hereafter reſide in any part of the dominions of Portugal, for the aſſiſtance and protection of the people of this republic, ſhall be from henceforward nominated, and made by the ſaid lord protector; and when ſo nominated, they ſhall have and exerciſe the ſame authority, as any conſul, of this or any other nation whatſoever, doth now, or ſhall hereafter exerciſe in the dominions of the ſaid king, although they do not profeſs the Romiſh religion. And, for the judging of all cauſes, relating to the people of this republic, a judge conſervator ſhall be deputed, from whom no manner of appeal ſhall be granted, except to the Senate of Rellacao, where the law-ſuits commenced, and appealed to that court ſhall be determined within the ſpace of four months.

ARTICLE VIII.

That if any of the people of this republic ſhall die within the kingdoms and dominions of the moſt ſerene king of Portugal, the books, accounts, goods and affets, belonging to them, or to others of the people of this republic, ſhall not be ſeized or poſſeſſed by the judges of the orphans and perſons abſent, or by their miniſters and officers; nor ſhall they be liable to their juriſdiction; but the ſame goods, merchandize, and accounts, ſhall be delivered to the Engliſh factors, or procurators reſiding in that place, who are nominated or deputed by the deceaſed: but, if the defunct, whilſt living, did not nominate any, then the ſaid goods, merchandize and accounts, ſhall, by the authority of the judge conſervator, be delivered to two or more Engliſh merchants reſiding in the place, and approved of by the Engliſh conſul, after having given ſecurity by unexceptionable bondſmen (who ſhall alſo be approved by the ſame Engliſh conſul) for reſtoring the ſaid goods, merchandize and accounts, to the right owners, or to their true creditors; and the goods which ſhall appear to have been the deceaſed's, ſhall be delivered to his heirs, executors or creditors.

ARTICLE IX.

That neither the king of Portugal, nor any of his miniſters, ſhall detain or arreſt any merchants, maſters of ſhips, captains, or mariners; or their ſhips, merchandizes, or other goods which belong to this republic, or any of its people, either for war, or any other uſe whatſoever, unleſs the lord protector, or thoſe to whom ſuch ſhips and goods appertain, are firſt appriſed thereof, and give their conſent; but that the ſaid ſhips, men, and goods, may freely, and without hindrance or impediment from the aboveſaid king or his miniſters, depart from the harbours and dominions of the ſaid king, at their own pleaſure; and that the ſales of the merchandize and goods belonging to this republic, ſhall not be hindered, or delayed, under pretence that the king has occaſion for them, or for any other reaſon whatſoever; nor ſhall they be taken for the king's uſe, nor for any other uſes whatſoever, if the perſons who are concerned in the goods do not conſent thereto.

ARTICLE X.

That the people of the republic of England may freely carry in their ſhips all ſorts of goods, merchandize, and things of what kind ſoever, even arms, proviſions, or other ſuch like, from the harbours and dominions of the ſaid republic, or any other harbours or dominions whatſoever, provided they are not taken immediately from the harbours and dominions of Portugal, to be carried directly to any ports and territories whatſoever of the king of Spain; and that neither the moſt ſerene king of Portugal, nor any of his ſubjects, ſhall hinder the ſaid ſhips, goods, or men, by ſeizures, repriſals, or any other means whatſoever, from navigating ſecurely to the harbours and territories of the ſaid king of Spain, and from trading therein; and that the people of this republic may freely carry arms, corn, fiſh, and all other ſorts of merchandize, into the kingdoms, ports and territories of the king of Portugal, and ſell the ſame at their pleaſure, either by retale or wholeſale, to any perſons whatſoever, and for whatever price they can get; and they ſhall not be prohibited, circumſcribed, or incapacitated by his ſaid royal Majeſty, or his miniſters, governors, farmers of the revenue, or monopoliſts, or by any chamber or juriſdiction of any tribunal whatſoever, either public or private: and that ſuch goods and merchandize as have once paid the cuſtoms or clearances in any port or harbour whatſoever, belonging to his Majeſty, may be freely carried into any other ports or places whatſoever, of his ſaid Majeſty, without paying any farther duties, clearances, or ſums of money, beſides what the Portugueſe merchants ſhould pay, if the goods and merchandize did belong to them.

ARTICLE XI.

That the people and natives of the republic of England ſhall trade and traffic freely and ſafely from Portugal to the Brazils, and the other conqueſts of the ſaid king in the Weſt-Indies, and from the Brazils and the ſaid conqueſts to Portugal, in all ſorts of goods and merchandize whatſoever (except meal, fiſh, wine, oil, and Brazil wood, which are prohibited by the king, in purſuance of his contract with the Brazil company) paying the duties and cuſtoms which others pay who trade into thoſe parts; and it is to be underſtood that the Engliſh ſhips hired by the Portugueſe are to ſail in company with the Portugueſe fleet; and that the ſaid people and natives arriving from any of the harbours and places in Brazil, and the ſaid conqueſts, at any of the dominions of the ſaid king whatſoever, ſhall not be compelled to unload their ſhips, or to put out any goods belonging to the Engliſh; but the officers of the cuſtoms ſhall cauſe the goods to be weighed while they are on board the ſhips, to the end that the cuſtoms and tributes due on them may be paid; and that no heavier duty or impoſt, nor greater ſum of money, or expence, ſhall be demanded by, or paid to, the king's officers, than if the goods were put on ſhore; nor ſhall there be any delay in diſpatching and diſmiſſing the ſaid ſhips. And after they are arrived at any of the dominions whatſoever, of the ſaid king, and have paid the cuſtoms and duties above mentioned, they ſhall freely proceed to any other harbour or place whatſoever; and the goods put on board the Engliſh ſhips, either by the ſubjects of the ſaid king, or by others, to be tranſported to any part whatſoever of the dominions of Portugal, ſhall by no means pay greater cuſtoms, or any other different duties, than if they were put on board Portugueſe ſhips. And likewiſe, that the people and natives of the republic of England ſhall have the liberty of navigating to the colonies, iſlands, regions, ports, diſtricts, towns, villages, and dominions, belonging to the king of Portugal, in the Eaſt-Indies, Guinea, Bengal, the iſland of St Thomas, or to any other part whatſoever, on the coaſts and ſhores of Africa; and there to ſtay

or

or reſide, negociate, trade; and traffic, by land or by ſea, on the rivers and freſh waters, in any goods and merchandize whatſoever; and to tranſport all kinds of merchandize to any place or region, with the ſame freedom as formerly; and alſo with the ſame that was ever granted, by any treaty heretofore, or ſhall hereafter be granted, to the natives of any other nation, in alliance and friendſhip with Portugal: and as to the cuſtoms and duties to be paid in thoſe regions, they ſhall not pay more or heavier than thoſe which are paid by any perſon or perſons trading in any of the ſaid places or regions. And likewiſe the king of Portugal, and his ſubjects, as well the Brazil company as all others, as often as they have need of foreign ſhips for carrying on their trade and navigation to the Brazils, or for the regions and iſlands above-mentioned, or elſe-where, ſhall hire the ſhips of this republic, and its people, at the uſual and ordinary rates, as many as they pleaſe, and no other ſhips of any prince or republic; provided the number of Engliſh ſhips to be hired be ſufficient to ſupply their wants: excepting that the Brazil company (as is contained in the charter of liberties granted to them by the king's letters patent) may hire, of what nation ſoever they pleaſe, two ſhips of war, and four others, to be ſent with fiſh to the Brazils; and that as well the ſaid Brazil company, as all other the ſubjects of the ſaid king, who follow the buſineſs of merchandizing, may freely hire as many Engliſh ſhips as they pleaſe, and ſail therein to the Brazils, and the other conqueſts of the ſaid king, in the Weſt Indies, without any licence, general or ſpecial, firſt to be obtained for that end; and the ſtipend agreed upon to be charged with the intereſt, ſhall run on, and an account thereof ſhall be kept till the whole is paid, though it ſhould exceed the ſtipend on the time contracted for.

ARTICLE XII.

That, whereas the moſt ſerene king of Portugal, by his reſcript ſealed with his ſeal, and dated at Liſbon, the twenty-firſt day of January, in the year of our Lord, 1641, granted to the natives of the lands under the dominion of the ſtates of Holland, &c. free liberty of importing and exporting all ſorts of merchandize to and from his kingdoms, dominions, and territories; the people of the republic of England ſhall uſe and enjoy the ſame liberty in the kingdoms and dominions of the ſaid moſt ſerene king of Portugal.

ARTICLE XIII.

That none who are commonly called Alcaydes (i. e. Bailiffs) or any other officer of his royal Majeſty, ſhall ſeize or arreſt any of the people of this republic, of what rank or condition ſoever, except in a criminal cauſe, being detected in any flagrant fact; unleſs he be firſt impowered in writing by the judge conſervator; and that the aforeſaid people, in all other reſpects, as to their perſons, domeſticks, and dwellings, books of accounts, intereſts, merchandize, and all other goods belonging to them, ſhall enjoy equal and the ſame immunity, within the dominions of the moſt ſerene king of Portugal, from impriſonment, arreſts, and other moleſtations whatſoever, as already is, or ſhall hereafter be, granted to any other prince or people whatſoever, in alliance with the king of Portugal; nor ſhall they be hindered, by any permit or protection to be granted by the ſaid king to his ſubjects, or others frequenting his dominions, from recovering their debts; but they ſhall have a right to ſue any man to juſtice for the recovery of any juſt debt, although he be ſheltered under the patronage or protection of any perſon whatſoever, or ſecured by any alvara, or written law, or whether he be a farmer of the revenues, or inveſted with any other privilege.

ARTICLE XIV.

And foraſmuch as the rights of peace and commerce would be null and uſeleſs, if the people of the republic of England ſhould be diſturbed for conſcience ſake, when they paſs to and from the kingdoms and dominions of the ſaid king of Portugal, or reſide there for the ſake of exchanging their merchandize: That commerce may therefore be free and ſecure both by land and by ſea, the ſaid king of Portugal ſhall take effectual care, and provide, that they be not moleſted by any perſon, court, or tribunal, upon account of the ſaid conſcience, or for having with them, or uſing, any Engliſh Bibles, or other books; and that it ſhall be free for the people of this republic to obſerve and profeſs their own religion in private houſes, together with their families, within any of the dominions of the ſaid king of Portugal whatſoever; and the ſame to exerciſe on board their ſhips and veſſels, as they ſhall think fit, without any trouble or hinderance; and finally, that a place be aſſigned them for the burial of their dead. But withal, the Engliſh are cautioned not to exceed what is written in this article.

ARTICLE XV.

If it ſhall happen hereafter, that any controverſies or doubts do ariſe between the ſaid republics, which may endanger the interruption of commerce between the one and the other nation, public notice ſhall be given to the people and ſubjects of both parties, through all the kingdoms and provinces of both, and the ſpace of two years, after ſuch notice, allowed for tranſporting themſelves, goods, ſhips, merchandize, and any other ſubſtance whatſoever, without any moleſtation, impediment, or damage, offered, in the mean-time, either to their perſons or goods. And it ſhall be lawful for the ſaid people and ſubjects on both ſides, to whom any debts may be owing at the time of ſuch public notice, legally to demand the ſame within the ſaid two years, in the places and dominions where they are owing; and from thence-forward uninterrupted juſtice ſhall be done them, in ſuch manner, that in effect thoſe creditors may be able to obtain their own within the time preſcribed.

ARTICLE XVI.

If it ſhall happen, that while this treaty, friendſhip and ſociety, are ſubſiſting, any thing be committed or attempted by any of the people or natives of either of theſe parties, contrary to this treaty, or any part thereof, by land or by ſea, on the rivers or freſh waters; the friendſhip, confederacy, and intercourſe betwixt theſe nations, ſhall not for this cauſe be interrupted or broken, but ſhall rather entirely ſubſiſt and ſuſtain its full force; and thoſe only in particular, who violate the ſaid confederacy, ſhall be puniſhed, and none elſe; and juſtice ſhall be done, and ſatisfaction given, to all thoſe concerned, by all thoſe who by land, ſea, or rivers, and freſh waters, ſhall act or commit any thing contrary to this confederacy, in any part of Europe, or in any other place within the ſtreights of Gibraltar, or in America; or along the coaſts of Africa, or in any of the lands, iſlands, ſeas, creeks, bays, rivers, or in any places on this ſide the Cape of Good Hope, within the ſpace of one year after juſtice ſhall be demanded; but in all places as above, beyond the ſaid cape, within eighteen months after juſtice be required in the manner above mentioned. And if the violators of the ſaid confederacy do not appear, nor ſurrender themſelves to trial, nor give ſatisfaction within this or that ſpace of time now limited, according to the diſtance of the place, they ſhall be deemed as enemies to both parties; and their goods, ſubſtance, and revenues, whatſoever, ſhall be ſeized, condemned, and applied to the making of full and juſt ſatisfaction for the injuries done by them; beſides which, the offenders themſelves, when they happen to be in the power of either of the parties, ſhall be liable to the puniſhments which their reſpective crimes deſerve.

ARTICLE XVII.

If it happens, that any controverſy does ariſe between the ſaid king's inſpectors, officers, or miniſters, and the ſaid merchants, concerning the goodneſs of fiſh, or any other ſorts of proviſions whatſoever, which ſhall be carried to any of the ſaid king's dominions; the ſame ſhall be determined by the arbitration of good men, provided they are Portugueſe, who ſhall be equally choſen by the magiſtrate of the place, and the conſul of the Engliſh nation; and they ſhall determine the buſineſs in ſuch a manner, that no damage may accrue to the owner in the mean time, while the matter is in diſpute.

ARTICLE XVIII.

That it ſhall be lawful for the people and ſubjects of either party, to go to the ports of the other, there to reſide, and from thence to depart, with the ſame liberty, not only with merchant ſhips and tranſports, but alſo with convoys and men of war, equipped for repelling the force of the enemy, whether they are driven there by ſtreſs of weather, or come in for refitting their ſhips, or for victualling them, provided they do not exceed the number of ſix men of war, if they come there of their own accord; nor ſhall they ſtay, or continue, any longer time than may be neceſſary to refit their ſhips, or to purchaſe ſuch neceſſary things as they want; that peradventure they may not be the cauſe of interrupting the commerce of other nations which are allied in friendſhip. And if at any time any unuſual number of ſhips ſhould chance to come to ſuch harbours, it ſhall not be lawful for them to enter, without firſt having leave from thoſe in whoſe juriſdiction ſuch harbours may be, unleſs they are conſtrained to do it againſt their will, by the force of tempeſtuous weather, or other urgent neceſſity for avoiding the danger of the ſea, and ſhipwreck; the which, if it ſhould happen, they ſhall immediately ſhew the cauſe of their coming thither to the preſident, or chief magiſtrate of that place; nor ſhall they ſtay there any longer

time than they are allowed by the preſident or magiſtracy of that place; nor ſhall they commit any hoſtilities in the ſaid harbours, which may be detrimental to the ſaid republic or king.

ARTICLE XIX.

That neither the ſaid republic, nor king, ſhall ſuffer the ſhips and goods of either of them, or of their people, which ſhall at any time be taken by the enemies or rebels of the other, and brought to any ports or places of the other's countries, to be conveyed away from the right owners, or transfer the property; but the ſame ſhall be reſtored to them, or their attornies, provided they lay claim to ſuch ſhips before they are ſold and unladen; and either prove their right, or exhibit teſtimonies to make appear their property in them, within three months after the ſaid ſhips and goods are ſo brought in: in the mean time, the proprietors themſelves ſhall pay and diſcharge the neceſſary expences for the preſervation and keeping of the ſaid ſhips and goods.

ARTICLE XX.

That the people and merchants of the republic of England, who frequent the kingdoms, dominions, and countries of the ſaid king, upon account of trade, or who arrive at this harbour with their ſhips, ſhall not pay for anchorage, or other poſt charges, or any other duties, or ſums of money, more than thoſe which were cuſtomarily paid to the king, and the chamber of Liſbon; but if any ill cuſtom ſhould introduce others for the future, they ſhall not be paid.

ARTICLE XXI.

That no manner of tribute ſhall be demanded from any of the people of this republic, either in Liſbon, or in any other place, to be expended in the chapel of St George; nor ſhall they be compelled to hold any perſonal offices, or to wear any ſort of arms, or to furniſh others therewith.

ARTICLE XXII.

That the merchants of either of the aforeſaid parties, and their factors, ſervants, negotiators of their families, or other ſervitors, mariners, maſters of ſhips, and people of the navy, may ſecurely and freely paſs to and fro in the dominions, territories, and countries of the ſaid republic and king; as alſo in their harbours, and on their out-ſkirts: and the people and ſubjects of the one may have and poſſeſs dwelling-houſes of their own in any of the dominions of the other; and alſo warehouſes for keeping their goods and merchandize, as long as they hire them, without being moleſted by any body. They may alſo wear ſwords, and carry with them both offenſive and defenſive arms, according to the uſance and cuſtom of the place, that they may the better be able to defend themſelves and their goods.

ARTICLE XXIII.

That all goods and merchandizes of the ſaid republic or king, or of their people or ſubjects, of both parties, loaden on board the ſhips of the enemies of either, being there found, ſhall be made prize, together with the ſame ſhips, and ſold at public ſale. But that all the goods of the enemies of either, or merchandize loaden on board the ſhips of either party, or of their people and ſubjects, ſhall be untouched.

ARTICLE XXIV.

That all juſt debts owing to the Engliſh by the king of Portugal, on account of merchandize taken or bought, or finally of ſhips loaden either before or after putting their goods or ſequeſtration to this time, ſhall be paid and diſcharged immediately, within two years next following: and that all recognizances, bonds, and ſurety-ſhips, given and entered into by the Engliſh, on account of any ſhips hitherto laden by the king of Portugal, or any of his ſubjects, for the ports of Brazil or Angola, and afterwards detained in any of his Majeſty's harbours, or ſeized and occupied by prince Rupert and prince Maurice, or hindered in any wiſe by the ſaid king, or by any of his officers or miniſters from being able to perform their contracts, ſhall from this time forward be cancelled, broken, and made null: and that neither their perſons, nor their ſhips nor goods, ſhall be put under arreſt, or in any wiſe moleſted by the ſaid king, or by any of his ſubjects, on account, and by reaſon, of the ſaid contracts.

ARTICLE XXV.

Whereas there was a convention between the new parliament, and the ambaſſador extraordinary from the king of Portugal; and the ſaid ambaſſador, in the ſecond of the ſix preliminary articles, which were agreed to on the 29th of December, 1652, obliged himſelf, that all the ſhips, goods, monies, and debts, appertaining to any Engliſhmen whomſoever, which were taken and detained in the dominions of the king of Portugal, ſhould immediately be freely reſtored in ſpecie, provided they were ſtill of the ſame value, and remain in the ſame good condition they were in at the time when they were firſt detained; but if they are grown worſe than they were, then ſatisfaction ſhould be given for them, according to their true price or value when they were firſt detained. But as to the compenſation of the damages, they being aſcertained by a declaration of the council, in their letter bearing date the 15th of November, 1652, and therein declared by the council, that it was not their intentions to preſs and demand reſtitution by vigour of law, but only in ſuch manner as ſhould be conformable to equity and reaſon, and that the ambaſſador might witneſs his inclinations to procure a peace; upon this ſuppoſition he obliged himſelf, that the damages ſhould be made good. In the fifth article of the ſaid preliminaries, the ſaid ambaſſador farther took upon him, or engaged, that all the ſhips and goods of the Engliſh, which by the princes Rupert and Maurice, or by any ſhip whatſoever under their command, have been carried to Portugal, and there diſpoſed of, or are ſtill remaining, or either by them or their command, have been carried again from thence, ſhall either immediately be reſtored to their owners and proprietors, or reparation and ſatisfaction ſhall be given for them. And becauſe ſome controverſies are ſtill remaining concerning the petitions or demands of the merchants and others, touching ſatisfaction; to the end theſe petitions or demands, theſe complaints of right and equity, may be judged and determined, it was by both parties contracted, concluded, and agreed upon, that the ſaid petitions, or demands, about the damages and ſatisfactions, ſhall be referred, as they are by theſe preſents referred, to the judgment, award, and ſentence, of Dr Walter Walker, John Crowther, Dr Henry da Sylva, ſecretary of the embaſſy, and Francis Perreira Rebella, agent in the affairs of the ſaid embaſſy, indifferent perſons, and choſen as well on the part of the king of Portugal, as of the lord protector; who by theſe preſents are made and conſtituted recognizers, arbitrators, and judges, to hear and examine all and every one of the demands and complaints of every one of the merchants and maſters of ſhips, and others who claim a right to all or any of the ſhips, monies, debts, merchandizes, and all other goods whatſoever, mentioned in the ſaid preliminary articles: which arbitrators ſhall meet and ſit in the city of London, on the 20th day of July next, O. S. and the ſame day they ſhall take a ſolemn oath before the judges of the high court of Admiralty of England, that they will renounce all favour or reſpect to either party, and all private intereſt in judging the matters to them referred; and, by theſe preſents, they are inſtituted and authoriſed to ſummon any perſons whatſoever, and to order ſuch depoſitions and papers to be laid before them, as ſhall have any relation to the buſineſs referred to them; and, whether they take the ſaid oath or not, they ſhall, in a ſummary way, examine and enquire into the truth of all theſe petitions and complaints, and alſo all and every one of the damages which were occaſioned by the ſaid arreſts and detainers. And the ſaid arbitrators are authoriſed by theſe preſents to finiſh all the cauſes above mentioned, and to liquidate, adjudge, and finally determine, the damages or loſſes, as they, or the major part of them, in their diſcretion and conſciences, ſhall judge to be juſtice and equity, and to publiſh their final ſentence in writing under their hands; which ſentence, ſo publiſhed, ſhall bind and oblige both parties, without any appeal, reviſal, or redemption whatſoever. And the ſaid king binds himſelf effectually to perform, keep, and obſerve the ſame, in all its members and articles, as alſo to pay, or cauſe to be paid, ſuch ſum or ſums of money as ſhall be adjudged him as aforeſaid. And beſides which it is agreed, that if the ſaid arbitrators do not agree and finally determine upon the ſaid things to them referred, before the firſt of September next, O. S. then the ſaid petitions or demands, which are left undetermined by the ſaid arbitrators, ſhall be ſubmitted, as they are by theſe preſents ſubmitted, to ſuch perſon of the ſaid lord protector's council, as the ſaid lord protector ſhall nominate, within any time whatſoever, after the firſt of September next: for which end the ſaid lord protector ſhall, by his mandate, authoriſe ſuch perſon ſo nominated, finally to determine upon all and every one of the petitions or demands aforeſaid. And if, before the pronunciation of ſentence by the ſaid counſellor, any papers ſhould arrive from Portugal, or any procurator to ſollicit about any of thoſe cauſes, the ſaid counſellor ſhall give them a new hearing, and the ſentence which ſhall be given by ſuch perſon ſo inſtituted under his hand and ſeal, ſhall conclude and bind both parties, and the ſame ſhall be duly complied with and executed. And for the greater caution and ſecurity that ſuch ſum of money, as ſhall be adjudged by the ſaid arbitrators, or arbitrator, may be honeſtly paid, it is agreed and concluded, that one moiety of the duties and cuſtoms of Portugal, ariſing from all the goods and merchandize whatſoever, of the natives and populace of this republic, who trade to Portugal, ſhall, immediately after the date of this treaty, be applied to the ſaid payment. Which moiety ſhall, from time to time, be paid to that perſon which the lord protector

protector ſhall nominate; thereby giving ſatisfaction to the merchants, maſters of ſhips, and proprietors, for their loſſes or damages.

ARTICLE XXVI.

It was concluded and agreed upon, that this preſent peace and confederacy ſhall not be broken by any other league or confederacy either already made, or that ſhall be made, by the moſt ſerene protector of England and king of Portugal, with any other princes or republics whatſoever; but this peace and confederacy ſhall be intirely kept, and its effects always remain in full force.

ARTICLE XXVII.

It was agreed and concluded, that both parties ſhall truly and firmly obſerve, and put in execution, the preſent treaty, and all and every one of the things therein contained and comprehended, and cauſe the ſame to be obſerved and performed by the people and ſubjects of the one and the other party.

ARTICLE XXVIII.

It was agreed and concluded, that the preſent treaty, and all and every one of the things therein contained and concluded, ſhall be ratified by the ſaid lord protector and king, by the letters patent of both parties, adorned with the great ſeal in due and authentic form, within ſix months next enſuing; and within the ſaid time mutual inſtruments ſhall be delivered on both ſides: and alſo, this peace and confederacy ſhall immediately (after the delivery and exchange of the inſtruments) be proclaimed in the uſual forms and places.

In truth and teſtimony of all which, we the commiſſioners of his highneſs the lord protector, and the ambaſſadors extraordinary of the moſt ſerene king, by virtue of our reſpective commiſſions and full powers, have ſigned the preſent treaty with our hands, and ſealed it with our ſeals.

Done at Weſtminſter, the 10th day of July, in the year 1654.

A SECRET ARTICLE between the lord protector of England, Scotland, and Ireland, on the one part; and the moſt ſerene king of Portugal, and of the Algarves, on the other part. Agreed on with the lord high chamberlain, his Majeſty's ambaſſador extraordinary in London.

That the people and inhabitants of England, trading (as has been already mentioned) in the kingdoms, dominions, ports, or territories of the ſaid king, ſhall not pay more duties and taxes, but only in the manner following, viz. That the Engliſh goods, merchandize, and manufactures ſhall never exceed 23 per cent. on their valuation for the payments of the duties; and they ſhall be favourably valued, according to the regimen of the cuſtom-houſe, and the ancient laws of the kingdom: and ſuppoſing there ſhould be any motive for raiſing the valuation, by reaſon of a riſe in the real value of goods or merchandize, it ſhall not be done but by the conſent and in the preſence of two Engliſh merchants who reſide and dwell in Portugal, and are choſen by the Engliſh conſul; and granting that the merchandize ſhould fall from its preſent or future exact value, the valuation and doubt ſhall be determined by diſintereſted perſons, who ſhall be choſen by the Engliſh conſul, and the officers of the cuſtom-houſe; and the aboveſaid inhabitants of the ſaid kingdom trading in the ſaid dominions and lordſhips of this republic, ſhall pay the preſent taxes and duties as they are newly impoſed and ſettled in this preſent month of May 1654, according to the uſance and laws of the place, both parties obſerving the laws and ordinances of each place reſpectively. And thus it was agreed upon and concluded, that the aboveſaid article, and every thing contained therein, ſhall be confirmed or ratified by the ſaid king, and by the ſaid lord protector, by the letters patent of the one and the other party, ſealed with the great ſeal, in due and authentic form, within ſix months next following; and within the ſaid time inſtruments ſhall be paſſed or exchanged by the one and the other party.

In faith and teſtimony whereof we ſign: the commiſſioner of the ſaid moſt ſerene king, by the force, vigour, and virtue of our commiſſions reſpecting this act, and we ſign this ſecret article with our hands and firms, and we ſeal it with our manual ſeals.

Done at Weſtminſter the 10th day of the month of July, 1654.

A CHARTER of the PRIVILEGES and LIBERTIES of the Engliſh; conſiſting of various ancient proviſional laws, alvaras, and decrees, granted by ſeveral of the kings of Portugal, in favour of the Engliſh, and others.

DON JOHN, by the grace of God, king of Portugal, and of the Algarves of this ſide, and beyond the ſeas in Africa, lord of Guiney, and the conqueſt, navigation, commerce of Ethiopia, Arabia, Perſia, and the Indies, &c. To all juſtices, commiſſioners, auditors, judgers, judges, officers of juſtice, and perſons of my kingdom and dominion of Portugal; where, or before whom, this my preſent charter of privileges may be preſented, and to whom the acknowlegement thereof by right may belong: know, that in this my very noble, and always loyal city of Liſbon, in the court of the cuſtom-houſe thereof; to me, and to my auditor, who at that time was doctor Nicholas Dias Tinoco, as judge-conſervator of the Engliſh, a petition was made, in the name and behalf of all the Engliſh nation then reſiding in this city; wherein they ſet forth, that among the laws, charters, and decrees, which the ſovereign of theſe kingdoms had granted in their favour, it was provided, that no bailiff, or conſtable, ſhould enter their houſes, to execute any warrants, or mandates, on their perſons, or goods; nor ſhould it be done in any other place, or by any other perſon, but by their judge-conſervator, or by his mandate, under the penalty of twenty cruſadoes forfeiture to their uſe; except the officers of juſtice ſhould be going in purſuit of a malefactor, detected in ſome flagrant fact: and that alſo they were excuſed, or exempted from paying any manner of rates, taxes, and loans, or performing any perſonal ſervices, or holding any offices of charge whatſoever. And likewiſe, that they ſhould not be impriſoned, or detained in priſon, even in a criminal caſe, otherwiſe than by the mandate of my ſaid auditor, their judge-conſervator, without homage, according to the proviſional law of the king, Don Emanuel; who, we hope, is taken into glory; and that likewiſe they were authoriſed to carry arms, offenſive and defenſive, in all this kingdom, as well by night as by day, before, or after, the ringing of the evening-bell, either with light, or without light, and enter with them into the prohibited places of all this kingdom. And, in like manner, they informed me how they had been vexed and diſturbed by the ſcavengers, officers, who uſed to perſecute them, notwithſtanding, in order to excuſe any differences, they uſed to ſend them one hundred reis, which they would not accept of; but from the Portugueſe they accepted of forty reis, and leſs; but, becauſe the petitioners were ſtrangers, they condemned them in 1000 reis, or, at leaſt, in 500 reis. And, likewiſe, when they went out of this city about their buſineſs, the juſtices of the country villages uſed to vex and diſturb them; and they would not keep, or have any regard to, their ſaid privileges, but rather put different and wrong conſtructions upon them, in order to vex and trouble the ſaid petitioners; and they took away their arms, which they carried, and were authoriſed to carry.

They begged of me, and of my ſaid auditor, their judge-conſervator, to declare by his diſpatch, that they were authoriſed to uſe the ſaid arms, and that, if any officer of juſtice had a mind to impeach them, it ſhould be done before their judge-conſervator, and no other judge, or juſtice, whatſoever, under penalty of being ſuſpended from their offices, and falling under the laſh of their privileges; and they would thankfully receive the favour done them.—This was the contents of the ſaid petition: together with which, Thomas Boſtock, an Engliſhman, preſented the charter of the liberties and privileges of the Engliſh nation, in which were inſerted the ſubſequent papers and articles, viz.

DON FERDINAND, king of Portugal, &c. to thee Fernando Rodriguez, by my authority, judge of the cauſes relating to my cuſtom houſe of Liſbon, or to any other, who after thee ſhall occupy thy place, health, &c. Know thou, that it being my pleaſure to favour the Engliſh merchants, natives of the kingdom of England, and the dominions of the prince of Wales, I give thee to them for their judge in the law-ſuits they have, or may have, with any perſons of my dominions, on account of merchandize bought or ſold by them, to or from ſuch perſon, or perſons, of my dominions.

I thee therefore command, that thou (or whoever may be in thy place) take cognizance of the law-ſuits and cauſes, that between the parties aboveſaid may happen, either by complaint of the one, or the other, upon account of merchandize, as is above already expreſſed. And, I command, that henceforward no others ſhall take cognizance of the ſaid law-ſuits, beſides thee, the ſaid Fernando Rodriguez, or any other perſon, that by my authority may fill thy place, as judge of my ſaid cuſtom-houſe; and thou ſhalt not do any thing to the contrary, or beyond this my command. In witneſs whereof, I have commanded this my grant to be given in Liſbon, the 29th day of October, 1450, written by Stephen Armes, for the king Don Ferdinand.

The KING.

DON JOHN, by the grace of God, king of Portugal, and of the Algarves, &c. To all to whom this letter ſhall come, we by it make known, that whereas we are graciouſly pleaſed to favour all the Engliſh merchants of the kingdom of England, who come to the city of Liſbon, or other places whatſoever of the kingdom, it is our pleaſure and commands, that they ſhall henceforward have and enjoy all the privileges and liberties that are granted to the Genoeſe, and other merchants, who at this time come to, or reſide in, our kingdoms,

doms, either in the city of Liſbon, or in any other places whatſoever, within our ſaid kingdoms. We therefore command all judges and juſtices of the ſaid kingdoms, and all general receivers of the revenues, ſcriveners, and all others whatſoever, to whom this may be preſented, that they look into the ſaid privileges and liberties, which the ſaid Genoeſe, and others, frequenting our dominions, have obtained from theſe kingdoms, and have been heretofore confirmed by us; and ſee that they keep, obſerve, and fully comply with the ſame, in favour of the Engliſh merchants, for the ſame cauſe and reaſon as they ſtrictly obſerve them in the favour of the ſaid Genoeſe, and other merchants, at preſent reſiding in our kingdoms, it being a new favour we ſhew to the ſaid Engliſh, having before given them privileges and liberties. In teſtimony whereof we have commanded this our letter-patent to be given in their favour, in the city of Coimbra, the 10th of Auguſt, 1400. Written by James Paes, for the king Don John.

The KING.

DON ALFONSO, by the grace of God, king of Portugal, and of the Algarves, &c. To all to whom this our letter ſhall come, we by it make known, that we privilege all the Flemings, Germans, French, and Britons, who come to reſide in our kingdoms; and, foraſmuch as Michael Arman, a German ſhoemaker, and a dweller in our city of Liſbon, is a ſubject of one of the ſaid nations, which we ſo privilege, and he humbly imploring our favour, that we command our privilege to be given him, and conſidering his requeſt, we have thought fit to ſhew him our grace and favour; therefore it is our royal pleaſure and will, that from henceforward he ſhall not be conſtrained to pay any of our demands, rates, taxes, or loans, whatſoever; nor ſhall he do any ſervices, or take upon him any charge whatſoever, or ſervitudes that are, or have been, occaſioned by us, or by our councils, upon any account whatſoever: they ſhall not guard either priſoners, or monies, nor ſhall they be tutors, or preceptors, to any perſons whatſoever; nor ſhall they be obliged to hold any manner of offices, or ſervitudes, under us, or our councils, againſt their will. In like manner they ſhall not be obliged to go into our ſervice, either by ſea or land, in any parts or places whatſoever; nor ſhall they be obliged to keep horſes, arms, or mules for our ſervice, notwithſtanding any law or cuſtom to the contrary. In the like manner we command that no perſon, of what ſtate or condition ſoever, ſhall be ſo preſumptuous as to take from them their dwelling-houſes, or cellars, or ſtables; nor ſhall they quarter therein; neither ſhall their bread, wine, cloaths, or any other thing whatſoever of theirs, be taken from them againſt their will.

We give them leave to hire and ride on beaſts of burden, with ſaddle and bridle, all over our kingdoms and dominions, notwithſtanding the prohibition and ordinance made about this to the contrary. And we command our harbinger, the harbinger of the queen our conſort (whom above all we prize and love) as alſo of the princes and lords of the ſaid city, that in caſe all and every one of us ſhould have occaſions, their ſaid houſes ſhall not be taken from them for the uſe of us, or any other perſons, in any manner, or by any means whatſoever. Such is our royal favour, upon pain of our diſpleaſure, and the forfeiture of ſix milreis to be paid for our uſe by any perſon whatſoever, who ſhall act contrary to this our mandate; the which we command our collectors and receivers to levy, and receive for our uſe, and the ſcriveners of their offices, ſhall enter it in their books, that a good and true account thereof may be kept under the penalty of paying double the ſum for their neglect.

We therefore command all our juſtices, judges, officers of juſtice, collectors, receivers, and all other officers, and perſons whatſoever, to the ſight or knowledge of whom this may come, that they ſhall acknowlege, and hold the ſaid Michael Arman, German ſhoemaker, for relieved, and excuſed from the aboveſaid things; and he ſhall not be obliged, or conſtrained to any of them: therefore ſee that you comply with, and cauſe this our letter to be well and truly complied with, and kept and obſerved for the cauſes and reaſons therein contained; nor ſhall ye do, or conſent that any thing ſhall be done to the contrary hereof, in any manner, or by any means whatſoever; for ſuch is our grace and favour, that it ſhall ſo be done, and let neither one nor the other do any thing to the contrary. Given in the city of Evora, the 28th day of March, 1452. Written by Loupo Fernandes for the king Don Alfonſo.

The KING.

DON EMANUEL, by the grace of God, king of Portugal, and of the Algarves, &c. To all to whom theſe our letters may come, health, and deſire of love. And whereas we are accuſtomed to honour ſuch as are worthy, and with liberal beneficence tread in the paths of honour: and whereas our approved-of ſubject, Simon Lopes, having applied to us with his accuſtomed humanity, we have heard him, and liberally granted his requeſt, as will appear by theſe our letters, wherein may be ſeen our gracious favours in behalf of the eſteemed gentlemen Anthony de Belver and Conrado Selim in their own names, and in the names of their company of noble merchants of the auguſt and imperial city, and other towns of Germany; wherein they ſignified to us their deſire of ſettling a houſe of their company in this city of Liſbon, in order to negociate, trade, and merchandize in our kingdoms, if we approved of granting them ſome favours and liberties, which they requeſted of us, conformable to ſuch as were given them in other countries; and as we have underſtood their requeſt, and conſidered how much honour and humanity is due to ſuch gentlemen, as well upon account of their perſons, as being worthy of all favour, as on account of their commodious trade, which according to our opinion will be advantageous for our people; as alſo on account of their being imperial citizens of the auguſt emperor of the Romans, Maximilian our beloved couſin. For which reaſons we conſent to their petition with very good will, granting them the liberties and privileges they deſire, the which have never been granted to any others, or even to our own ſubjects, as in theſe letters will appear and be contained at large, viz.

In the firſt place, we make over a freedom to the ſaid noble merchants, whereby they may freely negotiate, trade, ſell, and buy, in all our kingdoms and dominions, either by their own proper perſons, or by their factors and ſervants. It is our will, and we command, that whenſoever their merchandize arrives in any ſhip or veſſel before, or in the port of, or near this city, at the time of unloading, before any thing be unladen, our diſcharging officers ſhall firſt acquaint them of the time they intend to go on board; that if they pleaſe they come and bring boats with them, and therein ſee their goods unloaden; but if they do not come, or ſend within three hours, a little more or leſs, then the ſaid officers may unload, although the owners of the goods are on ſhore in the city.

It is our commands, that as ſoon as their goods are brought into the cuſtom-houſe, they ſhall immediately pay the decima and ſiza, except for woollen cloths, of which they ſhall pay the ſiza at the time of ſale, according to the preſent practice, and as it is contained in our articles; which ſizas ſhall be paid to the officers of the tables, whereunto ſuch duties do belong, and they ſhall enter the ſame in their books as paid, that all doubts about the payment may be avoided for the future. And ſo ſoon as they have paid the duties, and received the ſaid goods in their own poſſeſſion, they may carry them where they pleaſe, all over our kingdoms and dominions, without being obliged to acquaint any body of their moving from place to place, or of the ſales they make of the ſaid goods; much leſs ſhall they be obliged to enter or take out a permit from any of our offices of inland duties: nor ſhall they incur any penalty, or be deemed as ſmugglers, on account of their not entering the ſame, or taking out a permit for moving their merchandize from place to place, according to the method ordained by our charters, articles, and laws: and this is to be underſtood of ſuch goods and merchandize as have paid our duties, and have cleared, of which they ſhall have certificates from our officers, that by virtue of the ſame they may carry and ſell their merchandize all over our kingdoms, without paying any thing more; and they ſhall be treated in the ſame manner as the Flemings, as is contained in their privileges.

It is our will and pleaſure, that no officer, nor farmer of the duties, nor any other perſon whatſoever, ſhall enter into their houſes to ſearch, nor ſhall they in any wiſe oppreſs them, except by mandate of our accomptant-general: he firſt having information from ſome unſuſpected perſon, or perſons, making it appear, that they have in their houſes ſome counterband or run goods; and when ſuch an occaſion ſhall offer of ſending to their houſe, it ſhall be done by one ſcrivener of the cuſtom-houſe, and one of the farmers of the duties, if there be any; and without the ſaid ſcrivener they ſhall not go to their houſes to ſearch for the ſaid counterband goods.

It is our will and pleaſure, that they ſhall not pay any duties, either for the proviſions, or the furniture they import for the uſe of their houſe, much leſs ſhall they any duties for the woollen cloths they import for cloathing their factors and ſervants, allowing them two ſuits a year for each perſon; alſo canvaſs and wrappers of hemp for bags, and crocus for their merchandize, they depoſing on oath, that they import all thoſe things for their own private uſe, and not for ſale; becauſe, if they are for ſale, they ſhall pay the uſual duties.

It is our will and pleaſure, and we command, that none of our officers of juſtice preſume to enter into their houſes, except the ſaid corregidor, or ſuch as ſhall be ſent by him, and no other, under the penalty of twenty cruſadoes forfeiture to their uſe; except the officers of juſtice are in purſuit of ſome malefactor detected in any flagrant crime; in ſuch caſe they may enter into their houſes.

It is our will and pleaſure, that they ſhall carry arms not only themſelves, but alſo their domeſtic ſervants and attendants, ſo far as ſix of them in number, which arms they may carry by night and by day, all over our kingdoms and dominions, as well before the ringing of the evening-bell, as afterwards, with or without light, provided, however, that they

they do not uſe them otherwiſe than they ought to do; and this notwithſtanding our laws to the contrary: the which ſervants, however, ſhall not be Spaniards, for none of that nation ſhall enjoy this liberty.

It is our will and pleaſure, and our order, that any perſon whatſoever, who will not obſerve, keep, and comply with theſe their privileges, or doth any thing contradictory to them, ſuch perſon ſhall incur the penalty of 50 cruſadoes, in which he ſhall be condemned for the uſe of the hoſpital of All Saints in this city; and by theſe preſents we command our accomptant-general, that he knowing of any perſon who will not keep and comply with theſe privileges, according as is therein contained and declared, ſhall immediately cauſe execution to be made for levying the penalty on the ſaid perſon, which ſhall immediately be delivered to our general-receiver of the ſaid hoſpital, and charged in the books for every time they violate theſe privileges, or do any thing contrary thereunto; beſides which we command all other juſtices and officers of juſtice whom it may concern, that they obſerve this declaration, and ſee that it be intirely kept and complied with, together with all other privileges they have obtained of us, effectually putting the ſaid penalty in execution; foraſmuch as it is our will and intention, that the grace and favour we ſhew them ſhall in all things be underſtood to redound more to their advantage than to their prejudice; and becauſe our pleaſure is ſuch, we have commanded this our alvara, or law, ſigned by us, to be given in their favour; the which ſhall be as valid as if it had been our letter, regiſtered in the court of chancery, notwithſtanding any law or ordinance there may be to the contrary. Done in Almeyrim the 7th day of February, in the year 1411. Written by Andrew Pireo.

By the ſaid privilege which we have granted them, they may load their merchandize in any ſhips they pleaſe, as well Portugueſe as ſtrangers, trading and lading from the iſlands: and beſides this, we make them our natives; and we are juſt now informed, that at the Caza dò Vero Pezo, the officers put doubts and difficulties to them, when they loaded their goods in foreign ſhips, as our ſaid natives are wont to do: from whence it follows, that it is of damage to them to be privileged perſons, which was not our intention, but rather we intended to do them all favour and honour. Therefore, for the declaration of which it is our will and pleaſure, that as well in this caſe, as in any other whatſoever, which they have a mind to enjoy as ſtrangers, they may do it; becauſe we will not have it ſo that their privileges ſhall leſſen any favour granted them as ſtrangers, if it be poſſible to avoid it. And therefore they have for their privilege, that no officer of juſtice whatſoever can enter into their houſes, without an order from their ſaid judge, under certain penalties; and we are informed that ſome officers and perſons have meddled with them, and with things belonging to them, and have uſed them ill; and, in order to provide againſt this, it is our will and pleaſure, and we require, that no officer of ours either diſturb or meddle with them, or any thing that belongs to them, except their ſaid judges, or any by their order. And if any ſuch caſe ſhould happen, wherein their perſons and their factors ought to be taken into cuſtody and impriſoned, it is our will and pleaſure, that they ſhall be conducted to the caſtle by their ſaid judge, or his bailiff, in perſon, and not by their ſervants or followers; and if the cauſe of their impriſonment be ſuch as will admit of bail, we command that immediately, without other delay, the ſaid bail may be taken. Thus ſtands the caſe, wherein it is ſo largely contained and declared, and was contained and declared in the ſaid privileges and petition; the which being preſented to me, and by me conſidered, as alſo by my ſaid auditor Dr Nicholas Dias Tinoco, I therein pronounce my diſpatch as followeth, viz.

Let them make uſe of arms as is expreſſed in their privileges; and, for this end, the charters and mandates they petition for ſhall be granted and drawn out for them in authentic form, wherein ſhall be included the article that ſpeaks of arms, and that other juſtices cannot enter their houſes without an order from this conſervatory; and all bailiffs, conſtables, and all other officers of juſtice, that ſhall do any thing to the contrary, ſhall immediately be notified by the ſcrivener of the ſaid conſervatory, that without the approbation of this court, they meddle not with theſe privileged perſons, under the penalty of being ſuſpended from their offices, and falling under our diſpleaſure. Liſbon, the 11th of May, 1645.

TINOCO.

And this diſpatch being put to the ſaid petition, by virtue thereof this preſent charter of privileges was paſſed or drawn out in authentic form, for all in general, and every one in particular; by which I command, ſo ſoon as this ſhall be preſented to you, being firſt regiſtered in my chancery, you comply with it, and keep it, and cauſe that it may be very intirely complied with, and kept, in the manner as is therein contained; and in complying therewith, ye ſhall not hurt, moleſt, nor vex the ſaid Thomas Boſtock, nor his ſervants and factors; nor ſhall ye do, or cauſe to be done, any act or acts, as ſerving writs, warrants, &c. upon him, or his houſe, except it be done by the mandate of the ſaid my auditor, his competent judge conſervator, and not by the mandate of any other judge, without approbation of this conſervatory; it being ſo decreed them by a charter granted in favour of the Engliſh, by the king Don Emanuel (who we hope is taken into glory.) But rather ye ſhall render, or cauſe to be rendered him all favour and honour. The which let one and another ſo comply with; and nothing to the contrary ſhall ye do, nor ſhall ye put any doubt or delay to the obſervance of it; leſt the penalty of 50 cruſadoes be levied upon you, and ye fall under the laſh of the ſaid privileges, and of being ſuſpended, &c.

Given in this very noble and always loyal city of Liſbon, and court of the cuſtom-houſe, and conſervatory thereof, the 4th day of the month of November, from the year of the birth of our Lord Jeſus Chriſt, 1647.

The king our lord ſent this by Dr Anthony de Faria Machado, his judge-advocate, and his auditor, &c. &c. &c.

A DECREE about Engliſhmen's not being ſerved with any executions, without an order from their judge-conſervator.

On the part, and in behalf of the Engliſh nation, it was repreſented to me, that it being granted them by the 13th article of the treaty of peace, that no judger, or other officer of juſtice, could order to be ſeized, or taken into cuſtody, any ſubject of the king of Great-Britain, my good brother and couſin, for any cauſe, either civil or criminal, without firſt having an order for ſo doing from the judge conſervator; the ſaid article is ſo little regarded, that Engliſhmen are every day ſeized and taken into cuſtody, without the precedency of ſuch order from the judge-conſervator; ſo that the ſaid article is by no means obſerved, or complied with; and becauſe, according to the wording thereof, it is ſaid, that only in flagrant crimes the Engliſh could be impriſoned by any of my miniſters, and in other caſes recourſe ought to be had to the conſervator, or that he ſhould write his conſent to the orders of other judges before they ſhould be valid;

I recommend to the lord chief juſtice of the houſe of ſupplication, that he cauſe the ſaid article to be obſerved in its due form. In Liſbon, the 23d of Auguſt, 1667.

KING.

WHEAT, which is brought from the iſlands, or from any any other parts beyond the ſeas, may be imported free of duties in any parts or places of this kingdom.

I the king make known to whom this my alvara, or law, may come, that by the courts, which I held in this city of Liſbon, on the 28th of January, 1641, a reply to which I commanded to be given, in the year 1642, it was requeſted of me by the ſtate, in chapter 55, that I would pleaſe to exempt all wheat imported from the iſlands, and other parts beyond the ſeas, from paying any duties in this kingdom, it being a proviſion abſolutely neceſſary for the inhabitants thereof: and, as I have maturely conſidered the convenience and good of the common-weal of the kingdom, and other ſubjects, and for other reaſons, for which I am accuſtomed to grant what is requeſted of me by temporal laws, and by their means to ſhew grace and favour; it is my will and pleaſure, that the wheat which comes to this kingdom, as well from the iſlands as from any other parts beyond the ſeas, ſhall not pay any manner of duty; from which it ſhall be exempted, and free for ever. I therefore command the inſpectors of my treaſury, judges, juſtices, commiſſioners, and all other officers of juſtice, and other perſons of theſe kingdoms and dominions, to whom this my alvara, or law, may be preſented, and to whom the acknowlegement thereof doth belong, that they comply with it and keep it; and cauſe it to be entirely kept, obſerved, and complied with, according as is therein contained, without putting the leaſt doubt or contradiction to it; becauſe ſuch is my grace and favour: and it ſhall be regiſtered in the books of my treaſury, and of the cuſtom-houſe, and its regimens, and all other places where it may be neceſſary, that it may come to the notice of every body; and it ſhall be valid, as if a law made in court, and a charter given in my name, and ſealed with the ſeal-pendent, notwithſtanding the ordinance in the ſecond book, title the 40th, to the contrary. Anthony de Morais writ it in Liſbon, the 25th of May, 1647.

KING.

Of the things which owe no duties in this city of Liſbon; taken from the 12th chapter of the Book of Rates of the Cuſtom-houſe.

All wheat, barley, rye, Indian corn, and pulſe that are brought into this city from any foreign parts whatſoever, ſhall not pay any manner of duties in this cuſtom-houſe; nor fleſh-meat, cheeſe, or butter; foraſmuch as I have ſhewn favour to the chamber and people of the ſaid city, to free the

ſaid things from duties; and, in the ſame manner, arms, powder, horſes, gold, ſilver in lump, or in coin, and books, ſhall not pay any duty whatſoever in the ſaid city and cuſtom-houſe thereof. But all other things, and any kinds of merchandize, of what ſort or quality ſoever, which belong to this cuſtom-houſe, and are brought thereto by ſea or by land, as is already ſaid, although expreſs mention ſhould not be made in the ſaid books of rates, of every ſpecies of goods in particular, yet they ſhall pay the ſaid duties of 10 per cent. for the decima, and 10 per cent. for the ſiza; and this, becauſe the ſaid merchandize and things ſhall pay the ſame duties of 20 per cent. in all and every one of the cuſtom-houſes of this kingdom, iſlands, and dominions hereof; and the people who bring them to the ſaid cuſtom-houſe of Liſbon, ſhall bring with them certificates from the officers of the other cuſtom-houſes from whence they came, to make appear that they have paid the duties, foraſmuch as otherwiſe they will be obliged to pay the duties in this city for any goods that are brought to the cuſtom-houſe thereof. This is all that was expreſſed in the ſaid 12th chapter, which, by order of the commiſſioner of the cuſtom-houſe, James Soarés, the Notary Luis da Coſta has taken this copy of, in authentic form, the 2d of Auguſt, 1668.

A PROVISION, or LAW, whereby the Engliſh are exempted from paying decima on their ſtock, and from being obliged to take upon them any charge in war.

I the king make known, to whom this alvara, or law, ſhall come, that as I am deſirous to oblige the Engliſh nation with particular marks of my royal favour, on account of the ancient friendſhip or alliance which I have had with that crown, and now in particular, in reſpect of ſome motives which induce me to it; it is my will and pleaſure to ſhew grace unto the Engliſh merchants, and others of the ſame nation, reſiding in theſe kingdoms and dominions of Portugal, who have not been therein naturalized, by exempting them from paying the decima on their ſtock, which all the other dwellers in this kingdom pay: and I grant them liberty, that they ſhall not be obliged to keep horſes; and if they have any for their own ſervice, they ſhall not be taken from them againſt their will, nor ſhall they be obliged to any other charge of war. And becauſe the publication of this privilege may be followed with great inconveniences, this alvara, or law, ſhall remain in all ſecreſy; and for the better keeping it ſo, it ſhall not go out of the hands of the Engliſh conſul, for the time being, reſiding in my court; nor ſhall it be regiſtered in any other book but in that of ſecrets, in the ſecretary's office, in the expedient or original writing from whence this was tranſcribed in Alcantara, the 29th of May, 1656. And I Peter Severinde Noronha wrote this by particular command of his Majeſty, whom God preſerve.

KING.

Of ſuch things as owe no duties whatſoever; which are as follow, viz.

Pulſe from England, Scotland, and Ireland, New-England, and its dominions; that is to ſay, beans, peaſe, lentils, wheat, barley, Indian corn large ſort, ditto ſmall ſort, rye, butter, cheeſe, gun-powder, horſes, gold, ſilver, in lump or in coin, books, fleſh-meat of any ſort whatſoever; concerning which there is a ſentence againſt the contractors or farmers of the inland duties on fleſh, obtained by Henry Bomelman, in the years 1645 and 1646, pronounced in court, the ſaid farmers being plaintiffs, and the ſaid Bomelman defendant; wherein it was decided, that the things in diſpute owed no more than 40 reis for the entry, and 200 reis for the guard; which ſentence lies in the office of the eſcrivener, Chriſtopher de Campos. Alſo no duty ſhall be paid for biſcuit, or any other ſpecies of bread, cannon-ſhot of iron or bell-metal, bandeliers, pikes, and muſkets. But, however, theſe things ought to paſs through the cuſtom-houſe, and the accoutrements of war be offered to the ſervice of the king; and, if he has no occaſion for them, then the owners thereof may carry them where they pleaſe.

ALVARA, or a LAW, in favour of the ENGLISH; allowing them to repute their ſhips as Portugueſe, which pay no duties going from Liſbon to the Weſtern Iſlands, and other conqueſts belonging to the crown of Portugal; which are word for word in the manner following; viz.

I the king make known, to whom this alvara, or law, may come, that the Engliſh merchants reſiding in the Weſtern Iſlands, ſent to acquaint me by their petition, that I had been pleaſed to command, among other agreements and reſolutions of the treaty of peace lately concluded with the lord protector of England, that they might tranſport and carry any ſort of merchandize, which had paid the duties in any one port, to any other ports or places, without paying any more duties, or any manner of tribute, beſides what is paid by the native Portugueſe themſelves, for the goods that belong to them; and that, having once paid their duties in this city, they ſhall not pay again any ſort of tribute in any other port; and that the Engliſh ſhips which are freighted by Portugueſe, ſhall not pay more duties than is paid for the goods navigated in Portugueſe veſſels, as will appear by the tenth and eleventh articles of the treaty, the authentic tenor whereof was by them preſented: and whereas the ſaid articles were not duly obſerved and complied with in the ſaid iſlands, but, on the contrary, the Engliſh were vexed and diſturbed with doubts and moleſtations, and that the natives of the iſlands had unjuſtly extorted a great deal of money from them, ſince the ſaid articles of peace were made and publiſhed; whereas, in the obſervance thereof, due regard ought to have been had to the exemptions I granted to the Engliſh, becauſe the royal mandates ought always to be effective, and the tranſgreſſors of them puniſhed:

Therefore they requeſted of me, that I would pleaſe to favour them with my proviſional law, to oblige the miniſters of the ſaid iſlands, to whom the obſervance of what is contained in the ſaid articles doth belong, that they comply with the ſame, and obſerve and keep them in the manner as is therein expreſſed; and that they ſhould not conſent to the moleſtation of the petitioners, nor take from them more than they ought to pay, and that reſtitution ſhould be made of what they had hitherto been unjuſtly obliged to pay. Conſidering what they alledged, and the form of my orders, which had been given on ſuch like matters, they hoped I would grant their requeſt, and with all humility they would thankfully receive the favour.

I, having ſeen and conſidered the ſaid petition, did thereupon ſend my decree, dated the firſt of June of this preſent year, wherein it was written, that a proviſional law ſhould be prepared and paſſed by the council of my treaſury, in favour of the ſaid petitioners, conformable to the articles of peace; and if it ſhould appear to the ſaid council, that there was any thing in the matter, neceſſary to be repreſented to me, they ſhould do it immediately. And in compliance with this my order, the council gave their diſpatch, that the ſaid proviſional law ſhould be made and paſſed, in the form ordained by my ſaid decree, and that the articles of peace mentioned in the ſaid petition, ſhould be requeſted from the ſecretary of ſtate's office, which was accordingly complied with; but, as the ſaid articles are written in Latin, they were tranſlated into the Portugueſe language, and are as follows, viz.

[Here follow articles the tenth and eleventh, which are wrote in full length, in folio 11.]

Wherefore I command the commiſſioners of my treaſury, and all other miniſters and officers thereof, and the juſtices of the ſaid iſlands, and all other perſons to whom this my proviſional law may be preſented, and the acknowlegement thereof doth belong, that they comply with it, and keep it intirely; and that they cauſe it to be obſerved, complied with, and kept, in conformity to the articles herein tranſlated, without any manner of doubt or contradiction; becauſe ſuch is my will and pleaſure: and it ſhall be valid, though its effect ſhould laſt more than one year, notwithſtanding the ordinances or regimens that may be to the contrary; the which ſhall be regiſtered in the books of the cuſtom-houſe, that it may be publickly known to all people. Anthony Velloſo Eſtaſo writ it in Liſbon, the 4th of July, 1657; and John Pereira Bitancur ordered it to be tranſcribed.

QUEEN.

ALVARA, or a LAW, to exempt the Engliſh from paying brokerage againſt their will.

I the king make known, to whom this alvara, or law, may come, that having a regard to what the Engliſh merchants, reſiding in the iſland of Madeira, ſent to inform me of by their petition, requeſting that I would pleaſe to order my proviſional law to be paſſed, in order to prevent the brokers from obliging them to pay brokerage, unleſs they, of their own accord and free-will, thought fit to employ them, according to the third article of the laſt treaty of peace with England: and having ſeen what they allege, and likewiſe the information given by Dr Manoel da Cunha, conſervator of the Engliſh, together with the anſwer given upon this by my attorney-general, it is my will and pleaſure, and command, that the brokers ſhall not oblige the Engliſh to pay brokerage, except the ſaid Engliſh ſhall freely, and of their own accord, employ them, as they requeſt in their petition; having conſidered the articles of peace, and likewiſe the ſaid anſwer of my attorney-general. And this alvara, or law, ſhall be duly complied with, in the manner as is therein contained; and it ſhall continue in force, though its effect may laſt more than one year, notwithſtanding the ordinance in the ſecond book, title the 40th, to the contrary. Emanuel de Couto writ it in Liſbon, the 27th of January, 1661, and ſent this by two conveyancers. Jacinto Facundes Bezerra ordered it to be tranſcribed.

QUEEN.

ALVARA, or a LAW, which the king, DON ALPHONSUS VI. granted, at the requeſt of the Engliſh merchants, on account of ſuch caſes in law that may take place in the conſervatory, even with ſuch perſons as are privileged.

I the king make known, to whom this alvara, or law, may come, that the merchants of the crown of England repreſented to me, that notwithſtanding the conſervatory, which by an article of peace I have granted them for their cauſes, they are obliged to litigate in other courts, under pretence that the words of the general conceſſion do not abrogate the privileges granted in law, and are enjoyed by their contenders, which is a great hindrance to trade, they being obliged to attend various courts, and delay their cauſes, with trials about preferences: and becauſe, in all things which are not repugnant to juſtice, I deſire to favour the ſubjects of the king of Great-Britain, my good brother and couſin, I have ordered this matter to be examined with all due conſideration; and it has been my pleaſure to reſolve, that the ſaid conſervatory ſhall take place, even with ſuch as are privileged, and with privileges which are incorporated in law, either upon account of perſons, or upon account of things; ſuch as officers of the mint, of the court of India, and mines, and other ſuch like; that every body, in cauſes which proceed from trade, ſhall be obliged to anſwer, or litigate, whether they are plaintiffs, or defendants, in the ſaid conſervatory, notwithſtanding any laws or ordinances whatſoever to the contrary: therefore, for this effect, it is my will and pleaſure to annul them; but, however, with the declaration it is not my intention, by this conceſſion, to alter any thing whatſoever belonging to the judge or court of my exchequer, upon account of the quality of the matters and things therein tranſacted; and it is always to be underſtood, that appeals are to be made from the ſaid conſervator of the Engliſh, to whom they belong, as has been hitherto practiſed. And this alvara, or law, ſhall be complied with, in the manner as is therein contained; and it ſhall be valid, though its effect may laſt more than one year, notwithſtanding the ordinance in the ſecond book, title the 40th, to the contrary. Emanuel de Couto writ it in Liſbon the 16th of September, 1665. Jacinto Facundes Bezerra ordered it to be tranſcribed.

KING.

The ſuperintendant of the collectors of the 4 ½ per cent. of the pariſh of St Paul in this city, notwithſtanding the order given him in this junto or council, ſhall not oblige the ſubjects of the Catholic King, the French, Engliſh, and Hollanders, who are not naturalized, to pay what was charged to them on their ſtock; and thoſe who have lands in this kingdom, and are not naturalized, ſhall pay only what is charged on the ſaid lands, his Majeſty having declared it ſo by his decree of the 9th of the preſent month of July. And all other ſtrangers of other nations ought to pay what is charged them on their ſtock; becauſe, in order for them to enjoy this privilege, it is neceſſary they ſhould ſhew what they have to entitle them to it, that it may be obſerved and kept accordingly. And this diſpatch ſhall be recognized in the office of the accomptant-general of war. Liſbon, the 18th of July, 1699, with four firms of the miniſters of the junto of the three ſtates. Regiſtered, folio 106.

TRANSCRIPT of the RESOLUTION about the TAX on STOCK.

In the book of advices from the counties and hundreds, which ſerves in this office of the accomptant-general of war and the kingdom, in folio 211, is regiſtered the order given to the auditor of the town of Crato, about the particular things mentioned in this proviſion; of which tenor, other orders have been given to all the reſt of the miniſters and ſuperintendants of the pariſhes of this city, and its diſtricts; of which the following is a tranſcript.

PROVISIONAL, fol. 211. of the BOOK, Number XII.

Don John, by the grace of God, &c. I make known to thee, auditor of the hundred of Crato, that I am informed by the conſultations of the junto of the three States, that the ſubjects of ſeveral different nations diſpute the payment of the tax on their ſtock, which they were charged with, under pretence that they are privileged by the articles of peace, which free them from paying the ſaid tax. I was pleaſed to reſolve, on the 28th of April laſt, that the French, and the ſubjects of other nations, ought to pay the tax on ſtock, which was charged to them according to their trade, and that the ſubjects of the Catholic king, my good brother and couſin, and thoſe of England and Holland, ought to be exempted from this contribution; but, however, ſuch as are naturalized, notwithſtanding the privileges of England and Holland, ought to pay the tax on ſtock, in the ſame manner as the natives of this kingdom do. And I ſend you this advice of my ſaid reſolution, that thou mayeſt obſerve it in that hundred, in the part which concerns thee; and due notice ſhall be taken of this order in the office of the accomptant-general of war. The king our lord ſent this by Don Philip de Souza, captain of his royal guards, and by Francis de Mello, forreſter-general of the kingdom, both deputies of the junto of the three ſtates. Lewis Simeons de Azevedo writ it in Liſbon, the 7th of May, 1708. Gaſpar Salgado, who ſerves as ſecretary, ordered it to be tranſcribed. Accordingly, theſe are the contents of the ſaid privileges, which in every thing ſhall be duly complied with, according as is therein contained; and by virtue hereof, they ſhall he obſerved and kept, and every one ſhall comply with them, and nothing to the contrary ſhall ye do, &c. And this is regiſtered in my chancery of the accounts of the kingdom and palace. Given in this city of Eaſt Liſbon, the 8th day of the month of February, from the year of the birth of our Lord Jeſus Chriſt, 1717.

A TREATY of COMMERCE betwixt the moſt ſerene lady ANNE, queen of GREAT-BRITAIN, and the moſt ſerene lord Don PETER, king of PORTUGAL, and of the Algarves, &c. Agreed upon and concluded in Liſbon, the 27th of December, 1703.

PROLOGUE.

Whereas the league and ſtrict friendſhip which is between the moſt ſerene and moſt potent princeſs Anne, queen of Great-Britain, and the moſt potent Peter, king of Portugal, requires that the commerce of both the Britiſh and Portugueſe nations ſhould be promoted as much as poſſible; and her ſacred royal Majeſty of Great-Britain, hath ſignified to his ſacred royal Majeſty of Portugal, by the moſt excellent John Methuen, Eſq; member of the Engliſh parliament, and ambaſſador extraordinary in Portugal, that it would be very acceptable to her, if the woollen cloths, and the reſt of the woollen manufactures of Britain, might be admitted into Portugal, the prohibition of them being taken off: that this matter might be treated and tranſacted, they have given their full power and commands; that is to ſay, her ſacred Majeſty of Great-Britain to the aboveſaid moſt excellent John Methuen, and his ſacred Majeſty of Portugal to the moſt excellent Don Emanuel Telles, marquis of Alegrete, Conde da Villa Major, knight profeſſed in the order of Chriſt, &c. &c. &c. who, by virtue of the full powers to them reſpectively granted, having maturely and diligently conſidered the matter, have agreed upon the following articles, viz.

ARTICLE I.

His ſacred royal Majeſty of Portugal promiſes, both in his own name, and that of his ſucceſſors, to admit for ever hereafter into Portugal, the woollen cloths, and the reſt of the woollen manufactures of the Britons, as was accuſtomed till they were prohibited by the laws; nevertheleſs upon this condition, that is to ſay,

ARTICLE II.

That her ſacred royal Majeſty of Great-Britain ſhall, in her own name, and that of her ſucceſſors, be obliged for ever hereafter to admit the wines, of the growth of Portugal, into Britain; ſo that at no time, whether there ſhall be peace or war between the kingdoms of Britain and France, any thing more ſhall be demanded for theſe wines by the name of cuſtom or duty, or by any other title whatſoever, directly or indirectly (whether they ſhall be imported into Great-Britain in pipes or hogſheads, or other caſks) than what ſhall be demanded for the like quantity or meaſure of French wine, deducting or abating one half of the cuſtom or duty. But if at any time this deduction or abatement of cuſtoms, which is to be made as aforeſaid, ſhall in any manner be attempted and prejudiced, it ſhall be juſt and lawful for his ſacred royal Majeſty of Portugal, again to prohibit the woollen cloths, and the reſt of the Britiſh woollen manufactures.

ARTICLE III.

The moſt excellent lords the plenipotentiaries promiſe and take upon themſelves, that their above-named maſters ſhall ratify this treaty, and within the ſpace of two months the ratifications ſhall be exchanged.

For the faith and teſtimony of all which things, I the plenipotentiary of her ſacred royal Majeſty of Great-Britain, have confirmed this treaty by the ſubſcription of my hand, and by the ſeal of my coat of arms: and the moſt excellent lord the plenipotentiary of his ſacred royal Majeſty of Portugal, for avoiding the controverſy about precedence, between the two crowns of Britain and Portugal, hath ſubſcribed another inſtrument of the ſaid tenor, changing only what ought to be changed for that reaſon.

Given at Liſbon, the 27th of the month of Decem. 1703.

JOHN METHUEN. (L. S.)

A NEW

A NEW LAW, concerning the DIAMONDS found in the MINES of BRASIL.

DON JOHN, by the grace of God, king of Portugal, and of the Algarves, on this ſide, and beyond the ſeas in Africa, lord of Guinea, and the conqueſt, navigation, commerce of Ethiopia, Arabia, Perſia, and the Indies, &c. I make known to whom this my law may come, that as the mines of diamonds, which are found in my dominions, do belong to me in the ſame manner, and by the ſame title, as all the mines of metals, I have therefore a right to make ſuch reſerves of them as I may think proper; and as, by the cuſtom of thoſe dominions in which diamonds are found, ſuch as are of a ſpecial greatneſs, are reſerved for the ſovereign; therefore it is my will and pleaſure, that even in the countries in which, by my permiſſion, diamonds are extracted (beſides the other preccpts and regulations preſcribed by the laws, and ſuch as I have been pleaſed to give) all diamonds that are of the weight of twenty carats, or upwards, ſhall be reſerved for my uſe; and the perſons who find them, or take them out of the mines, ſhall deliver them immediately, within thirty days (to be counted from the time of their finding or taking them up) into my mints, or to the next neighbouring miniſters, that they may remit them to the mints; of which delivery an entry ſhall be made by the ſcrivener, who has the charge of that office, which he ſhall be obliged to remit to the governor. And ſuch diamonds being manifeſted and delivered by any ſlave whatſoever, that ſlave ſhall be made free, and he ſhall have his charter of freedom granted him, and drawn out in my name by the ſuperintendant of the mint, or by the miniſter to whom he made ſuch delivery; and to his owner ſhall be given four hundred milreis for the value of the ſaid ſlave, which ſhall be paid him in the ſaid mint where the ſaid diamond was delivered or remitted to. And if the delivery be made by a freeman, to him the ſaid freeman ſhall be given the ſame four hundred milreis. And all the diamonds, of the weight of twenty carats, or upwards, which may be found henceforward, and not delivered in the manner above-mentioned, it is my will and pleaſure, that they ſhall be forfeited to my uſe, whoſe hands ſoever they may be found in; of which all, or any perſons, may impeach, inform, or denounce; and their denunciation being proved, and the diamond taken into cuſtody, they ſhall receive four hundred milreis as a reward, to be paid them only out of my treaſury. And if the informer be a ſlave, that ſlave ſhall have his liberty given him, and his owner ſhall receive four hundred milreis for the value of him, except the information of the ſlave be given againſt his maſter; for then in ſuch caſe the ſlave ſhall be free, and two hundred milreis ſhall be given him, and both the freedom and the premium ſhall be paid and complied with, after the denunciation is adjudged to be good; and the maſter ſhall have nothing for the value of his ſlave, but he ſhall incur the penalties here-under declared. And, in the ſame manner ſuch may be informed againſt, who finding or taking out diamonds, of the weight of twenty carats, or upwards, do clandeſtinely hide, ſmuggle, or ſecret them, and not manifeſt and deliver them in the manner above preſcribed; which perſons, beſides the loſs of the diamond, or its value, I command, ſhall incur the penalties eſtabliſhed againſt thoſe who ſmuggle, ſecret, or run gold; and, being a ſlave, he ſhall undergo the puniſhment of being whipt and confined to the gallies during his life. In like manner ſuch perſons may be informed againſt, who ſend ſuch diamonds out of the kingdom; which perſons, beſides the loſs of the value of the diamonds, ſhall incur the penalty of being baniſhed ten years to Angola, and confiſcation of all their goods; and thoſe informations being given by the ſlaves of ſuch delinquents, the ſaid ſlaves ſhall have their liberty given them as a reward. But if the information be given by a ſlave belonging to another perſon, then, beſides the ſlave's being ſet at liberty, his maſter ſhall receive four hundred milreis for the value of him, as is declared above.

And becauſe it is not my royal intention to comprehend the diamonds that have been taken out of the mines to the time of the publication of this reſolution, it is my pleaſure, that all perſons who have diamonds in their poſſeſſion, that weigh twenty carats, or upwards, which were taken out of the mines before the publication of this reſolution, do manifeſt them within two months (to be counted from the day of the publication hereof) before any of my auditors of the ſtate of Braſil, and the other miniſters of this kingdom, and in all my dominions where ſuch diamonds are; and that they deliver them to the ſaid miniſters to be remitted to this court, and delivered into the mint thereof, in order that they may be purchaſed for my uſe, at the juſt valuation that ſhall be put upon them. And ſuch as are not manifeſted and delivered within the ſaid ſpace of time, ſhall be reputed as diſcovered or found after the ſaid publication; and they ſhall be irremiſſibly loſt or forfeited to my uſe in any hand whereinſoever they may be found: which perſons may be impeached, informed of, or denounced againſt, and the informers ſhall have the ſame reward, and the delinquents the ſame puniſhment, as above mentioned; and in the ſame manner may be impeached ſuch as are accomplices or abettors in the ſmugglings here prohibited: and on them ſhall be executed the ſame puniſhments in this reſolution eſtabliſhed, and the informers ſhall have the ſame rewards.

Wherefore I command the lord chief juſtice of the houſe of ſupplication, governor of the high court of king's-bench, and the houſe of Oporto, vice-king of the ſtate of Braſil, or whoever fills that place, judges of the ſaid courts, governors of the conqueſts, and all juſtices, commiſſioners, auditors, judges, officers of juſtice, and perſons of theſe my kingdoms and dominions, that they obſerve, comply with, and keep this my law, and cauſe the ſame intirely to be obſerved, complied with, and kept, as it is therein contained. And that it may come to the notice of every body, in order to cut off the allegation of ignorance, I command my chancellor-general of theſe kingdoms and dominions, or whoſoever fills his place, that he cauſe it to be publiſhed in the chancery, and ſend tranſcripts thereof, under my ſeal and his firm, to all the juſtices of the counties and hundreds of theſe kingdoms, and to the auditors of the donatory countries, in which the juſtices do not enter into viſitation; whom I command to proclaim it immediately in the places where they are, and cauſe it to be proclaimed in all their hundreds and tithings; and it ſhall be regiſtered in the books of my diſembargo, and houſe of ſupplication, and of Oporto, and in the Ultramarine council, and all other places where ſuch like laws are uſed to be regiſtered; and this original ſhall be depoſited in the Tower of Records. Given in Weſt Liſbon, the 24th of December, 1734.

KING.

COPIES of the TWELFTH and THIRTEENTH ARTICLES of the TREATY made betwixt the Crowns of ENGLAND and PORTUGAL, at the Marriage of CHARLES the Second, June 23, 1661. Taken from fol. 1. of the regiſter-book, by petition made by conſul POYNTZ, to his Majeſty Don JOHN, December 12, 1716. Tranſlated.

ARTICLE XII.

In order that the ſubjects of the king of Great-Britain may enjoy greater advantages in trade and commerce in all the dominions of the king of Portugal, it was agreed, that if the merchants and factors (beſides the privileges which were granted to them by the firſt treaties) aſk, in virtue of this, to reſide in all places where they have a mind eſpecially, they may inhabit and enjoy the ſame privileges and immunities, as far as relates to trade, as the native Portugueſe, in the cities and places of Cochim and Dio, provided that the ſubjects of the king of Great-Britain, that are to reſide in the above places, do not exceed the number of four families in each of them.

ARTICLE XIII.

The ſame privileges, liberties, and immunities, ſhall be enjoyed by the ſubjects of the king of Great-Britain, in the place of Bahia de todos os Santos, Pernambuco, and Rio de Janeiro, and in all other the dominions of the king of Portugal in the Eaſt-Indies.

For the DEFINITIVE TREATY of 1763, ſee the article AMERICA.

TURKEY COMPANY and TRADE. Under the article LEVANT TRADE, we have ſhewn that the FRENCH, in the year 1535, were the firſt nation that made TREATIES OF COMMERCE with the Porte: we have likewiſe there ſhewn, by what wiſe meaſures and regulations that neighbouring nation firſt eſtabliſhed, and has ſince advanced, this branch of commerce to a greater extent and advantage than is now done by any other European power. And if thoſe wiſe meaſures and regulations are duly weighed and conſidered, we cannot be at all ſurprized, that the effects thereof ſhould prove more lucrative and ſucceſsful to France than the meaſures taken by other nations, with regard to that trade, have proved to them. Likewiſe,

Under the article ORIENTAL TRADE, we have reſumed this ſubject, and given an hiſtorical view of the conduct and proceedings of our own Turkey company, and the caſe of the governor and this company of merchants trading to the Levant Seas, as laid before the parliament by the Turkey company in the year 1753, in order to prevent the trade being laid abſolutely open, as was then aimed at. Under this article, alſo, I have given an abſtract of what has been argumentatively urged, in oppoſition to this company, in order to lay that trade open to all his Majeſty's ſubjects.—Theſe particulars we have judged neceſſary to ſtate before the public, as preliminary to the determination of the expediency of opening this trade.

But as this matter was depending before the parliament, when I drew up what has been ſaid under ORIENTAL TRADE, and it being then doubtful what meaſures would be taken with this company, I thought it more eligible to poſtpone what I had further to obſerve in relation hereunto, 'till the determination of the legiſlature ſhould be known. And that the reader may have

have before him what the parliament have done upon this occaſion, we ſhall here inſert the laſt act made with regard to this company, anno vicesimo ſexto Georgii II. regis, intitled, An act for enlarging and regulating the trade into the Levant Seas, which is as follows:

Whereas king James the Firſt, by his letters patent, bearing date the 14th day of December, in the third year of his reign, did grant to ſeveral perſons therein named, and to their ſons, and ſuch other as ſhould then after be admitted, or made free, that they ſhould be one fellowſhip, and one body corporate and politic, by the name of The Governor and Company of Merchants of England, trading into the Levant Seas; and, by the ſame name, ſhould have perpetual ſucceſſion; and did direct, that all perſons, ſubjects of this realm, being mere merchants, which then were, or after the date of the ſaid letters patent ſhould happen to be, under the age of twenty-ſix years, or not out of his or their apprenticeſhips, ſhould be admitted into the freedom of the ſaid company, if he or they ſhould demand the ſame within one year next after he or they ſhould attain the age of twenty-ſix years, or within one year after the end of his or their apprenticeſhips, and ſhould offer and pay to the ſaid governor and company, for his or their admittance, the ſum of twenty-five pounds; and did further direct, that all perſons, ſubjects of this realm of England, being mere merchants, above the age of twenty-ſix years, ſhould be admitted into the freedom of the ſaid company, upon paying a fine of fifty pounds; and did alſo direct, that all and every the ſons of ſuch as were or ſhould be free of the ſaid company, and alſo all their apprentices employed in that trade for the ſpace of three years, or upwards, within the limits of the ſaid letters patent, ſhould, after the end of their apprenticeſhips, be admitted to the freedom of the ſaid company, on payment of the ſum of 20s. only. And whereas king Charles the Second, by his letters patent, bearing date the 2d day of April, in the thirteenth year of his reign, did ratify and confirm the ſaid letters patent of king James the Firſt, and did further direct, That no perſon reſiding within twenty miles of the city of London, ſhould be admitted into the freedom of the ſaid company, or have any benefit of the privileges thereof, unleſs he be made free of the ſaid city. And whereas the trade into the Levant Seas has very much decreaſed, and the taking of leſs fines for the admiſſion of perſons into the freedom of the ſaid company, and the not reſtraining the freedom thereof to mere merchants, and to ſuch perſons as, reſiding within twenty miles of the city of London, are free of the ſaid city: and the ſecuring to all perſons admitted into the ſaid company, the liberty of exporting, at all times hereafter, all ſorts of goods and merchandizes (not prohibited by law to be exported) to any port or place within the limits of the ſaid letters patent, from what parts of Great-Britain, and at what time, and in what quantity, and on board what ſhips (navigated according to law) they ſhall reſpectively think proper; and alſo of importing, in the like manner, from any port or place within the limits of the ſaid letters patent, raw ſilk, or any other goods or commodities purchaſed within the ſaid limits (not prohibited by law to be imported) are the moſt probable means of recovering and extending the ſaid trade, for the benefit of this nation: may it therefore pleaſe your Majeſty that it may be enacted, and be it enacted, by the king's moſt excellent Majeſty, by and with the advice and conſent of the lords ſpiritual and temporal, and commons, in parliament aſſembled, and by the authority of the ſame, That from and after the 24th day of June, 1754, every ſubject of Great-Britain, deſiring admiſſion into the ſaid company of merchants of England, trading into the Levant Seas, commonly called, or known, by the name of the Turkey Company, ſhall, upon requeſt for that purpoſe, made by himſelf or any other perſon in his behalf, to the governor, or deputy-governor, of the ſaid company for the time being, be admitted into the ſaid company, within the ſpace of 30 days after ſuch requeſt ſhall be made, and ſhall have, uſe, and enjoy all the liberties, privileges, juriſdictions, franchiſes, power, and authorities, granted to the ſaid company by the ſaid letters patent, as largely, fully, and amply, to all intents, conſtructions, and purpoſes, as any member of the ſaid company could, can, or may have, uſe, and enjoy the ſame, by virtue of the ſaid letters patent, ſuch ſubject paying or tendering, or cauſing to be paid or tendered, for ſuch his admiſſion, for the uſe of the ſaid company, the ſum of 20l. and no more, any thing in the ſaid letters patent, or either of them, to the contrary in any wiſe notwithſtanding.

And be it further enacted, by the authority aforeſaid, That from and after the 24th day of June, 1754, the following oath, in lieu of the oath heretofore taken by perſons, upon their admiſſions to their freedom in the ſaid company, ſhall be taken by every perſon, upon his admiſſion to his freedom, either before the governor or deputy-governor of the ſaid company, or before two of his Majeſty's juſtices of the peace (who are hereby reſpectively impowered and required to adminiſter the ſaid oath) which juſtices are hereby required to certify, under their hands and ſeals, that the ſaid oath was taken by on the day of before us, two of his Majeſty's juſtices of the peace in and for

——— 'You ſwear to be good, faithful, and true, to our ſovereign lord king George, his heirs and ſucceſſors: you ſhall be obedient and aſſiſtant to the governor, his deputy, and aſſiſtants, of the company of merchants of England, trading into the Levant Seas, in all lawful matters: you ſhall truly hold and keep to your power (having no ſingular regard to yourſelf, to the hurt and prejudice of the common-weal of the ſaid company) all ſtatutes, acts, and ordinances, which have been duly made, according to the grant of privileges granted to the ſaid company, and conſiſtent with an act of parliament made in the 26th year of the reign of king George the Second, intitled, An act for enlarging and regulating the trade into the Levant Seas: the ſecrets of the ſaid company you ſhall not diſcloſe; and, if you ſhall know any perſon or perſons, that intend any hurt, harm, or prejudice, to our aforeſaid ſovereign lord the king's Majeſty, his heirs, or ſucceſſors, or to the ſaid company, or the privileges of the ſaid company, you ſhall give knowlege thereof to the ſaid governor, deputy, or aſſiſtants, or to ſome of them; and you ſhall not colour or free any goods belonging to any one not free of the ſaid company.

So help you God.'

And be it further enacted, by the authority aforeſaid, That from and after the ſaid 24th day of June, 1754, it ſhall and may be lawful to and for all and every perſon and perſons, being free of the ſaid company as aforeſaid, ſeparately or jointly, to export, or cauſe to be exported, from any port or place in Great-Britain, to any port or place within the limits of the ſaid letters patent, in any Britiſh or plantation-built ſhips (navigated according to law) at any time, and to any perſon or perſons whatſoever, being freemen of the ſaid company, or ſons or apprentices of freemen (ſuch freemens ſons or apprentices being his Majeſty's Chriſtian ſubjects) ſo long as ſuch perſon or perſons ſhall remain under, and ſubmit to, the protection and direction of the BRITISH AMBASSADOR AND CONSULS RESPECTIVELY, for the time being, any goods, wares, or merchandizes whatſoever, not prohibited by law to be exported; and alſo to import, in like manner, from any port or place within the limits of the ſaid letters patent, raw ſilk, or any other goods, wares, or commodities, purchaſed within the ſaid limits (not prohibited by law to be imported) upon paying or ſecuring the cuſtoms, and other duties payable for the ſame to his majeſty, his heirs, and ſucceſſors, by virtue of any law now in force, or hereafter to be made; and, upon paying ſuch impoſitions or ſums of money as ſhall be aſſeſſed and charged upon all goods, wares, or merchandizes, to be exported or imported as aforeſaid, or upon any ſhips laden with the ſame, for defraying the neceſſary expences of the ſaid company, any thing in the ſaid letters patent, or either of them, or any ordinance, conſtitution, or bye-law of the ſaid company, made, or to be made, to the contrary, in any wiſe notwithſtanding.

Provided always, That the exportation of gold or ſilver, either in foreign coin or bullion, ſhall remain ſubject to the bye-laws of the ſaid company, made or to be made in that behalf.

And be it further enacted, by the authority aforeſaid, That it ſhall and may be lawful for the ſaid governor or deputy-governor, and company, in general court aſſembled, to make ſuch rules, ordinances, or bye-laws, for the good government of the ſaid company, as the major part of the members preſent at ſuch general court ſhall think neceſſary; but no ſuch rule, ordinance, or bye-law, ſhall be valid, or of any force or effect whatſoever, unleſs the ſame be confirmed at a ſubſequent general court, to be held at leaſt one calendar month after the general court at which ſuch rule, ordinance, or bye-law was made; and if any ſeven, or more, of the freemen of the ſaid company, ſhall think themſelves aggrieved by any rule, ordinance, or bye-law, made or to be made, it ſhall be lawful for them to preſent an appeal, in writing, againſt the ſame, to the commiſſioners for trade and plantations, who are hereby impowered and required, with all convenient ſpeed, to hear ſuch appeal, and to approve or diſapprove ſuch rule, ordinance, or bye-law, and in ſuch manner as to them, or the major part of them preſent, ſhall appear fit and reaſonable.

Provided, alſo, That in caſe any ſuch appeal ſhall be brought againſt any future rule, ordinance, or bye-law, to be made by the ſaid governor and company, ſuch appeal ſhall be brought within twelve calendar months after ſuch rule, ordinance, or bye law, ſhall be ſo made and confirmed as aforeſaid; and if any ſuch appeal ſhall be brought againſt any rule, ordinance, or bye-law of the ſaid company now in force, ſuch appeal ſhall be brought within twelve calendar months after the ſaid 24th day of June, 1754.

Provided, alſo, That the perſons appealing againſt any ſuch rule, ordinance, or bye-law, ſhall, at the ſame time, give notice in writing of ſuch appeal, to the governor, deputy-governor, or ſecretary of the ſaid company, for the time being.

Provided, nevertheleſs, That no ſuch rule, ordinance, or bye-law, ſhall be of any greater or other force or validity, than the ſame would or ought to have been if no ſuch appeal had been given by this act.

Provided always, and it is hereby further enacted, That whenſoever any general court of the ſaid company ſhall be appointed to be held, for the making of any rule, ordinance, or bye-law, public notice thereof ſhall be given in the London Gazette, at leaſt 20 days before the time appointed for the holding of ſuch general court.

Provided always, and it is hereby enacted, That all rules, orders, and regulations made for preventing infection, ſhall be and remain in full force and virtue, as if this act had never paſſed. See our article QUARANTINE.

And be it further enacted, by the authority aforeſaid, That no goods or merchandizes liable to retain the infection of the plague, and coming from the Levant, without a clean bill of health, ſhall be landed in any part of Great-Britain or Ireland, or of the iſles of Guernſey, Jerſey, Alderney, Sark, or Man, unleſs it ſhall appear to the ſatisfaction of his Majeſty, his heirs, or ſucceſſors, or of his or their privy-council, that the ſaid goods or merchandizes have been ſufficiently opened and aired in the lazareto of Malta, Ancona, Venice, Meſſina, Leghorn, Genoa, and Marſeilles, or one of them *.

* Before the making of this act, it was obſerved, by a judicious advocate for laying the trade intirely open [ſee ORIENTAL TRADE] and which may deſerve attention, as the trade is now circumſtanced, viz. 'That all ſhips returning from the Levant in times of infection, might perform quarantine either at Port Mahon or Gibraltar, as theſe places are directly in their voyage homewards, and might be made very convenient for ſupplying them with proper ſtores and refreſhments; ſo that it would be, in ſome meaſure, the intereſt of ſhips on a long voyage, to call at one or other of theſe places, eſpecially if they were made FREE PORTS. Moreover for the greater ſecurity, all ſhips returning from the Levant might be obliged, under the penalty of forfeiting ſhip and cargo, to touch at one or other of theſe ports, and obtain bills of health from the magiſtrates, before they proceed to England. Theſe cautions are very practicable in themſelves, and yet much ſtricter than have been uſually required either of the Turkey company, or of the merchants trading to Barbary and Morocco.'

REMARKS.

The preceding act of parliament having obviated ſome, if not moſt, of the principal objections that have been made againſt the company, and in favour of laying the trade abſolutely open [ſee our article ORIENTAL TRADE], we ſhall only obſerve, that it muſt be left to a few years experience to ſhew whether the general permiſſion of trade to the Levant, given by the aforeſaid act, will tend to enlarge this commerce, according to the intent and title, or not.—But, to have rendered this act ſtill the more effectual, it is to be wiſhed, we humbly preſume, that the heavy charges that neceſſarily attend the Turkey trade (as the ſupport of the ambaſſador, conſuls, &c.) were borne by the ſtate inſtead of the company.—I am not unapprized of the unprecedented munificence of his preſent moſt gracious Majeſty, to our ambaſſador at the PORTE *, in order to give more weight to our miniſter, and to render our mercantile intereſt in Turkey the more reſpectable; and yet it ſeems the French have, by the meaſures they take, more influence than we, and have rapidly advanced their commerce in the Turkiſh empire, while ours has been many years upon the decline. When this trade was firſt eſtabliſhed, there might be many good reaſons why the Turkey company was charged with the ſupport of the ambaſſador at the Porte, together with their conſuls, &c. and the ſame reaſon might exiſt for a number of years, but things have now taken a very different turn. It has been proved to a demonſtration that our Levant trade hath declined; it has indeed languiſhed to that degree, that our Turkey merchants, who ſome years ſince figured at the top of the commercial world, now bow their diminiſhed heads. Yet is not the trade intirely ſunk; on the contrary, we import annually from Aleppo above 600 bales of raw ſilk. This alone is a great national object; for if theſe 600 bales of raw ſilk contain 180,000 ſmall pounds †, what a benefit do we not receive by the manufactory of this ſilk, in the article of labour?

* As this may be a piece of ſecret hiſtory to moſt, yet, in juſtice to the king's liberality, I think the public ſhould know, that, beſides the appointments allowed by the company to our ambaſſador at the Porte, his Majeſty, out of regard to the merit of Mr. Porter, while commiſſaire d'affaire at the court of Vienna, and to induce him the more earneſtly to promote the intereſt of his kingdoms at the PORTE, has allowed him out of his privy-purſe, which was never done to any ambaſſador there before, the additional appointment, as commiſſaire d'affaire, of 1000 l. ſterling per annum, with this memento, 'that it is not to be made a precedent of.'

† A bale of 25 batmans, or 300 ſmall pounds, produce 180,000 lb.

In regard to the laying the Turkey trade intirely open in England, it will give great light into this ſubject to apprize the reader of what has been urged pro and con, with relation to the laying open the Levant trade in France; nor will it prove uſeful ſo to do upon this peculiar occaſion only, but it will give us a lively idea of the meaſures taken in France, in order ſo thoroughly to canvaſs all commercial topics, that the reſolutions of the ſtate may terminate in the promotion of the general proſperity. And this I am the more diſpoſed to do, as it may, ſome time or other, determine us to make eſtabliſhments of the like kind.

What I ſhall preſent to the reader upon this occaſion, is an extract from ſome MEMORIALS preſented by the DEPUTIES OF THE COUNCIL OF TRADE IN FRANCE, to the ROYAL COUNCIL, in 1701, being the year after the eſtabliſhment of the ſaid council of trade by king Lewis XIV.

A MEMORIAL of the deputies of the trading towns in the weſt of France, concerning the commerce with the Levant, the goods uſed in that trade, and why Marſeilles alone has the privilege of trading thither.

Experience teaches us that the Engliſh carry on [in 1701] the trade of the Levant with much greater advantage than our nation; their woollen cloths are better made, are better and cheaper than ours, and, therefore, are more in requeſt, and have a greater vent. They carry thither lead, pewter, copperas, logwood, which are goods that they are maſters of, together with a great deal of pepper: and, that they may not drain their country of its gold and ſilver, the ſhips which are freighted with thoſe goods are laden likewiſe with dry fiſh, of their own catching, ſugars from their colonies, and other goods of their own product, which they ſell on the coaſts of Portugal, Spain, and Italy, and receive the produce in pieces of eight, which they carry to the Levant, to add to the ſtock neceſſary for purchaſing the merchandizes which they take in there, and carry to England.

This way of trading is very beneficial to the Engliſh, ſince by ſupplying themſelves with coin from foreigners, they draw ſo much the leſs from home; and beſides, they make a profit by the goods they ſell in their paſſage upon the coaſts of Portugal, Spain, and Italy, which contributes to render this a good trade, and enables them to ſell the merchandizes of the Levant much cheaper than any other nation.

Upon the like plan it would be more advantageous to France to permit the towns of the weſt to carry on this trade in the ſame manner directly.

We have, as well as the Engliſh, woollen cloths, ſtuffs, paper, ſilks, tobacco, fiſh of our own catching, and linen cloths, which they have not; we can, like them, make up our cargoes of different ſorts of goods, ſome for the Levant, and others for Spain, Portugal, and Italy; we may ſell thoſe goods by the way, and carry the produce in money to the Levant to help make our purchaſes.

Thus the towns of the weſt might carry on this trade without ſending our money abroad, our manufactures would be conſumed in greater quantities, as far as the competition with thoſe of the Engliſh would permit, and we might bring back in our ſhips all the merchandizes of the Levant that are wanted in the weſtern parts of France, which would then come much cheaper to us than now they do.

Since the towns of the ocean have been obliged to go and unlade their goods at Marſeilles, inſtead of endeavouring to continue and increaſe that trade, they have been forced to relinquiſh it abſolutely. And indeed, how can it be expected they ſhould come from the extremity of the Levant to pay their reſpect to Marſeilles? ſubject themſelves to conſume a fourth or a third more of victuals than uſual? pay greater wages to ſeamen, and higher rates for inſurance? lie at heavy charges while they are unlading and relading their goods; and by this long delay, and that of making a round-about voyage, run the riſque of being ſtill at Marſeilles, when they might have been at home?

The pretence of contagious diſtempers, ought not to be made uſe of againſt the towns of the ocean to exclude them from this trade; ſince every body is taught by ſelf-preſervation to guard againſt them, there being likewiſe proper places appointed for quarantine on ſuch occaſions; beſides, the paſſing of the Streights, and the change of climate, purifies the malignant air; for which reaſon, the Engliſh and Dutch returning from the Levant have no need of ſuch precautions; and there's hardly any inſtance, that this trade has introduced among them any peſtilential diſtemper, which ſome would put us in apprehenſion of.

By the arrêts, none but the towns of Dunkirk and Rouen can receive goods from the Levant directly without touching at Marſeilles; nor they without paying 20 per cent. for entry; the other ports complain of being excluded: this extraordinary duty has been laid on but ſince the year 1685, whereby the throwing up of that trade has not only been continued, but it has likewiſe given occaſion to the farmers to be very vexatious in extending that duty to merchandizes which are not ſubject to it, as allums, oils of Italy and Barbary, manna, aloes, aſſafœtida, wax of Camenice, muſk, ſal armoniac, gum ſenegal, nay, even to ſublimated mercury, which is prepared at Amſterdam, and to other the like goods

that

that they could impute to this trade; which has occaſioned the exceſſive dearneſs of all drugs that are uſed in our manufactures.

Conſequently, our manufactures have laboured under this dearneſs: which is contrary to the views we ought to have, of increaſing the export and vent of them to foreign parts, and putting them, as much as poſſible, upon an equal foot with foreign manufactures.

The town of Marſeilles, which is ſolely impowered to manage the Levant trade, thrives by the excluſion of the other maritime towns, to the prejudice of the public: that city ought not to oppoſe the liberty demanded by the ports in the ocean, to drive the ſaid trade directly, and to bring home their returns without paying the 20 per cent.

Marſeilles, by being a free port, by its near ſituation to the Levant, and the ſettled correſpondence of its merchants there, will always have ſufficient advantage over the ports and towns of the weſt. Marſeilles is not excluded from any commerce permitted to the towns of the weſt (or ports of the ocean); therefore, what juſtice is there in appropriating the trade of the Levant to that city alone?

Beſides, the manner in which Marſeilles carries on this commerce cannot be approved, ſince it is manifeſt, that the goods which it ſends thither, of the growth or make of the kingdom, being in moderate quantities, and of little conſideration, the merchants of that town make the greateſt part of their remittances in pieces of eight and in other ſorts of coin; which conſumes a good part of the returns from Cadiz and the Indies, and greatly contributes to make bullion more ſcarce throughout the kingdom.

The merchants of Marſeilles lay out a great part of ſuch remittances in linen cloth and ſtuffs of the Levant, which, whatever precaution be taken, do not fail of being diſperſed about the kingdom, to the prejudice of our own manufactures. It would be proper to prohibit, not only the importation, but likewiſe the wear of them in France; and that nothing were brought from the Levant, but drugs and unwrought materials proper for our manufactures, ſuch as galls, cotton, hair, ſugar, ſilk, wool, and the like.

The privilege which the merchants of Marſeilles have, of enjoying this trade in excluſion of the other towns of the kingdom, joined to the 20 per cent. which is charged on the ſame ſorts of goods, and the fixing particular ports for importing of goods into the kingdom, give thoſe merchants an opportunity to ſtarve the trade of the kingdom, and to enrich themſelves ſo much, that notwithſtanding the 20 per cent. the charges of carriage, commiſſion-money, duties of export, and the diſadvantage of the exchange, which may together be reckoned at above 35 per cent. we find our account better in fetching thoſe goods from foreigners, than from the merchants at Marſeilles; who, being favoured ſo much, do not give themſelves the trouble to ſend them into the provinces of the kingdom.

They ſit ſtill for us to come to their market, that they may have an opportunity of impoſing what rates they pleaſe: nor are they ever ſufficiently ſtocked to ſupply all our demands.

And ſince the drugs which they bring to Marſeilles from the Levant, come thither from the eaſt in caravans, which enhances the price of them conſiderably, and that the ſame drugs which come directly from the Eaſt-Indies to the ocean, are not ſubject to the 20 per cent. for entry, no more than is cotton, the deputies conceive, that it would be a piece of juſtice to forbid the farmers to exact the duty of 20 per cent. upon the ſaid drugs ſo brought from the Levant.

The REPLY of the deputies of the weſtern ports of France to the preceding ANSWER.

1. We muſt own that the liberty which the towns of the ocean demand, may ſomewhat diminiſh the commerce of Marſeilles in the Levant: but the benefit which it will procure to the ſtate and to the public, by the abundance of merchandizes and the increaſe of navigation, is of much greater weight; beſides, Marſeilles may extend its commerce into the ocean, to make itſelf amends for the diminution of their Levant trade: our colonies are a fair field for them to exerciſe their navigation in.

2. This article is exaggerated, and it were needleſs to anſwer it: however, we ſhall ſay that there is not any merchandize of the Levant comprized among thoſe ſpecified in a liſt by the deputy of Marſeilles, that has not a conſumption in the weſt; except aſhes for the glaſs manufacture, which are but of ſmall conſumption.

3. If from the year 1669 to 1685, the ſea-port towns of the weſt in general have not carried on the trade to the Levant, it is becauſe at that time our nation had not mariners, ſhips, ſkill, nor emulation, for improving all ſorts of commerce: it is however true, that the towns of Rouen and Bourdeaux had correſpondence there, and ſent ſhips thither.

The deputy of Marſeilles makes a wrong interpretation of the decree of 1685. The duty of 20 per cent. takes its riſe from 1669, and was laid upon the Levant merchandizes which were firſt landed in Italy, England, and Holland: and the effect of the decree of 1685, has been only to debar the king's ſubjects from fetching the merchandizes of the Levant directly to Rouen, where, before that decree, they were exempt from the duty of 20 per cent. to which they are now ſubject, whether they come directly from the Levant, or whether they have been firſt landed in any other country. This is an effect of the powerful protection which Marſeilles has had, to the prejudice of the ſtate and of the public. It is to avoid taking from England and Holland the Levant merchandizes, that we demand liberty to trade directly to the Levant.

4. If the traders of Marſeilles are ſuffered to ſet againſt us their titles of preſcription, it is to no purpoſe to propoſe any thing; but the council has thought fit to give leave to lay before them the grievances of ſuch arrêts as are prejudicial to commerce in general.

5. We own it is good to guard againſt running of goods: it belongs to the general farmers to take the neceſſary precautions, but the 20 per cent duties are more likely to favour than hinder it.

6. We agree we have not ſpices as the Engliſh and Dutch have; but Marſeilles has them not any more than we; and as to all other merchandizes, it is beyond contradiction true, that we get them more commodiouſly than Marſeilles, and cheaper; becauſe the commerce of the Ocean being of much greater extent than that of Marſeilles in particular, procures us all things with greater eaſe, and in greater plenty.

7. This article is not maintainable; and it is indiſputable that the ſale of our fiſh in Portugal, Spain, and Italy, will produce ſpecie for the Levant, as it does actually ſupply the Engliſh therewith.

The commerce which the towns of the ocean maintain in Portugal and Spain, by linen cloths and other manufactures of the kingdom, is a perpetual fund to furniſh them with ſpecie, which Marſeilles has not, nor ever can have. The deputy of Marſeilles contradicts himſelf, in ſaying that there is no carrying ſugars and tobacco into Italy and the Levant, ſince he himſelf puts ſugars into his account of what merchandizes are proper for the Levant; and as for tobacco, it is well known that Genoa, Leghorn, and other towns of Italy, conſume conſiderable quantities of Clairac and St Domingo tobacco: and the towns of the ocean are willing, for the good of the ſtate, to bind themſelves not to ſend abroad any coin of the kingdom either to ſtrangers or others, and to carry to the Levant only the product of thoſe merchandizes which they ſhall ſell in foreign countries, provided Marſeilles ſubmits to the like law.

If an account be taken of the goods ſent from Marſeilles to the Levant, and of thoſe which are imported at Marſeilles, communibus annis, it will be ſeen what difference there is in the value, and how much ſpecie muſt have been carried out to purchaſe the overplus.

The ballance which has been produced upon two ſorts of Levant merchandizes eſſential to our manufactures, proves the truth of what the deputies of the weſt have advanced concerning the prices during the months of October, November, and December, when the commerce was in the greateſt tranquillity, and upon the foot of the preſent time, when the prices of merchandizes of the Levant are very high in England and Holland, through the fear of a war. Which has a counter-effect favourable to Marſeilles, ſince by her ſituation ſhe is free from that fear, and ſhould not be ſenſible of the like change; and therefore the deputy of Marſeilles ſhould not bring his compariſon upon the foot of the preſent time, becauſe it would be a falſe rule.

9. This reaſon is in favour of the towns of the ocean, ſince Marſeilles by its ſituation will always have great advantages over them; and as for the merchandizes proper for the Levant, the towns of the weſt will have them in our provinces as commodiouſly as at Marſeilles.

10. If it is true, as the deputy of Marſeilles aſſerts, that the Dutch fetch from Marſeilles the merchandizes of the Levant, they will fetch them from the ports of the ocean much more willingly and commodiouſly.

11. All the preceding articles ſhew, that the intention of the merchants of the weſt is perfectly oppoſite to ſuch views; and that it is purely and ſolely to avoid fetching from England and Holland the merchandizes of the Levant, that they now aſk the liberty of trading to the Levant directly.

12. The merchants of the weſt reckon they ſhall conſiderably augment their fiſheries, and by that means have wherewithal to furniſh in abundance this kingdom, Spain, and Italy.

13. It is agreed, that Marſeilles is the natural port of the city of Lyons for commerce; but it does not at all ſuit the towns of the weſt, who have ports and ſhips of their own for trading; and if the merchandizes of the Levant come dearer to the towns of the weſt, they give ſo much the leſs umbrage to Marſeilles; therefore that city ought not to oppoſe the liberty that is deſired.

14. Since we propoſe a general liberty for all towns to follow the Levant trade, there would be no inconveniency if the town of Sette ſhould enjoy it: the competition which the deputy of Marſeilles is apprehenſive of, cannot but be advantageous to the ſtate, on account of giving greater vent to the king-

dom and its manufactures, as likewiſe occaſioning a more plentiful importation of the goods of the Levant, which will make the market better for the public: if hereby ſome private men are loſers, the ſtate ſtill gains; and inſtead of having any fear, leſt ſuch permiſſion when granted to the towns ſhould enable the Engliſh, Dutch, and Italians, to make us abandon that commerce; on the contrary, ſeveral towns united may, better than Marſeilles alone, rival thoſe nations.

15. The ports of the weſt have places appointed for performing quarantine, and it is eaſy to take the ſame precautions as are taken at Marſeilles to defend ourſelves from the plague; beſides, it is undeniable, that the paſſage of the Streights to come to the north, and the change of climate, purifies that infectious air, and the Engliſh and Dutch for that reaſon are exempt from ſuch quarantine.

16. It muſt be allowed that the 9th article of the treaty of Ryſwic, gives to the Dutch the ſame advantage as to the king's ſubjects, in point of trading to the Levant; but we need not fear their coming from the Levant directly into our ports, with cargoes of 50, 60, and 100,000 crowns to ſubject themſelves to the humour of the buyers. That nation ſolely applies itſelf to make marts of goods at home, and to fix ſuch a price upon them as they think fit, and then to furniſh retailers therewith. It is the leſs to be feared that they ſhould bring to France the merchandizes of the Levant directly, if it be true what the deputy advances in his 11th article, that Marſeilles will furniſh that nation with them. Beſides, the Dutch being almoſt continually at war with the nations of Barbary, cannot carry on that trade without great convoys, which enhances very much the merchandize, and hinders them from carrying the ſame to France, where they would be loſers, and renders their navigation to the Levant very inconſiderable. To conclude, The towns of the weſt have actually the liberty of going to the Levant; and, in a word, they want only to free themſelves from the ſubjection of going to unlade and lade again at Marſeilles, which is equivalent to a formal excluſion, and has obliged the traders of the weſt to quit that commerce.

17. Whatever memorial may be given upon this head, it will fall of itſelf.

A MEMORIAL of the deputy of Marſeilles, in anſwer to the foregoing; ſetting forth the grounds and reaſons of the privilege which that town enjoys of trading to the Levant.

It is a very difficult taſk, when a ſingle man is obliged to anſwer ſuch knowing and acute perſons as the deputies of the ports of the weſtern ſea; and if I had not a juſt cauſe to defend, a cauſe in which the intereſt of the ſtate, as well as that of the town of Marſeilles in particular, is concerned, I ſhould diſtruſt my ability, through want of practice, in drawing up memorials ſo well put together, and ſo politely turned as thoſe given in by thoſe gentlemen: but as the preſent diſpute is about facts, and that the trade of the Levant has ever been allowed to be the moſt beneficial to the ſtate, the council will pleaſe to permit me to lay before them my reaſons in the beſt manner I can, without being too ſollicitous about purity of ſtile, which is not my talent.

1. The pretenſion of theſe gentlemen is not new; they have often endeavoured at the ſame thing, though without effect, becauſe it is againſt the good of the general trade of the kingdom, as I ſhall prove in the ſequel of this memorial. This proof is founded upon the ancient courſe and practice of trade, which they themſelves take notice of; and upon the information and inſight which the king has had of the prejudice reſulting from this propoſition to the general commerce of his dominions, for this reaſon his Majeſty has fixed things in the condition they have been for a long time, and are in to this day.

2. It is certain, that the permiſſion which they require of driving a trade to the Levant, is not proper to be granted them; becauſe neither in their own towns, nor among their neighbours, can they find a conſumption of divers groſs commodities, which they would be forced to take in to make up the lading of their ſhips, as does Marſeilles which enjoys this advantage.

3. One ſure proof that this trade is not proper for them, is, that it does not appear, they ever ſet about it, notwithſtanding the permiſſion which all the ports of the weſt had to drive this trade, before and after the eſtabliſhment of the free port of Marſeilles, which was in 1669 until 1685. For the ports of Rouen and Dunkirk had this permiſſion, becauſe the conveniency of their having the merchandizes of the Levant by the way of Holland and England, more eaſily than by fetching them from thence directly, which they find very difficult, always put them upon that prejudicial practice of giving their profits to thoſe foreigners and enemies, to the damage of the king's ſubjects; and, if his Majeſty had not put a ſtop to it, by his decree of the 15th of Auguſt, 1685, which lays a duty of 20 per cent. upon the merchandizes of the Levant which ſhould come from England or Holland into France, in order to exclude them for the good of his ſubjects, it is certain that by this time thoſe nations would have ſupplied France with all the Levant goods, and the king's ſubjects would have utterly loſt that trade, ſo important to the ſtate.

This is ſo true, that the experience of it puts the thing out of doubt. I aſk thoſe gentlemen, the deputies, whether it be not true, that after 1669, while they brought in by their ports the commodities of the Levant from Holland and England, when no duty was laid to hinder thoſe merchandizes from entering otherwiſe than by Marſeilles, France was filled with thoſe goods; whereby the trade of the Levant by Marſeilles was reduced to the laſt gaſp, as not finding any longer a conſumption, but only in Provence and the parts adjacent? This is what occaſioned the king's paſſing the ſaid arrêt of 1685, wherein the ſpecial cauſes moving him thereto are inſerted; without the paſſing of which arrêt, it is evident, that theſe two foreign nations, who have long ſought to deſtroy our Levant trade, as well by their ambaſſador at the Porte, as by their intelligence and ſecret practices in France, had entirely cut us out of it.

4. His Majeſty, and all his miniſters, who ſince the eſtabliſhment of this free-port, which was done upon due cognizance of the matter, and mature conſideration, have ever ſince done their utmoſt to ſupport this important trade; foreſeeing, ſome years after the ſaid arrêt, that they could not ſo ſoon root out the intelligence which thoſe nations had ſettled in France by their dealings with the French merchants, who continued to let them bring in their merchandizes, by the facility which they found in compounding the 20 per cent. with the general farmers, or by counterballances, very frequent and common; his Majeſty renewed his arrêt of prohibition, by that of November 1, 1688, confirmative of that of 1685. And becauſe, even after that, the abuſes in ſome meaſure continued, and he found more and more the neceſſity of putting a ſtop to them, he made another arrêt of the 3d of July, 1692, containing the ſame prohibitions, and ſtill confirmative of the edict which made Marſeilles a free port, and ſettled the duty of 20 per cent. Since 1692, things have gone on according to the intention of the king, who has continually cauſed orders to be given to the intendants of the provinces, to ſee to the execution thereof; and there has likewiſe paſſed a confirmative arrêt in relation to Dunkirk, the 30th of January, 1700.

5. How, after all this, can it be expected, that his Majeſty ſhould alter this eſtabliſhment? And how can the leaſt part of it be diſpenſed with, either for their carrying on the trade themſelves directly to the Levant, or taking in goods at Leghorn, as they propoſe? Is it not alike miſchievous to our trade? And if the king, inſtead of granting ſuch permiſſion, ſhall not be pleaſed to put a ſtop to the abuſes which are ſtill practiſed, both by compounding the duty to almoſt nothing at all, and by the daily pouring in of prohibited goods, through the ports and upon the coaſt of the weſt, to the prejudice particularly of the king's farms, (as it happened not long ſince with 4 or 500 bales of goat's-hair, which were imported on the coaſt of Picardy, whereby great quantities of the like goods which were in France, belonging to the king's ſubjects, became of no value, becauſe it is a periſhing commodity;) in all likelihood our trade, which is of conſequence to the ſtate, will be extremely diminiſhed. It is well known what cardinal Richlieu ſaid to the advantage of this trade, and what was done by M. Colbert, after mature conſideration, and upon the particular enquiries he made into it, and generally all that has been done in favour of it by the miniſters, who have ſucceeded them to this time: how can men, after this, think of procuring any change in this eſtabliſhment? It is well known, trade is ſo nice a thing, that it is often loſt by endeavouring to change the management of it, as may be proved by many inſtances.

6. All the artful ſubtilties, with which the memorials of the ſaid deputies abound, in order to prevail upon the council to grant them this commerce, are founded much more upon private deſigns, to the prejudice of the general intereſt, than upon reaſon; and all the compariſons which they make from the Engliſh and Dutch touching in their way upon the coaſts of Spain and Italy, there to ſell their goods, are fallacious, and bear no ſimilitude; for thoſe nations have part of the merchandizes which are any wiſe proper to ſell on thoſe coaſts, from the Indies, or elſe they are the product of their own country, with neither of which theſe gentlemen of the weſtern ports of France are ſtocked.

7. The fiſheries of the Engliſh or Dutch have no relation to this commerce: I affirm that the ſhips of thoſe nations trading to the Levant, do not carry any fiſh, and that the gentlemen of the weſt could not do it; that the very ſame ſhips which are employed by the Engliſh or Dutch in fiſhing, carry them from the places where they catch them to thoſe coaſts, and that they do this but once a year; that therefore their propoſition of going and exchanging their merchandizes for pieces of eight in Spain, and carrying that money to the Levant, to avoid thereby the exporting of French money, is not real, it is only a pretence; ſince, even though they had any merchandizes to carry to Spain, which they have not, except ſome linen cloths, theſe are goods that are long in going off, and this length of time would ſubject them to great charges; and it is exaggerating to ſay, that they can

carry to the coaſts of Spain and Italy, ſugar and tobacco from the French colonies, ſince Liſbon furniſhes them with both, in greater quantities than they have occaſion for; and it is beyond diſpute true, that they cannot carry on this trade but almoſt wholly by money, of which (whatever they ſay) the Engliſh carry great quantities from Holland and Germany.

8. As to what they object concerning their manufactures, that they can get materials from England with much more advantage than by Marſeilles, I defy them, and am perſuaded that they have not computed rightly: that may indeed happen in ſome of the materials, but I lay it down for fact, that they will very often, and almoſt always, draw what is neceſſary for them by the way of Marſeilles, cheaper than from foreign countries, or by their commerce directly, or at leaſt as cheap.

9. Marſeilles has a very particular and advantageous ſituation and proximity to the Levant; ſhe has in her town, her province, and in thoſe of Languedoc and Dauphiné, her neighbours, all ſorts of manufactures proper for the Levant, and has had ſettled correſpondence, and been uſed for ſome ages to this trade, which by experience ſhe manages with perfect œconomy; and it looks as if God had endowed her with theſe advantages for the good of the ſtate, to carry on by her means this ſo important commerce from France with the Levant, and from the Levant with all France.

10. It is ſo apparent and ſo true, that Marſeilles is always filled with all aſſortments of merchandizes (whatever they ſay) and even more than Holland and England; that Marſeilles often furniſhes the Dutch with goods which they have not, and would do the ſame to the Engliſh, if it were permitted to carry any thither; but they have taken due care of that by a vigorous prohibition, and the merchandizes which ſhould be carried thither would be burnt, and perhaps the ſhips too; ſo watchful are they to preſerve the trade to themſelves, to which they are the more ſtimulated by an inbred hatred which they have to the French: under what colour of juſtice, therefore, ſhould France permit her natives to go fetch the merchandizes of the Levant from them? Which forms another principal reaſon againſt the pretenſion of theſe deputies; and it is certain, that even though it were permitted them, there would not be that correſpondence with the Engliſh as is imagined; nor would they come, either more or leſs, to fetch the commodities of our kingdom; for they who come for wines and brandies are only dealers in thoſe goods, and not Levant merchants, and ſo would not have occaſion to exchange their merchandizes for ours.

11. They ought to be the leſs indulged in this permiſſion, becauſe they aſk it for no other reaſon but to have a pretence of carrying on their old clandeſtine trade with thoſe two nations, as from paſt example it is evident they uſed to do.

12. It is an idle pretence to ſay, that ſome of their ſhips going to Italy with their fiſh, might find means to touch there for Levant merchandizes at Leghorn, whither there go ſo few of them, that they may always for their fiſh have ready money; by which means they conſtantly relade with oil and allum on the coaſt of Italy, which are merchandizes of greater uſe to them. It is to Marſeilles whither almoſt all the ſhips of their fiſhery come, to the number of 30 or 40 every year, where they find their commiſſion favourable, and in return take ſoap, oil, merchandizes of the Levant, and fruits of Provence, whereby the greateſt part of them have an opportunity of making great freights homeward. This is very convenient for them, and gives them a profit which they would not have, if Marſeilles were not able to furniſh them with all thoſe things; there would be no need of going ſo far if they deſired to truck their fiſh for Levant merchandizes, they might do it much more eaſily and advantageouſly at Marſeilles than at Leghorn.

13. If they will carry on the Levant trade by Marſeilles, as Lyons and other cities of the kingdom do, no body hinders them; they may thereby have the ſame advantages which they fancy the Marſeillians have, without diſturbing, by their vain pretenſions, an order eſtabliſhed for trade ſo long ago; it being certain, that if they went to fetch the Levant merchandizes directly, they would coſt them much dearer than if they took them at Marſeilles. They cannot oppoſe to this any thing, but ſome charges of inſurance, which they pay from Marſeilles to the ports in the ocean; but this expence is ſo moderate, that it bears no compariſon with the extraordinary charges they would be obliged to be at, in going directly to the Levant, and in returning home; and before they could well have ſettled their correſpondence there, they would ſuffer conſiderable loſſes, which has always been the cauſe why they have not undertaken it.

If the general farmers make them pay the duty of 20 per cent. for ſuch goods as are not ſubject to it, it is their buſineſs to obtain juſtice againſt them, and the deputy of Marſeilles will gladly enter into meaſures to aſſiſt them.

14. There is another principal reaſon which that deputy has to offer, viz. If this permiſſion be given to the ports of the ocean, it muſt likewiſe be given to the port of Cette, which would demand it; and that could not poſſibly be done, without entirely deſtroying the Levant trade in France, by an infallible decay which this diſorder would occaſion, it not being poſſible to reconcile all theſe ſeveral competitors; the rather, becauſe it is known that Marſeilles itſelf, by order of M. Pontchartrain, has been obliged (for the preſervation of this trade, though they had it ſolely) to make a regulation of the number of ſhipping employed in it, to avoid the too great concourſe of them, which was very pernicious, as well at their arrival in the Levant, as at their return: this hinders the Dutch from driving this trade, as they were permitted by the treaty of Ryſwic. If theſe gentlemen were allowed this permiſſion, how could we poſſibly avoid a general diſorder, which would bring this trade to decay; and which the Engliſh, Dutch, and Italians, would take advantage of, and put us, perhaps, in danger of loſing it entirely? it being undoubtedly true, that theſe gentlemen, who have always had a good intelligence with thoſe two nations their neighbours, would make no other uſe of this permiſſion, but to lend their names to the Engliſh to drive this trade under the flag of France, and for a ſmall private intereſt, would not value ruining that of Marſeilles. We may further inſiſt upon the inconveniencies that would affect all the payments which Marſeilles makes for all the conſuls, the averages of the Levant, the penſion of the ambaſſador, and other extraordinary caſual expences, which could never be well adjuſted: this diſorder would likewiſe infallibly bring the plague into France, and we ſhall hear what work it has very lately made in a ſhip of St Malo.

I cannot believe, that after ſo many obſtacles, and ſo many regulations, ſo well concerted, and continually inforced to this preſent day, counter to this propoſition, and made to preſerve in its perfection this important trade, which is the greateſt and moſt profitable one of the kingdom, the government will deſtroy it by a permiſſion which will produce nothing good and ſettled; as may be gathered from what has already happened in the kingdom, which by the like novelties has loſt ſeveral trades and manufactures.

15. Whatever they ſay to diſſipate the apprehenſion of the danger of bringing the plague into France, it is almoſt certain they could not avoid it; and there is no doubt to be made, but this would be the greateſt calamity which could befal the kingdom. The deputy of Marſeilles affirms, that the contagious diſtemper never ceaſing to be in the Levant and Barbary, ſometimes in one part, ſometimes in another, becauſe in thoſe countries they take no precaution to avoid it, theſe gentlemen having neither experience, nor proper places for purging the merchandizes from that evil which cleaves to them (as is found true at Marſeilles, where oftentimes ſeveral die of the plague during the quarantine), would infallibly give the plague to France, which they of Marſeilles avoid, by rules which are more rigorouſly obſerved there than in any city in the world. This ſpecial experience in the Marſeillians is ſo well known every where, that the Italians, though an ingenious people, and who have proper places for theſe precautions, ſo dread the plague, that, when there come into their ports any ſhips from a place where it is known to be, they drive them away, and their aſylum is at Marſeilles, which receives them, with their wonted precautions; and oftentimes thoſe ſhips and merchandizes, by endeavouring to guard againſt the plague, would communicate it to the kingdom. Muſt the king put it to the venture, among men who have neither experience, nor proper places for the purpoſe, whether they will bring in the plague or not?

It is in vain for them to ſay, That the climate they inhabit, and the length of the paſſage, would ſtifle this evil, and hinder the communication of it; and to ſuppoſe that the Engliſh and Dutch never had it. This cannot be inſiſted on, ſince both the one and the other have had it oftener than once, though the coldneſs of their country, which really ſerves in ſome meaſure to preſerve them from it, is beyond compariſon greater than in France; and I have been informed for certain, that, not above 30 or 40 years ago, Holland and Flanders had it to a great degree, and that Picardy was afflicted with it likewiſe, as alſo Rouen, Dieppe, and other places, where it made great havock: and there is no doubt but it came from the Levant: and though it might have been there but once, yet we may have it often in France, eſpecially if opportunities be given of introducing it: and as this would be one of the moſt dreadful evils that could happen, people ought to be very apprehenſive of it.

16. Over and above all that I have been ſaying, there is an article, which of itſelf ought to deſtroy the pretenſions of theſe gentlemen to this trade, as a memorial which was communicated to me on their part has very reaſonably foreſeen. By the 9th article of the treaty of commerce at Ryſwick, the Dutch are permitted to drive this very trade in France, and under the ſame advantages with the king's ſubjects. In this caſe, they would not enjoy the permiſſion they aſk, and it would be the Hollanders who would ingroſs the whole trade, by their ports, which would entirely ruin ours; and though there be a likelihood now of a war with the Dutch, they will not fail, in the next treaty of peace, to ſtipulate and obtain the confirmation of that article.

17. It ought likewiſe to be obſerved, that Marſeilles, by means of this trade, cauſes infinitely more money to be brought

into France than ſhe cauſes to be carried out; which I ſhall take another occaſion to prove.

The rejoinder of the deputy of Marſeilles, to the foregoing reply.

1. Firſt, He repreſents that they formerly deny the principle of his firſt memorial, by every article of which it is plainly proved, that ſuch permiſſion would ruin the commerce of the Levant, and the navigation of the king's ſubjects, and totally transfer it to ſtrangers, and that all his Majeſty has done ſince 1669, by every ſucceſſive arrêt 'till this day, to avoid this misfortune, would be in vain; that his conduct and wiſe precaution herein, leaves no room to doubt that this propoſed competition was not found ſuitable to this trade, but rather that it would cauſe a general diſorder in all the ſcales or marts of the Levant, which would conſiderably raiſe the price of their goods; and this would ſoon bring on the total ruin of that commerce; and the ſame would befal that of the weſtern ports of France, if there were the like concourſe: and therefore it is for the intereſt of the ſtate and of the public, to preſerve both the one and the other, as hath wiſely been practiſed hitherto.

2. The gentlemen of the weſtern ports cannot be ignorant that they are unable to conſume all the merchandizes which they ſhould be obliged to take in to fill their ſhips, and which, conſequently, they would be overſtocked with; among others, there are four ſorts of very cumberſome commodities, and which always make three-fourths of a ſhip's lading, viz. coarſe wool, hides in the hair, aſhes in great quantities, and flax; all which are merchandizes proper for the manufactures ſet up in Provence, Languedoc, and Dauphiné, and which the provinces of the weſt are without.

3. He perſiſts in affirming, That no town in the weſt, not even Bourdeaux and Rouen, ever drove the trade of the Levant, though they were better able to do it before 1685 than ſince; and I do not believe that Rouen, which is the principal town on that coaſt, has any ſhips to carry it on, nor Bourdeaux neither, except ſome ſmall veſſels which ſerve them to go up the river. The deputies cannot deny the truth of this.

The edict of 1669, and the ſubſequent ordinance, laid a duty of 20 per cent. on ſuch merchandizes of the Levant as ſhould be imported into Marſeilles, after having been firſt carried into foreign countries; but it left the port of Rouen, and that of Dunkirk, free to carry on the Levant trade directly, without paying the 20 per cent. yet they never did it, becauſe it was not a ſuitable trade for them. But they made uſe of that permiſſion to get the Levant merchandizes by the way of England and Holland: ſo that, by that means, they filled France with thoſe merchandizes, and this brought the trade of the French in the Levant to almoſt nothing: which gave occaſion to his Majeſty (in order to remedy ſuch a misfortune) to paſs the arrêt of the 15th of Auguſt, 1685, commanding, That all ſuch commodities of the Levant as ſhould enter by the ſaid ports of Rouen and Dunkirk, which had not firſt been landed at Marſeilles, ſhould pay 20 per cent. The cauſes are inſerted in the ſaid arrêt; and, were it not for that arrêt, which hinders that evil practice with thoſe nations, it is to be feared it would have gone on ſtill.

4. The council may indeed allow things, which are really grievances, to be redreſſed: but theſe gentlemen of the weſt need not trouble themſelves; they will never perſuade the council to deſtroy edicts, paſſed with ſo thorough knowlege of the cauſe, and ſo often ratified until this preſent time; that were to contradict all that the king has done, and is what the deputy of Marſeilles is in no apprehenſion of.

5. It was, as we juſt now ſaid, to hinder the dealings with the Engliſh and Dutch, that his Majeſty was pleaſed to lay on that duty of 20 per cent. and, notwithſtanding the ſaid duty, ſuch dealings are ſtill carried on, either by compounding the duty, or by running the goods: and it is on this account that the deputy complains, becauſe of the miſchief it does to commerce in general; and the farmers are obliged, for the intereſt of the ſtate, to keep a watchful eye upon this matter.

6. They do not give a direct anſwer to the queſtion in this article; for they not only have not all that the Engliſh have to carry on this commerce in Spain and Italy (which they take for granted), but hardly any of the manufactured goods proper for the Levant, which Marſeilles is provided with, either in her city or province, as well as in her neighbourhood of Languedoc and Dauphiné, and ſuch as they cannot poſſibly have.

7. He affirms it to be fact and true, That the ſhips laden with their fiſh do not go into the Levant; they go from the place of their fiſhing to the Mediterranean, and chiefly to Marſeilles, and this but once a year: that the greateſt part of the product of ſuch fiſh, and all that they preſuppoſe to carry with them in the courſe of their pretended voyage, would ſerve for no more than to pay ſeamens wages, victuals, and the charges of the voyage; and what is over and above is not ſufficient for a fund for that trade, and therefore they ought not to reckon it. Tobacco abounds in the Levant, and as for ſugars, they are both of them articles of ſmall conſideration.

It is in vain for them to compare themſelves to the Engliſh, whoſe ſhips with fiſh go not to the Levant, and who uſe other ſhips wholly for that voyage, and have a great many goods proper for ſale on their way, and in the Levant, which the gentlemen of the weſt have not. As for linen cloth, it is agreed that a great many of them are ſent to Cadiz for the Indies; but this is not a fund for them to reckon upon, to be made uſe of in the ſame voyage, no more than are the other linen cloths that they may vend in ſome places of the coaſts of Spain, which are long in going off, and which they ſell at a very long credit; and Marſeillles, in this particular, has a greater advantage than they, by means of large quantities of imported manufactures, proper for that country, which ſhe ſends thither generally all the year round, and which go ſoon off, almoſt all for ready money, which brings her pieces of eight, and theſe ſhe makes uſe of partly for the Levant; and ſhe has the further advantage of making uſe of aſſortments of goods, which ſhe draws to herſelf, by means of uttering divers commodities and merchandizes to the Dutch, which the gentlemen of the weſt do not, for want thereof. Marſeilles therefore, which conſumes a great deal leſs money than is thought, does not make uſe of that foreign coin which ſhe acquires by means of the permutation of her wares and commodities; and it argues great ignorance to ſay, That the weſtern gentlemen can carry on the Levant trade without money, eſpecially ſince they have not the wares and manufactures which Marſeilles has.

8. The deputies of the weſt were pleaſed to pitch upon that time, and upon two particular ſorts of merchandizes, in order to make a calculation their own way; and it is obſerved they are continually taking advantage of every thing, and this occaſions their calculation (under favour) to be falſe; and the deputy of Marſeilles proves by his, that it is ſo far from being true, that thoſe gentlemen buy the merchandizes dearer at Marſeilles than in England and Holland: that the ſame merchandizes are bought at Marſeilles much cheaper than in thoſe countries, and that it is generally ſo. He has added to his calculation divers other merchandizes, for one and the ſame proof, to ſhew the difference there is between Marſeilles and England and Holland. He proves what he advances by certificates from the royal brokers; and, to ſatisfy theſe gentlemen as to the difference of the time, the deputy of Marſeilles, in ſelecting that time, has taken a medium, which is the month of April; though the ſame merchandizes can never increaſe in a neighbouring country, but they muſt increaſe, by means thereof, in another, whatever they pretend to the contrary.

9. It is upon account of her advantageous ſituation, that the king has choſen Marſeilles to preſerve this commerce to the ſtate: for this reaſon likewiſe it is, that all the manufactures proper for the Levant are ſet up in abundance about Marſeilles; and the gentlemen of the weſt cannot have them unleſs they go for them in that place. It was for all theſe reaſons that the king, to preſerve this important trade, did grant his edict of franchiſe to Marſeilles, and made all the other ſubſequent edicts to this day, and eſpecially to hinder the towns of the weſt from abuſing the liberty heretofore granted them.

10. That the Hollanders draw ſometimes from Marſeilles certain merchandizes which are convenient for them, and which they have not at home, and which they find among the aſſortments at Marſeilles, where the warehouſes are always full of them, and which the gentlemen of the weſt cannot have, becauſe, though they were to be let into this trade, they would carry it on but poorly: whereas Marſeilles, when it abounds, can, by reaſon of its nearneſs, ſend ſuddenly to the Levant for ſuch merchandizes as ſhe may want, and much cheaper than they who are forced to be at extraordinary expence, by reaſon of the length of their voyage.

11. If the gentlemen of the weſt had formerly carried on this trade, and if, during the time that they were permitted to do it, they had not made uſe of this permiſſion to introduce the merchandizes of the Engliſh and Dutch into France, what they advance might poſſibly be true; but the ill uſe which they made of it in times paſt, notwithſtanding all the edicts and orders of the king to reform the abuſes, is apt to make us ſuſpect the contrary.

12. They have increaſed their trade hitherto as much as they could, and they cannot hope to increaſe it more: were it not for Marſeilles, which conſumes the greateſt part of their fiſh, they would be forced to leſſen their fiſhing; and this is what will certainly happen, if the leaſt blow be given to her trade by this permiſſion.

13. The port of Marſeilles was not choſen ſolely for the ſake of the city of Lyons, but for the ſake of the whole kingdom, as a door through which the chiefeſt trades are carried on, and particularly that of the Levant, which is of the greateſt importance, and which cannot be well managed but by the port of Marſeilles; and it is proved by divers memorials which the deputy of that city has to preſent, that it would be intirely loſt by dividing it, and would fall into the hand of ſtrangers.

ſtrangers. For this reaſon, his Majeſty has always thought fit to preſerve it to Marſeilles.

14. It is evident, and beyond all queſtion, that a general opening of the Levant trade would entirely, in a ſhort time, deſtroy it. The conſtituting Marſeilles a free port, was not done without good grounds, and to put an end to that diſorder which a general permiſſion had cauſed; and all that has been done from that time to this, to correct the abuſes that had crept in, is it not a certain proof that ſuch a permiſſion would deſtroy it infallibly? ſince even Marſeilles could not hold up her head without regulating the number of ſhips that are to ſail to each port of the Levant, and which was done by order of M. de Pontchartrain, within theſe three years, otherwiſe it had been ruined. What then would become of this trade, if every body were let into it, and crouded in upon one another? The vent of manufactures at Marſeilles is as great as can be wiſhed, for ſuch manufactures which ſhe has, and the weſt has not; and the pretended cheapneſs at which France would have the Levant merchandizes, would laſt but a little while, becauſe competition would make them dearer in the Levant, and cheaper in France, which would diſable the merchants from continuing that trade, without ruining themſelves, and ſo it would paſs to foreigners. As for the permiſſion demanded for the port of Sette, Marſeilles has laid memorials before the council, with reaſons for not granting it, and deſires the council to caſt their eyes over them; and then they will be convinced that the gentlemen of the weſt ought not to have it neither.

15. The deputy of Marſeilles has made ſufficient anſwer to this article, by the memorial which he has given in, whereby he ſhews plainly, that the plague would not fail to enter into France, as it did heretofore, by means of the Engliſh and Dutch. But this being a very important article, the deputy will give an anſwer more at large, by a ſpecial memorial.

16. It is diſguiſing the truth, by their favour, to maintain that the Dutch would not carry on this trade in France. They demanded that article in the treaty of peace for no other end or purpoſe; and it would be very ſuitable to that nation, who would drive that whole trade by the ports, which would help them to deſtroy that of Marſeilles: and are thoſe gentlemen ignorant that the Dutch go thither continually, with ſeveral ſhips which private men ſend thither, and ſeldom with convoys? It is true that they, like us, are ſometimes at war with the nations of Barbary, but commonly they are at peace, as now. And all the reaſons and replies of theſe gentlemen of the weſt, have no other foundation but their fondneſs to drive that trade with thoſe nations, rather than to carry it on themſelves: and we repeat it again, That they are not excluded this trade, ſince they may carry it on by Marſeilles, as Lyons and ſome other cities of the kingdom do; and even though they were permitted to do it by their own ports, they could not poſſibly do it, conſidering the war we are going into at preſent.

17. The memorial given in by the deputy of Marſeilles, concerning the money ſhe makes uſe of for her trade, proves the truth of what he advances; and his memorial is clear upon that head, which is an abſtract of all his reaſons, and evidently demonſtrates, that there is no poſſibility of granting this Levant trade to other ports beſides Marſeilles (conſidering the difficulties that occur) without intirely loſing it to foreigners.

For the uſefulneſs and excellency of theſe inſtitutions in the kingdom of France, ſee our article CHAMBER of COMMERCE, and REMARKS thereon, and LEVANT TRADE; ſee alſo our articles TRADE.

REMARKS.

In order to come at the truth, in relation to commercial affairs, we find that the ROYAL COUNCIL OF FRANCE promote altercations between the DEPUTIES of the reſpective provinces: by which means, all the pertinent matter that can be urged pro and con, upon intereſting points, by the mercantile people, comes before the ROYAL COUNCIL; and where any repugnances or fallacies ſeem to appear, from different and contradictory repreſentations, the ROYAL COUNCIL is excited to make the ſeverer inquiſition into the matter, whereby they are the better enabled to come to ſuch reſolutions as tend moſt to the general emolument of the ſtate.

Thoſe who have applied themſelves to theſe kind of ſtudies, have allowed, that there cannot be brought before the legiſlature of this kingdom any points more difficult in themſelves, more entangled with a multiplicity of relations, or more perplexed with diverſity of circumſtances, than thoſe which relate to the concerns of trade; concerns on which the moſt experienced often diſagree, and on which the moſt ſagacious may deceive themſelves with erroneous conjectures. There are no queſtions which require ſo much perſonal knowlege of the ſubject to which they relate, nor is there any ſubject with which ſo few gentlemen in our parliament have had opportunities of being acquainted: there are no queſtions which their variety of relations to different perſons expoſes to be ſo eaſily miſrepreſented without detection, nor any in which the oppoſition of particular intereſts ſo much incites a falſe repreſentation. In all theſe caſes deceit is eaſy, and there is a ſtrong temptation to deceive.

The methods we ſee from the preceding example (which I have introduced on purpoſe) that are practiſed by the French, have certainly a very happy tendency to the diſcovery of truth, and to prevent the royal council from being perplexed and miſled by private intereſts, in oppoſition to the general: for it is no little diſcredit to the contending deputies to attempt to impoſe upon each other, and far more ſo to aim at any barefaced impoſition upon the royal council: whereby all matter foreign to the point in queſtion, all perſonal altercations and ſophiſtry, impertinence and verboſity, are laid aſide. But whoever has attended to occaſional controverſies of this nature in our nation, both without doors, and too frequently elſewhere, have too much reaſon to think they are ſeldom untainted with ſuch matter, and ſuch unbecoming warmth and animoſity as can tend only to eclipſe, inſtead of illuminate the truth; and this we fear has too often occaſioned the public intereſts to be miſtaken, overlooked, or miſrepreſented, to the great injury of the ſtate.—How far theſe ill conſequences might be prevented, by an inſtitution bearing ſome ſimilitude to that in France, is humbly ſubmitted to thoſe whoſe duty it is to take theſe things into their deliberate conſideration.

Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE,

continued from the End of Letter S.

CHIEF LAWS WITH RESPECT TO TEA.

TEA—counterfeited, adulterated, manufactured with Terra-Japonica, or any drug, or mixed with any ingredients, is forfeited, with the ingredients, and 100 l. 11 Geo. I. c. 30. §. 5.

—— May not be imported but from the place of its growth, nor upon any other pretence, upon forfeiture. 11 Geo. I. c. 30. §. 7.

—— The importation from any foreign parts, by licence, repealed. 6 and 7 W. III. c. 7. §. 3. 3 and 4 Ann. c. 4. §. 6. 6 Geo. I. c. 21. §. 45, 46. 7 Geo. I. c. 21. §. 12.

—— Seized, which cannot be ſold at a public ſale for 5 s. per pound, may be burnt, or otherwiſe deſtroyed; and the ſeizer rewarded as the commiſſioners ſhall think fit, not exceeding 18 d. per pound. 12 Geo. I. cap. 28. §. 3.

—— Any dealers in tea, who ſhall dye, fabricate, or manufacture any ſloe leaves, liquorice leaves, or leaves of tea that have been uſed, or of any other tree, ſhrub, plant, in imitation of tea, &c. are to forfeit 10 l. for every pound weight. 4 Geo. II. c. 14. §. 11.

—— Every perſon, declared at the company's public ſale of tea the beſt bidder, is, within three days, to depoſit with the company 40 s. for every tub or cheſt; and on neglect to make ſuch depoſit, forfeits ſix times the value, and rendered incapable of bidding for, or buying, any teas there for the future. 18 Geo. II. c. 26. §. 7.

—— The Eaſt India company, if tea imported be not ſufficient to anſwer the conſumption in Great-Britain, and to keep the price upon an equality with the neighbouring countries of Europe, may, with licence from the commiſſioners of the treaſury, import, from any part of Europe, in Britiſh ſhips legally navigated, what they ſhall think neceſſary; to be entered at the cuſtom-houſe, and ſubject to the ſame ſubſidies and duties, rules, &c. as tea imported from the Eaſt-Indies. 18 Geo. II. c. 26. §. 10, 12.

—— Upon neglect of the company to ſupply this market ſufficiently at reaſonable prices, the commiſſioners of treaſury may grant licences to any other perſon, or body corporate, to import tea from any parts of Europe, ſubject to ſuch duties, &c. as if imported by the ſaid company, to be lodged in warehouſes at the charge of importers, approved of by the commiſſioners of the cuſtoms till publicly ſold and duties paid—Notice of ſale to be given ſix days in the Gazette. 18 Geo. II. c. 26. §. 11, 12.

TEA,

TEA, exported to Ireland, or his Majeſty's plantations in America, the bond entered into, not to be diſcharged without a certificate under the hands and ſeals of the collector, comptroller, or ſurveyor of the port where landed, teſtifying the landing; the certificate, if from Ireland, to be produced in 6 months; if from America, in 18 months from the date thereof, otherwiſe the bond to be put in ſuit. 21 Geo. II. c. 14. §. 1.

—— To be exported as above, the permit received upon delivery of the tea from the warehouſe, muſt, before ſhipped, be delivered to the ſearcher, or proper officers, of the port where entered for exportation, who muſt, upon ſuſpicion of a deficiency in quantity or quality, open and examine the package, and whether it has been duly entered OUTWARDS, and endorſed on the entry; and if it does not agree in quantity and quality with the PERMIT and ENDORSEMENT, or is entered under a wrong denomination, it is forfeited, with the package, and may be ſeized and proſecuted by any officer of the cuſtoms.—If otherwiſe, the officer to cauſe the ſame to be repacked at his own charge, which is to be allowed him by the commiſſioners of the cuſtoms, if thought reaſonable. 21 Geo. II. c. 14. §. 1.

—— Not to be exported to Ireland, or the Britiſh plantations, in any package but that in which it was imported, or in any quantity leſs than the entire lot in which it was ſold, on forfeiture. 21 Geo. II. cap. 14. §. 2.

—— Entered for exportation as above, the package to be marked by the ſearcher in four different parts on the outſide, as the commiſſioners of the cuſtoms ſhall direct; and if found again on ſhore, is forfeited, and may be ſeized and proſecuted by any officer of the cuſtoms or inland duties. 21 Geo. II. cap. 14. §. 3.

—— All tea, above the quantity of ſix pounds, found in any Britiſh ſhip arriving in Great-Britain from foreign parts (except ſhips employed by the India company) forfeited, though intended to be reported for exportation. 28 Geo. II. c. 21. §. 1.

The chief Laws with regard to TOBACCO.

TOBACCO—Not of the Britiſh plantations.—The impoſt having been ſecured at importation, if the importer is afterwards deſirous to diſcharge his bond before the expiration of the 15 months, he is allowed a diſcount after the rate of 10 l. per cent. per annum, for ſo much of the ſaid 15 months as remain unexpired. 12 Ann. ſeſſ. 2. c. 8. §. 3. 5 Geo. I. c. 7. §. 1.

—— Of the Britiſh plantations.—— The importer may, if he is not willing to pay ready money, become bound with one or more ſufficient ſureties, (to be approved by the collector and comptroller of the port of importation) in one or more bonds, for payment of the additional duty, new ſubſidy, ſubſidy 1747, one-third ſubſidy and impoſt, within 18 months, to commence at the end of 30 days after the maſter's report of the ſhip, or from the merchant's entry within thoſe 30 days, which ſhall firſt happen. 9 Geo. I. c. 21. §. 3. 21 Geo. II. c. 2. §. 5.

If, after ſuch ſecurity be given for payment of the duties in 18 months, the importer be deſirous to diſcharge his bond in ready money, any time before the expiration thereof, he ſhall be abated upon ſuch bond, ſo much as the diſcount, at the rate of 7 l. per cent. per annum ſhall amount unto, in proportion to the time unexpired. 9 Geo. I. c. 21. §. 12. 24 Geo. II. c. 41. §. 31.

—— Upon payment of the old ſubſidy, and ſecurity of the other duties by the importer's own bond, may be put into warehouſes, provided at his charge, and approved by the commiſſioners of the cuſtoms; if deſtroyed in ſuch warehouſes by fire, the duties to be allowed. 12 Ann. c. 8. §. 5, 6. 5 Geo. II. c. 7. §. 1. 24 Geo. II. c. 41. §. 32.

—— Damaged or mean, is not to have any allowance, either at the ſcale or otherwiſe; but upon the merchant's refuſing to pay the duty, he may ſeparate ſuch damaged tobacco, by cutting off, from the hogſheads, ſo much as he ſhall refuſe to pay or ſecure cuſtom for; and any three or more of the principal officers of his Majeſty's cuſtoms ſhall cauſe ſuch tobacco to be burnt or deſtroyed, without making the importer any allowance for freight or charges, except as follows; viz. If any Britiſh plantation tobacco hath received damage on board any ſhip at ſea, or by the ſhip's being forced on ſhore in any part of Great-Britain; or after arrival, by the ſhip's bulging on an anchor, or by the lighter into which the tobacco is put, in order to be landed; the merchant refuſing to pay, or ſecure the duty for the ſame, hath liberty to ſeparate ſuch tobacco as afore obſerved, and to receive for every pound of damaged tobacco, ſo ſeparated, the merchant is to be allowed one half penny—The ſame to be paid by the commiſſioners or collectors, or other chief officers of the cuſtoms.—But ſuch allowance is not to exceed 30 ſhillings on any one hogſhead. 9 Geo. I. c. 21. §. 13.

—— The ſtalks may not be ſeparated from the leaves, on pretence that the ſame is damaged or mean tobacco. 9 Geo. I. c. 21 §. 5.

—— Allowance for draught at the ſcale, to be only 8 lb. upon every hogſhead of 350 lb. or more; which allowance is not to be deducted upon exportation. 9 Geo. I. c. 21. §. 15.

—— Only tobacco of the Britiſh plantation, that has paid the duties, and been manufactured in Great-Britain, may be conſumed on board Britiſh ſhips of war in any part of Europe, upon forfeiture of the reſpective places of their commander or purſers, and 3 ſhillings per pound weight. 6 Ann. c. 22. §. 13.

—— Shipped at any place in the Britiſh plantations in America for Great-Britain, after the 25th of March, 1752, the collector or comptroller, or other chief officer of the cuſtoms there, or any two of them, are at the clearing out of the veſſel to deliver to the commander, or perſon taking charge of her, a manifeſt under their hands and ſeals of office, containing a true account of all the tobacco taken on board, the number of packages, the quantity, marks, numbers, and tare of each package; and at the ſame time tranſmit a duplicate thereof to the reſpective commiſſioners of the cuſtoms in Great-Britain, on forfeiture of 200 l. to be recovered in any court of record at Weſtminſter, or court of admiralty in the plantations, where the offence is committed. 24 Geo. II. c. 41. §. 1.

—— The perſon having charge of the veſſel, upon her arrival at his port of diſcharge in Great-Britain, and at the time of making his report, muſt deliver the ſaid manifeſt to the collector of the cuſtoms there, on forfeiture of 100 l. and the collector is to deliver it to the land-waiters appointed upon the ſhip. 24 Geo. II. c. 41. §. 2.

—— The land-waiters are, from the manifeſt, to enter in their books (before any tobacco is landed) the marks, numbers, weights, tares, and contents of the ſeveral packages, under the penalty of 50 l. and to cauſe ſuch landing mark, as the commiſſioners of the cuſtoms ſhall direct, to be ſet upon every package, and are to enter every ſuch landing mark in their books, on forfeiture of 50 l. 24 Geo. II. c. 41. §. 3.

—— May not be imported into Great-Britain, otherwiſe than in caſk, cheſt, or caſe only, each containing 450 pounds weight of net tobacco at the leaſt, on forfeiture of all the tobacco, together with the package. 24 Geo. II. c. 41. §. 20.

—— Imported from the Britiſh plantations on the continent of America in bulk, or otherwiſe than in caſks, cheſts, or caſes, containing each two hundred weight, or 224 lb. at leaſt, is forfeited, and 6 d. per pound weight, except ſmall quantities for the crews ſmoaking; $\frac{2}{3}$ to his Majeſty, and $\frac{1}{3}$ to the ſeizer or ſuer. 10 and 11 W. III. c. 21. §. 29.

—— Exported.—No debenture to be made out after the 29th of September, 1751, nor any drawback to be allowed upon tobacco imported after that time, unleſs it is ſhipped and exported from the ſame port where it was originally imported, and (if unmanufactured) in the original package, with the ſame marks in and with which it was imported, no other tobacco being put therein, nor any taken out, except 10 pounds, which ſhall be allowed to be taken out of each package after the ſame is weighed at importation, as is now the practice. The penalty for entering unmanufactured tobacco for exportation, from any port but the port of importation, or in any other package, or without the ſame marks as imported, is forfeiture of the tobacco, and 200 l. by the perſon who enters it, or cauſes it to be entered, beſides of drawback; and whoever knowingly exports any package of tobacco, out of which more than 10 pounds has been taken, forfeits 20 l. for every package exported. 24 Geo. II. c. 41. § 4.

—— But if, upon landing, the tobacco in any hogſhead or caſk, by cutting off the damaged part, is under the weight of 450 pounds; the importer may, in the preſence of the land-waiter, cauſe the ſound tobacco to be put together into one or more hogſheads, out of which the damaged was taken; and the land-waiters are to enter in their books the exact weight of the tobacco, with the marks and numbers of each ſuch hogſheads, and note that they were refilled in their preſence; then ſuch tobacco (provided the quantity in each hogſhead is 425 pounds weight or more) may be exported from the port of importation, as if the package had not been altered. 24 Geo. II. c. 41. §. 5.

—— The perſon who enters unmanufactured tobacco outwards, muſt, before ſhipping it for exportation, indorſe upon the cocket and bill the plantation or manifeſt mark and number, the landing mark and number, with the weight of each package at the time of landing; alſo the exporter's mark and number, with the weight of each at the time of entry for exportation; and write off the weight of each package from the identical entry thereof at importation. Every perſon refuſing, or neglecting ſo to do, foreits 5 l. for every package, beſides loſs of drawback; and the ſearcher is not to admit any cocket, unleſs marked as aforeſaid. 24 Geo. II. c. 41. §. 6.

——Unmanufactured, may not be loaden in any veſſel in Great-Britain, with intent to be exported, but in caſks, cheſts, or caſes only, containing 425 pounds weight or more of tobacco in each, on forfeiture of the tobacco and

caſk, &c. containing the ſame; except packages containing ſamples ſhipped and exported at the ſame time and place with the caſks, &c. out of which they were taken. 24 Geo. II. c. 41. §. 21.

—— Exported (though manufactured) in any package but caſks of three hundred weight or more, is not to be allowed any drawback, except tobacco cut or rolled. 9 Geo. I. c. 21. §. 14.

—— Mixed with rubbiſh or dirt, or any other thing, ſhall be allowed no drawback; and every perſon who ſhall enter or ſhip ſuch for exportation, or cauſe it to be done, or who ſhall enter any thing as tobacco for exportation, which, upon examination by the proper officer, appears not to be ſo, ſhall forfeit all the goods and the package, and 50l. for every package. 24 Geo. II. c. 41. §. 24.

—— Manufactured or unmanufactured, may not be entered or ſhipped for exportation in any veſſel, not of the burthen of 70 tons or upwards, except to Ireland; and if exported thither in any veſſel under the burthen of 20 tons, it is not to be allowed any drawback. 24 Geo. II. c. 41. §. 25. 8 Ann. c. 13. §. 20.

—— Any officer of the cuſtoms apprehending a veſſel outward-bound with tobacco on board, not of the burthen of 70 tons or upwards, he may ſtop and detain her, and the whole cargo, 'till ſhe is admeaſured, as directed by 6 Geo. I. c. 21. and if ſhe proves to be of that burthen, he ſhall not be ſubject to any action for damages; but the maſter of ſuch veſſel entering and clearing her out as of that burthen, when ſhe is under it, forfeits 100l. for every ſuch offence. 24 Geo. II. c. 41. §. 25. 8 Ann. c. 13. §. 20.

TOBACCO EXPORTED TO IRELAND.—If, upon producing a certificate, leſs appears to be landed there than ſhipped from hence, an allowance not exceeding two per cent. may be made for waſte during the voyage. 6 Geo. I. c. 21. §. 48.

—— Entered for other foreign parts, if landed in Ireland, is forfeited, and double the drawback; and the debenture for the drawback is to be void. 6 Geo. I. c. 21. §. 49.

—— Entered out for any other place than Ireland, the exporter is to ſwear that the ſame is not landed in any part of Great-Britain or Ireland. 6 Geo. I. c. 21. §. 50.

—— Imported from the BRITISH PLANTATIONS in America.—The importer manufacturing it, or delivering it out to be manufactured upon his own account, muſt firſt deliver to the collector, or chief officer of the cuſtoms, at the port of importation, an account in writing, ſigned by himſelf and the manufacturer, or their known agents, with their names and places of abode, containing the plantations or manifeſt mark and number of each package, with the name of the ſhip, and time when imported, the landing mark and number, the weight at importation, and the weight at the time of delivering it out; and the importer muſt write off the weight from the entry at importation. The penalty for neglecting to give or ſign ſuch account, or knowingly giving or ſigning a fraudulent one, is 30l. for every package, by each perſon concerned. 24 Geo. II. c. 41. §. 7.

—— The importer ſelling or delivering ſuch tobacco out of his poſſeſſion, muſt, within 14 days after delivery, give to the collector the ſame account in writing, ſigned by himſelf and the purchaſer, or their known agents, and write off the weight from the entry in the ſame manner, and ſubject to the ſame penalties, as in caſe of delivering it out to be manufactured. 24 Geo. II. c. 41. §. 8.

—— REMOVED BY LAND.— TOBACCO OR TOBACCO STALKS, exceeding 24lb. weight, or SNUFF exceeding 10lb. weight, may not be conveyed from the place of importation to any other place in Great-Britain, without a certificate from the collector and comptroller, or chief officer of the cuſtoms, at the place of importation; and if unmanufactured, with the importer's oath thereto (if the importer applies for it) that the duties were paid or ſecured at importation, by whom, when, and in what ſhip imported; or with the purchaſer's oath thereto (if he applies for it) atteſting the marks and numbers of the hogſheads, out of which it was taken, from whom purchaſed, and when: if TOBACCO-STALKS or SNUFF, or MANUFACTURED TOBACCO, are ſo removed, then the certificate muſt have the importer's oath thereto (if he applies for it) that ſuch ſtalks were ſtripped, or ſuch ſnuff or manufactured tobacco was made, from one or more hogſheads, for which the duties were by him paid or ſecured at importation; or the purchaſer's oath thereto (if he applies for it) that ſuch ſtalks were ſtripped, or the ſnuff or manufactured tobacco was made, from one or more hogſheads, which had been delivered and received according to the direction of this act; which certificate ſuch officers are to grant, and after entering in their books, to deliver to the perſon applying for the ſame, without fee or reward for certificate or oath, on forfeiture of 10l. for every offence. 24 Geo. II. c. 41. §. 9.

TOBACCO.—The proprietor, factor, or agent of the tobacco, &c. (before it is removed) is to inſert on the back of the certificate the names of each package, with the marks and numbers, and the weight of each ſpecies of goods in each package, the place from whence delivered, and to which they are to be conveyed, and by whom, or the name of the inn from whence carried, and the name of the perſon to whom conſigned; and to which he muſt ſubſcribe his name, and make oath to the truth thereof. The certificate muſt expreſs the number of days it is to continue in force, and accompany the goods to the place to which they are to be carried; and the perſon there receiving it, muſt cauſe it to be delivered to the chief officer of the cuſtoms there; or if there is no officer of the cuſtoms, to the officer of exciſe for that diviſion, who is to examine the ſame with the goods, which, if they agree therewith, are to be taken away by the perſon to whom they belong; and ſuch officer is to enter the certificate in a book kept for that purpoſe. 24 Geo. II. c. 41. §. 10. 26 Geo. II. c. 13. §. 4.

—— Such goods, in the quantity above-mentioned, removing by land without ſuch certificate, are forfeited, and the packages, together with the cattle and carriages; and the carrier, or perſon employed in removing the ſame, is to be committed to the county gaol for one month, by a juſtice of the peace for the county where the offence is committed, or the offender found.—And any perſon, who ſhall counterfeit, forge, eraze, or alter ſuch certificate, or the duplicate thereof, or procure the ſame to be done, ſhall forfeit 50l. for every offence. 24 Geo. II. c. 41. §. 12.

—— Such goods, in the quantity above-mentioned, may not be conveyed by land from any place in Great-Britain to any other, unleſs the package is marked on the outſide with the reſpective words TOBACCO, TOBACCO-STALKS, or SNUFF, in letters not leſs than three inches in length, on forfeiture thereof, with the package, and alſo 1s. per pound weight to be paid by the owner thereof. 24 Geo. II. c. 41. §. 23.

TOBACCO REMOVED BY WATER.—No TOBACCO, TOBACCO-STALKS, OR SNUFF, may be ſhipped on board any veſſel to be carried by water from any place in Great-Britain to any other, until every part thereof is entered at the cuſtom-houſe, at the port neareſt the place where they are ſhipped; and if UNMANUFACTURED, it muſt be ſhipped in the original package in which it was imported, preſerving the ſame marks and numbers, but not without a certificate from the collector or comptroller, or chief officer of the cuſtoms at the port of importation, that the duties thereof were paid or ſecured at importation; by whom, the time when, and in what veſſel imported: if it is TOBACCO-STALKS, or SNUFF, or other MANUFACTURED TOBACCO, it is not to be ſo ſhipped without a certificate from the ſaid officers, that the duties were paid or ſecured at importation, for the tobacco from which they were ſtripped, made, or manufactured; which certificates the ſaid officers are required to grant to the importer, or his known agent, applying for the ſame, without fee or reward, on forfeiture of 10l. for every offence. 24 Geo. II. c. 41. §. 13.

—— Before ſuch goods are ſhipped, the proprietor muſt inſert on the back of the certificate the names of each particular package, with the marks and numbers, the weight of each particular ſpecies of goods in each package, and the place from whence brought, and to which they are to be carried. 24 Geo. II. c. 41. §. 14.

—— The certificate muſt, before ſhipping, be delivered by the proprietor to the perſon taking charge of the veſſel, who, immediately upon his arrival in any port or place in Great-Britain, muſt deliver it to the collector or chief officer there, who muſt examine the goods with the certificate; and if they agree therewith, the goods are to be diſcharged, and may be taken away by the perſon to whom they belong. 24 Geo. II. c. 41. §. 15.

—— Such goods found on board any veſſel before ſuch certificate is obtained, or without its being on board therewith, or if it is forged, or does not agree in all reſpects with the goods, then all ſuch goods are forfeited, together with the packages, and may be ſeized and proſecuted by any officer of the cuſtoms; and the perſon taking charge of the veſſel ſhall forfeit 6d. per pound weight; and any perſon who ſhall counterfeit, forge, eraze, or alter ſuch certificate, ſhall forfeit 100l. 24 Geo. II. c. 41. §. 16.

TOBACCO, or TOBACCO-STALKS, exceeding 24 pounds weight, or SNUFF exceeding 10 pounds weight (which has been removed by water from the place of importation to any other place in Great-Britain) may not be removed afterwards from thence by land, without a certificate from the collector and comptroller, or chief officer of the cuſtoms, at the place to which they were carried by water, that it appears to them by the entry of the certificate, which came by the goods from the place of importation, that the duties thereof were paid or ſecured there, and in what veſſel they were brought by water, and when, and that the perſon applying for the ſame had made oath to the truth thereof; which certificate ſuch officers are required (after writing it in their books) to deliver to any perſon applying for it. 24 Geo. II. c. 41. §. 22.

—— The proprietor of the goods, or his factor or agent (before they are removed) muſt inſert on the back of the certificate the names of each package, with the marks and numbers,

numbers, the weight of each ſpecies of goods in each packa e, the place from whence brought, and to which they are to be carried, and the name of the perſon to whom they ſhall be ſent, which he muſt ſubſcribe with his name, and make oath to the truth thereof.—And ſuch goods found ſo removing without ſuch certificate, or if the certificate appears to be forged or counterfeited, are forfeited, and the package, together with the horſes, cattle, and carriages employed, and may be ſeized and proſecuted by any officer of the cuſtoms: the carrier or perſon employed in the removal alſo forfeits 10 l. and is to be committed to the county-gaol for one month by any juſtice of the peace for the county where the offence is committed, or the offender found.—And any perſon who ſhall counterfeit, forge, eraze, or alter ſuch certificate or duplicate thereof, or procure it to be done, ſhall forfeit 100 l. for every offence. 24 Geo. II. c. 41. §. 22.

TOBACCO.—The ſecond purchaſer of an intire hogſhead of unmanufactured tobacco, is intitled to the benefit of a certificate on removal by land or water, in like manner as the firſt purchaſer from the importer; but in this certificate the name of the importer or ſeller may be omitted, provided the ſeller to the ſecond purchaſer has delivered to the collector, or chief officer of the cuſtoms at the port of importation, ſuch accounts as the importer is required to give by 24 Geo. II. c. 41. 26 Geo. II. c. 13. §. 6.

—— Any certificate for removal of tobacco, tobacco-ſtalks, or ſnuff, by land or water, is to be deemed a proper one, though the name of the importer is not inſerted therein, provided his name is expreſſed in the bill from which the certificate is prepared. 26 Geo. II. c. 13. §. 5.

—— Any perſon who ſhall put out, alter, or deface any mark or number ſet upon any package of tobacco in America, or in Great-Britain, at importation or exportation, ſhall forfeit 20 l. for each package. 24 Geo. II. c. 41. §. 19.

—— Tobacco-ſtalks and ſnuff, ſeized and condemned, are to be burnt in the preſence of the collector and comptroller of the cuſtoms at the place where the goods are at the time of condemnation; or, for want of ſuch, in the preſence of the collector or ſupervifor of exciſe for that diſtrict. 24 Geo. II. c. 47. §. 27, 28.

—— The officers who ſeized and proſecuted, are to be paid (if it is tobacco, or tobacco-ſnuff) at the ſame rate as if it was ſold for 6 d. per pound, which by 12 Geo. I. c. 28. §. 10. being one-third of the groſs ſale clear of all charges, amounts to 2 d. per pound: if tobacco-ſtalks, or damaged tobacco, they are to be paid 1 d. per pound, in lieu of all other allowance, by the receiver-general of the cuſtoms at London or Edinburgh reſpectively, or by the collector of the out-ports where ſeized and burnt, out of any duties applicable to incidents; provided the officers, before whom it was burnt, certify to the reſpective commiſſioners of the cuſtoms the exact quantity burnt, who are thereupon to grant their order for payment. 24 Geo. II. c. 41. §. 27, 28.

The following particulars are to be tranſmitted to the regiſter of tobacco by the perſons under mentioned, viz. an account of the certificate received with the goods by the officer of the cuſtoms or exciſe reſpectively; and duplicates of original certificates for removing by land, by the officers who granted them at the port of importation; and certificates for removal by water by the chief officer of the cuſtoms at the port where the goods were landed, within one month after he receives it, provided the goods agree therewith; and duplicates of certificates for removal by land, after the firſt removal by water, by the perſon who granted it; and once in every calendar month, one of the land-waiters book of the landing and diſcharging of tobacco imported from the Britiſh plantations in America, and copies of every entry thereof for exportation, with the endorſements, and copies of every account of tobacco intended to be manufactured, and copies of every account of tobacco ſold by the importer, to be tranſmitted by the collector and comptroller, or chief officer of the cuſtoms, of every port in Great-Britain where the buſineſs was tranſacted: which ſeveral accounts are to be by him entered in ſuch manner and form, that the marks and numbers of every hogſhead, caſk, or other package, and their weights at importation, may be compared with the marks, &c. reſpectively at exportation, or delivery for home-conſumption, or to be manufactured, in order to preſerve the identity thereof; and the ſaid regiſter is to tranſmit to the commiſſioners of the cuſtoms, at London and Edinburgh reſpectively, an account in writing of any thing which appears to be done contrary to the meaning of this act; and once in 6 months he is to lay before the lords of the treaſury, a copy of ſuch his repreſentations made to the ſaid commiſſioners. Any collector, or chief officer, neglecting to tranſmit any of the accounts before-mentioned, to forfeit 50 l. for every ſuch neglect. 24 Geo. II. c. 41. §. 10, 11, 15, 17, 22.

TOBACCO imported from the Britiſh plantations in America.—The importer is every year, between the 1ſt and 24th of June, to deliver to the collector, or chief officer of the cuſtoms, at the port of importation, an account in writing, under his hand, of all tobacco in his cuſtody, power, or poſſeſſion, which has been entered 18 months or more at that time, containing the number of packages, with the reſpective marks, numbers, and weights of each, and the place where lodged; upon receipt of which, ſuch officer is to cauſe the goods to be examined thereby, and then to tranſmit the account to the regiſter of tobacco. 24 Geo. II. c. 41. §. 18.

Any importer neglecting ſo to do, or if the account proves fraudulent in any reſpect, forfeits 50 l. for every offence.—Ditto act of parliament.

—— Any veſſel, under the burthen of 70 tons, having on board 100 lb. weight of tobacco, or any tobacco-ſtalks, or 50 lb. weight of ſnuff, found at anchor, or hovering within the limits of any port, or within two leagues of the ſhore, or diſcovered to have been within the limits of any port, and not proceeding on her voyage, (unleſs in caſe of unavoidable neceſſity and diſtreſs of weather, of which the maſter, purſer, or perſon taking charge, muſt give notice, and make proof before the collector, or chief officer of the cuſtoms, immediately after arrival) all ſuch goods are forfeited, with the package, or the value thereof, whether bulk ſhall have been broke or not; and the maſter, or perſon taking charge of the veſſel, forfeits 100 l.

—— And if any veſſel, above the burthen of 70 tons, having ſuch goods on board, ſhall be found hovering as aforeſaid, and no notice of diſtreſs is given, the maſter, or perſon taking charge of it, forfeits 100 l. 24 Geo. II. c. 41. §. 26.

TOBACCO-STALKS, or SNUFF, removed from one place to another in greater quantities than by 24 Geo. II. c. 21. is allowed, and not attended with the certificate required, may be ſeized and proſecuted by any officer of the cuſtoms or exciſe; and the proof that it was removed from the port of importation with a proper certificate, and that the duties thereon were paid or ſecured, is to lie on the claimer, and not on the officer who ſeized it. 26 Geo. II. c. 13. §. 2.

TOBACCO.—All bonds for payment of duties on tobacco, ſhall be deemed to be due and payable upon the day of payment, mentioned in the condition of the bond, and intereſt to be computed from the ſaid day whereon the bond ſhall be paid off in money, or the day the ſearcher certifies on the debenture, that the tobacco is ſhipped for exportation; and no ſecurity to be vacated till all intereſt be paid thereon. 24 Geo. II. c. 41. §. 29.

—— The chancellor, or either of the barons, of the Exchequer, to grant a fiat for iſſuing proceſs of immediate extent againſt any perſon bound for the duties on tobacco before the bond becomes due, on affidavit laid before him by one of the ſecurities, or the executor or adminiſtrator of ſuch ſecurity, that the perſon bound is decayed in circumſtances, and ſetting forth the danger of loſs to the crown, unleſs ſome more ſpeedy method of recovery than uſual be made uſe of: if the money is recovered before the bond becomes due, the obliger is to be allowed therefrom the uſual diſcounts. 24 Geo. II. c. 41. §. 30.

—— The penalties and forfeitures by this act are to be, one moiety to the uſe of his Majeſty, &c. and the other moiety to the uſe of ſuch perſon as ſhall inform, proſecute, or ſue for the ſame; and the ſaid penalties and forfeitures may be ſued for, and the cauſes ariſing by this act may be tried and determined in any of his Majeſty's courts of record at Weſtminſter, if ſuch offences are committed in England, or if the offender be in England at the time of commencing the proſecution; or in the court of Exchequer at Edinburgh, if the offence be committed in Scotland, or the offender be in Scotland at the time of commencing the proſecution, at the election of the commiſſioners of the cuſtoms for England and Scotland reſpectively. 24 Geo. II. c. 41. §. 33.

TOBACCO, of the growth of Europe, or mixed therewith, may not be ſold or delivered to the ſeamen on board any of his Majeſty's ſhips of war. 6 Ann. c. 22. §. 12.

—— The ſtalks or ſtems, ſtripped from the leaf, may not be imported; and upon ſeizure and condemnation, the commiſſioners of the cuſtoms may cauſe them to be publickly burnt, allowing the ſeizer 1 d. per pound weight, clear of all charges of condemnation. 12 Geo. I. c. 28. §. 13.

—— The STALKS or STEMS, when ſeparated from the reſt of the leaf, and exported by themſelves, are not to have any drawback. 9 Geo. I. c. 21. §. 20.

—— May not be planted in Great-Britain, Ireland, Guernſey, or Jerſey, upon forfeiture thereof, or the value, and 40 s. for every rod or pole of ground planted; half to the king, and half to the ſuer; and alſo 10 l. more; one-third to the king, one-third to the poor of the pariſh, and one-third to the ſuer.—Except in phyſic-gardens, and not exceeding half a rod in any one garden.—Sheriffs, juſtices, &c. within ten days after information, are to cauſe ſuch tobacco to be deſtroyed.——Juſtices, a month before each general quarter ſeſſions, are to iſſue out warrants to the conſtables, &c. to ſearch for ſuch tobacco, and to make a preſentation upon

upon oath, at the quarter-ſeſſions.—Conſtables, within 14 days after ſuch warrant, may call aſſiſtance, and deſtroy ſuch tobacco; upon neglect, are to forfeit 5 s. per rod.—Aſſiſtance refuſed, the forfeiture is 5 s.—Reſiſting, the penalty is impriſonment for three months, or to forfeit 5 l. and impriſonment, till a recognizance of 10 l. penalty, with two ſecurities, be entered into, not to offend again. 12 Car. II. c. 34. §. 1, &c. 15 Car. II. c. 7. §. 18, &c. 22 Car. II. c. 26. §. 2, &c. 5 Geo. I. c. 11. §. 19.

LEAVES OF WALNUTS, hops, ſycamore, or any other leaves, herbs, plants, or materials, may not be cut in the form, or in imitation of any of the uſual ſizes or cuts of tobacco of the Britiſh plantations, or coloured or cured, to reſemble ſuch tobacco for ſale, or knowingly ſold or offered to ſale as ſuch tobacco, upon forfeiture of 5 s. per pound weight. The charges of proſecution to be borne by his Majeſty. 1 Geo. I. c. 46. §. 1.

—— Such leaves, &c. may not be exported with intent to obtain a drawback, as for tobacco, upon forfeiture of 5 s per pound weight, beſides former penalties. 1 Geo. I. c. 46. §. 2.

—— May, with all engines, utenſils, and tools, be ſearched for, and ſeized by the officers of the cuſtoms, at ſeaſonable hours, and with a warrant from the juſtices; who, at their quarter-ſeſſions, are to determine ſuch ſeizure, and after condemnation, cauſe them to be burnt. 1 Geo. I. c. 46. §. 3, 4.

Servants employed in cutting, manufacturing, &c. or felling, upon conviction before two juſtices, may be committed to the houſe of correction, there to remain, not exceeding ſix months. 1 Geo. I. c. 46. §. 5.

TOBACCO-PIPE CLAY. See the concluſion of letter W. WOOL.

TURKEY.—Currants, and all goods of the growth, product, or manufacture of Turkey, muſt be imported only in ſhips belonging to Great-Britain or Ireland; except ſuch ſhips as are of the built of the country whereof the ſaid goods are the growth, production, or manufacture, or of ſuch port where the ſaid goods commonly, or moſt uſually, are firſt ſhipped for tranſportation, on forfeiture of ſhip and goods. 12 Car. II. c. 18. §. 8.

V.

VENICE. This ancient republic may be divided into three parts: theſe are the dominions in Italy, called Terma Firma; thoſe in Dalmatia, and thoſe in the Ionian and Egean Seas; called the Levant. The Terra Firma dominions are again ſubdivided into the following territories, viz. the Dagado of Venice, the Padnano, Vicentino, Veroneſe, Breſciano, Bergamaſco, Friuli and Aquilegio, Iſtria, Cremeſco, Poleſin de Revigo, Marcas Trevigiana.—The coaſts of Dalmatia contain the towns of Zara, Nona, Spalato, Sebenico, Trau, Cliſſa, and Cattara; and the iſles of Charto, Otero, Vegtia, or Vegia, Arbe, Pago, Iſola, Longa, La Barza, Leſſna, Curzola, and ſome few more of ſmall note.—In the Levant, the iſles of Cephalonia, Corfu, Zant, La Praga, Millo, Cerigo, Tine, Kimolo, or Argentaria, and the Morea.

The Venetians have little produce of the country, or manufacture of the people, except the ſilk, and the ſilken manufactures: the former reſpects the land part, the latter the city, where many of the ſilk manufactures are made: but yet the ſtate is very opulent, becauſe they abound with univerſal merchants; and this is owing to an univerſal correſpondence, by which, as the Dutch are to theſe northern parts, ſo are the Venetians to all the ſhores of the Adriatic gulph, the iſles of the Arches, and the ſea-coaſts of the Turkiſh dominons; for to all theſe places they ſend their ſhips, freighted with the growth and manufactures of other countries, as England, Holland, France, New Spain, &c. in return for which they bring but few goods, except from Turkey, whence they bring large quantities of ſilk, which they ſell again, among their own manufacturers in the city, as alſo in their Terra Firma dominions, and likewiſe to the duchies of Milan and Mantua.

By their inland commerce they convey their ſilk into the ſeveral countries as well of their own dominions, as thoſe of the emperor, and into all the countries between the gulph and the river Danube; through all which the Venetians have a great and flouriſhing commerce, partly by the help of canals, and partly by ſmall navigable rivers.

The trade which may be called their own, and which is more conſiderable, is by the navigation of thoſe great rivers the Po, the Adige, the Adda, the Mincio, and others, by which they carry all the heavy goods they import from foreign parts, into the rich and populous provinces of Lombardy, and have a communication even with Milan and Turin.

By theſe rivers, alſo, they have a correſpondence with the country of Trent and Tirol, and even with Bavaria itſelf; as alſo, by the lower branches of the Po, and the canal de Ferrara, they have with all the ſouthern provinces of the papal dominions, as Ferrara, Bologna, Urbino, and Parma, and as far into the country weſtward as Modena, &c.

As they have the ſole commerce of moſt of theſe countries, and in ſuch a manner as not to be interrupted by any rival nations, it is not to be wondered that the Venetians have a very thriving and gainful trade, and that they can advantageouſly diſperſe the large importations they make from almoſt all parts of Europe, as from Spain, Portugal, England, and Holland, they having a conſiderable call for goods from them all.

Nor do they bring any valuable returns back from their inland countries, for they have few productions in thoſe provinces, except corn: neither have they metals or minerals, iron excepted; nor wool, cotton, or hair, or any conſiderable manufacture for employing their people: ſo that the Venetians are ſaid to drive the moſt ready-money trade of any of the Mediterranean countries, becauſe they export ſuch great quantities of goods to countries which have no returns to make them but money.

However, they receive large quantities of other merchandize from the Turkiſh dominions; it is thought more than any one nation beſides. The particulars are,

Raw ſilk, directly from Smyrna and Scanderoon.

Coffee, from the Red Sea, by the way of Alexandria.

Spices, from India, and by the ſame way.

Drugs, &c. { Galls, from Aleppo. / Maſtic, and / Turpentine, } from Scio.

Drugs, &c. { Senna, / Balm, / Mummy, / Dates, and / India cotton, } from Egypt.

Cotton, and cotton-yarn, from Cyprus.

Greek wines from the iſlands.

Though the Venetians may have mines of iron and lead in the territories of the Vicentine and Friule, and in other parts, yet we find Engliſh lead and Swediſh iron have a good market at Venice, as alſo Engliſh block-tin, and moſt kinds of wrought iron and braſs: nor have we yet had any ſufficient proof of thoſe metals being found there in quantities, except ſome iron, as far off as Stiria and Carinthia.

The Venetians were formerly the principal glaſs-makers in Europe, and furniſhed all this part of the world with looking-glaſſes, and other glaſs wares of all ſorts, which were in high eſteem. But they have been excelled by the French, and the French by the Engliſh, who, without flattery, do now make the beſt glaſs wares in the world; and the Engliſh plate-glaſs and drinking-glaſſes are carried not to France only, but even to Venice itſelf.

They have a very conſiderable ſilk manufacture, as before noticed, not only in the city of Venice, but in the countries of Breſcia, Verona, Bergamo, and other parts; and they carry their fine brocaded ſilks, velvets, ſattins, and Mantua ſilks, as alſo figured damaſks, to Conſtantinople one way, and to Vienna the other way: and this trade is very conſiderable, and it brings them great returns in money, and employs multitudes of their people.

The Venetians have another trade, which is of no leſs concernment, it being almoſt peculiar to themſelves; it conſiſts in naval ſtores: for the provinces of the Vicentine, the Trevigiana, and part of Friuli, are full of firs, and thoſe ſo well grown and large, that they cut maſts there, even for their biggeſt ſhips of war: they have likewiſe good oak for building. In conſequence of their fir woods, they have pitch and tar; and the ſame countries produce great quantities of hemp and flax: ſo that they have deals, timber, maſts, ſails, hemp, flax, pitch, and tar, all of their own; which none of the princes or ſtates in the Mediterranean can boaſt of in the ſame manner.

Nor is this ſolely beneficial to them in regard to their own navy, and to fill their own magazines, but they furniſh all thoſe materials, in great quantities, to the other ports of Italy, as Genoa, Naples, Meſſina, and Palermo, or to any other places where they build ſhips, eſpecially thoſe of force; and the knights of Malta fetch moſt of their naval ſtores from hence. Were the countries this way furniſhed for trade, and with wealth ſufficient to carry it on, they would ſend hither for ſhips, and Venice would be the arſenal of the Mediterranean, as Holland has been of other parts of Europe.

They are poſſeſſed of a very large coaſt on the other ſide of the Adriatic gulph, called Dalmatia, where they have ſome good ports, though no city of any conſiderable commerce; neither does the country produce any thing extraordinary for merchandize: it ſupplies the city of Venice with corn and mutton, in great quantities; and, in return, the Venetians ſupply the people with their foreign merchandize.

Yet the Venetians want many things which their own territories cannot ſupply them with, and which, ſince they loſt ſo much of their dominions to the Turks, they are obliged to purchaſe from them, and from the Greeks under the Turkiſh government: and theſe are as well neceſſaries as merchandize.

They have no wine; the mountainous countries to the north of the city are, like the Alps, too cold for the vines, nor do they pretend to make any: and therefore they are ſo meanly ſupplied by the Greeks, who mix water with their rich wines, 'till they reduce them almoſt to water: yet the Venetians, taking care to reduce the price in proportion, are content with the liquor, though they know it is ſo ſpoiled.

They are ſupplied with wines from ſeveral of the iſlands, as particularly from

Skyros, where the wine is very good and rich, and bought very cheap.

Negropont: here the Venetians buy very good wine alſo, and raiſins of the ſun, or dried grapes: but the wine is dearer here than at Skyros.

Andros: from hence the Venetians fetch both wine and oil, alſo good oranges and lemons; and pomegranates they bring thence in ſuch plenty, that they make a kind of vinegar of their juice.

Tinos: here the Venetians fetch the beſt wines they drink, except that of Florence, of which we have ſpoken already; and, as this iſland is their own, they encourage the trade very much. Alſo the Venetians fetch a great deal of ſilk here, of a meaner ſort than the Italian and Turkey ſilk, which they fraudulently mix with it ſometimes in their manufactures, but principally uſe it in making tapeſtry, and other ſubſtantial manufactures.

Mycone: here is that wine, which, though excellent well-taſted, and rich and ſtrong in its natural original as a juice, is ſo greatly adulterated by the Myconians, before they bring it to Venice.

The Venetians bring cotton-yarn, alſo, and goat's-hair, from theſe iſlands, and ſeveral kinds of ſilk, ſome worſe than that of Tinos, and ſome better. The cotton and hair they work into ſeveral uſeful manufactures, which ſupply the place of woollen, for they have very little wool, and what they have is of little uſe in any kind of manufacture: wherefore they import conſiderable quantities of Engliſh, and other woollen manufactures.

They have ſome refining-houſes for ſugar, they purchaſing large quantities of muſcavado ſugars in England and in France, which they boil and refine, as is done in England; they alſo refine the Brazil ſugars, though very white before.

Their manufacture of bone-lace is ſtill conſiderable, as well for the uſe of the city, as for the trade of the countries adjacent; but is ſo much outdone by the Flanders manufacture, that very little, if any, is brought into theſe parts of the world.

It ſhould not be omitted, among their importations, that they fetch a great quantity of wax from all thoſe iſlands above named, which they generally conſume in the city of Venice, where the quantity they uſe is very great, almoſt all the perſons of figure burning none but wax candles, and the poorer ſort lamps, for they have but little tallow.

It may be obſerved here, that the cities of Venice and of Rome are, of all the cities of Europe for their bigneſs, the moſt noted for pomp and ſhew, the confluence of ſtrangers to both being ſcarce conceivable. At Venice, the diverſions of the carnival, the magnificence of the buildings, among which are 400 noblemens palaces, with the ſplendid appearance of ladies richly attired, &c.

This cauſes a prodigious trade in things otherwiſe of no great moment, as equipages, coaches, gondaloes, liveries, habits of ceremony, and ſuch things; as alſo in furniture, paintings, and other extraordinaries of that kind. Hence there are more taylors, upholſters, gold and ſilver lace-makers, embroiderers, and, to ſum up all, footmen and pages, and you may allow me to add fiddlers and ſtrumpets, than in any other city in the world, Paris and London excepted.

At Venice, the numerous throng of gentry, and perſons of the firſt quality, to the carnival, is ſuch, that they frequently number 20 or 30 ſovereign princes there at a time, beſides others of lower rank, without number: and the noblemen of Venice themſelves, though they are very numerous, and affect ſplendor and magnificence in apparel and jewels, as alſo in their furniture, yet they do not entertain ſo many valets, and other domeſtics, as is the cuſtom at Rome: and becauſe they cannot keep coaches and horſes in Venice, yet their grandeur the other way is equally expenſive, and occaſions abundance of thoſe trades before enumerated.

Nor, indeed, does any thing conduce more to the promoting commerce, than the gay and ſumptuous dreſs of the people, eſpecially where the humour once becomes national, as it is at Venice, as well as at Rome.

The Venetians trade with the Turks in the Morea, and the gulph of Theſſalonica, and to ſome of the iſlands, as before obſerved. And as thoſe countries are full of Greeks, and other Chriſtian inhabitants, they carry them proper manufactures, ſuch as wrought ſilks, fine linen, bone-lace, and all ſorts of haberdaſhery for the women, who love to go fine, eſpecially in the iſles. What they carry back in return is difficult to enquire, but is from all parts according to the production of the place, ſuch as currants, raiſins, figs, drugs, rice, corn, oil, wine, cotton, ſilk, &c. and this is the reaſon why Venice is the magazine for the ſcarceſt drugs, and from whence they are ſent over the whole Chriſtian world. As for money, they take little in the iſlands; the iſlanders rather carry ſome money from the Venetians.

Of the Foreign Exchanges of Venice.

The uſance of Venice with reſpect to the following places, viz.

To Amſterdam, two months after date.

To Antwerp, Hamburgh, London - 2 months / 3 months } after date,

Auguſte, Vienna, Franckfort, St Gall, Genoa, Naples } 15 days } after acception.

Florence, Leghorn } 5 days

Rome 20 days

Milan 20 days after date.

After the expiration of the time of theſe different uſances, bills of exchange have ſix days of grace to run.

It is forbidden to pay or accept bills of exchange endorſed, if not by the procuration of the laſt endorſer. All bills of exchange drawn upon any place or fair whatſoever muſt, under pain of being void, be paid in bank, and the bank keep their accounts, and almoſt the whole republic alſo, in ducats and gros.

There are particular perſons who keep their accounts in livres, ſols and deniers gros, whoſe ſubdiviſions are by 20 and 12; and others keep them in ducats current.

The lira, or livre = 10 ducats bank, or 240 groſſi.

The ducat of bank imaginary money, which is uſed in the exchanges, = 24 groſſi, or 124 ſoldi, or 6 $\frac{1}{5}$ lires.

The gros = 5 $\frac{1}{6}$ ſoldi banco, or 32 piccioli.

The ſoldo banco = 12 gros, or $\frac{1}{2}$ ducat banco.

The lira, or livre banco, = 240 gros, or 10 ducats banco = 12 ducats current, or 74 lires 8 ſoldi piccioli.

The ducat bank = 7 lires, 8 ſoldi, 9 $\frac{3}{5}$ piccioli, or 148 $\frac{4}{5}$ ſoldi current, or piccioli.

☞ The word piccioli ſignifies a denier, or a penny, and it is alſo called current money, piccioli or current being ſynonymous words.

The ſequin of gold = 20 lires current money, and is of the ſtandard of 23 $\frac{1}{3}\frac{1}{2}$ carats, and it weighs 66 grains.

The Venetian crown, or ducaton, = 8 lires 10 ſoldi of the ſaid money, of the ſtandard of 11 $\frac{1}{4}$ deniers, and it weighs 600 grains.

The reduction of ducats bank money into current, and the latter again into the former; and alſo of lires bank into lires piccioli, and lires piccioli into lires bank.

800 duc.	12 ſols d'or ban.		* 960 duc.	14 ſol.	5 den. d'or cur.			
$\frac{1}{5}$ 160	2	5 to be add.	160	2	5 the $\frac{1}{6}$ to be ſub.			

* 960 duc. 14 5 den. cur. = 800 duc. 12 ſols d'or in banco.
6 lires 4 ſoldi 6 lires 4 ſoldi

5760			4800		
192			160		
3 lires 2 ſoldi pic.			3 lires 2 ſoldi pic.		
1	4	4	0	12	5
0	2	6			
5956	8	10 cur.	4963	14	5 banco.
$\frac{1}{6}$ 992	14	5 ſub.	992	14	$5\frac{1}{5}$ to be added.
4963	14	5 ban. = 5956		8	10 current.

Beſides the bank money of the prince, there is another current money, which gives a ſur-agio from 15 to 20 per cent. according to particular conjunctures.

Beſides the aboveſaid bank and current monies, there are lires piccioli, which is the money with which merchandizes are ordinarily bought, and theſe are reduced into ducats current, of 6 lires 4 ſoldi, by multiplying the lires by 20 ſoldi, and by dividing the product by 124 ſoldi, the value of the ducat current.

The lira, or lire, = 20 ſoldi piccioli.

The ſoldo, or ſol, = 12 piccioli, or bagattini.

We ſhall now touch upon the ſeveral operations of the exchanges, in order to know for what ſums bills muſt be made, that I would remit to my correſpondents of the undermentioned cities, in their ſeveral and reſpective monies.

Before we enter into theſe operations, it is proper to apprize the reader that, for the ſame reaſons given under the article Holland, in relation to the exchange between that republic and Spain, with regard to the reduction of the parts of the ducat of 375 marvedees, in like manner we ſhall, for facility of computation, ſubdivide the ducat banco of Venice into 20 ſols d'or, and 12 deniers d'or, although the ordinary ſubdiviſion is into 24 gros, or 124 marchetti; and, in conformity hereto, we will ſuppoſe that I owe the following ſums, in ducats, ſols, and deniers d'or, bank money, to my ſeveral correſpondents.

	Duc.	Sols	Den.	Courſe of Exchange.	
At Amſterdam,	1060	17	3	at 88 $\frac{1}{4}$ deniers gros	per ſaid ducat banco.
Antwerp	600	10	—	at 92 deniers gros of exchange	
London	14	9	18	1 at 52 $\frac{3}{4}$ pence ſterling	
Hamburgh	552	10	4	at 86 $\frac{7}{8}$ gros of Hamburgh	
Genoa	373	15	—	at 103 marchetti per crown of 4 lires banco.	
Leghorn	785	1	—	at 102 piaſtres of 20 ſol d'or, per 100 duc. banco.	
Rome	2253	17	5	at 62 crowns d'eſtampe per 100 ducats banco.	
Naples	515	—	5	at 116 $\frac{1}{2}$ ducats of 10 carlins per 100 ditto.	
Lyons	800	12	—	at 62 ducats banco per 100 crowns of 3 lires.	
Auguſta	500	15	—	at 96 rixdollars of 90 kreutzers per 100 duc. banco.	
Vienna	542	12	9	at 188 florins current per 100 ditto.	
Milan	724	3	6	at 154 marchetti per crown of 117 s. exchange.	
Ancona	400	—	—	at 93 crowns of 10 julios per 100 ducats banco.	
Florence	300	—	—	at 78 crowns of 7 $\frac{1}{2}$ lires per 100 ditto.	
Bolzano	800	—	—	at 136 marchetti per rixd. of 93 kreutzers exch.	
Novi	1930	—	—	at 193 ducats banco per 100 crowns mark.	

CASE I.

Of the EXCHANGE of VENICE upon HOLLAND.

To reduce 1060 duc. 17 ſols 3 deniers banco of Venice, into florins, ſols, and penings banco of Amſterdam, exchange at 88 $\frac{1}{4}$ den. per ducat as above.

OPERATION.

1060 Ducats, 17 ſols, 3 deniers, multiplied
By the 88 $\frac{1}{4}$ Deniers gros of exchange.

8480
8480
265 for $\frac{1}{4}$ of 1060
44 $\frac{1}{8}$ for 10 ſols, the $\frac{1}{2}$
22 for 5 ſols, the $\frac{1}{4}$
8 $\frac{6}{8}$ for 2 ſols, the $\frac{1}{10}$
1 $\frac{1}{8}$ for 3 ſols, the $\frac{1}{80}$
} of the exchange.

9362|1 Deniers gros.

the $\frac{1}{4}$|2340 florins, 10 ſols, 8 penings banco, for which the draught muſt be made upon Amſterdam.

INSTRUCTION.

Multiply the 1060 duc. 17 ſols 3 den. by the price of exchange of 88 $\frac{1}{4}$, and divide by 40 deniers gros, the value of a florin, and the quotient will be 2340 florins, 10 ſols, 8 penings banco, to be received at Amſterdam; the proof of which you have under the article HOLLAND, in the exchange of Holland upon Venice.

CASE II.

Of the EXCHANGE of VENICE upon ANTWERP.

To reduce 600 $\frac{1}{2}$ ducats banco of Venice, into livres, ſols, and deniers gros, permiſſion money * of Antwerp, exchange at 92 per ducat.

* It muſt be obſerved, that Antwerp, and all Brabant, exchanges with moſt places in exchange or permiſſion-money, as it is called, which differs 8 $\frac{1}{3}$ per cent. from the current money; that is, 100 livres gros exchange money, make 108 $\frac{1}{3}$ livres gros current money; thus the crown of 48 palais exchange money, makes 52 palais, or ſols, current money.

OPERATION.

600 $\frac{1}{2}$ Ducats banco, to be multiplied
By 92 Deniers gros exchange.

1200
5400
46 for the $\frac{1}{2}$.

55246 Deniers to be divided by 240, give 230 livres, 3 ſols, 10 deniers gros, money of exchange, or permiſſion-money, for which ſum the draught muſt be made upon Antwerp.

Multiply the 600 $\frac{1}{2}$ ducats by the price of exchange of 92 deniers, and divide the product 55246 by 240 deniers gros, the value of a livre gros, and the quotient will be 230 livres, with a remainder of 46 to be multiplied by 20 ſols, the value of the ſaid livre, and dividing by the ſame it gives 3 ſols, with another remainder of 200, which being multiplied by 12 deniers, the value of a ſol, and divided again by the ſame diviſor, you will have 10 deniers gros to be received at Antwerp.—The proof of which muſt be eaſy to thoſe who underſtand the operation.

CASE III.

Of the EXCHANGE of VENICE upon LONDON.

To reduce 1459 ducats, 18 ſols, 1 denier d'or, bank money of Venice, into pounds ſhillings, and pence ſterling of England, exchange at 52 $\frac{3}{4}$ pence ſterling per ducat.

OPERATION.

1459 Ducats, 18 ſols, 1 denier, to be multiplied
By 52 $\frac{3}{4}$ pence ſterling, the exchange.

2918
7295
729 $\frac{4}{8}$ for $\frac{1}{2}$
364 $\frac{6}{8}$ for $\frac{1}{4}$
} of 1459
26 $\frac{3}{8}$ for 10 ſols, the $\frac{1}{2}$.
13 $\frac{1}{8}$ for 5 —— the $\frac{1}{4}$.
5 $\frac{2}{8}$ for 2 —— the $\frac{1}{10}$.
2 $\frac{5}{8}$ for 1 —— the $\frac{1}{20}$.
$\frac{3}{8}$ for 1 denier.

77010 pence ſterling, to be divided by 12 and 20, give 3201. 17 s. 6 d. ſterling, for which the draught muſt be made upon London.

INSTRUCTION.

Multiply the 1459 ducats, 18 ſols, 1 denier, by the price of exchange of 52 $\frac{3}{4}$ pence ſterling, divide the product 77010 pence by 12 and 20, and you have pounds, ſhillings, and pence ſterling. Note, The proof of this muſt be ſo eaſy to thoſe at all acquainted with arithmetic, that we think it needleſs to ſay more.

CASE IV.

Of the EXCHANGE of VENICE upon HAMBURGH.

To reduce 552 ducats, 10 ſols, 4 deniers banco of Venice, into marks lubs of banco of Hamburgh, exchange at 86 $\frac{7}{8}$ gros of Hamburgh, per ſaid ducat.

OPERATION.

552 Ducats, 10 ſols, 4 deniers banco, to be multipled
By 86 $\frac{7}{8}$ gros exchange.

3312
4416
276 for $\frac{4}{8}$ the $\frac{1}{2}$
138 for $\frac{2}{8}$ the $\frac{1}{4}$
69 for $\frac{1}{8}$ the $\frac{1}{8}$
} of 552.
43 $\frac{3}{8}$ for 10 ſols.
1 $\frac{5}{8}$ for 4 deniers.

48000 Gros, to be divided by 32, gives 1500 marks lubs banco, for which the draught muſt be made upon Hamburgh.

INSTRUCTION.

Multiply the 552 ducats, 10 ſols, 4 deniers, by the price of exchange, and divide the product 48000 gros by 32 gros, the value of the marks lubs, and the quotient will produce 1500 marks lubs to be received at Hamburgh. For the proof of which ſee the article HAMBURGH, Vol. I.

CASE V.

Of the EXCHANGE of VENICE upon GENOA.

To reduce 373 ducats, 15 ſols, 9 deniers d'or, bank money of Venice, into lires bank money of Genoa, exchange at 103 marchetti of Venice per crown of 4 lires of Genoa.

OPERATION.

373 Ducats, 15 ſols, 9 deniers, to be multipled
By 124 marchetti.

1492
746
373
62 for 10 ſols, the $\frac{1}{2}$
31 for 5 ſols, the $\frac{1}{4}$
} of 124
5 for 9 deniers, the $\frac{1}{6}$ of 5 ſols.

46350 marchetti, to be divided by 103, gives 450 crowns of 4 lires bank money, for which the draught muſt be made upon Genoa.

INSTRUCTION.

Reduce the 373 ducats, 15 ſols, 9 deniers, into marchetti, by multiplying them by 124, the value of a ducat, and dividing the product 46350 marchetti by 103 marchetti, the price of exchange, and you will have a quotient of 450 crowns of 4 lires, which being multiplied by 4, make 1800 lires banco to be received at Genoa; for the proof of which ſee the article GENOA, Vol. I.

If any thing after the firſt and ſecond diviſions ſhould remain, it muſt be multiplied by 20 and 12, and by dividing the ſame by the exchange, it will give ſols and deniers d'or to be received at Genoa, with the crowns.

CASE VI.

Of the EXCHANGE of VENICE upon LEGHORN.

To reduce 785 ducats 1 ſol banco of Venice, into piaſtres of 20 ſols d'or of Leghorn, exchange at 102 of the ſaid piaſtres per 100 ducats.

OPERATION.

If 100 ducats banco give 102 piaſt. what will 785 $\frac{1}{20}$ ducats?

102 exch.

1570
7850
5 $\frac{1}{10}$

Piaſtres 800|75 $\frac{1}{10}$
20

800 Piaſtres, 15 ſols, for which the draught muſt be made upon Leghorn. Sols 15|02

INSTRUCTION.

The queſtion is ſtated according to the direct rule of proportion, and the operation carried on according thereto. See the article ARITHMETIC.

CASE VII.

Of the EXCHANGE of VENICE upon ROME.

To reduce 2258 ducats, 17 ſols, 5 deniers d'or, bank money of Venice, into crowns d'eſtampe of Rome, exchange at 62 crowns per 100 ducats.

OPERATION.

If 100 ducats of Venice give 62 crowns d'eſtampe, what will 2258 ducats 17 05.

62 exchange.

4516
13548
31 : — : 0 for 10 ſols, the $\frac{1}{2}$.

6 : 4 : 0 for 2 — the $\frac{1}{10}$
: 15 : 6 for 3 deniers.
: 10 : 6 for 2 deniers.

Anſw. 1400 crowns, 10 ſols d'eſtampe, the draught muſt be made for. 1400|50
20
10|00

CASE VIII.

Of the EXCHANGE of VENICE upon NAPLES.

To reduce 515 ducats, 5 deniers d'or, banco of Venice, into ducats del regno of Naples, exchange at 116 $\frac{1}{2}$ of the ſaid ducats of Naples per 100 ducats of Venice.

OPERATION.

If 100 ducats of Venice give 116 $\frac{1}{2}$ ducats Naples, what will 115 duc. 5 — give?

116 $\frac{1}{2}$ exchange.

3090
515
515
257 : 10 for the $\frac{1}{2}$.
2 : 10 for the 5 den.

The draught ſhould be made upon Naples of duc. reg. } 600|00

CASE IX.

Of the EXCHANGE of VENICE upon FRANCE.

To reduce 800 ducats, 12 ſols d'or, banco of Venice, into livres, ſols, deniers Tournois of France, exchange at 62 of the ſaid ducats per 100 of ſaid crowns.

OPERATION.

If 62 ducats give 100 crowns, what will 800 $\frac{3}{5}$ ducats?

100

80000
60 for the $\frac{3}{5}$.

80060 to be divided by 62, give 1291 crowns, 17 ſols, 5 deniers Tournois, for which the draught muſt be made on Lyons.

Note, To reduce the French crowns into livres, ſols, and deniers, multiply the ſame by 3:

Thus 1291 crowns, 17 ſols, 5 deniers.
3

3873 Livres, 17 ſols, 5 den. Tourn. of France.

CASE X.

Of the EXCHANGE of VENICE upon AUGUSTA.

To reduce 500 $\frac{3}{4}$ ducats banco of Venice, into rixdollars, kreutzers and fenings, current money of Auguſta, exchange at 96 rixdollars exchange money of ſaid Auguſta, per 100 ducats banco of Venice.

OPERATION.

100 Ducats banco. 100 Rixd. exch. — 10000

500 $\frac{3}{4}$ Ducats, to be multipled By the 96 Rixdollars exch.

3000
4500
48 for the $\frac{1}{2}$.
24 for the $\frac{1}{4}$.

48072

Rixd. 610|5144
90

Kreutz. 46|2960
4

Fenings 1|1840

The draught muſt be made for 610 rixd. 46 kreut. and 1 fening.

INSTRUCTION.

Multiply the 500 $\frac{3}{4}$ ducats, by the price of exchange of 96 rixdollars, and the product 48072 by 127 rixdollars, current money (becauſe it is the equality of 100 rixdollars exchange money, the current money being 27 per cent. higher than that of exchange): ſeparate 4 figures to the right-hand of the new product 6105144, and it will produce for quotient 610 rixdollars to be received at Auguſta, in current money.— Multiply the remainder 5144 by 90 kreutzers, the value of the rixdollar, and ſeparating 4 figures as before, it gives 46 kreutzers: multiplying alſo theſe 4 laſt figures by 4 fenings, the value of the kreutzer, and ſeparating again in the ſame manner, it produces 1 fening more. ☞ Separating the four laſt figures of the three products, is the ſame as dividing by 10000, the product of 100 ducats of Venice, multipled by 100 rixdollars exchange of Auguſta, which is done with reſpect to the equality of the ſaid 100 ducats, with the exchange of 96 rixdollars of exchange.

CASE XI.

Of the EXCHANGE of VENICE upon VIENNA.

To reduce 541 ducats, 12 ſols, 9 deniers d'or, banco of Venice, into florins, gros, and fenings of Vienna, exchange at 188 of the ſaid florins per 100 of the ſaid ducats.

OPERATION.

If 100 ducats of Venice give 188 florins of Vienna, what will 542 ducats 12 s. 9 d.?

CASE XII.

Of the EXCHANGE of VENICE upon MILAN.

To reduce 724 ducats, 30 ſols, 6 deniers d'or, banco of Venice, into livres, ſols, and den. current money of Milan, exchange at 154 marchetti of Venice, per crown of 117 ſols, exchange money of Milan.

OPERA-

OPERATION.

117	sols of the crown	724 duc. 3 : 6, to be multi.*	
73	sols current	* By 124 marchetti	
351		2896	
819		1448	
		724	
8541	multiplicator	12 : 8	
154	marchetti of exch.	6 : 4	
53	sols exchange	3 : 2	
462		89798 : 2	
770		8541 sols current	
8162	divisor.	89798	
		359192	
		448990	
		718384	
		854 $\frac{1}{10}$, for the 2 sols, the	
		766965572 $\frac{1}{10}$, dividend.	

766965572 $\frac{1}{10}$, divided by 8162, will give 9396, 7 sols, 10 den. current money, and 4698 livres, 7 sols, 10 deniers, also cur. money, for which the draught must be made upon Milan.

INSTRUCTION.

Reduce the 724 ducats, 3 $\frac{1}{2}$ sols, into marchetti, by multiplying by 124, the value of the ducat, and the product will be 89798 $\frac{1}{10}$: multiply the 177 sols of the crown by 73, the product will be 8541; multiply these two products, the one by the other, and it will give 766965572 for a dividend.—Multiply separately the exchange of 154 marchetti by 53, the product will be 8162, for a divisor, which gives for a quotient, 93967 sols, and 6918 for a remainder; and which being multiplied by 12 deniers, the value of a sol, and dividing by the same, it gives 10 deniers.—Separate the last figure of 93967 sols, and take the $\frac{1}{2}$ of the remainder, and you will find that the sum to be received at Milan is 4698 livres, 7 sols, 10 deniers, current money. — Multiplying the exchange of 154 marchetti, by 53 sols exchange, is because you multiply the 117 sols of the crown of Milan, by 73 sols current of Milan, these two multiplicators being in proportion the one to the other, for we have seen in the exchange of Genoa upon Milan, that 106 sols of exchange makes 146 current. See the article GENOA, Vol. I.

CASE XIII.

Of the EXCHANGE of VENICE upon ANCONA.

To reduce 400 ducats banco of Venice, into crowns of 10 julios of Ancona, exchange at 93 of the said crowns per cent. of said ducats.

OPERATION.

If 100 ducats ban. Ven. give 93 crowns Anc. what will 400?

400

Crowns of Anc. to be rec. 372|00

CASE XIV.

Of the Exchange of Venice, upon BOLZANO.

To reduce 800 ducats banco of Venice into florins, kreutzers, and fenings, current money of Bolzano, exchange at 136 marchetti of Venice, per rixdollar of 93 kreutzers of Bolzano.

OPERATION.

136	marchetti of exch.	124 marchetti	
60	kreutzers	800 ducat	
810	divisor.	99200	
		93	
		297600	
		892800	
		9225600 dividend, being divided by 8160, gives 1130 florins, 35 kreutzers, 1 fening, current money, for which the draught must be made upon Bolzano.	

INSTRUCTION.

Reduce the 800 ducats into marchetti, by multiplying them by 124; multiply the product, 99200, by 93 kreutzers, the value of the exchange rixdollar, the new product will be 9225600, the dividend.—Multiply the exchange of 136 marchetti by 60 kreutzers, the value of a florin, the product will be 8160; the divisor, which will give 1130 florins, with a remainder of 480, to be multiplied by 60 kreutzers, the value of a florin, and dividing by the same, you will have 35 kreutzers, and 240 remaining, which multiplied by 4 fenings, the value of a kreutzer, and dividing as before, it gives 1 fening.

CASE XV.

Of the EXCHANGE of VENICE upon FLORENCE.

To reduce 300 ducats banco of Venice into crowns of 7 $\frac{1}{2}$ lires of Florence, exchange at 78 of the said crowns per 100 of the said ducats.

OPERATION.

If 100 ducats of Ven. give 78 crowns of Florence, what will 300 [300?

Crowns of 7 $\frac{1}{2}$ lires 234|00

CASE XVI.

Of the EXCHANGE of VENICE upon NOVI, or BIZENZONE,

To reduce 1930 ducats banco of Venice, into crowns mark of Novi, exchange at 193 of the said ducats per 100 of the said crowns of Novi.

OPERATION.

If 193 ducats give 100 crowns, what will 1930 ducats?

100

193)193000(1000 cro.

mark, for which the draught must be made in the Easter fair upon Novi.

Of the WEIGHTS and MEASURES of VENICE.

Their measure for linen and silks is the brace, and that is of two sorts, viz. 5 braces for silk make something less than 3 English ells; or 100 braces make about 57 $\frac{1}{2}$ ells in London, 98 in Holland, 117 $\frac{1}{2}$ in Hamburgh, 122 $\frac{1}{2}$ in Breslau, 104 in Dantzic, 117 in Leipsic: and the brace for linen is about half an English ell.

Their weights are distinguished in gross and suttle weights.

Their gross quintal, by which they weigh brass, metal, feathers, and other lumbering commodities, is 100 lb. gross.

The other, by which they weigh silk, spices, and drugs, is 100 lb. suttle.

Now 100 lb. gross weight makes 158 lb. suttle weight, or 106 lb. in London avoirdupoise weight.

And 100 lb. suttle weight makes about 63 $\frac{2}{3}$ lb. of their gross weight, or about 65 $\frac{3}{4}$ lb. in London.

And 100 lb. suttle weight of Venice has been found to make about 61 $\frac{3}{4}$ lb. in Hamburgh, 65 $\frac{3}{4}$ lb. in London, 60 lb. in Amsterdam, 59 lb. in Frankfort.

Their gold and silver weights are as follow, viz. 4 grains is 1 carat, 9 carats (or saliques) is 1 quarta, 4 quarta's 1 ounce, and 8 ounces is one mark; and 100 lb. Troy weight has been found to make about 116 $\frac{1}{2}$ of the above marks: and the same in Verona.

Their wine measure is the amphora, of 4 bigorza's; each bigorza is 4 quarts, and each quart 4 sachies, and each sachie is 4 lera's; but, by wholesale, the amphora is 14 quarts, and the bigorza 3 $\frac{1}{2}$ quarts.

Oil they sell by weight and by measure; the mizaro is 40 mero, and the mero is about 3 $\frac{1}{3}$ pints by measure, but by weight it is more.

Corn is sold by the staro, and is in quantity about one sextier of Paris.

The BANK of VENICE.

This is commonly called Banco del Giro: that is, properly, a public depositum, for the reception of the cash of merchants and traders, &c. It was established by an edict of the republic, which declares, That the payment, for merchandizes by wholesale, and bills of exchange, is to be made in bank; and that all debtors and creditors shall be obliged, the one to carry their money to the bank, and the other to receive their payment in bank, by making a transfer from one account to the other.

An excellent memoir received from Venice remarks, That none are obliged to pay for merchandize in bank, every one being free to do so, or otherwise: and with relation to bills of exchange, if it is expressed VALUE IN BANK, i. e. the value to be paid in bank, such bills are to be paid in bank; but when it is expressed in CURRENT MONEY, that is to say, in ducats, or livres current, or in sequins, philippines, or other species, they must be paid in these respective monies, unless the parties agree to negociate the affair in bank; but, in such case, the concerned must previously agree upon the agio. See the article AGIO.

It is allowed sometimes to make real payment, particularly in retail trade, or when strangers desire ready money, or when others shall require current money for the transaction of business by bills of exchange, or otherwise to dispose of it.

The necessity that there sometimes is of making these effective, or money payments, has occasioned a ready-money bank-account to be opened, for the accommodation of those whose affairs require it.

It has been experienced, that this caſh account has not cauſed any ſenſible diminution in the funds of the bank; this liberty of drawing for ready caſh has, on the contrary, occaſioned an augmentation thereof.

By means of the bank, the republic, without cramping the freedom of trade, and without paying any intereſt, has made herſelf miſtreſs of five millions of ducats, to which the fund of this bank is fixed: whereby, on preſſing emergencies, the Venetians have rarely occaſion for extraordinary taxes. The regularity alſo exerciſed in the adminiſtration of the affairs of the bank, for which the ſtate is guaranty, has rendered this eſtabliſhment ſo permanent, that there is great reaſon to judge its duration will be equal with that of the republic itſelf.

The accounts of the bank are kept in livres, ſols, and deniers gros: the livre is 10 ducats bank, or 240 gros, the ducat being equal to 24 gros.

Money of exchange is always underſtood to be that of ducats in bank, which is imaginary, 100 whereof make 120 ducats current money: ſo that the difference between bank and current ducats is 20 per cent. brokers being prohibited to raiſe the ſame higher.

The memoir before cited illuſtrates this matter as follows: 100 ducats bank make 100 effective, which have beſides another agio upon the ducats current, or upon the current money; and this agio, like the other, is called an agio of bank, which is always fixed at 20 per cent. and, on the contrary, the other agio is uncertain, and varies more or leſs: for example, ſuppoſe this variable agio to be 29 per 100, if we would know how many 100 ducats bank will produce current, we muſt firſt add the fixed bank agio of 20 per cent. and afterwards upon the 120 ducats muſt be added the value of 29 per cent. thus 100 ducats bank will make 154 ducats and 19 gros current.

The bank is ſhut four times a year, viz. the 20th of March, the 20th of June, the 20th of September, and the 20th of December; and it remains ſhut every time for the ſpace of 20 days. During this time, buſineſs is not obſtructed, the money payments go on, and what is tranſacted in bank, is transferred upon the opening thereof.

The ſaid memoir likewiſe informs us, That the preciſe times of opening and ſhutting the bank have been ſettled, by an ulterior decree of the ſenate, of the 20th of February, 1730, as follows: (1.) That it ſhall be ſhut the Saturday before Palm-Sunday, and opened again the Monday after the Octave of Eaſter. (2.) From the 23d of June to the ſecond Monday in July. (3.) From the 23d of September to the ſecond Monday in October. (4.) From the 23d of December to the ſecond Monday in January. The bank is alſo ſhut on all ordinary holidays, and every Friday, when there is no ſuch holiday; but at preſent the bank is not ſhut on law-court holidays, nor on the Fridays of the month of March, as heretofore.

There are, beſides, other extraordinary times of ſhutting up the bank, which is for eight or ten days, during the Carnival, and as many for the Paſſion Week. It is ſhut likewiſe every Friday of the week, when there is no holiday, for the ballancing of their accounts.

Bills of exchange for places and fairs are paid in bank. A ſeller cannot refuſe payment in bank for his merchandize, when there is no agreement to the contrary.—Bills of exchange, from the expiration of their time to run, have ſix days of grace, or RISPETTO DI BANCO; and, in default of payment, you are not obliged to make proteſt, but the ſixth day, after which you run the hazard, if not done.

From the moment that the bank is ſhut, a debtor is not obliged to the payment of bills of exchange in caſh, nor in any other manner; nor can a proteſt be made 'till the opening of the bank, and that only after ſix days of grace, according to cuſtom, excepting, nevertheleſs, in the caſe of a failure, and, when this happens, ſtrict meaſures may be taken, provided the time of uſance, with regard to bills, is expired.

Bills of exchange endorſed cannot be paid in bank: the perſon to whom the bill is payable, muſt ſend a letter of attorney to his correſpondent at Venice, to receive it for him; otherwiſe it is neceſſary that the bill be made payable to ſuch correſpondent.

Contracts for goods and merchandizes are made for current money, and not in bank, except thoſe for oil and quickſilver, which are always dealt for in bank money.

As the accounts of the public bank of exchange are kept in livres, ſols, and deniers, when transfers are therein made, it muſt be done by reckoning 10 ducats banco per livre: for example, if you have occaſion to write in bank, ducats 1246 : 8, it is not ſpecified in ducats and gros, but in liv. 124 : 12 : 8, which make the ſaid ſum of ducats banco. To give an idea with what facility and convenience parties may be paid in bank, the following is the method practiſed.

Aſdrubal is indebted to ſundries for fundry particulars:

To Berentio, for a bill of exchange remitted from London upon ſaid Aſdrubal, of the ſum of ducats banco - - -	2689 : 4
To Caſimiro, for a bill of exchange, remitted to Aſdrubal upon Amſterdam - -	3847 : 9
Brought over - - -	6536 : 13
To Domitian, for the value remitted to ſaid Aſd.	4754 : 17
To Emilio, for ballance of an account current, ſettled with Aſdrubal - - -	1589 : 5
Total ducats -	12880 : 11

To diſcharge theſe ſeveral ſums in bank, when Aſdrubal has the ſum in bank requiſite ſo to do, he appears before two of the book-keepers of the bank (who write uniformly, at the ſame time, in two ſeparate bank books) and he ſays or dictates to them as follows:

By Aſd. to Barentio, for a bill from London	l. 268 : 18 :	4
to Caſimiro, for one from Amſterdam	384 : 14 :	9
to Domitian, received -	475 : 9 :	5
to Emilio, for ballance -	158 : 18 :	5
Livres bank -	1288 : 0 :	11

In this manner the whole is regulated, without need of any receipt, declaration, or acquittance, between the parties. It is not even neceſſary for the creditors to be preſent when theſe articles are wrote off, except Emilio, becauſe when he ſettles the ballance of an account, the creditor muſt be there, and affirm, by a ſimple AYE, to the writer, that ſuch ſum makes the ballance, an act of this kind being more valid than any other acquittance that can be required by the payer. And ſuppoſe that Aſdrubal has not, by his credit in bank, a ſum ſufficient to pay what he owes, or that he has none at all; in this caſe he muſt carry into bank ſo much current money as the ſaid ſum amounts to, upon the footing of 29 per cent. agio: or, by the means of a broker, he muſt find ſuch who will lend him that ſum (after having agreed for the ſaid agio, perhaps at $\frac{1}{8}$ difference) and transfer the ſame in bank, to the credit of Aſdrubal's account: ſuppoſe that Flammio is the perſon who receives the value thereof, he goes to the bank book-keepers, and orders them to write as follows:

By Flammio. To Aſdrubal, l. 1288 : 0 : 11. In this manner the diſpoſition that Aſdrubal has made in bank, is juſtly regulated for the value of the ſeveral beforementioned ſums. By theſe examples, the great conveniency of this bank may be judged of, particularly in a city where ſuch large tranſactions in bank and exchange are negociated.

VIRGINIA. We having ſpoken ſo largely already throughout this work, in relation to the high importance of the colonies to this kingdom, it cannot be neceſſary to urge that matter further; nor is it needful, we apprehend, to ſay more than we have done, with reſpect to the precarious ſtate wherein our plantations on the continent of America ſeem to be at preſent, from the unjuſtifiable conduct of the French. What we have ſaid upon theſe points, is to be met with under the articles BRITISH AMERICA, CANADA, COLONIES, FLORIDA, LOUISIANA, MAP, NORTH CAROLINA, PENSYLVANIA, PLANTATIONS, SUGAR COLONIES, TRADE.

And as this is the laſt time that we ſhall have occaſion in this work to ſpeak of our colonies in America, it may not be unacceptable to give a ſummary of the meaſures taken by FRANCE to protect and extend the commerce of their colonies and plantations in this part of the world; whereby it will appear, in a narrow compaſs, by what means they are at preſent enabled to figure it ſo powerfully in the American world.

REMARKS on the article VIRGINIA, before the laſt war.

The MEASURES taken by FRANCE to promote and extend the TRADE and COMMERCE of their COLONIES and PLANTATIONS in AMERICA.

The meaſures taken by the French to people their colonies, are,

I. To people them with a number of WHITES proportionate to that of BLACKS, that the latter may not be an overmatch for the former, and raiſe inſurrections*.

* The caſe is otherwiſe with regard to our colony of JAMAICA. See an Eſſay concerning Slavery, and the danger Jamaica is expoſed to from the too great number of ſlaves, &c.

II. They ſend over French workmen, ſo articled as ſervants, to render labour cheap, and to inſtruct the negroes in ſuch things as may render them more beneficial to the French planters.

III. They regularly inſtruct the people in the uſe of arms, as well to defend their colonies at the leaſt expence to the crown, as to train them to hunting, not only for food, but to enlarge the peltry trade in New France†. See our article FRENCH AMERICA.

† We have not been ſo careful in regard to either of theſe material particulars.

IV. Thoſe who are bred up in the hoſpitals in France (where there is a prodigious number) are ſent to America for planters, and every ſingle man of theſe is obliged to marry an Indian woman. And to enable them to trade among themſelves, they had a ſupply of 25,000,000, in bank bills, granted them, by an arrêt of the 16th of July, 1719. See the article CANADA.

V. The French king gave the clergy conſiderable grants of lands in Canada, and ſent thither a great number of miſſionaries and Jeſuits to Quebec, who are diſperſed among the Indians, fall in with their cuſtoms, and thereby have greatly extended their trade and influence among them.

VI. They have taken effectual meaſures, from time to time, to eſtabliſh formidable colonies from Florida and the Miſſiſſippi, to Canada, upon the back of all the Britiſh colonies on the continent of America, and have erected many ſtrong forts in the moſt advantageous ſituations, and deſtroyed ſeveral nations of our Indian allies, and drawn others off from our intereſt, and added them to their own *.—See our articles BRITISH AMERICA, FLORIDA, LOUISIANA, NORTH CAROLINA, PENSYLVANIA, PLANTATIONS, &c.

* Can any meaſures prove more effectual to reduce the Indians to their obedience?

VII. The negro-trade, for the benefit of their iſland colonies in particular, is regulated upon wiſer principles than that of any other nation.—Their great Eaſt-India company, with all its privileges, &c. is the ſupport of their African trade. See the articles FRANCE, and FRENCH AFRICAN TRADE and COMPANY; ſee, in particular, an account of the bounties, exemptions, privileges, and encouragements, given by the French to their African Company, &c. See alſo the article FRENCH AMERICA, in regard to the trade of their iſland and continent colonies in America, where we have treated of this matter very fully, extracted from the regiſters of the council of ſtate. See further, LE CODE NOIRE, ou RECUEIL des reglemens rendus juſq'uà preſent [1742] concernant le governement, l'adminiſtration de la juſtice, la police, la diſcipline, & le commerce des negres dans les colonies Françoiſes. Et les conſeils & compagnies établis à ce ſujet †.

† By theſe means they have peopled their iſland colonies cheaply with negro ſlaves, and can thereby afford the produce of their colonies cheaper than we can that of ours.

VIII. For the further regulations of the commerce of France, ſee the article CHAMBER of COMMERCE, and my REMARKS thereon. See alſo the article TURKEY TRADE and COMPANY, in the concluſion, for an exemplification of the methods of proceeding of the DEPUTIES of COMMERCE or council of trade ‖, in order that nothing eſſential may be omitted to be laid before the ROYAL COUNCIL, for the government of their reſolutions in regard to points of trade. See alſo the article CONSUL, with our REMARKS thereon.

‖ This council it is which overſees the manufactures of the kingdom, and procures to them thoſe encouragements, that liberty, and thoſe immunities which gave birth to them, and preſerves them. It directs the mutual commerce between France and its colonies, to their beſt common advantage. Well informed of the ſtate of the national trade, by a compariſon of the annual imports and exports, it obſerves the branches of it which want protection. From this knowlege it is that they govern opportunely their ſollicitations to foreign powers for new advantages; that they defend thoſe which they poſſeſs, or profit of thoſe which preſent themſelves. It is from the repreſentations of this board that thoſe treaties of commerce are projected which commonly accompany treaties of peace. In ſhort, this council is a center of union for trade, the marine, and the revenue, to furniſh one another with reciprocal and neceſſary occaſional aſſiſtance.

IX. After eſtabliſhing the ſaid council of commerce, ordonnances were iſſued for regulating the conduct of the governors, ſur-intendants, &c. in America, and a ſovereign council was appointed in each colony, conſiſting of 12 counſellors, and the intendant as preſident.—This council is the ſupreme judicature, in all cauſes, without appeal, in the colonies. Here every one pleads his own cauſe, viva voce, or by memorial, ſollicitors and barriſters being not to appear there: thus lawſuits are quickly determined §.—Beſides theſe, there is in each colony a lieutenant-general, both civil and military, an attorney-general, the great provoſt, and a chief juſtice in eyre.—The chief officers are ſuch checks on each other, that few abuſes, injurious to the crown or ſubject, are committed without ſpeedy redreſs.—The French have a governor general ‡ of Louiſiana, or Miſſiſſippi, reſiding at New Orleans,

§ Does not this prevent the planters and traders being diſtracted with law-ſuits, which unfit them to exert their trading induſtry?

‡ Our colonies being differently conſtituted among themſelves, and having no governor-general, &c. to direct their affairs upon one ſteady plan of conduct, for the ſafety and proſperity of all, are liable to great diſadvantages and dangers.—We have many difficulties to encounter in relation to our charter-governments, which require the redreſs of parliament.

and the lieutenant-governor at Mobille. See the article LOUISIANA.

X. The revenues ariſing in the French colonies are accounted for in the chamber of accounts, and all officers give ſecurity for the due performance of their duty; whereby there is a conſtant fund for the uſe of the colonies, applied as adviſed by the council of trade *.

* We have no ſuch competent fund for the conſtant ſupport of our colonies.

Of the DUE EXECUTION of the ORDONNANCES, EDICTS, and ARRETS, in relation to TRADE, iſſued in FRANCE, concerning their Plantations.

I. The council of commerce is the channel of conveyance, in regard to matters of trade, to the royal council.—The former examines and diſcuſſes, as we have ſhewn before, all propoſitions and memorials, and the ſecretary keeps an exact regiſter thereof: theſe are laid before the royal council.—With ſuch ſteadineſs and independency does this council of commerce act, that they have frequently oppoſed and overruled the determinations of the regal council. By this means the council of trade guards againſt encroachments, as well on the rights of the crown as on the property of the ſubjects, and the ordonnances or arrêts of the crown ſcarce ever fail to be duly executed: for the council of ſtate is ſo conſtituted, that it may be truly ſaid to be (as a late judicious writer obſerves) the eyes, the ears, and the hands of the king, as there is no act done but what may be redreſſed, by applying to the king in this council of ſtate: if the officers of the crown are aggrieved by acts of power in their ſuperiors, they may, and often do, meet with redreſs on that head: which regulation hath a wonderful effect in the foreign concerns of the French nation, whereby all channels of information are left open to the view of the crown, the officers of the lower claſs not being debarred acceſs to the crown, nor liable to oppreſſion of their ſuperiors without redreſs. Thus care is taken for the ſecurity of the ſubjects in America, ſo as not to leave them a prey to governors, and other officers in the plantations. And in order the more effectually to inforce the execution of the royal edicts, arrêts, and ordonnances, the penalties for the violation thereof are vigilantly inflicted. See our articles before referred to †.

† This point certainly deſerves due attention in this kingdom.

The FRENCH MANAGEMENT of the INDIANS in NORTH AMERICA.

I. We have ſeen how the French intermarry with the Indians, and of what uſe their miſſionaries and Jeſuits are among thoſe people.

II. The French who carry on the fur-trade in Canada do it by licence: but they employ great numbers of Indian traders, whom they call COUREURS DE BOIS, who are expert in that trade, and go in canoes, and trade with moſt of the ſavage nations ‖ round the government of Canada. The coureurs de bois are, at preſent, become very numerous, being computed, at leaſt, at 1500 men, who are often employed as a kind of flying corps, and joined with the French Indians, either to attack the ENGLISH, or ſuch Indians as are in friendſhip with them.

‖ Is not this far more judicious than our methods of traffic with the Indians?

III. The French for many years being prevented, by the FIVE NATIONS in our intereſt, from diſcovering the great lakes, carrying on trade, and forming alliances with the Indians who lived to the ſouthward and weſtward of them, they prevailed with our Charles II. to forward a peace between the French and thoſe nations.—This gave them a power to extend their lines, and build FORTS to the ſouthward, by which means the FIVE NATIONS have been much galled, ever ſince the building of FORT FRONTENAC, NIAGARA, and others.

IV. The French have cut off many of them, by treachery and open force, when the Engliſh have neglected to ſupport them; ſo that thoſe warlike people are ſo reduced, as to be unable to withſtand the French, which has been owing to our engaging them in wars with the French, and then leaving the burthen of the war on them §. See LOUISIANA.

§ This diſregard and treachery on our ſide towards the Indians, will hardly be thought to cement their friendſhip towards us.

V. The French alſo have built a FORT near the water-fall of SAUT ST MARIE, and erected another of conſiderable ſtrength at CROWN POINT, on the lands of the FIVE NATIONS,

TIONS, which is of more ſervice to the French, and, conſequently more hurtful to the Engliſh, than any of the forts the French have built from Quebec to the river Ohio. By this fort they keep the Five Nations under conſtant alarms, and diſtreſs them and their allies in their huntings; and by CROWN POINT, FORT FRONTENAC, NIAGARA, &c. they keep open a communication with the weſtern Indians.

VI. They likewiſe prevent the Engliſh from making a proper uſe of the Five Nations againſt the eaſtern Indians, who live in the province (as the French call it) of GASSPESSIE, which is part of NOVA SCOTIA: by this means, the Indians to the eaſtward of NEW ENGLAND are left at liberty to make continual inroads upon the Engliſh ſettlements of NOVA-SCOTIA: though this might be prevented, if the FIVE NATIONS could, with ſafety, attack the eaſtern nations in the province of GASSPESSIE, in the back parts of Nova Scotia. *

* Upon what plan, on our ſide, the ill conſequences of theſe meaſures may be greatly prevented, if executed in time, ſee our REMARKS on the article LOUISIANA.

VII. CROWN POINT is near to the branches of HUDSON'S RIVER, which runs by Albany to New York: therefore, from the ſituation of this fort, the province of NEW YORK may be brought into imminent danger; and, indeed, may endanger the ſafety of the whole Britiſh continent of America; for if the French take us at an unguarded hour, and make themſelves maſters of New York, they may cut off the communication between our NORTHERN and SOUTHERN COLONIES, and, by the aid of their INDIANS, they might have it in their power to deſtroy the Engliſh ſettlements.

VIII. Though the Engliſh have above ten times the number of ſettlers which the French have in their colonies on the continent of America, yet the Engliſh frontiers making near 1500 miles in length, and the French having now moſt of the Indians in their intereſt, it is not eaſy to guard againſt the Indians in their ſudden attacks; for before the Engliſh can collect a force to oppoſe them, the Indians may retire and ſhelter themſelves behind the FRENCH FORTS; and in ſuch an extenſive foreſt, through ſwamps and thickets, it is ſcarce poſſible to purſue them with any proſpect of advantage, or to ſupply an army with neceſſaries in ſuch an enterprize †.

† Should not all imaginable ways be taken to ſecure the Indians ever after in our intereſts?

IX. The deſign of the French, in taking the great lakes, was to ſecure the Indians and the fur-trade to themſelves.—The building of CROWN POINT was to awe the FIVE NATIONS, or bring them into the meaſures of FRANCE.—The treaties with the EASTERN TRIBES OF INDIANS, and erecting the province of GASSPESSIE out of NOVA SCOTIA, was to enlarge their territories on the SEA-COAST, and extend their FISHERIES.—Theſe encroachments, added to thoſe made at the OHIO, muſt render them very formidable.

X. If the French ſurrender to us the FORTS which they have lately taken at OHIO, and yet continue to extend their SOUTH LINE, they would thereby take in a great part of VIRGINIA, and of NORTH and SOUTH CAROLINA, and leave us wholly expoſed to the excurſions of the INDIANS in all our frontier ſettlements; therefore the ENGLISH ought not only to demoliſh the FORTS which they have lately built on the branches of the river OHIO, but to take CROWN POINT and NIAGARA, and alſo to erect FORTS inſtantly, for the protection of the FIVE NATIONS, and for enlarging our trade and commerce with the INDIANS §.

§ How our Indian trade and affairs have ſuffered by the handlers at ALBANY, ſee our REMARKS on the article LOUISIANA.

XI. If the French come to a DIVISION with the Engliſh on the continent of America, their intention apparently is to include our INDIAN ALLIES within their limits, and to turn our own weapons againſt us.

XII. Many of the Indians to the weſt of the APALACHIAN MOUNTAINS have acknowleged themſelves ſubject to the crown of GREAT-BRITAIN, and, were we to determine their territories to be within the FRENCH limits, it would be throwing them into the arms of FRANCE, deſtructive of all our frontier ſettlements, and put an intire ſtop to the trade and commerce which hath hitherto been carried on with them; and, in ſuch caſe, the FRENCH, doubtleſs, would erect divers FORTS within their territories, and compel our preſent INDIAN FRIENDS to make war on us.

XIII. The ULIBALYS, CHICANES, and CHATTAS, who were the moſt conſiderable nations upon and between the river Coza and the MISSISSIPPI, kindly entertained the Engliſh, who reſided among them ſeveral years, and carried on a ſafe and peaceable trade with them, 'till about the year 1715, when, by the intrigues of the FRENCH, they were either MURTHERED, or obliged to make room for thoſe NEW INVADERS, who have ſince unjuſtly poſſeſſed and fortified the ſame ſtations, in order to curb the natives, and to cut off the communication with the Engliſh traders; whereby the French have ingroſſed a profitable trade for above 500 miles, of which the BRITISH SUBJECTS were a few years ago the ſole maſters. See our article FLORIDA.

XIV. But if ſuch LIMITS were determined between the ENGLISH and the FRENCH, thoſe who ſettle on our frontiers would not be more ſecure in reſpect of their lives or poſſeſſions, as it has always been, and always will be, the policy of France to ſtir up their friendly Indians to annoy our frontier ſettlements, and afterwards diſavow every act done by them.

XV. What has greatly contributed to the ſucceſs of the French affairs in America, and has given them ſuch weight and influence with the Indians, is the appropriation and due application of a fund for thoſe purpoſes.—How theſe evils may be, or might have been, we moſt humbly conceive, happily prevented, ſee our article LOUISIANA [REMARKS thereon] and ſuch other articles as we have referred to occaſionally on our AMERICAN AFFAIRS.

Of the FRENCH ISLAND-COLONIES in AMERICA.

I. In a memorial of the French deputies of commerce, laid before the royal council in the year 1701, the ſaid deputies repreſented, That the French had then 8,850 white men, and 45,600 blacks in their iſland-colonies *; but, by a calculation made in the year 1751, the FRENCH had then, in the ſaid colonies, upwards of 51,500 white men, fit to bear arms, independent of many thouſands of ſailors employed in the trade of the colonies, and 364,800 ſlaves of both ſexes; and, ſince the increaſe of their colonies, they have incroached upon the ENGLISH, in ſettling of ST LUCIA, TOBAGO, DOMINIQUE, &c. By what means theſe things have come to paſs, ſee the articles beforementioned, particularly FRANCE, FRENCH AFRICAN TRADE and COMPANY, and FRENCH AMERICA. See LEEWARD ISLANDS.

* It is proper to remark here, That the deputies of commerce do not make any mention of the iſlands of St Vincent, St Lucia, or Tobago. See our article BRITISH AMERICA. The colonies ſpecified by the ſaid deputies are, CAYENNE, GRENADE, MARTINICO, GUADALOUPE, MARIGALANTE, ST CRUCE, HISPANIOLA, or ST DOMINGO, PETIT GUAVE, LA DOMINIQUE, LES XANTIES, ST MARTIN, and ST BARTHOLEMY (a.)

(a) Vide Memoire ſur la compagnie de Guinée, ſur le commerce des colonies François de l'Amerique, & l'état preſent des iſles que la France y occupe, les moyens de s'y conſerver, & s'y étendre, & leurs ſentimens ſur les ports & commerces excluſifs, en particulier ſur les partys du tabac & du ſucre.

II. By a calculation made from the year 1737 to 1744, it appeared, That the amount of the produce of the French ſettlements on the continent of America, and alſo of their fiſhery on the coaſt of Newfoundland, &c. was 820,000 l. ſterling per annum, and upwards—That the ſaid freight, in time of peace, amounted to 220,000 l. ſterling, and upwards, which, incluſive of their fiſhery, annually employed 9000 ſeamen.

III. And it appears, by the beforementioned French memorial of the deputies of commerce in 1701, that the French did not employ above 100 ſail of ſhips in the WEST-INDIA TRADE, and theſe ſhips were not near the ſize, dimenſions, or burthen of their ſhips at preſent employed therein; neither were their commodities of equal goodneſs or value of thoſe which they now produce; but, by a calculation made of the amount of the produce of their Weſt-India colonies, from the year 1737 to 1744, the French Iſlands have, in ſugar, rum, molaſſes, indigo, pimento, cotton, pepper, ginger, coffee, &c. &c. produced to the value or amount of 2,400,000 l. ſterling per ann. and upwards, independent of an extenſive and profitable trade carried on from St Domingo with the Spaniards in America. Moreover, that in the French WEST-INDIA COMMERCE, 120,000 tons of ſhipping, with 11,000 ſeamen, are annually employed; the freight of which (as computed) amounted to 480,000 l. ſterling per annum.—Theſe are the effects which thoſe regulations, arrêts, edicts, and ordonnances iſſued in France, with relation to their colonies, and exhibited throughout our work, have produced.

The STEADY MEASURES taken by the FRENCH to PROTECT and EXTEND their AMERICAN COLONIES.

I. It has always been the conduct of France, in relation to the Spaniſh depredations committed in their American trade, to check them, by impowering their governors to grant private commiſſions, and employ ſhips of force, to treat their guardes de coſta as pirates; and they avow or diſavow the conduct of their governors therein, as the circumſtances of their affairs require.—When the Spaniards have complained of the French governors making reprizals, or treating the Spaniſh guardes coſtes as pirates, the anſwer of the French hath generally been, That it was the duty of their governors to protect the king's

king's ſubjects, but if they found their conduct blameable with reſpect to the ſubjects of Spain, they would grant them ſatisfaction therein. However, it has always ſo happened, that the French have found ſufficient cauſe to throw the blame on the Spaniſh governors, and the guardes de coſtes commiſſioned by them †.

† Might not the like meaſures have preſerved our logwood-trade to us, from which, it ſeems, we are now abſolutely excluded by the Spaniards, notwithſtanding our undoubted right to the ſame? See our article LOGWOOD.

II. In the ſettlement of St Domingo, the French did not appear openly to ſupport the buccaneers who firſt ſettled there, but only ſupplied them with arms and ammunition, 'till they ſtrengthened themſelves and got poſſeſſion of a great part of St Domingo.

III. The French have, for ſome years ſince, carried on a very lucrative, though illicit trade, from the Miſſiſſippi to Mexico, and we have not heard of any complaints on that head from the Spaniards, or their guardes de coſtes, committing any depredations on them on that account. They have alſo carried on an extenſive ſmuggling trade from St Domingo to the Spaniſh ſettlements, which has ſomehow been winked at by the Spaniards: and yet ſome are willing to flatter themſelves, that there is not ſo good an underſtanding between the French and the Spaniards, as between the latter and the Engliſh *.

* Is it any indication of friendſhip on the part of the Spaniards, towards the Engliſh, when they have thus long ſuffered the French to carry on an illicit trade, and have lately extirpated the Engliſh logwood cutters from their rightful poſſeſſions, while they pretended to be negociating a treaty with us, to ſettle that matter amicably? Does not the Spaniard's preſent attempt too upon the Dutch colonies of ISEQUEBE and BERBICE, ſhew as high regard for that republic, as their honourable treatment of us does to Great-Britain? Will the Dutch be blind, as long as the Engliſh have been, to their true intereſts, and ſuffer themſelves to be lulled into a lethargy? Sure the Proteſtant maritime powers will at length be rouſed, and never ſuffer Popiſh perfidy to be triumphant.

That the French have, by the groſſeſt falſhoods and perfidy, endeavoured to make ſhameful and unjuſtifiable encroachments upon the Britiſh colonies and plantations in America, has been ſhewn in various parts of this work, as may be ſeen by the various articles before referred to.—We ſhall, at preſent, only add a word more upon this occaſion.

NOVA SCOTIA being the only province in AMERICA, belonging to the crown of England, that can be made a ſufficient barrier to cover any of our plantations from the invaſions of the FRENCH, and check their motions on that ſide of the continent, by ſea and land: the French have practiſed every art of deceit and treachery to encroach upon this colony.

In my REMARKS upon the article MAP, I have taken occaſion to ſhew, that there is an office in the French marine for depoſiting charts and plans, to be made uſe of for the benefit of their navigation; nor is this nation leſs ſollicitous in regard to geography than hydrography; for it too frequently appears, that their geographers are directed to adapt their maps to the views, ſchemes, and pretenſions of their ſtateſmen, however unjuſtifiable they may be: nay, we have all imaginable reaſon to believe, that thoſe Machiavellians have ſet even their hiſtorians to work, to aſſert and maintain thoſe things for truth, with reſpect to their POSSESSIONS, that from them their map-makers may the more plauſibly deſcribe upon paper, thoſe ſhameful encroachments upon the dominions of other ſtates, to the end that their ſtateſmen may the more plauſibly ſupport them by artful negociations.—This we have ſhewn to be the caſe, in variety of inſtances throughout this work, which we have often referred to; and the truth of this charge againſt the French has been lately unanſwerably corroborated, with great judgment and accuracy, in a treatiſe intitled, The CONDUCT of the FRENCH with reſpect to the BRITISH DOMINIONS in AMERICA, particularly NOVA SCOTIA.—In a letter to a member of parliament.—Printed for T. Jefferys.

An EXTRACT from Dr MAYHEW's remarkable POLITICAL SERMON, preached lately before the GOVERNOR, COUNCIL, and REPRESENTATIVES of MASSACHUSETS BAY in NEW ENGLAND, on the intereſting circumſtances of NORTH AMERICA before the laſt war.

'What horrid ſcene is this, which reſtleſs, roving France, or ſomething of an higher nature, preſents to me, and ſo chills my blood! Do I behold theſe territories of freedom become the prey of arbitrary power! Do I ſee the motly armies of French and painted ſavages taking our fortreſſes, and erecting their own, even in our capital towns and cities! Do I behold them ſpreading deſolation through the land! Do I ſee the ſlaves of Lewis, with their Indian allies, diſpoſſeſſing the free-born ſubjects of king George, of the inheritance received from their forefathers, and purchaſed by them at the expence of their eaſe, their treaſure, their blood! To aggravate the indignity beyond human toleration, do I ſee this goodly patrimony raviſhed from them, by thoſe who never knew what property was, except by ſeizing that of others for an inſatiable lord! Do I ſee Chriſtianity baniſhed for Popery! the Bible for the maſs-book! the oracles of truth for fabulous legends! Do I ſee the ſacred edifices erected here to the honour of the true God and his Son, on the ruins of pagan ſuperſtition and idolatry, erected here, where Satan's ſeat was! Do I ſee theſe ſacred edifices laid in ruins themſelves, and others riſing in their places, conſecrated to the ſaints and angels! Inſtead of a train of Chriſt's faithful, laborious miniſters, do I behold an herd of lazy monks and Jeſuits, and exorciſts, and inquiſitors, cowled and uncowled impoſtors! Do I ſee a Proteſtant there ſtealing a look at his Bible, and, being taken in the fact, puniſhed like a felon! What indignity is yonder offered to the matrons! and here to the virgins! Is it now a crime to reverence the hoary head! and is he alone happy that taketh the little ones, and daſheth them againſt the ſtones! Do I ſee all liberty, property, religion, happineſs, changed, or rather tranſubſtantiated into ſlavery, poverty, ſuperſtition, wretchedneſs! And, in fine, do I hear the miſerable ſufferers (thoſe of them that ſurvive) bitterly accuſing the negligence of the public guardians! and charging all their calamities leſs upon the enemies, than upon the fathers of their country! O diſhoneſt, prophane, execrable ſight! O piercing ſound! that entereth into the ears of the Lord of Sabbath! Where, in what region, in what world am I? Is this imagination (its own buſy tormentor), or is it ſomething more divine? I will not, I cannot, believe 'tis prophetic viſion, or that God has ſo far abandoned us.

And how different a ſcene is now opening upon me, with clearer indications of truth and reality! There inſolence and injuſtice puniſhed! Here, 'the meek inheriting the earth!' Liberty victorious! Slavery biting her own chain! Pride brought down! Virtue exalted! Chriſtianity triumphing over impoſture! and another Great-Britain ariſing in America! But I muſt not declare the whole—The Lord God omnipotent reigneth! Juſt and true are all thy ways, O thou king of ſaints! And them that in pride thou art able to abaſe, 'What 'has pride profited, or what good has vaunting brought you,' ye reſtleſs diſturbers of our peace? What good your maſſes? your relics? your croſſings? your Ave Marias? and to which of your ſaints will you now turn?

But we are not, my honoured fathers, to preſume on God's protection, much leſs on his giving us any ſignal advantages over them that are ever either planning or executing miſchief againſt us, without uſing the proper means for obtaining that protection, and theſe advantages: as the apoſtle ſaid to the mariners, after aſſuring them of deliverance from the impending danger, 'Except theſe abide in the ſhip, ye cannot be ſaved;' ſo it may be ſaid to our Britiſh colonies, Ye cannot be ſaved from the ſtorm ye are now threatened with, yea, which is already begun, except ye are at union amongſt yourſelves, and exert your ſtrength together, for your common intereſt. Upon this condition you are ſafe, even without a miracle: otherwiſe, nothing ſhort of one can ſave you. And can you, without the utmoſt indignation, think of becoming a prey to thoſe who are ſo much inferior to you in all reſpects, merely for want of unanimity, public ſpirit, the manly reſolution of your forefathers, and a little expence?'

For a diſplay of the matchleſs perfidy of FRANCE, ſee our articles AMERICA, BRITISH AMERICA, CANADA, FLORIDA, FRANCE, LOUISIANA, NORTH CAROLINA, PLANTATIONS, INDIANS IN NORTH-AMERICA.

REMARKS on this article VIRGINIA, ſince the laſt war, and the treaty of 1763.

Under our article AMERICA, we have given the treaty of peace, concluded in the year 1763, at large. By the preſent as well as the various articles we have above referred to from this, and alſo from divers others referred to from them, it appears that the fulneſs of time was come, before the laſt war, that Great-Britain muſt either extirpate the French out of NORTH-AMERICA, or that the French would extirpate the ſubjects of Britain from thence. By the laſt treaty of peace, we ſeem now to have ſecured, from the power of the French, the whole range of our Britiſh colonies from north to ſouth of this extenſive continent, by the ceſſion of CANADA and all its DEPENDENCIES, and more particularly the ceſſion of CAPE BRETON, to the crown of Great-Britain. See CANADA, MISSISSIPPI, NEWFOUNDLAND.—By the ſaid treaty we have alſo obtained the ceſſion, from Spain, of Eaſt and Weſt Florida; ſo that, at preſent, our North American colonies are ſecured to this kingdom by divers maritime barriers; we mean, on the moſt northerly parts, by the GULPH and RIVER ST LAWRENCE, and by CAPE BRETON; by the extended ocean, on the eaſt, from CAPE BRETON to FLORIDA; by the GULPH OF MEXICO on the ſouth, by our poſſeſſions therein, as the BAY OF APALACHE, PENSACOLA, and MOBILLE; and on the weſt, by the Britiſh right of navigation to and from the River MISSISSIPPI: ſo that now we ſhall be able to exert the full force of our maritime ſtrength to

maintain and preſerve to the Britiſh crown thoſe eſtimable colonies. The ſmall poſſeſſion of NEW ORLEANS, which the French enjoy on the eaſt of the MISSISSIPPI, does not ſeem to put it in their power, any more than their other poſſeſſions on the weſt of the river, to endanger thoſe colonies from that power; eſpecially if we attach the INDIANS on the eaſt thereof to our intereſt; which now it appears that we can hardly fail of doing effectually, and ſoon. For by a letter from OSWEGO, dated Auguſt the 7th, 1764, to colonel Burton, at MONTREAL, we have an account, that "Matters are entirely ſettled with all the Indian nations who attended the meeting at NIAGARA; the greateſt ever known, being about 2000 Indians. Some reports ſpreading prevented the CHENUSSIOS coming for a long time: at length they came and delivered up the priſoners, &c. &c. and gave to his Majeſty and his ſucceſſors, for ever, the land on both ſides the ſtreights to LAKE ERIE (or CARRYING PLACE) four miles on each ſide, and liberty of a port on the north ſide of Lake Erie, &c. So that his Majeſty will be poſſeſſed of all territory from LAKE to LAKE; a ceſſion of near 300,000 acres. They have alſo given two Seneca hoſtages, for the SHAWNEESE and DELAWARE king, whom the CHENUSSIOS engage to deliver up at this part, with all priſoners amongſt them. There were 22 different nations at the congreſs, eleven of which were weſtern Indians; all behaved well, and were diſcharged in the beſt humour. The MICHILLEMAKINAC INDIANS have engaged to protect the garriſon which may be ſent there. The COGNAWAGOE warriors are gone with the army, and behave well. Peace is ſettled by a ſolemn treaty, in writing, with the HURONS of DETROIT: the treaty of peace and alliance with the CHENUSSIOS is alſo ratified and confirmed in writing; ſo that every thing is done that could be wiſhed for, or expected." And

Before this goes to the preſs, we have the following accounts from Philadelphia, dated September 6, 1764.

"Ten deputies from the Delawares, Shawaneſe, Hurons of Sanduſky, and other Indians of the countries between Lake Erie and the Ohio, met Col. Bradſtreet at Preſque Iſle, on his way to their country, with the forces under his command, and in the moſt ſubmiſſive manner begged for peace, which he granted them on terms to the purport following:

"1. That all the priſoners in their hands ſhould be delivered to him at Sanduſky in twenty-five days.

"2. That they ſhould renounce all claim to the poſts and forts we now have in their country; and that we ſhall be at liberty to erect as many more as we think neceſſary to ſecure our trade; and that they ſhall cede to us for ever, as much land round each fort as a cannon-ſhot can fly over, on which our people may raiſe proviſions.

"3. That if any Indian hereafter kill any Engliſhman, he ſhall be delivered up by his nation, and tried by the Engliſh laws, only to have half the jury Indians. And if any one of the nations renew the war, the reſt ſhall join us to bring them to reaſon.

"4. That ſix of the deputies ſhould remain with him as hoſtages, and the other four with an Engliſh officer; and one of our Indians ſhould proceed immediately to acquaint thoſe nations with theſe terms of peace, and forward the collecting of the priſoners, to be ready at the day appointed.

"It is ſaid that the colonel has told them, that if this peace is not confirmed by their chiefs, no other will be granted them; and that, if they continue the war, they ſhall find their country filled with warriors immediately, who will cut them off from the face of the earth.

"It ſeems the motion of the two armies at once towards their country, viz. that under Colonel Bradſtreet, from Niagara, and that from this province, under colonel Bouquet, has greatly intimidated thoſe people, who at firſt haughtily ſtood out, and refuſed to meet Sir William Johnſon at the congreſs of Niagara. See the article INDIAN NATIONS.

UNITED PROVINCES of the STATES-GENERAL. Under the articles FLANDERS, HOLLAND, NETHERLANDS, DUTCH AMERICA, DUTCH WEST-INDIA COMPANY, DUTCH COMPANY of the NORTH, DUTCH LEVANT COMPANY, DUTCH EAST-INDIA COMPANY, we have conſidered the nature of the commerce of this republic; to which we have ſubjoined ſuch REMARKS as we have judged requiſite to ſupport the power and dignity of the States-General of the United Provinces, whoſe intereſt we look upon to be inſeparable from that of Great-Britain. We have more particularly ſhewn the ill conſequences which ſoon attend this republic, for want of the barrier being duly ſettled for her preſervation, as well as our own.

From this principle it is, that, in all our wars in Flanders, we have fought for the Dutch as for ourſelves, and that it has been the repeated ſenſe of the parliament, That a ſtrong barrier for the Dutch in Flanders, againſt France, is neceſſary for the ſafety of England, as well as Holland. This we have endeavoured to demonſtrate from reaſon and authority, under the articles above referred to. [See FLANDERS and NETHERLANDS.]

If we make a calculation of the forces of France in time of war, we ſhall find that they have not amounted to leſs than 100,000 horſe, and 300,000 foot; nor is there any other potentate in Europe, if in the whole world, able to bring ſuch an army, and ſo well appointed, into the field. On the other hand, we know very well what an averſion both the parliament and people of Great-Britain have to a ſtanding army, as a thing deſtructive of their liberty and freedom; nor need we be told how unable an undiſciplined rabble is to withſtand a body of regular troops: ſo that our ſecurity chiefly lies in being maſters at ſea. This is what we, in conjunction with the United Provinces, may ſtill be, if the Dutch will increaſe their marine, and exert their naval power, as they have heretofore glorioufly done. But ſhould the French king be once poſſeſſed of Flanders, he may eaſily ſurprize and conquer Holland: nor is it poſſible for that ſmall republic to withſtand him. Being once poſſeſſed of the Dutch towns and harbours, he is, by conſequence, not only maſter of all the ſhips and naval ſtores that are laid up in them, but may augment them to as great degree as the Dutch have formerly done. And having once united the ports and fleets of Holland with his own, it is a vain thing for us to pretend any longer to the dominion of the ſea: for if this ſhould ever come to paſs (which God forbid!) and the fleets of Spain ſhould join thoſe of France, as is too likely to be the caſe, we muſt ſubmit to the yoke of France: for they may then pour in above 100,000 veteran troops upon us, from all quarters; nor will it be poſſible for us, without a miracle, to withſtand them. So that in truth we are as much concerned to hinder the French from over-running the United Provinces, as he that dwells at one end of a ſtreet is to quench thoſe flames that are raging at the other: for, as Sir W. Temple very well obſerves, 'If France 'were once maſter of Flanders, the body of that empire would 'be ſo great and ſo entire, ſo abounding in people and riches, 'that, whenever they found or made an occaſion of invading the United Provinces, they have no hopes of preſerving 'themſelves by any oppoſition or diverſion †.'—And if they be ruined one year, we are undone the next.

† Temple's Obſervations on the United Provinces.

The neceſſity of a BARRIER, or a chain of ſtrong towns in the LOW COUNTRIES, to hinder the French from ſurprizing Holland, has been the ſenſe of our parliament from the time of king Charles II. and is at preſent the ſenſe of the wiſeſt men in the nation, and of the trueſt friends to our conſtitution. In the year 1713, the parliament, in their humble repreſentation preſented to her Majeſty, and printed by the Speaker's order, they affirm, in direct terms, 'That 'the SUCCESSION and BARRIER are two points of the 'GREATEST IMPORTANCE to both nations,' i. e. to BRITAIN as well as HOLLAND.

The preſent inſecurity of the United Provinces, for want of a good barrier being ſettled, we may reaſonably enough preſume, has been none of the leaſt incentives with France to act ſo barefacedly as they do at preſent againſt Great-Britain, imagining that it will not be in her power, without the aid of the Dutch, to right herſelf, eſpecially if they ſhould bring Spain into their meaſures (of which I make no doubt but they were certain before they ſtruck any ſtroke in America); and, however omnipotent ſome people are ſanguine enough to think this kingdom alone, yet we have had the experience of three long wars to convince us, that the ſtrongeſt confederacies which can be formed, are ſcarce a match for France; and, therefore, they that are for truſting to the SINGLE STRENGTH of ENGLAND, in oppoſition to a force ſo much ſuperior, muſt certainly very much miſtake the true intereſt of their country. Our conſtitution will not conſiſt with a ſtanding army: the French king, on the contrary, can never be without one: therefore it is our buſineſs to ſecure the aſſiſtance of ſuch as have always a ſtanding force, ready to oppoſe to his; and by their fleets at ſea, as well as their armies on the continent, may, in conjunction with us, either deter him from invading England, or, if he does, ſoon find him ſo much work at home, as may oblige him rather to think of defending his OWN dominions than invading his NEIGHBOURS.

Certain it is, that there is no alliance ſo uſeful to us as that of the STATES-GENERAL, in order to ſecure the Proteſtant ſucceſſion: whether we conſider their ſituation, their ſtrength, (which I am grieved to think is far inferior to what it was in queen Anne's war) their religion, or indeed, their intereſt; for the ſafety of each country depends upon that of the other: for as, on the one hand, ſhould HOLLAND fall under the dominion of France, Britain would be entirely cut off from any communication with the continent (which, joined to the great acceſſion of naval ſtrength which France would acquire by this conqueſt, muſt bring immediate ruin upon Britain); ſo, on the other hand, Holland muſt inevitably loſe both its religion and liberties, the moment that France, or any Popiſh prince under the influence and direction of France, gets poſſeſſion of Britain. From whence it neceſſarily follows, that the mutual defence and preſervation of each other ought to

be one of the chief maxims of government to BOTH NATIONS.

This is ſo plain, that the only handle which the emiſſaries of France have made uſe of to divide Us and the DUTCH, has been the point of TRADE, in which they have always endeavoured to repreſent them as dangerous rivals. Although we have occaſionally ſpoken to this point, under the articles of FISHERIES in particular, yet it may be uſeful, at this juncture of affairs, to urge this matter farther.

Certain it is, that the wealth and ſtrength of each nation doth depend entirely upon TRADE, and that therefore neither we nor they can be too careful and tender in that matter; but the world is wide enough for us both, and if the pains and expence that have been employed in the quarrels we have had with one another, upon the pretence of trade, had been applied to the keeping a watchful hand over our enemies, and preventing the encroachments they have made upon us both in this valuable article, and alſo the ſtrides they have made, and are daily making, to univerſal dominion [ſee our article FRANCE], it is evident the commerce of both nations would have been much more extenſive and flouriſhing than it is at this time; nor ſhould we now have reaſon to dread the ill conſequences that may attend the United Provinces, upon the breaking out of a freſh war in Flanders.

We are far from allowing, that the trade of the two ſtates engages them in ſuch a rivalſhip and competition with one another as has been generally pretended by thoſe who are enemies to both: for all that have any inſight into the affairs of HOLLAND muſt acknowlege, that their trade is chiefly founded upon their carrying goods cheaper than any nation of the world: the hard and penurious way of living they are inured to, enables them to perform the longeſt voyages with much leſs conſumption and expence than other nations: by this means they are become the common carriers of the product of other countries, having none of their own, except what ariſes from their ſettlements in the Indies. Our trade, on the contrary, conſiſts almoſt intirely in vending and diſperſing the product and manufactures of our own country and the plantations, while our freight is dearer than that of any other nation. See the article FREIGHT, REMARKS thereon.

The main branch, therefore, of the Dutch commerce, no way affects or interferes with ours; neither, if they were to lay it down to-morrow, would any ſhare of it devolve to GREAT-BRITAIN, but to the FRENCH, the DANES, the SWEDES, the HAMBURGHERS, and the other Hanſe-Towns [ſee the article FISHERIES particularly] who all both can, and actually do, ſail much cheaper than we. And were the Dutch at this time to loſe the plantations in the Indies, would not theſe fall into the hands of France? France, therefore, is our moſt formidable rival, and the proper object of jealouſy to both nations, who, by fomenting animoſities and quarrels between us, has had the addreſs to weaken us at our own expence, and to make herſelf powerful under favour of our folly and connivance. The diviſions between England and Holland firſt gave France the courage and opportunity to increaſe her naval ſtrength, to extend her dominions in both the Indies, to drive the Engliſh out of the trade of HUDSON'S-BAY, and of great part of NEWFOUNDLAND; to lay ſuch high duties on our reſpective commodities as amount to a prohibition, and thereby to encourage, and even force her own ſubjects to eſtabliſh our manufactures in FRANCE, and by that means to run away with a great part of OURS, as well as the DUTCH trade to SPAIN, the LEVANT, and other countries. Theſe are part of the fruits of our former quarrels with the DUTCH, which, one would hope, might have that effect, as to make us wiſer for the future, by teaching us that the only way to retrieve our paſt follies, is by UNITING, in order to recover thoſe valuable branches of our reſpective trades which FRANCE has taken from us; to preſerve a ballance of power in Europe, which now ſeems in great danger, that peace and trade may flouriſh; to provide jointly and zealouſly for the ſecurity of the ſeas, and ſafety of our commerce; and to deſtroy that growing naval force that otherwiſe may ſoon prove our deſtruction.

That ſuch an happy and indiſſoluble union may inſtantly take place, I hope it will not be judged unſeaſonable to endeavour to remove thoſe prejudices againſt the Dutch, which too many, by the wiles and artifices of the partizans of FRANCE, have cauſeleſsly imbibed.

A popular objection againſt the Dutch, in relation to thoſe wars wherein we have been allies and confederates, is this, viz. That though we have come generouſly into the wars, to help them in their diſtreſs, yet they have thrown all the burthen upon our ſhoulders, which they themſelves would ſcarce touch with one of their fingers; that they have rooked us of our money, but done little or nothing to promote the common cauſe. This is that prejudice which has made the deepeſt impreſſion on the minds of the common people. Profit and loſs are things by which they are moſt ſenſibly affected: do but confidently affirm, that they have been cheated of their money, by ſuch or ſuch great men, their rage is preſently kindled, without waiting for a proof, or expecting evidence. Thus, in the reign of king William, the impatience of the people under taxes, together with a groundleſs clamour againſt the prince, as if he had tranſported the treaſures of the nation into Holland, conſtrained him, contrary to his own ſenſe of things, to precipitate a peace with France; whereas the carrying on the war till the king of Spain's death, and expending eight or ten millions THEN, would have ſaved the nation FIFTY MILLIONS ſince.— This was the caſe, alſo, at the concluſion of queen Anne's war, as well as of the laſt great war.

But I would aſk, Was not England as much concerned to enter into theſe wars as the Dutch? Are we not highly indebted to the Dutch, for their aſſiſtance to bring about the Revolution? Nay, could it have been poſſibly brought about without them? Or what figure could this kingdom have made in queen Anne's war, without the aid of this our old and natural ally? The moſt groundleſs, falſe, and inveterate clamours were raiſed againſt them by the French partizans, in this reign, as if they had not brought into the field their quota's of men, arms, and ammunition, according to the ſtipulations agreed upon: whereas it was demonſtrated, to the confuſion of their enemies, that they had greatly exceeded what was required of them; and yet were ſo infamouſly treated by the Utrecht treaty-makers, that it is to be admired they were ſo ready to aſſiſt us in the laſt war, which was chiefly OUR war, and not theirs; for the depredations the Spaniards committed on us, gave birth to the war; and yet they were ſhamefully aſperſed and belied, in regard to their conduct upon that occaſion, which I could ſhew at large, if the limits to which I am confined did not ſo reſtrain me as not to admit of it at preſent.

However, that people may not be miſled by the artful and wicked inſinuations of the enemies of the Dutch (whom I ſhall ever look upon as the enemies of Great-Britain), it may not be altogether unſerviceable to obſerve, in the general, That, if we conſult any book of geography, or any map of Europe, we ſhall find that the dominions of his Britannic Majeſty are twenty times as large as thoſe of the STATES-GENERAL; their SEVEN PROVINCES are commonly reckoned no bigger than our four weſtern counties: it is true, theſe provinces are fuller of towns and villages than moſt counties in England, but then the city of London is three times as populous as that of AMSTERDAM, the greateſt city belonging to the States. This is evident by the bills of mortality, which, in the former amounts, in the moſt healthy years, to about 20,000, whereas, in the latter, they ſeldom amount to more than between 6 and 7000: without doubt, the Dutch muſt unite many of their biggeſt cities, before they can equal his Majeſty's metropolis in number of inhabitants, and many more to equal it in wealth. What reaſon, therefore, can we have to think hardly of the Dutch, as if, in any degree, they withdrew their ſhoulders from the burthen, when the truth of it is, they actually have maintained more ſoldiers againſt the common enemy than we, though the wars have been as neceſſary for our ſafety as for theirs, and though their territories bear no manner of proportion to thoſe of his Britiſh Majeſty?

This will appear yet more evident, if we conſider that their taxes are incomparably heavier than ours. This was the caſe in Sir William Temple's time, king Charles the Second's ambaſſador at the Hague, a moſt accompliſhed ſtateſman; and ſince his time their taxes have greatly increaſed, although their trade and their treaſure have not in the like proportion. Sir William tells us, in general, 'That they are oppreſſed 'with the moſt cruel hardſhips and variety of taxes, that was 'ever known under any government: that the exciſe [upon 'all commodities] is ſo great and general, that he hath heard 'it obſerved at Amſterdam, That, when in a tavern a cer-'tain diſh of fiſh is eaten, with the uſual ſauce, above 30 ex-'ciſes are paid for what is neceſſary to that ſmall ſervice §.' In queen Anne's time, beſides what we call the land-tax, which is heavier with them than with us in the general, they pay, ſays my author, exciſe for every thing they eat, drink, uſe, or enjoy.

§ Obſervations on the United Provinces.

The impoſt upon all corn ground in the mills of Holland, which every body pays without exception, amounts to 5l. 5s. per quarter of wheat, to half as much for rye, to 35s. for barley and oats: in a word, it is generally computed there, that the duty on all bread-corn is equal to the prime coſt.

The exciſe on beer is as follows: firſt, the brewer pays 12d. a barrel, private families pay 20d. more, and victuallers, or retailers, pay another 20d. French wines pay 6d. a ſtoup, other wines twice as much. Butter pays 6s. a barrel, tobacco 10d. a pound, fiſh 20d. a pannier, and ſoap 11s. a barrel. Every horſe above three years old pays 2d. a month; every horned beaſt above that age 3d. a month. Every coach pays 10s. a year, and every little bark 20d. All cattle, ſheep, or hogs, that are killed, pay one penny in ſeven of the money they are ſold for. All wood made uſe for fuel, pays one penny in eight of what it coſts. Every maſter pays 20d. a head yearly for each ſervant that he has in his family, male

male or female. All ſhips, lands, and houſes, that are ſold by one man to another, pay to the government a fortieth penny of what they are ſold for: hangings and houſhold-ſtuff pay one penny in nine, and woollen cloths a fourth part of their value. In one word, the Dutch pay exciſe for ſalt, candles, lead, lime, coals, ſtone; there is not a turf or log of wood in their chimnies, not an herb or onion in their gardens, but what pays a duty, more or leſs, to the States. Our author aſſures us, that a cow of nine years old, if it be ſold for 5 l. will pay above 6 l. to the States; and that there is never a diſh comes to table but has paid exciſe above twenty times.

Theſe are the impoſitions that our neighbours are ſubject to in times of peace, which, in war, are raiſed to a degree hardly to be believed: at ſuch times, land and houſes have paid 10 or 11 s. in the pound of their intrinſic value.

To ſuch a degree are theſe our friendly provinces taxed, that they are under the neceſſity to lay impoſitions even upon the dead: but theſe, indeed, may be termed voluntary benevolence; for from noon 'till two o'clock you may bury your dead, without paying any other coſts than only the charges of the burial: but they who bury half an hour after two are obliged to pay a forfeiture of 100 ſous, which doubles every half-hour: for example; at three o'clock the forfeiture is 10 livres; at four, 20; at five, 40; at ſix, 80; at ſeven, 160; at eight, 320; and at nine, 640; which is the higheſt, for after that hour no body is permitted to bury.

The reader may be apt to aſk, perchance, how it is poſſible for people to bear up under ſuch heavy preſſures, ſuch loads, that even the Engliſh would certainly ſink under? To this it is anſwered, That their extraordinary induſtry and parſimony enables them to ſupport ſuch prodigious taxes. A burgher of Amſterdam will dine contentedly on a red herring, when a citizen of London, of the ſame condition, will ſcorn to ſit down to table without a ſurloin of beef or a couple of capons before him. Sir William Temple again tells us, that 'it is a common rule among them, for every man to ſpend 'leſs than what he has coming in, be that what it will; and 'that, if a man's expence equals his revenues, it diſcredits a 'man among them, as much as any vicious or prodigal ex-'travagance does in other countries: ſo that frugality is be-'come honourable amongſt them.'

Another thing that reconciles them to theſe exceſſive impoſitions, is that confidence which they have, that their money is laid out for the good of the community. The ſalary of a burgomaſter of Amſterdam is but 500 gilders a year, which amounts not to 50 l. ſterling: nor was it ever known that they who have the diſpoſal of offices in that republic, took any money on that occaſion. The prime miniſters of ſtate are obliged to no ſort of expence more than ordinary modeſt citizens, in their habits, their attendants, their tables, or any part of their domeſtic affairs. Sir William never ſaw the two greateſt officers belonging to their ſtate, the vice-admiral DE RUYTER, and the penſioner DE WIT, with above one ſervant a piece in their train, but moſt uſually on foot, and alone in the ſtreets, like common burghers: and this was the general faſhion among all the magiſtrates. This has made the people part chearfully with their money, when it is not made uſe of to fill the coffers, or maintain the pompous equipages, of the ſervants of the public.

Upon the whole, when we reflect upon the ſmall extent of this republic, their maintaining more men conſiderably than we have done, at an average, during the three great wars, in compariſon to the extent of their territories, &c. with thoſe heavy taxes which they ſubmit to, we cannot doubt but they are the braveſt people in the world; and it is certain that they have made the moſt prodigious efforts for the common liberties of Europe, that ever any ſtate of the like dimenſions did: and do they not deſerve our utmoſt aid and aſſiſtance, when needful, as well as our praiſes and encomiums?

Another art practiſed by the French intereſt in this kingdom, to divide England and Holland, is the malevolent inſinuation, That, in times of war in Flanders, the DUTCH in particular have drained us of our money. We cannot diſallow but, on theſe occaſions, a great deal of gold and ſilver have been exported to pay our armies in Flanders, though nothing comparable to the clamour that has been raiſed about it; but this could by no means be avoided in carrying on the wars, which have been always abſolutely neceſſary in the defence of both ſtates, ſince a tolerable underſtanding has happily ſubſiſted between them. But in regard to this matter the caſe is plainly thus; we muſt, on theſe unhappy occaſions, ſpare ſome of our money, or loſe all our lands. However, it ſhould be obſerved, by thoſe who would know the truth of things, that the armies have, for the moſt part, been paid by bills drawn on merchants in Amſterdam, and other places: and the Dutch purchaſing of us many hundred thouſand pounds worth of Britiſh manufactures § every year, brings back the money again

§ Holland takes from England, broad cloths, druggets, longells, ſtuffs of a great many ſorts, leather, corn, coals, and ſomething of almoſt every thing that this kingdom produces; beſides all ſorts of India and Turkey re-exported goods, ſugars, tobacco, rice, ginger, pitch, and tar, and ſundry other commodities of the produce of our plantations. England imports from Holland, fine Holland linens, threads, tapes, and incles; whale fins, braſs battery, madder, argol, toys, clapboard, wainſcot, &c.

that has been exported on thoſe occaſions: that is to ſay, The ballance of our trade by means of Holland, has far more than compenſated for the occaſional expences upon the continent, which our mutual ſafety ſeems to have rendered neceſſary. And, perhaps, upon due examination it will be found, that after thoſe wars, and the expences among all the contending parties have run high in Flanders, the trade of England with Holland, Flanders, Germany, &c. has been temporarily augmented, in proportion to the money ſpent by England on thoſe military atchievements.

It would, without doubt, be better for both ſtates, provided they could contend with the enemy wholly in a maritime way, upon the ſuppoſition that they could ſupply themſelves with all ſhips and naval ſtores for the purpoſe, becauſe ſuch expences would circulate and center within themſelves. But while France is able to ſupport ſuch formidable armies, and their territories ſo adjacent to the United Provinces, it is to be feared that the exertion of the maritime ſtrength of England and Holland alone will not all times abſolutely prevent a war upon the continent; for it ſhould ſeem, that while the affairs of France are ſo circumſtanced to enable them to uphold ſo great a military force, England and Holland, in conjunction with the houſe of Auſtria, and ſuch other allies as can be brought into their meaſures, muſt SOMEHOW have a land force capable of looking France in the face, and ſtopping the progreſs of her arms.

That it is not in the power of the Dutch alone to do this, has been apparent beyond all doubt *. Nothing can effectually do this but another GRAND ALLIANCE; and England muſt, for her own ſecurity, contribute to a part of the military expence; and this may be more eligible, perhaps, than to ſend our ſoldiery abroad on theſe occaſions, as has hitherto been our practice. There is, indeed, ſome doubt to be made in relation to the repoſe of confidence in allies and confederates, when they do not fight, as well as act, in concert: however, experience has ſhewn what troops and what general officers are to be truſted, when the cauſe of Great-Britain is at ſtake, although ſome people are too backward in our giving aſſiſtance to the Hanoverians, notwithſtanding they are our natural ally, and have behaved gallantly in the common cauſe of England and Holland, notwithſtanding they ſhould be drawn into quarrels upon our account. And if the exigency of public affairs ſhould require Great-Britain to take into her pay any troops to ſerve in Flanders againſt France, conjunctively with other confederates, will it not prove adviſeable to put confidence in our tried, truſty, and natural friends and allies, the HANOVERIANS, who are ſubjects of the ſame ſovereign? It has been ſaid too, That if a war ſhould break out, his Britannic Majeſty, as Elector of Hanover, will augment his troops; if ſo, ought not this to prove a further inducement to us to take an additional body of theſe troops into Britiſh pay?

* If we conſider France and Holland, as to the extent of their dominions, the Dutch can make no head. If we will conſider the length and breadth of each province in the United Netherlands, and then multiply one by the other, we may know how many ſquare miles there are in the whole, and ſee what proportion this bears to the kingdom of France.

	Square Miles.
Holland is computed 80 miles long, 40 broad, making	3200
Zealand, 30 long, 17 broad	510
Utrecht, 30 long, 25 broad	750
Guelderland and Zutphen, 50 long, 48 broad	2400
Overyſſel, 60 long, 40 broad	2400
Groningen, 46 long, 24 broad	1104
Weſt Frieſland, 40 long, 25 broad	1000
Dutch Brabant, 55 long, 31 broad	1705
Dutch Flanders, 31 long, 13 broad	403
So that the whole comprehends, of ſquare miles	13472

Theſe are all the dominions the States-General have in Europe, except two or three ſcattering towns, which have no territories belonging to them worth regarding. Let us next ſee the dimenſions of the kingdom of France. France is computed to be, in length and breadth, 200 leagues, or 600 miles. This number, multiplied by itſelf, produces 360,000 ſquare miles. Now if you divide 360,000 by 13,472, the quotient is 27: ſo that the kingdom of France is 27 times bigger than all the territories poſſeſſed by the Dutch. If it be objected, That France is not in all places 600 miles broad, the ſame may be ſaid of each of the United Provinces. Thus we have reckoned Holland 40 miles broad, when in many places it is not above 25; and you can conſult no map, in which the diſproportion between the two ſtates will not appear greater than I have repreſented it. I confeſs, were France like the parched deſarts of Arabia, or the frozen lakes of Lapland, a wild uncultivated wilderneſs, our argument would conclude very little; but France is a populous country, full of great towns and villages, and a rich and fruitful ſoil, containing above 36,441 pariſhes, above

above three times as many as there are in England and Scotland; nor has the greateſt city in Holland half ſo many inhabitants as that of Paris: ſo that you may as well ſuppoſe that a gnat ſhould ſwallow a camel, as that the Dutch republic ſhould devour the French monarchy, or alone make any head againſt that nation.

We will next conſider the revenues of theſe two ſtates, which are not improperly ſtiled, the nerves and ſinews of war. Sir William Temple informs us, that, in his time, the revenue of the Seven Provinces amounted commonly to 21 millions of gilders, which is ſomething leſs than two millions ſterling. It is true, in time of war, they have raiſed five millions; but this is little, compared to what the grand monarch collects within his ſpacious territories; his revenues, in 1695, amounted to more than 15 millions and a half of our money; and they have increaſed very conſiderably ſince that time. Of the number of their forces we have taken notice before.

It has been urged by ſome, That the whole empire is concerned to keep the UNITED NETHERLANDS out of the hands of FRANCE; and why ſhould we be at any expence for them? This is certainly the intereſt of his Imperial Majeſty, nor is any queſtion to be made, but he will do all that he is able, to prevent ſo great a miſchief to his family: but then the emperor may be involved againſt the Turks, &c. and ſo not able to help them, at leaſt not to any effectual purpoſe. The German princes may be quarrelling one with another; or ſome of them may be bribed to take part with FRANCE againſt their own country, which has too often been the caſe of theſe perfidious princes. This was actually the caſe of the DUTCH, in 1672, when their two neighbours, the biſhops of COLOGNE and MUNSTER, joined with the FRENCH in invading their dominions, and that with ſuch ſucceſs, that their deliverance from utter ruin was next to a miracle. Theſe things conſidered, I hope it will be allowed by all true friends to the PROTESTANT INTEREST, that we did not, in our late wars, fight barely for the DUTCH, but for our OWN ſecurity, as well as theirs.

Notwithſtanding the unhappy differences which heretofore, by the machinations of the common enemy, ſubſiſted between England and Holland, and by means whereof France firſt raiſed their naval power; yet I cannot but look upon theſe miſunderſtandings as fatal to both ſtates, as even civil wars would be in the hearts of their nations; becauſe I cannot but look upon them in the light of ONE and the SAME PEOPLE, and that every meaſure ought to be purſued by both, to render their reciprocal intereſts compatible in every reſpect; ſo that they may be jointly and harmoniouſly enabled to extend their COMMERCIAL intereſts, and their MARITIME ſtrength, in perfect concert and unanimity, in order to curb the growing formidable power of thoſe who will ever be perfidious enough to attempt the deſtruction of both.

Another prepoſſeſſion which the common enemy ſtudiouſly endeavours to raiſe among us againſt this ſtate, is their form of government, which is republican, and therefore cannot ſo well accord with ours, that is monarchical. Have we any reaſon to be angry with them on this account? Friends to this conſtitution muſt determine in the negative, when it is conſidered that their caſting themſelves into ſuch a model was the effect not of choice, but abſolute neceſſity.

It is not conſiſtent with our brevity to enter into a detail of the riſe, progreſs, and concluſion of the Low-Country wars; let it ſuffice to obſerve for the preſent occaſion, that the United Provinces were once ſubject to the king of Spain:—That the invaſion of their civil liberties, and the inhuman cruelties which thoſe of the reformed religion ſuffered, provoked the diſtreſſed inhabitants to take up arms in their own defence, and to withſtand thoſe inſtruments of cruelty that were made uſe of to oppreſs them.—After many tumults and confuſions, there was a convention of the eſtates at Antwerp, in the year 1581, in which it was determined, That Philip king of Spain, by invading their privileges, and overthrowing their conſtitution, had forfeited his right to govern thoſe provinces, &c. and the throne was become vacant.—But, inſtead of moulding themſelves into a commonwealth, they, at the ſame time, elected the DUKE of ALENÇON, younger brother to the king of France, to be their ſovereign §. This prince accepted their invitation; but being influenced more by humour and caprice than by the maxims of policy and wiſdom, he quickly loſt the affections of his new ſubjects.—When he perceived this, he retired into France, and quickly after died there. The provinces being once more without a ſupreme governor, they offer next to transfer their allegiance to our renowned QUEEN ELIZABETH †. She refuſed, indeed, to accept of this propoſal, but afforded them a very generous aſſiſtance, and continued their friend and patroneſs to the day of her death. Whence we may diſcern, that when the DUTCH formed themſelves at firſt into a commonwealth, it was becauſe they could not obtain a KING or QUEEN of their own, who was able and willing to protect them; and their erecting a republic was a matter rather of neceſſity than choice. This ſeems plainly to demonſtrate, that men may be born and bred in a commonwealth, and under government as anti-monarchical as Holland may appear to be; and yet the wiſeſt part of the ſtate may be zealous friends to a limited monarchy, eſpecially ſuch an one as that of Great-Britain, becauſe there is no other nation that has the ſame conſtitution that we have, nor ſo well adapted to the happineſs of the people.

Nor ought the religion of the Dutch, which is Preſbyterian, to give either of the nations a prejudice againſt each other: the Dutch never attempted to obtrude their model upon us; they do not look upon their particular diſcipline as abſolutely neceſſary to ſalvation, nor do they condemn thoſe that differ from them; they look upon the church of England as a ſiſter-church, and pay a due regard to her. An inſtance or two may be neceſſary to intimate, in order to what may be touched on in the ſequel.

In the reign of king James I. when the peace of their provinces was very much diſturbed, by the Arminian controverſies, they ſent to the king, deſiring that ſome of our Britiſh divines might be permitted to come over, and conſult with thoſe of other reformed churches, in order to compoſe thoſe unhappy differences. Accordingly, the then biſhop of Landaff, with the doctors Davenant and Hall, afterwards biſhops of Sarum and Exeter, were ſent over by the ſaid prince, with other eminent men §. Theſe met with the divines of Holland and Germany, at the famous ſynod of Dort, where they gave their ſuffrages with the reſt. So that the churches of England and Holland looked upon each other as members of the ſame body: nor have the latter, to this very day, receded from that charitable temper.

When the eſtabliſhed church of England was really in danger, under the adminiſtration of king James II. when her biſhops were impriſoned; when an illegal commiſſion was ſet up, prepared to execute the vengeance of enraged Papiſts upon all the clergy in the kingdom; in that diſtreſs, did we not implore the aſſiſtance of the DUTCH? Were they not the inſtruments (under God) of reſcuing our eccleſiaſtical and civil liberties, whilſt the FRENCH offered their troops to enſlave us? Before I leave this matter, it may not be improper to mention one or two inſtances more of the reſpect which is ſhewn in Holland to our Common Prayer. The Dutch conſented to the erecting of a ſtately church in Rotterdam, in which the Engliſh Liturgy is read to ſuch Britiſh merchants and traders as reſide in that town. When the biſhop of Briſtol arrived at Utrecht, as her Majeſty queen Anne's plenipotentiary at that peace, the ſtate offered his lordſhip the uſe of one of their public churches in that city, for the celebration of divine ſervice, according to the right and uſage of the church of England: was not this paying a great deference to thoſe forms of devotion uſed by his lordſhip?

We have not room to enter into the nature of the civil conſtitution and ſtadtholderſhip of this ſtate, and to compare it with that of England: which if we were to do, it would be eaſily diſcernable that the conſtitution of Great-Britain is infinitely preferable, as being better calculated for the preſervation of liberty and property, and the extenſion and enlargement of the commercial intereſts of a maritime nation. True it is, that the United Provinces have ſplendidly and gallantly figured it under their ſtadtholders; but if they had been governed, ſince their ſhaking off the Spaniſh yoke, by monarchs, limited as thoſe of Great-Britain are in all reſpects; if, in a word, the conſtitution of the UNITED PROVINCES was modelled upon the plan of that of this kingdom; it would, in all human appearance, have increaſed the trading intereſts and glory of that ſtate, to a degree far ſuperior to what it ever was, and have eſtabliſhed the ſame upon ſuch a foundation, as would have contributed unſpeakably more to the preſervation of the Proteſtant and the commercial intereſts both of Great-Britain and the United Provinces, than a difference in conſtitution has done; provided that one and the ſame ſovereign had governed both powers, and that a ſtadtholder was only a viceroy, deputed from the crown of England, as the Earl of Leiceſter was in our queen Elizabeth's time, or as a lord lieutenant of Ireland now is. And what hinders but this may one day be the caſe?

We have ſeen from a very brief compariſon of the eſſential particulars relating to both ſtates, that theſe provinces have no averſion to our monarchical government: on the contrary, they have frequently manifeſted a high regard to the Britiſh conſtitution in general; and they, as well as we, have experienced the ill conſequences of the intereſt of both ſtates not being bottomed and cemented upon the principles of an inſeparable union, as well with regard to trade and navigation, as to every other material point.

That I may not be miſunderſtood upon this occaſion, the candid reader is deſired to obſerve, that all that is here meant and intended is, that if the DUTCH ſhould ever think proper to agree to adopt the conſtitution of England, and make her ſovereign their ſovereign, they ſhould poſſeſs and enjoy all the privileges of commerce and navigation as Engliſhmen, without

§ Vide Acta Synodi Dordrect. pag. 10.

§ Vide Stradam de Bello Belgico. Bentivoglio's Hiſt. of Flanders.

† Camden's Hiſt. of Queen Elizabeth.

without any reſtriction whatſoever: for although we have compared a ſtadtholder, or viceroy, deputed from the crown of Great-Britain, to a lord lieutenant of Ireland; yet it is not thereby intended to inſinuate that, in ſuch caſe, the DUTCH ought to lie under any reſtraints of trade whatſoever, as the Iriſh do, which is what alſo we diſapprove, as well in regard to Ireland, as we ſhould do in regard to Holland, if any ſuch happy union could ever be brought about. And what would be the conſequence hereof to both nations, we have briefly ſhewn under our article TRADE, to which we refer the reader.

But if England and Holland ſhould never judge it adviſeable to become one nation, and governed by one and the ſame conſtitution, the next beſt thing to be done, for the mutual ſecurity and intereſt of both, ſeems to be, to cement the ſtricteſt union between them that can be upon all other occaſions. Nor can any thing more apparently evince the neceſſity hereof, than the ſurprizes to which they are both liable, from the machinations of France, their common enemy. This we have repeatedly experienced, to the unſpeakable loſs of the blood and treaſure of both; and this we are likely too ſoon to experience again: and, therefore, does it not become the duty of the wiſe and honeſt men, and thoſe in authority in both nations, to think ſeriouſly and expeditiouſly upon the beſt meaſures to ſecure and preſerve themſelves from thoſe imminent dangers to which they are both liable by their diſunion? For however ſanguine ſome may be, that our ſecurity may be ſufficiently provided for by our fleet, (which, indeed, is in a condition that gives glory to the nation) yet do we not know, that when the fleet of Holland was almoſt as powerful as our own now is, and theirs and ours were united, they with difficulty withſtood the common enemy? It is a very fond opinion to imagine that we, who, in conjunction with Holland, have heretofore been inſulted on our own coaſt by the fleets of France, and another time had probably been ruined by them, had not the heavens been favourable to us, ſhould be able, without the aſſiſtance of the like degree of maritime ſtrength, to ſecure us from a power ſo exorbitant as that of France and Spain may be in conjunction. The ſecurity of England and Holland does undoubtedly chiefly depend upon a powerful fleet; but does it not become the wiſdom of both to be certain of that degree of naval power that will overmatch and defeat that of our enemies which may be united againſt us? But without the Dutch will inſtantly exert their maritime ſtrength, and act zealouſly in concert with Great-Britain, we do not ſeem to have that degree of maritime ſtrength, ready to act for the effectual ſecurity of both ſtates. We have been repeatedly informed that the Spaniards have actually made, or apparently intend, an attempt on the Dutch colonies of ISEQUEBE and BERBICE, which are greatly aſſiſtant to our ſugar colonies of Barbadoes and St Chriſtopher's, in ſupplying them with timber for their ſugar-works, of which it ſeems they muſt be deprived, if thoſe colonies fall into Spaniſh hands: and if the French alſo get poſſeſſion of the NEUTRAL ISLANDS, thoſe ſugar colonies muſt be greatly hurt, if not abſolutely ruined and undone, for want of thoſe needful ſupplies. If it ſhould prove matter of fact that the Spaniards have made, or ſoon intend to make, ſuch an attempt on thoſe Dutch colonies, under the pretext of preventing illicit commerce with the Spaniſh colonies, does not this look with an aſpect that Spain intends the like inſults and encroachments on the Dutch, as they have ſhewed to us in our logwood ſettlements, from whence, it ſeems, they have quite extirpated the Britiſh logwood-cutters? Does not ſuch conduct in the Spaniards appear too ſignificantly declarative, that they intend as little good towards England and Holland, as France does? Do not theſe things ſeem to forebode a conjunction between France and Spain, that we both ought inſtantly to guard againſt by proper alliances, and by the due exertion of our maritime, as well as military ſtrength? And as this nation has at preſent a very able and vigilant miniſter in Holland, we have good reaſon to expect as happy ſucceſs from his negociations ABROAD, as we have from the wiſdom and councils of his honourable family at HOME.

Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE, continued from the End of Letter T.

UNION OF ENGLAND AND SCOTLAND.——After the 1ſt of May, 1707, united into one kingdom, by the name of Great-Britain (art. 1.) 5 Ann. cap. 8. §. 1.—— All the ſubjects to have full freedom and intercourſe of trade and navigation, within all the dominions thereunto belonging (art. 4.) ditto act of parliament.——All ports of the united kingdom to be under the ſame LAWS and REGULATIONS of TRADE, liable to the ſame CUSTOMS and DUTIES, entitled to the ſame ALLOWANCES and DRAWBACKS as in England; except the exemption of private rights. 5 Ann. cap. 8. (art. 6, 7, 14, 18.) 6. Ann. cap. 26. §. 17. But after the Union, an equivalent was to be paid by England to Scotland for the improvement of the duties; to be applied towards ſatisfying private loſſes by the reduction of the coin, and to the payment of the capital ſtock and intereſt of the African and Indian company of Scotland; and the overplus towards the public debts of Scotland, and the encouragement of the fiſheries, and other manufactures and improvements; which ſaid equivalent was to be under the management of particular commiſſioners: but in lieu and full diſcharge of ſuch equivalent, after the 24th of June, 1719, there was eſtabliſhed one yearly ſund of 10,000 l. and one other, of 2000 l. payable out of the revenue of cuſtom, exciſe, &c. ariſing in Scotland, by the reſpective commiſſioners. 5 Ann. c. 8. §. 1. 6 Ann. c. 24. §. 1. 5 Geo. I. c. 20. §. 1, 14, 18.

W.

WAR

WAR

As this article ſtood in our former editions, begun in the year 1751, when France ſeemed again to be meditating a freſh war, ſoon after the treaty of peace concluded at Aix-la-Chapelle in the year 1748.

WAR. If Great-Britain ſhould enter into a war in the preſent conjuncture of affairs, we have endeavoured to demonſtrate, throughout this work, that ſhe is compelled ſo to do for the defence of her rightful TRADE and POSSESSIONS, and not from any unjuſtifiable motives, or attempts made upon the commerce or poſſeſſions of any other nation. 'A man may 'be forced to kill another, in his own neceſſary ſelf-defence, 'and then the ſin is not in the ſlayer, but in him that is ſlain 'for in all caſes of force, not he who is compelled to ſtrike the 'ſtroke, but he who is the cauſe of the evil, bears the whole 'guilt. If a thief be found breaking, ſay our ſacred oracles, 'and be ſmitten that he die, there ſhall no blood be ſhed for 'him. For the ſame reaſon, enemies may be ſlain in a juſt 'and neceſſary war: and it is no crime, but an honour to 'be ſucceſsful in deſtroying them: but WARS of mere AM-'BITION are direct MURDERS.' See Dr Samuel Clarke's Works.

Some PRINCIPLES relating to the CONDUCT of WAR.

I. To deal with murderers of this kind then, it is not neceſſary only to be in a capacity to protect our trade and commerce, our poſſeſſions and our liberties, for the preſent, but we muſt endeavour to put it for ever out of the power of a perfidious nation to injure us again. See the article PLANTATIONS [REMARKS thereon], ſhewing the deteſtable perfidy of France for above a century paſt.

II. Nothing can effectuate this but the due exertion of our NAVAL POWER, as well MERCANTILE AS ROYAL, to deſtroy their trade and navigation, which is the great ſource of their treaſure and ſtrength. See our articles NAVAL AFFAIRS, SEA DOMINION, SEA BRITISH, SEAMEN.

III. If we ſuffer their trade and navigation, and, conſequently, their maritime ſtrength, to grow to a greater pitch, and do not put a ſtop to that career of ſplendor and power which they aim at, we ſhall be no longer a nation: vaſſalage and ſlavery muſt be the inevitable doom of Britons.

IV. To defend ourſelves againſt any invaſion, we muſt have a competent number of land forces; nor ſhould we be deſtitute of a well-regulated and DISCIPLINED MILITIA, to contribute to the defence of our extended ſea-coaſts; for our fleets alone may not always be capable to prevent the landing of the enemy.

V. Leſt our own force ſhould not be amply ſufficient to put it out of the power of the enemy to diſturb our peace, and diſtract Europe again, the moſt powerful alliances, both OFFENSIVE and DEFENSIVE, ſhould be entered into that can be, with ſuch powers whoſe intereſt it will be, as well as ours, to deſtroy the ENEMY'S TRADE AND NAVIGATION, and to TAKE AND DIVIDE THEIR MOST VALUABLE TRADING POSSESSIONS AMONGST US, ACCORDING TO THE DEGREE OF STRENGTH WHICH THE CONFEDERATES SHALL CONTRIBUTE TO THAT END, AND THE SUCCESS THAT SHALL ATTEND THEM. See UNITED PROVINCES, FLANDERS, HOLLAND.

VI. If the MARINE of HOLLAND could be raiſed equal to that of GREAT-BRITAIN, their united royal navies, together with their mercantile maritime ſtrength, would certainly prove ſufficient to anſwer this great end in the four parts of the world. See our article UNITED PROVINCES.

VII. If the UNITED PROVINCES cannot be brought, or are not able, perhaps, to raiſe their marine and their military force to the height deſired, and to act vigorouſly, in concert with Great-Britain, as one nation, Great-Britain muſt do the next beſt thing that ſhe is able: ſhe muſt make ſuch alliances as will afford her the greateſt addition of MARITIME STRENGTH; and, if needful, ſhe muſt not be backward in aiding, with her purſe, ſuch confederacies on the continent as may prevent the French from over-running the United Provinces; for as the intereſt of Great-Britain and thoſe provinces are inſeparable, as we have endeavoured to ſhew under the article UNITED PROVINCES, it will be impolitic for us to truſt their whole ſecurity and protection to any other power or powers, without contributing any thing thereto. Beſides, there may be other powers beſides France, that might be glad to poſſeſs themſelves of this republic, and who might not prove leſs detrimental to the trade and navigation of Great-Britain, than France would be, if the United Provinces were annexed to that crown.

VIII. If the United Provinces are reduced to ſo low an ebb, that they are rendered incapable of exerting themſelves againſt France, in concert with Great-Britain, as they have heretofore done, it will nevertheleſs be for the intereſt of England to enter into an alliance with them, both OFFENSIVE and DEFENSIVE; and England muſt, for her own ſafety, do all in her power to preſerve Holland from deſtruction: for if England enters into ſuch alliances with the United Provinces as will make their INTERESTS ONE, and if they both zealouſly exert their maritime power, and ruin a great part of the French trade and navigation, and POSSESS THEMSELVES OF THE SAME, thiswill make them both an ample compenſation for the expence of SUCH A WAR: and SUCH A WAR AS WILL RUIN THE TRADE AND NAVIGATION OF FRANCE, AND ADVANTAGE THAT OF GREAT-BRITAIN AND THE UNITED PROVINCES MUTUALLY, is the ONLY WAR that thoſe powers ought chiefly to proſecute.

IX. The Dutch can never be ſo poor, as a ſtate, but they are able ſtill to lend themſelves many millions, and are ſtill able ſo to exert their maritime ſtrength, in conjunction with England, as to deſtroy a great part of the French commerce and navigation, and to draw the ſame into their own ſcale: wherefore it muſt be very deſireable to the well-wiſhers of both ſtates, that ſuch offenſive and defenſive alliances are inſtantly entered into, that may for ever ſecure the poſſeſſions of both, and ſo enlarge and extend the trade and navigation of both, as to give and preſerve to them the dominion of the ſeas: for, without this, England and Holland will be no more, and Britons and Dutchmen muſt tamely ſubmit to the French yoke.

X. So happy an union between Great-Britain and the United Provinces, would ſoon raiſe the maritime power, and the trade and navigation of both ſtates, to what pitch they pleaſed; for if they jointly exert themſelves, upon the coaſt of Africa, the French might ſoon be extirpated from all commerce in that part of the world, becauſe the Dutch and the Engliſh united there, are now ſtronger than all the other powers who have ſettlements in that part of the world; [ſee ENGLISH AFRICAN COMPANY, and DUTCH AFRICAN COMPANY;] and if the Engliſh and Dutch deſtroy the French AFRICAN TRADE, and poſſeſs themſelves of their ſettlements for ever, will not this prevent that nation from ſupplying their ſugar-iſlands with negro-ſlaves? and what then will become of their ſugar-colonies? which, as they have proved the means of greatly extending the commerce of that nation, it is to be hoped that Great-Britain and Holland will have a watchful eye upon them; for if theſe were in ENGLISH AND DUTCH hands, and proper TREATIES OF COMMERCE were entered into between thoſe two powers, in relation to their trading acquiſitions, they would enjoy the SUGAR-TRADE OF THE WHOLE WORLD; and this, and their African commerce, would amply recompence them for the expence of a war of ſome years.

XI. Upon ſo happy a maritime and commercial union of intereſts between England and Holland, how long could the French figure it in Aſia? Would not the united power of the Dutch and Engliſh in the Eaſt-Indies, ſoon lower the creſt of France alſo in that part of the world?

XII. If once Great-Britain and Holland poſſeſſed themſelves of the FRENCH AFRICAN SETTLEMENTS, and their SUGAR ISLANDS, this would give a great blow to the French commerce between Canada and thoſe iſlands, and increaſe that between the Britiſh northern colonies and thoſe iſlands.

XIII. In regard to the Britiſh affairs in North-America, we have urged that point largely, from the beginning to the concluſion of this work; but as every thing that throws a new light upon a matter of this high concernment to the nation, may have its uſe, I ſhall cite a late ingenious writer upon this occaſion*.

* See the State of the Britiſh and French Colonies in North-America, &c. In two letters to a friend.

'If

'If we would ſecure, ſays that gentleman, our American dominions againſt the French, we muſt OUT-FORT them, as well as OUT-SETTLE them. Our colonies are in a worſe condition by far than is generally believed, or can well be conceived, unable to hurt their invaders, or defend themſelves, while the French have FORTS every where, and we have FORTS, in a manner, no where.

The number of forts neceſſary to be built for ſecuring the colonies, muſt be eſtimated by the number of forts already built by the French on our frontiers, and the places proper for fortifying, which they have left unoccupied, which are indeed very few, ſo induſtrious they have been to anticipate us in an article of ſuch infinite concern to our plantations.

As the country of the OHIO is in ſo much danger of being wreſted from us, and its being well ſecured of ſo much importance to all the colonies in general, north, ſouth, and middle, as hath been already ſet forth; if ever it comes into our hands again, it ought to be well fortified, by building forts in convenient places, along the river, eſpecially at each extremity; that is, one at the mouth of the OHIO, on the MISSISSIPPI, and another at NIAWGRA, near the lake ONTARIO: this laſt will prevent the communication of LOUISIANA with CANADA, by that lake and the lake ERIE, and oblige the French to abandon their forts on the ſouth-eaſt ſide of this laſt lake, by rendering them uſeleſs, as well as ſave us the expence of erecting a fort at TIERONDOGNAT, on the lake of ONTARIO, about 60 miles to the eaſt of the NIAWGRA ſtreight: a place which they have long had their eye upon for building a fort, and which we might be under a neceſſity of fortifying, in caſe the French remain at NIAWGRA, in order to prevent their taking poſſeſſion of it, as they did once already, in 1687, although it was but for a ſhort time: and this, doubtleſs, was the reaſon which made governor Clarke of New York ſo earneſt to have that place fortified.

In effect, a French fort there would prove no leſs dangerous to NEW YORK, than that at CROWN POINT, as it would give them admiſſion into the country of the SENNEKAS, the moſt powerful of the SIX NATIONS, among whom they have already gotten ſome footing, by means of the NIAWGRA fort, and their prieſts; and whoſe defection, conſidering their influence, might be a means of our loſing the friendſhip of the other five.

The fort at the mouth of the OHIO ought to be ſtrongly built and garriſoned, and a conſiderable ſettlement made about it: after, this ſettlement might be gradually carried on, between the MISSISSIPPI, and the ALLIGANEY mountains, backwards and forwards at the ſame time. Nor can too much encouragement be given to ſettle this country, eſpecially on the ſide of the MISSISSIPPI, as quick as poſſible, by allowing people liberty to ſettle how and where they pleaſe, without making large grants to any company; an obſtacle which has hindered ſettling more than any other thing, and, on many accounts, proved greatly detrimental to the colonies, by raiſing the price of land to an exorbitant degree; which, beſides the dangerous evil of enriching a few, and impoveriſhing many, has been attended with one ſtill more pernicious, that is, of weakening the colonies, by leaving near HALF OF SOME OF THEM UNPEOPLED.

This fort and ſettlement would effectually exclude the French from paſſing into the weſtern parts of Virginia, by the Ohio and its branches: but as they have two forts on the WABISH, one at its mouth on the OHIO, and another about the middle of that river, it would be proper to have two others built, in oppoſition to them: the ſecond, in the part where it draws near the river of the ILONOIS, or CHIKTAGHIKS. Should we go a little farther, and erect another on this laſt river, in the neighbourhood of the former, it would intirely cut off their communication this way, between LOUISIANA and CANADA, and oblige them to go ſo far about, as to diſcourage them, with all their ſanguine views and perſeverance, from ever hoping to compaſs their ſo-much-deſired project of joining their two colonies on this ſide of the Miſſiſſippi.

The country to the ſouth of the OHIO would be in good meaſure ſecured, by the fort built at the mouth of it, which will hinder their paſſage into the HOGHEGE, or river of the CHEROKEES, dividing the country of theſe Indians on the north from VIRGINIA. However, more effectually to ſecure it, and, at the ſame time, cover the country of the CHEROKEES, it would be proper to build one at the FALLS, a little below the place where the PELESIPI, or CLINCHES river joins it, in the north-weſt borders of the CHEROKEES; and another eſpecially in the heart of the country poſſeſſed by thoſe people, who have long applied with great earneſtneſs to the governor of CAROLINA for that purpoſe, repreſenting the danger which otherwiſe there was of the French doing the ſame; and it is well if, through this unpardonable neglect, the French, in caſe they ſhould be forced out of the back parts of VIRGINIA, [ſee VIRGINIA] do not, in their return to NEW ORLEANS, put that deſign in execution: as to be ſure they will, in caſe they keep poſſeſſion of what they have already uſurped, in order to prevent any attempts on our ſide to ſecure that country to us. By a like pernicious remiſſneſs, or ſomething elſe, were they ſuffered, ſince the

year 1715, to build the fort TOULOUSE, on the river AILIBAMOUS, not far from the country of the CREEK INDIANS, and the borders of GEORGIA; which frontier, though not yet ſufficiently fortified, has balked their views of carrying on their CHAIN of FORTS, on that ſide, to the Atlantic Ocean, which, before that colony was founded, they thought themſelves ſure of effecting, whenever they pleaſed, and, therefore, made the leſs haſte to accompliſh it.

Theſe FORTS might ſerve, at preſent, to fortify the ſouthern provinces of our American dominions. With regard to our northern, the firſt thing that demands our attention is the ſecurity of NEW YORK, and its PROVINCE. This will be, in good meaſure, done by the FORT to be built at NIAWGRA, and that already built at OSWEGO, in the country of the SIX NATIONS, at the ſouth-eaſt end of the lake KADARAKAI, or on ONTARIO, almoſt due ſouth of the FRENCH fort of FRONTENAC, on the north-eaſt corner of the ſame lake, about 70 miles diſtant. But this fort, which is the only one we have for defence of our back ſettlements for many hundred miles, 'till we come to GEORGIA, ought to be much enlarged, ſtrongly fortified, and furniſhed with a pretty numerous garriſon, and is of great conſequence, by its ſituation, to both the ſecurity and trade of our northern colonies, it being our north-weſtern frontier, and the only place, or opening left, by which the Indians can come to us with their furrs. For this reaſon, 'till ſuch time as our neighbours ſhall be obliged to allow them a free paſſage through the LAKES, it will be neceſſary to build a veſſel or two, capable of mounting guns for the conveniency of carrying them backwards and forwards, acroſs the lake; which expedient will go a great way to fruſtrate the deſign of the French, and recover our trade.

And here it is worth obſerving, that this fort of OSWEGO, built by governor Burnet in 1727, by favour of the Indians, ſtood unmoleſted all the laſt war; and although the garriſon uſually conſiſts of no more than an officer and 23 men, has been of more ſervice and benefit than all the reſt, although now it muſt be in imminent danger. This is a demonſtrative proof of the great importance and advantage of ſuch FORTS, on the number of which and ſmall garriſons, properly placed, the intereſt and ſupport of the French almoſt wholly depend.

However, more effectually to ſecure NEW YORK, a ſtrong FORT ought to be built in view of the French FORT at CROWN POINT. By means of this poſt, they may be enabled to intercept, or at leaſt diſturb, the trade from ALBANY up to the MOHOK's river, a branch of HUDSON's, to the Six Nations, by ſending a force on that ſide; and could they deſtroy the commerce of theſe Indians with the province of NEW YORK, they would oblige them to depend wholly on CANADA, a thing which they threatened to have done in 1732.

During the late French war, from 1744 to 1748, CROWN POINT was the rendezvous of the CANADA French and their Indians, from whence they attacked NEW YORK, and the north-weſt corner of MASSACHUSETS BAY. From this place, in 1745, they deſtroyed SARATOGA ſettlement, on Hudſon's river, about 30 miles above ALBANY: in which parts, during that and the two following years, they killed and captivated above 300 of our people *, deſtroying moſt of the inhabitants and plantations on the north-eaſt branch of that river. In former wars, the attack on New England was from the north-eaſtward; in the war of 1746, it was from Crown Point. New York government, in former French wars, did not ſuffer, but in this laſt they ſuffered moſt †; that is, they were puniſhed for ſuffering that fort to be built. Beſides building this counter fort, ALBANY ought to be put in the beſt poſture of defence imaginable, in order to ſecure it againſt any attempts on that ſide. This quarter requires the ſtrongeſt barriers, becauſe the French have declared it to be the chief object of their views; and it lies ſo near QUEBEC, the center of all their ſtrength in CANADA, from which they have a moſt convenient paſſage all by water, excepting a ſmall ſpace of about 12 miles by land.

* Douglas's Summary of North America, vol. ii. p. 246.
† Ibid. vol. i. p. 316.

Monſ. Callieres, who firſt propoſed the project for the conqueſt of this city, to induce Lewis XIV, to comply with his deſire, ſays, in his Memoirs to the French miniſters, 'That 'this conqueſt would make the king maſter of one of the 'fineſt ports in AMERICA, which they might enter at all 'times, and a moſt beautiful country, in a mild and fertile 'climate!' No wonder ſo inviting a deſcription as this ſhould ſet the French at Canada a longing for NEW YORK: but ought not that longing of theirs to make us more earneſt to preſerve it?

By theſe fortifications, NEW ENGLAND will be pretty well ſecured on the weſt ſide, as it will on the eaſt by thoſe already built, and the two now building on the river KENNEBECK, one by the province, the other by the proprietors of the KENNEBECK purchaſe; whoſe generous example, it is hoped, will animate others to do the like, and not let them

ſtop, 'till they have erected a fortreſs on the very banks of ST LAURENCE RIVER, which is within their limits. Mean time, as the laſt of the two forts has been founded ſo high as the TAKONNEK FALLS, and the north part of New England lies wholly expoſed to the ravages of an enemy, it is not doubted but that they will not delay to build a third, at the head of the KENNEBECK itſelf in the Carrying-Place, not above four miles over, where it locks with the river called by the French LA CHAUDIERE, which falls into the ST LAURENCE, four or five leagues to the ſouth-weſt of QUEBEC. This fort ſhould be ſtrongly built, and furniſhed from Britain with a garriſon of 500 ſtout men: unleſs this be done, the building thoſe two forts will only ſerve to put the French in mind of doing it. And from their conduct it may be judged, that a ſmall occaſion would ſerve them for a pretence.

The building a fort here is the more neceſſary on three accounts; (1.) As it will bridle the ABENAKKI INDIANS, in the intereſt of the French, and hinder them from ever attempting any thing againſt NEW ENGLAND, this having always been the place of rendezvous for both, on ſuch occaſions. It will alſo prevent their going on the OHIO expedition; and thoſe reſtraints, by degrees, be a means of their coming over to our intereſt. (2.) As it lies near the heads of the rivers St Francis and St John, as well as of the Kennebeck and La Chaudiere, before mentioned; ſo that it will have the command of four very important rivers, two of which fall into the St Laurence, the Chaudiere towards Quebec, and the St Francis towards Montreal. (3.) As it will help to cover not only the northern borders of New England, but alſo thoſe of New York, from which it will not be far diſtant. I may venture to ſay, that the good effect of this fort will extend as far as ANNAPOLIS ROYAL, and the town of HALIFAX in NOVA SCOTIA, by cutting off all ſupplies of men and ſtores to the French in that country, by ST JOHN'S RIVER, which will oblige them to abandon their forts lately built at the mouth of it. The KENNEBECK company, in full expectation of this deſirable event, have already given land to 100 men, and their families, to ſettle the country thereabout, under protection of the two forts newly built upon that river.

How different is the practice of ſome colonies, to this generous public-ſpirited conduct of the KENNEBECK proprietors! The aſſembly of NEW YORK, in their addreſs to governor De Lancey, the 20th of Auguſt laſt, complains, 'That other 'colonies make themſelves ſtrong and defenſible, by ſettling 'in townſhips, or ſome other cloſe order, while our frontier 'lands are granted away in patents almoſt without bounds 'or number, regardleſs of ſettlements, or the public welfare.' And in a State of the Britiſh ſettlements, now in view, we are told, that 'even the lands beyond New York itſelf and 'Albany, on both ſides of Hudſon's river, by an abuſe which 'ought to be remedied, viz. the old exorbitant grants, are 'but thinly inhabited, although lands for ſettlement in that 'colony are extremely wanted: and thoſe tracks would ſoon 'be purchaſed, if they could be had at any tolerable rates.' This unpeopled ſtate of the country is of ſo much the worſe conſequence, ſince, in caſe the French ſhould attack ALBANY and NEW YORK at the ſame time, one by SEA, and the other by LAND, conformably to their plan, from whence could ALBANY be reinforced? The country has not men to ſupply it, nor could NEW YORK, in ſuch a caſe, be able to ſpare any. On this occaſion, the memorial of 1732 obſerves, 'That when the preſent ſtate of New York, and the power of thoſe neighbours (the French) is well underſtood, it will too evidently appear, that they will, on a rupture, be under unhappy circumſtances; and with them the other colonies muſt be deeply involved.' Such ENFEEBLING GRANTS, therefore, are of pernicious tendency every where, but no where ſo much as in the province of NEW YORK; which being the key of all the other colonies, and moſt expoſed to our northern neighbours, who, for theſe reaſons, cover it, all means which can be thought of, conducive either to its improvement or ſecurity, ought to be applied, and every the leaſt obſtacle to either ought to be removed.

After the words cited from the aſſembly's addreſs, they juſtly remark, 'We can erect FORTS and BLOCK-HOUSES; but 'to what end? Woods and uncultivated tracks are not the 'objects of ſecurity; induſtry is to be protected, and mens 'perſons to be defended, otherwiſe little good will accrue to 'the public, be the expence what it will.' It is true, there can be no proſpect of ſettling a country, while ſuch diſcouraging grants are in the way: but were thoſe obſtacles removed, under the protection of ſuch forts as have been propoſed, in a very ſhort time we might hope to ſee this part well inhabited, and, conſequently, the ſtrongeſt barrier (as it ought to be) in the ENGLISH AMERICAN dominions againſt the FRENCH. With regard to NOVA SCOTIA, including the country to the eaſt of KENNEBEK RIVER, it will require ſeveral FORTS and ſettlements to ſecure it, not only at the mouths of the three principal rivers, PENOBSKOT, LA CROIX, and ST JOHN'S, at which laſt there are two French forts, but alſo at certain poſts along thoſe rivers, particularly this laſt; which beginning not far from the head of the Kennebek, and paſſing with a circular courſe, encompaſſeth the greater and moſt valuable part of all the country; ſo that thoſe forts will keep both FRENCH and INDIANS in awe, as they will have an eaſy communication by water among themſelves, and with the ſettlements on the other rivers, travelling only a little way by land. Above all, care muſt be taken to build a ſtrong fort at SHEGNIKTO, on ſome elevated ground, to the north of the French fort, which may both command, and exceed it in force; for the preſent fort is ſo weak, and ill ſituated, that the garriſon would be obliged to ſurrender almoſt at the firſt ſhot: ſo that, in caſe of a war, we ſhould have no chance there. Nor will this be enough: it will be neceſſary for ſecuring it, to have two forts more, one at BAY VERTE, to prevent our neighbours from invading the country at pleaſure, that being their landing-place from CANADA, and one of the two ways by which they enter and correſpond with Nova Scotia: ST JOHN'S RIVER, as before mentioned, is the other, by which (ſays La Hontan) the inhabitants of thoſe two countries may hear from each other in 16 or 17 days; though not in a month by ſea.

The ſecond fort ought to be erected at the entrance into SHEGNIKTO baſon, or harbour; for ſhould the French build one there, they would exclude all acceſs to it by ſea.

But as the erecting ſo many forts at once in this province (of Nova Scotia) may be thought too expenſive a work, it may be ſufficient, for the preſent, only to build ſome along the river ST JOHN, and thoſe at SHEGNIKTO.

By ſuch a number of forts and ſettlements as I have mentioned, may the BRITISH territories be effectually ſecured, the FRENCH kept at a diſtance, and our trade in good meaſure recovered, by paſſages opened for the Indians to come and trade with the colonies; which will likewiſe be at liberty to extend their ſettlements on all ſides, in ſpite of any oppoſition which the French can give them, or rather without danger of any from them: for, by means of theſe forts, a much ſtronger line of circumvallation will be formed againſt them, than they at preſent have againſt us.

You will ſay, perhaps, that I have cut out a fine expenſive work for the colonies. It will be expenſive, there is no doubt of that; but what can be done, ſuppoſing fewer forts will not be ſufficient to ſecure them? If, therefore, the burthen fall heavy, they may thank their own miſmanagements. Had FORTS been gradually built on their frontiers, and as they extended their out-ſettlements, after the example of the FRENCH, a thing which ought to have been done, the charge would not have been felt. As this has been neglected, that muſt be done at once which ſhould have been done at different times: beſides, the expence is greatly augmented, by their having ſuffered the French to build upon them every where. At firſt, a few forts erected in proper places, would have ſerved the purpoſe, and their neighbours finding the poſſeſſions ſecured, might never have thought of diſturbing them: but ſeeing the countries lie open, and the colonies careleſs through a vain ſecurity, or worſe, covetouſneſs, they were invited to enter, and puniſh their neglect in the manner they have done.

REMARKS before the laſt war, and peace of 1763, in our firſt edition began in the year 1751.

If America ſhould again become the ſeat of war, as it was in the laſt, (and this it certainly will, if the Spaniards join the French) it will prove of unſpeakable detriment to theſe kingdoms, as things are at preſent circumſtanced, provided it ſhould be conducted as the laſt war there was, and if there ſhould be ſuch unhappy miſunderſtandings between admirals and generals, as was between Mr Vernon and Mr Wentworth, &c.—I have now the miſconduct of this whole affair before me; which would prove very diſagreeable, and, indeed, very ſhocking, to repreſent in its true colours. But we will hope for better conduct in the next war, in that part of the world, or our all, I am confident, will be loſt there.—It appears to me, that there are opportunities enough in America greatly to diſtreſs the Spaniards, if it ſhould become neceſſary, as well as the French; and, after having provided effectually for our affairs in Europe, we cannot have too great a fleet to act in America, and elſewhere: but, unleſs we ſtrike ſome CAPITAL AND EFFECTUAL STROKE, the war will only be prolonged for the benefit of the officers, from year to year, and turn to the diſhonour and ruin of the nation, inſtead of its glory and proſperity.

We have not the leaſt reaſon to be diſcouraged at the expence of a much greater FLEET than ever this nation beheld. If we had a fleet as powerful again as we have, we ſhould ſcarce feel the expence of it: nay, I could almoſt preſume to affirm, THAT THE GREATER OUR ROYAL NAVY IS, THE RICHER, INSTEAD OF THE POORER, WILL THE NATION BE; AND THEREFORE WE CAN SCARCE SPEND TOO MUCH UPON OUR MARITIME FORCE.

Excluſive of what we expend for naval ſtores with other nations, the reſidue of our naval expences is raiſed within ourſelves, and centers and terminates within ourſelves. 1. Our royal navy is victualled among ourſelves, and this inriches the landed gentleman, as well as the farmer and grazier. 2. Our ſhips are built and maſted with our own timber, and built by Britiſh artificers. 3. Though we take hemp from Ruſſia,

yet our cordage and ſail-cloth and iron are chiefly manufactured amongſt ourſelves, for the employment of our manufacturers and artificers. 4. Our ſhip-chandlery particulars, great in number, are produced among ourſelves; and our ſhips are ſupplied with liquors by our own brewery, and our own diſtillery. 5. Though we uſed formerly to be obliged to take our pitch and tar from Sweden, yet at preſent we have the bulk of it from our own plantations; and ſo we may, in time, have all our hemp from thence: and whatever adds to the circulation of commerce between England and her colonies and plantations, tends to augment the opulence and power of both. 6. The appointments paid to our ſea officers, and wages of our mariners, alſo revert again into our own hands. 7. The great eſtates frequently obtained in time of war by our admirals, and other chief officers, as well as by privateering, generally make the nation more than an ample recompence for the mercantile loſſes we ſuſtain by ſea in thoſe calamitous times. 8. The prizes which we commonly make of the enemies ſhips of war and naval ſtores, can ſcarce fail to be equivalent to thoſe we may happen to loſe of our own.

Upon the whole, if we compare the national expence raiſed upon our ROYAL NAVY, when it ſhall be exerted to its fulleſt extent in times of war, with the national RETURNS, as the neceſſary conſequence thereof, according as our affairs are now happily circumſtanced; we need not be at all apprehenſive, that a war carried on by SEA can ever impoveriſh or hurt the kingdom at all. For let it be ſuppoſed that 3,000,000l. a year, or even more, was raiſed annually above the ordinary expence, for the ſupport of the royal navy, it will not be eaſy for any one to ſhew, that near the whole expence raiſed would not return into Great-Britain again. From paſt experience in relation to the three laſt great wars, the expence of our naval affairs, conſidered in the ſeveral lights before intimated, did the nation no great injury, and would have done much leſs, if we could then have provided ourſelves, as we now can, with ſo great a part of our naval ſtores.

Nor could it do us any detriment, if the expence was conſiderably greater, provided the money was conſtantly RAISED WITHIN THE YEAR; for the greater our naval power is, if exerted as it ought to be, the greater might, and very probably would, be our advantages by ſea over the enemy, and therefore the RETURNS of treaſure into the kingdom would be equivalent to the EXPENCE RAISED: and this would be almoſt all gain to the nation.

But ſuppoſing the neceſſity of our affairs ſhould oblige us to run annually THREE MILLIONS, or more, into debt, on account of our NAVAL EXPENCES, let us conſider how it would affect the wealth of the nation.

Who muſt be the public creditors to whom this money will be due? Does it not every ſhilling (except what I have before excepted) ariſe from the product of our land, and the labour of our workmen? And while the PRINCIPAL MONEY is due only AMONGST HIS MAJESTY'S SUBJECTS, as I have zealouſly pleaded for in this performance, and the INTEREST paid to them only, ſuch debts will ſit light upon the nation: but when any proportion of ſuch debts becomes due to foreigners, by transfer or otherwiſe, and the intereſt money goes out of the nation, this is reckoned a diſadvantage in the like degree, which is the reaſon that I have ſuggeſted how deſireable it would be, if it ſhould ever be found practicable, that all the PUBLIC DEBTS THE NATION SHALL BE OBLIGED TO INCUR, ſhould be CONTRACTED AMONGST BRITONS ONLY; in which caſe, no intereſt-money would go out of the nation, and, conſequently, the burthen of our national incumbrances would be the leſs ſenſibly felt. See our articles CREDIT, [PUBLIC CREDIT], DEBTS, [NATIONAL DEBTS], FUNDS, MONIED-INTEREST.

Although a part of the intereſt money paid on account of the principal debt contracted for our naval affairs, ſhould be remitted to foreigners out of the kingdom, in virtue of their becoming our public creditors, yet it ſhould not be forgot, that the PRINCIPAL VALUE aroſe from the produce of our LAND and our LABOUR, and that we have taken ſuch foreigners PRINCIPAL MONEY, though they take away our INTEREST MONEY. This abates the evil in ſome degree: but when a great proportion of the principal money due to FOREIGNERS has been ſpent IN FOREIGN COUNTRIES, and never returned in any ſhape to us again; when this is not only the caſe, but the intereſt money is ſpent out of the nation likewiſe; this magnifies the evil of ſuch debts.

But when our native land and labour ſhall have PRIMARILY received the benefit and advantage of our NAVAL EXPENCE, it may be a quere, whether thoſe benefits and advantages, conſidered upon the WHOLE, may not be equivalent to the diſadvantages ſuſtained by paying intereſt to foreigners for a PART only.

Certain it is, however, that let theſe our NAVAL EXPENCES be any way conſidered, it ſhould ſeem, methinks, as if they had a tendency rather to inrich the nation, than any how to injure or impoveriſh it: for ſo much of the money expended this way, in time of war, is really ſomething like extracting ſo much GOLD and SILVER out of our MINES; and what is the common produce of our LANDS and our LABOUR, are MINES of the greateſt utility to the ſtate. Neither ſhould it be forgot, that our ROYAL NAVIES, built and equipped with ſuch money, become really PERMANENT RICHES for many years, of which we enjoy the benefit; and the ſervice and glory which the kingdom derives from theſe her NAVAL TREASURES, far more than compenſate for the expence of the intereſt of the money they coſt, be that conſidered in what light it may.

In a word, it ſhould ſeem, however paradoxical at firſt glance it may appear, that our very NAVAL EXPENCES are creative, under the reſtrictions we have conſidered them, of NATIONAL WEALTH; and if our whole public incumbrances had been made up of ſuch ſort of expences, and raiſed within the year, and the whole intereſt money had centered within ourſelves, as perhaps might have been the caſe, our debts would have proved very little burthen to us. There is another conſideration, notwithſtanding, that ought to alleviate, in ſome meaſure, the thoughts of the burthen of the INTEREST MONEY paid to foreigners who are our public creditors; which is, that the chief of our foreign public creditors being the ſubjects of the United Provinces, and the author of this work looking upon the intereſt of thoſe provinces in a light abſolutely inſeparable from that of Great-Britain, thinks that the intereſt money paid to them ought to be looked upon, in ſome degree, as really paid to ourſelves: and what ought to be ſome additional motive with us to have a natural tie and affection towards that nation, is the chearfulneſs they ever ſhew to aid and aſſiſt us with their money-ſubſcriptions, upon all emergencies, and in all other ſhapes, I am willing to think, according to their power, unleſs when ſome wicked men at the helm have prevented it. And is not this the caſe of all nations at one time or other? But the contrary is the genuine ſenſe of the wiſe and upright men in that ſtate; and I hope that we ſhall ſoon happily experience a perfect union and good underſtanding between GREAT-BRITAIN and HOLLAND, notwithſtanding all the wiles and machinations of our common enemies, to divide and diſtract us, in order to ſubvert the power of both.—To this end, I have zealouſly endeavoured to remove the prejudices which too many in this kingdom are at preſent taught to have againſt the Dutch, by the emiſſaries of France. See our articles UNITED PROVINCES, HOLLAND, TRADE, FLANDERS and NETHRELNADS.

Theſe conſiderations, we humbly hope, will animate the nation to ſpare no EXPENCE upon their NAVAL POWER, if the neceſſity of affairs, as I fear will be the caſe, ſhould make it requiſite even to treble the FLEETS we at preſent have, more eſpecially if we exert ourſelves to raiſe the whole of our naval ſtores in our plantations.

REMARKS on our article WAR, ſince the laſt war, and the PEACE of 1763.

Under our article TAXES, there appears an account of all the money that has been raiſed ſince the year of the REVOLUTION in 1688, to the concluſion of the reign of his late Majeſty George II. If we caſt an eye upon the incredible expence of the laſt war, it would certainly have proved utterly impracticable to have raiſed ſuch ſupplies WITHIN THE YEAR as were raiſed to carry on that war. Since the reign of queen Anne, our PUBLIC DEBTS are nearly trebled to what they then were, although a great parade has been made, ſince that period, to leſſen them. And if the examples of carrying on WARS by this nation at the expence we have hitherto done, are to become permanent precedents, and eſteemed worthy the ſanguine imitation of poſterity; it requires no extraordinary preſcience to predict, that ſuch expenſive wars muſt at length prove the inevitable RUIN and DESTRUCTION of this commercial empire. For to ſuch a degree muſt our TAXES in general be neceſſarily augmented, to pay the INTEREST of our ENCREASED PUBLIC DEBTS, that the NECESSARIES OF LIFE, THE PRICES OF LABOUR, AND THE PRICES OF ALL OUR COMMODITIES AND MANUFACTURES, WILL BE SO GREATLY RAISED AND INHANCED, THAT THE GENERAL DOMESTIC CONSUMPTION OF ALL OUR NATIVE COMMODITIES WILL DECREASE AMONG OURSELVES; OUR GOODS WILL BECOME SO DEAR, THAT FOREIGNERS NEITHER CAN NOR WILL PURCHASE THEM: AND WHAT WILL BE THE CONSEQUENCE HEREOF? AS THE HOME CONSUMPTION OF OUR NATIVE COMMODITIES DIMINISHES, WHAT WILL BECOME OF THE REVENUE OF EXCISES? WILL NOT THAT BE REDUCED PROPORTIONABLY? AND WHEN WE SHALL NOT BE IN A CONDITION TO EXPORT OUR OWN GOODS, BECAUSE NO FOREIGNER CAN OR WILL BUY THEM, WHILE HE CAN BUY THOSE OF OTHER NATIONS, OUR TRADING COMPETITORS, CONSIDERABLY CHEAPER, HOW LONG SHALL WE BE ABLE TO IMPORT THE FOREIGN GOODS OF OTHER STATES AND EMPIRES? NOT LONG, MOST CERTAINLY. AND WHEN THAT COMES TO BE OUR CASE, WHAT LIKEWISE WILL BECOME OF THE REVENUE OF CUSTOMS? WILL NOT THAT BE REDUCED AS OUR IMPORTS SHALL BE? WHERE THEN SHALL WE FIND THE FUNDS TO PAY THE INTEREST FOR OUR PUBLIC DEBTS? WILL NOT THE

FUNDS VANISH ALSO, FOR THE PAYMENT OF THE KING'S CIVIL LIST REVENUE; FOR THE SUPPORT OF HIS HOUSHOLD, AND THE HONOUR AND DIGNITY OF HIS CROWN? WILL NOT THE VERY EXISTENCE OF THE SINKING FUND, NOW MORTGAGED AS A COLLATERAL SECURITY TO THE PUBLIC CREDITORS, BE ANNIHILATED; AND INSTEAD OF THE NATIONAL CREDITORS HAVING ANY SECURITY FOR THE DISCHARGE OF THEIR PRINCIPAL MONEY, HOW WILL THEY COME BY THEIR INTEREST? WHEN THIS SHALL COME TO BE THE STATE OF PUBLIC CREDIT, AND THE MONIED INTEREST SHALL BE UNDONE, WHAT WILL BECOME OF OUR TRADERS? WILL NOT OUR MERCHANTS FLY TO FOREIGN COUNTRIES, AND THERE EXERCISE THEIR SKILL AND INDUSTRY, TO IMPROVE THE COMMERCE AND NAVIGATION OF THOSE COUNTRIES, WHOSE GREATER CHEAPNESS OF THEIR COMMODITIES WILL INDUCE THEM TO TRADE THEREIN THROUGHOUT THE WHOLE WORLD? WHEN WE HAVE LOST OUR MERCHANTS AND OUR MONIED MEN, WHAT A FIGURE WILL OUR LANDED GENTLEMEN MAKE? WHEN OUR BRITISH LAND SHALL BE OF AS LITTLE WORTH AS THAT IN SIBERIA, WILL THE RAISING FOUR SHILLINGS IN THE POUND UPON SUCH LAND, RAISE AGAIN THE BRITISH SPLENDOR?

It would be eaſy to carry on this ſtrain of obſervation to a much greater pitch; but the idea of a bankrupted and ruined nation is a melancholy ſubject to dwell upon; eſpecially when men are too apt to judge it viſionary. I heartily wiſh it may never prove otherwiſe; the author had rather have his memory eternally ſtigmatized, than ſuch a cataſtrophe ſhould ever come to paſs. His motive is not to alarm with falſe fears; but to guard Britons againſt that danger that appears to him impending, unleſs ſome maſterly ſtrokes of policy are ſtruck, to reduce the tax-incumbrances on our trade in general, in order to reduce the PRICES OF OUR COMMODITIES AND MANUFACTURES in general as low as thoſe of any RIVAL NATION in EUROPE. 'Till this is done, and moſt effectually too, we deceive ourſelves in imagining, that we ſhall be able to preſerve our trade and navigation. The wiſeſt TREATIES OF COMMERCE with nations will not effect it; they will eternally be evaded; ſuch ſtates and empires with whom we ſhould make them, and become even upon a better footing with them in trade than any other nation is, cannot be compelled to purchaſe our goods, when they can have others from 15 to 30 and 40 per cent. cheaper. Nor ſhall we ever be able to put a ſtop to the infamous practice of ſmuggling in Great-Britain and Ireland, and the Britiſh plantations, while they ſhall be able to buy French and other foreign commodities ſo much cheaper than they can Engliſh. I could heartily wiſh and rejoice that theſe things were conſidered by our RULERS as they ought to be, and this great work was ſet about in earneſt; for if it is deferred, the malady will grow ſo malignant as to become abſolutely incurable.

It has proved a misfortune to both ſtates, that Great-Britain and the States General, have not been happily cemented in their intereſts; we mean more particularly in their commercial intereſts; for nothing but a union founded on ſuch a baſis, can influence them to act in concert heartily for their reciprocal ſupport and preſervation, againſt France, or any confederacy the court of Verſailles may form againſt them both.

But while the Dutch experience it more for their benefit and advantage, to traffic in French commodities and manufactures, in preference to thoſe of Engliſh; while the Hollanders find it turn more to their account to engage large capitals in the French trade, and carry the wares of that kingdom for ſale to every part of the world, by reaſon of their greater cheapneſs and readier vent than Engliſh, 'tis no wonder, that thoſe ſtates are more united than England and Holland; but it is more aſtoniſhing, that the great men in England and Holland have not yet fallen upon ſome meaſures to accompliſh a deſireable commercial union, as previouſly neceſſary to a total union of all their mutual intereſts. For till this is done, and effectually done, they will always be liable to be plunged into wars; which their hearty conjunction would often prevent.

However beneficial the Dutch may have found their neutrality when Great Britain has been engaged in wars with France, the States General may at length carry this maxim too far; for it is to be feared, that France will never loſe ſight of attempting to annex the United Provinces to their crown, however they may temporize with them. The Dutch may alſo have reaſon, and that, perhaps, not long firſt, to dread the machinations of another great and intriguing power, whoſe great aim ſeems to be to erect himſelf into a conſiderable maritime and commercial power; to which end he may have his eye no leſs upon the United Provinces than ſome other, and that acquiſition would not a little contribute to his extenſive views. Nothing might have a happier tendency to render abortive ſuch ſchemes of power, either on the ſide of France, or others, to ſwallow up Holland, than a perfect harmony and good underſtanding, in all reſpects, between Great-Britain and the States General; and this upon principles preſervative of the being of both ſtates, and tending to the increaſe of their commerce and navigation. See UNITED PROVINCES, FLANDRES, HOLLAND.

WARWICKSHIRE is bounded with Worceſterſhire on the weſt; Glouceſterſhire and Oxfordſhire on the ſouth; Derbyſhire and Staffordſhire on the north; and Northamptonſhire on the eaſt: in circumference it is computed at 122 miles. Its air is excellent, the ſoil rich, and its principal commodities are corn, malt, wool, wood, iron, coal, and cheeſe. The moſt conſiderable of the many rivers and brooks it is plentifully watered with, are the Avon and the Tame.

COVENTRY is a large, populous, and rich city: the chief employment of the inhabitants, at preſent, is in the manufacture of tammies, and weaving the ordinary ſorts of ribbons, eſpecially black.

TAMWORTH is a fine pleaſant town, noted for its good ale: the river Tame parts it in the middle, ſo that one half of this town is in this county, and the other in Staffordſhire. Here is a conſiderable trade in narrow cloth, and ſome other manufactures.

BIRMINGHAM is a large populous town; multitudes of the meaner ſort of people are employed here in the iron-works, in which they are ſuch ingenious artificers, that their performances in the ſmall wares of iron and ſteel are admired both at home and abroad.

STRATFORD has a ſtone bridge on the Avon, which is navigable to it by barges. It is a populous town, and its chief commodity is malt, which it makes in great abundance.

The navigation of the river Avon is obſerved to be of vaſt advantage to this county, and to the particular commerce of the city of Briſtol; for by it they drive a great trade in groceries, iron, lead, and all heavy goods, which are uſually carried by water almoſt as far as Warwick; and, in return, the corn, and eſpecially cheeſe, are carried back from Glouceſterſhire and Warwickſhire to Briſtol.

ATHERSTON, on the Stour, is famous for its cheeſe fair, the greateſt in England, on the 8th of September. Here the cheeſe factors buy vaſt quantities, which they carry to Stourbridge fair.

NUNEATON is a pretty large well-built town, and has a manufacture of woollen cloth.

WEIGHTS.

The foreign Weights of ſeveral of the chief trading parts of EUROPE compared.

The weights for HEAVY GOODS may properly be divided into three ſorts. 1. GREAT WEIGHTS, 2. POUNDS, and, 3. Their FRACTIONS, or ſmall weights.

The great weights are the SCHIPPENDT, which makes 300 or 400 pound, according to the different places; the LOAD, compoſed of two bales, making likewiſe 300 or 400 pound weight; the WAGE, about 165 pounds; the QUINTAL, making 100, 104, 105, 110, and ſometimes 112 pounds, or more, according to the cuſtom of each place.

The hundred, which is divided into QUARTERONS; the AROB, between 25 and 32 pounds.

The LISPENDT, 15 pound, more or leſs; the STONE, in ſome places of 8, in ſome of 15, and in ſome of 16 more; in others, more; the POUND conſiſts in ſome places of 12, in ſome of 14, in others of 16, which is moſt common; and in ſome of 40 ounces. And thoſe FRACTIONS are variouſly ſubdivided, according to the goods that are weighed, and the cuſtom of the place.

The fractions of the POUND are the MARK, conſiſting of 8 ounces, or half a pound; the OUNCE, of 8 GROSS, or DRACHMS, or 24 DENIERS, or 20 ENGELS; the GROSS, or DRACHM, of 3 DENIERS; the DENIER, of 24 GRAINS; the ENGEL, of 32 ACES, or 30 GRAINS.

In weighing of PRECIOUS STONES, &c. the OUNCE conſiſts of 576 GRAINS, but they reckon it 600. Four GRAINS make a CARAT.

The SILVERSMITHS divide their MARK, which they call OUNCE, into OCTAVES, CARATS, and GRAINS. The MARK, or OUNCE, contains 8 OCTAVES; the OCTAVE, 20 CARATS; and the CARAT, 4 GRAINS.

In HOLLAND, and particularly at AMSTERDAM, they make uſe of two ſorts of weights, to weigh all ſorts of goods and commodities ſubject to be weighed by the town-weights, viz. The MARK, or Troy weights, and the ANTWERP weights. The MARK, or TROY WEIGHT, is that which is known all over Europe, and which is uſed by the goldſmiths in weighing gold and ſilver, conſiſting, as I have already ſaid, of 8 ounces, or half a pound; ſo that, to make the hundred weight, there muſt be 200 MARKS, which hundred weight, or 200 marks, makes 105 $\frac{1}{2}$ pounds of Antwerp weight, or a little leſs; and the huudred weight of Antwerp makes but 94 $\frac{4}{5}$ pounds weight of Amſterdam.

As for Antwerp weights, they are only uſed there to weigh certain ſorts of ſilk, cochineal, ſome drugs, and other things of that nature.

Nor is it of the Antwerp, but of the Amſterdam hundred of 200 marks, that the ſchippendt is compoſed; by which weight the Holland cheeſe, Riga hemp and flax, and many other ſuch goods, are commonly ſold. At Amſterdam the ſchippendt is reckoned but 300 weight, and not 400, as in divers other places.

The pound mark of Spain and Portugal is held to be about $\frac{1}{2}$ an ounce leſs than that of Amſterdam. However, they make uſe, in thoſe countries, of ſeveral ſmaller weights.

In France they uſe three different ſorts of weights in buying and ſelling of goods, viz. mark-weight, table-weight, and king's-weight, or cuſtom-houſe weight.

It is not neceſſary to give further account of the mark-weight, of which I have ſaid enough. What they call table-weight, is that they make uſe of in ſeveral provinces in the kingdom, and particularly in Provence and Languedoc; which weight is between 18 and 25 per cent. ſmaller than the mark-weight; though at the ſame time the pound table-weight is compoſed of 16 ounces, becauſe thoſe ounces are ſo much ſmaller than the other. And though that diverſity of weight, in almoſt every town in Provence, and High and Low Languedoc, occaſions a great inconvenience to trade, the inhabitants of thoſe towns cannot be prevailed with to alter their ancient weights and meaſures.

Though ſome who have wrote upon that ſubject, have not taken notice of the difference between the weights of Toulouſe and thoſe of Marſeilles, 'tis certain that the latter are 5 $\frac{1}{4}$ per cent. or thereabouts, ſmaller than the former; ſince 100 weight of Toulouſe renders about 105 $\frac{1}{4}$ at Marſeilles, and 100 weight of Marſeilles renders only about 95 at Toulouſe.

Nor are they leſs miſtaken, who reckon the weights of Marſeilles equal to thoſe of Rochelle; for, on the contrary, they differ almoſt 25 per cent. as ſhall be ſhewn.

In ſome places of France they reckon by the quintal, and in others by the hundred, and in ſome places, both by the one and the other. And in that caſe, ſtrangers muſt take particular notice of making contracts, clearly to expreſs which of the two they mean.

By the hundred is meant barely 100 weight, and no more. And by the quintal is commonly meant 104; and in ſome places much more, as we ſhall ſee hereafter. And even at Toulouſe they add 1 pound to the 104, to make it good weight as they call it.

At Lyons they have two ſorts of weights. By the town-weights all ſorts of goods are weighed but ſilks; and they reckon 14 ounces mark to the pound.

By the others nothing is weighed but ſilks; and the pound conſiſts of 15 ounces.

At Rouen they have likewiſe two ſorts of weights; thoſe of the Viconté, and the mark-weight.

The weight of the Viconté is taken to be about 6 per cent. better than that of Paris, or the mark-weight, in weighing of wool; but in other caſes it is only 4 per cent. greater than the other. And ſo it is divided into fractions of 52, 26, and 13 pounds.

There being no Viconté weights leſs than 13 pound, all fine goods that are ſold by ſmaller weights are weighed by the mark-weight.

Of the Weights of Holland, and their conformity with thoſe of other Countries.

We have already obſerved, that the weights ordinarily uſed in Holland, and particularly at Amſterdam, are thoſe called mark-weights; and though ſome people make them equal to thoſe of Paris, Straſburgh, Beſançon, and Bourdeaux, it is certain, there is ſome difference between them.

Of the Weights of Brabant and Flanders, compared with thoſe of Holland.

The difference between the weights of Amſterdam and thoſe of Brabant, is about 5 $\frac{1}{2}$ per cent. excluſively: ſo that 100 pound of Amſterdam make 105 $\frac{1}{2}$ of Brabant, Antwerp, &c. and 100 pound of thoſe places make 94 $\frac{4}{5}$ of Amſterdam. As for the reduction of the one into the other, nothing is more eaſy, ſince you need only make the plain operation of the rule of three, and ſay,

If 100 pound of Amſterdam make 105 $\frac{1}{2}$ of Antwerp, &c. how many will 90 $\frac{4}{5}$ make? And you will have juſt 100—And on the contrary,

If 100 pound of Antwerp, &c. make 94 $\frac{4}{5}$ of Amſterdam; how many will 105 $\frac{1}{2}$ of Antwerp make? And you will likewiſe have 100.

And ſo you may make the reduction of any quantity whatſoever, of the weights of one of theſe places, into thoſe of the other.

You may comprehend, under the name of thoſe of Antwerp, the weights of more of the other towns of the ſame province, and likewiſe of Flanders; though indeed there is ſome ſmall difference between them, as it has been calculated, according to the following account, viz.

100 pound weight of Amſterdam makes at

Bruſſels, Bruges, Louvain, Bois Le Duc, Malines and Aerſchot	100
Bergen-op-Zoom	98
Namur - - - -	99
Ghent - - - -	108

The ſchippendt of Antwerp is 300 pound
The load - - - 400
The wage - - - 165
The ſtone - - - 8

Of the Weights of Paris, compared with thoſe of Amsterdam.

Though there is but an inconſiderable difference between the weights of Amſterdam and thoſe of France, we did not think fit to paſs it by without notice. According to the trueſt calculation, we reckon the weights of Paris 1 $\frac{1}{3}$ per cent. heavier than thoſe of Amſterdam. That is to ſay, 100 pound of Amſterdam make 92 $\frac{2}{3}$ pound of Paris; conſequently 100 pound of Paris make 101 $\frac{1}{3}$ pound of Amſterdam. The reduction of the one into the other is made in the manner mentioned above for the weights of Flanders and Holland, which is very plain.

The Weights of Rouen, compared with thoſe of Amsterdam.

For making the reduction of the weights of thoſe two places, you need only to take notice, that

100 pound of Amſterdam make 96 pound 2 $\frac{1}{2}$ ounces, Viconté weight of Rouen; and

100 pound Viconté weight of Rouen make 104 pound of Amſterdam.

The Weights of Lyons, compared with thoſe of Holland.

We have obſerved that at Lyons they uſe two ſorts of weights, viz. the pound of 15 ounces mark for ſilks, and that of 14 ounces for other goods; and the latter being the town-weight, obſerve, that

100 pound town-weight of Lyons make 86 pound of Amſterdam, and 100 pound of Amſterdam make 116 pound town-weight of Lyons, or thereabouts. Obſerve alſo, that the weight for ſilk is $\frac{1}{15}$ greater than the town-weight: ſo they reckon, that 100 pound ſilk-weight make 108 pound town-weight, and 100 town-weight make but 98 $\frac{1}{2}$ pound ſilk weight, and a little more.

The Weights of Bourdeaux, compared with thoſe of Amsterdam.

Though a certain miſtaken author has averred, that 100 pound of Amſterdam make 115 of Bourdeaux, the ſame having been exactly compared, the difference was found to be only $\frac{1}{2}$ a pound or thereabouts, that the weight of Amſterdam proved heavier than that of Bourdeaux; ſo that the difference being ſo very ſmall, it will not be neceſſary to trouble the reader with further notice thereof.

The Weights of Rochelle and Nantes, compared with thoſe of Amsterdam.

The difference between the weights of Rochelle and thoſe of Amſterdam, is ſo inconſiderable, that ſome writers have aſſerted that they are equal; but upon a more exact enquiry, it appears,

100 pound of Amſterdam make 99 pound of Rochelle; and 100 pound of Rochelle make 101 pound of Amſterdam, or very near — The weights of Nantes are equal to thoſe of Rochelle, or but a very trifling difference.

The Weights of Toulouse, compared with thoſe of Amsterdam.

The weights of Alby, Cartres, Lavour, and other towns of High Languedoc, are the ſame with thoſe of Toulouſe. 100 pound of Amſterdam make 118 pound of thoſe places; and 100 of thoſe places make 84 pound $\frac{3}{4}$ of Amſterdam.

The Weights of Marseilles, compared with thoſe of Amsterdam.

Though it is commonly ſaid that 100 pound of Amſterdam make only 120 pound of Marſeilles; upon an exact enquiry into the matter, it appears that 100 pound of Amſterdam make 123 $\frac{1}{2}$ pound of Marſeilles; and

100 of Marſeilles are reckoned 300 pound of the weight of that town; and by that they commonly ſell the Levant and Turkey goods.

The Weights of Geneva, compared with thoſe of Amsterdam.

Monſ. Sebaſtian Peters, an author of Bremen in Germany, in a book he publiſhed, ſays, that 100 pound of Geneva make 113 $\frac{1}{2}$ of Amſterdam, and that 100 pound of

Amſterdam

W E I

Amſterdam make 88 pound of Geneva; but Meſſieurs Marcet, brothers, and natives of Geneva, late merchants of Amſterdam, ſay that
100 pound of Geneva make 112 $\frac{3}{8}$ pounds of Amſterdam,
And 100 pound of Amſterdam make 89 pound of Geneva.

The Weights of LONDON and DUBLIN, compared with thoſe of AMSTERDAM.

They make uſe of three different ſorts of weights at London, for weighing of goods and ſilver, viz. The great hundred, the hundred, and the weight of Venice.
For what they call the great hundred, they give 112 pound; and in ſome ſorts of goods, only 104 pound, and that only to citizens of London; the ſtrangers, and ſuch Engliſhmen as are not citizens, having only 100.
But for ſpiceries, drugs for dyers, and ſome other ſuch things, ſtrangers and citizens promiſcuouſly have 112 for 100.
When ſtrangers ſell their goods, they muſt deliver them by the king's weights; but when they buy, they muſt uſe the merchants weights, which are leſs than the king's weights.
They weigh ſilver by the weight called the weight of Venice; 12 ounces of which make the mark.
According to the beſt computation, 100 pound of London make 91 $\frac{1}{2}$ pound of Amſterdam; and 100 pound of Amſterdam make 109 $\frac{1}{2}$ pound of London.
The weights of Ireland are the ſame with thoſe of England.

The Weights of SCOTLAND, compared with thoſe of AMSTERDAM.

The weights of Scotland being about 4 per cent. greater than thoſe of London, the reduction muſt be made accordingly.

The Weights of BREMEN, compared with thoſe of AMSTERDAM.

The weights of Bremen being 3 per cent. leſs than thoſe of Amſterdam, 100 pound of Amſterdam make 103 pound of Bremen, or a little more; and 100 pound of Bremen make 96 pound of Amſterdam.

The Weights of HAMBURGH, compared with thoſe of AMSTERDAM.

At Hamburgh they ſell ſeveral ſorts of goods by the ſchippendt of 300 pound, or 30 ſtone of 10 pound each, to the ſchippendt; which renders at Amſterdam 294 pound.
It is to be obſerved, that at Hamburgh, retailers have the privilege to ſell any goods, not exceeding 10 pound, by the weight of Cologne, which is 2 per cent. leſs than that of Hamburgh; but wholeſale merchants muſt ſell by the weight of that place.
They have but one weight at Hamburgh, by which all goods are to be weighed; and the weighers, at their admiſſion, take an oath before the ſenate, and keep a record of all goods they weigh.
100 pound of Amſterdam make 102 pound of Hamburgh; and 100 pound of Hamburgh make 98 pound of Amſterdam, or thereabouts.

The Weights of LUBECK, compared with thoſe of AMSTERDAM.

There is about 5 per cent. difference betweeen the weights of Lubeck and thoſe of Amſterdam. For
100 pound of Amſterdam make 105 pound of Lubeck; and
100 pound of Lubeck make 95 $\frac{1}{4}$ pound of Amſterdam.
The ſchippendt of Lubeck is compoſed of 320 pound;
The ſtone, of 10 pound; and,
The liſpendt, of 16 pound.
The ſchippendt renders at Amſterdam about 305 pound.

The Weights of COPENHAGEN, compared with thoſe of AMSTERDAM.

The ſchippendt of Amſterdam is compoſed of 20 liſpendts, or 32 pounds; and 100 pound of Amſterdam make 101 $\frac{1}{4}$ pound of Copenhagen; and 100 pound of Copenhagen make 98 $\frac{3}{4}$ pound of Amſterdam.

The Weights of BERGEN in NORWAY, compared with thoſe of AMSTERDAM.

The weights of Bergen are by ſome reckoned equal to thoſe of Copenhagen, but upon ſcrutiny it has been found that there is ſome difference. For
100 pound of Amſterdam make 95 $\frac{1}{5}$ pound of Bergen; and
100 pound of Bergen make 105 pound of Amſterdam.
Some reckon the ſchippendt equal to 300 pound of Amſterdam, but it is commonly reckoned 315.

The Weights of STOCKHOLM, compared with thoſe of AMSTERDAM.

The ſchippendt of Stockholm, for copper and ſuch goods, conſiſts of 320 pound; but that uſed for other commodities is reckoned 400.
The firſt renders at Amſterdam 273 $\frac{1}{2}$ pound; the laſt, 342.
100 pound of Amſterdam make 117 pound of Stockholm;
And 100 pound of Stockholm make 85 $\frac{1}{2}$ pound of Amſterdam.

The Weights of DANTZIC and REVEL, compared with thoſe of AMSTERDAM.

They weigh fine goods in thoſe places by the STONE of 24 pound.
Almonds, rice, wax, and ſuch other goods, are weighed by the GREAT STONE of 34 pound.
Braſs, tin, lead, and other ſuch goods, are weighed by the great hundred, of 120 pound.
16 pound, mark-weight, make 1 liſpendt.
20 liſpendts make the ſchippendt of 32 pound.
But the ſchippendt of Revel is reckoned 400 pound.
100 pound of Amſterdam make 112 $\frac{1}{2}$ pound of Dantzic; and
100 pound of Dantzic make 89 pound of Amſterdam.

The Weights of STETIN, compared with thoſe of AMSTERDAM.

See what has been ſaid of the weights of Copenhagen; to which thoſe of Stetin are reckoned equal, or within a very ſmall matter.
The weights of Koningſberg conſiſt of 400 pound, or 10 ſtone of 40 pound each; and it renders at Amſterdam 306 or 307 pound.
When burghers of Koningſberg buy of ſtrangers, they allow 4 $\frac{1}{2}$ or 5 per cent. good weight.
100 pound of Amſterdam make 125 pound of Koningſberg;
And 100 pound of Koningſberg make 80 pound of Amſterdam.

The Weights of RIGA, compared with thoſe of AMSTERDAM.

The ſchippendt of RIGA conſiſts of 20 liſpendts, and renders at Amſterdam about 330 pound.
100 pound of Amſterdam make 121 $\frac{1}{2}$ pound at Riga; and
100 pound of Riga make 82 $\frac{1}{2}$ pound of Amſterdam.

The Weights of FRANKFORT and NUREMBURGH, compared with thoſe of HOLLAND.

The ordinary cuſtom of Frankfort and Nuremburgh, is to allow 120, and ſometimes they allow the length of 132, to the hundred.
100 pound of Amſterdam make 98 pound of Frankfort and Nuremburgh; and
100 pound of Nuremburgh make 102 pound of Amſterdam.

The Weights of BERN in SWITZERLAND, compared with thoſe of AMSTERDAM.

The weights of Amſterdam are about 11 per cent. greater than thoſe of Bern; for
100 pound of Amſterdam make 111 pound of Bern; and
100 pound of Bern make 90 pound of Amſterdam.

The Weights of LEIPSIC compared with thoſe of AMSTERDAM.

The difference between the weights of theſe two places is not ſo conſiderable as ſome authors have made it, viz. 8 per cent.; for upon enquiry it appears, that
100 pound of Amſterdam make 105 pound of Leipſic; and
100 pound of Leipſic make 95 $\frac{1}{4}$ of Amſterdam.

The Weights of NAUMBURGH and HALL, compared with thoſe of AMSTERDAM.

There being but a very inconſiderable difference, if any at all, between the weights of theſe two places, and thoſe of Leipſic, I refer the reader to what is ſaid thereof before.

The Weights of BRESLAW in SILESIA, compared with thoſe of AMSTERDAM.

The difference between the weights of thoſe two places is very conſiderable, being, according to the exacteſt computation, no leſs than 25 per cent. So that
100 pound of Amſterdam make 125 pound of Breſlaw; and
100 pound of Breſlaw make 80 pound of Amſterdam.

The Weights of COLOGNE, compared with thoſe of AMSTERDAM.

The weights of Amſterdam are 4 per cent. greater than thoſe of Cologne. So that
100 pound of Amſterdam make 104 pound of Cologne; and
100 pound of Cologne make 96 pound of Amſterdam.

The Weights of LIEGE, compared with thoſe of AMSTERDAM.

The weights of Amſterdam have likewiſe the advantage of thoſe of Liege, about 5 per cent. or little more; for
100 pound of Amſterdam make 105 $\frac{1}{4}$ pound of Liege; and
100 pound of Liege make 95 pound of Amſterdam.

The Weights of GENOA, compared with thoſe of AMSTERDAM.

At Genoa they uſe five different ſorts of weights in buying and ſelling goods.
The firſt they call the GREAT-WEIGHTS, which are uſed in the cuſtom-houſe.

The

The ſecond they call CASH-WEIGHTS, being what they weigh the piaſtres, and other ſilver ſpecies, with.
The third they call QUINTERO, which is the common-hundred, uſed for bulky goods.
The fourth they call the GREAT BALANCE, by which they weigh raw and unwrought ſilks. And
The fifth they call the SMALL BALANCE, for weighing fine goods.

They reckon that 90 4/5 rotoli, great-weight,
or 66 2/3 rotoli, caſh-weight,
or 100 rotoli, common-weight,
or 144 pound, great-ballance,
or 153 pound, ſmall-ballance,
make 100 pound of Amſterdam.

The Weights of LEGHORNE, compared with thoſe of AMSTERDAM.

The pound of Leghorne conſiſts of 12 ounces, mark-weight. They commonly ſell goods by the quintero, which in ſome caſes is reckoned 150, in ſome 151, and in ſome caſes 160 pound.
And ſometimes they ſell by the thouſand.
Wool and fiſh are ſold by the quintero, of 160 pound.
100 pound of Amſterdam make 145 pound of Leghorne; and
100 pound of Leghorne make 69 pound of Amſterdam.
And you may likewiſe obſerve, that
100 pound of Leghorne make 85 pound of Marſeilles; and
100 pound of Marſeilles make 117 3/4 pound of Leghorne.

The Weights of MILAN, compared with thoſe of AMSTERDAM.

The pound of Amſterdam makes 1 pound 11 ounces of Milan, or a little more.
The pound of Milan makes 9 1/2 ounces of Amſterdam, or a little more. So that
100 pound of Amſterdam make 168 pound of Milan; and
100 pound of Milan make 59 1/2 pound of Amſterdam.
Some authors have made the difference greater, but this account is conformable to the exacteſt computation.

The Weights of VENICE, compared with thoſe of AMSTERDAM.

At Venice they uſe two ſorts of weights, one for wholeſale bargains, the other for retail; and the difference between theſe weights is very conſiderable.
For 100 pound, wholeſale groſs weights, make 158 pound, retail weights; and
100 pound ſmall or retail weights, make but 63 1/2 pound, groſs weights.
100 pound of Amſterdam make 166 pound, ſmall weights of Venice; and
100 pound, ſmall weights of Venice, make 60 pound of Amſterdam.
They alſo commonly reckon that 100 pound of Marſeilles make 134 pound, ſmall weights of Venice.
The mark of Venice, both at the mint and among the goldſmiths, is reckoned 8 ounces, and the ounce 144 carats.
They likewiſe divide the ounce into 4 quarters, and the quarter into 36 carats, 1152 of which compoſe the mark.
Gold and ſilver thread is weighed by the ounce of 132 carats; whereas the ſmall ounce conſiſts only of 120; and the carat is compoſed of 4 grains: for though one of thoſe weights be heavier than the other, they are both divided in the ſame manner.
Spiceries are ſold by the load of 400 pound, ſmall weights.

The weights of NAPLES and BERGEN, compared with thoſe of HOLLAND.

As there is little or no difference at all between the weights of Naples and Bergen, I have comprehended them both in one article.
100 pound of Amſterdam make 169 pound of Naples, &c.
And 100 pound of Naples, &c. make 59 pound of Amſterdam.

The Weights of SPAIN, compared with thoſe of AMSTERDAM.

The arobe of Seville and Cadiz conſiſts of 25 pound, and 4 arobes make the quintal, the pound being reckoned of 17 ounces.
But the quintal for iron is reckoned at Bilboa and St Sebaſtian's 155 pound, the pound conſiſting of 16 ounces.

100 pound of Amſt. make { 106 pound of Seville and Cadiz, and 108 pound of Alicant; and

100 pound of Seville and Cadiz make 94 1/2 pound of Amſterdam, or a little more.
And 100 pound of Alicant make 92 1/2 pound of Amſterdam, or a little more.

The Weights of PORTUGAL, compared with thoſe of AMSTERDAM.

The arobe of Portugal conſiſts of 32 pound, which render between 28 and 29 pound of Amſterdam; and 4 arobes make the quintal.
100 pound of Amſterdam make 114 1/2 pound of Liſbon, or a little more; and
100 pound of Liſbon make 87 1/2 pound of Amſterdam, or a little more.

The Weights of CONSTANTINOPLE, SMYRNA, LEYDA, ALEPPO, and SICILY, compared with thoſe of AMSTERDAM.

100 rota's of Conſtantinople and Smyrna make 114 pound of Amſterdam.
100 rota's or damaſquins of Leyda, make 380 pound of Amſterdam.
100 rota's or acres of Leyda make 486 pound of Amſterdam.
100 rota's of Aleppo, for coarſe goods, make 455 pound of Amſterdam.
100 rota's of Aleppo, for Perſian ſilks, make 430 pound of Amſterdam.
100 rota's of Aleppo, for white ſilks, make 440 pound of Amſterdam.
100 rotolo's of Sicily make 162 pound of Amſterdam.
See our article MEASURES.

WESTMORELAND is an inland county, and has Lancaſhire on the ſouth and ſouth-weſt; Cumberland on the weſt and north-weſt; and Yorkſhire and the biſhopric of Durham on the eaſt and north-eaſt; and is about 120 miles in compaſs.

Its air is ſweet, healthful, and pleaſant, but ſomewhat ſharp in the mountainous parts; the vallies are pretty fruitful, eſpecially in the meadows near the rivers; and the northern parts afford plenty of arable land, which bears good ſtore of corn.

Among the mountains, in the ſouth part of the country, lies Winander Mere, ſaid to be the greateſt lake in England: it is about 10 miles in length, and ſaid to be of a vaſt depth in ſome parts of it, and well ſtored with the chare, a ſort of fiſh rarely found, except among the Alps, and is reckoned a ſort of golden Alpine trout; it is baked in pots, and ſo ſent to London, and other parts.

The Ulles-Water is another lake well ſtocked with fiſh, and has ſome chares too, but not in ſuch plenty as the other.

APPLEBY is the county town, but is neither rich nor beautiful. It has the beſt corn market in all theſe northern parts.

KENDAL, upon the river Can, is much ſuperior to Appleby in trade, buildings, and the number and wealth of the inhabitants, and is indeed the largeſt town in the county, being inriched by the induſtry of the townſmen, and the woollen manufacture, with which they have drove a trade throughout England for ſome ages. It is of note, alſo, for the manufactures of cottons, druggets, ſerges, hats, worſted and yarn ſtockings, &c.

KIRBY LONSDALE, the chief town of Lonſdale, i. e. a vale upon the Lone, is a pretty large town, with a woollen manufacture.

KIRBY STEPHEN, on the river Eden, is noted for weaving yarn ſtockings.

AMBLESIDE is another town noted for a manufacture of cloth. It ſtands on the upper corner of Winander Mere.

MILTHORP, at the mouth of the Can, is the only ſea-port town in the county, commodities being brought hither in ſmall veſſels from Grange in Lancaſhire.

WESTPHALIA in Germany. This circle ſtretches along the weſt ſide of the Weſer, from the German Ocean on the north, to Heſſia on the ſouth, and between Lower Saxony on the eaſt, and the Netherlands on the weſt. The air, eſpecially in the north part, is very cold, and great part of the ſoil marſhy and barren; however, it has plenty of corn and paſture, but the fruit is very ordinary, and uſed chiefly to feed the hogs, which are numerous, and of an excellent kind; ſo that the bacon they ſend abroad is very much eſteemed. It is divided into ſeveral dominions or provinces.

OSNABRUG, which is the capital of the biſhopric of that name, is a neat well-built city: the inhabitants, who are very induſtrious, not only breed abundance of hogs and other cattle, but have a conſiderable trade in making linen, in brewing a palatable, though thick ſort of beer, called buſe, and in baking the beſt white bread in Weſtphalia.

OLDENBURG has a good trade by barges, which come up from the Weſer to its bridge.

PYRMONT, famous for its mineral waters, lies on the borders of Hanover. It is the capital of a county. There is a great reſort of German and other nobility hither to drink the waters, which are preferred even to thoſe of the Spa, and exported far abroad from Bremen, to which they are carried by the Weſer.

LUDE is of note alſo for its medicinal fountain, for which it is much frequented: this commonly goes by the name of Pyrmont water.

HOXTER, on the river Weſer, is a fair conſiderable trading town.

SOEST is a populous city on the river Arſe, but having no trade, is not very rich.

DORTMUND, though a ſmall place, is rich and populous, having

ing a pretty good trade, and communication with the Rhine by its river Empſer.

CLEVE, the metropolis of the duchy of that name, is ſo called from its ſituation among cliffs, and on the declivity of a hill, between the Rhine and the Maeſe, is one of the fineſt countries of Germany. It is now ſmall, but well built and peopled. The river Hel, which runs by the foot of its caſtle, is navigable by ſmall veſſels to the Rhine.

EMMERICK is a large, rich, beautiful town, pleaſantly ſituate on the eaſt ſide of the Rhine, and has a pretty good trade.

CALCAR, on the river Men, which falls into the Rhine, ſoon after it was built grew populous and rich, by a trade in linen; but ſince one of its dukes built a vaſt granary here, for the boors to bring their corn to, it has been more conſiderable for making malt and beer.

ESEL, called NETHER WESEL, to diſtinguiſh it from Upper Weſel, in the electorate of Treves, ſtands on the eaſt ſide of the Rhine, near the mouth of the river Lippe. It is not only a large and well-built town, but populous, and well ſeated for trade. It grew rich by the concourſe of merchants, who fled hither from the perſecution in the Spaniſh Netherlands.

DUISBURG is a ſmall city on the Roer, which falls a little lower into the Rhine. Fairs were held in the town formerly, which brought a great trade to it, but are ſince removed to Frankfort.

DUSSELDORP has its name from the little river Duſſel, that here falls into the Rhine. The town is large and well built. Here are three weekly markets for corn, which is imported hither from the Low Countries, and exported in great quantities to Cologne, and other parts of Germany.

SOLINGEN, a ſmall city on the river Wipper, is only noted for making good cutlers ware.

AKEN, by the French called AIX LA CHAPELLE, is of chief note, and greatly frequented on account of its baths.

The adjacent country abounds with corn, fruit, and paſturage. They have alſo rich coal-mines, beſides others of iron, lead, vitriol, ſulphur, and lapis calaminaris, and are well ſupplied with neceſſaries by the Rhine and Maeſe.

WETTERAW in Germany. This is the general name of the county that lies between Heſſe on the north, the river Nayne on the ſouth, the Rhine on the weſt, and the county of Reineck on the eaſt. The principal dominions of it are,

The county of NASSAU, which is bounded on the north by Weſtphalia; on the weſt by Berg, Triers, and the Rhine; on the eaſt by Heſſe and Solms; and the electorate of Mentz on the ſouth. The ſoil and product of it is various. In ſeveral parts they have good mines of iron, lead, copper, and other metals.

DILEMBERG on the river Dilla, has a good trade in cattle and woollen goods.

SIGEN, near which there is a very good iron mine, ſtands on the river Siega.

EMBS is noted for its baths.

HERBORN, upon the river Dilla, is a city of a pretty good trade in cotton and woollen cloths.

WISBADEN is an ancient large town frequented by reaſon of famous hot baths in it, from whence it has the name.

HANAU, the capital of a county or diviſion ſo called, ſtands pleaſantly on the river Kintz, and is reckoned one of the neateſt and moſt regularly built towns in Germany: it is much frequented by merchants of ſeveral nations, particularly the French and Dutch. The Walloons here have eſtabliſhed ſeveral manufactures, viz. woollen ſtuffs, ſnuff, &c.

But the chief of the imperial and free cities in Wetteraw, of which it is the capital, is FRANKFORT. It is a large, populous, and rich city; it has a great trade by the Mayne and the Rhine, and ſeveral other rivers which fall into them, and is very well ſituate for bringing corn and wine in abundance from the Palatinate and Franconia. It has two annual fairs, frequented by merchants with all ſorts of commodities, particularly books from moſt parts of Europe, of which they diſtribute printed catalogues; ſo that there is greater choice here than in any other town in Chriſtendom, during their mart, which laſts three weeks.

On the north ſide of the city is a ſpacious horſe-fair or market, where a vaſt number of good horſes are ſold to the French king, and the neighbouring princes, particularly the former, who buys ſome thouſands in a year to remount his cavalry. The Jews are the chief jockies.

WILTSHIRE is bounded on the weſt with Somerſetſhire, on the eaſt with Berkſhire and Hampſhire, on the north with Glouceſterſhire, and on the ſouth with Dorſetſhire and part of Hampſhire, and is 140 miles in circumference.

The air is very ſweet and healthy. The ſoil of its vales is very fruitful, and affords great quantity of as good cheeſe as any in England; and though that of the hills is in ſome places chalky, and barren enough, yet its cheapneſs makes it beneficial to the neighbouring farmers, ſome hundreds of acres having been rented at a groat an acre. But the numerous flocks of ſheep fed there, turn much more to the profit of the proprietors. And the abundance of wool thereby produced, invited the inhabitants to fall very much into the clothing trade; and the beſt broad cloths, both white and dyed, in England, are made in the weſt and north parts of this county, and indeed in the ſouth and eaſt parts too, but not in ſuch quantities.

SALISBURY is a large, well-built, pleaſant city. Beſides the manufacture of flannels, druggets, and the cloths in particular, called Saliſbury whites, for the Turkey trade, here is a conſiderable trade in bone-lace; and partly by thoſe commodities, and by its markets, fairs, &c. it may be looked upon as flouriſhing a city as any in the kingdom, that depends entirely upon a home trade.

HINDON is a ſmall old borough towards the borders of Dorſetſhire. Its market is chiefly for cattle, and its manufacture a ſort of fine twiſt, which employs even the children of the poor.

WESTBURY is another ſmall borough. Its chief manufacture is coarſe broad cloth.

CALNE is a ſmall, but populous well-built town. Its chief manufacture alſo is cloth.

DEVIZES is an old-built town. Its chief trade, beſides malting, is the woollen manufacture, eſpecially druggets, and its market is much frequented for corn, wool, horſes, and all ſorts of cattle.

CHIPPENHAM, on the river Avon, is a large, populous, well-built town. The chief manufacture here is cloth; but its main ſupports are, its market, and its thoroughfare between London and Briſtol.

MALMSBURY is a neat town, and carries on a conſiderable trade in the woollen manufacture.

MARLBOROUGH is an ancient borough; but the chief tradeſmen are ſhopkeepers, there being few manufacturers.

TROWBRDGE is alſo an ancient town, in the weſt part of the county. The chief manufacture is broad cloth, and, for moſt part, of the fine ſort, made with Spaniſh wool; and ſome clothiers have formerly got great eſtates.

BRADFORD is alſo noted, as well as Trowbridge, Melkſham and other adjacent towns, for the fineſt broad cloths, of which ſo many were made about 40 years ago, when the trade was in its moſt flouriſhing ſtate, that it was no extraordinary thing for clothiers hereabouts to be worth from 10,000 to 40,000l. and many of the gentry of theſe parts have been originally raiſed from this truly noble manufacture.

COSHAM is a pleaſant village. The woollen manufacture is the chief employment and ſupport of this place, here being ſome conſiderable clothiers.

WARMINSTER has a flouriſhing market for corn, and the malt trade here is greater than in any other town in the weſt of England; Briſtol, and many places in Somerſetſhire, being ſupplied with it from hence. Here is alſo a conſiderable trade in wool and cloth.

WINE is made of the expreſſed juice of the grape, which immediately after the preſſure is called muſt, and being fermented, becomes wine*. The fermentation cauſes a ſeparation of the groſs tartar, and the viſcous part of the muſt from the pure ſuphureous and oily ones, in which are the ſpirit and eſſential ſalt. The ſolid part of the tartar adheres to the ſides of the veſſel, and the viſcous fall to the bottom.

* The difference of flavour, taſte, colour, and body in wines, is, perhaps, as much owing to the different manner and time of preſſing, gathering, fermenting, &c. the grape, as to any difference in the grape itſelf. In Hungary, whence tockay, and ſome of the richeſt and higheſt flavoured wines come, they are extremely curious in theſe reſpects: for their prime and moſt delicate wines, the grape is ſuffered to continue upon the vine, 'till it is half dried by the heat of the ſun; and if the ſun's heat ſhould not prove ſufficient, they are dried by the gentle heat of a furnace, and then picked one by one from the ſtalks. The juice of this grape, when preſſed out, is of a fine flavour, and ſweet as ſugar: this, after due fermentation, is kept for a year, and then racked from the lees, when it proves a generous, oily, rich wine, and is ſold at a very high rate.

The Hungarians prepare a ſecond ſort of wine, by collecting together the better kind of grapes, carefully picking the fruit from the ſtalks, and then preſſing out the juice: this is extremely ſweet, and is made richer by infuſing in it, after it has fermented for ſome days, a ſufficient quantity of half dried grapes. This wine is very ſweet, oily, of a grateful taſte, and retains theſe qualities for a long time. There is a third ſort, made from the pure juice of the ſame kind of grape without any addition. This is a more briſk and lively wine, and far leſs ſweet. They likewiſe prepare a fourth ſort, from grapes of different goodneſs mixed together: this, though not ſo generous, is nevertheleſs an excellent wine. Theſe Hungarian wines are remarkable for preſerving their ſweetneſs, and for the delicacy of their taſte and ſmell: they likewiſe do not grow eaſily vapid, and may be kept in perfection for many years.

The practice of the Hungarians, which we have extracted from Hoffman's obſervations, fairly points out a method of improving muſt, or the juice of the grape, ſo as to make it of any aſſignable degree of richneſs and ſtrength; and the celebrated Dr Stahl has given us another method of improving poor, thin wines, ſo as to make them ſtrong and full bodied, without any ways altering their natural flavour or taſte.

This he effects by expoſing a quantity of the liquor, in proper veſſels, to the action of a cold, freezing air, which ſoon congealing the watery parts alone, ſuffers the richer to be poured from them. By this means, the product of our own country, cyder, may be made of ſuch a degree of ſtrength and richneſs, as to equal, if not to exceed, the ſtrongeſt bodied wines, and to ſtand the alternatives of the winter's cold, and the ſummer's ſun, without alteration; and if as much care was taken in the culture, choice, and management of the fruit, and particularly in the preſſure, and ſlow wary fermentation of the juice, there is good reaſon to expect, that the flavour and taſte would not fall far ſhort even of the more excellent wines. See Stahlii Zymotectin. fund. Opuſc. Phyſico-Med. Schediaſma commendans concentrationem vini aliorumque, and Dr Shaw's Comment on this Tract, in his third Eſſay in artificial Philoſophy. Miller's Gardeners Dictionary.

The ſharp ſprightly wines, Champaigne, Burgundy, Nants, Bourdeaux, &c. being moſt impregnated with eſſential ſalt, yield more ſpirit than ſweet Spaniſh and Muſcate wines, becauſe they are more loaded with a viſcous ſubſtance *.

* The principles of wines are, an inflammable ſpirit, a phlegm or watery liquor, an acid ſalt or tartar, and a ſulphureous oily ſubſtance. Wines, therefore, greatly differ in their taſte, ſmell, and virtue, according to the various proportions and manner in which theſe principles are combined. There is in ſome wines another principle, which is a ſoft, oily, mild, viſcid, ſweet ſubſtance; and is particularly obſervable in ſack, Frontiniac, and the more generous kinds of Hungarian wine. The ſulphureous, oily principle, is more ſubtile and grateful in ſome wines, than in others: thus Rheniſh and Hungarian wines yield a far more delicate and ſubtile ſpirit, than thoſe of France and Miſnia: the very ſmell of good old Rheniſh wine, has a remarkable effect in refreſhing the ſpirits. Nor is the acid principle, or tartar, leſs different in wines: ſome abound with it, while others have it more ſparingly, but of a more ſubtile kind, as the Spaniſh wines: the tartar of ſome wines, particularly that of Moſelle, has a bitteriſh, nitrous taſte, whence they are held to be laxative and diuretic.

REMARKS.

The great expence to which this nation is put for foreign wines, ſhould induce us, methinks, to make our utmoſt efforts to try whether we cannot amply ſupply ourſelves with this commodity, of which we are ſo fond; eſpecially ſince ſome of thoſe countries from which we take great quantities of wine, have begun to take leſs and leſs of our Britiſh manufacture: wherefore, to retaliate upon them in their own way, may not be impolitic.

It is commonly objected againſt this attempt, that our climate will not admit hereof to any conſiderable degree. I am afraid, that has never been effectually tried; but if it has not, for want of proper management, ſucceeded upon the grape, I am inclined to believe, that we have many other productions in Great-Britain, that will afford exceeding good wines.

It has, however, been reported for theſe twelve months paſt, that ſeveral gentlemen in different parts of England, are going on in the planting and improving of vineyards, ſome wines having been made in this kingdom of good ſtrength, and of a more delicate flavour than the beſt growths of France. It is greatly to be wiſhed they may meet with ſucceſs, ſince the nation pays ſuch ſums for thoſe liquors, as tend to impoveriſh us, and augment the ſtrength of our rivals. Another, and a greater conſideration is, the health of the drinkers; for moſt foreign wines are ſophiſticated; whereas it will not be the intereſt of the Engliſh planter to ſophiſticate his wine, as he would thereby loſe his credit, and the ſale of it.

But if Great-Britain nor Ireland ſhould be found to afford good wines ſufficient for our own conſumption, might not our own plantations anſwer the end effectually? Certainly they might; but we have not room to ſhew how that may be effectually done. Some other opportunities may poſſibly hereafter offer.

WISBUY LAWS of COMMERCE and NAVIGATION.

Before we repreſent the laws of Wiſbuy, we ſhall give ſome account of Gothland, and that city, the capital of it, once famous for trade above all the cities in the north. The iſle of Gothland is ſituated by the Gothic Sea, in the dioceſe of Licopen. It formerly belonged to the king of Sweden, but was afterwards annexed to the crown of Denmark.

According to Johannes Magnus, a Gothic hiſtorian, book 23. chap 2. it was ſo called for the goodneſs of the country; for GOTH ſignifies GOOD: and Olaus Magnus, book 2. ſays it deſerves that name for many reaſons. There are ſeveral very fine ports in it, whoſe entrances are ſafe and eaſy: it is rich in cattle, of which it feeds prodigious numbers; abounds in veniſon, fiſh, foreſts, woods, pitch, tar, and fine marble. In the north-eaſt part of the iſland, was a very fair and noble ſea-port town called Wiſbuy, built by foreigners, who came to live in the country: upon which account the citizens of Wiſbuy had frequent quarrels with the Gothlanders, or inhabitants of the country, of whom they made a terrible ſlaughter in the year 1288. After which the citizens, to defend themſelves againſt their enemies, obtained a permiſſion, from Magnus king of Sweden, to wall their city, and erect baſtions, and other fortifications. They flouriſhed more and more, and grew great by their trade and navigation, to which they entirely gave themſelves up: inſomuch that this town was a long while the axis and moſt celebrated market of Europe, there being no city ſo full of merchants, and ſo famous for its commerce. Hither came Swedes, Ruſſians, Danes, Pruſſians, Livonians, Germans, Finlanders, Vandals, Flemings, Saxons, Engliſh, Scots, and French, to trade. Each nation had their quarter, and particularly ſtreets for their ſhops and warehouſes. All ſtrangers were ſafe and welcome there, and enjoyed the ſame privileges as the townſmen themſelves. The magiſtrates of this city had the juriſdiction, or rather the arbitrament, of all cauſes or ſuits relating to ſea affairs. Their ordinances were ſubmitted to in all ſuch caſes, and paſſed for juſt on all the coaſts of Europe, from Muſcovy to the Mediterranean. Thus much we have taken from Olaus Magnus, lib. 10. cap. 16. and baron Herbeſtain In Rerum Muſcovitarum Commentario, p. 118. In the courſe of time, this town was entirely deſtroyed, except the citadel, which ſtands to this day. The Gothic hiſtorians do not tell us when nor how its deſtruction came upon it, only that it was through civil diſſenſions which aroſe from trifles, but occaſioned great factions; which ſet them ſo againſt one another, that it ended in the entire ruin of them all, city and citizens. The ruins of it are now to be ſeen, and under them are often found tables of marble, porphyry, and jaſper, witneſſes of the ancient ſplendor and magnificence of the citizens. The houſes were covered with copper, the windows gilt with gold, and all that is ſaid or that is diſcovered of it, ſhews the ineſtimable riches of the inhabitants in times paſt. The citizens who ſurvived the ruin of the city, retired to the country of the Vandals and Eaſtern Saxons, who were enriched with the wealth of theſe refugees. Albert king of Sweden rebuilt it, and granted great privileges to all that ſhould come and inhabit it: but it never could recover its trade and former magnificence.

It was in this city of Wiſbuy that the ſea laws and ordinances, which the Swedes brought into credit, were compoſed; they were received as righteous and juſt, and are kept in the Teutonic language till now. The Germans, Swedes, Danes, Flemings, and all the people of the north obſerve them: but none have been ſo curious, as to preſerve the date and the remembrance of the time when they were compoſed and publiſhed.

ARTICLE I.

Whatever mariner, whether pilot, mate, or ſailor, binds or hires himſelf to a maſter, if he afterwards leaves him, he ſhall refund what wages he has received; and beſides that, pay half as much as the maſter had promiſed him for the whole voyage. And if a mariner has hired himſelf to two ſeveral maſters, the firſt that hired him may claim him, and force him to ſerve him. Nevertheleſs, he ſhall not be obliged to pay him any wages at all for the whole voyage, unleſs he does it of his own good-will.

ARTICLE II.

Every pilot, mate, or mariner, that does not underſtand his buſineſs, ſhall be obliged to repay to the maſter whatever wages he had advanced him, and be beſides bound to pay half as much more as he had promiſed him.

ARTICLE III.

A maſter may turn off a mariner, without any lawful cauſe given, before he ſets ſail, paying him half what he had promiſed him for the voyage. After he has ſet ſail, and is gone out of his port, that maſter who turns off a mariner without lawful cauſe given, is obliged to pay him all his wages, as much as if he had performed the voyage.

ARTICLE IV.

No mariner ſhall lie or ſtay a night aſhore without the maſter's leave, on pain of forfeiting two deniers, nor ſhall he unmoor the ſhip's boat in the night, under the ſame penalty. By deniers here are underſtood, thoſe of which 24 make an ounce of ſilver. The double deniers are now called carolus's, or grand blancs, by the French and other nations.

ARTICLE V.

The mariners ſhall have three deniers a laſt for loading and three for unloading, which is to be reckoned only as their wages for guindage or hoiſing *. Theſe duties are never fixed on account of the dearneſs of proviſions and the value of money, which changes and increaſes daily. The rate of guindage or reguindage, is commonly in France five ſols a laſt, which is two ſols ſix deniers Tournois a ton.

* i. e. Loading or unloading.

ARTICLE VI.

It is not lawful to arreſt or impriſon the maſter, pilot, or mariners of a ſhip, in an action of debt, when they are ready to ſail; but the creditor may ſeize and ſell any thing he finds in the ſhip, that belongs to his debtor. L. 1. de Navicularíis, lib. iv. cod.

ARTICLE VII.

A ſhip being freighted for all the ſummer, the ſeaſon ſhall end on the feaſt of St Martin, or the 11th of November.

ARTICLE VIII.

Whoever ſhall make uſe of another man's lighter, without his leave, ſhall pay the owner four ſols a day, unleſs it was in a caſe of neceſſity, as of fire, or the like.

ARTICLE IX.

If any one has occaſion to have a debt witneſſed, he need not carry ſtrangers aboard, but may make uſe of the people in the ſhip. The ſame he may do in all acts where witneſſes are neceſſary, lib. 10. cod.

ARTICLE X.

It is not lawful to ſell or mortgage a veſſel let out to freight, but it is lawful to freight it or underlett it to others for the ſame time, and the ſame voyage. The words of this article are, de la frotter ou ſous louer a d'autres pour le meſme temps, & pour meſme voyage: which we think we have rendered right, notwithſtanding the difficulty there ſeems to be in the ſenſe, or the equity of this law.

ARTICLE XI.

If a ſhip that was freighted for a voyage is ſent upon another longer than that, or upon ſeveral voyages, if there's no proteſtation or diſſent entered againſt it, the freighter ſhall pay but half the damage that may happen to the ſhip in ſuch longer voyage or voyages.

ARTICLE XII.

If a maſt, ſail, or any other tackling is unfortunately loſt when the ſhip is under ſail, or otherwiſe, the loſs ſhall not be brought into an average. But if the maſter is obliged to cut his maſt by the board, or ſpoil any of his tackling for the preſervation of the ſhip, the bottom and the cargo ſhall make good the damage by an average.

ARTICLE XIII.

The maſter ſhall not ſell the ſhip, nor any part of her tackling, without the conſent of the owners; but if he wants victuals, he may pawn his cables and cordage, always obſerving to have the advice of the mariners.

ARTICLE XIV.

The maſter being in port, ought not to depart and ſet ſail without the advice and conſent of the major part of the mariners: if he does, and there happens any loſs, he is bound to make ſatisfaction.

ARTICLE XV.

The mariners are obliged, to the utmoſt of their power, to ſave and preſerve the merchandize, and for doing it ought to be paid their wages, but not otherwiſe. It is not lawful for the maſter to ſell the ſhip's cordage, without the conſent of the owners or factors; but he is bound to preſerve all, as much as in him lies, on pain of making ſatisfaction.

ARTICLE XVI.

The mariners are obliged to ſave as much as they can, and the merchants may take away their goods, paying the freight, or ſatisfying the maſter: otherwiſe the ſaid maſter may fit out his ſhip, if he can do it in a little time, in order to accompliſh his voyage: if he cannot do it, he may relade his merchandize upon other veſſels bound for the port to which he was to carry them, paying freight.
There is ſome difficulty in this article alſo, and, perhaps, the error is in the French verſion; we not underſtanding the Teutonic, which is the original, and making uſe of the tranſlation printed by authority at Roan.

ARTICLE XVII.

The mariners ſhall not go out of the ſhip without leave of the maſter, on pain of paying the damage that may happen in their abſence, unleſs it is when the ſhip lies aſhore, moored

with four cables: in ſuch caſe, they may go out of her for a little time, taking care not to tranſgreſs in it.

ARTICLE XVIII.

A mariner being aſhore in the maſter's or the ſhip's ſervice, if he ſhould happen to be wounded, he ſhall be maintained and cured at the charge of the ſhip: but if he goes aſhore on his own head, to be merry and divert himſelf, or otherwiſe, and happens to be w unded, the maſter may turn him off, and the mariner ſhall be obliged to refund what he has received, and, beſides, to pay what the maſter ſhall be forced to pay over and above to another whom he ſhall hire in his place.

ARTICLE XIX.

If a ſeaman falls ill of any diſeaſe, and it is convenient to put him aſhore, he ſhall be fed as he was aboard, and have ſome body to look after him there, and, when he is recovered, be paid his wages; and, if he dies, his wages ſhall be paid to his widow or heirs.

ARTICLE XX.

If, by ſtreſs of weather, it is thought neceſſary to throw any goods overboard, to lighten the ſhip, and the ſupercargoes or merchants aboard will not conſent to it, the merchandize ſhall nevertheleſs be thrown overboard, if the reſt of the people aboard think it ſafeſt to do ſo: in ſuch caſe, as ſoon as the ſhip puts into port, a third part of the mariners muſt go aſhore, and purge themſelves by oath, that they were forced to do it for the preſervation of their own lives, the ſhip, and the reſt of the cargo. The merchandize ſo thrown overboard ſhall be brought into a groſs average, and be rated at the ſame price the other merchandize of the ſame ſort that was ſaved was ſold for.

ARTICLE XXI.

Before the maſter throws any goods overboard, he is bound, in the abſence of the merchant, to aſk the pilot and mariners advice; and the loſs ſhall be made good by contribution, the ſhip and cargo being accountable towards it.

ARTICLE XXII.

The maſter and mariners are obliged to ſhew the merchant the cordage that is uſed for hoiſing his goods in and out of the ſhip; if he does not do it, and there happens any accident, they ſhall ſtand to the loſs; but if the merchant has ſeen and approved of it, the damage he ſuſtains ſhall be borne by himſelf.

ARTICLE XXIII.

If a ſhip is ill trimmed, and it happens that the wine ſhe has aboard is loſt, through the maſter's ignorance or negligence in governing her, the ſaid maſter is bound to pay for it: but if the mariners clear him upon oath, the leakage or loſs ſhall be borne by the merchant.

ARTICLE XXIV.

No man ſhall fight, or give another the lie aboard; he who offends in this kind, ſhall pay four deniers; and if the mariner gives the maſter the lie, he ſhall pay eight deniers: but he who ſtrikes him ſhall pay 100 ſols, or loſe his hand. If the maſter gives the lie, he ſhall pay eight deniers; if he ſtrikes, he ought to receive blow for blow.
Loſe his hand: this was a common puniſhment among the Scythians, and the people of the north. Lucianus de Toxari. And alſo among thoſe in the eaſt. Harmonopulus de Pœnis.

ARTICLE XXV.

The maſter may turn off a mariner for a lawful cauſe; but if the ſaid mariner compenſates for his fault, and the maſter nevertheleſs refuſes to admit him again, the mariner may follow the ſhip to her deſtined port, and he ſhall be paid his wages as much as if he had made the voyage in the ſame ſhip: if the maſter hires a leſs able ſeaman in his place, and there happens any damage by it, the maſter is to make good the loſs.

ARTICLE XVI.

If a ſhip riding at anchor in a harbour is ſtruck by another ſhip which runs againſt her, driven by the wind or current, and the ſhip ſo ſtruck receives damage, either in her hulk or cargo, the two ſhips ſhall jointly ſtand to the loſs. But if the ſhip that ſtruck againſt the other might have avoided it, if it was done by the maſter on purpoſe, or by his fault, he alone ſhall make ſatisfaction. The reaſon is, that ſome maſters who have old crazy ſhips, may willingly lie in other ſhips way, that they may be damnified or ſunk, and ſo have more than they were worth for them: on which account this law provides, That the damage ſhall be divided, and paid equally

by the two ſhips, to oblige both to take care, and keep clear of ſuch accidents as much as they can.

ARTICLE XXVII.

A ſhip being at anchor in a harbour, where there is ſo little water that ſhe touches, another ſhip comes and anchors near her; if the ſhip's company of the former veſſel require thoſe of the latter to take up their anchor, becauſe it is too near them, and they do not do it, the former may take it up themſelves; and if the latter hinders them, they ſhall make ſatisfaction for all the damage that may happen by that anchor.

ARTICLE XXVIII.

No maſter of a ſhip ſhall lie at anchor in a haven without faſtening a buoy to his anchor, to give notice to others where it is: if he omits to do ſo, and any damage is ſuſtained by it, he is obliged to make it good.

ARTICLE XXIX.

In any voyage, where wine is the trade, the maſter is obliged to find the ſeamen with it, and then he may give them but one meal a day: but where it is not to be had, and the mariners drink water, he ſhall give them two meals a day.

ARTICLE XXX.

When a ſhip is let out to freight, the maſter ought to aſſign and ſhew the ſeamen where they are to have the ſtowage that belongs to them; and they muſt declare whether they will load it themſelves, or will let the maſter freight it with the reſt of the ſhip, and be paid for their proportion.

ARTICLE XXXI.

A ſhip being arrived at her deſtined port, thoſe ſeamen who would be paid their wages there, if they have no cheſt nor bedding, or other moveables aboard, equivalent to their wages, they muſt give the maſter ſecurity that they will ſerve out the reſt of the voyage, and ſee it compleated, or he may refuſe to pay them before.

ARTICLE XXXII.

Thoſe ſeamen who bargained for a certain proportion of the ſhip's freight, inſtead of wages in money, in caſe freight is not to be had for her when ſhe arrives at the port for which ſhe was bound, and ſhe muſt go further in queſt of it, they muſt go with her: but thoſe ſeamen who agreed to be paid in money, ſhall have their wages there.

ARTICLE XXXIII.

When a ſhip is ſafe at anchor, the ſeamen may go aſhore, one after another, or two together, and carry ſufficient meat and bread with them for one meal, but no drink: nor muſt they ſtay any longer time aſhore; for if, through their abſence, any damage happens to the ſhip or goods, they are obliged to make ſatisfaction. And if any one of the crew is wounded, or comes by any other ill accident in doing the merchant's buſineſs, the merchant is bound to cure him, and indemnify the maſter, pilot, and mariners.

ARTICLE XXXIV.

A ſhip being let out to hire, to a merchant to freight her, and he agrees to load her in a certain time, if he fails, and exceeds that time fifteen days, or more, and by this means the maſter loſes his opportunity to freight his ſhip, the ſaid merchant ſhall make him ſatisfaction for his delays, and pay his damages and intereſt, a quarter of which belongs to the mariners, and three quarters to the maſter.

ARTICLE XXXV.

If the maſter, being upon his voyage, wants money, he muſt ſend home for it, but ought not to loſe a fair opportunity of proceeding; if he does, he ſhall ſatisfy the merchant for all the damage he may ſuſtain by his delay: but, in caſe of great neceſſity, he may ſell part of the merchandizes, and, when he arrives at his deſtined port, he ſhall pay the merchant for them, at the ſame price the reſt was ſold at, and the merchant ſhall pay freight as well for the merchandizes the maſter ſold, as for thoſe he delivered him.

ARTICLE XXXVI.

When the maſter arrives in a port, he ſhould be careful to place his ſhip well, to moor her well; for if, by his neglect in this, the merchandize aboard receives any damage, he is obliged to make it good.

ARTICLE XXXVII.

If a ſhip has been in a ſtorm, and the merchant, maſter, or crew, think ſhe ought to be refitted, to enable her to continue her voyage, they may do it, and then proceed: however, the maſter ſhall be paid his freight for the goods ſaved, which are for the merchant's profit only. If the merchant has no money, and the maſter will not give him credit, he may take his merchandize in payment, at the market-price.

ARTICLE XXXVIII.

The maſter ſhall not throw any goods overboard, without firſt conſulting the merchant; and if the merchant will not conſent to it, yet if two or three of the moſt experienced mariners think it neceſſary, they may be thrown overboard, but the mariners muſt ſwear they thought it was expedient ſo to do. If there is no merchant or factor aboard, the maſter and major part of the mariners may lawfully reſolve upon what is fit to be done.

ARTICLE XXXIX.

The merchandize thrown overboard ſhall be valued in the average, at the price the reſt was ſold for, freight only deducted.

ARTICLE XL.

The maſter, in the average, ſhall pay his proportion for the goods thrown overboard, either by calculating what the ſhip is worth, or what the freight amounts to, at the choice of the merchant; and the merchant ſhall pay his, according to the value of the remaining merchandize: it ſhall be left to the merchant to leave or take the ſhip at the price the maſter rated her at.

ARTICLE XLI

If any one has plate, or merchandize of great price, in his cheſt, he is bound to declare it beforehand, and ſo doing, he ſhall be paid for his merchandize according to its worth, and the plate after the rate of two deniers for one.
There is ſomething a little dark in this article; but it is as we find it in the French verſion, as is alſo what is obſcure in others; and we excuſe the tranſlator, conſidering the Teutonic is an untoward language to turn into French: we wiſh our readers may have as much tenderneſs for us.

ARTICLE XLII.

If any one has money in his cheſt, let him take it out, and carry it about him, and he ſhall pay nothing.

ARTICLE XLIII.

If a cheſt is thrown overboard, and the proprietor does not declare what is in it, it ſhall not be reckoned in the average, but for the wood and the lock, if it be locked, according to their value.

ARTICLE XLIV.

If it be thought convenient in any river, or off any dangerous coaſt, to take aboard a pilot of the country, and the merchant oppoſe it, yet, if the maſter, the ſhip's pilot, and the major part of the ſeamen, are of another opinion, he may be hired, and the pilot ſhall be paid by the ſhip and cargo, as averages are calculated for goods thrown overboard.

ARTICLE XLV.

If a maſter wants money or victuals, and for that reaſon is forced to ſell part of his merchandize aboard, or borrow money at bottomry, he ought to pay, within 15 days after his arrival, for the merchandize, at a reaſonable price, neither the higheſt nor the loweſt; and if he does not, and the ſhip be ſold, and another maſter put in her, the merchant to whom the merchandize belonged, or the creditor that lent the money on bottomry, ſhall, at any time within a year and a day, have a good right to the ſhip, 'till ſatisfaction is made for the goods ſold, or money borrowed.

ARTICLE XLVI.

A ſhip being loaden, the maſter ought not to take in any more merchandize, without leave of the merchant: if he does, and there happens any occaſion to throw goods overboard, he ſhall pay as much as he took in goods over and above the ſhip's loading: wherefore he ought, when he is loaded, to declare how much goods he has, and ought to have aboard.

ARTICLE XLVII.

The ſeamen are obliged to keep and match the merchandize, at the requeſt of the merchants, maſter, and pilot.

ARTICLE XLVIII.

If, for the preſervation of the commodity, the ſeamen turn up the corn aboard, they ſhall be allowed a denier a laſt for each time; and if they will not do it, they are liable for the damage that comes to it for want of it: they ſhall alſo be allowed

lowed a denier a laſt for unlading, and ſo for other merchandize.

ARTICLE XLIX.

The mariners ought to repreſent to the maſter what condition their tackling for lading and unlading is in, that if the cordage is out of repair, or any other part of it, it may be mended; and if the maſter does not do it, he ſhall be accountable for whatever damage happens by that means; but if the mariners do not make their repreſentation, the accidents that befal the merchandize ſhall be indemnified at their expence.

ARTICLE L.

If two ſhips ſtrike againſt one another, and receive damage, the loſs ſhall be borne equally between them, unleſs the men aboard one of them did it on purpoſe; in which caſe, that ſhip ſhall pay all the damage.

ARTICLE LI.

To prevent all inconveniencies, all maſters of ſhips are required to faſten buoys to their anchors, on pain of making ſatisfaction for all the damage that may happen for want of

ARTICLE LII.

When a ſhip arrives at her port of diſcharge, ſhe ought to be unladen with all poſſible diſpatch, and the maſter to be paid in eight or fifteen days at fartheſt, according to the circumſtances of the voyage.

ARTICLE LIII.

If a ſhip, freighted for one port, enters another, the maſter, together with two or three of his chief mariners, ought to clear themſelves upon oath, that it was by conſtraint and neceſſity that they went out of their way: after which he may proceed in his intended voyage, or ſhip the cargo aboard other ſhips, paying freight for the goods, which the merchant ſhall alſo pay him, and what elſe is due on account of the merchandize.

ARTICLE LIV.

It is forbidden to any mariner to go out of the ſhip and leave it, after the voyage is done, and the ſhip diſcharged, unleſs her ſails are all in, her furniture taken away, and ſhe is ſufficiently lightened of her ballaſt.

ARTICLE LV.

If a ſhip ſtrikes, the maſter may take out part of his cargo, and relade it aboard other ſhips, and the charges of it ſhall come into a general average upon ſhip and goods: however, the maſter, and two or three of his ſeamen, ſhall purge themſelves upon oath, that they were forced to do it to ſave the ſhip and cargo.

ARTICLE LVI.

When a ſhip arrives at the mouth of any river or harbour, and the maſter finds ſhe is too heavy loaden to ſail up, he may put part of the cargo aboard hoys, lighters, or barges, and an average ſhall be made for it, of which the maſter ſhall pay two-thirds, and the merchant one-third; but if, after the ſhip is intirely diſcharged, the ſhip draws too much water, and cannot ſail up, then the maſter ſhall pay all the charges.

ARTICLE LVII.

The merchandize being put aboard lighters, in order to be landed, if the maſter has any jealouſy of the merchant's ability or honeſty to pay him, he may ſtop it at his ſhip's ſide, and refuſe to let it go, 'till the merchant has paid him in full for his freight and charges.

ARTICLE LVIII.

All lighters, open or cloſe, ſhall be diſcharged in five days.

ARTICLE LIX.

When a ſhip is at anchor before an harbour, with which her pilot is not well acquainted, the maſter ought to hire one at the place, to carry his ſhip into it, who ſhall be paid by ſhip and cargo.

ARTICLE LX.

When a ſhip is in an harbour or river, and the maſter does not know the coaſt nor the river, he ought to take a pilot of that country to carry her up the river or harbour, which pilot ſhall be maintained by the maſter, and paid by the merchant.

ARTICLE LXI.

If a ſeaman deſerts his ſhip, and carries away what he has received of the maſter, and the maſter apprehends him, the fact being proved upon him, by the depoſitions of two other ſeamen, he ſhall be condemned to be hanged and executed.

ARTICLE LXII.

If a maſter diſcovers that a mariner is infected with any contagious diſtemper, he may put him aſhore on the firſt land he makes, without being bound to pay him any wages, provided the caſe be proved by the atteſtation of two or three of the other mariners belonging to his ſhip.

ARTICLE LXIII.

If a pilot or mariner buys a ſhip, or is made maſter of one, he ſhall be diſcharged from his own maſter, paying him back what he received of him; and it ſhall be the ſame if he marries.

ARTICLE LXIV.

If the maſter, merchant, and owners have any difference, and the owners will not furniſh their quota of the charge of the outſet, the maſter may nevertheleſs proceed in his voyage or voyages with the ſaid ſhip, paying the ſeaman what he thinks reaſonable.

ARTICLE LXV.

If the maſter lays out any money in repairing or refitting his ſhip, or buys any tackling, or any thing elſe for her uſe, he ſhall be reimburſed, and every owner pay his part.

ARTICLE LXVI.

If the merchant obliges the maſter to inſure the ſhip, the merchant ſhall be obliged to inſure the maſter's life againſt the hazards of the ſea.

ARTICLE LXVII.

If two ſhips ſtrike againſt one another, and one of them unfortunately periſhes by the blow, the merchandize that is loſt out of both of them ſhall be valued, and paid for pro rata by both owners, and the damage of the ſhips ſhall alſo be anſwered for by both, according to their value.

ARTICLE LXVIII.

In caſe of neceſſity, the merchant may ſell part of the merchandize, to raiſe money for his ſhip's uſe, and the ſhip happening to be loſt afterward, the maſter ſhall, however, be obliged to pay the merchant for the ſaid merchandize ſo ſold, without pretending to deduct any thing for the freight.

ARTICLE LXIX.

When the maſter is forced to ſell any of the merchandize, he is obliged to pay the ſame price for them as the ſame goods were ſold for at the market for which they were deſigned, and the maſter ſhall be paid his freight for what goods are ſold.

ARTICLE LXX.

If a ſhip under ſail does damage to another, the maſter and mariners of the ſhip doing the damage, muſt ſwear they did not do it deſignedly, and could not help it, and then the damage ſhall be borne by both ſhips, in equal proportion; and if they refuſe to ſwear, the damage ſhall be paid by the ſhip that did it.

WOOL, and WOOLLEN MANUFACTORY.

Under the articles BISCAY, CASTILLE, CATALONIA, FACTORS, INDIA-HOUSE of SPAIN, and FRANCE and SPAIN, we have ſhewn the extraordinary progreſs that both FRANCE and SPAIN have made, and are daily making, in the woollen manufactories, and which muſt neceſſarily tend to the greater and greater injury of our branches of trade in the like way. We have too long experienced the unſpeakable detriment that France alone has done to this nation in this article only; and if Spain is determined to ſupply her own dominions with what they took from us in this kind of manufactures, we muſt ſoon ſenſibly feel the effects of this policy; and more eſpecially ſo, if the Portugueze alſo ſhould be taking meaſures to encourage our competitors more and more in this capital article: and this I am aſſured, by my correſpondence from Portugal, is the real caſe.—There are ſeveral other ſtates too that are ſtriving for ſome ſhare in this the grand Britiſh ſtaple of commerce. In a word, we are loſing ground in moſt parts of the world, in this branch, where we had long got footing, as has been ſhewn throughout the courſe of this performance.—It is, therefore, certainly full time to think, without delay, of every meaſure that is in our power to ſave and preſerve ourſelves from the calamitous conſequences that muſt reſult herefrom.

In the courſe of this undertaking, we have endeavoured alſo to point out the CAUSES of theſe things, and have occaſionally ſuggeſted what we humbly apprehend to be the moſt rational and practicable ways and means to retrieve what we have loſt in this eſſential particular.

As the running of wool from Ireland has, among many other things, been attributed to be one principal cauſe of the before-intimated misfortunes to our trading intereſt, whatever bids fair to remove an evil of this nature, cannot be too often inculcated, nor too ſeriouſly weighed and conſidered.

Many very judicious and well-intentioned gentlemen have endeavoured, by variety of ſchemes, to prevent this practice of ſmuggling wool. The great difficulty that ſeems to attend this matter is the reaſon, perhaps, why many good propoſals have been rejected, and why, indeed, none of our laws hitherto have been effectual to the purpoſe intended.

Among others who have attempted this great work, the judicious Mr Bradſhaw has lately obliged the public with ſomething that ſeems to merit great regard, and, therefore, a ſhort abſtract of what this gentleman has offered, may have its uſe, if any thing of this ſhould ever be attempted in earneſt.

'Long experience has ſhewn us, that no laws hitherto made have prevented the running of raw wools from Ireland to France, and their manufactured goods to foreign countries, and that nothing can put a ſtop to this evil, but making it the intereſt of Ireland to diſcourage that practice.

The importation of Spaniſh wools into Ireland, and their clothiers making Spaniſh cloths therewith, inſtead of working up their own wool, is the reaſon why they have the more of their own wools to ſell to France: wherefore let Spaniſh wool be prohibited in Ireland, and their manufacturers will work up their own wools, and then there will be the leſs for France to purchaſe.

Let ſuch woollen goods made in Ireland be exported to Great-Britain only, not to be conſumed in England, but exported from thence to foreign countries.

To prevent the Iriſh from injuring the Engliſh woollen manufactures, let a DUTY be laid on all Iriſh woollen goods imported into England, and drawn back upon exportation to foreign countries, &c. This duty would prevent their wear in England, and alſo hinder the Iriſh from running their wools to France.

To induce Ireland to lay aſide the manufacture of Spaniſh cloths, and take to the working upon their own wools, the ingenious gentleman ſhews the Iriſh the advantage of the one to be far ſuperior to that of the other, thus:

The Spaniſh wools imported into Ireland, from the 25th of March, 1743, to the 25th of March, 1744, were 128,086 ſuttle pounds;—which I compute to be about 570 bags.

I ſhall ſuppoſe each bag of wool ſufficient to make four pieces of Spaniſh cloth: then the cloths manufactured were 2280, which, upon an average, being worth 20 l. each cloth, the produce of the year's importation of Spaniſh wools will amount to 45,600 l.

It is computed that, in woollen manufactures, four-fifths of the value of the goods, when finiſhed for ſale, are given to the labour of the people; therefore I ſhall ſuppoſe, that, of this 45,600 l.

There was paid to the labour of the people, -	l. 36,480
And to Spain for the wool, &c. - -	9,120

To make one piece of Spaniſh cloth, compleatly finiſhed for ſale, will take up three months; it is ſeldom finiſhed in leſs time: the manufacture is ſo tedious, that ſome of the people employed are often obliged to wait for work, while others are finiſhing their parts, as may be ſuppoſed by the following table, which I received from an eminent clothier, on whoſe veracity I can depend.

To make one piece of Spaniſh cloth will employ

	men.	wom.	boys.	days.
Dyeing - - -	1	0	0	1
Beating and picking -	0	2	0	4
Scribling - - -	2	0	0	5
Spinning the chain -	0	8	0	7
Spinning the woof - -	0	8	0	7
Winding the chain - -	0	3	0	1
Warping, winding quills, and weaving	2	0	1	24
Spinning the liſt - -	0	2	0	2
Burling, - -	0	2	0	4
Milling - -	1	0	0	1
Dreſſing - -	4	0	0	5

By this table it appears, in how many days leſs than three months the poor employed in this manufacture finiſh their ſeveral parts; and ſeveral of them are often idle for want of work.

The ſame people employed in this table, in manufacturing one cloth made of Spaniſh wool, are requiſite in manufacturing a cloth made of Iriſh; and they can finiſh ſuch a cloth in TWO months, as compleatly as they can a cloth made of Spaniſh in THREE; therefore, if fully employed, can work up half as many more yards of cloth in one year, as an equal number can do who are wholly employed in manufacturing of Spaniſh. Beſides, as coarſe wools may be worked up into goods of various kinds, and the wool ſo diſpoſed of as to give employment, at any time, to a greater number of hands than the like value of Spaniſh wools can employ; all manufactures of coarſe wools can be finiſhed with greater diſpatch. Therefore, ſince the wealth of a nation is increaſed by the number of the poor it employs, and the quantity of the product of the lands they conſume, let it be conſidered what number of the poor of Ireland 9,120 l. value in Spaniſh wools will employ, and what number of poor the wools of Ireland, valued at 12 s. the great ſtone containing 16 lb. will employ and ſubſiſt.

I have made the beſt enquiry I was capable of, and find that the wools Ireland yearly produces are computed at 480,000 ſtones, of 16 lb. each; ſome think they are leſs, but no accounts that I have received from any part of that kingdom ſay more.

I ſhall therefore conſider the wools of that kingdom under the higheſt eſtimation that I have received, and ſhew what that quantity of wool would produce, if worked up for their own conſumption, or for exportation to England, and what loſs that kingdom ſuſtains yearly, by neglecting the manufacturing her own wools, encouraging the manufacture of Spaniſh, and ſmuggling her raw wools to France.

I ſhall likewiſe ſhew the gain that would ariſe to that kingdom, if their own wools were fully manufactured by their own people.

	l.
I ſhall ſuppoſe the medium price of the wools of Ireland to be 12 s. the ſtone of 16 lb. then 480,000 ſtones, at 12 s. the ſtone, are -	288,000
If 10 l. value in wools, when compleatly manufactured for ſale, is worth 50 l. the value of the yearly wools of Ireland, when worked up, muſt be - - -	1,440,000
If $\frac{4}{5}$ of this ſum be paid to the working people for labour, and the remaining $\frac{1}{5}$ be paid to the rents of the kingdom, for the produce of their ſheep, the earned money of the poor of that country, in working up the yearly produce, will amount to - - -	1,152,000
And they will work up as much of the product of the kingdom as amounts to -	288,000
Conſequently, Ireland will gain yearly, by the manufacturing of her own wools -	1,152,000
And, by the manufacturing the whole year's importation of Spaniſh wools, ſhe can only gain - - - -	36,486
To earn which ſum, ſhe muſt yearly pay to Spain	9,120

And have numbers of her poor idly ſupported by high wages, to make them amends for the many days the manufacturing of Spaniſh wool leaves them unemployed.

It is very difficult to compute the exact number of poor that the wools of a country, if worked up among themſelves, would employ and ſubſiſt: but, as moſt working people earn no more than what is ſufficient to maintain them comfortably, I am of opinion, that the finding out the quantity and value of any kind of goods manufactured in a country, and the value of the common annual ſubſiſtance of a manufacturer, is the beſt way of judging of the number of working people ſubſiſted by that manufacture.

I ſhall therefore ſuppoſe, that the annual ſubſiſtance of working men, women, and children, in Ireland, may be purchaſed, at a medium, for 10 l. per annum, and that 480,000 ſtones of wool, when fully manufactured, are worth 1,440,000 l. Then the number of poor ſubſiſted by the manufacturing the yearly produce of the wools, will be 144,000 people.

I ſhall conſider next how many of the poor of Ireland are ſubſiſted by the manufacturing Spaniſh wools, admitting that they are not, during the whole year, one day unemployed, and that they manufactured the whole importation of Spaniſh wools in the year 1743, which was much larger than any quantity they ever imported in one year into that kingdom.

I computed that 570 bags of Spaniſh wool, when fully manufactured for ſale, would amount to 45,600 l.

By that computation, the poor employed can be no more than 4,560 perſons.

It is therefore obvious, that Ireland loſes immenſely every year by encouraging the manufacture of Spaniſh cloths, diſcouraging the manufacturing her own wools, and ſelling her unmanufactured wools to France. To theſe cauſes we muſt aſcribe the number of poor that are now in the places of manufacture in France, where, on account of religion, as well as ſkill, they have met with protection and encouragement.

If the induſtrious poor are compelled to quit their country for want of employment, the gentlemen of Ireland muſt loſe their former markets for the product of their lands. The loſs will be greater to the landed than the trading intereſt; gentlemen muſt abate of their rents: for it is the employment of the poor that muſt keep them up to their value. And while the Iriſh encourage the manufacturing Spaniſh cloths, which has obliged numberleſs poor to quit that country, or come to the lands for their maintenance, the price of their beef, butter, &c. will be low; but the value of their lands muſt riſe, as the manufacture of Iriſh wools is encouraged, and as the greater numbers of their poor are employed. Therefore a trade with England for ſuch woollen goods as Ireland may manufacture more than are requiſite for her own conſumption muſt be of the greateſt advantage to that kingdom. It

will

will encourage them to work up early their ſurplus wools, and employ the number of the poor already mentioned.

Therefore, if encouragement to manufacture Iriſh wools will keep up the price of the product of the lands of Ireland (as conſumption of all commodities neceſſarily cauſes the advance of prices); if it will bring home numberleſs manufacturers, who have found employment in other countries, and enable their poor to maintain themſelves, who are now a public charge: it muſt be the intereſt of Ireland to manufacture her own wools, prohibit the importation of Spaniſh wools, and prevent the running their raw wools to France, which muſt ever be detrimental to the woollen manufactures of both England and Ireland.

If the union propoſed between England and Ireland, with reſpect to a liberty of exporting to England ſuch woollen goods as Ireland ſhall manufacture, ſhould be agreeable to both kingdoms, I am convinced no gentleman in Ireland will conſent to the running of raw wools to France. If he is able to procure but a nurſery of ſpinners upon his eſtate, the produce of their labour (though of all labour on wools the moſt ſparingly paid for) will keep up the price of the product of his lands, which will be much more advantageous to him than what he can gain by permitting the wools that grow on his lands to be ſent to France.

If this union ſhould not be agreeable to both kingdoms, and that the people of Ireland ſhall be obliged to wear (as they now are) what woollen goods they manufacture, I am of opinion it appears that it is not the intereſt of that kingdom to wear Spaniſh cloths, if manufactured in Ireland, which muſt bring ſuch numbers of their poor to the pariſh for ſubſiſtence, or oblige them to quit the country for want of employment, who might be ſubſiſted by their labour on Iriſh wools, without any charge to the landed intereſt.

For if ſuch of their poor as could not be employed in manufacturing their wools fully, were encouraged to ſpin their ſurplus wools for exportation to England, their poor might be employed and ſubſiſted, ſince it is evident, by the price we have paid them of late for their ſpinning, that the labour of the comber and ſpinner is equal to the firſt coſt of the wool; and as England has taken upwards of 80,000 ſtones of their yarn, (as ſhall be ſhewn in its place) the poor of Ireland have earned 48,000l. for their ſpinning, and we have paid them the like ſum of 48,000 l. for their wool, which will appear from the following computation. A ball of wool conſiſts of one pound and a half of combed wool, which, at 12s. per ſtone of 16 lb. coſts 13½d: when ſpun into ſkains of yarn, is ſold from 2s. 3d. to 3s. per ball, according to the number of ſkains into which it is ſpun.

I ſhall take the loweſt price for my valuation: if, therefore, a ball of wool that coſts but 13½d. when ſpun into yarn, is ſold for 2s. 3d. it appears that the money earned by the comber and ſpinner is equal to the firſt coſt of the wool: therefore, if the poor of Ireland were employed to manufacture their ſurplus wools, no farther than through the hands of the combers and ſpinners, numbers might be maintained, and Ireland would become a nurſery for England (but never can be ſo, while her poor are engroſſed by the high prices now given for the ſpinning of Spaniſh wools) and the landed intereſt of Ireland would be conſiderable gainers by their poor being ſo far employed, ſince it muſt benefit a nation to be ſaved from the charge of maintaining its poor.

The gentlemen of Ireland may imagine they receive their rents from their tenants; but it is the conſumer that pays them both the price of their wools, and of the product of their lands.

If their artificers and manufacturers are obliged to quit the country for want of employment, the conſumption of the product muſt be greatly leſſened: therefore all prudent ways ought to be tried, to keep thoſe at home that are willing to work, and to induce them to return who have been obliged to ſeek for their ſubſiſtance abroad.

Every one who lives in that country, and wears the manufacture of Iriſh wools, ought to be conſidered, for what he wears, eats, and drinks, as a tenant to the lands and a paymaſter to the workmen.

How many ſuch tenants the gentlemen of Ireland may keep in that country, and how many old ones they may prevail on to return, by preventing the running of their wools to France, encouraging the manufacturing their own, and prohibiting the importation of Spaniſh, I have endeavoured to ſhew; which I ſhall ſubmit to the conſideration of the gentlemen of that kingdom.

I ſhall next conſider the advantages England will have, by conſenting to the importation of ſuch woollen goods as Ireland ſhall ſend us, under a duty at importation to be drawn back only on exportation to foreign countries.

The accounts that were publiſhed the year after the peace of Utrecht, of the great quantities of Iriſh wools that were run out of Ireland, and imported in one year into France, ſo alarmed our manufacturers and landed gentlemen of England, that we have ever ſince endeavoured to make the moſt effectual laws to prevent the exportation of the wools of that country, and are now at a great annual expence by the many ſhips ſtationed on the coaſts of Ireland for that purpoſe; but notwithſtanding we have been unwilling to receive any propoſals, that have been offered to the conſideration of parliament to prevent this evil, if ſuch propoſals had the leaſt tendency to a free liberty of exportation of the woollen manufactured goods of that kingdom.

However juſt our apprehenſions were thirty years ago, there is not the leaſt room for them now; ſince Ireland does not produce, at preſent, two-thirds of the wools that were ſuppoſed to be the growth of the country at that time.

The decreaſe of their ſheep has been owing, not only to the very great danger and difficulty the people of Ireland found in ſending their wools to France, under the ſevere laws we made to prevent it, but to ſeveral acts of parliament, which have been made in that kingdom ſince the year 1714.

By the act to encourage tillage, every farmer in Ireland is obliged to plow a certain number of acres, in every hundred, which he holds by leaſe. This obligation, together with the great difficulty and riſk in ſending their wools to France, obliged many people to plow up their paſture grounds, which leſſened their ſheep throughout the kingdom; for they found a certain market for their corn, inſtead of an uncertain one for their wool.

The ſeveral acts for encouraging the linen manufactures of that kingdom, have been another cauſe of leſſening the growth of their wools; ſince it is well known that they have no more ſheep in the north of Ireland, where that manufacture is eſtabliſhed, than are ſufficient for the neceſſary ſubſiſtance of the people.

Theſe conſiderations ſhould entirely remove our former apprehenſions, and convince us, that the Iriſh cannot have the quantity of wools, which they had before theſe acts of parliament were made.

We ought to examine what the wools of that country are at preſent, and what we have to fear if the wools, which their own people cannot conſume in apparel, were fully manufactured and exported to us, and from hence exported to ſuch foreign countries as we trade to.

We are very certain that we may grow leſs conſiderable in foreign markets, but cannot be more ſo, while the French continue to procure the wools of Ireland; and ſince we have made ſo many laws to prevent it, and that it is evident they have been ineffectual, we ſhould try other ways and means to ſtop the evil we have ſo long complained of. For ſince by long experience we find that the people of Ireland are not, by any laws, to be forced from this pernicious practice of ſelling their wools to France, and that neither puniſhments nor penalties can prevent it; I am clearly of opinion, our condition cannot be worſe than it is at preſent, if we permit them to ſend us ſuch woollen goods as they ſhall manufacture for exportation, which will effectually put a ſtop to their ſending to France; becauſe they will then find it more their own intereſt to prevent it, than it is now their intereſt to connive at and encourage it.

The many creeks and by-places on the coaſt of Ireland are ſo well known to the French, that their agents, notwithſtanding the many difficulties that attend it, will be always able to procure a loading of wool; for the farmer, whoſe lands lie contiguous to the ſea, will be as ready to ſell as the French are to buy. But theſe temptations will ceaſe, if the farmer finds that he can have a market near his own home for his wools, when ſpun only; becauſe the French can give no price for the ſmall quantity of wool that he has to ſell, that can be equal to the advantage the farmer will have by its being ſo far manufactured.

Since the laſt declaration of war againſt Spain, the wools of Ireland have ſold at a much higher price than they were ever known at before. When they exceed ten ſhillings per ſtone of ſixteen pounds, our manufacturers cannot afford to purchaſe them. But as the prohibiting the importation of Spaniſh wools into Ireland, will occaſion a greater plenty of their ſpinning, we may be certain of having more of their ſurplus wools ſo far manufactured, and thereby leſſen the quantity, they would otherwiſe fully manufacture themſelves.

We do not buy their ſpinning for its fineneſs, (our own people ſpin much finer) but on account of its nature and quality. It is very uſeful to our weavers, in mixing with our own ſpinning, and making ſeveral ſorts of goods for foreign markets; and on that account only we buy it. But if we cannot take from them in ſpinning, ſuch wools as they have more than are requiſite for the cloathing of their own people, we muſt give them leave to export, fully manufactured, what they cannot conſume, or the French will certainly take from them their wools unmanufactured.

They are not (as we are) limited by price; for by the help of one pack of Iriſh wools, France manufactures two of her own, without which they are uſeleſs to her for foreign markets, notwithſtanding the wool ſhe procures from Germany, Portugal, Barbary, and Turkey.

The wools of France are ſhort and coarſe; they are not (to ſpeak in a manufacturer's phraſe) ſo fine in the thread, or ſo long in the ſtaple, as thoſe of Ireland: for which reaſon, France can ever give double the price that we can afford for the wools of that country, which I ſhall ſhew more fully

hereafter. This proves how dangerous an enemy we have to encounter, and that nothing can prevent France from buying them, but making it the intereſt of Ireland to manufacture their wools; which engages me to think, that the beſt law that can be made, to prevent France from procuring the wools of Ireland, will be, to permit the people of that country to ſend their manufactured woollen goods to England, under a duty at importation, to be drawn back on exportation to foreign countries.

I have already ſhewn the quantity of wool, by eſtimation, that Ireland yearly produces, and what value theſe wools may be manufactured into by their own people, if the importation of Spaniſh wool is prohibited. I ſhall now conſider what number of people there are in that kingdom, what their own conſumption muſt be of the wools they may manufacture; what quantity of wool we have taken from them laſt year, how much in woollen yarn, and how much in worſted yarn, and to what value the ſurplus wools of Ireland, if fully manufactured, will amount. The exportation to England of this laſt article, is the whole we have to fear from the union propoſed, which I ſhall ſhew cannot be manufactured into ſuch a quantity of cloth, or other woollen goods, as will prejudice England to receive, for exportation. On the contrary, I am of opinion, the encouragement to manufacture and export it, will be the means of increaſing and extending our commerce.

The people of Ireland are computed at 1,666,000: I ſhall ſuppoſe the one half of their people to be men and boys, and the other half women and girls; and that every man and every boy in Ireland wears, or is the occaſion of conſuming, the value of 20s. of woollen goods yearly; and that every woman and every girl wears, or is the occaſion of conſuming, 5 s. in woollen goods yearly.

	l.
Then 833,000 men and boys, at 20 s. per ann. conſume in Iriſh woollen goods -	833,000
And 833,000 women and girls, at 5 s. per ann.	208,250
Therefore, the amount of woollen goods, wore in apparel and conſumed in furniture of ſuch houſes as they inhabit, will be - -	1,041,250
As the richer kind of people in Ireland are buried in woollens, according to act of parliament, I ſhall allow for burials in woollen - -	20,000
	1,061,250
Then, if all the wools Ireland yearly produces were fully manufactured, and that England took from them neither raw wools, worſted, or woollen yarns, the value of the ſurplus wools fully manufactured would be - -	378,750
	1,440,000

I find we have imported from Ireland from March 25, 1743, to March 25, 1744,

In raw wools, great ſtones - -	19,993
In worſted yarn - - -	68,622
In woollen yarn - - -	15,224
Stones	103,839

If we take yearly the ſame quantity of unmanufactured wools, worſted, and woollen yarns, that we have done laſt year, which I ſhall compute only at 100,000 great ſtones, we ſhall prevent their fully manufacturing as much of the wools of Ireland as I have computed, when fully manufactured by themſelves, would amount to 300,000 l.

Therefore, admitting there is no objection to the value in woollen goods, which I have computed to be the yearly conſumption of the people of Ireland, not only in apparel, but in bedding, houſe-furniture, and burials, all the woollen goods Ireland can fully manufacture for exportation, will amount to no more than 78,750 l.

In order to remove the apprehenſions that may ariſe in our clothiers and manufacturers, that this value in Iriſh woollen goods, if exported to England for re-exportation to foreign countries, may hurt the ſale of our manufactures abroad, I ſhall conſider, what value in woollen goods France will be prevented from vending at foreign markets, which ſhe now ſupplies, by procuring the ſurplus wools of Ireland, that may be manufactured into that ſum.

I ſhall ſuppoſe, that France has been able to procure yearly no more Iriſh wools than, when fully manufactured, I have computed would produce this 78,750 l. which I calculate at 1750 packs, of 240 pounds weight each.

I ſhall likewiſe ſuppoſe, that what France purchaſes are the beſt Iriſh wools, for which ſhe pays 16s. the great ſtone (at which price the fine wools of that country were ſold laſt year), and that all riſks, hazards, inſurances, and freights, being accounted for, thoſe wools, when landed in France, coſt the manufacturer 20s. per ſtone.

By the beſt information I could get in France, I have learned that their people manufacture two packs of their own wools by the help of one pack of Iriſh. I ſhall therefore ſuppoſe their own wools worth 5 s. the great ſtone, and when mixed with Iriſh wools at 20 s. the ſtone; that the manufacturer in France has three packs of wools, at 10s. the ſtone, a medium price.

	Stones.
I have computed that the ſurplus wools of Ireland, which France now procures, are 1750 packs, which make in great ſtones of 16 pounds to the ſtone - - - -	26,250
To which I ſhall add double that quantity of French wools, which the manufacturers of France work up by the help of this quantity of Iriſh	52,500
Total ſtones	78,750

Therefore the French manufacturers, by the help of 26,250 ſtones of Iriſh wools, have 78,750 ſtones of wools proper for ſuch manufactures as we carry on; which wools, on an average, will coſt them only 10 s. per ſtone. Then 78,750 ſtones, at 10 s. per ſtone, coſt the manufacturer in France 39,375 l. And when fully manufactured for ſale, allowing for labour, as I have done on the like value of wools manufactured in England, the amount will be 196,875 l.

If theſe calculations are juſt, it plainly appears, that we have nothing to fear from giving Ireland a liberty of exporting to England ſuch manufactured woollen goods, as her own people cannot conſume; ſince, by encouraging Ireland, we ſhall prevent France from procuring her wools, who thereby is enabled to ſupply the foreign markets with goods of her own manufacture, to the value of 196,875 l.

If France can ſend to foreign markets ſuch conſiderable quantities of woollen goods, by procuring 1750 packs of Iriſh wools, of what conſequence ought thoſe wools to be to England! and ſince we know that ſuch a quantity, and a much greater, may be ſent yearly out of England, we ſhould endeavour to prevent the running of it from England as well as Ireland, which I am far from thinking an impoſſible ſcheme. If the preventing the running of this quantity of Iriſh wools, will enable us to ſend to foreign markets as much woollen goods, as will, when manufactured, be worth 196,875 l. more than we now export, I am humbly of opinion, we ought to make a new experiment, and conſent to the people of Ireland's ſending their manufactured woollen goods to England; for we may be certain of manufacturing and vending more cloth, and other woollen goods, as the French are deprived of the means of ſupplying the foreign demands. And as all the goods that the ſurplus wools of Ireland can be manufactured into, will not amount to one-half of what France will be prevented from ſupplying, we muſt furniſh the reſt from our own manufactures. And if France has been able to procure a larger quantity of Iriſh wools yearly, than I have ſuppoſed, we ſhall be able to manufacture ſo much the greater quantity for foreign markets, as ſhe is obliged to manufacture the leſs.

We have nothing to fear from any encouragement we give Ireland to manufacture, if we can prevent the French from procuring the wools of that country; for when the plague raged at Marſeilles, the demands for woollen goods from foreign countries were ſo large, that the wools of both England and Ireland were inſufficient to ſupply them; which plainly ſhewed how largely France had been concerned in the markets abroad, and what a quantity of her own coarſe wools ſhe muſt have worked up, by the help and aſſiſtance of the wools of that kingdom.

The camblets of Ireland are goods the Portugueze have been a long time accuſtomed to wear, and that they will have, and do procure theſe goods from Ireland, appears from the ſhips we have already taken, bound with ſuch goods to Portugal; and the Iriſh will continue that trade, notwithſtanding our guard-ſhips, and the encouragement our commanders of men of war have to ſearch, unleſs we make it their own intereſt to diſcourage it.

All that our manufacturers have been able to do, has not been ſufficient to prevail with Portugal to approve of the camblets we make. I am convinced, the conſumption of that article would be greatly increaſed there, if the people of Ireland were permitted to export thoſe camblets to us, under a duty at importation, to be drawn back on exportation from England; their profit would be more certain than it can be at preſent, and it would put a ſtop to all attempts to run ſuch goods for the future, and be a great encouragement to their working up more of their ſurplus wools, and conſequently of leſſening the temptation of ſelling them to France. Our merchants would have a commiſſion on receiving and forwarding, perhaps on ſales; our packers would have the benefit of re-packing, and our ſhips of carrying.

If it be objected, that the exportation of ſuch other woollen goods, as Ireland may ſend us, will interfere with the exportation of our own, I am of opinion it cannot. For if France be prevented from procuring the wools of Ireland, there will be a demand in foreign markets, not only for the ſame quantity of woollen goods which we now ſupply, but for as much

more as France did formerly ſupply; and we ſhall ſell, not only to the amount of what I have computed the ſurplus wools of Ireland may be manufactured into, but alſo near double that value, which France would have been able to ſell of her own manufactured wools, by the help of the ſurplus wools of that kingdom.

If it be objected, that when the duties laid on the Iriſh woollen goods at importation, are drawn back on the exportation from England, the Iriſh woollen goods can be ſold cheaper in foreign markets, than goods of the ſame kind manufactured in England, by reaſon of the cheapneſs of proviſions and low price of labour in Ireland; I anſwer, that we ſhall have in our own hands a remedy, when it is convenient to uſe it, by permitting ſuch goods to draw back only a PART of the DUTIES paid at importation, as we find can be ſold cheaper in foreign markets. By which we ſhall bring the value of ſuch Iriſh woollen goods upon a par with our own, on exportation from England, ſo that there will be no temptation to the buyers for exportation to take the one before the other.

If it be objected, that the people of Ireland will increaſe their ſheep, when they have liberty to export what they manufacture, and that they may ſend us too great a quantity of their woollen goods for re-exportation; I anſwer, That it muſt be ſome years before they can effect it; and if they ſhould ſo increaſe their ſheep, as to be able to export double the quantity that I have computed their preſent ſurplus wools may be manufactured into for exportation, that quantity will not exceed what France now ſells, by the help of the ſurplus wools of that country; therefore we muſt continue to ſell the ſame quantity we now ſend abroad.

Again, if it be objected, that ſhould the people of Ireland have liberty to export what they manufacture, they will ſell us no more of their wools, or woollen and worſted yarn; and that inſtead of their having but 78,750 l. value to export, they will export the whole value that I have computed their ſurplus wools might be manufactured into; I am of opinion, we have little to fear from this objection; for there will be always in England and Ireland, as many people on the trade of buying the wools and yarns (for which we pay ready money) as there will be purchaſers of their wools, fully manufactured; which, if ſent here to be ſold for exportation, muſt be on long credit; and if ſent abroad on their own accounts, will be ſubject to uncertain ſales, and as uncertain payments. Beſides, if there ſhould be occaſion, their wools may be made cheaper to us, and their woollen goods loaded with a duty at exportation from Ireland to England.

We pay for licence (together with fees) to the lord lieutenant of Ireland, for every thouſand great ſtones of wool exported to England, about 23 l. If the Iriſh wools are exported to us free of this charge, our manufacturers might purchaſe the wools of Ireland at all times, near 5 per cent. cheaper than they now can, or hitherto have done; and in lieu of this income which belongs to the lord lieutenant of Ireland, the parliament of that kingdom may fix a duty on all woollen goods, fully manufactured, on exportation to England.

This would, in ſome meaſure, prevent their ſending us too much of their wools fully manufactured, and enable us to purchaſe more of their raw wools.

New experiments muſt be made; the people of Ireland muſt find a market for their ſurplus wools, manufactured or unmanufactured, or we cannot effectually diſtreſs France, enlarge our foreign woollen trade, or indeed be certain of ſupplying them ourſelves with ſuch goods as we now manufacture.

I will admit, that from the cheapneſs of proviſions, and low price of labour in Ireland, their poor are able to work cheaper than ours. They are not in Ireland bound by any parliamentary laws to provide for, and maintain for life, reduced and decayed houſekeepers, and diſabled and ſuperannuated ſervants, as the people of England are, which obliges their poor to work for leſs prices than ours.

Notwithſtanding, I am of opinion we have little to fear from their being able to underſel us abroad; for though moſt of the goods they manufacture are worked up cheaper than ours, yet the advantages we have of them in dyeing better colours, preſſing, tilleting, and packing our goods, will ballance, in moſt foreign markets, the advantage they may have of us, with reſpect to their low price for labour.

Beſides, the freight of their woollen goods from Ireland to England, the inſurance, the inland carriage to proper places for ſale, the charge of warehouſe room, reception and forwarding, the charges of unpacking and repacking, will affect ſuch woollen goods as they can ſend us, 10 per cent. on the loweſt computation I can make; which ought greatly to leſſen the apprehenſions of our manufacturers; and if the woollen goods they ſend us are to be dyed, preſſed, and packed here, ſo as to be ſent abroad, equally finiſhed with the like goods of our own manufacture, they will be ſubject to a much greater expence.

What we ſuffer Ireland to gain by the export of her woollen manufactured goods from England, can be no loſs to us; in many inſtances we ſhall be gainers. By encouraging them to manufacture their wools, they will find it their own intereſt to ſell none of them to France, by which we ſhall be tempted to manufacture the more of our own.

By prohibiting the importation of Spaniſh wools into Ireland, their manufacturers will be obliged to work up more of their own wools, and their people to wear more of their own manufactures, by which we ſhall have the leſs to fear from what they may be able to export.

By leſſening the numbers of their fine ſpinners, we ſhall increaſe the ſpinning of ſuch worſted and woollen yarn, as we want and take from them; which are ſo uſeful and neceſſary in our manufacturing ſeveral kinds of coarſe goods, for our conſumption as well as exportation.

By allowing them to export their woollen goods to Great-Britain, manufactories will be eſtaliſhed in ſeveral counties in Ireland; their nobility and gentry will have ſuch advantages by the ſettlements of workmen on their eſtates, that they will find it their own intereſt to diſcourage the running of wools, and to forbid their tenants to be aiding and aſſiſting.

By making Ireland a NURSERY of ſpinners for England, we ſhall have plenty of their ſpinning; and by making England a MAGAZINE for Iriſh woollen goods, fully manufactured, our merchants will have a commiſſion on reception and forwarding; our dyers, a profit on ſuch white goods as they ſhall ſend us; our preſſers, the benefit of packing, and our ſhipping have better employment. By a good underſtanding between ENGLAND and IRELAND, our manufactures will be brought into greater eſteem abroad; we then ſhall have nothing to fear from the low price of labour in France, with reſpect to coarſe goods, which has obliged us for years paſt to manufacture ſuch goods as would ſell, although they brought diſcredit to our country.

By our woollen goods being demanded abroad, in proportion as France is unable to ſupply, our landed gentlemen will find their rents better paid, and their lands lett at a higher value. The increaſe of our woollen manufactures will keep up the price of the product of the lands; as demands for goods not only employ our poor, but cauſe the advance of the price. The product of the lands of England is a conſiderable part of every manufacture; our rents are but the value paid for the product of the lands; therefore all the additional labour we encourage, which pays to the product of the lands, is ſo much added to the rents of the kingdom.

By preventing France from procuring the raw wools of Ireland, we ſhall not only underſel her, but ſpeedily put it out of her power to anſwer the demands of thoſe foreign countries, which ſhe has for many years paſt been able to ſupply.

By permitting Ireland to export ſuch goods, as ſhe may manufacture of her own wools, the gentlemen of that kingdom may be prevailed on to wear no Spaniſh cloths, but ſuch as we manufacture. The advantage of which I ſhall ſhew.

I have already computed, that the Spaniſh wools Ireland imported laſt year, might be manufactured into 2280 pieces of cloth; which, ſuppoſing each cloth 26 yards, would be 50,000 yards. I find that from the 25th of March 1743, to the 25th of March 1744, the importations of Spaniſh cloths into Ireland were 20,981 yards and one quarter; therefore the yearly conſumption of Spaniſh cloths in Ireland, ſeems to me to be 77,981 yards one quarter. We cannot prevent France from ſupplying foreign countries with their Spaniſh cloths; by their ſituation they always will have the Spaniſh wools cheaper than we can; and the low price of labour, and cheapneſs of proviſions in thoſe provinces of France where Spaniſh cloths are manufactured, will ever enable them to vie with, if not underſel, us in that manufacture. Their colours are as good as ours, and their wools as fine. But we have advantages peculiar to this nation, which they cannot take from us. Their cloths want the firmneſs in their texture and milling, that our cloths have, without which they never can dreſs them as we do; and if a ſmall encouragement, by bounty on exportation, was given by parliament, on ſuch Spaniſh cloths, as we export to the Levant only, I am humbly of opinion, we ſhould wholly ſupply both the Turks and the Perſians.

Therefore, ſince we have ſo powerful a rival as France in our Spaniſh wool manufacture, which of all our manufactures deſerves our greateſt attention; we ſhould endeavour, by all prudent ways, to encourage and ſupport it at home. Our ſilken manufactures greatly depend on it. A bale of Spaniſh cloths amounts to a large ſum of money; conſequently, it is a means of increaſing our ballances againſt thoſe countries, from which we receive a ballance by our commerce, and, on the other hand, of preventing a ballance being too heavy againſt us with thoſe countries, which, by our large imports, may have a ballance againſt us.

By the modern dreſs of our nobility, gentry, and merchants, this manufacture appears daily decreaſing among ourſelves. I am convinced, that the new-faſhion goods we wear, have leſſened our conſumption of Spaniſh cloths two fifths of what it was a few years ago. If we ſuffer this manufacture to decay, the FRENCH and DUTCH will ſoon procure the hands we employ; our poor muſt quit the country, or come to the lands for a maintenance; ſince it is well known, that a woman, who has ſpent the beſt of her days in ſpinning fine

wools,

wools, cannot bring her fingers to make good work by ſpinning of coarſe. I have already ſhewn, that if we conſent to the people of Ireland's exporting their ſurplus wools, fully manufactured, the value of them cannot exceed 78,750 l. And though we may think it our intereſt, that no Spaniſh cloths ſhould be manufactured but in England, and to prohibit the importation of Spaniſh wools into Ireland, yet I am of opinion, the gentlemen of Ireland would wear but little of our Spaniſh cloths, if we prevented their manufacturing (though it is demonſtrably their own intereſt) without giving them, in lieu thereof, a liberty of exporting ſuch woollen goods as they could manufacture of their own wools.

The conſumption of Spaniſh cloths, in that country laſt year, appears to be 77,981 yards; and we may expect they will yearly conſume an equal quantity, which, at 16s. per yard, will amount to 62,385 l.

Therefore, if they wear no Spaniſh cloths but what we manufacture, and we agree to their exportation of ſuch woollen goods as they may manufacture, more than are requiſite for their own conſumption, the ballance we ſhould yearly pay them would be but a trifle, if they took no woollen goods from us but Spaniſh cloths; whereas we do now, and always may, depend on ſupplying them yearly, with all new-faſhion woollen goods that are worn here, ſince all dependent kingdoms take their faſhions from the place where the court reſides. We have had no reaſon to repent of the encouragement we have given to their linen manufactures; it has greatly enriched that country, which has been thereby more improved, within theſe 30 years paſt, than in 100 years before. We take from them in linens 500,000 l. value per ann. beſides what they ſend directly to our plantations, and other countries; whereas, according to Dr d'Avenant's report, in the year 1713, their whole exports of linen were computed at only 80,00 l. value. We continue to give their linens the preference of moſt others, and ſince we contribute ſo largely to ſupport and encourage that manufacture, they ought in gratitude to ſupport (as far as in their power lies) a manufacture, that is of as great conſequence to England, as the linens are to that kingdom.

Therefore I am humbly of opinion, that a union between England and Ireland, with reſpect to their woollen manufactures, muſt be advantageous to both kingdoms, and will be the means of effectually preventing FRANCE from procuring the wools of that country.'

REMARKS.

As the Iriſh are not allowed to carry their woollen manufactures to foreign markets, nor to export them to England, whilſt the Engliſh may export ſuch goods to Ireland, it naturally follows, that the wool of that nation muſt be ſmuggled to the French and Dutch, or any nation that will bid higheſt for it. Some regulations might, perhaps, be framed, to prevent the running of Engliſh wool to France and Holland, and this nation might poſſibly be induced to try dangerous ſchemes, in order to retrieve ſo important a branch of trade as the woollen manufactory. But if this great end can be as effectually anſwered for the reciprocal benefit of both nations, without introducing any ſuch ſchemes which may prove dangerous to the liberty of the ſubject, it will certainly prove far more eligible, and that is what the preceding propoſal ſeems to bid very fair to do.

It is a maxim in equity and the law of nature, that every nation has a right to make the moſt of its own products. Where one nation is ſo far ſubject to another as to be debarred from that right, it muſt be for conſiderations reſpecting the intereſt of both; the chief of which may be, that the more powerful of the two may be maintained in a condition to afford protection and ſupport to the other. Where that natural right is not ſuperſeded on this principle, the weaker nation will be apt to look upon it as an oppreſſive act, or, at beſt, as an abſurdity equally pernicious to both parties.

So long as the Iriſh are not allowed a free vent for their woollen manufactures, it will be in vain to think of effectually preventing the running of their unwrought wool to France and other foreign parts; and even part of their manufactures will be run to England and elſewhere, in ſpite of all the laws the Engliſh can make to obſtruct it. Commerce claims freedom: where it is crampt, it either decays, or is carried on clandeſtinely. To take all the wool of Ireland into the government's hands, in order to ſell to the manufacturers juſt enough for the inhabitants of that kingdom, and export the reſt to England at a lower price than foreigners offer for it, would, by the Iriſh, be conſidered as an act of injuſtice: at leaſt, to make them view it in a favourable light, Engliſh woollen goods ought to be prohibited in Ireland. For though England's proſperity is of ſo much importance to Ireland, that if ever the former ſhould be ruined, the latter would of courſe fall under a foreign yoke; yet the welfare of both ought, as far as is poſſible, to be promoted by equitable meaſures and fair regulations, ſuch as no reaſonable man in either kingdom would object to.

It has been apprehended by ſome, that if the Iriſh were allowed a free trade in the woollen branch, they would greatly hurt England; but, perhaps, it would produce the contrary effect, by what has been urged in the foregoing repreſentation. It might occaſion, for ſome time, the removal of many manufacturers from England to Ireland; but is not this much better than their removing to foreign parts, going to ſeek bread among our enemies, and helping them to ruin the trade of the three kingdoms? If Ireland increaſes in commerce and wealth, one may ſafely conclude, from the genius and character of that nation, that its riches will chiefly center here at laſt. That country produces fewer miſers than England: the Iriſh covet money, perhaps, as much as any people in the world; but not ſo much with a view to hoard it, as to make a figure and ſpend freely: and experience proves, that in all ſtates and monarchies, the riches of diſtant provinces and colonies inſenſibly flow to the mother country, or to the metropolis.

It may be objected, that Ireland's taxes bear no manner of proportion with thoſe of England; and therefore, to grant them a free trade, would be putting them in a condition to leave the Engliſh far behind them, as they could carry every thing to foreign markets ſo much cheaper than this nation can do. In anſwer to this it has been aſked, Whether it is not ſafer to let the IRISH thrive, than to ſuffer our enemies, the FRENCH, to take advantage of their miſerable condition, and thereby ruin BRITAIN as well as IRELAND? The Iriſh, in their preſent circumſtances, cannot be taxed like England: yet to grant IRELAND the ſame privileges as ENGLAND enjoys, and to tax it in PROPORTION to its wealth, would be fair and equitable, ſatisfactory and beneficial to both nations. Let us therefore think in earneſt of a ſolid and permanent union, before it be too late: let us lay aſide unreaſonable, partial, and ſelfiſh principles; give them encouragement to become induſtrious, put them upon a fair and equitable footing, make all trifling diſtinctions ceaſe; and let us not ſuffer our moſt dangerous competitors to run away with that trade, that England and Ireland may obtain, upon a wiſe and ſolid union made between the two nations.

An act for permitting the exportation of wool and woollen, or bay yarn, from any port in Ireland, to any port in Great-Britain.

Whereas the permitting of wool, and woollen or bay yarn, to be exported only from certain ports in Ireland, to certain ports in England, is not of ſo great and extenſive advantage to the trade of this kingdom, as it would be if all the ports in Great-Britain and Ireland were opened for that purpoſe; be it therefore enacted by the king's moſt excellent Majeſty, by and with the advice and conſent of the lords ſpiritual and temporal, and commons in this preſent parliament aſſembled, and by the authority of the ſame, That from and after the fifth day of June, in the year of our Lord 1753, it ſhall and may be lawful for any perſon or perſons, to export from any port in Ireland, any wool, or woollen, or bay yarn, wool fells, ſhortlings, mortlings, wool flocks, and worſted yarn, to any port in Great-Britain, any act or acts of parliament to the contrary notwithſtanding.

Provided always, and be it enacted by the authority aforeſaid, That all ſuch exportations and importations of wool, and woollen or bay yarn, wool fells, ſhortlings, mortlings, wool flocks, and worſted yarn, from any port in Ireland, into any port in Great-Britain, ſhall be made under the ſame reſtrictions and regulations, and in the ſame manner in all reſpects, as wool or woollen yarn is now by law permitted to be exported from Dublin, Waterford, Youghall, Kinſale, Cork, Drogheda, New Roſs, Newry, Wexford, Wicklow, Sligoe, Limerick, Galway, and Dundalk, and imported into the ſeveral ports of Biddeford, Barnſtaple, Minehead, Bridgewater, Briſtol, Milford-Haven, Cheſter, Liverpool, Lancaſter, and Great Yarmouth, or any of them. See IRELAND.

WORCESTERSHIRE, has Herefordſhire and Shropſhire on the weſt, Glouceſterſhire on the ſouth, Staffordſhire on the north, and Warwickſhire on the eaſt, and is 130 miles in circumference. The air and ſoil of this ſhire are inferior to no other, either for health or pleaſure; the former being ſweet all over the county, the latter rich both in tillage and paſturage, the hills being covered with flocks of ſheep, and the vallies abounding in corn and rich meadows. It is in all parts watered with very fine rivers, as the Severn, Stour, Avon, Teme, &c. which alſo furniſh it with plenty of the moſt delicious fiſh. Its commodities, beſides corn, cattle, cheeſe, wool, cloth, ſtuffs, cyder, lampreys, &c. are perry and ſalt, which laſt is in a peculiar manner. Hops are lately very much cultivated in this ſhire, which commodity and their ſalt are ſent down the Severn in a ſort of veſſels called troughs, of which at leaſt 20 are conſtantly employed to Briſtol, Bridgewater, and other places, Somerſet and Dorſetſhire being chiefly ſupplied with the latter by this traffic.

WORCESTER, which is the capital of the county, is a large flouriſhing city. The chief manufactures of it are broad cloth and gloves, eſpecially the former, in which it is incredible what a number of people are employed here and hereabouts.

DROITWICH is of ſpecial note for its ſalt ſprings, by which it is much enriched; the quantity of ſalt made being ſo great, that the taxes annually paid to the crown amount to about 50,000 l. a year, at the rate of 3 s. 6 d. a buſhel.

EVESHAM is a neat town, with a gentle aſcent from the river Avon. Its chief manufacture is woollen ſtockings.

BEWDLEY, or BEAULIEU, is ſo called, from its pleaſant ſituation on the declivity of a hill on the weſt bank of the river Severn. It is a place of conſiderable trade; for by means of the Severn, great quantities of ſalt, iron ware, glaſs, Mancheſter goods, &c. are put aboard barges here, and at Glouceſter aboard troughs, for Briſtol, Bridgewater, and other ports, which renders this a populous thriving town and corporation: but its chief manufacture is caps, which the Dutch ſeamen buy, called Monmouth caps. The town is well ſupplied with corn, malt, and leather, and every Saturday has a market for hops.

KIDDERMINSTER on the Stour, not far from the Severn, is a compact town, where the inhabitants, who are at leaſt 2000, drive a pretty good trade in cloth, and weaving linſey woolſeys, &c.

STOURBRIDGE is a well-built town, the name of which ſhews its relation to the river, over which it has a ſtone bridge. It has been much enriched by iron and glaſs works. There's about half a ſcore glaſs-houſes near it, where glaſſes, bottles, and window-glaſs are made, together with fine ſtone-pots for glaſs-makers to melt the metal in, alſo crucibles, &c. the clay of which they are made, being peculiar to the place. Here is alſo a manufacture of fine freeze cloth.

BROMSGROVE, near the riſe of the river Salwarp, drives a conſiderable trade in clothing.

PERSHORE is a pretty large old town. Its manufacture is ſtockings.

WRECK is where a ſhip is broke to pieces, or loſt on the ſea, and ſignifies in our law ſuch goods as, after a ſhipwreck, are caſt upon the land by the ſea, and left there within ſome county, for they are not wrecks ſo long as they remain at ſea, in the juriſdiction of the admiralty.

In matters of wreck it is obſerved, that there is, as it were, a contract between the perſons that have loſt their goods by ſuch misfortune, and thoſe upon whoſe lands the goods and merchandize are driven, that the ſame be reſtored to them, or thoſe that claim under them: and therefore, by the civil law, no man ſhall meddle with ſuch goods as are wrecked, nor ſhall they be ſeized by the king, or any other by virtue of his grant or royal privilege; for that ſuch goods, being caſt on land and recovered out of the ſea, remain ſtill his who was the firſt owner thereof, and ſhall go to him or his ſucceſſor; and if it be proved that any thing be ſtolen out of the wreck, the takers ſhall be deemed robbers.

Here we find what is worthy to be followed and imitated in all trading countries; and the reaſon why the laws were ſo ſtrictly declared by the Romans was, becauſe by the Rhodian laws [ſee RHODIAN LAWS], if any ſhip had become wreck, though all the perſons were ſaved and alive, yet the ſhip and goods became ſeizable by the lords: but the ſame being barbarous and inhuman, it was afterwards repealed and abrogated, as well by thoſe emperors in their territories, as here in England; and firſt by the naval law of Oleron [ſee OLERON's LAWS], which provided in ſuch misfortune, that if the merchant or mariners, or any of them came ſafe to land, it was not to be accounted wreck.

And the emperor Conſtantine the Great ſays, If any ſhip at any time by ſhipwreck be driven unto the ſhore, or touch at any land, let the owner have it, and let not my exchequer meddle with it; for what right have I in another man's calamity, that I ſhould hunt after gain in ſuch a woeful caſe?

REMARKS.

The laws of Oleron well deſerve attention, on account of the great and juſt ſpirit of them; and this barbarity is now rarely uſed in any nation in Europe, unleſs it be againſt the enemies of the ſtate, infidels, or pirates. See OLERON LAWS.

There are ſeveral other excellent proviſions in the laws of Oleron, to ſecure ſhipwrecked goods to the diſtreſſed owners; and by other ſea laws and ordinances, if any man ſhall prevent aſſiſtance to ſhipwrecked perſons, he ſhall be puniſhed as a murderer: and the like puniſhment hath been ordained for thoſe who ſhall, by treachery, put forth any light, with intention to ſubject them to danger or ſhipwreck; and hence it is that fiſhermen are forbidden to fiſh with lights in the night. By the laws of France, ſuch as during the night light falſe fires upon the ſhore, in dangerous places, to decoy thither, and occaſion the loſs of ſhips, ſhall be put to death, and their bodies hung up upon a maſt, which ſhall be ſet upon the place where the fires are made.

If a ſhip and goods periſh in the ſea, and the owners abandon her, ſo that ſhe becomes a mere derelict, in ſuch caſe, the firſt perſon that takes poſſeſſion of her, and recovers any part of the lading, gains a property therein, by the laws of nations. And where any ſuch wreck happens by any fault or negligence in the maſter or mariner, the maſter muſt make good the loſs; but if the ſame was occaſioned by the act of God, or done to avoid an enemy or pirate, then he ſhall be excuſed. The maſter, &c. ſhall ſuſtain the damage, where he, or any of his mariners, lie aſhore, and the ſhip, during their abſence, periſheth, whether by night or by day, &c. See RHODIAN LAWS.

By the French laws, all ſhips and perſons belonging to them that ſhall be caſt aſhore by tempeſt, or otherwiſe, upon the coaſts of that kingdom, and every thing that has eſcaped ſhipwreck, is declared to be taken into the protection of the king: and all ſubjects are injoined not only to do their utmoſt endeavours to ſuccour all perſons in danger of ſhipwreck, but alſo, till the arrival of the officers of the admiralty, to ſave the ſhipwrecked goods, and prevent their being rifled, under pain of being anſwerable for all loſſes and damages, of which they ſhall not be excuſed, without producing thoſe that are guilty: and ſuch as make an attempt upon the lives or goods of ſhipwrecked perſons, ſhall be puniſhed with death, without any poſſibility of a pardon.

In ancient times, all wrecks in England belonged to the crown; and where a ſhip periſhed at ſea, and no man doth eſcape out of it, the wrecked goods being brought to land by the waves, by the common law belong to the king, by his prerogative, or to the lord of the manor: and the ſtatute de Prerogativa Regis, 17 Edward II, ordains, That the king ſhall have wreck of the ſea, whales and great ſturgeons, taken in the ſea and elſewhere, throughout the realm, except in places privileged. But it was formerly uſual to ſeize wrecks as forfeited to the king, only when no owner could be found; for, in ſuch caſe, it muſt of conſequence belong to him, as lord of the Narrow Seas [ſee SEA DOMINIONS and SEA BRITISH], which he is obliged to ſcour of pirates, &c. and the product of wrecks was ordained to contribute to the charge. Bract. lib. ii. cap. 5.

And by ſtat. 3 Edw. I. cap. 4. called the ſtatute of Weſtminſter the firſt, it is enacted, That where a man, dog, or cat, eſcapes alive out of the ſhip, neither the ſhip, nor any thing therein, ſhall be adjudged a wreck; but the goods ſhall be ſaved, and kept by the ſheriff, coroners, or king's bailiffs, and delivered to the inhabitants of the town where they are found; ſo that if any perſon, within a year and a day, ſue or apply for thoſe goods, and prove that they were his property at the time of the ſhipwreck, they ſhall be reſtored to him without delay: but if not, then they ſhall be ſeized by the ſaid ſheriffs, coroners, or bailiffs for the king's uſe, and ſhall be delivered to the inhabitants of the town or place, who ſhall anſwer before the juſtices for the wreck belonging to the king. Alſo where the wreck belongs to another, he ſhall have the ſame in like manner; and if any one be convicted to have done otherwiſe, he ſhall ſuffer impriſonment, make fine to the king, and likewiſe yield damages: and bailiffs to lords acting contrary, ſhall anſwer for it, if they have wherewith to do it; and if they have not, the lord ſhall deliver his bailiff's body to the king to be anſwerable.

The owners claiming a wreck, muſt make ſufficient proof of their title within the year and day; and they are to do it by their marks or cockets, by the cuſtom-houſe books, or the teſtimony of reputable men; and if the wreck be taken by the king, or ſeized by perſons having no authority, the owner may have a commiſſion to inquire, and hear and determine it, by the oaths of 12 men; or he may bring an action at law, and make his proof by verdict. The year and day ſhall be accounted from the ſeizure; and if the owner of the goods dies within the year, his executors or adminiſtrators may make proof: and when ſuch goods wrecked are periſhable, the ſheriff may ſell them within the year, and the ſale ſhall be good; but he muſt diſpoſe of them to the beſt advantage, and account with the owners. Fitz. Nat. Br. 12. 2 Inſt. 167.

If a ſhip is ready to ſink at ſea, and all the men therein, for preſervation of their lives, quit the ſhip, and afterwards ſhe periſhes, if any of the men are ſaved, the goods ſhall not be loſt. A ſhip on the ſea was chaſed by an enemy; the men in it, for the ſecurity of their lives, quitted the ſhip, which was taken by the enemy, and ſpoiled of her goods and tackle, and then turned to ſea: after this, by ſtreſs of weather, ſhe was caſt on land, where it happened her men ſafely arrived: it was reſolved that the ſhip was no wreck by our law. 5 Co. Rep. 2.

Where goods are wrecked on ſhore, and the lord having power takes them, he ſhall not pay cuſtom, neither by the common law nor the ſtatute law; for at the common law, ſhipwrecked goods could not be charged with cuſtoms, by reaſon the wreck was wholly the king's, and he could not have a cuſtom of what was all his own: and wines, or other goods, coming or brought into the kingdom by wreck, are not imported by any body, but by the wind and ſea; nor can ſuch wrecked goods, ſo caſt aſhore, be ſaid to be brought into the kingdom as merchandize for ſale. Hill. 23 and 24 Car. II.

If a man have a grant of wreck, and goods are wrecked upon his lands, and another taketh them away before ſeizure, he ſhall have an action of treſpaſs, &c. to recover them; and before they are ſeized, there is no property gained, to make it felony. 1 Hawk. 94.

In caſe a perſon loſes his goods at ſea, by piracy or tempeſt, and not by wreck, ifthey afterwards come to land, and he can make proof that they are his goods, they are to be reſtored by the king's officers, or the lords there. Stat. 27 Edw. III. cap. 13.

The ſtatute of 12 Ann. cap. 18. hath ordained, That the ſheriffs and juſtices of the peace of every county, or of a city or town, and all mayors, bailiffs, and other head officers of corporations and port towns near adjoining to the ſea, and all conſtables, tithing-men, and officers of the cuſtoms, in all ſuch places, upon application to them made on behalf of any commander of a ſhip in danger of being ſtranded, or run on ſhore, ſhall command the conſtables near the ſea-coaſt where ſuch ſhip ſhall be in danger, to call together as many men as ſhall be neceſſary, to the aſſiſtance, and for the preſervation of ſuch ſhip; and if there ſhall be any ſhips of war, or other ſhips, lying at anchor near the place, the officers of the cuſtoms, and conſtables, &c. are to require the aſſiſtance of the ſuperior officers, by their boats, and what hands they can ſpare: and if ſuch officers ſhall refuſe or neglect to aſſiſt, they ſhall be liable to the penalty of 100 l. to be recovered by the chief officer of the ſhip in diſtreſs.

No perſons ſhall enter into ſuch ſhips in diſtreſs, without leave from the commander, or a conſtable, &c. and the maſters and conſtables may, by force, repel perſons who ſhall preſs on board the ſaid ſhips without leave. And if any goods are carried off from any ſuch ſhip, and found on any perſon, if they are not delivered to the owner on demand, ſuch perſon ſhall pay treble the value of the goods, recoverable by the owner in an action at law. Alſo, if any officer of the cuſtoms, or his deputy, abuſe the truſt repoſed in him by this act, and ſhall be convicted thereof, he ſhall forfeit treble damages to the party grieved, and be incapable of any employment in the cuſtoms.

If any perſon makes holes in the bottom, ſide, or in any part of a ſhip, or ſteals any pump, or does any thing tending to the loſs of the ſhip, he ſhall be guilty of felony. And by this ſtatute, ſhips and goods are to be preſerved for the benefit of the owners, paying the ſalvage, &c. [ſee SALVAGE.] But this act ſhall not extend to deprive the crown, or any grantee of any right or claim to any wreck or goods that ſhall be jetſam, flotſam, or lagan. See FLOTSAM.

Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE, continued from the End of Letter U.

The chief LAWS relating to WINES.

WINE, oil, and honey, the ton muſt contain 252 gallons, the pipe or butt 126 gallons, the hogſhead 63 gallons, the barrel 31 ½ gallons, the rundlet 18 ½ gallons.

——imported, are diſcharged from the impoſition of exciſe. 12 Car. II. c. 4. §. 15.

—— of vinegar, landed before payment and ſecurity of the impoſt duty, are forfeited, or their value, and the importers are to pay the ſaid duty notwithſtanding. 1 Jac. II. c. 3. §. 5.

—— firſt landed in the out-ports, and carried afterward to London by certificate, are to pay ſo much more as they paid ſhort of the duties due in London.

—— No wine exceeding the quantity of 10 gallons, imported into any of the out-ports, to be brought from thence to London, or within 20 miles of the Royal Exchange, without paying the out-port and London duty. And if any quantity of wine, exceeding in bottles three dozen, or in caſks 10 gallons, is brought in the ſame carriage to London, or within 20 miles of the ſaid Exchange, without a certificate of the ſaid reſpective duties being paid, &c. it is to be forfeited, &c. 26 Geo. II. c. 12. §. 1, 2.

—— Every hogſhead run out, and not full ſeven inches, or above, and every pipe or butt not above nine inches left therein, are to be accounted for outs, and no duty is to be paid for the ſame.

—— of the growth of Hungary, may be imported from Hamburgh, paying duty as Rheniſh wines. 1 Ann. c. 12. §. 112.

—— imported, 12 per cent. to be allowed for leakage.

—— damaged and corrupt, the allowance repealed. 6 Geo. I. c. 12 §. 1.

—— damaged, corrupt, or unmerchantable, upon the importer's refuſing to pay or ſecure the duties, may, at the landing, be delivered up into the cuſtody of the officers of the cuſtoms, in order to be publicly ſold to be diſtilled into brandy, or made into vinegar: and that they ſhall not be uſed for any other purpoſe, ſecurity muſt be taken; which may be diſcharged upon a certificate (within three months after delivery) that they have been ſo uſed. 6 Geo. I. c. 12. §. 3. 12 Geo. I. c. 28. §. 20.

—— The produce of ſuch ſale is to be paid to the importer, by certificate, as a compenſation for the freight, &c. but ſuch allowance muſt not exceed 4 l. for every ton of wine of the growth of France and Germany, and 8 l. for every ton of all other wines ſo delivered up: and if there be any overplus beyond the ſaid allowance, it muſt be placed to the duties out of which the charges have been paid. 6 Geo. I. c. 12. §. 4. 12 Geo. I. c. 28. §. 20.

—— But no allowance may be made for ſuch wines, unleſs they be imported in caſks on board a merchant-ſhip directly from the place of their growth, or the uſual place of their firſt ſhipping. 8 Geo. I. c. 18. §. 19. 11 Geo. I. c. 29. §. 4.

—— Except ſaved from ſhips ſtranded, which are to enjoy the ſame allowances, as if imported in the ſhip wherein they were firſt laden. 8 Geo. I. c. 18. §. 20. 11 Geo. I. c. 29. §. 4.

——Except of the growth of the dominions of the great duke of Tuſcany, in open flaſks, or of Turkey, or any other parts of the Levant Seas, may not be imported in flaſks or bottles, or in veſſels, or caſks, which ſhall contain leſs than 25 gallons, upon forfeiture thereof, or the value: to be ſued for in any of the courts of record in Weſtminſter, or in the court of Exchequer in Scotland, or by the laws of exciſe. 1 Geo. II. c. 17. §. 7, 8.

—— exceeding in quantity 10 gallons, which have been imported from foreign parts into any of the out-ports, may not be brought from any place, either by land or water, into the port of London, or members thereof, or within 20 miles of the Royal Exchange, before the proprietor has paid to the collector, or proper officer of the cuſtoms, neareſt to the place from whence the wine is intended to be removed, the duties payable in any of the out-ports, and alſo the difference between the duties payable there, and in the port of London on importation. 26 Geo. II. c. 12. §. 1.

—— in bottles, exceeding three dozen, and in caſks 10 gallons, at the ſame time, and in the ſame carriage, ſo removed, without a certificate from ſuch collector or proper officer, expreſſing the quantity and quality, and that the duties have been paid as above, or that the ſame was wine ſold for ſalvage, or has been compounded for or condemned, is forfeited, together with the caſks or veſſels containing it, and may be ſeized by any officer of the cuſtoms, and proſecuted in the ſame manner as any uncuſtomed wines.

—— If after removal, and payment of the duties as above, it is ſtaved, loſt or periſhed before its arrival as aforeſaid, the commiſſioners of the cuſtoms, or any three of them, upon proof thereof upon oath to their ſatisfaction, are to cauſe repayment to be made to the proprietor of the difference between the duties payable in the out-ports, and in London, out of the duties payable on wines.

Beſides the duties before mentioned, an act of parliament took place in the year 1762, intitled, An act for granting ſeveral additional DUTIES upon WINES imported into this kingdom, and certain DUTIES upon all CYDER and PERRY, &c.

WINES.——The additional duties on wines to take place after the 31ſt of March, 1763, without any DISCOUNT or DEDUCTION inwards, or drawback on re-exportation afterwards, viz.

—— On French wine and vinegar, 8 l. per ton; and on all other wines and vinegar imported, 4 l. per ton.

—— Damaged and unmerchantable wines exempted from theſe additional duties.

——The ſaid duties to be under the management of the commiſſioners of the cuſtoms.

—— No allowance to be made for LEAKAGE, but upon wines imported directly from the country or place of their growth, &c.

—— MADEIRA wines imported from the Britiſh plantations in America excepted.

Chief Laws relating to Wool.

Wool.——The owners of wool, ſhorn or lodged within 10 miles of the ſea-ſide, in the counties of Kent or Suſſex, muſt, within three days after ſheering, give an exact account, in writing, of the number of fleeces, and where lodged, to the officers of the next port.

—— The like notice muſt be given before removal, expreſſing the number of fleeces, and weight, the name and abode of the buyer, and the place to which it is intended to be carried, and a certificate taken from the officer, who firſt entered it, upon forfeiture, and 3s. per pound weight.

—— Such certificates muſt ſpecify the names of the owners and buyers, and be limited to ſuch times and places to be removed; for which certificate the officer is to receive 6d. 9 & 10 W. III. c. 40. §. 3.

—— Perſons reſiding within 15 miles of the ſea, in the counties of Kent and Suſſex, may not buy wool before they have entered into a bond, with ſureties, that all the wool they buy, ſhall not be ſold by them to any perſons within 15 miles of the ſea.

—— found carrying towards the ſea-ſide, in the aforeſaid counties, unleſs entered, and ſecurity be given, is forfeited, and 3s. per pound weight. Ditto act, §. 4.

—— removed from the place where firſt lodged after ſheering, within 10 miles of the ſea, may not be lodged, after the firſt removal, within 15 miles of the ſea, in the aforeſaid counties, upon forfeiture thereof, if found, or 3s. per pound weight by the owners, if carried away. Ditto act, §. 5.

—— laid or hid within 15 miles of the ſea, and not entered, is forfeited.

—— The claimer of ſuch wool, ſo ſeized as forfeited, muſt give ſufficient ſecurity in the court of Exchequer, to pay treble coſts, if caſt, over and above the penalties and forfeitures. Ditto act, §. 6.

—— One third part of the aforeſaid forfeitures and penalties is to be to the uſe of his Majeſty, and the other two-thirds to the uſe of the ſeiſer or ſuer. Ditto act, §. 8.

—— coaſtwiſe, deſigned to be carried to any place on the ſea-coaſts, with an intention to be conveyed to any other port or place on the ſea-coaſt, from whence it may be exported, muſt, before loaded, or carried within five miles of the place, be entered at the port from whence it is to be conveyed, mentioning the exact weight, mark and numbers, upon forfeiture thereof, with the horſes, &c. and perſons concerned in carrying, driving, &c. are liable to the forfeitures inflicted on the exportation.

—— But to hinder the conveyance of wool from the place of ſheering to the proprietor's dwelling-houſe, though within five miles, or leſs, of the ſea; provided that within 10 days after the ſheering, and before the removal and diſpoſal, he certifies under his hand, to the officers of the next port, the number of fleeces, and where lodged, and does not remove or diſpoſe thereof, without certifying his intention, at leaſt three days before removal; ſuch certificates are to be kept, and regiſtered by the officers. 1 W. and M. c. 32. §. 2, 3. 9 and 10 W. III. c. 40. §. 1.

—— A regiſter of all wool ſent coaſtwiſe, with the particular weights and numbers, the ſhip-maſter's name, and to whom conſigned, muſt be kept at the cuſtom-houſe, London. 1 W. and M. c. 32. §. 11. and 9 and 10 W. III. c. 40. §. 1.

—— Wool-fells, mortlings, ſhortlings, yarn made of wool, wool-flocks, fuller's earth, fulling-clay, and tobacco-pipe-clay; the cockets for the carriage thereof coaſtwiſe muſt be written upon paper, and not parchment, expreſſing the exact weights, marks, and numbers, and be ſigned by at leaſt three of the chief officers in whoſe preſence they are to be weighed. 1 W. and M. c. 32. §. 4. 7 and 8 W. III. c. 28. §. 7. 9 and 10 W. III. c. 40. §. 1. 5 Geo. I. c. 11. §. 14.

—— The return or certificate of landing the wool muſt be written on paper, not parchment, the quantity not obliterated or interlined, and muſt expreſs the exact weights, marks, and numbers, and be ſigned by at leaſt three of the chief officers, in whoſe preſence it muſt be weighed. Ditto acts.

—— Officers not performing their duties, are to be deemed aiders and abettors of the tranſportation, and ſhall ſuffer the penalties contained in 12 Car. II. c. 32. and 14 Car. II. c. 18. 1 W. and M. c. 32. §. 5. and 9 and 10 W. III. c. 40. §. 1.

—— Wool, ſheep, &c. as above, may not be exported, nor packed, or loaded upon any horſe, &c. nor laden on board any ſhip, with intent to be exported, unleſs as hereafter excepted, upon forfeiture, and 20s. for every ſheep, and 3s. for every pound weight of the reſt. 12 Car. II. c. 32. §. 1, 2, 3. and 14 Car. II. c. 18. §. 2, 3, 8. and 7 and 8 W. III. c. 28. §. 2, 3, 4. and 9 and 10 W. III. c. 40. §. 1, 2.

—— Owners of the ſhips, knowing thereof, are to forfeit their intereſt therein. 12 Car. II. c. 32. §. 3.

—— And if the owners be aliens, or natural-born ſubjects not inhabiting within this kingdom, ſuch ſhips are forfeited wholly to his Majeſty. 12 Car II. c. 32. §. 9.

—— Maſters and mariners, knowing thereof, and aſſiſting therein, are to forfeit all their goods and chattels, and to ſuffer three months impriſonment. 12 Car. II. c. 32. §. 3.

—— The exporter, beſides other penalties, is diſabled to require any debt, &c. 12 Car. II. c. 32. §. 4.

—— Owners, maſters, or mariners, diſcovering upon oath, within three months after knowlege of the offence, or after their return into Great-Britain, the number, quantity, and quality of the goods exported, &c. are to be diſcharged of all penalties, and to have the benefit of an informer's part. 14 Car. II. c. 18. §. 11. and 1 W. & M. c. 32. §. 8. and 9 and 10 W. III. c. 40. §. 1.

—— Sheep, wool-fells, mortlings, ſhortlings, yarn made of wool, wool-flocks, fuller's earth, fulling-clay, or tobacco-pipe-clay, the exportation declared a common and public nuſance. 14 Car. II. c. 18. §. 11.

—— Offences may be tried and determined at the general quarter-ſeſſions, in the county where committed, or where the offenders ſhall be apprehended, or the goods or ſhips taken. 12 Car. II. c. 32. §. 5. 14 Car. II. c. 18. §. 4, 12. and 10 and 11 W. III. c. 10. §. 12.

—— Offences muſt be proſecuted within three years. Ditto acts.

Such goods ſhipped or found on the ſhore, at or near the ſea, or any navigable river, or packed or loaded on any horſe, &c. with intent to be exported, may be ſeized by any perſons; but ſuch perſons may not be evidence againſt the offender. 12 Car. II. c. 32. §. 7, 8. and 1 W. and M. c. 32. §. 8, 9. and 9 and 10 W. III. c. 40. §. 1.

——But the aforesaid Prohibition is not to extend to—lamb ſkins ready dreſſed and prepared for furs or linings—nor to wool-fells, or pelts, or beds ſtuffed with flocks, or whether ſheep alive, or the wool growing thereon, taken on board for the uſe and food of the ſhip and paſſengers. 12 Car. II. c. 32. §. 10, 11. and 14 Car. II. c. 18. §. 10.—Nor to the exportation of uncombed wool, out of the port of Southampton, into the following iſlands, and not exceeding the following reſpective quantities yearly, viz.

To Jerſey	4000	Tods, not exceeding 32 pounds each.
To Guernſey	2000	
To Alderney	400	
To Sark	200	

—— Provided the exporter, before ſhipping, delivers to the cuſtomer, comptroller, ſurveyor, or ſearcher, a writing under the ſeals of the reſpective governors, ſignifying that the perſon therein named is authorized to export the number of tods therein mentioned; and that he has given ſufficient ſecurity for the due landing. 12 Car. II. c. 32. §. 2, 12, 13.

—— Governors may not grant licences for any greater quantity, upon forfeiture of 20l. per tod to his majeſty. 1 W. & M. c. 32. §. 14. and 9 and 10 W. III. c. 40. §. 1.

—— Such wool may not be again tranſported out of the ſaid iſlands, upon forfeiture of 20l. per tod; $\frac{1}{2}$ to his Majeſty, $\frac{1}{4}$ to the informer, $\frac{1}{4}$ to the poor; and the offenders to be rendered incapable of any grant or warrant for wool for the future. 1 W. and M. c. 32. §. 14. and 9 and 10 W. III. c. 40. §. 1.

—— Cuſtomer of Southampton muſt keep a true account of the quantity of the wool ſhipped, and may not permit any greater quantities than thoſe before limited, upon forfeiture of office, and 100l. Ditto acts.

Wool, Wool-Fells, Mortlings, Shortlings, Yarn made of Wool, Wool-Flocks, Fuller's-Earth, Fulling-Clay, or Tobacco-Pipe-Clay.

—— Packs, ſacks, bags, or caſks of ſuch goods, may not be loaded on any horſe, &c. nor carried by land within this kingdom, but in the day-time, and at ſeaſonable hours; that is to ſay, from the 1ſt day of March to the 29th of September, between 4 in the morning, and 8 in the evening; and after the 29th of September to the firſt of March, between 7 in the morning and 5 in the evening, upon forfeiture thereof, or the value. 14 Car. II. c. 18. §. 9.

—— Such goods may not be loaded upon any horſe, &c. or carried by land, within five miles of the ſea-coaſt, but between ſun-riſing and ſun-ſetting, upon forfeiture thereof, and the horſes, &c.

—— Exported into parts beyond the ſeas, the penalty is forfeiture of ſhip and goods, and treble the value, with treble coſts of ſuit.

—— Perſons aſſiſting in the exportation, are to ſuffer three years impriſonment, without bail or main-prize.

—— The firſt three perſons (not being the owners) aſſiſting in the exportation, diſcovering their crime to any juſtice of the peace, are diſcharged of all penalties and puniſhments. 7 and 8 W. III. c. 28. §. 8, 10, 11.

—— The inhabitants of the place out of which, or through which, ſuch goods are carried or exported, are to forfeit 20l. if they be under the value of 10l. but if above, treble the value, and alſo treble coſts of ſuit. 7 and 8. W. III. c. 28. §. 8.

—— But

—— But the hundred of Winchelſea, in the cinque-ports, being divided by a navigable arm of the ſea, is to be deemed as two diſtinct hundreds; and the offences committed in one part, are not to be chargeable on the inhabitants of the other. 9 and 10 W. III. c. 40. §. 1.

—— Execution for the informer may be had againſt two or more of the inhabitants; and the juſtices, at their general quarter-ſeſſions, may tax every town, &c. in the hundred, &c. as in the caſe of robbery. 7 and 8 W. III. c. 28. §. 9.

—— The owner of the goods, and each of his aſſiſtants, are to anſwer treble the value of the penalties to the inhabitants, and treble coſts of ſuit, to be recovered by action, in the name of the clerk of the peace. 7 and 8 W. III. c. 28. §. 10.

—— Perſons entitled to penalties and forfeitures, compounding with any hundred, port or place, for leſs than is due by law, any other perſon may ſue for the whole, as if no ſuch compoſition had been made; and the compounder is to ſuffer five years impriſonment, without bail or mainprize. 7 and 8 W. III. c. 28. §. 13.

—— The admiralty are to appoint one ſhip of the 5th rate, and two of the 6th rate, and four armed ſloops, to cruize conſtantly from off the North Foreland to the Iſle of Wight, with orders for ſeizing all veſſels exporting wool, or carrying or bringing prohibited goods, or any ſuſpected perſons. 7 and 8 W. III. c. 28. §. 14.

—— The admiralty are to appoint three ſhips of the 6th rate, and 8 or more armed ſloops, to cruize on the coaſt of Great-Britain or Ireland, in ſuch ſtations as ſhall be aſſigned them by the admiralty, with orders to ſeize all veſſels in which any wool, worſted, bay or woollen yarn, cloth, ſerges, bays, kerſies, ſays, frizes, druggets, cloth-ſerges, ſhalloons, or any drapery, ſtuffs, or woollen manufactures whatſoever, ſhall be exported, or laden to be exported, from Ireland to foreign parts. A liſt of the ſhips and ſloops, the names of the commanders, and copies of their inſtructions, are to be ſent to the commiſſioners of the cuſtoms of Great-Britain, and commiſſioners of the revenue in Ireland, within 10 days after given. 10 and 11 W. III. c. 10. §. 16. and 5 Geo. II. c. 21. §. 1.

—— The commanders of ſuch ſhips may ſearch any veſſels within the limits of their ſtations; and if any of the above-mentioned goods are found on board, without cocket or warrant, licenſing the exportation thereof, may carry them, with crew and cargo, into any port in Great-Britain or Ireland. 5 Geo. II. cap. 21. §. 2.

—— After ſeizure, the goods are to be ſecured in the king's warehouſe; and when condemned muſt, together with the veſſel, her guns, tackle and furniture, be ſold by inch of candle to the beſt bidder, after 21 days public notice; $\frac{1}{4}$ of the produce of ſuch to the commander, $\frac{1}{4}$ to the officers of the ſhip or ſloop, $\frac{1}{4}$ to the mariners, and $\frac{1}{4}$ to the king, out of which the charges of proſecution are to be paid, except the ſeizure be made upon information; in which caſe, the informer is to be indemnified from all penalties, &c. and to be paid $\frac{1}{5}$ of ſuch ſale, and the reſidue to be divided into four parts, and diſtributed as above. 10 and 11 W. III. c. 10. §. 17. and 5 Geo. II. c. 21. §. 3.

—— Commanders neglecting their duties, compounding for, or conniving at the exportation of wool, are to forfeit all their pay due, to ſuffer ſix months impriſonment, and be rendered incapable of any ſervice in the navy. 10 and 11. W. III. c. 10. §. 18.

Offenders againſt any of the laws made for the preventing of the exportation of wool, may be proſecuted by action, &c. in any of his Majeſty's courts of record at Weſtminſter; and thereupon copies may iſſue in the firſt proceſs, ſpecifying the ſum of the penalty ſued for; and ſuch offenders be obliged to give bail to anſwer the ſuit, and alſo, at appearance, to pay the penalties incurred, or to yield their bodies to priſon. 10 and 11 W. III. c. 10. §. 20.

—— Offenders in priſon, for want of ſufficient bail, for the unlawful exportation of wool or wool-fells, not pleading to a declaration or information, delivered by the ſpace of one term, judgment may be entered againſt them by default. 4 Geo. I. c. 11. §. 6.

If judgment be obtained againſt ſuch offenders, and they do not pay the ſum recovered within three months, the court may order tranſportation for ſeven years, as for felony. 12 Geo. II. c. 21. §. 27.

WOOL, YARN MADE OF WOOL, AND WOOL-FLOCKS, may not be preſſed together with any ſcrews, preſſes, or other engines, into any ſack, pack, bag, caſk, &c. nor carried, nor laid, at or near the ſhore or coaſts of the ſea, or any navigable river, or into any place adjoining, with intent to be exported, upon forfeiture thereof, or the value. 14 Car. II. c. 18. §. 7.

—— Wool, Spaniſh or foreign, may be exported only in Britiſh ſhipping, upon pain of confiſcation. See Rule 5, at the end of Letter A.

WOOL, WOOL-FELLS, MORTLINGS, SHORTLINGS, WOOL-FLOCKS, WORSTED, BAY, OR WOOLLEN YARN, may be exported from any port in Ireland, with intent to be imported into any port in Great-Britain, and not otherwiſe; but CLOTH, SERGES, BAYS, KERSIES, SAYS, FRIZES, DRUGGETS, SHALLOONS, STUFFS, CLOTH-SERGES, or any othe DRAPERY, made of or mixed with WOOL, or WOOL-FLOCKS, and manufactured in Ireland, may not be exported out of Ireland, unleſs they be ſhipped in the ports of Cork, Drogheda, Dublin, Dundalk, Galway, Kinſale, Limeric, New-Roſs, Newry, Sligo, Waterford, Wexford, Wicklow, and Youghall in Ireland, and with intent to be imported into the ports of Barnſtaple, Biddeford, Bridgewater, Briſtol, Cheſter, Liverpool, Milford-haven, and Minehead in England and Wales: but notice muſt be firſt given to the commiſſioners of the cuſtoms, or to the cuſtomer or collector of the port into which they are intended to be brought, of the quantity, quality and package, with the marks and numbers, the name of the ſhip and maſter, and the port of importation; and bond be entered into, with one or more ſufficient ſureties, in treble the value of the goods, that they ſhall be landed accordingly; and a licence be alſo granted, under the hands of the commiſſioners, or any three of them, or by the cuſtomer, or the collector of the port where bond is given, upon forfeiture of ſhip, goods, and 500 l. by every offender. 1 W. and M. c. 32. §. 6. 7 and 8 W. III. c. 28. §. 5. 10 and 11. W. III. c. 10. §. 1, 2, 3, 10, 14. 11 and 12 W. III. c. 13. §. 9. 4 Ann. c. 7. §. 1. 3 Geo. I. c. 21. §. 4, 5. 5 Geo. I. c. 11. §. 21. 5 Geo. II. c. 21. §. 6. 26 Geo. II. c. 11. §. 1, 2.

—— Maſters, mariners, or others, knowing of ſuch offence, and aſſiſting therein, are to forfeit 40 l.

—— Actions and informations may be tried in any of his majeſty's four courts at Dublin.

—— The firſt three perſons aſſiſting, (not being owners) diſcovering their offence, are diſcharged of all penalties.

—— Acquittals in Ireland, not to bar or delay proſecutions in England. Ditto acts.

—— WOOL, WOOL-FELLS, MORTLINGS, SHORTLINGS, WOOL-FLOCKS, WORSTED, BAY OR WOOLLEN-YARN, CLOTH, SERGES, BAYS, KERSIES, SAYS, FRIZES, DRUGGETS, SHALLOONS, STUFFS, CLOTH SERGES, or any other DRAPERY made of, or mixed with WOOL, or WOOL-FLOCKS. For every ſhip ſailing from Ireland to Great-Britain, with any of the aforeſaid goods, bond muſt be given, before ſhipping, to the chief officers of the port, by two ſufficient perſons, in double the value of the goods, that they ſhall be brought to Great-Britain, and there landed, and the duties paid, upon forfeiture of the ſhip. 10 and 11 W. III. c. 10. §. 5, 15.

—— The penalties and forfeitures of ſuch bonds may not be granted or aſſigned over to any perſon. Ditto acts.

The cockets, or warrants, for carrying of ſuch goods from Ireland to Great-Britain, muſt be written upon paper, and not parchment, and ſigned by at leaſt three of the chief officers, with the exact quantities, qualities, marks and numbers indorſed thereon.

—— The like endorſement muſt be upon the warrant for the landing the ſame in England; and the goods muſt be viewed and examined by the ſurveyor or land-waiter. 7 and 8 W. III. c. 28. §. 7. 10 and 11 W. III. c. 10. §. 7, 9.

—— The certificates of landing, granted for diſcharging the bond taken in Ireland, muſt be written on paper, and not parchment, ſigned by at leaſt three of the chief officers, with the exact quantities, qualities, marks and numbers indorſed thereon, and not obliterated or interlined. Ditto acts.

—— A regiſter of all ſuch goods, with the particular quantities, qualities, weights, and numbers, the ſhip, maſter's name, owner's name, and to whom conſigned, muſt be kept at the cuſtom-houſe, London. 1 W. and M. c. 32. §. 11. and 10 and 11 W. III. c. 10. §. 6.

—— The commiſſioners of the cuſtoms in Ireland muſt, every ſix months, or within 30 days after, tranſmit to the commiſſioners of the cuſtoms in England, duplicates of the bonds taken for the lading, and a true account of all ſuch goods exported, expreſſing the quantity, quality, and weight, by whom, and in what ſhip exported, where conſigned, the names of the officers, certifying the landing in England, the dates of their certificates, where landed, and the quantity, quality, weight, marks and numbers contained in ſuch certificates. 7 and 8 W. III. c. 28. §. 6. and 10 and 11 W. III. c. 10. §. 8.

—— The commiſſioners appointed to execute the ſeveral acts againſt the exportation thereof. 1 W. and M. c. 32. §. 7. and 9 and 10 W. III. c. 40. §. 1.

WOOL, WOOL-FELLS, MORTLINGS, SHORTLINGS, WOOL-FLOCKS, WORSTED, BAY OR WOOLLEN-YARN, CLOTH, SERGES, BAYS, KERSIES, SAYS, FRIZES, DRUGGETS, SHALLOONS, STUFFS, CLOTH-SERGES, OR ANY OTHER DRAPERY, MADE OF, OR MIXED WITH WOOL, OR WOOL-FLOCKS, may not be put on board any veſſel or boat in Ireland, or imported from thence, into this kingdom, but ſuch as are of the built of Great-Britain or Ireland, and wholly owned and manned by the ſubjects of this kingdom or Ireland, and regiſtered as under, on forfeiture of the goods or value thereof, as alſo of the veſſel or boat, with her guns, tackle, apparel, and furniture. 12 Geo. II. c. 21. §. 6.

Oath muſt be made by one of the owners, before the collector and comptroller of the cuſtoms, at the port to which ſhe belongs, as follows:

Jurat. A. B. That the ſhip of whereof is at preſent maſter, being built of tons, was built at in the year and that of and of are at preſent owners thereof; and that no foreigner, directly or indirectly, hath any ſhare, part, or intereſt therein. 12 Geo. II. c. 21. §. 7.

A certificate of which oath, atteſted by the collector and comptroller, under their hands and ſeals, is (after having been regiſtered by them) to be delivered to the maſter of the ſhip, for the ſecurity of her navigation; and a duplicate of the regiſter to be immediately tranſmitted to the commiſſioners of the cuſtoms in London, in order to be entered in a general regiſter to be there kept for this purpoſe. Ditto act.

—— No ſhip's name, after regiſtering, may be changed, or the property transferred to any port, without regiſtering her again, and delivered up to the former regiſter to be cancelled, under the ſame penalties as before directed. And in caſe of any alteration of property in the ſame port, by ſale of any ſhare, ſuch ſale muſt be acknowleged by indorſement on the certificate of the regiſter before two witneſſes. 12 Geo. II. c. 21. §. 8.

WOOL, WOOL-FELLS, MORTLINGS, SHORTLINGS, WOOL-FLOCKS, WORSTED, BAY, or WOOLLEN YARN, may not be packed up in Great Britain or Ireland, in any other package but packs or truſſes of leather, and pack-cloth, and marked on the outſide with the reſpective words WOOL or YARN, in large letters, not leſs than three inches in length, on forfeiture of the goods and package, and 3s. for every pound weight, to be paid by the owner or packer of it. 12 Geo. II. c. 21. §. 10.

—— Wool, coverlids, waddings, or other manufactures of wool ſlightly worked or put together, ſo as they may be reduced to, or made uſe of as wool again, or matraſſes, or beds ſtuffed with combed wool, or wool fit for combing, may not be exported from Great-Britain or Ireland, under the like penalties and forfeitures, as for being concerned in the exportation of wool. 12 Geo. II. c. 21. §. 9.

WOOL, WOOL-FELLS, MORTLINGS, SHORTLINGS, COMBED WOOL, WOOLLEN or BAY-YARN, WORSTED, YARN-CRUEL, OR WOOL SLIGHTLY MANUFACTURED, may not be laden on any veſſel bound to parts beyond the ſeas; nor laden, in order to be carried coaſtwiſe, from one port of Great-Britain or Ireland to another; unleſs notice be firſt given to the commiſſioner of the cuſtoms, or to the cuſtomer or collector and comptroller of the port from which they are intended to be ſent or exported, of the quantity, quality, and package, with the marks and numbers, the ſhip and maſter's name, the name and place of abode of the owner of the goods, and the port into which they are intended to be imported, and to whom conſigned; and bond be entered into, in treble the value of the goods, that they ſhall be landed accordingly (notice whereof to be tranſmitted from the cuſtomer or collector of the port from whence the ſame is intended to be exported, to the cuſtomer or collector and comptroller of the port into which the ſame is intended to be imported) and unleſs a licence be taken out under the hands of three of the commiſſioners of the cuſtoms, or from the cuſtomer, or collector and comptroller, where ſuch bond is given for landing and carrying thereof as aforeſaid, on forfeiture of the goods, together with the veſſel, or boat, and furniture, on which they are laden. The licence to be granted without any charge to the perſon demanding it. 12 Car. II. c. 21. §. 11.

—— The ſaid bond not to be diſcharged, but by a certificate under the hand and ſeal of the cuſtomer or collector and comptroller of the port where they are landed, of the quality, quantity and package, the marks and numbers, with the name of the ſhip and maſter. And bonds not ſo diſcharged after ſix months, are to be tranſmitted to the commiſſioners of the cuſtoms in Great-Britain, or to the commiſſioners of the revenue in Ireland, who are to put them in ſuit immediately. Ditto act.

—— No other ſecurity, now required by law, for goods carried coaſtwiſe, to be hereby leſſened; or law in force for preventing the exportation of wool, or other goods aforeſaid, to be repealed or made void herehy. 12 Geo. II. c. 21. §. 12.

—— None of the goods before mentioned, imported from Ireland, or carried coaſtwiſe within this kingdom or Ireland, may be ſhipped or landed, but in the preſence of the proper officers, and at the lawful keys, without leave from the commiſſioners and officers of the cuſtoms, on forfeiture of the goods, or value thereof, and 3s. for every pound weight; to be paid by the proprietor of the goods, or any perſon concerned in the ſhipping or landing thereof. 12 Geo. II. c. 21. §. 13.

WOOL, WOOL-FELLS, WOOL-FLOCKS, MORTLINGS, SHORTLINGS, WORSTED, BAY, OR WOOLLEN-YARN, FULLER'S-EARTH, FULLING-CLAY, TOBACCO-PIPE-CLAY, or any ſcouring-clay or earth, tranſported out of Great-Britain, or any of the ſaid goods, or CLOTHS, SERGES, BAYS, KERSIES, SAYS, FRIZES, DRUGGETS, CLOTH-SERGES, SHALLOONS, or other DRAPERY-STUFFS, or WOOLLEN MANUFACTURES, made up or mixed with WOOL, or WOOL-FLOCKS, illegally tranſported out of Ireland.

—— Information of ſeizure of any of the ſaid goods, as forfeited by this or any other act, are to be entered by none but officers of the cuſtoms, exciſe, or ſalt-duties; and informations againſt any perſons, for recovery of the penalties and forfeitures, on account of the illegal tranſportation of the ſaid goods, to be filed, and proſecuted only in the name of the attorney-general, or in the name of ſome officer of the cuſtoms, exciſe, or ſalt-duties.

—— But this act is not to take away the power given by any law to the commander and officer of ſhips of war, or the armed ſloops, appointed by the admiralty to guard againſt the tranſportation of wool out of Great-Britain or Ireland. 12 Geo II. c. 21. §. 14.

—— Any officer making a colluſive ſeizure or information of the ſaid goods, or any fraudulent agreement, whereby the perſons concerned may avoid the penalties and forfeitures incurred, forfeits 200l. and is incapable of ſerving in any office of the revenue; and the exporters, importers, and owners of the goods, forfeit treble the value, to the uſe of the perſon who informs or ſues for the ſame in any court of record at Weſtminſter or Dublin, or the court of Exchequer in Scotland. 12 Geo. II. c. 12. §. 16.

——Any perſon concerned therein, firſt making a diſcovery, ſo as one of his accomplices be convicted, is to be cleared and diſcharged thereof; and, not being an officer of the revenue, or owner of the goods, to have the whole money recovered on conviction of the offender, the charge of proſecution being firſt deducted. 12 Geo. II. c. 12. §. 17.

WOOL, WOOL-FELLS, WOOL-FLOCKS, MORTLINGS, SHORTLINGS, WORSTED, BAY or WOOLLEN YARN, CRUELS, OR WOOL SLIGHTLY MANUFACTURED, OR MATTRASSES, OR BEDS STUFFED WITH COMBED WOOL, OR WOOL FIT FOR COMBING, FULLER'S-EARTH, FULLING-CLAY, TOBACCO-PIPE-CLAY, OR ANY OTHER SCOURING-EARTH OR CLAY, exported from Great-Britain, or any of the ſaid goods, or CLOTH, SERGES, BAYS, KERSIES, FRIZES, DRUGGETS, SHALLOONS, STUFFS, CLOTH-SERGES, or any other DRAPERY made or mixed with WOOL manufactured in Ireland, and illegally exported from thence. Actions, ſuits or informations upon this, or any other act, may be proſecuted (except where by this act is otherwiſe directed) in any court of record at Weſtminſter, or in the court of Exchequer in Scotland, or at the quarter ſeſſions of the peace, or before two juſtices of the peace, in a ſummary way, at the election of the ſeizer or informer, or by any law relating to the revenue of Ireland in that kingdom; and if the property be claimed, the ONUS PROBANDI to lie upon the owner or claimer. 12 Geo. II. c. 21. §. 18.

—— All penalties and forfeitures before mentioned in this act (except where otherwiſe directed) to be for the uſe of the perſon who ſhall ſeize, inform, or ſue for the ſame. 12 Geo. II. c. 21. §. 19.

On condemnation of the aforeſaid goods, the reſpective commiſſioners may cauſe them to be ſold publicly to the beſt bidder; and the charges of condemnation and ſale being firſt paid, the remainder is to be paid to the perſon who ſhall ſeize, inform, or ſue for the ſame. 12 Geo. II. c. 21. §. 20.

—— But if an officer makes a ſeizure, or carries on a proſecution to effect, by the information of any other perſon, ſuch perſon is to have half of what is recovered by the officer. 12 Geo. II. c. 21. §. 21.

—— If any perſon who may become liable to the payment of the 3s. per pound weight by this or by any former acts, is not able to pay it, the reſpective commiſſioners may cauſe 1s. per pound weight of the goods, for which the offender is convicted, to be paid to the informer or proſecutor by their receiver-general, out of any public money in his hands. 12 Geo. II. c. 21. §. 22.

—— Any maſter, mate, or mariners, belonging to any ſhip concerned in the illegal exportation or importation of the goods aforeſaid, from Great-Britain or Ireland, giving an account, within ſix months after the ſhipping the ſame, to the commiſſioners of the cuſtoms in England or Scotland, or the commiſſioners of the revenue in Ireland, of the name of the ſhip, the ſpecies and quantities of the goods, the name of the owner, exporter, or perſons who act in their aid and aſſiſtance, ſo as they may convicted, is to be indemnified, diſcharged of all penalties and forfeitures, and receive $\frac{1}{4}$ of what is recovered, clear of all charges, the other $\frac{1}{4}$ to be applied to the uſe of his majeſty, after deducting the charges of proſecution and condemnation. 12 Geo. II. c. 21. §. 23.

—— Every perſon appointed by deputation, commiſſion, or other inſtrument, under the hands and ſeals of the commiſſioners of the cuſtoms, exciſe, or ſalt, to act as an officer

or

or ſervant under them, in putting this or any act, againſt the tranſportation of wool, in execution, is to be eſteemed an officer of the cuſtoms, exciſe, or ſalt reſpectively. 12 Geo. II. c. 21. §. 24.

—— Offering or promiſing to bribe an officer to connive at the ſaid illegal practices, the penalty is 300 l. 12 Geo. II. c. 21. §. 25.

—— Perſons obſtructing an officer, or his aſſiſtants, in making ſeizures, by virtue of this act, or who being armed or diſguiſed, attempt to reſcue any of the aforeſaid goods after ſeizure, are to be tranſported for ſeven years. 12 Geo. II. c. 21. §. 26.

WOOL, WOOL-FELLS, WOOL-FLOCKS, MORTLINGS, SHORTLINGS, CRUELS, WORSTED, WOOLLEN AND BAY-YARN, MATRASSES, AND BEDS STUFFED WITH COMBED WOOL, OR WOOL fit to be combed, exported from Great-Britain or Ireland, and WOOLLEN MANUFACTURES exported from Ireland, inſured to parts beyond the ſeas; the perſon inſuring, his aiders, abettors, and aſſiſtants, forfeit 500 l. over and above all other forfeitures and penalties they are liable to; and the perſon inſured forfeits 500 l. to the uſe of the informer, or perſon who ſues for the ſame. 12 Geo. II. c. 21. §. 29, 30.

—— The inſurer firſt making diſcovery within ſix months after ſuch tranſaction, ſo as the perſons concerned with him be convicted thereof, is to be acquitted of the offence, receive the whole forfeiture recovered, deducting charges of proſecution, and likewiſe retain the money given him for inſurance. Or the perſon inſured firſt making diſcovery as aforeſaid, is to receive back what was paid for the inſurance, and alſo to have the whole forfeiture impoſed on the inſurer, deducting the charges of proſecution, and to be diſcharged of the forfeitures incurred. 12 Geo. II. c. 21. §. 31.

X Y L

XYLO BALIANUM. This is the wood of the ſhrub that yields the balſam of Mecca, and paſſes for a powerful cordial, cephalic, and alexipharmic. It has been ordered in many compoſitions; but as it is very hard to be procured, apothecaries generally ſubſtitute for it either yellow ſaunders or aloes-wood.

X Y L

Y.

YEAST.

A METHOD of CURING YEAST, the FLOWER of WINE, and WINE-LEES, for the ſervice of diſtilling, wine-making, vinegar-making, &c.

Take a quantity of common ale-yeaſt, and put it into a cloſe canvas-bag, and gently ſqueeze out the moiſture in a ſcrew-preſs, 'till the remaining matter is left as hard as clay; in which ſtate, being cloſe packed in a tight caſk, and well ſecured from the air, it will keep freſh and ſound for ſeveral months, as has been often experienced.

REMARKS.

This is an experiment of conſiderable uſe to brewers and diſtillers, who in England, though they employ very large quantities of yeaſt, ſeem to have no good method of preſerving it, or raiſing nurſeries thereof, whereby they ſuſtain a conſiderable loſs: whereas the brewers in Flanders make a great profit, by ſupplying the malt-diſtillers of Holland with yeaſt, which is rendered laſting and fit for carriage, after the manner of the preſent experiment.

The ſame method is practicable to much greater advantage, in the yeaſt of wine and wine-lees, if they could be imported into England: for by this means we might eaſily imitate the wines and brandies of foreign growth; the lees and yeaſt of wine readily affording an eſſential oil, by diſtillation, a ſmall proportion whereof will flavour a large one of wine or brandy. But a ſhorter and more perfect way, is to let any taſteleſs, or other proper wine, fret, or ſtand for ſome time, upon ſuch lees, or wine-yeaſt, whereby it will, to great advantage, acquire the natural taſte and flavour of the wine whereto the lee or yeaſt belonged. See the article BREWING.

YORKSHIRE. As this is by far the largeſt county in England, ſo it is variouſly ſituated, and conſequently, has great variety of ground, that is, high and low, rich and poor, marſhy and heathy. On the weſt it is bounded by Lancaſhire, and a part of Cheſhire; on the ſouth by Derbyſhire, Nottinghamſhire, and Lincolnſhire; on the north by Durham and Weſtmoreland; and on the eaſt by the German Ocean; and contains 360 miles in compaſs.

The commodities are, in a particular manner, allum, jet, lime, liquorice, horſes; its manufactures, knives, bits, ſpurs, ſtockings, &c. but the greateſt of all is cloth, with which it in a good meaſure ſupplies Germany and the North. The corn and cattle, with which it abounds, are not mentioned, becauſe theſe are what they have in common with other counties. Iron and lead mines have been in more plenty than of late years, though no leſs than 40,000 perſons are employed in the iron manufactures, under about 600 maſter cutlers, who are incorporated by the ſtile of the cutlers of Hallamſhire.

It is divided into three parts, or ridings, each as large, if not larger, than any ordinary county, which are diſtinguiſhed by weſt, eaſt, and north, from their ſituation with reſpect to the city of York.

The WEST RIDING, which is the moſt conſiderable of the three, for its fertility and number of inhabitants, is ſeparated by the Ouſe from the Eaſt Riding; it has the North Riding on the north; part of Lancaſhire, and Cheſhire on the weſt and ſouth-weſt; and Lincolnſhire, Nottinghamſhire, and Derbyſhire, on the ſouth-eaſt and ſouth. Its chief rivers are the Ure or Ouſe, Don, Calder, Are, Ribble, and Wherfe. Its air, though ſharp, is generally reckoned more healthy than that of the other two; and the ſoil is various. They have a ſtone here, which being calcined, is made into allum, by various percolations and boilings: it is noted alſo for jet and liquorice, for fine horſes and goats, for making and curing legs of pork into hams, like the Weſtphalian, and for the manufactures of cloth and iron.

YORK, the capital of the county, and heretofore the ſecond city in the kingdom, is pleaſantly ſituate, in a large plain, or valley, on the river Ouſe, which, though 60 miles from the ſea, bring ſhips to the city that are of 70 tons burthen. A cotton manufacture was lately eſtabliſhed here, which is brought to very great perfection.

KNARESBOROUGH is only of note for its medicinal ſprings, but not ſo much frequented ſince Scarborough ſpa came in vogue.

RIPPON is a large, pleaſant, well-built, and populous town, between the Ure and little river Skell: it formerly flouriſhed by the woollen manufacture, which it has ſince loſt, though it is ſtill a ſtaple for wool, which is bought up here every week, by the clothiers from Leeds, Wakefield, Haliſax, &c. It has two annual horſe-fairs, viz. one the Monday before the 10th of March, the other on the Monday after Lammas-Day, and is noted for making the beſt ſpurs. Tanned leather is ſold in great quantities, as alſo cattle of all kinds, at its fairs.

BOROUGHBRIDGE is a borough and poſt-town on the Ure; it is reckoned that 7 or 8000 l. is laid out yearly here in hard ware, which is the chief ſupport of the town.

SHEFFIELD, on the borders of Derbyſhire, is an ancient, large, thriving, and populous town, on the river Don, having been noted ſeveral hundred years for cutlers and ſmiths wares, particularly for files and knives, or whittles: the firſt mills in England for turning grindſtones were ſet up here. The ſmiths manufactures were encouraged and advanced here, by the neighbourhood of the iron mines.

DONCASTER, on the river Don, is a noble, ſpacious, and populous town; the manufactures of which are knit waiſtcoats and petticoats, gloves and ſtockings.

BAUTRE, ſituate near the Idle, which parts this riding from Nottinghamſhire: it is of chief note for its trade in mill-ſtones.

BARNESLEY is a well-built town, noted for its trade in wire and hard-ware.

WAKEFIELD is a large well-built town, in a thriving ſtate, and very populous. Its Friday market is for woollen cloth, like that at Leeds, but not quite ſo conſiderable, though abundance of it is made in and near this town: it ſtands on the Calder, which has been made navigable by acts of parliament, firſt to this town, and continued from hence to Ealand and Halifax.

HUTHERSFIELD is the firſt town of note that the Calder comes to from Halifax, and is one of the five towns in this county that have the greateſt ſhare in the cloathing trade.

SNATH is a ſmall town, but has a pretty good trade, the river being navigable to it by boats.

HALIFAX ſtands on the Calder, extending from weſt to eaſt, on the gentle deſcent of a hill: it is a pariſh, the moſt populous, if not the moſt extenſive, in England. The trade of this town has greatly increaſed of late years, eſpecially as they have entered into the manufacture of ſhalloons, of which few, if any, were ever made in theſe parts before; ſo that it has been calculated that 100,000 pieces are made in a year in this pariſh only, at the ſame time that almoſt as many kerſies are made here as ever; and it has been affirmed, that one dealer here has traded by commiſſion for 60,000 l. a year, to Holland and Hamburgh, in the ſingle article of kerſies.

It is remarked, that this and the neighbouring towns are all ſo employed in the woollen manufactures, that they ſcarce ſow more corn than will keep their poultry, and that they feed very few oxen or ſheep: ſo that the proviſions they conſume come chiefly from the Eaſt Riding, and neighbouring counties. Their markets are thronged by ſuch prodigious numbers of people, to ſell their manufactures, and buy proviſions, that none are more crowded in the north of England, except thoſe of Leeds and Wakefield.

LEEDS, which ſtands on the river Aire, has been a long time famous for the woollen manufacture, and is one of the largeſt and moſt flouriſhing towns in the county.

Its cloth market was formerly on the bridge; but, on the great increaſe of that trade, it has been ſold in that called the High-Street, or Bridgate-Street, where every market-day in the morning numbers of treſſels are ranged, and covered with boards, and, upon ringing of the market bell, at ſix in the ſummer, and ſeven in the winter, the clothiers in the inns bring out their cloth. When the bell ceaſes, the chapmen come into

into the market, where they match their patterns, and treat for the cloth in few words, and with a whiſper, becauſe the clothiers ſtand ſo near each other; and perhaps 20,000 l. worth of cloth is ſold in an hour's time. The bell rings again at half an hour after eight, upon which the ſcene is changed; the clothiers and their chapmen, with their treſſels, diſappear, and make room for the linen-drapers, hardwaremen, ſhoe-makers, fruiterers, &c. at the ſame time the ſhambles are well ſtored with all ſorts of fiſh and fleſh; and of apples 500 loads have been counted here on a day. There is a magnificent hall in the town, where they alſo ſell great quantities of white cloth: it has a cupola and bell at top, like Blackwell-Hall in London, to give notice when the ſale begins. The river Aire being navigable here by boats, opens a communication from the town with Wakefield, York, and Hull, to which places it exports other goods beſides woollen, and furniſhes the city of York with coals.

BRADFORTH is another town eminent for the woollen manufacture.

ABERFORTH is of note only for its manufacture of pins.

SELBY is a populous, though ſmall town, with a good trade on the river Ouſe, which brings up large veſſels to it, ſo that it is inhabited by ſeveral merchants.

WETHERBY is a notable trading town on the river Wherfe.

BURSTALL is a little town, noted for the manufacture of broad cloth, ſo called to diſtinguiſh it from kerſeys, druggets, &c. though the cloths of this county are all called narrow at London, when compared with the broad cloths made in the weſt of England. At this town is alſo made a ſort of cloth in imitation of the Glouceſter whites, which is of as good a colour as thoſe, if not as fine.

The EAST RIDING, which is the ſmalleſt of the three, is bounded on the north and weſt by the Derwent and the Ouſe; on the ſouth by the Humber; and on the eaſt by the German Ocean. The air and ſoil are various, according to the different parts of it. Its rivers are the Ouſe, Derwent, Fowlwy, Shelfleet, and Hull.

BEVERLEY, on the river Hull, has a trade in malt, oatmeal, and tanned leather, which are its principal manufactures; but the poor people ſupport themſelves moſtly by weaving of bone-lace, which of late has met with particular encouragement. Here was formerly a cloathing trade, but long ſince decayed. Its moſt remarkable fair is that which begins about nine days before Aſcenſion, and is kept in a ſtreet leading to the Minſter-Garth, called Londoner-Street, becauſe then the Londoners bring down their wares and furniſh the country tradeſmen with them by wholeſale. The trade of this town is very much increaſed ſince the creek, or cut, called Beverley-Beck, from the town to the river Hull, has by act of parliament, in 1727, been cleanſed, deepened, and widened, and thereby rendered navigable for veſſels of large burthen.

KINGSTON UPON HULL, as it is denominated in all authentic writings, but commonly called HULL, is a large, cloſe-built, and exceeding populous town, and not only the moſt conſiderable in this part of England, for its inland traffic, but has a foreign trade equal to that of moſt out-ports in the kingdom; and has as many merchant-ſhips belong to it, as to any port in England, except London, Briſtol, Liverpool, and Yarmouth. Indeed more particular circumſtances concur to render it rich in trade, than moſt towns on our coaſts can boaſt of. One thing has contributed eſpecially to its increaſe in trade, and to its being the center of the navigation, and that is, the great number of large rivers which fall into the ſea near it, by which it carries on a commerce and navigation with a very great part of England, particularly the inland counties, that have no foreign trade by any other canal; all the heavy goods of which counties, ſuch as lead from Derby and Nottinghamſhires, iron ware from Sheffield, cheeſe from Warwickſhire, Staffordſhire, and even Cheſhire, are brought down to this port, and here exported to Holland, Hamburgh, and the Baltic, as alſo to France and Spain, from whence they make large returns in iron, copper, hemp, flax, canvas, Ruſſia linen and yarn, beſides wine, oil, fruit, linen, &c. from Holland, France, and Spain. But what is more than all is, the vaſt quantity of corn brought down out of thoſe counties to Hull, as makes it, without exception, the greateſt port in England for exportation of corn, ſometimes exceeding even London itſelf. The trade, on the other hand, betwixt this port and London, eſpecially for corn, lead, and butter, and the trade between this port and Holland and France, not only for all thoſe commodities, but for the cloth, kerſeys, and other manufactures of Leeds, Halifax, and other great and populous towns of the Weſt-Riding, is ſuch, that they not only employ ſhips, but fleets, which are generally from 50 to 60 ſail together, and in war time often 100 ſail, or more. They who have ſeen the greateſt ports abroad, ſay there is more buſineſs done at this, in proportion to its bigneſs, than in any other port in Europe.

BRIDLINGTON, which ſtands near the bay ſo called, is of late years become a place of good trade, and has a great corn market. The key, which is near two miles from the town, is chiefly inhabited by ſeafaring people.

The NORTH RIDING extends along the coaſt, from Robin Hood's Bay, as far as Whitley, being bounded on the north with the river Tees; it runs from the ſea, in a narrow track of near 60 miles, as far as Weſtmoreland, and is bounded on the ſouth and weſt with the Derwent and Ure, which part it from the Eaſt and Weſt Ridings. The ſoil in many parts is very indifferent, it being rocky and mountainous, but the bottoms and vallies are not unfruitful. The hills afford great ſtore of lead, pit-coal, and lapis calaminaris; and in ſome places it produces marble, allum, jet, and copperas. The chief allum-works here were carried on by the late duke and ducheſs of Buckingham, at Whitby, where was the greateſt plenty of its mine. The jet is found in ſeveral places by the ſea ſide, in the chinks and clefts of the rocks.

SCARBOROUGH is an ancient borough, ſituate on a ſteep rock, has a good trade, and a commodious key, with a good number of veſſels, which are chiefly employed in the coal trade between Newcaſtle and London. From the middle of Auguſt to November, herrings are taken here in great numbers, with which they ſupply the city of York, as alſo with ſeveral other kinds in their ſeaſon. But the wealthy condition of this town is chiefly owing to the number of perſons of all ranks that flock hither every year, in the ſeaſon, to drink the waters of its chalybeat ſpring.

MALTON is a populous borough, and its Saturdays market is the beſt in the county for horſes, black cattle, and other commodities, eſpecially tools for huſbandry.

NORTHALLERTON has a good market alſo for horſes, and other cattle, corn, &c. and its beaſt fairs the moſt thronged in England.

RICHMOND has a good trade in ſtockings and ſailors woollen caps.

YARUM is a corporate, though a ſmall town, and carries on a pretty trade with London by water, for lead, corn, and butter.

MIDLAM is noted for a manufacture of woollen cloth.

MASHAM has alſo a cloth manufacture.

Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE, continued from the End of Letter U.

CHIEF LAWS RELATING to YARN.

YARN, linen. See the end of letter I. and the end of letter W. for WOOL.

——Brown or raw linen-yarn made of FLAX may be imported in Britiſh ſhips legally navigated, free of duty, from the 24th of June 1756, for 15 years, and to the end of the then next ſeſſion of parliament, if duly entered and landed in the preſence of the proper officers.

—— If any doubt ariſes whether ſuch yarn is made of FLAX or not, the ONUS PROBANDI to lie on the importer or claimer. — 29 Geo. II. c. 15. §. 13, 24.

——MOHAIR. See end of letter G. — Yarn worſted. See end of WOOL.

Z.

ZAFFRE, or SAFREE, is a mineral of a blueiſh, or partridge-eye colour, which the Engliſh, Dutch, and Hamburghers bring from the Eaſt-Indies, and eſpecially from Surat.

Moſt of the zaffre we have is in a grey powder, like aſhes, from which it ſo little differs in appearance, that we are forced to conſult the workmen who uſe it, to know, by trials, whether it is what it ought to be.

There are, however, two ſorts of zaffre, the fine and the common: the former is in a bluiſh, or cineritious ſtone; the latter in powder, and very often ſo bad, that it is hardly good for any thing, and being ſo very weighty, muſt needs be mixed with ſome ſtony ſubſtance, the other being much lighter.

This matter is much uſed by Delft-ware and glaſs-makers, to give a blue colour to both ſorts of ware: it is alſo with zaffre that they colour calcined pewter, in order to make a ſort of falſe ſtone; and with zaffre it is that the azure colour of glaſs is produced, as is before obſerved, and of which is made the counterfeit ſapphire, according to Pomet.

Monſieur Lemery ſays ſaphre, ſafre, zafre, or ſapphire, is a mineral whereof there are two kinds, one called fine ſapphire, and the other common: the fine ſapphire is a pretty ſoft ſtone, of a blueiſh colour; the common ſapphire is a greyiſh heavy powder: both ſorts come from India. The fine ſapphire is uſed to give a blue colour to enamel, to earthen ware, and glaſs; they likewiſe colour counterfeit ſapphires with it, whence it takes its name.

ZINCK, called ZINCHUM, ZINCTHUM, and MARCASITA PALLIDA, by ſome, is a metallic, ſulphureous, heavy ſubſtance, reſembling lead in colour, fuſible and ductile to a certain degree, very hard to break, inflammable, and volatile. It ſeems to have been quite unknown to the ancients; and even the moderns knew very little of its nature and origin, 'till Mr Stahl explained it, in his Metallurgia. It is extracted from a kind of the lapis calaminaris, and from the lead ore of the mines of Goſſelar, which ore is very hard to melt, though it appears rich and ſhining. Three ſubſtances are ſeparated from it, lead, zinck, and a kind of cadima fornacea, which, melted with copper, makes a Bath metal, or prince's metal, ſo called from prince Rupert, who is ſaid to have invented it: but the fineſt metal of this kind is made of zinck and copper melted together. In the melting this Goſſelar ore, the lead remains at the bottom of the furnace, and the zinck and cadima ſtick to the ſides. The cadima is to be long expoſed to the air before it is fit for uſe, and the zinck is purified by careful meltings, and caſt into moulds.

The zinck at this time is much in uſe, for the pewterers have found it more proper to cleanſe their pewter than pin-duſt and roſin. It is wrong to believe that zinck is mixed with pewter to increaſe its weight, for unto a fount of five or ſix hundred pounds of it they put but one pound of zinck, and, which is wonderful, the zinck has the quality of purifying and whitening the pewter, and acting upon it as lead does upon gold, ſilver, or copper. This zinck is uſed to give copper the colour of gold, eſpecially when mixed with turmeric, and works upon copper as arſenic does, that turns it of a ſilver colour; or the lapis calaminaris, that makes it yellowiſh; or, laſtly, as Hungarian vitriol, that turns iron into copper colour, as hath been obſerved in the Philoſophical Tranſactions of the Royal Society at London.

A Concise Explanation of the Contents of Mr. SAXBY's Portable Book of Rates, referred to in this Work, in relation to the Business of the Customs, and the Chief Acts of Parliament contained therein. See the Concluſion of Letter A, and that of every other Letter. See alſo our article Subsidy.

UNDER any peculiar articles, where it is neceſſary, we have given ſuch an idea of the practical buſineſs of the cuſtoms, both as the ſame reſpects the out-ports, as well as the port of London, that the reader will eaſily judge from thence, what further knowlege may be occaſionally requiſite for him to obtain, relative to that particular branch of trade he may be intereſted in; and he will be able to obtain the ſame from his own enquiry, when he has been duly introduced into the ſyſtem of our cuſtoms.

At the end of the letter A, we have alſo communicated, in an intelligible manner, it is apprehended, the principles and rudiments upon which the computation of the cuſtom-houſe Duties are grounded, as the ſame have relation to Britiſh ſubjects and ſtrangers; and alſo to the cuſtomary drawbacks, bounties, and premiums, as they are computed in Mr Saxby's book of rates.

In order to render the ſame the more eaſily comprehenſible to our readers, which it really requires, we have ſhewn, that the Reference Figures, affixed to the Right-hand Side of the columns of that ready-calculated book of rates, are the keys whereby ſuch computations are to be underſtood. To this end, we have repreſented the peculiar Table and List, made uſe of therein, invented firſt by Mr. Edgar, in the year 1714, ſince followed by the late Mr. Crouch, and now by Mr. Saxby. For the ſaid Table and List, contained in pages 73, 74, and 75 of Saxby, indicate, with all poſſible brevity, the ſeveral branches of duties, to which the reſpective goods, contained in the book of rates, are liable, by the various acts of parliament that are now in force.

At the end of our letter A, we have alſo given the Rules, Orders, Directions, and Allowances, for the advancement of trade, and Encouragement of the Merchant, as alſo for the regulating as well of the merchant in making of due entries and juſt payments of their cuſtoms, as of the Officers in all the ports of this kingdom, in the faithful diſcharge of their duty; referred to in the act of tonnage and poundage, paſſed anno 12 Car. II. Which Rules, &c. are ſigned by Sir Harbottle Grimſtone, ſpeaker of the houſe of commons.

We have alſo noticed the Rules, Orders, and Regulations, annexed to the additional book of rates, referred to in an act paſſed anno 11 Geo. I. c. 7.

Upon the before-intimated rules and regulations, we have made ſome remarks that we judged neceſſary, in relation to the Discounts allowed to merchants, upon the payment of the divers ſubſidies at importation; to which we refer the reader; we judging what we have there urged may require conſideration.

If the reader likewiſe conſults our article Subsidy, he will find a ſuccinct account of thoſe duties to which various ſpecies of goods are ſubject, purſuant to act of parliament; with ſome obſervations thereon, which may not be altogether uſeleſs to

thoſe who would well weigh the conditions whereon ſuch ſubſidies are paid.

Beſides the ſeveral ſubſidies noticed under our article SUBSIDY, Mr. Saxby's book of rates contains, in the firſt part of it, the various impoſts, and other kind of duties, payable on goods and merchandizes imported into, brought coaſtwiſe, or exported out of Great-Britain; all which are enumerated in the above-mentioned LIST of DUTIES, conjoined with the TABLE before obſerved, except thoſe that have aroſe ſince.

This part of Saxby contains an abſtract of the ſeveral acts referred to, and the particular conditions upon which the ſaid impoſitions are paid; all which are neceſſary to be conſulted by thoſe who would comprehend the TABLE and LIST.

The ſecond part of Saxby contains the RATES OF MERCHANDIZE: that is to ſay,

'The ſubſidy of tonnage; the ſubſidy of poundage; and 'the ſubſidy of woollen cloth, or old drapery; as they are 'rated and agreed on by the commons houſe of parliament, 'ſet down and expreſſed in that book, to be paid according 'to the tenor of the act of tonnage and poundage from the '24th day of June, incluſively, in the 12th year of the reign 'of his Majeſty (Charles the Second) and ſubſcribed with 'the hand of Sir Harbottle Grimſtone, Bart. ſpeaker of the 'houſe of commons.' Likewiſe,

'An additional book of rates (referred to by 11 Geo. I.) of 'goods and merchandizes uſually imported, and not parti-'cularly rated in the book of rates referred to in the act of 'tonnage and poundage, made in the 12th year of the reign 'of king Charles the Second; with rules, orders, and re-'gulations, ſigned by the right honourable Spencer Compton, 'Eſq; ſpeaker of the honourable houſe of commons.' Together with

The ſeveral additions and alterations which have been reſpectively made by any ſubſequent act of parliament; every of which is diſtinctly pointed out and explained. To which are added,

The TOTAL AMOUNTS of the net duties to be paid on each ſpecies of goods imported, exported, or brought coaſtwiſe, and of the net DRAWBACKS to be repaid on any of them when duly exported; with proper REFERENCES, ſhewing the ſeveral reſpective BRANCHES which compoſe the ſaid TOTAL AMOUNTS, &c. and commencing from page 79 to page 266 of Saxby, on goods INWARDS, or imported.

Then follows the SUBSIDY OF TONNAGE, upon all WINES to be brought into the port of London, and all other ports of Great-Britain, and dominions thereof, by BRITISH; and alſo the DRAWBACK thereof to be repaid upon due exportation, which begins at page 267, and continues to page 275.

REMARKS.

With reſpect to the WINES mentioned in Saxby, page 267, it muſt be obſerved, that all merchant-ſtrangers, bringing in any ſorts of the wines there enumerated, are to pay thirty ſhillings in the ton, over and above the rates there ſignified, which the natives pay; including twenty ſhillings the ton formerly paid to his Majeſty, by the name of Southampton duties for muſcadels, malmſies, and all other wines of the growth of the Levant.

For which ſort of wines, the ſtranger is alſo to pay to the uſe of the town of Southampton, for every butt or pipe, the ſum of ten ſhillings.

Moreover, the ſtranger is to pay the ancient duty of butlerage, which is two ſhillings upon every ton.

Note, that ſuch wines as ſhall be landed in any of the outports, and cuſtom paid, and afterwards brought to the port of London by certificate, ſhall pay ſo much more cuſtom, as they paid ſhort of the duty due in the port of London. For the explanation of which ſee pages 7 and 274, and 275, of Saxby — And for the other duties on wines, ſee the reſpective branches contained therein.

N. B. All wines imported into the port of London, are to pay for the uſe of the orphans of the ſaid city, for every ton, as by 5 and 6 Will. and Mary, cap. 10. §. 7. 4 ſhillings. And

Alſo, if imported by ſtrangers, the ancient duty of butlerage, which is for every ton 2 ſhillings.

WINE-LEES imported into any port, are to pay the ſame duties as wine; but are exempted from drawback upon exportation. 1 Geo. II. cap. 17.

N. B. No wines, except of the dominions of the Great Duke of Tuſcany, in open flaſks, or of Turkey, or any other parts of the Levant ſeas, may be imported in flaſks or bottles.

Though part of the duties on wines may be ſecured by bond; yet, as that does not frequently happen, all the duties, as computed in Saxby, are as if paid down in ready money; therefore, when bond is to be given, you muſt conſult the ADDITIONAL DUTY, IMPOST ON WINES, and IMPOST 1692, Saxby.

Wines may not be brought in any other than Britiſh or Iriſh ſhips, or ſhips of the built of the country of which they are the growth, or of the port where they can only, or are moſt uſually firſt ſhipped; nor from the Netherlands or Germany, except RHENISH or HUNGARY WINES from Hamburgh. 12 Car. II. c. 18. §. 8.

For other regulations reſpecting wines, ſee our article WINE, and the end of letter W. where the laſt duties on wines are obſerved, ſince the publication of Saxby. And if the duties are underſtood, as they are calculated in Saxby's preſent book, it will be eaſy to make any after-addition thereto, that may happen.

The tonnage duty comprehends the duties payable on wines imported (and the old ſubſidy on perry, rape of grape, ſyder, ſyder-eager, and vinegar, the impoſts on vinegar, and the coinage duties) being regulated by the ſum certain on the ton meaſure.

All the duties on wines are explained in Saxby, under each reſpective branch in chap. I. wherein are ſhewn the GROSS DUTIES, the DISCOUNTS thereon, and the net duties to be paid or ſecured (for one ton, or one gallon) according to the ſeveral circumſtances of entry and importation; therefore, when the branches, to which any ſort of wines are liable, are deſired to be known, that ſort (obſerving the particular circumſtances of entry and importation) muſt be ſought for in Saxby between the pages beforeſaid, of 267 and the page 275; and oppoſite thereto will be the REFRENCE LETTER, as contained in the preceding TABLE, repreſenting the particular branches, as is explained in the following example.

One ton of Spaniſh wine, unfilled, for ſale, imported into the port of London, by Britiſh, in Britiſh ſhips qualified, all duties paid down.

Upon recourſe had to page 269, Saxby, in the REFERENCE COLUMN, directing to the ſaid TABLE and LIST, at the end of our letter A, or Saxby 74, 75, oppoſite to the ſort of wine above deſcribed, will be found the REFERRING LETTERS Z b, which letters (being found alſo in the TABLE) refer to the BRANCHES contained in the LIST N°. 1. III, 2, 3, 4, 7, 16, 34; each of which branches muſt be conſulted, that the reſpective ſums due thereon may be exactly charged; which from the above example will be found to ſtand thus. viz.

	l.	s.	d.	20ths.
N°. I. Old Subſidy - - -	3	10	2	8
N°. III. Additional duty - -	2	17	1	8
N°. 2. New Subſidy - -	3	10	2	8
N°. 3. One-third ſubſidy -	1	3	4	16
N°. 4. Two-thirds ſubſidy -	2	6	9	12
N°. 7. Impoſt on wine - -	8	0	7	1
N°. 16. Coinage duty on wine	0	10	0	—
N°. 34. Duty on wine 1745 -	4	0	0	—
Total duty to be paid — —	25	18	3	13

As the ſame ſtands at preſent in Saxby, page 316, before the laſt further duty on wines took place in the year 1762, viz. on French wine and vinegar, of 8 l. per ton; and on all other wines and vinegars imported, 4 l. per ton. See the end of letter W, for the BUSINESS OF THE CUSTOMS. So that there muſt be added to the ſaid ſum in Saxby, of 25 l. 18 s. 3 d. $\frac{13}{20}$, the further additional duty of 4 l. per ton, which makes the duty 29 l. 18 s. 3 d. $\frac{13}{20}$ per ton, on the wine above.

But as the duties on wines bear ſo many branches of duties, for the greater eaſe and diſpatch in computing them, it is the practice of the cuſtoms to work by tables, wherein each branch is computed net, according to all the reſpective circumſtances of importation, diſcount, &c. from a gallon to a ton.

However, with relation to wines, the computations in Saxby, from page 269 to page 275, may be conſulted; and then the laſt additional duties mentioned before muſt be added thereto.

The next part contained in Saxby concerns the rates of merchandize OUTWARDS, referred to by the act of TONNAGE and POUNDAGE, Anno 12 Car. II. c. 4. §. 2, 7. with the net duties payable on each ſpecies of goods and merchandize (ſubject thereto) by that or any ſubſequent act of parliament; together with the ſubſidy of poundage, of ſix-pence in the pound, to be paid on the exportation of foreign goods uſed in dyeing, &c. This extends from page 279 to 306, including directions for the payment of the ſubſidy upon woollen-cloths, or old drapery; the former of theſe being mighty eaſy; the REFERENCE LETTERS directing to the TABLE, being I B, which point to page 48 in Saxby, with directions for the computation.

The following part of Saxby contains the total net duties payable upon goods brought COASTWISE from port to port of Great-Britain; and alſo to be repaid on due exportation, which conſiſts only of the ſingle page 307, and is underſtood by the REFERENCE LETTERS to the TABLE of H A, V B. the former directs to pages 52 and 53, in Saxby, and the latter to page 54, where the duties are plain enough.

After this follow certain RULES, ORDERS, DIRECTIONS, and ALLOWANCES, for the encouragement of the merchant, as alſo for the regulating as well of the merchant in making of DUE ENTRIES and JUST PAYMENTS of their cuſtoms, as of the officers in all the ports of this kingdom, referred to in the act of tonnage and poundage paſſed anno

anno 12 Car. II. — Alſo, the RULES, ORDERS, and REGULATIONS, annexed to the ADDITIONAL BOOK of RATES referred to in an act paſſed anno 11 Georgii Primi, c. 7. — All which ought to be deliberately conſulted by merchants for their own intereſt. See what we have ſaid thereon at the concluſion of our letter A, reſpecting the BUSINESS of the CUSTOMS, and alſo under our article SUBSIDY.

Chapter the 3d of Saxby begins at page 315, and ends at 388, and contains to the time that gentleman wrote. I. Inſtructions for the computation of the ſeveral branches compoſing the total duties to be paid on goods and merchandizes imported, exported, and brought coaſtwiſe; illuſtrated by examples adapted to the reſpective circumſtances of importation, &c. II. The ſeveral allowances and bounties payable out of the duties of cuſtoms, the bounties and drawbacks on Britiſh exciſeable goods exported, and the premium on naval ſtores imported.

In regard to the former of theſe, the reader is deſired to conſult the end of our letter A, upon the computation of the duties, &c. together with what we have here ſaid, and alſo under our article SUBSIDY: and for the variety of examples given in Saxby we refer him to the before-mentioned pages; recommending to him the conſideration of the ſubſequent acts of parliament, that have been made ſince Mr Saxby wrote; eſpecially that which concerns the ſubſidy of 1759, and that of the further additional duties on wines, cyder and perry, made in 1762.

With relation to the ſeveral ALLOWANCES, and BOUNTIES payable out of the duties of the cuſtoms, the bounties and drawbacks on Britiſh exciſeable goods exported, and the premium on naval ſtores imported; together with inſtructions in regard to the performance of the reſpective regulations required by law; theſe concerning the intereſt of merchants ſo materially, we ſhall give them at large at the end of theſe ſhort obſervations on the book of rates in general.

The fourth chapter of Saxby begins at page 389, and ends at page 433, and contains, 1. Liſt of the ports of Great-Britain, with their members and creeks. 2. The names of the lawful keys, wharfs, &c. for ſhipping and landing goods in the port of London. 3. Fees and allowances due and payable to the officers of his Majeſty's cuſtoms in the port of London. 4. The grant to the city of London of the duties of ſcavage, package, &c. 5. The ſcavage table of rates inwards. 6. The package table of rates outwards. 7. The balliage duties outwards. 8. The packers water-ſide porters table of duties and rates for landing and ſhipping out ſtrangers goods.

The contents of this chapter are known as ſoon as peruſed, and require only to be duly noticed, that traders may be informed when they have juſtice done them according to the laws of the land ſtill in force.

The fifth and laſt chapter is an index, containing an abſtract of the laws now in force for collecting, and otherwiſe regulating the cuſtoms, digeſted and diſpoſed in alphabetical order; with references to the reſpective acts, and to the material circumſtance throughout the book.

This index ſerves to give ſome idea of the multiplicity of our laws relative to the revenue of cuſtoms only, yet a very faint one of their full bulk and extent; for, was every trader obliged to conſult them all at large, and we had given them in their full length from the ſtatutes, in this work, we might have eaſily filled up our volumes even with thoſe laws, and more eſpecially ſo, if we had had added thereto thoſe appertaining to the exciſe, and other branches of trade alſo. 'Tis no little misfortune to this kingdom, that the preſent conſtitution of the public revenues, particularly, ſhould occaſion ſuch a body of numerous laws, which concern our commerce and navigation only; for it requires more application to become maſters of thoſe laws than traders have to ſpare, or even our profeſſed lawyers either to reconcile: yet what adds to our misfortune is, that we have no hopes of theſe voluminous laws being leſſened to any conſiderable degree, till the whole ſtate of our revenues is changed; and when that will be, ſince we are in the way of encreaſing our laws concerning it every ſeſſions, we do not preſume to ſay, notwithſtanding there is nothing of ſo much importance to theſe kingdoms. But who will attempt what he will never be recompenſed for in this nation?

At the end of every letter of our work, we have given an abſtract of many materials of the laws relating to the cuſtoms, and have occaſionally interſperſed others throughout this performance. Yet we the rather refer our readers to conſult the Statutes at Large, upon any peculiar branch of trade wherein they may be concerned, than to depend wholly upon our abſtracts, or thoſe of any other. Even thoſe publiſhed by the officers of the cuſtoms themſelves, who are daily concerned in the practice of the cuſtom laws, we have found to be very imperfect, of which Mr Saxby has complained largely in the introduction to his book of rates; and perhaps it may not be long before the imperfections of his book may be ſhewn by others: and it is, perhaps, more owing to the laws themſelves than to thoſe who may endeavour to explain them, as might be ſhewn in many inſtances, if neceſſary. At preſent I ſhall only obſerve, in the words of Mr Saxby, that 'the allowances, bounties and drawbacks payable on Britiſh goods exported, and premiums on other goods imported, &c. being a part of buſineſs not ſo immediately obvious to the officers of the cuſtoms, (and I will add, not to the traders themſelves, though for other reaſons than he has aſſigned perhaps, ſome of them being within the province of the exciſe and ſalt duties) have not been heretofore ſo well collected and digeſted as they might have been; for though part of them have been extremely well done, others have been but ſlightly touched, and ſome quite omitted: but as they are now become very numerous, and in regard to bounties and premiums a very extenſive and formidable branch of the buſineſs of the cuſtoms, it became neceſſary that the merchants, as well as officers, ſhould be well inſtructed therein; therefore great care and diligence have been uſed to conſtruct them in ſuch manner, as that every regulation for the obtaining the ſeveral bounties and premiums is properly inſerted under the reſpective heads; and in regard to the payment of all other allowances, &c. the inſtructions for the performance of the reſpective regulations required by law, are ſo particularly and extenſively deſcribed, that the officers will ſcarcely be at a loſs in any circumſtance.'

As we eſteem this one of the moſt material improvements in Mr Saxby, for the benefit of the trader, we ſhall give the ſame as it is therein contained.

SECTION II.

The ſeveral allowances and bounties payable out of the duties of the cuſtoms, the bounties and drawbacks on Britiſh exciſeable goods exported, and the premium on naval ſtores imported; together with inſtructions in regard to the performance of the reſpective regulations required by law.

1. Bounty on corn exported.
2. Bounty on Britiſh refined ſugar exported.
3. Bounty on Britiſh-made ſailcloth exported.
4. Bounty on ſpirits drawn from barley, malt, or other corn exported.
5. Bounty on Britiſh manufactures of ſilk exported.
6. Bounty on Britiſh-made gunpowder exported.
7. Bounty on Britiſh ſhips employed in the whale-fiſhery.
8. Bounty for encouragement of the Britiſh white-herring fiſhery.
9. Bounty on ſhips built for, and employed in the Britiſh white-herring fiſhery.
10. Bounty on Britiſh and Iriſh linens exported.
11. Bounty or premium on Britiſh plantation indico imported.
12. Allowance on damaged tobacco imported.
13. Allowance or drawback of the duties of coals uſed in copper or tin mines.
14. Allowance on damaged or corrupt wines imported.
15. Allowance of portage.
16. Drawback of the exciſe duty on Britiſh-made candles exported.
17. Drawback of the exciſe duty on hides or calve-ſkins rough or tanned; hides or calve-ſkins, dreſſed or curried; ſheep ſkins and lamb-ſkins, tanned, tawed, or dreſſed, exported.
18. Drawback of the exciſe duty on Britiſh-made ſope exported.
19. Drawback of the exciſe duty on Britiſh-made paper exported.
20. Drawback of the exciſe duty on filks, ſilk handkerchiefs, callicoes, and all linens and ſtuffs printed, ſtained, painted or dyed in Great-Britain, exported.
21. Drawback of the exciſe duty on Britiſh-made ſtarch exported.
22. Bounty or allowance on gold and ſilver thread, lace or fringe, made in Great-Britain, exported.
23. Drawback on boots, ſhoes, and other manufactures of Britiſh-tanned leather, exported.
24. Drawback of the exciſe duty on Britiſh-wrought plate exported.
25. Drawback of the exciſe duty on glaſs made in Great-Britain exported.
26. Drawback of the exciſe or inland duty on Britiſh-made ſalt exported.
27. Bounty on fiſh and fleſh exported.
28. Premium on naval ſtores imported.
29. Drawback of the exciſe duty on ſtrong beer, ſtrong ale, mum, cyder, and perry, made in Great-Britain, exported. 1 Will. and Mar. cap. 22, &c.
30. Drawback of the exciſe duty on ſpirits drawn from corn in Great-Britain, without any mixture of other materials, exported. 6 Geo. II. cap. 17.
31. Drawback of the exciſe on ſpirits exported. 19 Geo. II. cap. 8.

I. The

I. The bounty on CORN exported.

		Price per quarter Winchester measure. l.	s.	d.	Bounty per quarter Winchester measure. l.	s.	d.
By 1 Will. and Mar. cap. 12. §. 2. —	WHEAT — — —	2	8	0	0	5	0
	RYE — — —	1	12	0	0	3	6
	BARLEY — — —	1	4	0	0	2	6
	MALT — — —	1	4	0	0	2	6
	But the exciſe of 6d. per buſhel muſt not be reckoned into the price of the malt. 13 and 14 of Will. III. c. 5. §. 31. 12 Ann. c. 2. §. 3.						
By 5 Ann. c. 8. article 6.	BEER, alias BIGG	1	4	0	0	2	6
	Malt made of wheat	2	8	0	0	5	0
5 Ann. c. 29. §. 10, 15.	Oatmeal when oats do not exceed	0	15	0	0	2	6

* When the above ſorts of corn, either ground or unground, do not, at the port of exportation, exceed the reſpective prices in the firſt column, and ſhall be ſhipped on board any Britiſh ſhip, whereof the maſter, and at leaſt two-thirds of the mariners, are Britiſh ſubjects, in order to be exported to parts beyond the ſeas, the exporter is to be allowed the reſpective bounties in the ſecond column; provided a certificate in writing, under the hand of the exporter, containing the quantity and quality of the corn, be firſt brought to the collector of the port, and the truth thereof confirmed by the oath of one or more credible perſon or perſons; and bond be given by the exporter, in the penalty of 10l. for every ton of oatmeal, or forty buſhels of beer, alias bigg, and 200l. at leaſt for every 100 tons of all the other ſorts (i. e. eight ſhillings per quarter) that the ſame ſhall be exported into parts beyond the ſeas, and not be relanded in Great-Britain, or the iſlands of Guernſey or Jerſey.

* 1 Will. and Mar. cap. 12. §. 2. 5 Ann. cap. 29. §. 10. 3 Geo. II. cap. 7. §. 15.

† In order to adjuſt the quantity for which the bounty is to be paid, the corn is to be admeaſured by the proper officers of the cuſtoms, who, for the greater expedition, may make uſe of a tub or meaſure containing four Wincheſter buſhels; or if the ſaid corn be intended to be exported in ſacks, they are to chooſe two out of any number not exceeding twenty ſacks, and ſo in proportion, and thereby compute the whole quantity; but if exported from London, may be meaſured by the ſworn meters, from whoſe certificate the ſearchers may certify the quantity ſhipped for exportation.

† 2 Geo. II. cap. 18. §. 4, 5.

‡ But with reſpect to malt, the bounty is to be allowed after the rate of thirty quarters, and no more, for every twenty quarters of barley, or other corn or grain entered and made into malt, for exportation; as ſhall appear by a certificate from the proper officer, with whom the corn or grain, intended to be made into malt for exportation, was entered.

‡ 3 Geo. II. cap. 7. §. 14, 15.

§ And with reſpect to wheat meal or other ground corn or grain, the ſame bounty, and no more, is to be allowed for 224 pounds weight thereof, as is allowed for 4 buſhels of the ſame kind of corn or grain, unground, and ſo in proportion. And if it is brought to be ſhipped off in ſacks, the proper officer may chooſe and weigh two ſacks out of any number not exceeding twenty ſacks, and ſo in proportion for any greater quantity, and thereby compute the weight of the whole. And the bounty money is to be paid to the exporter accordingly, upon producing a certificate from the proper officer of the cuſtoms, atteſting the quantity, quality, and weight thereof.

§ 24 Geo. II. cap. 56. §. 1.

‖ The aforeſaid bounty to be paid by the collector of the port, upon demand made by the exporter, unleſs he has not ſufficient money in his hands; and then (except for bigg and oatmeal) he is to certify the ſame to the commiſſioners of the cuſtoms, who are to cauſe the money to be paid by the receiver-general within three months.

‖ 1 Will. and Mar. cap. 12. §. 2. 12 and 13 Will. III. cap. 10. §. 91. 5 Ann. cap. 29. §. 10. 3 Geo. II. cap. 7. §. 15.

¶ When the certificate above mentioned, annexed to the debenture for corn exported, is produced to the commiſſioners of the cuſtoms at London, they are immediately to cauſe an indorſement to be made on the back of the debenture, of the day when it was produced, and as ſoon as conveniently may be, ſign their order to the receiver-general for payment.

* If any ſuch debenture remains unſatisfied more than ſix months after the day it has been produced to the commiſſioners of the cuſtoms at London, intereſt, at the rate of three per cent. per annum, is to be allowed thereon, from the end of the ſaid ſix months to the time of payment, or to the time of proper notice given thereof.

* 26 Geo. II. cap. 15. §. 1.

† The receiver-general, when he has ſufficient money in his hands, is to give notice in writing, to be affixed on three or more doors of ſome public place in the cuſtom-houſe, London, and to be advertiſed in the London Gazette, that on a certain day therein limited, and on the four days following (ſo as ſix days intervene between the date of the notice and the day ſo limited, and ſo as Sundays and holidays be not included in ſuch four days) he ſhall be ready to pay the principal and intereſt of ſuch debentures, which have remained unſatisfied above ſix months from the time of their being produced as above, or principal of ſuch debentures, which have not exceeded the ſaid ſix months; after the expiration of which five days, all intereſt is to ceaſe, though the money due ſhould not then be demanded.

† 26 Geo. II. cap. 15. §. 2, 4.

‡ Theſe debentures are to be paid by the receiver-general, without fee or reward, in courſe, reſpect being had to the times when they were produced to the commiſſioners of the cuſtoms, without any preference, and are aſſignable by indorſement thereon.

‡ 26 Geo. II. cap. 15. §. 5, 7, 8.

§ The ſame allowances are granted, and rules to be obſerved with reſpect to debentures for corn exported from Scotland; with this difference, that the certificate is to be made to the commiſſioners of Edinburgh, and notice of payment to be publiſhed in the Edinburgh Courant, and affixed in the cuſtom-houſe, Edinburgh.

§ 26 Geo. II. cap. 15. §. 9, 10, 11, 12.

‖ The aforeſaid bond, given for the exportation, may be delivered up to be cancelled, upon producing a certificate under the common ſeal of the chief magiſtrate in any place beyond the ſeas, or under the hands and ſeal of two known Britiſh merchants, teſtifying that the corn was there landed, or upon proof by credible perſons, that it was taken by enemies, or periſhed in the ſeas.

‖ 1 Will. and Mar. cap. 12. §. 2. 5 Ann. cap. 29. §. 10.

¶ Malt relanded in Great-Britain is forfeited, with treble the value, beſides the penalty of the bond.

¶ 3 Geo. II. cap. 7. §. 15. and ſince continued yearly with the malt act.

II. The allowance on Britiſh REFINED SUGAR exported.

By 9 and 10 Will. III. cap. 23. §. 9. — 5 Ann. cap. 8. art. 6.	Was granted from 31 January 1699, during the continuance of the New ſubſidy, Upon ſugar refined in GREAT-BRITAIN, for every Cwt. exported	0	3	0
2 & 3 Ann. c. 9. §. 3. — 4 — — 6. — 2. — 5 — — 19. — 8. — 1 G. I. — — 12. — 8.	Was granted during the continuance of the one-third ſubſidy, A further allowance on the ſame, for every Cwt. exported — —	0	1	0
6 Geo. II. c. 13. §. 10.	Was granted from 24 June 1753, for five years.				
11 — — 18. — 2.	Further continued for ſeven years.				
19 — — 23. — 1.	Further continued for ſeven years.				
20 — — 32. — 5.	Further continued to 24 June 1756.				
29 — — 26. — 1.	Further continued for three years.				
	A further allowance on the ſame, for every Cwt. exported — — —	0	2	0	

21 Geo. II. cap. 2. §. 6.	Was granted from 1 March 1747, during the continuance of the ſubſidy 1747,			
	A further allowance on the ſame, for every Cwt. exported. —	o	3	o
	Total bounty	o	9	o

* To be paid at the cuſtom-houſe to the exporter within thirty days after the demand thereof; oath being firſt made by the refiner, that the ſugar, ſo exported, was produced from brown and muſcovada ſugar, charged by the acts of 9 and 10 Will. III. cap. 23. and of 2 and 3 Ann. cap. 9. and by 21 Geo. II. cap. 12. (that is to ſay, charged with the new ſubſidy, one-third ſubſidy, and ſubſidy 1747) and that, as he verily believes, the ſame was imported from his Majeſty's plantations in America, and the duty duly paid at the time of the importation thereof; the exporter making oath, that the ſame was duly exported, and his Majeſty's ſearcher alſo certifying the ſhipping thereof, and all other requiſites being performed according to the book of rates.

* 9 and 10 Will. III. cap. 23. §. 9. 2 and 3 Ann. cap. 9. §. 3. 6 Geo. II. cap. 13. §. 10. 21 Geo. II. cap. 12. §. 8.

III. The bounty on Britiſh-made SAILCLOTH exported.

By 12 Ann. cap. 16. §. 2.	Was granted from 21 July 1713 for 7 years					
5 Geo. I. — 25. — 2.	Further continued for 7 years					
10 — — 17. — 4.	Further continued for 7 years					
8 Geo. II. — 18. — 1.	Further continued to 25 March 1742					
15 and 16 — 35. — 1.	Further continued to 1 June 1747 —					
20 — — 45. — 1.	Further continued to 1 June 1754 —					
27 — — 18. — 6.	Further continued to 29 September 1760					
	and from thence to the end of the then next ſeſſion of parliament.					
	Upon Britiſh-made SAILCLOTH or CANVAS, fit for or made into ſails, for every ell exported —	Bounty.	o	o	1	
By 4 Geo. II. c. 27. §. 4.	Was granted from 24 June 1741, without limitation, a further allowance for every ell of Britiſh-made SAILCLOTH —		o	o	1	
	Total bounty		o	o	2	

† This bounty is to be paid out of ſuch parts of the old ſubſidy as are applicable to incidents, upon the exporter making oath, that ſuch ſailcloth was made in Great-Britain, is actually exported, or ſhipped to be exported, without any intention to be relanded in Great-Britain, and that no former reward upon theſe acts was made for the ſame.

† 12 Ann. cap. 16. §. 2. 23 Geo. II. cap. 21. §. 26. 26 Geo. II. cap. 32. §. 9.

‡ Such failcloth, upon which the bounty has been given, relanded in Great-Britain, ſhall be forfeited; and every perſon concerned in bringing back, or relanding the ſame, ſhall forfeit two ſhillings for every ell ſo brought back or relanded.

‡ 12 Ann. cap. 16. §. 3.

IV. The bounty on SPIRITS drawn from barley, malt, or other corn, exported.

By 6 Geo. II. cap. 17. §. 10. was granted without limitation, viz.

SPIRITS drawn from barley, malt, or other corn, for every ton thereof — — —	Bounty.	1	10	o

§ To be paid to the exporter by the commiſſioners of the cuſtoms, or other proper officer belonging to them, when barley is at 24s. per quarter, or under, upon ſuch proof of the exportation, as is directed by 1 Will. and Mar. cap. 12. and out of ſuch duties as are liable to the payment or the bounties on corn exported, in the ſame manner as if the reſpective quantity of barley, malt, or other corn, had been exported, allowing that twelve quarters of barley or malt are made uſe of in making one ton of ſpirits.

§. 6 Geo. II. cap. 17. §. 10.

V. The bounty on Britiſh MANUFACTURES of SILK, &c. exported.

By 8 G. I. c. 15. §. 1. granted from 25 March 1722, to 25 March 1725.
11 — 29. — 2. thence continu'd to 25 March 1728.
2 G. II. c. 28. — 4. thence — — to 29 Sept. 1734.
8 — 18. — 2. thence — — to 25 March 1742.
15 and 16—35. — 2. thence — — to 1 June 1747.
20 — 45. — 2. thence — — to 1 June 1754.
26 — 32. — 4. thence — — to 24 March 1758.
And from thence to the end of the then next ſeſſion of parliament.

Upon due exportation of the Britiſh manufactures of ſilk hereafter mentioned, there are to be allowed the following reſpective bounties, viz.

RIBBONS and STUFFS of SILK ONLY, the pound avoirdupoiſe weight — — —	o	3	o
SILKS and RIBBONS of SILK mixed with GOLD or SILVER, the pound avoirdupoiſe weight	o	4	o
SILK STOCKINGS, SILK GLOVES, SILK FRINGES, SILK LACES, STITCHING or SEWING SILK, the pound avoirdupoiſe weight —	o	1	3
STUFFS of SILK and GROGRAM YARN, the pound avoirdupoiſe weight —	o	o	8
STUFFS of SILK mixed with INCLE or COTTON, the pound avoirdupoiſe weight —	o	1	o
STUFFS of SILK and WORSTED, the pound avoirdupoiſe weight — —	o	o	6

* To be paid out of the cuſtoms, or other duties upon goods imported, by the collector of the port, with the privity of the comptroller, upon a debenture made out from the entry, the ſhipping verified by the ſearcher, and the oath of the exporter, that they are of Britiſh manufacture, and exported without intention of relanding in Great-Britain; he having firſt given ſecurity with one or more perſons, in the value of the goods, to the ſame purpoſe; and to produce a certificate from the officers of the cuſtoms in diſcharge thereof, within ſix months, for ſuch goods as ſhall be exported to Ireland, Guernſey, Jerſey, Alderney, Sark, or Man, and within eighteen months for thoſe to the Britiſh plantations; and for what ſhall be exported to any other foreign parts, a certificate under the common ſeal of the chief magiſtrate, or under the hands and ſeals of two known Britiſh merchants there reſiding.

* 8 Geo. I. cap. 15. §. 1, 5.

† But after 1 May 1729, if ſuch goods were ſold on the coaſt of Africa, or other foreign parts, where certificates of the landing cannot be obtained, or were tranſhipped at any of the Britiſh plantations in America, without being there landed, into ſhips bound to Africa, or other foreign parts, the bonds given on exportation may be diſcharged, and vacated, upon proof made, within eighteen months from the date of ſuch bonds, upon oath of the maſter, mate, purſer, &c. and alſo upon oath of the merchant exporter, if living, that to the beſt of their knowlege and belief, the ſaid goods have been diſpoſed of at the places therein to be mentioned, and that they have not been relanded, or brought on ſhore again, in any port or part of Great-Britain.

† 1 Geo. II. cap. 17. §. 9.

‡ The aforeſaid manufactures may, after entry, be opened and examined by the officers, and if wrong entered, are forfeited, with their value; but if right entered, muſt be repacked at the officer's charge, which may be allowed him by the commiſſioners of the cuſtoms.

‡ 8 Geo. I. cap. 15. §. 2, 3. 11 Geo. I. cap. 29. §. 2.

§ And in all caſes of diſputes, touching the manufacture or quality, the onus probandi is to lie on the proprietor.

§ 8 Geo. I. cap. 15. §. 2, 3. 11 Geo. I. cap. 29. §. 2.

‖ No allowance to be made for ſuch manufactures as are mixed with gold, ſilver, or ſilk, only at the ends and edges of the piece.

‖ 8 Geo. I. cap. 15. §. 3.

¶ Silk ſtuffs mixed with grogram-yarn, incle, cotton, or worſted, not to have allowance, except at leaſt two-third parts of the ends, or threads of the warp (in the length of the piece) be all ſilk, or mixed, or twiſted with ſilk in the warp, and the ſilk mixed in the warp be obvious and apparent to the view of the proper officers of the cuſtoms; and the ſilk therein uſed be double the value of the bounty.

¶ 9 Geo. I. cap. 8. §. 9. 1 Geo. II. cap. 17. §. 10.

And

† And if entered or ſhipped, not being mixed with the quantity of ſilk required, they are forfeited, with double the value.

† 9 Geo. I. cap. 8. §. 10. 11 Geo. I. cap. 29. §. 3.

‖ If relanded, forfeited, with the penalty of the bond, and treble the value.

‖ 8 Geo. I. cap. 15. §. 4. 11 Geo. I. cap. 29. §. 2.

VI. The bounty on Britiſh-made GUNPOWDER exported.

By 4 Geo. II. cap. 29. §. 1. was granted from 24 June, 1731, for five years,
By 10 Geo. II. cap. 27. §. 3. further continued to 24 June, 1738,
By 16 Geo. II. cap. 26. §. 1. further continued to 24 June, 1750,
By 24 Geo. II. cap. 52. §. 4. further continued to 24 June, 1757,
And from thence to the end of the then next ſeſſion of parliament,

	l.	s.	d.
GUNPOWDER of the MANUFACTURE of GREAT-BRITAIN, exported by way of merchandize, for every barrel containing one hundred pounds net weight, and ſo in proportion for greater or leſs quantities -	0	4	6

‡ To be paid to the exporter on a debenture to be made forth by the collector of the cuſtoms (with the privity of the comptroller) at the port of exportation, and the ſhipping thereof teſtified by the ſearcher; the exporter making oath that it is of Britiſh manufacture, and to be exported by way of merchandize, and not relanded, or intended to be relanded in Great-Britain; that it is not for the uſe of the ſhip in her voyage; and alſo giving ſecurity, in the penalty of 5l. per barrel, that no part thereof ſhall be relanded in Great-Britain.

‡ 4 Geo. II. cap. 29. §. 1.

§ To be paid out of cuſtoms, or other duties on goods imported.

§ 4 Geo. II. cap. 29. §. 4.

* But may not be exported, when it exceeds the price of 5l. per barrel.

* 12 Geo. II. cap. 4. §. 12.

† Fraudulently relanded (over and above the penalty of the bond) forfeited, and treble the value.

† 4 Geo. I. cap. 29 §. 3.

VII. Bounty on SHIPS employed in the WHALE-FISHERY.

	l.	s.	d.
By 6 Geo. II. cap. 33. §. 1. was granted, during the continuance of the act 5 Geo. II. cap. 28. for every Britiſh ſhip of 200 tons and upwards, manned and navigated according to law, which ſhall proceed from Great-Britain on the whale-fiſhery to the Greenland ſeas, Davis's Streights, or the adjacent ſeas, a bounty, according to the admeaſurement of the ſhip, for every ton thereof	1	0	0
By 13 Geo. II. cap. 28. §. 3. continued to 25 December, 1750.			
By 22 Geo. II. cap. 45. §. 2. continued to 25 December, 1757.			
And by this laſt-recited act a further bounty for every ton - -	1	0	0
And the whole extended to ſhips built in any of his Majeſty's dominions in America.			
By 28 Geo. II. cap. 20. the whole continued to 25 December, 1764; and from thence to the end of the then next ſeſſion of parliament, and extended to ſhips under 200 tons.			
Total bounty	2	0	0

‡ To be paid to the maſter or owners, or their aſſigns, on the return of the ſhip to Great-Britain, by the receiver-general of the cuſtoms of that part of Great-Britain from whence ſhe departed, out of the old ſubſidy; but if he has not ſufficient money on that branch, then out of any money ariſing from any duties under the management of the commiſſioners of the cuſtoms reſpectively, if the following regulations are complied with.

‡ 6 Geo. II. cap. 33. §. 3. 28 Geo. II. cap. 20 §. 4.

§ Every ſhip, of the burthen of 200 tons, or under, muſt have on board 40 fiſhing lines, 120 fathoms each, 40 harpoon-irons, four boats, with ſeven men to each boat (including a harpooner, a ſteerſman, and a line-manager to each boat) making in the whole 28 men, beſides the maſter and ſurgeon, with ſix months proviſion at leaſt; and every ſhip of larger burthen, an increaſe of ſix men, one boat, 10 ſuch lines, and 10 harpoon-irons for every 50 tons.

§ 6 Geo. II. cap. 33. §. 2. 28 Geo. II. cap. 20. §. 8.

* After 25 December, 1757, every ſhip employed in this fiſhery is to have on board an apprentice, indentured for three years at leaſt, for every fifty tons burthen, otherwiſe the owners are to loſe the bounty; but ſuch apprentice is to be accounted as one of the number of men, which by law ought to be on board ſuch ſhip.

* 28 Geo. II. cap. 20. §. 5.

† After 25 December, 1757, no ſhip above the burthen of 400 tons ſhall be intitled to a larger bounty than a ſhip of 400 tons; nor the owners obliged to fit out, equip, or man any ſuch ſhip, otherwiſe than is required for a ſhip of 400 tons.

† 28 Geo. II. cap. 20. §. 6, 7.

‡ The ſhip, before ſhe proceeds on her voyage, muſt be viſited by the proper officer of the cuſtoms at the port from whence ſhe proceeds, who is to examine the above qualifications, and take an account of her tonnage, &c. and certify the ſame to the commiſſioners of the cuſtoms. And if it appears, by the oath of one of the owners and the maſter of the ſhip, made before the collector and comptroller of the port, at the foot of the certificate, that it is really and truly their firm purpoſe, and determined reſolution, that ſuch ſhip ſhall forthwith proceed, ſo manned, furniſhed, and accoutred, in a voyage to the Greenland ſeas, or Davis's Streights, or the ſeas adjacent, and there to uſe their utmoſt endeavours to take whales, and other creatures living in the ſea, and on no other deſign, and to import the whale-fins, oil and blubber, into Great-Britain (naming the port to which it is their intention to return). And if the maſter alſo becomes bound with two ſufficient ſecurities, in treble the value of the bounty (which bond is to be taken by the collector, with approbation of the comptroller, and is to be in force for the term of three years againſt them, for the faithful dealing of the maſter and ſhip's company, in regard to the ſhip and voyage) then any three of the commiſſioners of the cuſtoms for England or Scotland, reſpectively, upon receiving ſuch certificate and oath, with a certificate that ſufficient ſecurity has been given, are to grant to the maſter and owners full licence to proceed on ſuch voyage.

‡ 6 Geo. II. cap. 33. §. 1.

‖ On return of ſuch ſhip to the port mentioned in the oath of the maſter, the proper officers of the cuſtoms are to go on board and view her condition and lading, and take a ſchedule of the names of the maſter, mate, and other perſons on board, diſtinguiſhing the harpooners, and perſons more immediately employed in the fiſhery, and certify the ſame, with their obſervations thereon, and alſo the real tonnage of the ſhip; and the maſter and mate muſt make oath before the collector and comptroller, on the back of, or annexed to the licence (which is then to be delivered up) that they did in purſuance thereof (mentioning the day of their departure) proceed in a voyage directly to the places aforeſaid, and have not ſince been on any other voyage, or purſued any other deſign or view of profit; and that they had there (mentioning the time of their ſtay) uſed their utmoſt endeavours to take whales, and other creatures living in thoſe ſeas; and that all the whale-fins, oil and blubber, imported (if any) in ſuch ſhip, was truly, and bonâ fide, taken in the ſaid ſeas by the crew of ſuch ſhip only. This ſchedule, certificate, licence, and oath, are to be tranſmitted to the reſpective commiſſioners for that part of Great-Britain from whence the ſhip departed with her licence, who being fully ſatisfied of their faithful dealings are, on demand, to cauſe payment to be made of the bounty, as above.

‖ 6 Geo. II. cap. 33. §. 3.

§ Ships fitted out from any of his Majeſty's dominions in America, to be under the ſame regulations as thoſe fitted out from Great-Britain, except that they are not to be more than two years old from the firſt building, which is to be inſerted in the oath; and that the certificate is to be returned to the governor or naval officer, who are to adminiſter the oath, take the bond, and grant the licence.

§ 22 Geo. II. cap. 45. §. 5,

* On the arrival of ſuch a ſhip in Great-Britain, the proper officers of the cuſtoms are to proceed as directed for Britiſh ſhips; and the reſpective commiſſioners of the cuſtoms, for that part of Great-Britain where ſhe ſhall arrive, being ſatisfied of the faithful dealings of the maſter and others, with reſpect to the voyage, ſhall cauſe payment to be made of the bounty.

* 22 Geo. II. cap. 45. §. 6.

† Alſo every ſhip fitted out in America muſt ſail from the port where ſurveyed, directly on the whale-fiſhery, on or before the firſt of May, and not leave Davis's Streights, or Greenland, and ſeas adjacent, before the 20th of Auguſt, unleſs they have ſuch ſucceſs as to fill as many caſks with blubber as will amount to no leſs than 200 hogſheads for a ſhip of 300 tons, and ſo in proportion, or meet with any unavoidable accident, ſo as to endanger the lives of the crew; which accident muſt be declared on the oaths of the maſter, mate, carpenter, harpooners, line-managers, boat-ſteerers, and ſurgeon, or ſuch of them as are living; otherwiſe ſhe ſhall loſe the benefit of this bounty.

† 22 Geo. II. cap. 45. §. 7.

‡ The commiſſioners of the cuſtoms for England and Scotland reſpectively muſt, at the beginning of every ſeſſion of parliament, lay before both houſes an account of what number of ſhips have been employed in this fiſhery, with their names and burthens, from whence fitted out, and at what port in Great-Britain diſcharged, and what quantity of oil or whale-fins each ſhip imported.

‡ 28 Geo. II. cap 20. §. 10.

VIII. Bounty for encouragement of the Britiſh WHITE-HERRING FISHERY.

By 23 Geo. II. c. 24. §. 6. was granted to the Society of the Free Britiſh Fiſhery, for fourteen years, from the 11th of October, 1750, the date of their charter,
And by 28 Geo. II. c. 14. §. 4. was further continued for three years,

And is,	
For every hundred pounds actually employed in the ſaid fiſhery -	3l. per annum.

‖ To be paid to the proprietors of the ſtock out of the cuſtoms, by the receiver-general of the cuſtoms, by equal half-yearly payments, provided the ſociety ſhall employ 100,000 l. at leaſt in the ſaid fiſhery, within eighteen months after the date of their ſubſcription.

‖ 23 Geo. II. cap. 24. §. 6, 7.

§ In order to aſcertain the ſums from time to time actually expended and employed by the ſociety in the ſaid fiſhery, the account thereof muſt be delivered to the commiſſioners of the cuſtoms, ſigned by three at leaſt of the council of the ſociety, as an atteſtation that they have examined it, and believe it to be juſt, and atteſted by the oath of the accountant of the ſociety at the foot of the account; upon which the commiſſioners are to order payment accordingly.

§ 23 Geo. II. cap. 24. §. 6.

‖ The ſociety are alſo to lay their accounts annually before parliament, and if loſs ſhould ariſe by one year's adventure, and there ſhould be gain by ſucceeding years, the gain muſt be applied to make good the original ſtock of 100,000l. before any dividend is made.

‖ 23 Geo. II. cap. 24 §. 7.

By 28 Geo. II. c. 14. §. 1, 2. this bounty is allowed to the ſociety on the ſum of 104,509 l. for two years, to October 22, 1752, and all future intereſt on that ſum is to be computed from that day; and all future computations of intereſt on any additional ſum paid in by the ſociety, in order to be employed in the ſaid fiſhery, are to be made from the day on which each ſum reſpectively is paid into the Bank of England.
* Any number of perſons ſubſcribing 10,000 l. or upwards, into the ſtock of the ſaid ſociety, and carrying on the ſaid fiſhery, under their own management, and on their own account, from the port named by them; conformably, nevertheleſs, to this act and the charter (except as to being obliged to uſe the marks of the ſaid ſociety) and ſubſcribing under the name of the Fiſhing Chamber of ſuch city, port, or town, are entitled to the ſame bounty. But their account of expences, atteſted by three of their committee, ſigned by their accountant, and verified by his oath, and alſo the vouchers, if required, are to be tranſmitted to the ſociety in London, whoſe accountant is to enter it in their account, delivered to the commiſſioners of the cuſtoms, as a ſum expended in the ſaid fiſhery by the ſaid ſociety. The bounty is to be paid to the ſociety in London, and by them paid over to the Fiſhing Chamber, after deducting the neceſſary charges of receiving it.

* 23 Geo. II. cap. 24. §. 18, 20.

IX. Bounty on SHIPS built for, and employed in the Britiſh WHITE-HERRING FISHERY.

By 23 Geo. II. c. 24. §. 11, 12, 16. was granted for fourteen years, from the commencement of this act,
By 28 Geo. II. c. 14. §. 4. further continued for three years,

And is, for	
Every decked buſs or veſſel, from 20 to 80 tons burthen, built in Great-Britain after the commencement of this act, for the uſe of the ſaid fiſhery, and proceeding thereon from ſome port in Great-Britain, and fitted out and employed therein by the ſociety of the Free Britiſh Fiſhery, or any other perſon, manned and navigated according to law, for every ton burthen	Bounty. 1 10 0

To be paid annually to the owners thereof out of the produce of the cuſtoms, ſubject to the following regulations.
† Every ſuch veſſel muſt have on board twelve Wincheſter buſhels of ſalt for every laſt of fiſh ſhe is capable of holding, barreled up in new barrels, and as many more new barrels as ſhe can carry, and two fleets of tanned nets, viz. for a veſſel of 70 tons, one fleet of 50 nets on board, each 30 yards upon the rope, and 7 fathoms deep; and another fleet of 50 nets in a tender, or proper place on ſhore, each 30 yards upon the rope, and not under five fathoms deep, and ſo in proportion; and muſt have on board, at the rendezvous, ſix men for a veſſel of 20 tons, and one man more for every five tons above 20; and muſt return into port with the ſame number, unleſs reduced by death, ſickneſs, or deſertion, without fraud or colluſion.

† 23 Geo. II. cap. 24. §. 13, 14. 26 Geo. II. cap. 9. §. 3, 4.

‡ Before ſhe proceeds on ſuch voyage, ſhe muſt be viſited by the proper officer of the cuſtoms, who is to examine if ſhe is qualified as above, and take account of her tonnage by admeaſurement, and certify the ſame to the commiſſioners of the cuſtoms, and whether ſhe is a proper veſſel to be employed in the fiſhery. And further, upon one of the owners, or their agents, or a proper officer or agents of the ſociety, and the maſter of the veſſel making oath at the foot of the certificate, before the collector and comptroller of the port, that it is their firm purpoſe, and determined reſolution, that the veſſel ſhall proceed, ſo manned, furniſhed, and accoutred, either to Braſſey's Sound in Shetland, and be at the rendezvous on or before the 22d of June, and not ſhoot or wet their nets before the 24th of June, and ſhall continue fiſhing among the ſhoals of herrings as they move ſouthward, unleſs prevented by loſs of maſts, or other unavoidable accidents, to the 12th of October; or ſhall proceed to Campbell town in Argyleſhire, or Kirkwall in the Orkney iſlands, and be at the rendezvous on or before the 12th of September, and continue fiſhing among the ſhoals of herrings as they move to the 11th day of January, unleſs they ſhall ſooner have compleated their loading [1], and fiſh in an orderly manner, without obſtructing others; and ſhall keep a journal of their proceedings, and an account of the quantities of fiſh diſpatched to foreign markets before they come into port, and the quantity they ſhall bring into port with them; and upon the ſame perſons giving ſecurity, in treble the value of the bounty, for the faithful dealings of the maſter and ſhip's company, the collector and comptroller of the port are to give them a licence to proceed on the voyage.

‡ 23 Geo. II. cap. 24. §. 12. 26 Geo. II. cap. 9. §. 2, 7.

[1] By 28 Geo. II. cap. 14. ſect. 5, 6. the ſociety may follow the white-herring fiſhery in any part of the Britiſh ſeas; and are not to forfeit this bounty, though the buſſes ſhould not arrive at one of theſe places of their rendezvous on the reſpective days appointed, provided ſhe took her departure from one of thoſe places at leaſt five days before the day appointed for their being there.

‖ But in the interval, between the Shetland and Yarmouth fiſheries, the veſſels may put into any port of Great Britain or Ireland to change their nets, or otherwiſe prepare for the Yarmouth fiſhery; and are not obliged to carry more than one fleet of nets to the latter fiſhing.

‖ 26 Geo. II. c. 9. §. 3, 8.

§ Upon the return of the veſſel to her port of diſcharge, the chief officer of the cuſtoms, or one appointed by him, muſt

§ 23 Geo. II. cap. 24. §. 15.

go

go on board and examine her condition and lading, and certify the ſame, with their obſervations thereon, and alſo the tonnage and names of the maſter, and other perſons on board [2]; and the maſter muſt make oath, before the collector and comptroller of the port, on the back of the licence, or to be annexed to it, that the veſſel was at one of the places before mentioned at the time appointed, and has not ſince been on any other voyage, or purſued any other deſign, or view of profit; and that they did remain fiſhing, according to the directions of this act, and had, at the time of their rendezvous, the quantity of nets and other ſtores, and number of men as above directed [3]. The licence is to be delivered up, with an account of what was done in purſuance of it; and the certificate, ſchedule, licence, and oath, together with the account of the fiſh taken, are to be tranſmitted, by the collector and comptroller of the port, to the commiſſioners of the cuſtoms for that part of Great-Britain from whence ſhe departed with her licence; who, being ſatisfied of their faithful dealings, are (upon the owners producing a proper certificate, from the receiver of the duty of 6d. per month from all ſeamen for the uſe of Greenwich-hoſpital, that all money due on that account for every ſeaman on board ſuch veſſel has been paid) to cauſe payment of the bounty to be made by the receiver-general of the cuſtoms.

[2] A true copy of this certificate muſt be tranſmitted by the commiſſioners of the cuſtoms, with all convenient ſpeed, to the receiver of the duty of 6d. per month from all ſeamen for the uſe of Greenwich hoſpital, in London 28 Geo. II. cap. 14. §. 10.

[3] If by virtue of the liberty granted (note [1]) any buſs quits her ſtation, appointed by 26 Geo. II. c. 9. in order for fiſhing at other ſtations, or does not arrive at one of the ſtations there mentioned on the day appointed, this oath is to be varied, and made conformable to the circumſtances attending ſuch reſpective buſs. 28 Geo. II. cap. 24. §. 7.

*The ſociety may let out to hire any of their buſſes to be uſed and employed in the ſaid fiſhery only, and ſubject to the ſame regulations and reſtrictions, as if employed by the ſociety.

* 28 Geo. II. cap. 14. §. 5.

X. Bounty on BRITISH and IRISH LINENS exported.

By 29 Geo. II. c. 15. §. 1. was granted from 24 June, 1756, for fifteen years, and from thence to the end of the then next ſeſſion of parliament,

	Bounty.		
† For every yard of BRITISH and IRISH LINEN made of hemp or flax, of the breadth of 25 inches, or more, and under the value of 5 d. per yard - -	0	0	0½
Of the value of 5d. and under the value of 6d. per yard - -	0	0	1
Of the value of 6d. and not exceeding the value of 1s. 6d. per yard -	0	0	1½

which ſhall be exported out of Great-Britain to Africa, America, Spain, Portugal, Gibraltar, the iſland of Minorca, or the Eaſt-Indies.

† To be paid to the exporter, or ſeller for exportation, by the collector of the port from whence the ſame ſhall be exported, out of any monies in his hands ariſing from any duties, revenues, and cuſtoms received at ſuch port.

† 29 Geo. II. cap. 15. §. 1.

‡ But not to extend to any linens that are ſtriped or chequered, or printed or painted, or made into buckrams or tillettings; nor to any Iriſh linen, unleſs of the property of perſons reſiding in Great-Britain, or in his Majeſty's plantations in America; nor to ſuch Iriſh linen, whereof the piece or bolt contains 38 yards in length, and 24 inches in breadth, and cloths of different lengths and breadths in proportion, from Nº 1. to Nº 10. incluſive, weighing from 15 to 44 pounds, as deſcribed in the act of 9 Geo. II. cap. 37.

‡ 29 Geo. II. cap. 15. §. 7, 8, 9.

§ Collectors in the out-ports of South-Britain, and in any port of North-Britain, not having money ſufficient in their hands to pay ſuch bounties, are to certify the ſame to the commiſſioners of the cuſtoms at London and Edinburgh reſpectively, who ſhall cauſe payment thereof to be made by the reſpective receiver-general; and if the receiver-general of Edinburgh hath not money ſufficient in his hands, the commiſſioners at Edinburgh, or any three of them, ſhall certify the ſame to the commiſſioners in London, who are to cauſe payment thereof to be made by the receiver-general there.

§ 29 Geo. II. cap. 15. §. 1.

‖ The exporter, or ſeller for exportation, ſhall expreſs in his entry, and indorſe on the cocket, the quantity and value of ſuch linen, and produce a certificate from the ſearcher, verifying the ſhipping thereof, and likewiſe give ſecurity in double the value of the goods, and 100 l. not to reland them in Great-Britain, Ireland, or Iſle of Man; and ſhall alſo make oath of the value of ſuch linens, and that the ſame were made in Great-Britain or Ireland, and (if in Ireland) that at the time of exportation they were the property of a perſon or perſons reſiding in Great-Britain, or in ſome of his majeſty's plantations in America.

‖ 29 Geo. II. cap. 15. §. 2, 8.

* After entry of any linens, as being intitled to this bounty, the ſearcher, or other proper officer, may open and examine any package, to ſee if the goods are rightly entered and indorſed; and if they are ſo, he muſt repack them at his own charge, which ſhall be allowed to the officer by the commiſſioners of the cuſtoms, if they think it reaſonable.

* 29 Geo. II. cap. 15. §. 3.

† If any linen, ſo to be exported for the bounty, ſhall be of greater value than 18 d. per yard, the exporter, or ſeller thereof for exportation (on demand in writing made by the cuſtomer or collector and comptroller of the port of exportation) ſhall cauſe it to be delivered into the king's warehouſe; and the collector ſhall pay to the exporter, &c. (out of any money in his hands) the value of 1 s. 7 d. per yard, taking his receipt for the ſame; and ſuch linen to be publicly ſold, and out of the produce thereof the money to be replaced to ſuch funds from which it was borrowed, and one moiety of the overplus, if any, to be paid into the exchequer to the ſinking fund, the other to the officer who ſearched and examined the linen.

† 29 Geo. II. cap. 15. §. 4.

‡ If the exporter of ſuch linen, ſo demanded, refuſes to cauſe the ſame to be delivered up; and if any ſuch linen, entered for exportation, of the value of 6 d. per yard, and not exceeding 18 d. per yard, ſhall be found to be under the value of 6 d. per yard; or entered for exportation at the value of 5 d. per yard, and not amounting to the value of 6 d. per yard, be found to be under the value of 5 d. per yard; or of ſuch linen as ſhall be leſs in quantity than is indorſed on the cocket, or ſhall be found to be under the breadth of 25 inches, or entered and indorſed under a wrong denomination, whereby the bounty may be fraudulently received; all ſuch linen, and alſo all the goods in every package, indorſed on ſuch cocket, ſhall be forfeited, and the exporter to loſe the benefit of the bounty.

‡ 29 Geo. II. cap. 15. §. 5.

§ Any ſuch linen, for which the bounty has been given or claimed, relanded in Great-Britain, Ireland, or the Iſle of Man, is forfeited, and every perſon concerned in bringing back, or re-landing it, forfeits one ſhilling per yard.

§ 29 Geo. II. c. 15. §. 6.

‖ Bonds taken, or debentures made, purſuant to this act, are not chargeable with the ſtamp duties.

‖ 29 Geo. II. cap. 15. §. 10.

* Any perſon, legally convicted of falſely making any oath required by this act, is to forfeit 200 l. and be impriſoned for twelve months.

* 29 Geo. II. cap. 15. §. 11.

† In caſe of any queſtion, whether the linens are of the manufacture of Great-Britain or Ireland, the ONUS PROBANDI is to lie upon the exporter or ſeller for exportation.

† 29 Geo. II. cap. 15. §. 12.

XI. Premium or Bounty on Britiſh Plantation-made INDICO imported.

By 21 Geo. II. cap. 30. §. 1, 6, 8. was granted for ſeven years, from March 25, 1749;
By 28 Geo. II. cap. 25. §. 1. further continued to March 25, 1763; and from thence to the end of the then next ſeſſion of parliament,

	Bounty.		
For every pound weight of good and merchantable INDICO, free from any falſe mixture, and fit for dyers uſe, imported directly from any of the Britiſh colonies or plantations in America, in a ſhip which may lawfully trade thither, manned as by law required, and being of the growth or product of the plantation from whence imported, and being worth 3 s. per pound weight, when the beſt French, or other indico equal with the beſt French, is 4 s. per pound weight, and ſo in proportion	0	0	6

To be paid upon demand to the importer by the collector of the port of importation, out of the customs; but if he has not money sufficient in his hands, he must certify the same to the commissioners of the customs, who are to cause it to be paid by the receiver-general of the customs in England or Scotland respectively, according to the place of importation.

* But to intitle the importer to this premium, the person who ships the indico in America must, before the ship is cleared out, produce to the governor, lieutenant-governor, collector and comptroller of the customs, and naval officer of the colony, or any two of them, a certificate signed and sworn before a justice of the peace by the planter, or his known agent, and attested by the justice, "that a quantity "of indico, expressing the weight thereof, had been sent "from his indico-work to be shipped off, or was sold to "the person therein named, and was of the growth of his "plantation, situate in the district, division, or parish of "———, within the island or colony of ———;" and also sign a certificate himself before the said officers, "that "the indico shipped by him is the same mentioned in the "planter's certificate;" upon which they are to deliver to him a certificate, under their hands and seal of office, of "having received such certificate, and that at the same time "the planter's certificate was produced and left with them." This last certificate must be produced to the chief officer of the customs at the port of importation, together with a certificate from the commander of the vessel importing the indico, "that the same was shipped on board his vessel, within such Bri-"tish colony in America, as mentioned in the said certificate;" and also a certificate signed by the surveyor, land-waiters, or searchers of the customs of the port where landed, or any two of them, specifying "the weight, and that it is good and mer-"chantable, free from false mixture, and of such quality as to "be intitled to the premium;" which certificate they must grant within ten days after landing, unless they can assign sufficient cause for refusal. Upon producing the several certificates to the proper officer, the premium is to be paid.

* 21 Geo. II. cap. 30. §. 2, 3, 4.

† The officers of the customs, before making out the certificates, are to examine the indico, by opening the package, and shifting it so as to see the whole contents, and if it is good and merchantable, and free from false mixture, and of the value required.

† 21 Geo. II. cap. 30. §. 7, 8.

‖ In case of any dispute about the quality of the indico, if in the port of London, the commissioners of the customs may call two or more dyers, dry-salters, or brokers, or others well skilled in it, who are to declare upon oath, if required, their opinion as to the quality, and whether it is intitled to the premium: if in the out-ports, samples are to be sent up to the commissioners of the customs in London or Edinburgh respectively, to be inspected and adjudged there.

‖ 21 Geo. II. cap. 30. §. 9.

‡ No fee, gratuity, or reward, to be taken by any officer of the customs, for examining, viewing, or delivering such indico, or for signing any certificate, or paying the premium, on forfeiture of 100l. loss of office, and being incapable of serving his Majesty.

‡ 21 Geo. II. cap. 30. §. 10.

§ Certificates and debentures, made out in pursuance of this act, are not chargeable with the stamp duties.

§ 21 Geo. II. cap. 30. §. 11.

* No person may enter, or cause to be entered, any foreign-made indico, under the name of British plantation-made indico, on forfeiture thereof; or mix, or cause to be mixed, any foreign indico, or other false mixture, with that made in the British plantations, in order to obtain the premium, on forfeiture of the whole, and double the value thereof.

* 21 Geo. II. cap. 30. §. 5.

† Any governor, lieutenant-governor, collector, or comptroller of the customs, naval officer, merchant, trader, or factor, or master, or commander of a ship, or any other person, falsely making a certificate of the produce or manufacture of any indico, or counterfeiting any certificate by this act required, in order to obtain the premium, is to forfeit 200l. and, if an officer of the customs, also to lose his office, and be incapable of serving his Majesty.

† 21 Geo. II. cap. 30. §. 15.

† If any indico, made in the British plantations in America, shall be exported after the 25th of March, 1749, the exporter, before entry thereof, is to pay the collector of the customs, at the port of exportation, 6d. for every pound weight, allowed as a premium by this act, over and above any other duty it is subject to pay on exportation, on forfeiture thereof, and double the value; and in case of a dispute, whether it is of the growth, product, and manufacture of the British plantations in America, the onus probandi is to lie upon the owner or claimer.

‡ Penalties and forfeitures, by this act, may be prosecuted in any of his Majesty's courts of record at Westminster, the court of exchequer in Scotland, or any of the courts of admiralty, in his Majesty's plantations in America respectively; and are to be divided, if in Great-Britain, one moiety to his Majesty, and the other to the person who shall sue for the same; if in his majesty's plantations in America, one-third to his Majesty, one third to the governor of the plantation, and one-third to the person who shall sue for the same.

‡ 21 Geo. II. cap. 30. §. 16, 17.

XII. Allowance on damaged TOBACCO imported.

§ If any British plantation TOBACCO hath received damage on board any ship at sea, or by the ship's being forced on shore in any part of Great-Britain; or after arrival, by the ship's bulging on an anchor, or by the lighter into which the tobacco is put in order to be landed; the merchant refusing to pay, or secure the duty for the same, hath liberty to separate such damaged tobacco, by cutting it off from the hogshead or other package.

§ 9 Geo. I. cap. 21. §. 4, 13.

‖ For every pound of damaged TOBACCO so cut off, the merchant is to be allowed — 0 0 0½

To be paid by the commissioners or collectors, or other chief officers of his majesty's customs.

But such allowance not to exceed thirty shillings on any one hogshead.

‖ 9 Geo. I. cap. 21. §. 13.

* Such damaged tobacco cut off, to be burnt and destroyed.

* 9 Geo. I. cap. 21. §. 4.

XIII. Allowance or drawback of the duties on COALS used in melting copper or tin ores within the counties of Cornwall and Devon, or in fire-engines for draining tin or copper mines in Cornwall.

† All COALS used in either of the above works, and for which the duties have been first answered, upon proof, by oath made before the customer or collector of the said duties, that they have been so used, shall have a drawback of all the duties; to be repaid by the collector of the duties to the person making such proof.

† 9 Ann. cap. 6. §. 54. 14 Geo. II. cap. 41. §. 3.

XIV. Allowance on damaged, corrupt, or unmerchantable WINES imported.

‡ If any merchant, finding his wine on importation to be damaged, corrupt, or unmerchantable, shall refuse to pay or secure the duties for the same; the commissioners of the customs may cause such wines to be received into the custody of the proper officers, and to be publicly sold, in order to be distilled into brandy, or made into vinegar, taking sufficient security that they be not made use of for any other purpose whatsoever; and shall cause the produce of such sale to be paid to the merchant, as a compensation for the freight and other charges, not exceeding the allowances following.

For every ton of WINE	of the growth of Germany, or which pays duty as such -	4	0	0
	of the growth of France -	4	0	0
	of the growth of Spain, Portugal or elsewhere - -	8	0	0

‡ 6 Geo. I. cap. 12. §. 3, 4. 12 Geo. I. cap. 28. §. 20.

The security to be discharged, on a proper certificate that the wines have been so made use of within three months after delivery out of the warehouse.

The overplus, if any, to be replaced to the duties, out of which the warehouse rent, and other charges attending the sale, have been advanced.

§ But no allowance to be made for any wines, unless imported in casks, on board a merchant ship, directly from the place of the growth, or the usual place of first shipping.

§ 8 Geo. I. cap. 18. §. 19.

* Except as to ships stranded; in which case, the wines salved may be put on board any other ship or vessel, and carried to any lawful port of this kingdom, and be intitled to the aforementioned allowance.

* 8 Geo. I. cap. 18. §. 20.

XV. Al-

XV. Allowance of PORTAGE.

PORTAGE is a bounty given by the commiſſioners of the cuſtoms, by virtue of their patent, to maſters of ſhips inwards for making true reports of their ſhips and cargoes, and otherwiſe demeaning themſelves according to law and cuſtom, and is granted on the net amount of the undermentioned branches paid or ſecured for the goods imported in their reſpective ſhips, certified by the proper officer of the port (damages and over-entries firſt to be deducted) and is as follows.

WINES -	0 6 8	per cent. on the net amount of the branches of cuſtoms and impoſt.
CURRANTS -	0 6 8	per cent. on the net amount of the branch of cuſtoms.
NORWAY GOODS	2 0 0	
OTHER GOODS	0 10 0	

Note, that no portage is to be granted, when it doth not amount to ten ſhillings, except for Norway goods.

XVI. Drawback or repayment of the duty of exciſe on Britiſh-made CANDLES.

		Drawb.
CANDLES MADE OF WAX.	‡ the pound weight averdupoiſe 0 0 4 † the pound weight averdupoiſe 0 0 4	0 0 8
CANDLES MADE OF TALLOW, and other Candles.	‡ the pound weight averdupoiſe 0 0 0½ † the pound weight averdupoiſe 0 0 0½	0 0 1

‡ 8 Ann. cap. 9. 9 Ann. cap. 21.
† 9 Ann. cap. 6. 3 Geo. I. cap. 7.

* To be repaid to the exporter by the collector of the exciſe, on proof made before him, upon oath, of the payment of the duties; and the collector giving a certificate thereof to the exporter, expreſſing kinds and quantities, and payment of duties; which certificate being produced to the collector of the cuſtoms at the port of exportation, and the exporter giving ſufficient ſecurity, before ſhipping, that the candles ſhall not be relanded in Great-Britain, and likewiſe making oath, that they are the ſame mentioned in the certificate, the collector of the cuſtoms is to give to the exporter a debenture, expreſſing the true kinds and quantities exported.

* 8 Ann. cap. 9. §. 24, 26.

† If relanded (over and above the penalty of the bond) the candles are forfeited, or their value.

† 8 Ann. cap. 9. §. 25.

XVII. Drawback or repayment of the duty of exciſe on HIDES or CALVE-SKINS, rough or tanned; HIDES or CALVE-SKINS, dreſſed or curried; SHEEP-SKINS and LAMB-SKINS, tanned, tawed, or dreſſed, in Great-Britain, exported.

By 9 Ann. cap. 11. §. 39. and 10 Ann. cap. 26. §. 4. any hides or calve-ſkins, tanned, tawed, or dreſſed, were to draw back two-thirds of the duties laid on by thoſe acts reſpectively.
But by 10 Ann. cap. 26. §. 6. it is there explained, that thoſe acts, as to the drawback, comprehended only tanned or rough hides, and calve-ſkins, &c.
Therefore the drawback is as follows.

		Drawback.
‖ TANNED or ROUGH HIDES, and CALVE-SKINS, the pound weight averdupoiſe -	by 9 Ann. cap. 11. - 0 0 0⅔ by 10 Ann. cap. 26. - 0 0 0⅓	0 0 1
† HIDES or CALVE-SKINS, dreſſed or curried, the pound weight, as they ſhall weigh at the cuſtom-houſe - -		0 0 1

‖ 9 Ann. cap. 11 §. 39. 3 Geo. I. cap. 7. 10 Ann. cap. 26. §. 4. 3 Geo. I. cap. 7. 10 Ann. cap. 26. §. 6.

† 10 Ann. cap. 26. §, 6.

SHEEP-SKINS, * and LAMB-SKINS,	tanned for glovers and bazils -	the pound weight averdupoiſe -	0 0 0½
	dreſſed in allum and ſalt, or meal, or otherwiſe tawed -		
	dreſſed in oil, the pound weight avoirdupoiſe -		0 0 0⅔

* 12 Ann. cap. 9. §. 67. 9 Ann. cap. 11. §. 2.

‡ To be repaid to the exporter, by the collector of exciſe on a debenture made forth by the collector of the cuſtoms, at the port of exportation, expreſſing the kinds, quantities and weights ſo exported, ſufficient ſecurity being firſt given by the exporter to the collector of the cuſtoms, that the ſaid goods ſhall not be relanded in Great Britain.

‡ 9 Ann. cap. 11. §. 39, 40.

† The hides and calve-ſkins, ſo exported, to be marked with a ſtamp, denoting having paid the duties *; but the drawback may be allowed, although the ſaid marks have not been ſeen by the officers of the cuſtoms, provided that oath be made before the collector of the cuſtoms, that the hides or ſkins, contained in the reſpective bales or packs, were marked with the ſtamps, denoting payment of the duties, and ſpecifying how much the duties amounted to, together with the weight thereof exported.

† 9 Ann. cap. 11. §. 39.
* 10 Ann. cap. 26. §. 5.

‖ If relanded, forfeited, with treble the value.

‖ 9 Ann. cap. 11. §. 42.

XVIII. Drawback or repayment of the duty of exciſe on Britiſh-made SOAP exported.

	Drawback.
† SOAP, for every pound weight avoirdupoiſe - - 0 0 1 ‡ SOAP, for every pound weight avoirdupoiſe - - 0 0 0½	0 0 1½

† 10 Ann. cap. 19. §. 24. 1 Geo. I. cap. 7.
‡ 12 Ann. ſeſſ. 2. cap. 9. §. 13. 6 Geo. I. cap. 4.

* To be repaid to the exporter by the collector of exciſe for ſuch ſoap as is exported to foreign parts by way of merchandize, on a debenture to be made forth by the collector of the cuſtoms, at the port of exportation, and teſtified by the ſearcher; the exporter having firſt made proof of the payment of the duties before the collector, who received the ſame, and alſo having given ſufficient ſecurity, that the ſoap ſhall not be relanded in Great-Britain.

* 10 Ann. cap. 19. §. 22, 24. 12 Ann. cap. 9. §. 13.

† If relanded (over and above the penalty of the bond) the ſoap, or the value, forfeited.

† 10 Ann. cap. 19. §. 93.
‖ 12 Ann. sess. 2. cap. 9. §. 13.

* Not to extend to linens, callicoes, or fustians, dyed throughout of one colour, nor to stuffs made of woollen, or whereof the greatest part is woollen.

* 10 Ann. cap. 19. §. 68. 12 Ann. sess. 2. cap. 9. §. 8.

† Note, all callicoes printed, &c. as above, which shall be within ⅛ part of a yard of a yard broad, or not exceeding ⅛ part of a yard of a yard board, shall pay as yard broad, and no more nor less.

† 10 Ann. cap. 19. §. 96.

To be repaid to the exporter by the collector of excise, on a debenture, expressing the kinds and quantities, to be made forth by the collector of the customs at the port of exportation: the exporter having first made proof of the payment of the duties before the said collector of the customs, and also having given sufficient security, that the goods shall not be relanded in Great-Britain.

‡ 10 Ann. cap. 19. §. 93, 95. 12 Ann. sess. 2. cap. 9. §. 13.

§ Before shipping the exporter is to give, to the proper officer of the customs, notice, when and where he will pack the goods; and such officer is to see the seals or stamps taken off from every piece to be exported, and to make returns of the kinds and quantities thereof to the officer appointed to receive the same.

§ 12 Ann. cap. 9. §. 17.

‖ If relanded (over and above the penalty of the bond) forfeited, or the value.

‖ 10 Ann. cap. 19. §. 92.

XXI. Drawback or repayment of the duty of excise on British-made STARCH exported.

	Drawback.	
† STARCH, for every pound weight thereof avoirdupoise	0 0 1	0 0 2
‖ STARCH, for every pound weight thereof avoirdupoise	0 0 1	

† 10 Ann. cap. 26. §. 27. 3 Geo. I. cap. 7.
‖ 12 Ann. sess. 2. cap. 9. §. 13. 6 Geo. I. cap. 4.

* To be repaid to the exporter thereof (by the collector of the duties) for such starch, exported to foreign parts by way of merchandize, on a debenture, to be made forth by the collector of the customs at the port of exportation, expressing the true kinds and quantities, and the exportation thereof testified by the searcher; the exporter having first made proof of the payment of the duties (on oath) before the said collector, and also having given sufficient security, that the starch shall not be relanded in Great-Britain.

* 10 Ann. cap. 26. §. 25, 27. 12 Ann. cap. 9. §. 13.

† If relanded (over and above the penalty of the bond) forfeited, or the value.

† 10 Ann. cap. 26. §. 26.

XXII. Bounty or allowance on GOLD and SILVER THREAD, LACE, or FRINGE, made in GREAT-BRITAIN, exported.

	Bounty.	
* SILVER THREAD, LACE, or FRINGE, made of plate-wire, and spun on silk, every pound weight avoirdupoise — —	0 5 0	
* GOLD LACE, THREAD, or FRINGE, made of plate-wire, and spun on silk, every pound weight avoirdupoise — —	0 6 8	

To be paid to the exporter by the collector of the duties on gilt and silver wire, on a debenture, expressing the kinds and quantities, to be made forth by the collector of the customs at the port of exportation, and the shipping thereof testified by the searcher; the exporter first making proof upon oath, before the collector of the customs, that the said thread, lace, or fringe, was actually made after the first of July, 1712, and also giving sufficient security, that they shall not be relanded in Great-Britain.

* 9 Ann. cap. 26. §. 62. 3 Geo. I. cap. 7. §. 1.

XXIII. Drawback on BOOTS, SHOES, GLOVES, and other manufactures of British-tanned leather, exported.

	Drawb.	
† ALL TANNED LEATHER, which shall be manufactured, and actually made into GOODS or WARES, for every pound weight thereof	0 0 1½	

† 12 Ann. sess. 2. cap. 9. §. 68.

§ This drawback commenced from the 2d of August, 1714, and is in lieu of the drawback of two-thirds of the excise duties granted by 9 Ann. cap. 11. and 10 Ann. cap. 26. and is to be paid by the collector of those duties, to the exporter thereof, out of those duties respectively, on a debenture to be made forth by the collector of the customs of the port of exportation, security being first given by the exporter, that the goods shall not be relanded in Great-Britain.

§ 9 Ann. cap. 11. §. 40, 41. 12 Ann. sess. 2. cap. 9. §. 68.

‖ Relanded, forfeited, and treble the value.

9 Ann. cap. 11. §. 43.

XXIV. Drawback or repayment of excise on British-wrought PLATE exported.

	Drawback.	
WROUGHT PLATE, or MANUFACTURES of SILVER, made in Great Britain, the ounce troy — —	0 0 6	

* To be repaid by the exporter, for such plate as is exported to foreign parts by way of merchandize, by the collector of the duty, on a debenture to be made forth by the collector of the customs at the port of exportation, expressing kinds and quantities, and the shipping thereof certified by the searcher; the exporter first making proof on oath, before the said collector, that the plate was actually made or marked after the first of June, 1720, and likewise giving sufficient security, that it shall not be relanded in Great-Britain.

* 6 Geo. I. cap. 11. §. 18.

If the collector of the duties hath not money sufficient in his hands, he is to certify the same to the commissioners.

† But no drawback to be paid on the exportation of plate, if the same shall have been made seven years or more before the day of entering it for exportation.

† 12 Geo. II. cap. 16. §. 10.

For other regulations, see silver in the index.

XXV. Drawback or repayment of the excise on GLASS made in Great-Britain, exported.

	Viz.	Drawback.	
§ CROWN, PLATE, FLINT, or WHITE GLASS -	for every hundred weight -	0 9 4	
GREEN GLASS, for every hundred weight		0 2 4	

§ 19 Geo. II. cap. 12. §. 3, 4, 5.

† The collector who received the duty upon the glass, upon oath made before him that the duty has been paid, is to give the person (gratis) a certificate, expressing the kinds and weight of the glass, and the duty paid for it; which being produced to the customer or collector of the port of exportation, and the exporter making oath before him, that the glass to be exported is the same mentioned therein, and likewise giving sufficient security for such exportation, and that

† 19 Geo. II. cap. 12. §. 19, 21.

it

it ſhall not be relanded in any part of Great-Britain, the collector is to grant a debenture, expreſſing the true weight; which debenture being produced to the collector of the ſaid duties at the place of exportation, he is forthwith to pay the above allowance; but if he has not money ſufficient in his hands, the reſpective commiſſioners of exciſe in Great-Britain are to pay it out of the duties upon glaſs ariſing by this act.

* Relanded, is forfeited, or the value, beſides the penalty of the bond.

* 19 Geo. II. cap. 12. §. 20.

XXVI. Drawback of the Excise or Inland Duties on British Salt exported.

Of England, Wales, or Berwick upon Tweed.

By 5 and 6 of W. and M. cap. 7. were granted, from the 25th of March, 1694, to the 17th of May, 1697, the following duties.

	Duty.
Rock-salt, taken out of any pits in England, Wales, or Berwick, the buſhel †, containing 65 pounds weight — —	0 1 0
Salt made at any ſalt-works in England, Wales, or Berwick, or refined from rock-ſalt, the buſhel ‡, containing 56 pounds weight —	

And by 9 and 10 Will. III. cap. 44. was granted from 24 December 1699,

A further duty on every ſuch reſpective buſhel of Salt above mentioned — —	0 2 4
Total duty	0 3 4

† 1 Ann. cap. 21. §. 9.
‡ 9 and 10 Will. III. cap. 44. §. 34.

§ Which duties have been ſince revived and continued for ever.

§ 7 and 8 Will. and Mar. cap. 31. 5 Geo. II. cap. 6. 7 Geo. II. cap. 6. 8 Geo. II. cap. 12. 14 Geo. II. cap. 22. 18 Geo. II. cap 5. 26 Geo. II. cap. 3.

‖ The above duties to be paid by the maker thereof, for rock-ſalt, within twelve months, and for all other ſalt, within nine months, after true entries made of the reſpective times of making ſuch ſalt, or taking it out of the pits, or ſufficient ſecurity given; but if he chuſes to pay ready money, he ſhall have a diſcount thereon, after the rate of 10 per cent per annum *; and if paid within 28 days after ſecurity given, to be allowed a diſcount, after the rate of ten per cent. per annum, for the remaining time.

‖ 5 and 6 Will. and Mar. cap. 7. §. 6. 9 and 10 Will. III. cap. 44. §. 8. 5 Ann. cap. 29. §. 5.
* 1 Ann. cap. 24. §. 39.

† On exportation, the officer of the place, where ſuch ſalt was made or taken out of the pits, ſhall deliver to the exporter a certificate, under his hand and ſeal, that the duties have been paid or ſecured; on producing this certificate to the officer of the cuſtoms where the ſaid ſalt is to be ſhipped off, he is to grant a debenture, the exporter making oath of the ſhipping of the ſalt, and of its not being relanded in England or Wales; which debenture being produced to the officer of the place where the duties have been paid or ſecured;
Then theſe duties are to be wholly repaid, or the ſecurity vacated.

† 5 and 6 Will and Mar. cap. 7. §. 11. 9 and 10 Will. III. cap. 44. § 22.

‡ Shipped for Ireland, no debenture to be granted, till there is produced a certificate of the quantity landed, under the hand of the collector of the cuſtoms of ſuch port in Ireland where the ſaid ſalt is landed.
For further regulations thereon, ſee the index.

‡ 1 Ann. cap 21, §. 11.

Salt of Scotland.

By the act of union, 5 Ann. cap. 8. art. 8. ſalt made in Scotland is exempted from payment of the inland duty of 2s. 4d. per buſhel, impoſed by 9 and 10 Will III. cap. 44.

Therefore the inland duty payable in Scotland, for the like ſorts of Salts, is, the reſpective buſhel	0 1 0

§ To be managed with the ſame allowance, encouragement, and drawback proportionable, and under the ſame reſtrictions and regulations, as for England.

§ 5 Ann. cap. 8. art. 6. §. 18.

XXVII. Bounty on Fish and Flesh exported.

‖ Flesh exported, cured with (any ſalt in England, but in Scotland only with foreign) ſalt which has paid duty, is to be allowed, viz.

Beef or Pork, the barrel — — —	0 5 0

‖ 5 Ann. cap. 8. art. 8. 5 Ann. cap. 29. §. 8.

* To be paid by the collector of the duties upon ſalt, in the port of exportation, within 30 days after demand, on a debenture to be prepared by the collector of the cuſtoms at that port, verified by the ſearcher, as to the quantity actually ſhipped, and that the ſame is good and merchantable; and the oath of the exporter, or agent, being firſt taken before the principal officers of the port, before the debenture is allowed (if exported from England, Wales, or the town of Berwick upon Tweed) 'that the beef or pork, mentioned 'in the debenture, was ſalted with ſalt, for which the du-'ties have been paid, and not drawn back, and that the 'ſame is really exported to parts beyond the ſeas for ſale, 'and that any part thereof was not ſpent, or intended to be 'ſpent, for the ſhip's uſe, nor relanded, or intended to be 'relanded:' if exported from Scotland, 'that the fleſh, men-'tioned in the debenture, is really exported to parts beyond 'the ſeas for ſale, and not intended to be relanded in Great-'Britain, and was duly cured only with foreign ſalt, with-'out any mixture of Britiſh or Iriſh ſalt, and that the du-'ties for ſuch imported ſalt have been duly paid or ſecured.'

* 5 Ann. cap. 29. §. 8. 7 Ann. cap. 11. §. 10.

† Relanded, is forfeited, and 40s. for every barrel, to be recovered of the importer or proprietor.

† 5 Ann. cap. 29. §. 9.

Fish, exported from any part of Great-Britain to foreign parts, are intitled to the following allowances, viz.

Pilchards, or Scads, the caſk, containing 50 gallons — — — —	0 7 0
Codfish, Ling, or Hake — If 14 inches or upwards in length, from the bone in the fin to the third joint in the tail, the hundred — —	0 5 0
Wet, the barrel, containing 32 gallons	0 2 0
Dried, called Haberdines, the hundred weight — —	0 3 0
Salmon, the barrel, containing 42 gallons —	0 4 6
White Herrings, the barrel, containing 32 gallons — — — —	0 2 8
Full Red Herrings, the barrel, containing 32 gallons — — —	0 1 9
Clean Shotten Red Herrings, the barrel, containing 32 gallons — —	0 1 0
Dried Red Sprats, the laſt — — —	0 1 0

☞ By 29 Geo. II. cap. 23. §. 5. theſe bounties were extended to fiſh cured in Scotland with Britiſh or foreign ſalt, which by the act of union were limited to fiſh cured (in Scotland) with foreign ſalt only.

‡ To be paid by the collector of the duties upon ſalt, in the port of exportation, within thirty days after demand, on a debenture to be prepared by the collector of the cuſtoms in the port of exportation, and verified by the ſearcher, as to the quantity actually ſhipped; and the oath of the exporter, or agent, being firſt taken before the principal officers of the port, before the debenture is allowed, 'that the fiſh men-'tioned in the debenture were Britiſh, taken and really ex-'ported to, or for parts beyond the ſeas, and not relanded, 'or intended to be relanded in Great-Britain.'

‡ 5 Geo. I. cap. 18. §. 6. 29 Geo. II. cap. 23. §. 5.

§ If the ſaid collector (in England) has not ſufficient money in his hands to pay the ſaid debentures on fleſh or fiſh exported, he is to give without delay a certificate thereof to the commiſſioners for the exciſe upon ſalt in England, who ſhall be chargeable with the payment, to be paid in courſe out of the firſt money ariſing out of the duties upon ſalt; and if in Scotland, to the commiſſioners of the cuſtoms or exciſe in Scotland, at the option of the merchant, who are to cauſe it to be paid in courſe out of the duties upon ſalt in Scotland, or out of the revenues of cuſtoms or exciſe there.

§ 5 Ann. cap. 29. §. 8. 7 Ann. cap. 11. §. 10. 5 Geo. I. cap. 18. §. 6.

‖ The herring barrel is to contain 32 gallons, and the ſalmon barrel 42 gallons; and herrings or ſalmon exported in barrels of any other ſize (except half barrels) are not entitled to the bounty.

‖ 5 Geo. I. cap. 18. §. 15, 16. 29 Geo. II. cap. 23. §. 5.

* No allowance to be paid on fleſh or fiſh not well cured, or unmerchantable.

* 5 Ann. cap. 29. §. 8. 5 Geo. I. cap. 18. §. 6. 29 Geo. II. cap. 23. §. 5.

† Such fiſh fraudulently relanded in Great-Britain, or re-imported, is forfeited, and double the value, to be recovered of the importer or proprietor.

† 5 Geo. I. cap. 18. §. 6. 29 Geo. II. cap. 23. §. 5.

‡ No fee to be taken for a debenture, or certificate, or for payment of the money.

‡ 5 Ann. cap. 29. §. 8. 7 Ann. cap. 11. §. 10. 5 Geo. I. cap. 18. §. 6.

§ Any officer refuſing or neglecting to pay the money, or give a certificate, as above, forfeits double the ſum to the party aggrieved.

§ 7 Ann. cap. 29. §. 8. 5 Geo. I. cap. 18. §. 6.

* Herring, ſalmon, cod, ling, tuſk, or other white fiſh, brought coaſtwiſe from Scotland into England for re-exportation after the 25th of June, 1756, are upon exportation intitled to the bounties above mentioned, ſubject to the ſame regulations, in order to prevent the relanding, or reimporting thereof, and the owners are ſubject to the ſame penalties for relanding, or other fraudulent proceedings, in order to obtain the bounty, as in caſe of fiſh cured in, and exported from England.—This allowance is not to be paid in England, but the chief officer of the cuſtoms, or his deputy, at the port of exportation, upon requeſt of the exporter, and oath made before the principal officers of the port, "of the ſhipping of the fiſh, and its not being relanded, or intended to be relanded in Great-Britain," is to give a debenture under his hand, without fee, for payment of the allowance, which being produced to the commiſſioners of the cuſtoms or exciſe in Scotland (at the option of the exporter or his aſſigns) they are to pay the bounties out of any money in their hands, ariſing by any branch of the cuſtoms or exciſe, regard being had to the priority of the dates of the debentures.

* 29 Geo. II. cap. 23. §. 10, 11.

XXVIII. Premium on NAVAL STORES imported.

I. From the Britiſh plantations in America.

By 2 Geo. II. cap. 35. §. 3. 18. was granted from 29 September, 1729, to 29 September, 1742.
By 13 Geo. II. cap. 28. §. 1. continued to 25 December, 1750.
By 24 Geo. II. cap. 52. §. 1. continued to 25 December, 1751.
By 25 Geo. II. cap. 35. §. 2. continued to 25 March, 1758. And to the end of the then next ſeſſion of parliament.

† Imported directly from any of the Britiſh plantations in America, in ſhips legally navigated, and that by law may trade thither —

MASTS, YARDS, and BOWSPRIGHTS, the ton, allowing 40 feet to each ton, girt meaſure, according to the cuſtomary way of meaſuring round bodies -	1	0	0
Clean, good, merchantable, well-conditioned, clear of droſs or water, and fit in every reſpect for making of cordage, the ton, containing eight barrels, and each barrel to gauge 31½ gallons, to be well hooped and filled up —	2	4	0
TAR { Clean, good, merchantable, well-conditioned, clear of droſs or water, and fit in every reſpect for making of cordage, made from trees prepared according to the directions hereafter mentioned, the ton, containing eight barrels, and each barrel to gauge 31½ gallons, to be well hooped and filled up on the importation thereof -	4	0	0
‖ But no premium is to be paid on any tar, unleſs each barrel contains 31½ gallons, and the officers not to ſurvey the tar till the water is all drawn off, and every barrel filled up with tar.			
PITCH, clean, good, merchantable, and well-conditioned, not mixed with dirt or droſs, the ton, containing 20 groſs hundreds, neat pitch, to be brought in eight barrels of equal ſize -	1	0	0
TURPENTINE, clean, good, and merchantable, clear of droſs and water, the ton, containing 20 groſs hundreds, neat turpentine, to be brought in eight barrels of equal ſize -	1	10	0

† 2 Geo. II cap. 35. §. 3.
‖ 24 Geo. II. cap. 52. §. 2, 25 Geo. II. cap. 35. §. 3.

* Which premiums are to be paid by the commiſſioners of the navy, by bills to be made out for the ſame, and delivered to the importers within twenty days after the diſcharge or unlading of the ſhip, in order to be paid in courſe, upon certificate of the reſpective chief officers of the cuſtoms where imported; to whom a certificate has been produced, under the hands and ſeals of the governor, lieutenant-governor, or collector of his Majeſty's cuſtoms, and naval officer, or any two of them, reſiding within any of his Majeſty's ſaid plantations, teſtifying, that before the departure of the ſhip, the perſon lading the ſame had made oath before them, that the ſaid ſtores were truly, and bonâ fide, of the growth and produce of his Majeſty's ſaid plantations: and with reſpect to the high bounty on tar, expreſſing, that it has appeared to them, the perſons ſo certifying, by the oath of the owner or maker of the tar for which ſuch certificate was granted, that the tar herein mentioned was made from green trees, prepared for that purpoſe after the following manner; that is to ſay, that when ſuch trees were fit to bark, the bark thereof was ſtripped eight feet or thereabouts, up from the root of each tree, a ſlip of the bark, of about four inches in breadth, having been left on one ſide of each tree; and that each tree, after having been ſo barked, and ſtood during one year at the leaſt, and was not before cut down for the making of tar; and that the ſaid tar was made without mixture of any other tar therewith; as likewiſe upon oath to be made by the maſter of the ſhip, at any port in Great-Britain, that the ſame were ſhippped within ſome of his Majeſty's plantations in America, and that he knows, or believes, that the ſaid ſtores were the produce of the ſaid plantations.

* 2 Geo. II. cap. 35. §. 4, 12.

† But the aforeſaid certificates of the chief officers of the cuſtoms are not to be made out for the premium on pitch, until the ſame be freed from dirt or droſs, nor for any tar that is not fitting to be uſed for making of cordage, and ſhall not be freed from droſs and water, and unleſs ſuch pitch and tar be clean, good, merchantable, and well-conditioned.

† 5 Geo. I. cap. 11. §. 16. 2 Geo. II. cap. 35. §. 11.

§ And the ſaid officers of the cuſtoms, before they make out ſuch certificates, are to examine the pitch, by opening the heads of the barrels, ſawing of the ſtaves in the middle, and breaking the barrels, or by ſuch other means as they ſhall think proper, to diſcover whether the ſaid pitch is good and merchantable, not mixt with dirt or droſs; and alſo to examine and ſearch the ſaid tar, to diſcover whether the ſame is clean, good, merchantable, well conditioned, and clear of droſs or water, and fit for making of cordage.

§ 5 Geo. I. cap. 11. §. 17. 2 Geo. II. cap. 35. §. 11.

II. From North-Britain, commonly called Scotland.

By 2 Geo. II. cap. 35. §. 13. was granted from 29 September, 1729, to 29 September, 1742.
By 13 Geo. II. cap. 28. §. 1. continued to 25 December, 1750.
By 24 Geo. II. cap. 52. §. 1. continued to 25 December, 1751.
By 25 Geo. II. cap. 35. §. 2. continued to 25 March, 1758. And from thence to the end of the then next ſeſſion of parliament.

Imported from North-Britain to any part of South-Britain.

TREES of twelve inches diameter and upwards, fit for MASTS, YARDS, or BOWSPRIGHTS, regularly converted and hewed at leaſt into eight ſquares, ſound, freſh, and in good and merchantable condition, the ton, allowing forty feet to each ton, girt meaſure, according to the cuſtomary way of meaſuring round bodies —	1	0	0

* Which premiums are to be paid by the commiſſioners of the navy, by bills to be made out for the ſame, and delivered to the importers within twenty days after the diſcharge or unlading of the ſhip, in order to be paid in courſe, upon certificates of the reſpective chief officers of the cuſtoms where imported, to whom a certificate has been produced, under the hands and ſeals of the comptroller and collector of the cuſtoms, and the naval officer, or any two of them, reſiding at the port or ports of exportation in North-Britain, teſtifying, that before the departure of the ſhip, the perſons concerned, or employed, (or any two of them) in cutting down the aforeſaid trees, had made affidavit in writing, before ſuch comptroller and collector, and naval-officer, or any two of them, that ſuch trees were truly and bonâ fide of the growth and produce of North-Britain; and ſpecifying in the ſaid affidavit, the particular number, quantity, and qualities of the trees, together with the time when they were cut down,

* 2 Geo. II. cap. 35. §. 13.

the names of the proprietors, and the places where the ſame did grow; as likewiſe upon oath to be made by the maſter of the ſhip, at the port of importation in South Britain, that the ſame were truly laden within North-Britain, and that he knows, or believes, that the ſaid trees were of the growth of North-Britain.

* Perſons counterfeiting, or making falſe affidavits, or certificates, of the growth of the trees, in order to obtain the premium, are to ſuffer as for wilful and corrupt perjury, and to forfeit 100 l.

* Collector, comptroller, or naval officer, making falſe certificates, ſhall incur ſuch penalties as are directed for like offences, by the act (13 and 14 Car. II. cap. 11.) for preventing frauds, and regulating abuſes in his majeſty's cuſtoms.

* 2 Geo. II. cap. 35. §. 14.

† Maſters or owners of ſhips knowingly importing foreign trees, fit for maſts, &c. as of the product of North-Britain, in order to obtain the bounty, are to forfeit 100 l. together with the ſhip and furniture.

† 2 Geo. II. cap. 35. §. 15.

From the Britiſh plantations and Scotland.

‡ Upon the landing of the aforeſaid ſtores and trees, the preemption or refuſal muſt be offered and tendered to the commiſſioners of the navy, and if, within twenty days after ſuch tender, they ſhall not contract for the ſame, the importers may otherwiſe diſpoſe of them.

‡ 2 Geo. II. cap. 35. §. 6, 13.

‖ No fee, gratuity, or reward, may be demanded or taken by the officers of the cuſtoms, for the examining, viewing, or delivering any of the aforeſaid naval ſtores, or for making or ſigning certificates, in order to receive the premium, upon the forfeiture of office and 100 l. and to be rendered incapable of ſerving his Majeſty.

* And if any of the aforeſaid naval ſtores, or trees, ſhall be again exported, the exporter muſt, before entry thereof, produce to the collector, &c. of the cuſtoms, at the port of exportation, a receipt from the treaſurer of the navy, or his caſhier, ſubſcribed by his comptroller, or his chief clerk, ſignifying that the full amount of the aforeſaid premium had been repaid to him; on failure whereof, ſuch ſtores may not be exported; and if ſuch ſtores are fraudulently exported without repayment of the premium, they are forfeited, and double the value.

* 2 Geo. II. cap. 35. §. 7, 9, 16.

† And if, upon the exportation of the aforeſaid ſtores, doubts ſhall ariſe concerning the growth, product, or manufacture, the onus probandi ſhall lie on the owner or claimer thereof.

† 2 Geo. II. cap. 35. §. 10, 16.

XXIX. Drawback of exciſe on STRONG BEER, STRONG ALE, MUM, CYDER, and PERRY, made in Great-Britain, exported. 1 Will. and Mar. cap. 22, &c.

XXX. Drawback of exciſe on SPIRITS DRAWN FROM CORN in Great-Britain, without mixture of any other materials exported. 6 Geo. II. cap. 17.

XXXI. Drawback of the exciſe on SPIRITS exported. 16 Geo. II. cap. 8.

☞ Not only the payment of theſe three drawbacks, but the forms and regulations of ſhipping, being by law required to be performed by the officers of exciſe, it is unneceſſary to deſcribe them particularly here.

AN
INDEX
OF THE
MATERIAL ARTICLES,

Contained in the SECOND VOLUME of the UNIVERSAL DICTIONARY of TRADE and COMMERCE.

LETTER L.

LABOUR, remarks political thereon, in relation to the natural price thereof. How taxes on commodities tend to raiſe the price of labour. The price of labour will fall, when ſuch taxes are annihilated. Invention of compendious arts of workmanſhip. Of the natural cauſes of the riſe and decay of nations in wealth and power, with regard to the price of labour. The increaſe of paper circulation in a ſtate naturally tends to raiſe the price of labour and commodities; and likewiſe the declenſion of the ſtate in wealth and power. Annihilation of paper debts, the way to preſerve ſtates, by preſerving the channels of trade and exportation. The more commercial labour in a ſtate, the richer is that ſtate eſteemed. Laws of England in regard to labourers; with remarks ſince the laſt war and peace of 1763.

LACE-MANUFACTURE, its manufacture. Political Reflections thereon. The principal laws of France, in reſpect to the lace-manufacture. Of the principal laws of England in regard thereto. The allowance on gold and ſilver lace, thread, and fringe, on exportation. Of the cuſtom-houſe buſineſs on this occaſion. Political remarks thereon. The encouragement given to this manufacture in Ireland. Philoſophical conſiderations on the manufacture of gold and ſilver lace.

LADING, ſee BILLS OF LADING.

LAGAN, or LAGON, what.

LANCASHIRE, its ſituation, produce and trade; with remarks relating to Liverpool.

LANDED-INTEREST. Reaſon why the decline of foreign trade ſinks the value of land. Encreaſe of paper-treaſure, argues the decline of trade, and decay of the landed-intereſt. The effect of land-taxes compared with thoſe upon commodities. Further political remarks. Of the country gentleman's advancement by improving it, and of preſerving himſelf and family, independently on court-preferment; which is ever a precarious dependence, except to but very few, and thoſe few liable to be turned out of their poſts and places, on miniſterial diſtractions.

LAND-CARRIAGE, outward; with regard to duties and taxes of goods for exportation.

LAND-CARRIAGE, inward; with regard to duties and taxes of goods for importation.

LAND-WAITER, an officer of the cuſtoms. His buſineſs; and ſome laws relating thereto.

LANERKSHIRE, its ſituation, produce, and trade.

LANGUEDOC, its ſituation, produce, and trade.

LAPIDARY, an artificer. Laws in France relating thereto.

LAPLAND, its ſituation, produce, and trade. See NORWAY, SWEDEN, and RUSSIA.

LAQUE, an artificial preparation for the buſineſs of laquered wares. Its preparation of a vegetable colour called laques.

LAQUERED-WARES, laquers of divers ſorts, how prepared.

LATITUDE, in geography and navigation.

LAW, as the ſame regards traders; with ſuitable remarks thereon.

LEAD, a metal. Its manufacture from natural ores. Its divers preparations for ſeveral uſes. Methods of ſmelting lead at the great works with pit-coal. Ditto with wood-fuel. Of black lead.

LEEKAGE of liquors, allowance at the cuſtoms on the importation thereof.

LEASE in LAW, what. The calculations of the values of leaſes; with tables ſuitable thereto; with remarks thereon.

LEATHER, of its manufacture from ſkins of beaſts of various kinds; with remarks before and ſince the laſt war, and Definitive Treaty of 1763.

LEATHER-BREECHES-MAKER, his trade.

LEATHER-CUTTER and CURRIER, ditto.

LEATHER-DRESSER,——————— ditto.

LEATHER-DYER,———————————ditto.

LEATHER-PARER and GROUNDER, ditto.

LEATHER-SELLER,——————————— ditto. The chief laws of England relating to leather. Some laws and regulations in England concerning leather tanned. Remarks on LEATHER-DRESSING in general.

LEDGER, in regard to the art of accountantſhip. A curious real mercantile tranſaction, carried on by partnerſhip at ſeveral foreign ports; the ſame ſtated in the ledger mode, and ballanced by the ſeveral parties reſiding at the ſeveral different foreign ports, and all in conformity to each other; with illuſtrative remarks thereon.

LEEWARD ISLANDS, their ſhort ſtate, with conſiderations ſuitable to the late peace of 1763; ſhewing the probability of thoſe NEUTRAL ISLANDS, that are thereby annexed to the crown of Great-Britain, turning to our commercial emolument hereafter.

LEICESTERSHIRE, its ſituation, produce, and trade.

LEINSTER,———————————ditto.

LETTER OF CREDIT, what.

LETTER-FOUNDER, his employment.

LETTER OF LICENSE, what, and its form.

LETTER OF MARQUE,———ditto.———Laws of England relating thereto.

LETTERS PATENT, what. The laws relating thereto.

INDEX.

LEVANT-TRADE, its trade in general. The firſt eſtabliſhment of the Chriſtian powers therein. The regulations and polity of France with reſpect to the Levant-trade. An arret of the king's council of ſtate, ordaining that the French ſhips trading to the ports of the Levant, ſhall not be liable to thoſe averages which may be neceſſary to be laid on the payment of the debts and other charges of the nation, but in proportion to the value of the merchandizes wherewith they are loaded, and not according to the tonnage and ſtrength of the ſhipping. A royal ordonnance, permitting the ſheriffs, and deputies of the chamber of commerce at Marſeilles, to deliver certificates of reſidence of the children and relations of the merchants of the province, who chuſe to ſettle in the Levant, provided they were 18 years of age; and alſo to ſuch women and girls whoſe huſbands or fathers are eſtabliſhed in the ſaid ports, to live there with them, 1716. An arret of the royal council in times of war ordains, that upon the merchandize of the Levant, ariſing by the prizes made during the preſent war, (1705) and carried into the port of Toulon, there ſhall be levied 10 per cent. on the value of the ſaid merchandizes over and above the ordinary duties paid on importation. A royal ordonnance, excluding from all public truſt and adminiſtration, and from the aſſemblies of the body of the French nation in the ports of the Levant, ſuch French merchants, who ſhall there marry maids or widows born in the dominions of the Grand Senior; and excludes, likewiſe, all thoſe who are under 30 years of age, from all public truſts of adminiſtration, who ſhall marry, without the conſent of the parents, even any French young women. A royal ordonnance, forbidding all the ſubjects of France, and others trading in Turkey under their protection, to purchaſe any thing taken from the Turks by the Malteſe corſairs, or by any other, 1718. A royal ordonnance, forbidding all captains of French ſhips and veſſels to embark in the Levant any Frenchman or foreigner, without permiſſion firſt had and obtained, in writing, from the king's ambaſſador at Conſtantinople, or the conſuls of the ports, 1719. An arrêt of the royal council of ſtate, in relation to the eſtabliſhment of a duty in favour of the chamber of commerce at Marſeilles laid upon merchandizes coming from the Levant, charged with the payment of the appointments of the conſuls, 1721. An arret of the royal council of ſtate, laying a penalty upon the captains and owners of ſhips, coming from the Levant to Marſeilles, who ſhould miſrepreſent the weight and quality of the merchandizes wherewith they are loaded, or ſhould not repreſent them at all, 1722. A royal ordonnance, regulating the appointments that the firſt deputies of the French Nation are intitled to in the ports of the Levant and Barbary; if, in caſe of the death or abſence of the conſuls, they perform the offices of the conſular power, 1723. A royal ordonnance, revoking thoſe of the year 1689, 1713, and 1719, and the prohibitions therein contained; in conſequence whereof, it permits all Frenchmen reſiding in the ports of the Levant, Barbary, and Italy, to load merchandizes for their account upon foreign bottoms, 1727. A royal ordonnance, regulating what ſhould be regarded in the ports of the Levant and Barbary, on the part of the Jews, and other foreigners, who ſhall enjoy there the protection of France, 1727. A royal ordonnance, excluding from the liberty of trading in France, and from the privilege of the body of the nation, ſuch French who ſhall marry in the ports of the Levant, and the ſons of Frenchmen born in the ſaid ports, whoſe mothers are foreigners, 1728. A royal ordonnance, concerning the patent of health that the captains and maſters of ſhips ſhould take, who traffic in the ports of the Levant and Barbary, 1730. The French king's declaration, ſignifying that no cabbin-boy ſhall be left in the ports of the Levant and Barbary, 1730. A royal ordonnance concerning the depoſits in the chanceries of the conſulſhips of the Levant and Barbary, 1731. Regulations for the imports of conſuls and vice-conſuls of the ports of Negropont, Covelle, Rhodes, Meteleme, Scio, Milo, Ime, Micona, 1732. General regulations of the French trade of all the ſaid ports. An arret of the council of ſtate, relating to the merchandizes in pacotilles, as the French term them, which the captains, ſupercargoes, and paſſengers carry into the Levant, as well for their own account as for that of the freighters, 1733. A royal ordonnance, forbidding the French merchants to conſign directly, or indirectly, merchandizes, fruits, or proviſions, to foreigners eſtabliſhed in the ports of the Levant, 1735. An arret of the council of ſtate, concerning the impoſition of a duty of average of 1 per cent. for 3 years, upon the merchandizes which ſhall be carried to the ports of the Levant, 1736. A royal ordonnance, permitting French ſhips to be conſigned to merchant ſtrangers eſtabliſhed in the ports of the Levant, in caſe they are entirely freighted by foreigners, 1737. An arret of the council of ſtate, eſtabliſhing, to commence the 1ſt of April, 1739, that the duty of averages at importation, the raiſing of which was ordained by the arret of the 25th of February, 1736, ſhall be ſuppreſſed in all the ports of the Levant of Dec. 1738. On the 18th of January, 1749, an arret was iſſued for the regulation of policies of inſurance paſſed before the ſigning the preliminaries of peace, with regard to ſhips employed in the commerce of the ports of the Levant, and regulating the premiums to be allowed to the inſurers, in theſe caſes mentioned in the arret of the 12th of July, 1748. A royal ordonnance, forbidding all ſubjects who reſide in the ports of the Levant and Barbary to poſſeſs themſelves of any real eſtates, 1749; with remarks, ſhewing that the above are the principal royal arrets, edicts, ordonnances, and declarations iſſued in France, from the year 1665, by authority, for the occaſional regulation of the Levant trade, and the conſequences thereof.

LEVANT TRADE, of the regulation of the Dutch, in regard to their commerce of the Levant trade. Of the general nature and circumſtances of the Turkey trade in the Levant; with remarks.

LIEGE, its ſituation, produce and trade.

LIGHT-HOUSES, or SEA-MARKS, their nature and uſe in navigation.

LIMBURG, its ſituation, produce and trade.

LINCOLNSHIRE,———ditto.

LINEN, a manufacture. Its great utility throughout the world. In whoſe hands the linen trade of Europe chiefly lies, to the diſadvantage of England; with a ſeries of national political reflections. Of the raiſing of flax, for the more effectual eſtabliſhment of the linen manufacture in Great Britain. A ſummary of the chief laws of England, relating to the linen manufacture. Of the conduct of Ireland, in regard to the linen manufacture, with reſpect to the linen-board there granting premiums for the encouragement of that manufactory. An account of the quantity and duty of the ſtatuteable and unſtatuteable linen yarn, exported out of Ireland to Great-Britain for twenty years. An account of the net quantities of cotton wool imported into Great-Britain for ſeven years, after deduction of the quantities exported; drawn from the accounts before the committee, in a report to his late Majeſty George II. with political remarks on the linen manufacture in general.

LINLITHGOWSHIRE, its ſituation, produce, and trade.

LINT, with reſpect to the linen manufacture, in order to render the linen manufacture belonging to theſe kingdoms as complete as the ſame is in foreign countries, &c. with remarks.

LITHUANIA, its ſituation, produce, and trade.

LIVES, (annuities on lives). Of the principles whereon ſuch computations are made, with various curious tables thereon, made by ſeveral ingenious gentlemen.

LIVONIA, its ſituation, produce, and trade.

LOADMANAGE, a term in commerce.

LOADSMAN,———ditto.——— Laws relative thereto.

LOGWOOD, a wood much uſed in the art of dying. A repreſentation from the board of trade to his late majeſty Geo. I. aſſerting the right of the ſubjects of Great-Britain, to cut logwood in the bay of Campeachy, 1717. Political remarks on this article in various lights, before and ſince the laſt war and treaty of peace of 1763.

LONGITUDE, its nature and uſe in the art of navigation, and the difficulties hitherto attending its diſcovery. Of a new problem for its diſcovery at ſea. Acts of parliament relative thereto. See alſo COMMANDERS OF SHIPS for the ſame at large.

LORRAIN AND BAR, their ſituation, produce and trade. See ALSACE.

LOTTERY, a public game at hazard, to raiſe money for the ſervice of the ſtate. Laws of England relating thereto. Lotteries in France. That in England for the purchaſe of Sir Hans Sloane's curioſities; with remarks on lotteries in general, upon mathematical principles. Of the abuſe of lotteries.

LOUISIANA, its ſituation, produce, and trade; with political remarks thereon, before and ſince the laſt war and peace of 1763. Of the Indians in North America; and how to manage them ſince the large acquiſition of territory ceded in North America to the crown of Great-Britain; of preſent important conſideration.

LUBECKERS, of the imperial city of Lubeck. Of their union with other ſtates.

LUXEMBERG, its ſituation, produce and trade.

LYONNOIS, its———ditto.

Of the buſineſs of the cuſtom-houſe.

LETTER M.

MACE, its nature and commerce.

MACEDONIA, its ſituation, produce and trade.

MACHINE, with political remarks thereon, to leſſen the price of commodities.

MALT, obſervations on the manner of MALTING; with philoſophical remarks thereon. An abſtract of acts of parliament thereon; together with the nature of the excife buſineſs reſpecting this article; and alſo the buſineſs of the cuſtoms, relating to the exportation of malt.

I N D E X.

MAN, (ISLE OF MAN) its ſituation, produce, and trade; with political remarks with reſpect to the ſmuggling trade carried on at the Iſle of Man before its being annexed to the crown of Great-Britain. Reaſon before its being annexed to the crown of Great-Britain, given in this work above 10 years before it was ſo annexed, furniſhed to the author by that worthy patriot, the preſent chamberlain of London, Stephen Theodore Janſſen, Eſq;

MANUFACTURERS. Engliſh laws relating to them; with political remarks for their encouragement in Great-Britain. The ſyſtem of Spain to advance their manufactures of every kind, as publiſhed in this work before the laſt war, and Definitive Treaty of 1763; with other political remarks in divers uſeful lights. An abſtract of an act of parliament for the effectual puniſhing of perſons convicted of ſeducing artificers in the manufactures of Great-Britain or Ireland, out of the dominions of the crown of Great-Britain or Ireland, into foreign parts; and for the more eaſy and ſpeedy determination of appeals, allowed by another act, &c.

MANURE, for land; with philoſophical remarks thereon. Of political remarks thereon, tending to the better cultivating of the lands of Great-Britain and Ireland, in order to render labour and commodities cheaper than they are; with conſiderations incorporated regarding the landed intereſt. Alſo other political remarks on the whole of our article MANURE, and cultivating additional quantities of land, ſo as to render the neceſſaries of life cheaper, in order to cheapen labour, and the price of Engliſh commodities in general, for the benefit of foreign commerce.

MAP, its uſe in geography; with political remarks on this article before the laſt war and peace of 1763, relative to the perfidious deſigns of France to ſtrip us many years ago of our rights of poſſeſſion in North America in particular; of which the author of this work apprized the nation before the late war; alſo political remarks ſince the laſt war and Definitive Treaty of 1763.

MARBLE, its nature and quality, and uſe in buildings.

MARCASITE, a mineral; its nature, quality, and uſe; with proper remarks thereon, in order to make them turn to the beſt advantage on landed eſtates.

MARINERS, how governed in a maritime country by the antient ſea law, as thoſe of Rhodes, Oleron, and Wiſby; ſee thoſe articles, as well as according to the Engliſh laws; with variety of caſes litigated and determined in our courts of juſtice. Of the admiralty laws relating to theſe people. See ADMIRALTY.

MARITIME and MARINE AFFAIRS, and MARINE TREATIES. See MARQUE, (LETTERS OF MARQUE) MASTERS OF SHIPS, NAVAL AFFARS, PILOTS, PORTS, and HAVEN; PIRACY, PRIZES, QUARENTINE, SALVAGE, WRECKS; with other articles therefrom referred to. A marine treaty between the States-General and the city of Lubeck, 1613. A marine treaty between the United Provinces and the Hanſe Towns, 1615; with political remarks thereon of divers kinds. Alſo variety of maritime forms, and articles of ſeveral natures; with occaſional illuſtrative explanations. Treaty between the ſtates of Holland with the towns of Bremen and Hamburgh, in the year 1645. Another between the king of Denmark and the States-General. Another maritime treaty between the crowns of Sweden and Denmark. A form of a general maritime paſsport for a Swediſh ſhip laden with Swediſh goods, &c. A form of a certificate to be given to the Swediſh ſhips, laden partly with Swediſh, and partly with foreign goods, &c. with explanatory and political remarks, 1645. Another treaty between the States-General and Denmark, 1647; with a model for meaſuring the ſhips according to the meaſure of Amſterdam. A manifeſto publiſhed by the Parliament of England againſt the States-General of the United Provinces in the year 1652, ſevere againſt the Dutch. An abridgement of the manifeſto of the States-General againſt the nation and government, &c. of England, given at the Hague, 1652; which ended in a declaration of war, and was followed by a treaty between the States-General and the king of Denmark; which promoting a good underſtanding between the Dutch and the Danes, there was another treaty concluded between thoſe two powers at Copenhagen in the year 1653. An abſtract of a treaty of peace and union between Oliver Cromwell, as protector of England, and the United Provinces of the Low-Countries. A marine treaty between king Charles II. after his reſtoration to his dominions, and the States-General of Holland; in which all former differences are compoſed, &c. in 1667. The ſame time was concluded another treaty concerning marine affairs; which was the forerunner of that of February, 1667-8. Article touching navigation and commerce, between king Charles II. and the States-General, concluded at the Hague in February, 1667-8. Form of the certificate that ought to be given by thoſe that have the ordinary power of the admiralty of England, to the ſhips and veſſels that go out thence, according to the ſaid treaty; with other requiſite forms on both ſides relative to carrying the ſame into execution. After this treaty for affairs in Europe, another was ſet on foot, and agreed to, for regulating their naval affairs all over the world, &c. the ſubſtance of which we have given; with various neceſſary forms concerning the ſame. A marine treaty between king Charles II. and Lewis XIV. king of France in 1676-7; with the form requiſite on this occaſion, and proper remarks.

MARLE, for the manuring of land; with philoſophical remarks.

MARQUE, (LETTER OF MARQUE) what, their nature and authority. Laws of England concerning the ſame; with ſome curious caſes determined in our courts of judicature, on laws relative to litigations on this point.

MASTERS OF SHIPS, mercatorial laws and uſages relating thereto. With divers uſeful caſes of diſpute ſettled by our courts of law concerning them.

MATHEMATICS, how far they may be uſeful to thoſe who would underſtand the practice and theory of trade; and of general uſe and advantage, in the ſeveral lights repreſented; with pertinent remarks of ſeveral kinds.

MEASURES and WEIGHTS, as well relative to foreign countries as our own; with proper tables and computations.

MECHANICAL ARTS, the great commercial utility of mechanic arts to the ſtates; with ſuitable remarks thereon in divers lights.

MECKLENBURGH, or MECKLENBOURGH, its ſituation, produce and trade.

MEDALS, of the traffic therein in divers parts; with political remarks made of them in France to commemorate the great epochas of their commercial advancement in the reign of Lewis the XIVth and the preſent French king; with remarks alſo ſince the late war and treaty of peace of 1763.

MEDITERRANEAN, its ſituation and extent; with remarks relative to the important advantages derived to Great-Britain from the poſſeſſion of Gibraltar, and ſhewing why that territory and fortreſs ought never to be given up to any power whatſoever, if we would preſerve the Mediterranean trade; alſo other political remarks on this article. Likewiſe of the buſineſs of the cuſtom houſe relating to the MEDITERRANEAN COMMERCE.

MEDITERRANEAN PASSES, our laws relating thereto.

MELLI, its ſituation, produce, and trade.

MENSURATION, its uſefulneſs in ſeveral branches of trade. With practical caſes of computation concerning the ſame, in artificers works of divers kinds; as carpenters work, bricklayers work, plaiſterers work, maſons work, glaziers work, painters work; alſo the uſe of the carpenter's rule, and the ſliding-rule in menſuration.

MENTZ, its ſituation, produce, and trade.

MERCANTILE ACCOUNTANT-SHIP, the whole art ſuccinctly delineated.

BRITISH MERCANTILE COLLEGE, ſhewing the neceſſity of eſtabliſhing a mercantile college in Great-Britain for the education of young Britiſh merchants better than they uſually are; with a plan for that purpoſe. Another plan laid down for the due execution of the former. Of the dignity of the Britiſh merchant, and the conſequences of this intended new college to the public.

MERCHANT-COURT, or COURT-MERCHANT, of the nature of ſuch an inſtitution for the ſummary deciſion of mercantile perſonal controverſies. Of the merchant's court in the city of Rouen in France.

MERCURY, a mineral, its nature and quality; with philoſophical obſervations thereon.

MERIONETHSHIRE, its ſituation, produce, and trade.

METALLURGY, the art of, deſcribed; with remarks philoſophical.

METALS, their nature and quality philoſophically deſcribed. Of factitious metals;; with proper remarks.

MEXICO, (OLD MEXICO) its ſituation, produce, and trade; with remarks particularly reſpecting the right of Britiſh ſubjects to the cutting of logwood in the bay of Honduras; alſo political remarks made before and ſince the laſt war and treaty of 1763.

MIDDLESEX, its ſituation, produce, and trade; with ſuitable remarks before and ſince the laſt war and Definitive Treaty of 1763.

MILAN, its ſituation, produce, and trade.

MINERAL, deſcribed philoſophically; with remarks.

MINERAL WATERS, their nature, uſe, and their trade.

MINEROLOGY, concerns the diſcovery of mines; with philoſophical explanations, and ſuitable remarks. Of the deceits and impoſitions of miners, and others, often in league with them. Of the generation of mines; with intereſting remarks to thoſe concerned therein.

MINORCA, its ſituation, produce, and trade; with political remarks.

MISSISSIPPI, its ſituation, produce, and trade; with remarks before the laſt war and the Definitive Treaty of peace in the year 1763; alſo political remarks ſince the laſt war and peace of 1763.

MODENA, its ſituation, produce, and trade.

MOGUL EMPIRE, ſee INDOSTAN.

MONEMUGI, its ſituation, produce, and trade.

MONEY, the origin of money; with political remarks thereon.

MONIED-INTEREST, or the ſtockholders of this kingdom; with ſuitable remarks thereon, both before the laſt war and peace of 1763, and ſince the ſaid peace.

MONMOUTHSHIRE, its ſituation, produce, and trade.
MONOMOTOPA, its ſituation, produce, and trade: with remarks.
MONOPOLIES, their nature. Our laws relating thereto, and origin of thoſe trading ones in this kingdom; with political remarks thereon.
MONTFERRAT, its ſituation, produce, and trade.
MONTGOMERYSHIRE,———ditto.
MONTSERAT, ſee BRITISH AMERICA.
MORAVIA, its ſituation, produce, and trade.
MOROCCO, its ſituation, produce, and trade; with remarks thereon. Of the union of the Chriſtian powers to extirpate the piratical ſtates.
MORTALITY, (BILLS OF MORTALITY) with reſpect to annuities on lives and leaſes, &c. with various uſeful tables relating thereto: with caſes exemplifying the ſame.
MOSKITO COUNTRY, its ſituation, produce, and trade.
MUNSTER,———————ditto.
MUSEUM, BRITISH, with political remarks thereon.
The practical buſineſs of the cuſtom-houſe continued at the end of Letter M.

LETTER N.

NAPLES, its ſituation, produce, and trade: with political remarks. Of Sicily in particular; with remarks alſo.
NATIONAL ACCOUNTANTSHIP, an idea thereof, for people of diſtinction.
NAVAL AFFAIRS, their importance to the Britiſh empire, and their ſhort Hiſtory; with remarks, ſhewing how the French regard their naval affairs. Further remarks thereon before the laſt war and peace of 1763. And likewiſe remarks intereſting ſince the laſt peace of 1763.
NAVAL STORES, with political remarks thereon, before and ſince the Definitive Treaty of 1763.
NAVIGATION, the practical arts thereof; with the Rev. Mr Richard Locke's univerſal problem for the diſcovery of the longitude at ſea. See COMMANDERS OF SHIPS, and LONGITUDE. The principal laws of England enacted for the promotion of trading navigation. A memoir that may be neceſſary to be referred to occaſionally, containing an account of all the foreign ſhipping which entered in at the ſeveral ports of England, ſet forth in columns, under the title of the nation or ſtate to which they belong, for two ſeveral years, ending at Chriſtmas 1743, and 1747, and one year ending at Lady-day 1749; which is one year before the laſt French war but one, one year in the war, and one year after that war, or the peace of Aix-la-Chapelle, made in 1741.
NEGROLAND; ſee AFRICA, ENGLISH AFRICAN COMPANY, ANTILLES ISLANDS.
NETHERLANDS, (or THE UNITED PROVINCES OF THE NETHERLANDS) of their commerce; with intereſting political remarks before the laſt war and peace of 1763; and likewiſe remarks ſince the laſt peace of 1763.
NEUFCHATEL, its ſituation, produce, and trade.
NEVIS; ſee BRITISH-AMERICA.
NEUTRAL ISLANDS; ſee LEEWARD ISLANDS.
NEW-CASTILLE; ſee CASTILLE.
NEW-ENGLAND; ſee ditto.
NEW-JERSEY; ſee ditto.
NEW-YORK; ſee ditto.
NEWFOUNDLAND, its fiſheries and trade; with remarks ſince the laſt war and peace of 1763.
NEWS-PAPERS, their uſe and their abuſe, with reſpect to public affairs; the laws relative thereto.
NEW-SPAIN; ſee SPANISH AMERICA, PERU, and MEXICO.
NICARAGUA; ſee MEXICO.
NICOBAR-ISLANDS, their ſituation, produce, and trade.
NIGRITIA; ſee AFRICA.
NITRE, or SALT-PETRE, its nature, quality, and uſe, with philoſophical remarks; of its purification, &c. &c.
NIVERNOIS, or NEVERS, its ſituation, produce, and trade.
NORFOLK, its ſituation, produce, and trade: with the peculiar laws relating to Norwich, and Norwich-ſtuffs.
NORMANDY, its ſituation, produce, and trade.
NORTHAMPTONSHIRE,—ditto.
NORTH CAROLINA,———ditto;————with intereſting remarks before the laſt war, and peace of 1763, and ſince that peace.
NORTHUMBERLAND, its ſituation, produce, and trade.
NORWAY,————————ditto;————————with political remarks before the laſt war and peace of 1763, and ſince the ſaid peace.
NOTARY-PUBLIC, an idea of his profeſſion, with remarks.
NOTTINGHAMSHIRE, its ſituation, produce, and trade.
NOVOGOROD,————————ditto.
NOYONNOIS,————————ditto.
NUBIA, its ſituation, produce, and trade.
NUTMEG, its nature and commerce; ſee LEEWARD-ISLANDS.
The buſineſs of the cuſtom-houſe continued.

LETTER O.

Mts Caphas according to Ptolemy, which give rise to the River Dandus now called Senaga.

All NIGRITIA, from the Head of Senaga, is very little known: but the situation of this great Region, and even some Towns, as far as Nyssi, are described by Edrisi the Nubian Geographer and Leo the African, agrees with several new Discoveries, all uniting to verify their Accounts. I therefore conclude that the Niger flows from West to East, and has no Affinity with the Senaga or any Part thereof, but falls into some Lakes that communicate with the River Nile.

Bito, Temian, Dauma, Medra, are Countries named by Leo to lye about this Latitude.

In the 17th Century some Persons imagined they had found the Springhead of the Nile in the Land of Abessinia. But all the old Geographers call this River Astapus, which is intirely a different river lying farther in the Continent of Africa, and to which the name of Nile hath been given in preference. Wherefore as the true source thereof remains doubtful, we must not reject the opinion of Ptolemy, or the report of Edrisi and Almsfeda, till Time shall make a more clear Discovery.
Note. The pretended Nile from Abessinia runs East of Sennar and the other runs on the West. Latitude 15.

Africa plate III. The Southeast part.

This Scale is half of the other.

This Map, including the Bays of Hudson and Bylot, contains all the material Discoveries, with their proper Names correctly inserted; for which the original Voyages have been examind, from Martin Forbisher in 1576. to Francis Smith in 1747.

In the late Charts, particularly that of Capt. Smith 1747, Whalebear Bay crosses over to Cumberland Strait and makes the Island of Good Fortune. The other Strait or Chanel North of Mill Islands, meets the Northwest end of Cumberland Strait and forms James's Island: so that Cumberland Island, named by Mr. Dawid James's Island, remains nearly as tis in this Map.

According to Mr. Foxe, Bear Sound or Strait in 63 is a Fiction, and Frobisher Strait in 62 is wrong placed; for in 1723 he searched in vain all that Coast to find it. So that the Strait at Cape Christian, making Cape Farewell an Island, is undoubtedly the real Strait of Captain Frobisher.

Great River coming from the West, discovered lately by the Oshagac Savages.

Missasipi.

Pekitanoui R. the Source unknown.

Padoucas

Panis

Northwest of California in Lat. 38. 30. where no Spaniard ever settled, is the Harbor of S.t Francis Drake, where he remained five Weeks in 1579. and with remarkable form and Ceremony, on the free Surrender of the Natives, took possession of the Country, for Queen Elizabeth, calling it the Kingdom of New Albion. Notwithstanding so clear a Fact, observed in all other Charts, Mr. De Lile and Mr. Danville have agreed to suppress it: and rather than mention New Albion as an English Claim, founded by Drake the first Circumnavigator, they castrate their own Maps to blind his Discovery.

BY THE SIEUR D'ANVILLE.

Greatly Improved by
Mr BOLTON.

Engravd by R.W.Seale.

Gravelot delin.
Walker sculp.

By the Treaty of Utrecht 1713, the French have the Liberty of the Northern Coast of Newfoundland from Point Ruch on the West to Bonavista on the East, for curing their Fish only.

Pursuant to the last Treaty of Peace concluded at Paris, Feb.10 1763.

North America is settled as follows, Viz.

1. Nova-Scotia & Acadia in all its Parts are ceded to Great Britain.
2. Canada & all its Dependencies are ceded to Great Britain, as well as the Island of Cape Breton, & all the other Islands & Coasts in the Gulf & River St Lawrence.
3. The Subjects of France have the Liberty of Fishing & drying on a Part of the Coasts of the Island of Newfoundland, such as is specified in the 13th Article of the Treaty of Utrecht which last Treaty of Peace is confirmed & renewed (except as to the Island of Cape Breton, as well as the other Islands & Coasts in the Mouth & Gulf of St Lawrence, which Islands & Coasts are ceded to Great Britain) as to the Island & Coasts in the Gulf of St Lawrence, on Condition to Enter to the Subjects of France, the Liberty of Fishing & drying on the Coasts of Three Leagues from all the Coasts of the Islands ceded to Great Britain in the Gulf of St Lawrence; but at the Islands ceded to G. B. as well those of the Continent, as those of Newfoundland, they are not to exercise the said Fishery but at the Distance of Fifteen Leagues from the Coasts of Nova Scotia & Acadia. And the Subjects of France shall not be permitted to Fish in the Gulf of St Lawrence, or within Fifteen Leagues of the Coasts of Nova Scotia & Acadia. Except where they are at the said
